"Each group elects a president, 'who bears the patriarchal title of "Starosta"—i.e., the old man: He thus stands to his fellows in much the same relation as the steward of a table in a college hall to his fellow-diners. Thanks to the cheapness which is secured by this practice of meal-communism, a Russian workman can live on 14 kopecks—i.e., about 5d.—a day.

"Such is the 'artel' for manufacturing purposes. In agriculture it plays a still more important part. Ferrero comments with wonder on the fact that the illiterate and simple Russian peasant has devised and practices almost universally a system of voluntary association and com-

mon labor 'to get rid of the entrepreneur,' the nearest parallel to which may be found in the trade union or cooperative society of the 'cultured and far-sighted English artisan.' In fact, these artels seem to combine features of both these English institutions.

#### TRADES UNIONS AS CONTRACTORS.

"Laborers combine together and contract as a body with an employer to do a certain piece of work, in a certain time, for a certain price. They divide the fruits of their labor usually equally among themselves; and the work finished, the association is ipso facto at an end, and the workers free to combine afresh, and, if they please, in different numbers and proportion, for similar objects. This resembles a system of cooperative labor with an equal division of wages, or a district trade union, which, in its corporate capacity, contracts with and works for an employer. Thus, too, in the cities, waiters combine to form an artel, and eliminate the middleman employer. . . . Newspaper hawkers form their artel. . . . The boatmen on the rivers form many such societies, and the custom is in each to elect each member in rotation to be president and banker of the society for one day. Every evening the gains of the day are put together, and then divided equally among all who have worked that day."

Mr. Henderson has doubts as to the permanence of this device, and confesses that "highly interesting as the artel is, the question must arise whether its interest is that of a semi-patriarchal survival or that of a future savior of society, carrying with it a present message to the workers of Great Britain."

In any case, the instinct for communism and capacity for altruism which run in the Russian blood must have no small influence in solving the social problem of the international future.

# ADOLPH WAGNER ON SOCIALISM.

THE great Berlin professor of economics, Dr. Adolph Wagner, contributes to Cosmopolis for February a strong criticism (in German) of Herr Liebknecht's "Future Socialist State." He declares the transition to such a state impossible and incredible, on grounds psychological, technical, and "populationistic." Beginning with the psychological difficulty, Dr. Wagner replies to the socialist:

"First, everything that you project in your future state presupposes men essentially different from those we have known in the present and also in the entire past of mankind: men different in nature, men who, as regards the mental motives of their economic activity, feel,

strive, act quite differently. Secondly, you deceive yourselves-or others-in supposing that the evolution of society out of the middle-class capitalistic economic system into the socialist state implies only a historical process similar to that which has gone before, in which one economic system has followed on the other—e.g., the capitalistic system on that of the petty middleclass. . . . The transition to the economic system of socialism would not merely be a much more thoroughgoing advance—it would be no merely gradual change—it would be a change in kind and in principle of the whole economic and social organization, and just for that reason would necessarily presuppose a human and social building material 'generically different' from all that we have known.

"You certainly do not want to make a tabula rasa: you believe that your system would spontaneously evolve itself. But you do not perceive that human beings, who are the necessary material of every social structure, must be as pliable as a piece of wax in the hands of your labor office and education office . . . if you are to succeed."

Dr. Wagner complains that socialists display a singular lack of clearness both as to the presuppositions involved in the realization of their schemes and as to the ways and means of realizing them. No satisfactory answer, he says, has been given to the question, How will the more menial forms of service be discharged in a socialist community? Socialism has never seriously considered the danger of dilletantism bound up with the frequent change of occupation it suggests.

"How would the 'social state' regulate the numerous kinds of labor that are hard, fatiguing, stupidly mechanical, disagreeable, such as are continually increasing in an age of machinery?

. . . Herr Liebknecht evades the cardinal question, How are the managing authorities, the labor office and its organs, to procure without compulsion of the individual, without the inducement of private interest, of free will, the staff of laborers for every kind of needed labor, at the time and place required, and especially for burdensome, disagreeable, repulsive tasks?"

In higher walks of life the pleasure of work does away with the pain of it, even with the thought of recompense. But the case is very different with the mass of common tasks in the sphere of material production. The socialist, in short, postulates for his future state a kind of human nature which contradicts all experience, past and present, and so proffers not proofs, but 'dogmas' and 'articles of faith' to be believed, apparently, quia absurdum est."

#### SAVINGS IN THE POSTAL SERVICE.

A N opponent of the Loud bill, Mr. Orville J. Victor, contributes to the February Forum an article entitled "Side Lights on Postal Reform," which is mainly a reply to Mr. Loud's own article, "A Step Toward Economy in the Postal Service," in the December Forum.

Mr. Loud proposes to effect an economy by taking out of second-class matter all books and pamphlets and also all sample copies of periodicals. These two changes would save the Government, as he estimates, \$13,000,000 a year. Mr. Victor, on the other hand, would let the classification of mail matter, with attendant privileges, remain as it is, but would make savings in the cost of the service by various other methods.

For example, it appears that the Government pays excessive transportation charges to the railroads. About \$5,000 a year is paid for each postal car more than the value of the car. The New York Central is said to receive an annual payment of \$3,088.09 per mile for transporting mail matter between New York City and Buffalo, while the Pennsylvania Railroad receives annually \$3,801.53 per mile for its service between New York and Philadelphia. These and other similar facts lead Mr. Victor to say:

"A careful examination of the tables given and of the charges imposed discloses the signal fact that if the United States Government owned and controlled all postal cars and paid the railroads for traction and station storage and stowage—just as great shippers like Armour & Co. and all the express companies pay—the saving would be fully 40 per cent., as compared with the cost per mile indicated by the sums above particularized, and the deficit that so sickens the souls of a long line of reformers and nostrumvenders would completely disappear. Nay, more: there would be a big surplus with which to further the scheme of free city and rural delivery and to silence the enemies of cheap reading, who, under the thin mask of postal reform, would seriously add to the cost of all periodical publications."

#### WHAT CAUSES THE DEFICIT?

Mr. Victor, who defends the "libraries," or series of cheap books published periodically and now sent through the mails at second-class rates, undertakes to show that the principal increase in the weight of second-class matter in the mails comes from the bona fide periodicals:

"The considerable yearly increase in the weight and bulk of second-class matter is due chiefly to the rapidly advancing circulation of the weekly and monthly papers, and notably of the monthly magazines and reviews. Then we have a quite remarkable increase in the quantity of letter-press as well as of advertising pages. Also, this further item visibly enters into the problem of the paper weight of the publications—the heavier paper required for the proper printing of the almost countless illustrations which now have become a pronounced feature of our popular periodical literature.

"When several of the magazines issue each month from 250,000 to 500,000 copies, each weighing from ten to fifteen or more ounces; when a certain Philadelphia monthly paper circulates—mostly through the mails—725,000 copies of its December number; when a Boston weekly puts forth for the year 600,000 copies each week; when fully a half-hundred other papers have mail-lists calling for from 100,000 to 200,000 copies weekly—it takes but a novice to determine the source of the steady growth of weight of second-class matter in the mails, and to see that this growth is a grand confirmation of the wisdom and propriety of the present postal laws.

"He must be a bold legislator who seeks in any way to curb or restrict this tremendous output of good literature and good art. To prohibit it the freest use of the mails in its distribution over our vast domain is simply a crime against

civilization."

#### AMERICAN LABOR UNIONS AND STRIKES.

A N article on "The Condition of the American Working Class," contributed to the February Forum by Mr. Frank K. Foster, discusses the subject of strikes from the trade unionist's point of view:

"Economically speaking, the trade union is a class organization, but scarcely so in a greater degree than the ordinary business associations of the commercial world. The man who has labor to sell has, in that capacity, a relationship to the rest of the community—especially to the laborbuyer—peculiarly his own. His interest and that of his employer may be reciprocal, as Commissioner of Labor Carroll D. Wright well puts it; but the interests are not identical. He may attend the same lodge, vote the same ticket in politics, and kneel at the same altar with his employer; but when he brings his labor into the market, his interest demands that he obtain for it the highest possible price up to the limit of the absorption of the 'margin of profit;' while, under competition with other employers, the labor-buyer endeavors to obtain it at the lowest possible price. What the laborer is contending for is an equality of bargaining power. The entire trend of development in the industrial world.

from status to contract, has been toward this equality. The factory system, with its massing of capital, has injected a new element into the problem; and the countless industrial wars, called 'strikes' and 'lockouts,' are but phenomena in the process of adjustment which is now going on.

#### WHAT JUSTIFIES A STRIKE?

"While the strike has received ample measure of condemnation by some political economists, its utility is now quite generally recognized. The strike is industrial war. It is the court of last As both armies and courts are sometimes used in the cause of the oppressor, so the strike may be lacking in justice. Of itself, it is neither good nor bad, but depends upon its inspiration for its justification. Workmen may fairly claim, however, that if the civilized and Christian nations of the world find it necessary to maintain great armies and powerful navies in order to maintain peace, it is inconsistent to expect the wage-earner to rely entirely upon the power of moral suasion for the protection of his As the principle of arbitration is the more readily resorted to between nations equally capable of defending their claims by force, if need be, so the labor-seller finds that his claims are the more likely to receive fair consideration, when, back of those claims, there is an agency capable of resorting to industrial war if the exigencies of the case so demand. strength of this principle is still further made manifest by the fact that the trade organizations most capable of making a stubborn resistancethose with the largest treasuries and most thorough organization—are least often called upon to resort to strikes."

# AGRICULTURAL TRAINING FOR WOMEN.

ISS EDITH BRADLEY expounds in the Fortnightly Review for February Lady Warwick's idea of utilizing women in British rural industries:

"Lady Warwick's scheme has a threefold object: 1. To open a new field of work and means of livelihood for women (notably the class described as the daughters of professional men). 2. To stay the depopulation of our villages. To keep some of the money in this country which is annually spent in foreign dairy, poultry, and horticultural produce.

"It is proposed to form, in the first place, an agricultural training college for women; and simultaneously around this, on the same estate, to build some ten or twelve cottages standing in two, three, or four acres of ground, which will

form the agricultural settlement. The college will be in the center and will be worked by responsible people—not necessarily women chosen for their experience and ability in organ ization and agricultural work. The theoretical classes will include botany, geology, entomology (insect pests), horticulture, poultry, and bee-keeping, fruit and flower growing, bookkeeping; while the practical work will embrace flower and fruit growing, bee-keeping, jam-making, bottling fruit, home-made wines; dairy work, milk, butter, and especially soft cheese-making; pig-keeping, poultry-rearing—turkeys, ducks, geese, guinea-fowls, etc., for market, and for sale of eggs. Recognizing the necessity for recreation and culture, Lady Warwick proposes in her scheme that games and physical exercises shall take an important place in the college curriculum, while a library, a literary and debating club, and regular lectures will minister to the intellectual side of the students and foster opportunities for social intercourse among the settlers, who will, of course, be expected to participate in the internal life of the college. The fees will be moderate, in order to reach the class whom it is proposed to benefit.

"Opportunities for individual scope and ability will be afforded by the allotments, for which a certain portion of the college grounds will be reserved, and which will be granted to students under certain conditions. The cultivation of these allotments will provide an important link between the college classes and settlement work, as it is reasonably expected that a percentage of students will afterward join the agricultural settlements.

"Another feature set forth in the scheme has the recommendation of novelty, viz., the employment of domestic economy students to do the necessary domestic work of the house. A large number of middle-class women have availed themselves of the technical instruction classes in cookery, laundry, and housewifery; why not employ them instead of wrestling with the everprominent servant question? In return for their

services the college fees will be remitted, and they may be allowed half time to take up one or two branches laid down in the college curriculum."

In connection with the college there will be agricultural settlements under the direction of the college. Twenty cottages will be built each on a plot of from two to four acres. Each will be rented to a couple of gentlewomen at \$2.50 per week and upward, who must possess incomes of from \$100 to \$250 per annum each. They will cultivate their holdings and sell the produce through the college.

# SCHOOL GARDENS.

IN Appleton's Popular Science Monthly for February M. Horney ruary Mr. Henry Lincoln Clapp explains the use of school grounds in teaching the pupils horticulture and natural history.

European countries, it seems, are far in advance of the United States in the utilization of school gardens as sources of plant material for study and as training-grounds in practical horticulture and related occupations.

Austria, in 1890, had nearly 8,000 such school gardens for instruction in rearing trees, vege-

tables, and fruits.

"In France gardening is practically taught in 28.000 primary and elementary schools, each of which has a garden attached to it, and is under the care of a master capable of imparting a knowledge of the first principles of horticulture. No one can be appointed master of an elementary school unless qualified to give practical instruction in cultivating the ordinary products of the garden.

"In Sweden, as long ago as 1871, 22,000 children received instruction in horticulture and treeplanting, and each of 2,016 schools had for cultivation a piece of land varying from one to

welve acres.

"Still more significant is the recent establishment of many school gardens in Southern Russia. In one province 227 schools out of a total of 504 have school gardens whose whole area is 283 acres. In 1895 these gardens contained 111,000 fruit trees and 238,300 planted forest trees. them the schoolmasters teach tree, vine, grain, garden, silkworm, and bee culture. They are supported by small grants of money from the country and district councils. In the villages, small orchards and kitchen gardens are connected with many primary schools. This movement has also widely spread over different provinces of central Russia.

#### A BOSTON EXPERIMENT.

School grounds in this country have usually been devoted exclusively to athletics and play, but in 1891 a garden was started in connection with one of the Boston grammar schools. piece of ground 48 by 72 feet in the rear of the boys' yard was preëmpted for the purpose, and it was decided that only native wild plants, shrubs, grains, and vegetable roots should be used as stock.

"The pupils brought in many wild plants, and the fleshy roots of biennials—turnips in variety, carrot, parsnip, radish, beet, onion (bulb), cabbage, etc. In planting, they took turns in digging the holes and placing the plants in position. Observations were made during the flower-

The structure of the flowers of the ing season. cruciferous and umbelliferous plants was studied, and the nature of biennials was revealed. economic plants, such as the potato, the tomato, and the gourd, were raised to show the individualism of plants.

"A square yard of ground was assigned to each of the ordinary grains—wheat, rye, oats, barley, and buckwheat. The first four, being most important members of the grass family, were especially interesting in their development. After that, grains meant more to the pupils.

"Nineteen species of wild asters were planted Ten of the finest flowering kinds in one row. formed another row. Later it was discovered that those plants blossomed the most profusely which sprang from seeds scattered at random around trees and beside rocks and fences.

"In the fall, seed vessels were collected for study in winter, and bulbs, corms, and tubers

were stored away for spring planting.

"Each member of the highest class had a particular plant to take care of and study. around and watered it, took off all dead leaves and unseemly branches, and tied it up. Then he sketched its characteristic parts—flower, leaf, stem, habit of growth, etc.—and took such written notes as would enable him to write an account of his plant and illustrate it with appropriate drawings. On one occasion each of the thirtytwo members of the class studied his own clump of asters, there being just clumps enough to go The importance of seeing and studying plants growing in large masses is not likely to be overestimated if interest and thoroughness in learning about them are desired. Comparatively, a single cut specimen in hand means but little.

· By the aid of the boys a fernery was made in an angle of the school building on the north side, in a shady, sheltered position. They took handcarts into the woods half a mile distant and collected leaf-mold, which they mixed up thoroughly with loam and sand, and then assisted in taking the ferns from scattered places in the garden and locating them by genera in the fern-The name of each species was written on a flat stick, which was stuck into the ground near the specimen to which the name belonged."

#### EDUCATIONAL VALUE.

This experience of the Boston school adds force to Mr. Clapp's argument for the establishment of school gardens:

"Reasons that are good for introducing the elements of science into elementary schools are equally good for supplying adequate and seasonable elementary science material to work upon. Plants are so available for the purposes of instruction, their structure, uses, and functions are so varied and interesting, that it is generally conceded that the best elementary science material on the whole is found in the vegetable world.

"The school garden affords by far the best means for the cultivation of the powers of observation. Pupils find excellent forms to draw, colors to imitate, habits to describe, and motives to use in decorative design. They find something to take care of, something that quickly responds to love's labor, and as interest is added to interest they lay up for themselves resources for happiness that should be the heritage of every child, even the poorest city child; and this would be so if school authorities and the people behind them had more real insight into children's best natures, more foresight, more humanity, and more liberality in the purchase and equipment of school grounds."

# THE SCIENTIFIC BUREAUS AT WASHINGTON.

In an article in the March Harper's Mr. J. W. McGee writes to show that Washington's longing for a great national institution of learning has been largely realized at Washington in the work of the scientific bureaus of the Smithsonian Institution, the Patent Office, and the corps of engineers. He shows that many of our notable scientists and writers have gained inspiration, training, and strength in this unorganized 'National Seminary of Learning.' More than eight millions of dollars are appropriated every year for the work of the scientific bureaus, exclusive of the Smithsonian Institution proper, and five thousand employees, most of them scientific experts, are at work.

"While most of the offices and officers are in the capital, local branches and stations are distributed throughout the country. Most of the bureaus are inadequately housed, largely in rented quarters, for as their growth has exceeded anticipation, so it has outrun provision for public buildings; yet from time to time suitable domiciles are erected. The various bureaus have never been united administratively, and most of them are now organized separately under four departments (Navy, Treasury, Interior, and Agricultural) and the Smithsonian Institution—the Fish Commission and the Bureau of Labor remaining independent of the executive departments. Plans have been suggested for segregating them in a single department, or perhaps under a regency something like that of the Smithsonian, but these plans are far from mature. The present dean of the scientific corps, as president of the joint commission and as patron and promoter of

edge, is Hon. Gardiner G. Hubbard, a

regent of the Smithsonian Institution; the Nestor is Maj. J. W. Powell, the explorer of Colorado Canyon and maker of the Geological Survey and the Bureau of American Ethnology, a bureau chief since 1868; yet these and other leaders shape progress only through force of character and example, for of general organization there is none."

#### SIR WILFRID LAURIER AT WASHINGTON.

THE Hon. J. W. Longley, Attorney-General for Nova Scotia, contributes to the National Review (London) a brief article on the significance of Sir Wilfrid Laurier's visit to Washington in November last.

Mr. Longley points out in the introductory part of his article the delicate position occupied by Canada in relation both to British imperial affairs and to the Government of the United States. Between this country and Great Britain Mr. Longley admits that only the most cordial relations should exist; nevertheless, he is not blind to certain influences working against international amity:

"Unfortunately, the history of the past hundred years establishes the fact that while not for over eighty years in open hostility, yet during that period they have both had frequent occasions for serious differences in relation to national aims, and on both sides there has been wanting that spirit of general amity and good-will which every good Englishman and American should desire to see, and which the interests of both would undoubtedly suggest. It is idle to attempt to adjust the responsibility, but, looking at it in as impartial a manner as possible, it does seem that in recent years at least there has been a distinct desire on the part of the British people to cultivate friendly relations with the United States, and very considerable indisposition on the part of the people of the latter country to reciprocate this aim. It is quite true that the utterances of the larger portion of the American press are not quite a fair indication of actual public opinion in But, making allowance for this and the States. for the overt hostility of certain classes in the United States toward Great Britain, the fact remains that the sentiment toward Great Britain in the United States is not as warm and cordial as could be desired."

#### CANADA'S ATTITUDE TOWARD "THE STATES."

Mr. Longley shows that most of the misunderstandings between Great Britain and the United States in recent years have arisen from questions in which the people of the British Islands are not directly interested, but which chiefly concern the Canadians. The fisheries, sealing, customs, bonding privilege, and alien labor disputes are matters in point.

As Canada is not independent and has no recognized diplomatic status at Washington, the settlement of these differences is left to the British Foreign Office, although Canada's interests have always been carefully consulted, but the result has been a frequent straining of relations between the United States and Great Britain.

"Hitherto scarcely any effort has been made on the part of the Canadian government to seek direct communication with the American executive in the elucidation of these matters of international misunderstanding. The late Dominion government, indeed, may be fairly classed as a government hostile to the United States, and was regarded with no very friendly eye by the governing bodies at Washington. This was partly due to the feelings and instincts of the men constituting that government, but it was also intensified by circumstances not wholly within their control."

Mr. Longley then speaks of the reciprocity policy of the Canadian Liberals, and of their endeavor, since coming into power, "to get on a friendly footing with the Government at Washington." Sir Wilfrid Laurier and Sir Louis Davies fully recognized, he says, the importance of a good understanding between the two countries, and went to Washington for the purpose of engaging in a frank and friendly discussion of matters at issue.

#### POSSIBLE RESULTS OF THE CONFERENCE.

As to the good likely to come from this meeting at Washington last November, Mr. Longley is optimistic:

"International courtesy makes it indelicate and improper for the negotiators to take the public into their confidence in regard to what was said or done, but enough is already known to justify the pleasant conviction that the conference can only result in lasting good between the two countries. Whatever foolish jingoes may think or say, the true policy of Canada is to live on terms of the utmost friendship with the All neighbors enhance their United States. mutual pleasure by being on friendly terms, and there is hardly a limit to the capacity which neighbors, actuated by a wrong spirit, have to make each other's lives unhappy. It is equally desirable in every way, as has been already hinted, that the United States and Great Britain should be on terms of the greatest cordiality. However much nations of other race and blood may quarrel—and this is altogether undesirable and ought to be avoided—every possible reason exists

for amity and friendly alliance between all the members of the great English-speaking world. If Sir Wilfrid Laurier, acting for and on behalf of the Dominion of Canada, can assist to bring about a termination of the causes of misunderstanding and irritation between Canada and the United States, he has gone a wrong way to remove all causes which militate against friendly relations between Great Britain and the United States. No higher mission could present itself to a colonial statesman, and no incident now happening within the purview of the empire should engage the more sympathetic interest of the British people."

#### A FRENCH VIEW OF SIR WILFRID LAURIER.

O the first January number of the Nouvelle Revue M. Hamelle contributes an acute and discriminating study of the great Canadian statesman whose picturesque exterior and striking personality made so deep an impression on the public mind at the jubilee festivities in England last year. Sir Wilfrid Laurier towered above the other statesmen at the jubilee—the Salisburys, the Chamberlains, and the Roseberys. The regular heroes of the political stage naturally stood modestly at the wings and looked on while the colonial premiers were being fêted and ca-The nation knew little or nothing about the premiers personally, and it simply acclaimed in Sir Wilfrid Laurier and his companions the imperial idea, the principles of colonial expansion, and the marvelous progress of the Victorian M. Hamelle makes all the usual points. He shows us this Franco-American Roman Catholic, the hero of Protestant England; but he also says that on the other side of the channel the spectacle roused mixed emotions. Frenchmen thought of the classic image of the Roman conqueror making his triumphal progress to the capitol with vanquished monarchs chained to his This descendant of the conchariot-wheels. quered race—was he not ministering to the glorification of a rival nation? Yet with that idea lurked also a secret feeling of pride that a Frenchman had won his way to be premier of Queen Victoria's greatest colony.

But M. Hamelle rightly sees that Sir Wilfrid Laurier teaches in his own person a wider lesson than any gratification of either French or English pride. And that lesson is simply the old one of liberty. With the single exception of the American colonies, England has administered her daughter nations with an eye rather to their interests than her own. She has not confused unity with uniformity. She has respected each colony's personality, and has as soon as possible left it free to develop on its own natural lines.

# A BRITISH VIEW OF THE SPANISH-CUBAN CRISIS.

WRITER in Blackwood's Magazine for February makes a trenchant analysis of the situation in Spain. As preliminary to an understanding of the present crisis there, this writer puts aside a number of secondary causes, such as the alleged ill-will of the United States and the encouragement it has given to the Cuban insurgents, the obstinacy of Canovas, the weakness of Martinez de Campos, and the incompetence of Weyler. These he regards as "the visible signs of the something behind which is working for the misfortune of Spain."

A great part of this untoward "something behind" is discovered when we come to know the Spaniard's conception of the relation which he sustains to his government. When the incompetence of his government is revealed, the Spanish citizen freely admits that the government is bad, but he seems to have no conception

of rational reformatory methods.

"One can note that the Spanish mind works in such and such a way. Why it works just so, and not in another fashion, is the mystery which refuses to be explained. The explanations which are offered do not, when you come to look into them, amount to more than this, that there is something Spanish in the Spaniard which causes him to behave in a Spanish manner. It is better to keep to the demonstrable fact, which is that he regards his government much as we are told the Indian does the Sirkar—namely, as a force beyond his control. If by wheedling, craft, or bribery he can get an advantage from it, then he He is prompt to seek his own good in that will. fashion. But it never occurs to him that he can control this mysterious force. At the utmost, and when provocation has gone beyond endurance, or when the Sirkar looks weak, he will break out into murderous fury, and will kill, not the administrative vices which elude his grasp, but the individual representative of the state on whom he can lay hands. And this is no new thing in Spain. In mediæval times, when there was a Cortes in Castille, the murder of the 'advocates' -i.e., the members of the privileged cities—was a not uncommon resource when things were go-In later times a civil governor has occasionally been massacred and his corpse dragged through the streets. But to combine for a common purpose, to select their own representatives, to vote for them, and to insist on a definite line of conduct—that is what the Spaniard cannot do.

# WHO GOVERNS SPAIN?

"The mass of the country people, the vast majority of the inhabitants of Spain, would never

vote at all of their own free will. In the towns there are those who take, as far as writing and speaking go, a lively interest in politics, but with them it evaporates in words. Time was when there were two great governing forces at work in Spain—those two great mediæval powers which a barbarous people can realize—the King and the To-day they are not destroyed, but divided against themselves, or against one an-The old royalist sentiment is split between the ruling dynasty and the Carlists. Church sympathizes in its heart with the lost Therefore it is kept at arm's length by the victor. It can intrigue, it can worry a Darwinian professor out of his chair, but it cannot govern. There is no governing class in Spain. The aristocracy destroyed its own power centuries ago, when it refused to pay taxes because it rendered military service, and allowed itself to be extruded from the Cortes which met to vote the taxes. A strong ruling line might have supplied the country with a vigorous despotism. But the air of Spain has been fatal to its dynas-The Hapsburgs ended with an idiot. Bourbons have sunk to cretinism."

That any satisfactory scheme of autonomy for Cuba or any other portion of Spain's dominions could be evolved out of such conditions in the home government as Blackwood's describes, seems simply out of the question. The Spanish people themselves are far from having "home rule" in

the Anglo-Saxon sense.

It is this writer's opinion that the Cuban rebellions have been due to the weakness of the mother country rather than to the harsh character of her rule, but however this may be, the fact is that Cuba is for the time being ruined, and with it Spain's trade with the island, while Spanish soldiers have died there in enormous numbers, and thousands of native Cubans have perished of starvation.

# THE INTEREST OF THE UNITED STATES.

Meanwhile, what has been the attitude of the United States Government? In the diplomatic phrase it has been "correct." The Spanish squadron of from thirty to forty vessels off the Cuban coast has been powerless to intercept filibustering expeditions from American ports, but it certainly has not been proved that these expeditions have gone by the connivance of Washington. Nevertheless, the language used by Presidents Cleveland and McKinley has encouraged the insurgents to hope for ultimate intervention, and this forms the chief grievance of the Spaniards against the United States.

The writer of the Blackwood article freely admits, however, that the actions of our Govern-

ment give Spain no substantial ground for complaint, even if Americans do sometimes say things "well calculated to excite anger among Europeans who possess colonies in the New World."

"The geographical position of Cuba does make it of immense importance to the United States. The mere obligation which its perpetual troubles throw upon them to enforce their neutrality laws in the face of considerable administrative difficulties would of itself justify the Presidents in asking for the cooperation of Spain. They are entitled to call upon their neighbor either to vindicate his authority or confess that he cannot do Nor can it be fairly denied that if the administration at Washington were influenced by the principles which have commonly guided European states, it would have held itself justified by national interests in annexing Cuba or helping it to independence long ago. blocks the Gulf of Mexico, and if it were in the hands of a power possessing an active navy, might be the means of inflicting immense loss on America. Great conquests have been undertaken on less provocation, and the conquerors have been held to have deserved well of their country. Neither must it be forgotten—or considered as a detail of no importance—that the United States have vast financial interests in Cuba, which have suffered greatly from the war. It is unnecessary to go at length into the motives which have restrained successive Presidents, or even to suppose that they were all creditable. We are only concerned with the fact that America, though tempted by opportunity and possessed of power, has hitherto held her hand. Yet it has been impossible for her to refrain altogether from She has spoken; and her words have speaking. had a certain effect, which cannot but in its turn produce other consequences for Spain and Cuba."

# THE FARCE OF "AUTONOMY."

The measure of so-called autonomy which has been set in operation in Cuba stands revealed by this article in all its pitiful inadequacy:

"The Cubans have one sentimental grievance and three real ones. They wish to be as independent as their brother creoles and half-breeds on the mainland. They complain of the great arbitrary powers of the governor-general; of the swarms of Spanish officials and troops who are quartered upon them; and they also claim that Spain sacrifices their commercial interests for its own benefit, while giving them no equivalent market in Europe, and even shutting their sugar out of America by refusing to make a treaty with the States. The autonomy offered will not remove one of these grievances. It is obvious

that it will not pacify those who wish for independence. It leaves the governor-general in possession of large arbitrary powers, gives no security against the appointment of officials from Spain, retains commercial privileges for the mother country, and leaves her in a position to put a veto on any commercial treaty the colony may wish to make with the United States. No surprise need be felt that the insurgent leaders in the bush refuse to accept any such autonomy, and until they are pacified by force or persuasion nothing is done. Mr. McKinley may well say that he will wait to learn what result is produced in Cuba by Señor Sagasta's policy. The United States are not ready for armed intervention, and he need be under no apprehension that he will be deprived of an excuse for inter-Moreover, he has gained this fering again. great point, that Spain has in reality conceded the right of the United States to speak, and will be ill-placed to resent intervention if this tardy and illusory concession fails, as it must almost inevitably fail."

# THE HERO OF THE YALU.

An American in the Chinese Service.

THE story of the life of Philo Norton McGiffin, late captain in the Chinese navy, is told by Mr. Calvin Dill Wilson in the Home Magazine for March.

Captain McGiffin was the only man of American or European blood who ever commanded a modern warship in battle. His bravery at the great fight on the Yalu in 1894 has been recognized the world over. The writer of this article says of him:

"He belongs to the history of our time. Educated by the United States, he soon found that our nation in a state of peace offered him no chance to utilize his powers and the training that he had received; he was born for stirring events, and as the events did not seek him, he set forth in quest of the events. He very justly conceived of himself as belonging not merely to this nation, but to humanity; he was a thinker. not a mere seeker for adventures, and realized that his equipment and his gifts might be of more service to the world by going away from America than by staying within it. His patriotism was for America if she needed him; when she did not need him his mission was elsewhere. If he had been a mere rollicking adventurer, who owned no ties to country and was ready to sail for any port that promised a new sensation or to hire himself to any nation that needed fighters, he would have little claim to our attention, and

the halo of the hero would soon fade or be seen to be but an imitation of the laurel; but this was a man, a patriot, a soldier, great-hearted and sincere, all whose motives will bear closest analysis and whose deeds were pure gold.

"The career of this young American is sufficient answer to the current opinion that romance is dead. His life is an illustration of the saying of Disraeli, 'Adventures are for the adventurous.' His memory should not be allowed to perish for want of such sympathetic tribute as may enable his countrymen to understand him and to learn the lesson of his activities."

At the outbreak of hostilities between Japan and China in 1894 McGiffin was in his thirty-fourth year and had been in China's service about ten years. The Chinese had placed him in charge of their principal naval academy, and he enjoyed the confidence of Li Hung Chang, Admiral Ting, and other great lights in Chinese officialdom. At the outbreak of the war with Japan he had a leave of absence, and could have returned to America and thus avoided all personal peril, but instead he promptly offered his services to the government, and was intrusted with the command of the Chen Yuen, the sister ship of the Chinese flagship.

Captain McGiffin's heroic conduct in the first great battle of modern iron-clads furnishes the one bright page in China's record for the war. Though terribly wounded, he followed the noble example of an American naval hero of a former generation—he "never gave up the ship."

"To have seen McGiffin on his ship during that fight of the Yalu would have been a sight to remember forever; that dauntless spirit rode the forces of battle as if they were a steed. He was the soul of his ship, the spirit of the storm, the Prospero with his magic wand. body was shattered, but his mind kept awake. He was so near the first gun when it exploded that his clothing was set on fire, his eyebrows and hair burned, his eyes injured, and although his ears were rammed as tightly as possible with cotton, the drums of both ears were permanently injured by the explosion. He was unconscious for a time, but as quickly as he regained his senses he was on his feet and giving orders. He received forty wounds, many of them caused by splinters of wood; he with his own hands extracted a large splinter from his hip, and holding his eyelids open with his finger, this heroic man navigated his ship, which had been struck four hundred times, safely to its dock, skillfully evading capture, the Chen Yuen being the only one of the Chinese vessels that came out of that fight with credit. A competent authority has declared that the daring of McGiffin, as shown in

the battle of the Yalu, has possibly never been surpassed in the history of the world."

In that terrible battle McGiffin's nerves, limbs, and senses were shattered, and within three years insanity and death followed.

# DU MAURIER ON PICTORIAL SATIRE.

HARPER'S MAGAZINE" is very fortunate in containing the delightful discursive essays on "A Social Pictorial Satire,"by the late George Du Maurier, the second of which is published in the March number and devotes itself largely to Charles Keene. Mr. Du Maurier says that Keene was the opposite to Leech—who was discussed in the February essay-except for the gentleness, kindness, and modesty which characterized both of them. Keene was "absolutely unconventional and even almost eccen-He dressed more with a view to artistic picturesqueness than to fashion, and despised gloves, and chimney pot hats, and black coats. and broadcloth generally. Scotch tweed was good enough for him in town and country alike. Though a Tory in politics, he was democratic in his tastes and habits. He liked to smoke his short black pipe on the top of omnibuses; he liked to lay and light his own fire and cook his mutton chop upon it. He had a passion for music, and a beautiful voice, and sang with a singular pathos and charm, but he preferred the sound of his bagpipes to that of his own singing. and thought that you must prefer it too!"

"Among his other gifts he had a physical gift of inestimable value for such work as oursnamely, a splendid hand—a large, muscular. well-shaped, and most workmanlike hand, whose long, deft fingers could move with equal ease and certainty in all directions. I have seen it at work—and it was a pleasure to watch its acrobatic dexterity, its unerring precision of touch. It could draw with nonchalant facility parallel straight lines, or curved, of just the right thickness and distance from each other-almost as regular as if they had been drawn with ruler or compass-almost, but not quite. The quiteness would have made them mechanical and robbed them of their charm of human handicraft. A cunning and obedient slave, this wonderful hand, from which no command from the head could come amiss—a slave, moreover, that had most thoroughly learned its business by long apprenticeship to one especial trade, like the head and like the eye that guided it."

# KEENE'S METHODS OF WORK.

Mr. Du Maurier says that Keene at one time carried a little ink-bottle at his button-hole and

steel pens in his waistcoat pocket, so that he would be prepared to sketch any little bit that took his fancy in his walks and rides. facility in sketching became phenomenal, as also his knowledge of what to put in and what to leave out, so that the effect he aimed at should be secured in the production with the smallest amount of labor.

#### DU MAURIER ON HIMSELF.

But even more interesting than Du Maurier's picture of Charles Keene is his picture of himself as an illustrator—"a difficult and not very grateful task," he protests. Du Maurier says that when he was made a member of the Punch dinner-table party, the social and domestic dramas were allotted to him, the nursery, the schoolroom, the dining and drawing rooms and croquetlawns of the more or less well-to-do. "I was particularly told not to try to be broadly funny, but to undertake the light and graceful business like a jeune premier." Mr. Du Maurier says he settled into this rut the more easily because his sight was defective. In his own words, it was "so sensitive that I cannot face the common light of day without glasses thickly rimmed with wire gauze, so that sketching out of doors is often to me a difficult and distressing performance. That is also partly why I am not a sportsman and a delineator of sport."

# THE AIMS AND IDEALS OF DU MAURIER'S JOKES.

"Sam Weller, if you recollect, was fond of 'pootiness and wirtue.' I so agree with him! I adore them both, especially in women and chil-I only wish that the wirtue was as easy to draw as the pootiness.

"But indeed for me-speaking as an artist, and also perhaps a little bit as a man-pootiness is almost a virtue in itself. I don't think I shall ever weary of trying to depict it from its dawn in the toddling infant to its decline and setting and long twilight in the beautiful old woman who has known how to grow old gradually. to surround it with chivalrous and stalwart manhood; and it is a standing grievance to me that I have to clothe all this masculine escort in coats and trousers and chimney pot hats; worse than all, in the evening dress of the period!—that I cannot surround my divinity with a guard of honor more worthily arrayed!

"Thus, of all my little piebald puppets the one I value the most is my pretty woman. I am as fond of her as Leech was of his; of whom, by the way, she is the granddaughter! artistic vanity; it is pure paternal affection, and by no means prevents me from seeing her faults; it only prevents me from seeing them as clearly as you do!

"Please be not very severe on her for her grandmother's sake. Words fail me to express how much I loved her grandmother, who wore a cricket cap and broke Aunt Sally's nose seven

"Will my pretty woman ever be all I wish her to be? All she ought to be? I fear not!

"On the mantel-piece in my studio at home there stands a certain lady. She is but lightly clad, and what simple garment she wears is not in the fashion of our day. How well I know Almost thoroughly by this time—for she has been the silent companion of my work for thirty years! She has lost both her arms and one of her feet, which I deplore; and also the tip of her nose, but that has been made good!

"She is only three feet high, or thereabouts, and quite two thousand years old, or more; but

she is ever young-

"'Age cannot wither her, nor custom stale Her infinite variety!'-

and a very giantess in beauty. For she is a reduction in plaster of the famous statue of the Louvre.

"They call her the Venus of Milo, or Melos! It is a calumny—a libel. She is not Venus, except in good looks; and if she errs at all, it is on the side of austerity. She is not only pootiness, but wirtue incarnate (if one can be incarnate in marble), from the crown of her lovely head to the sole of her remaining foot—a very beautiful foot, though by no means a small one —it has never worn a high-heel shoe!

"Like all the best of its kind, and its kind the best, she never sates nor palls, and the more I look at her the more I see to love and worshipand, alas! the more dissatisfied I feel—not indeed with the living beauty, ripe and real, that I see about and around-mere life is such a beauty in itself that no stone ideal can ever hope to match it! But dissatisfied with the means at my command to do the living beauty justice-a little bit of paper, a steel pen, and a bottle of ink—and, alas! fingers and an eye less skilled than they would have been if I had gone straight to a school of art instead of a laboratory for chemistry!"

This is the lady, then, who more than any one female was the original of Du Maurier's "pretty woman."

Du Maurier hints, possibly, at certain unfulfilled aspirations when he says:

"If there had been no Charles Keene, I might perhaps, with practice, have become a funny man myself—though I do not suppose that my fun would have ever been of the broadest!"

# TRIBUTES TO ALPHONSE DAUDET.

S is natural, the French reviews devote a considerable amount of space to the late Alphonse Daudet, his literary career, personal character, and position in the world of French Probably no successful writer was ever more admired and even loved by his own contemporaries and rivals than the brilliant author of "Tartarin" and "Le Petit Chose." have come forward to pay him tribute, beginning with Zola and ending with Anatole France. The latter in the Revue de Paris gives some interesting details of the great Provençal novelist's personal history. He came of a long line of traders, Daudets and Reynauds, in whom were to be found a strong mystical strain which led many of them to become priests and nuns. This strain showed itself again and again in the successful man of letters whom Paris is still mourning. Thus he was ever ready to "go into retreat," and his best work was always produced in absolute retirement and solitude. M. France alludes touchingly to the part played in Daudet's lifeboth as man and as artist-by his wife, herself an exquisite and refined writer. Had it not been for her influence, there is little doubt that he would have remained to the end one of those incomplete children of genius who never fulfill the expectations formed of them. All Alphonse Daudet's best work was done after his marriage to Julia Allart, and it was always his eager wish that his debt to her should be acknowledged by his countless readers and friends.

In the Nouvelle Revue M. Albalat finds many happy expressions by which to testify his ardent appreciation of Daudet, who, says his critic, "did not choose his themes by an effort of the will. He painted that which he had seen, and reproduced the vibration communicated to his own soul by the men and things which tasked his own experience. It is this which places a gulf between his talent and that of the De Goncourts, who destroyed their nerves by incessant application; or that of M. Zola, who undertakes his task as a scholar executes his theme, and whose weary romances are cast in uniform molds filled with matter of varying composition." M. Albalat assigns to Daudet the place of the chief realist, because his observation was singularly impersonal; and in this claims for him close kinship with Balzac, "whom he admired with no reserves," and his own nature only to be derived by the extreme perfection of his art. Daudet had the realistic passion, but he sought typical fact. was also "a great idealist, and the eloquence, the morality, and the high signification of his work have nothing in common with the monotonous and heavy production of an author distinguished

by interminable repetition "—Zola. To the influence of Dickens we owe the famous "Fromant Jeune et Risler Ainé," with its vivid pictures of mercantile life and society in the Marais, the old commercial quarter of Paris. But Daudet soon reverted to more imaginative work. Of his native Provence he was passionately enamored, and of its inhabitants he said: "I adore them: but their nature also amuses me." And he wrote the two Tartarins, chefs-d'œuvres of profound humor and irony combined.

In the sad years of immobility, nailed to his arm-chair, he would say, "Alas! I am no more a real presence," yet he became ever nobler and tenderer; and suffering caused in him neither bitterness nor revolt; and in memory his image

attains its full and grand proportions.

M. Albalat finds a touching word for Madame Daudet, the collaborator of his work and "the faithful sister of his life," and ends by saluting in final admiration the great artist who, having charmed his own generation, has now made triumphal entry through the gate of posterity.

The Revue Encyclopedique of January 15 is a Daudet number. We have Daudet Intime, Daudet's youth, Daudet in the Journal of the De Goncourts, Daudet the novelist, Daudet the dramatist, extracts from his works, etc. The number is profusely illustrated.

# THE LITERARY "CLAQUE."

A LIBRARIAN'S views on the methods adopted by publishers to force new books into circulation are tersely set forth in a recent number of the *Monthly Bulletin* issued by the Carnegie Library of Pittsburg. By way of illustration the writer cites a recent typical instance which our readers will probably have no great

difficulty in recognizing:

"A well-known English novelist was about to publish a new novel. Either he or his publishers signaled the claqueurs at the wrong time; for the praise of the book actually began before it was The public on both sides of the ses published. was regaled with laudatory accounts of what a marvelous book it was going to be. The author was diligently interviewed by the London newspapers. He was rewriting the book for the third time. He had poured his vitality into it to such an extent that he was physically exhausted and almost prostrated. Evidently the author was The whole about to be delivered of an oracle. literary claque seemed to be ostentatiously intoning, as a grace before meat: 'For that which we are about to receive, may the Lord make us truly thankful.' The public was supposed to be hanging on the author's words, in the interviews,

for some, even the slightest, intimation as to what direction its gratitude should take. Of course, when the book was finally published the edition was immense, the demand tremendous, and the sales—ah! the sales, that was the object of all this heralding, trumpeting, and fanfaronade."

This librarian disclaims animosity toward any particular book, and asserts that it is not even his purpose to discourage the sale of "boomed" books, but he has a librarian's grievance, for all this blaring of trumpets by which each new book is heralded helps to create an artificial demand for it at the public libraries, and here is the rub.

"A library cannot buy the whole edition of a book nor any large part of it. It would take several hundred copies of a book that had been skillfully 'boomed' to supply the demand for it at the delivery desk of any public library in a large city. Moreover, such books are apt to have only an ephemeral popularity. Literary claques may

"' Disturb our judgment for the hour, But at last silence comes.'

Emerson's advice was, not to read a book until it was at least a year old. If the users of the library were to follow this advice, there would be much less difficulty in meeting the demand. The best books are not heralded and applauded by claques. A really great book needs no such questionable methods to bring it to the attention of people of taste. And we beg leave to remind those who inquire at the delivery desk for the latest literary fad, and find that every copy is out,' that there are standing on the shelves many other books of greater purity, truth, and power. And not the least attractive thing about them is that they are not advertised like a new brand of soap."

#### OFFICE-SEEKING UNDER JEFFERSON.

M. GAILLARD HUNT, of the Department of State, who in previous numbers of the American Historical Review has dealt with the history of office-seeking under Washington and Adams, presents in the January number an article on "Office-Seeking Under Jefferson's Administration," based, like the preceding articles, chiefly on the letters of the applicants on file in the Department of State. He says:

"The political campaign which resulted in Jefferson's election to the Presidency was one of unparalleled bitterness of feeling. Chiefly through his devoted lieutenants he had inspired the ranks of his party with the belief that the success of democratic government depended upon the success of the party which he led. His triumph, therefore, was popularly believed to be

the triumph of the common people. Henceforth forms and ceremonies were to be set aside, and there were to be no privileges for one that another might not also enjoy. 'Equal and exact justice to all men, of whatever state or persuasion, religious or political,' was the first of the general principles of government which Jefferson announced in his inaugural address. The victory which he and his party gained was complete, but he thought that their permanent supremacy might be rendered certain if he could attract to his standard Federalists of the milder school. accomplish this, it was plain that the hot hatred between the parties must be tempered. fore he made at his inauguration this famous announcement: 'But every difference of opinion is not a difference of principle. We have called by different names brethren of the same principle. We are all republicans; we are all federalists.' The Federalists were soothed by these gentle words, and manifested a disposition to give the man who had beaten them a chance to show that he was not actually as bad as they had believed him to be. But if he was to acquire popularity with them he must not remove them from office to make room for Republicans, and the Republicans soon made him understand that as they had won the election they thought they had a right to enjoy the spoils of victory. What course to pursue so as to attract his opponents without repelling his friends was a perplexing question to the President. On two points he made up his mind The leading Federalists bein the beginning. ing, as he called them, 'incurables,' should receive no favors from him, and those appointments made by Adams after the result of the Presidential election became known should be treated as 'nullities.'"

Three days after his inauguration Jefferson wrote to Monroe:

"I have firmly refused to follow the counsels of those who have advised the giving offices to some of their leaders in order to reconcile. have given and will give only to Republicans under existing circumstances. But I believe with others that deprivations of office, if made on the ground of political principles alone, would revolt our new converts and give a body to leaders who now stand alone. Some, I know, must be They must be as few as possible, done gradually, and bottomed on some malversation or inherent disqualification. Where we shall draw the line between retaining all and none is not yet settled, and will not be until we get our administration together, and perhaps even then we shall proceed a talons, balancing our measures according to the impression we perceive them to

#### CHANGES FOR POLITICAL REASONS.

The results of Jefferson's action in the matter of offices are thus described:

"Writing on the same subject to William Duane, the editor of the Aurora, later in the year (July 24), he said that as a result of removals, deaths, and resignations, only 130 offices subject to his appointment were held by Federalists, out of a total of 316. There is a tabulated statement among the archives, showing by States and districts the officers of 'external revenue,' or customs, and the changes which had been made up to June 16, 1803. Of a total of 165 officers, 59 were new appointments. Eight changes are charged to death, 9 to 'misbehavior,' and 4 to resignation. The remaining 38 changes were doubtless based upon political considerations. Ædanus Burke's letter, already quoted, and a few other letters indicate that some of the incumbents who were not removed by Jefferson were Republicans. Before his administration expired 46 more appointments were made in the customs service, making 105 in all."

Among those for whom office was sought, though he would not himself seek it, was Andrew Jackson, whose friends wished Jefferson to make him the first governor of the Territory of Or-A neighbor of Jackson's, however, protested against the appointment on the ground that "Old Hickory" was a man of violent passions and arbitrary in his disposition. In conclusion

Mr. Hunt says:

"The applications for office during Jefferson's administration prove beyond dispute that prevailing public sentiment on the subject of appointments and removals was in favor of their being made for political reasons. Jefferson recognized and followed this sentiment, and he achieved a popularity which increased instead of diminishing. His first election to the Presidency was obtained by a narrow majority through the House of Representatives, the electoral colleges failing to give him a majority vote. His second election was won easily, the opposition to him having become insignificant, and he might have secured a third term had he desired it. After his retirement he still remained the foremost character in America in the eyes of his party, and that party has continued to conjure with his name for nearly a century. No other President since Washington has enjoyed such a popular approval, with the possible exception of the man whom he would not appoint as governor of the new Territory of Orleans, and whom his correspondent described as 'of Violent passions, arbitrary in his disposition, and frequently engaged in broils and disputes.'"

#### WERE THE FIRST AMERICAN COLONISTS IRISH?

HE Irish have had so large a share in peopling America in modern times as to make doubly interesting the story of their first landing. Mrs. Marion Mulhall, writing in the Dublin Review on the "Hiberno-Danish Predecessors of Columbus," seeks to show that of all European peoples the Irish were the first to settle on American soil. She says:

"Rafn, in his 'Antiquitates Americanæ,' says that a people speaking the Irish language were found in Florida as far back as the eighth century, and another distinguished historian, Von Tschudi, in his work, 'Peruvian Antiquities,' mentions that the country which lay along the coast reaching from Chesapeake Bay and extending down into the Carolinas and Florida had been peopled by Irishmen, and that a manuscript had been found before he finished his book which proved that what had formerly been mere conjecture was now converted into a certainty. The traces of Irish origin which have been observed among some of the Indian tribes of North and Central America strengthen the presumption of early Irish colonization. Professor Rask, the eminent Danish philologist, in his book, 'Samlide Afhandlinger,' Book I., p. 165, deals with the early voyages of the Irish to Iceland and the similitude between the Hiberno-Celtic and American Indian dialects. remarkable that the famous Arabian geographer, Abdullah Mohammed Edrisi, who was born in Ceuta in 1099, wrote at the invitation of Roger II., King of Sicily, a work bearing the title 'Muzhat al-Mushtak i ikhtirak alafak' (that is. 'Amusement of the curious in the exploring of countries'), in which the New World is described and called Great Ireland.

"The first name given definitely by the 'Landnamabok,' p. 132 (which may be called the Doomsday book of Iceland), as having visited the New World is Ari-Marson, the great-grandson of O'Carroll, King of Dublin, who was wrecked on the coast of Florida in 983, which he called Great Ireland or Whitemen's Land."

Mrs. Mulhall afterward goes on to say that it was from Limerick merchants that Icelanders heard of the new continent; and impelled by this news they went on to Greenland and Vinland in the tenth century. Columbus certainly voyaged one hundred leagues beyond Thule, possibly to Iceland, where he may have heard of the Norse discoveries of transatlantic land.

The Irish seem to have succeeded to the Scotch in the endeavor to make history prove their race in all things preëminent. Heretofore it has been supposed that the Irish discovery and occupation of America began on Manhattan Island.

# MILAN'S GREAT THEATER.

In Music for January Mr. Edward Baxter Perry writes on "La Scala and Giuseppe Verdi," associating the great Italian theater with the greatest of Italian composers, who has indeed been identified for half a century with the fortunes of La Scala.

Now, in Verdi's old age, the city of Milan, which has maintained the theater for many years, is heavily in debt, and declines to make up the large yearly deficit to keep it running. It seems, then, that La Scala's glory and usefulness are over. Mr. Perry gives a brief sketch of the ancient building's interesting history:

"Early in the eighth century a wealthy and high-born lady of Milan, whose family name was Scala and who was for a time duchess of the province, built here, at her own expense, a large, substantial church edifice of gray stone in what is now the heart of the city. The church was dedicated and generally known under the name Santa Maria della Scala—that is, of the Scala family. The open square in front of the building came to be known as the Place or Piazza della Scala, and still retains this appellation.

"The years rolled by. Time and war did their work. The lady and her entire family passed from the face of the earth, leaving nothing but a name on the page of local history and this old stone church. This gradually fell into disuse, was finally entirely abandoned and dismantled, and stood for many years empty, a mass of useless, ownerless masonry. In the year 1778 the city of Milan took possession of it, entirely remodeled the interior into the most spacious and commodious of European theaters, with the largest and best-equipped stage at that time to be found on the continent. From then till now, a period of a hundred and twenty years, it has led the opera-houses of the world in the splendor of its scenic decoration, the artistic excellence of its performances, and especially in the eminence and fame of its singers.

"The name of the old church and its builder clung to the walls, in spite of the great transformation within and the total change of purpose to

which the building was devoted. Thus Santa Maria della Scala became Teatro alla Scala, more familiarly known simply as La Scala. Now it has fulfilled its purpose for the second time ap parently, and reached a second period of rest, its empty silence haunted by a double set of phan-Its venerable stones are satutom memories. rated with music, both sacred and secular, with chants, masses, and requiems from its centuries of early history, and with melting arias, dramatic recitatives, and brilliant colorature passages from its long operatic career. To what sounds will they next reëcho, I wonder, and to what new purpose will future generations put these massive walls! In any case, whatever its destiny, it is safe to say that the building will remain La Scala as long as one stone rests upon another."

#### VERDI IN MILAN.

"Inseparably connected with La Scala are the name and fame of the veteran composer, the master musician of Italy, Giuseppe Verdi, the only remaining musical giant of the many produced in the first two decades of our century. He has been identified with the musical life of the land and with the work and renown of the Scala for fully fifty years. Many of his operas were written expressly for presentation here, and all have been early and ably given, with the best possible resources and with conscientious regard for the best results, in this chief center of the Verdi For Verdi, like every other great man, has had his active partisans and equally active enemies; has created, by the trenchant force of his genius, divisions, dissensions, in fact, a practical revolution in the musical world south of the Alps.''

"Verdi is known by sight to all the Milanese and honored as more than a king. Many an affectionate, admiring glance follows his modest gray-clad figure as he passes upon the streets with bowed head, thoughtful face, but still energetic step. Yet such is his well-known aversion to conspicuous publicity or anything like a demonstration that no hat is raised, no hurrah resounds, and no apparent notice is taken of him in the public highways, except by his intimates."

## THE PERIODICALS REVIEWED.

## THE CENTURY.

HE March Century contains two articles on the Klondike; one, "The River Trip to the Klondike," by John Sidney Webb, and the other, "The Rush to the Klondike Over the Mountain Passes," by E. S. Curtis, both of them beautifully and adequately illustrated. Mr. Webb says that it does not take long to stake out a creek when the discovery of gold is made. The man who makes the find is entitled to the usual five hundred feet and an additional five hundred feet by the right of discovery. One creek was staked out from end to end within twenty-four hours after gold had been found in it. Mr. Curtis, who tells of the rush over the mountain passes, says that many more men would have gone over in 1897 if the steamship capacity had allowed them to get to Dyea. Every boat, steam and sail, was packed with men, cattle, and freight. One of the worst obstacles to the mountain pass route was the condition of the trails, which destroyed numbers of horses from exhaustion, and still more by falls among great bowlders, in which case heavy packs very generally caused broken limbs. In this manner many men who started with horses as part of their stock in trade lost their entire capital.

The March Century begins with an article on "The Mammoth Cave of Kentucky," by John R. Procter, formerly State Geologist of Kentucky, with magnificent drawings showing the points of interest in the cave by Castaigne. Mr. Procter says that the air of the cave is considered very beneficial to consumptives, and that in 1843 two stone cottages were built against the walls of the cave for the use of consumptive patients. Fifteen remained there five months, and when they went out three died before they reached the hotel. This was, he thinks, on account of the lack of sunlight, and he believes that these immense reservoirs of dry, pure antiseptic air will be tapped and part of their contents poured into sunlight sanitariums on the plateaus above

John Burroughs makes a pleasant, characteristic article on "Songs of American Birds," illustrated from photographs of mounted birds that are in several cases very successful. Mr. Burroughs tells of a discussion he had with Robert Louis Stevenson as to whether various birds of the same species had each their distinctive songs. Stevenson said that we might just as well talk of the song of men; that every blackbird had its own song, and told of a remarkable singer he used to hear in the Scotch moors. Mr. Burroughs says this was an exception, and that of blackbirds twenty-four out of twenty-five would sing the same song, while the twenty-fifth might show unusual powers.

An article by Rupert Hughes on "Women Composers" gives the first place to Mlle. Cécile Chaminade, a Parisian, who began to compose at the age of eight.

## HARPER'S MAGAZINE.

THE March Harper's contains an article on "The Traditional Policy of Germany in Respect to Austria and Turkey," by "An Eastern Diplomat;" a description of our "National Seminary of Learning,"

by W. J. McGee, and George Du Maurier's posthumous essay on "Social Pictorial Satire," which we have reviewed in another department.

The very notable and excellent series of articles by Dr. Henry Smith Williams on "The Century's Progress in Science" come this month to a chapter which concerns itself with the advances made in anatomy and physiology during these past hundred years. Dr. Williams' matter is perforce too full and complete to make with justice any sketchy quotation from. It is excellently well worth reading.

Mr. Julian Ralph has been traveling through Turkey and tells in this number of *Harper's* what he saw "In the Wake of a War," in that excellent reportorial style of which he is a master.

Joel Benton's "Reminiscences of Eminent Lecturers" give readable anecdotes of Horace Greeley, Wendell Phillips, E. H. Chapin, Josh Billings, John B. Gough, Fred Douglass, P. T. Barnum, and others.

In the "Editor's Study" Mr. Charles Dudley Warner gives it as his opinion that the phenomenal popularity of "Quo Vadis" in this country is due to the fact that it is the poorest novel of Sienkiewicz. Its popularity, he thinks, is due to the fact that its story is about the early Christians and their persecution, a subject sure to attract wide attention, and also the "publicity" that Nero has even in the nineteenth century, while other romances of the author are on ground more unfamiliar.

## SCRIBNER'S MAGAZINE.

THE March Scribner's begins with a new series of "The Workers," Mr. Walter A. Wyckoff's account of his experience as a laboring man, and this further recital describes his sojourn in the West.

Mr. E. Neville-Rolfe makes a pleasant contribution of a description of the recently excavated house of A. Vettus, which has enabled him to give in detail the facts of "A Pompeiian Gentleman's Home Life." Most of the photographs in illustrating the article were made for Scribner's Magazine at Pompeii.

Henry Cabot Lodge's "Story of the Revolution" is concerned in this chapter with the events of the fall of 1775 and the first half of the year 1776 to the Declaration of Independence, on July 4.

## THE COSMOPOLITAN.

WE have quoted in another department from an article by "A Hawaiian Government School-Teacher" under the caption, "Shall We Annex Leprosy?"

Prof. E. H. Holden contributes an article in the series on "The Choice of a Profession," and discusses the field of science as to its opportunities for young men. Among the many advantages of a scientific profession he cites the unexpected one of its tendency to prolong the life of its votaries. While the average longevity of men is only thirty-two years, he says that some one has had the patience to find out that the average age of seventeen hundred astronomers and mathematicians was sixty-four years; in other words, astronomers live twice as long as other men. Another authority puts

the average life of artists at fifty-nine, of literary men at sixty-five, and of scientific men at seventy-four years.

The well-known newspaper writer, Mr. T. C. Crawford, contributes an article on "The Dreyfus Mystery," embodying the result of some investigations he made in a visit to Paris to find out the evidence in the Dreyfus case. Mr. Crawford has the view of most American journalists, that Dreyfus is an absolutely innocent man. Most of the reasons which have led him to this conclusion have been made public in the newspapers since this article was prepared for the Cosmopolitan. Mr. Crawford says that it is a matter of current report that everything is being done in the island prison of Dreyfus to drive him to despair by restrictions and punishments of a character that must break him down, though it is difficult to believe this in the face of his resolute and courageous letters to his family. Mr. Crawford says that since the publication of the evidence no one outside of France believes in the guilt of Captain Dreyfus. "But who is the man who has woven about him the web of forgery and hate?"

A very handsomely illustrated article describes "The Emperor William of Germany as a Huntsman." On his preserves his majesty shoots alone or with a small select company of guests. The Emperor is very fond of stalking the red deer, and has the trophies of hundreds of stags. But aside from this private shooting there are great imperial court hunts, held in such districts as the Forest of Letzlingen. On these occasions part of the forest is surrounded by a high rail fence, nets, or sheets of canvas, and drivers frighten the game into a place convenient for its slaughter by the noble sportsmen. The photographs show an array of game as a result of these royal hunts which resembles rather a scene in a Chicago abattoir than a game-bag.

## McCLURE'S.

THE March number of McClure's Magazine has a good, practical article by Hamlin Garland on the road to the Klondike, from which we have quoted in the department of "Leading Articles."

The magazine continues Charles A. Dana's "Reminiscences," which are concerned this month with the battle of Chattanooga and the work in the War Department with Stanton. Of Stanton Mr. Dana says: "Mr. Stanton was a short, thick, dark man with a very large head and a mass of black hair. His nature was intense and he was one of the most eloquent men that I ever met. Stanton was entirely absorbed in his duties, and his energy in prosecuting them was something almost superhuman. When he took hold of the War Department the armies seemed to grow, and they certainly gained in force and vim and thoroughness. One of the first things which struck me in Mr. Stanton was his deep religious feeling and his familiarity with the Bible. He must have studied the Bible a great deal when he was a boy. He had the firmest conviction that the Lord directed our armies." Mr. Dana says that the popular impression that Mr. Stanton took a malevolent delight in brow-beating his subordinates was a very mistaken one.

McClure's publishes some very interesting pictures of the expedition which sent Andrée and his balloon off to the north pole, together with the letters from Nils Strindberg. Andrée's companion, to his brother in New

York, written just before the start. Walter Wellman contributes a short article in conjunction with this, under the question, "Where is Andrée?" Mr. Wellman considers three different probabilities; one that the "Ornen," Andrée's balloon, came down in the sea, in which case the aeronauts were drowned. If it descended in the loose pack ice southeast of Spitzbergen they probably perished, as it would be next to impossible for them to reach land by sledging over such a surface. If they landed upon Franz Josef Land or upon the ice near it without accident, they are almost certainly If the descent was made upon the polar pack more than two hundred and fifty miles from Cape Flora, they are lost. If they are now alive the chances are they will next summer be found in the Jackson House at Cape Flora.

The editor of McClure's announces a new Lincoln feature by Miss Ida M. Tarbell, a very conscientious writer, who constructed the "Life of Napoleon" and the "Earlier Life of Lincoln" for that magazine. This coming feature is to be a history of Lincoln's life from the time of his nomination to the Presidency in 1860 to his death at the hand of Booth five years later.

## THE ATLANTIC MONTHLY.

THE Atlantic Monthly for March contains a vigorous article by Mr. J. N. Larned on "England's Economic and Political Crisis," which we have quoted from in another department.

Among several other articles of weight, there is an essay by Mr. E. L. Godkin on "The Australian Democracy." Mr. Godkin says that Australia is absolutely free to democratic experimentation under extremely favorable circumstances, since in each colony the state has apparently existed for the benefit of the working classes. The rapidity of the experimenting which is now going on in Australia promises, Mr. Godkin says, to bring about crises very illuminating to the world earlier than in America. For instance, we shall not get our currency experience, in all probability, for some years. "Were the Australians engaged in trying our problem, they would reach a solution in one or two vears." Mr. Godkin thinks that the Australian press is a powerful steadying influence, and calls it serious, able, and influential, and almost entirely free from the love of triviality which has descended on American newspapers.

There is a readable description of "The Social and Domestic Life of Japan," by Mr. K. Mitsukuri, a Japanese gentleman, which will offer a pleasant variation on the many and failing attempts we have seen made by Americans to give the truth concerning the real life of the Japanese. This subject of the Mikado stands by his guns chivalrously when the subject of Japanese women is approached. He agrees with those who pronounce them the best part of Japan. "They have been described as gentle, graceful, beautiful, and self-sacrificing. Not only in the gentler virtues, but also in some sterner aspects of life, the Japanese woman often has shown what she is made of." Mr. Mitsukuri goes on to give some convincing examples of the high spirit of Japanese women.

Mr. Herbert W. Fisher makes a pleasant contribution from his imaginary letter written by a young Londoner in 1529 to a countryman, describing a first performance of one of Shakespeare's plays.

## THE BOOKMAN.

THE March Bookman contains a brief article on "Mr. J. M. Barrie as a Dramatist," by Edward Morton, who does not by any means consider that the novelist's fame should be restricted to his stories. The simplicity, humor, and purity, invariable characteristics of his plays, are so regenerating that Mr. Morton can say: "To the elevation of the drama, of which so much has been heard in our day, no writer has contributed more than Mr. J. M. Barrie."

Mr. Stephen Crane fills a couple of pages with an account of the English "Academy." While Mr. Crane makes a good deal of fun of the reason which the Academy gives for its selections and rejections, he says. "Here is a task which few have been able to perform decently, mainly, perhaps, because few decent people have ever attempted it, but the Academy has carried it through, and the result is, in the artistic sense, respectable, inexorably respectable." It will be remembered that the first prize for the best book of the year was given to Mr. Stephen Phillips for his volume of poems, while the prize of fifty guineas for the second best book went to Mr. W. E. Henley for his "Essay on the Life, Genius and Achievement of Burns."

The series of "American Bookmen" comes this month to Whittier and Lowell, while the "Living Continental Critic' discussed by Mr. Frederick P. Cooper is Ferdinando Martini, the Italian critic and politician.

## THE LADIES' HOME JOURNAL.

THE Ladies' Home Journal for March has a striking travel sketch feature in Mr. Thomas G. Allen, Jr.'s, much-illustrated article, "In Fashionable Siberia." The dress, manners, and amusements of the wealthy Siberian ladies are very well described. In the matter of dress, furs of course play a large part, and Mr. Allen says that sables are used exclusively, and the social standing of a woman depends largely upon the number of skins displayed by her when arrayed for public gaze. Mr. Allen's observations were made most largely at Krasnoyarsk.

A. H. Zander writes to the Ladtes' Home Journal from "a small country place in Wisconsin," to describe how he can live on \$200 a year, supporting a family of four—that is, himself and wife and two children. This estimable gentleman is a teacher on \$400 a year, and he saves \$200 of it. At the same time he can boast that his meals are abundant in quantity and variety. This feat is proven by the hero of it with a long list of necessaries which his \$200 bought, itemized down to matters of baking powder and soap.

Mrs. Burton Harrison writes about the Bowery, but a different Bowery from that which visitors to New York go to see nowadays. A hundred or more years ago the street was fashionable to a degree. Even as late as 1825 the country north of Astor Place was occupied chiefly by quiet farms and orchards. "A favorite resort for pleasure-seekers among the leading families of the town was the Vauxhall Garden, whose leafy bowers and flower-pots, gravel walks and stage performances occupied a portion of the site of the present Astor Library."

## MUNSEY'S MAGAZINE.

I N the March Munsey's Ian Maclaren gives the "Favorite Novel" judgment in favor of "Henry Esmond" and "The Heart of Midlothian," and argues for them as the highest types of the literary art.

Some striking illustrations are printed in the remarks on Giovanni Boldini, the Italian-Parisian painter who made his first visit to America this winter. The portrait by Boldini of Whistler has become somewhat famous. The other portraits reprinted in *Munsey's* are scarcely known to the American public.

Mr. Walter Wyman, the supervising surgeon-general of the Marine Hospital, contributes an article on "A National Quarantine," in which he argues the country's great need of a uniform system of guarding against contagious disease. This system, he thinks, should be controlled and operated by the authority of the national Government. A practical proof of this need is seen in the ravages of the recent yellow-fever epidemic in the South. He thinks Congress should act at once.

## LIPPINCOTTS MAGAZINE.

R. GEORGE ETHELBURT WALSH writes in the March Lippincott's to tell of the new conditions which are coming to govern farming in the United States and the revolution that will work to the advantage of the agriculturist. "The new farming has its superstructure built upon strict business principles that obtain in the world of general commerce and industry. It is just as much a question of profit and losswith the farmer as it is with the merchant. How much can he make out of one acre, five acres, one hundred acres? He must be a seller as well as a producer." Mr. Walsh thinks the old-fashioned way of things is past for good, and that the farmer who wishes to keep up with the procession to-day must hearken to the voice of the State Experiment Stations, the Department of Agriculture, and the farming periodicals.

Frank H. Sweet gives a short account of "Pearl-Seeking," describing the various regions in which pearlishing flourishes and the methods of the divers. He says that pearls are sorted by being passed through brass sieves of 20, 30, 50, 80, 100, 200, 400, 800, and 1,000 holes, and are afterward classified according to shape and luster.

Neith Boyce tells of many famous "Historic Diamonds" and the dramatic histories of some of them. He says that the country now richest in diamonds is Russia. The famous diamonds in that country are the "Orloff," the "Polar Star," the "Shah," and many more in the royal crowns. The crown of Catherine II. contained 2,536 diamonds. The collection of Napoleon I. was one of the most famous of all collections of diamonds. It contained 64,812 diamonds and was valued at about \$4,000,000. In 1872 the Bonaparte family had within a year thrown upon the market diamonds to the value of \$1,250,000.

The complete novel of this number is "An American Aspirant," by Jennie B. Waterbury, which begins on an ocean liner and passes in Paris.

## THE CHAUTAUQUAN.

In the March Chautauquan there is a lucid and readable article by Sydney Brooks, explaining some of the differences between English and American methods of electioneering. After enumerating the fundamental differences of law and custom Mr. Brooks points to the intense interest, amazing to an American, that society takes in an English election. Tuxedo and Lenox are politely ignorant of the fact of a national election in America, while the English "season" promptly gives

way to an issuance of writs. The wives and daughters of Parliament members repair to the country and labor with the rural voters, "flattering their wives and kissing their children, and wheedling votes for Sir John with a skill almost diabolical."

"All over the United Kingdom, in town and country, the insinuating arts were being practiced, and for a whole delirious fortnight or more the British workingman had the aristocracy of the country at his feet, a humble suppliant for his favors. A country house during election time is not a place to be lightly entered by the flaneur of Piccadilly. The innocent visitor who bites his cake and tries to talk about the theaters or the latest book is gorgonized from head to foot with 'a stony British stare.' To hear your hostess' daughter fulminate against disestablishment and 'that Gladstone' you would imagine that she had never heard of Henley or Goodwood or condescended to anything so trivial as a theater or a tennis racket. And a similar sacrifice is demanded of you, on pain of immediate expulsion. Guns and fishing-rods are put away, a morning canter voted flat heresy, the billiard-room locked until the last canvasser has returned, and life resolves itself into a long political debate."

Mr. John Swinton, formerly of the New York Sun's editorial staff, publishes some memoranda of the late Charles A. Dana. Mr. Swinton has a great deal to say about Mr. Dana's liberality in paying for the articles that he liked, and the examples that he gives of his own experience as editorial contributor and as Mr. Dana's understudy certainly bear out his opinion of the great editor's liberality. On the other hand, Mr. Dana was sometimes severe when manuscripts were poor. He would write "No good," or "Too rough," or "All wrong," or "Not up to the mark," with the terrible blue pencil, and he never told any one that "lack of space" prevented the acceptance of a manuscript.

## THE ARENA.

THE February and March numbers of the Arena offer conclusive evidence that the free-silver agitation is not merely persistent, but positively aggressive. The Arena itself has never withdrawn from the ray; it is now more than ever the exponent of all those radical elements that united on Mr. Bryan's candidacy in 1896 and seem eager to unite again in 1900.

Dr. Ridpath, the Arena's able editor, has methods of his own in dealing with contributors. Instead of invariably declining the manuscripts of people who hold and express opinions at variance with the editorial policy of the magazine, he frequently accepts and publishes such articles, following them up with vigorous and pointed replies in which his own position is cogently stated. Thus the February number opens with a twelve-page article by the venerable George W. Julian, of Indiana, mercilessly exposing the weak points in the. Republican party's record on the currency question, while Dr. Ridpath himself occupies the succeeding thirty pages with what he calls a "severe analysis" of Mr. Julian's contribution. Editor and contributor are agreed that radical reforms are demanded; they differ widely as to both the nature of the difficulty and the remedy.

In connection with the publication of a paper on currency reform by Mr. Anthony W. Dimock. in the March Arena, Dr. Ridpath declares that the sole aim of his magazine is to discover and disseminate the truth, and

that he has no desire to have the Arena take its place in the ranks of "class journalism." "We want, moreover, to mix an ethical sweetness with the editorial bitter draught, to the end that the people taking our cupshall not drink death." This is a crumb of comfort for the Arena's wicked "goldite" readers.

Besides Mr. Dimock's paper and Dr. Ridpath's "Notes," there are in the March number two articles on the money question of more than ordinary importance. Mr. Francis E. Woodruff states the case for bimetal-lism fully and ably; the Hon. Charles A. Towne approaches the subject from the point of view of party politics.

Senator Butler, of North Carolina, writes on "Trusts: Their Causes and the Remedy;" Charles A. Robinson discusses "Pingree Potato Culture and Its Effect on Business;" and H. W. B. Mackay reviews modern industrial conditions under the caption, "Law, Lawlessness, and Labor."

Mr. B. O. Flower contributes a sympathetic account of the Russian people known as the Christians of the Universal Brotherhood, or Spirit Wrestlers.

Mr. Robert Stein has an article on "Girls' Cooperative Boarding Houses," in which he describes a number of institutions which do not seem to be cooperative at all in the strictly economic sense of the word.

Dr. Ridpath's paper on Kipling, in the department called "The Editor's Evening," reveals a fine gift of literary criticism. Perhaps if Mr. Kipling should write a poem in eulogy of the gold standard even the editor of the *Arena* would capitulate!

## THE FORUM.

ROM the February Forum we have selected Mr. Frank K. Foster's article on "The Condition of the American Working Class" and Mr. Orville J. Victor's "Side Lights on Postal Reform" for quotation in our department of "Leading Articles."

The number opens with a paper on "Antarctic Exploration and Its Importance," by Sir Clements R. Markham, president of the Royal Geographical Society, who regards the urgent need of a magnetic survey as a sufficient reason, though by no means the only one, for sending an expedition to the antarctic seas.

As a remedy for certain defects in our electoral system, ex-Secretary Carlisle proposes a constitutional amendment, "providing simply that the President and Vice-President shall be chosen by the people of the several States, voting by ballot, on a day fixed by Congress, which shall be the same throughout the United States; that the electors in each State shall have the qualifications required for electors of the most numerous branch of the State Legislature; that each State shall be entitled to a number of votes—to be called presidential or electoral votes—equal to the number of its Senators and Representatives in Congress; and that in ascertaining the result of the election, each person voted for shall be entitled to have counted in his favor a number of the presidential or electoral votes of each State, corresponding to the proportion of the popular vote received by him in such State."

Commissioner Carroll D. Wright reiterates his belief that the increasing productive capacity of our industries is accompanied by the employment of an increasing proportion of the whole people in remunerative labor, by an upward tendency in wages, by a constant tendency to reduction in prices, and by a general rise in the standard of living.

the standard of living.

The old question, "Whence came the American Indians?" is reviewed by Major Powell, who concludes that Indian government. art, language, and mythology were developed on this continent, and not derived from another, and that man has always inhabited what we call the New World.

Mr. C. Wood Davis contributes an article on "Corn and Cotton-Seed: Why the Price of Corn is Low," suggesting an explanation of the significant fact that with a corn acreage, since 1887, averaging but 12.8 per cent. more than in the preceding ten years, with a population 24.6 per cent. greater, and exports 43 per cent. greater, the price has averaged 16.8 per cent. less. Mr. Davis ascribes this remarkable change in conditions to the substitution of cotton-seed oil for the fat of swine in the making of lard. That this substitution has caused a revolution in the volume of corn and pork products there can be no doubt, though not every reader would agree with Mr. Davis that this single factor in the problem is sufficient to account for the depression.

In a rather technical article Dr. Harvey W. Wiley endeavors, with indifferent success, to make plain "The True Meaning of the New Sugar Tariff." The Hon. Frederic C. Penfield writes on "Britain's Exploitation of the Nile Valley," repeating the main points of his recent North American article (reviewed in our January number), and Karl Blind analyzes Alexis de Tocqueville's "Recollections."

## THE NORTH AMERICAN REVIEW.

LSEWHERE we have quoted from Mr. A. F. Weber's paper on the German credit associations in the February North American.

The article on "America's Opportunity in Asia," by Charles Denby, Jr., in the January North American (from which we quoted last month in our department of "Leading Articles"), is followed in the February number by a survey of "America's Interests in China," contributed by Gen. James H. Wilson, who incidentally advocates Hawaiian annexation.

Miss Frances M. Abbott endeavors to treat the hackneyed subject of woman suffrage from a new point of view—that is, to consider the outcome of the suffrage movement in the light of the history of other reforms, especially of those in which the status of women is concerned. It is this writer's belief that suffrage for woman is merely in line with every other change in her opportunities that has taken place during the last halfcentury.

Mr. Elliott Flower, in support of his contention that too much money is spent at the top of our educational system and too little at the bottom, shows that thousands of children are turned away from the primary and grammar schools of our great cities because of lack of room, while many colleges scattered through the country have hardly students enough "to make it worth while to remain open." Mr. Flower has found one hundred and forty-six institutions which confer the degree of B.A. and have not more than two hundred students each. Supposing that more than half a million dollars is spent annually by these small colleges, Mr. Flower asks whether it would not do more good if devoted to trade schools. That is an open question, of course, but it would not solve the problem of primaryschool accommodations in Chicago and New York.

In an article on "The Crisis of Civil Service Reform," Mr. H. T. Newcomb expresses the hope that the merit system will soon make an honorable profession of our civil service, as similar methods have already done in some of the European countries. Some of the places at Washington are exceedingly attractive to young men of scientific training.

Mr. J. A. Latcha contributes a vigorous article in opposition to the Nicaragua Canal scheme and in support of a policy of developing cheap inland railroad

transportation for this country.

Mr. Charles Frederick Holder describes the famous Chinese "Six Companies" and their relations to American politics. These companies have imported nearly all the Chinamen now in this country. They secured these coolie laborers in the first place by promising them transportation from China to America, employment, care when sick, legal advice, and a general superintendence. The coolies on their side signed a paper binding them to pay back the money at a rate agreed upon, and 2½ per cent. of all money received during their stay in America. The hold thus acquired by the Six Companies on the Chinese immigrants has been utilized, Mr. Holder asserts, in building up a powerful organization to fight American laws.

The February North American contains the first installment of "Recollections of the Civil War," by Sir William Howard Russell, the famous correspondent of the London Times. Notwithstanding all that has been written of the war in the way of personal reminiscence, the American reading public has not forgotten "Bull Run Russell" nor his daring achievements as a war correspondent; his recollections will be read with keen interest.

The Hon. Charles S. Fairchild contributes an article on "The Monetary Commission and Its Work;" Mr. James L. King relates some anecdotes showing Lincoln's skill as a lawyer, and Mrs. Maud Nathan advocates the adoption of a "consumer's label" to secure the public against the purchase of goods made under unwholesome conditions.

## THE CONTEMPORARY REVIEW.

THE Contemporary deals much with current questions of the day by writers adequate for the discussion.

Mr. F. T. Jane, in a paper, "The British Ship of War," practically charges the Admiralty with allowing outside clamor to modify the designs of British warships. The American fleet, he declares, has been chiefly constructed to win the applause of the newspapers, and he fears that the same deadly element is beginning to make itself felt at Whitehall. Mr. Jane says:

"The statistician is omnipotent. Already he has forced the Admiralty to alter the armament of the Hyacinth class. Next we may look to see 4.7-inch guns substituted for the 12-pounders of the Diadems, or the laying down of a servile copy of the absurd Rossia. The Canopus class have been designed to satisfy a popular fad on the matter of speed; to satisfy another fad, the foremost and aftermost guns on their main decks have been sponsoned—a thing that will not go to improve their sea-worthiness. They carry two or more 6-inch guns in excess on what on our usual scale of armament to displacement they should carry. What sort of navy shall we have if the movement gathers momentum? The Admiralty appear to have had the inch

forced out of them; how long now before the ell will be demanded? And what then?"

## HAUPTMANN'S "SUNKEN BELL."

The editor of the Contemporary makes a bold and very welcome innovation in publishing an abridged translation of Gerhart Hauptmann's play "The Sunken Bell," which has had a phenomenal success in Germany. Mr. Bunting says:

"In Germany, as here, there is usually a very limited demand for modern plays in book form; but this drama has run through twenty-eight editions in eight months. It is performed in some thirty theaters in Germany and Austria. It has also been translated into French and represented in Paris; and the same is or soon will be true of Denmark."

Mr. Bunting's account of the play is very good reading, but it is hardly a subject for quotation. The play has evidently one great element of success, and that is that no one can tell exactly what it means, and so there is room for endless discussion.

"One thing, however, is clear: it is, in symbol, the life tragedy of an artist placed between the duties of ordinary and conventional life on the one hand, and on the other the enthrallments of a fairy muse, inspiring him to impossible ideals of perfect art and ecstatic dreams of what art may do for mankind."

## WANTED-A NEW RESERVE FOR LITTLE WARS.

"A Member of the Headquarters Staff," writing on "The State of the Army," combats the extremely pessimistic conclusions of Mr. Arnold Forster. What is wanted is a reserve that would be available for little wars:

"Ten thousand men, trained for seven years in the ranks, who in many instances have seen actual fighting, are passed to the reserve annually. Were the military authorities authorized by Parliament to call up these men during the first year of their service with the reserve, the whole difficulty in regard to our small wars would vanish. We should be able to send abroad battalions of which any nation could be proud, and that at short notice and without causing any real hardship to the reservists concerned."

## RUINED BY A HAPPY MARRIAGE.

Mrs. Virginia M. Crawford, in her paper on Alphonse Daudet, propounds the somewhat original theory that the great novelist has failed chiefly because he was too happy in his married life:

"That his marriage was a singularly happy one is the testimony of all their friends. But it seems to me a question whether the life of a prosperous bourgeois—which, thanks in a great measure to his wife's admirable supervision, the novelist was enabled to lead-served the higher interests of his art; whether it might not have prospered better in a garret of the Quartier Latin, or, better still, in some Provençal village, and whether all the circumstances of his marriage did not interpose a barrier between him and that Provençal life from which he drew all his best inspiration. The tendency of the whole milieu in which his later life was spent was to place the novelist's work on too high a plane, and to urge him into methods of composition quite foreign to his natural bent, with the inevitable result of a great loss in spontaneity and grace, his two most valuable qualities. And in this tendency I cannot but feel that Madame Daudet had her share of responsibility."

## THE NINETEENTH CENTURY.

THE February number of the Nineteenth Century is alive and up to date. Among the numerous political articles, separate notice is claimed by Mr. Fred. Greenwood's proclamation of "England at War" and Mr. Henry Birchenough's "Expansion of Germany." Doubtless the editor supposes that any amount of papers on current affairs would be more than balanced by the singularly musical and sonorous poem of Mr. A. C. Swinburne with which the review opens. The piece is entitled "Barking Hall: A Year After. A Sequel to The High Oaks," and is a lovely tribute to the beauty of the place which saw the sunrise and sunset of his mother's life.

## BRITISH INDIAN FRONTIER POLICY.

The future of the Anglo-Afghan alliance exercises the mind of the Moulvie Rafluddin Ahmad, who once more eulogizes the genius and good faith of the Ameer, and earnestly begs that the British Government accede to his desire to be represented in London by a special agent. "An independent monarch he is, for all practical purposes." The Moulvie goes on to characterize the frontier war as "the most unfortunate war India ever had," and urges that England should make the Affridis her allies, convincing them of her good faith. Maj. G. J. Younghusband proposes for the permanent pacification of the Indian frontier the two measures-complete and universal disarmament of the tribesmen, with enforced settlement within our borders for the recalcitrant, and the construction of metaled roads giving free access to all portions of the tribal territory.

## FALLACIOUS FREE-TRADE PROPHECIES.

"The Manchester School and To-day" is the title of Mr. Carnegie's contribution. He recalls the prophecies of the early free traders, and unmasks with a smile their underlying assumption that England was pretty well to monopolize the manufacturing industries of the world, while the rest of mankind was to find its mission in supplying her with raw material.

"The wonderful machinery, mostly of British invention, especially in iron and steel and in textile manufactures, enables the Hindoo of India, the peon of Mexico, the negro of America, the Chinaman and the man of Japan to manufacture with the more carefully educated workman of Britain and America. . . . Automatic machinery is to be credited as the most potent factor in rendering non-essential to successful manufacturing a mass of educated mechanical labor such as that of Britain or America, and thus making it possible to create manufacturing centers in lands which, until recent years, seemed destined to remain only producers of raw materials. . . . This is not change; it is revolution."

Something better than was hoped for is, in Mr. Carnegie's judgment, being evolved when all the nations enter into the manufacturing sphere.

"It is pleasing also to note how the genius of each tends to excel in a different line. Thus France has almost monopolized the superfine in textiles, as it has long enjoyed supremacy in the department of women's rich apparel. Britain holds supremacy in machinery for textiles. The inventor of the iron and steel industry, she is also leading the world to-day in successfully developing a collateral branch, the by-product coke oven, in which even the American has so far failed. America leads in electrical appliances and machine tools. Ger-

many is supreme in chemical dyes, and has recently invented a condenser for steam which is showing great results, as well as a remarkable new process for the making of armor. The stirring competition which has begun among the nations and which we may expect to see still more strenuously pushed is the true agency for producing the best results."

## THE LARGEST COAL-FIELD IN THE WORLD.

Mr. C. A. Moreing, writing on Great Britain's opportunity in China, is lost in admiration at the moderation and wisdom of British demands. He strongly puts the case for the appointment of a British special commissioner or commercial agent to look after Chinese trade accredited to the local governors. He also urges the drawing up of a mining code in view of the great mineral wealth of China. Of Baron von Richthofen's investigations he says:

"He reports on Hunan that the whole of the southeastern part of that province may be called one great coal-field, covering in all some 21,700 square miles. Over large areas of this the coal measures are visible on the surface, and a good proportion of the coal is of an excellent quality. Hunan also produces iron, copper, silver, quicksilver, tin, lead, and gold. As to the latter mineral. Pumpelly's tables give sixty-four localities in fourteen provinces where gold is to be found, and though some of the 'washings' may be poor, many mines are indisputably rich. Hunan is said by Baron von Richthofen to be another province most favored by nature, being rich in both agricultural and mineral products, lead and iron constituting the latter. The same minerals with the addition of salt are found in Shansi, which in proportion to its area has probably the largest and most easily workable coal-field of any region on the globe, while the manufacture of iron is capable of almost unlimited extent."

The writer's own firm has information of rich mineral resources in Manchuria and the northern provinces.

## OTHER ARTICLES.

Mr. G. M. Chesney, editor of the Pioneer, writes on the native press of India, and shows that the Indian journalist catering for his own literary caste, with its singularly narrow range of interest, finds criticism of the British sway which he cannot modify the principal source of "copy." The Count de Calonne bewails the heavy burden of French officialism-the great army of nearly a million state functionaries, to say nothing of the municipal officers, one-half of whom could be swept away with advantage to every one; whose officious idleness and dishonest use of their position are a bane to the nation. The Earl of Mayo makes a very pointed and pertinent rejoinder to Sir John Lubbock's criticism of the Financial Relations Commission. Lieut.-Col. Sir G. S. Clark reviews Captain Mahan's counsels to the United States, regrets with him their isolation from the world-life, deplores their animosity toward Great Britain, and hopes that the two great nations will be united by some common task, such as was presented in Armenia or as is imminent in the far East. Miss I. A. Taylor gives a pathetic sketch of Lord Edward Fitzgerald, the generous-hearted Irish noble, who joined the rebels in 1798, was arrested by the government, and died in prison. Mr. D. R. Fearon writes on Dante and paganism.

## THE FORTNIGHTLY REVIEW.

THE Fortnightly Review publishes several interesting articles touching upon the crisis in the far East, the County Council election, etc., which we deal with elsewhere.

Sir George Baden-Powell writes upon the British West Indian topical colonies in a tone of cheerful optimism. He describes what the various commissions have recommended should be done, and devotes his article to insisting upon the importance of carrying out their recommendations. Sir George Baden-Powell does not think that the policy of sugar bounties or the imposition of a countervailing duty is the aim-all and end-all of West Indian reforms:

"Practically perfect in a great majority of the estates is the process of the production of sugar. If prices hold as they are, if they mend only a little, then bounties or no bounties, sugar production in the West Indies will continue. What is really needed for the West Indies is a wise, comprehensive policy, steadily carried to its conclusion. It is really a question not of economic, or diplomacy, or subsidy, but of administrative statesmanship. Many of the evils now accruing in the West Indies might have been averted had the sound advice and information from time to time acquired by the authorities been acted upon. Speaking generally, while I look for the abolition of the bounty system in Europe in the near future, I do not consider that this would, by itself, save the situation in the West Indies. It would assist in preserving the sugar industry. But more, far more than this is needed, and the sum total of this is contained in resolute administration on the lines I have indicated."

## A TRIBUTE TO CARDINAL MANNING.

In the course of an article on Mr. Ward's Cardinal Wiseman, Mr. W. S. Lilly takes occasion to print the following tribute to the memory of Cardinal Manning, of whom, as a theologian and scholar, he professes to have a poor opinion:

"Cardinal Manning, then, was, before and beyond all things, an ecclesiastical statesman-and an ecclesiastical statesman of a high order; a churchman cast in the heroic mold of St. Gregory VII. The 20,000 neglected Catholic children of London were very near his heart from the first moment of his episcopate. And before it came to an end he had succeeded, after many a hard fight with bigotry and ignorance, in securing their education in Catholic schools. For the brutal gratifications of notoriety and money he cared absolutely nothing. But he was a born ruler of men; and he loved to rule. At Harrow he was known as 'the General,' from his habit of command. Even there, 'Aut Cæsar, aut nullus' was his motto. Well, he became Cæsar-a ruler in the midst, even among his brethren. And his rule was everywhere felt. He loved to control even the smallest details. A witty man, who knew him well, said of him, 'He is not content to drive the coach, he wants to drag it also.' He had the defects of his qualities, his great qualities. But I do not understand how any man who had the privilege of intercourse with him could doubt his faith unfeigned, his deep devotion, his spotless integrity, his indomitable courage, his singleness of aim, his entire dedication of himself to the cause which he, in his inmost soul, believed to be the only cause worth living for. 'The purity of his heart, the sanctity of his motives, no man knowing

him can question,' Archdeacon Hare bore witness when lamenting his secession. This testimony is true."

## A PLEASANT TESTIMONY.

Mr. Frederick Gale, who has for forty years been in and out of the lobby of the House of Commons in connection with private-bill legislation, contributes an article of very lively gossipy reminiscences which it is impossible to summarize. His connection with the Parliamentary lobby dates from the year 1846. He remembers "King" Hudson, and he has the very highest opinion of the way in which Parliamentary committees do their business. In the course of his article he incidentally makes a remark which is worth quoting:

"I can speak from pretty long experience that in rival companies contests which have been waged with every available weapon, if, by mutual consent, a truce has been called and both sides showed their hands with an eye to establishing a modus vivendi, and it has ended in fighting it out before a committee, not a word spoken in confidence was ever dropped or hinted at by either side in the committee-room; and moreover, I have seen compromises which involved thousands and thousands of pounds settled by word of mouth, leaving the details of carrying them out to some disinterested party afterward."

#### OTHER ARTICLES.

Mr. Sidney Lee throws himself vehemently into the controversy as to the person to whom Shakespeare addressed his sonnets. He will not admit for a moment that that person could have been the Earl of Pembroke, and he is quite positive that it could be no other than the Earl of Southampton.

"His most abiding characteristic, alike in middle age and youth, was, according to the unvarying testimony of numerous literary protégés, a love of learning and literature, and it is, I believe, to Southampton that Shakespeare addressed such of the sonnets as can be positively credited with a genuinely autobiographic significance."

Mr. J. A. Steuart writes entertainingly enough, but without any definite aim, on "Authors, Publishers and Booksellers." Mr. William Johnstone describes a jour ney which he took from Canton to Mandalay.

## THE NATIONAL REVIEW.

THERE are several good articles in the National Review, which is not weighted down this month as much as usual by a deck cargo of bimetallism. The Hon. J. W. Longley's article on Sir Wilfrid Laurier at Washington is noticed elsewhere.

## THE TRANSVAAL-ITS MINES AND ITS MASTER.

A recent visitor to the Transvaal gives a very interesting account of the mining and politics of that country. He calculates that the amount of gold that can be worked in the Rand is of the value of £1,100,000,000, or four times the entire production of all the Californian mines in fifty years. At present the output of the mines is £11,000,000 a year, but even at the rate of £20,000,000 it would not be exhausted before the middle of the next century The deep mines can be worked to half a mile beneath the surface. The temperature does not increase anything like what was anticipated. The writer considers that the Uitlanders may be considered a permanently settled population. He was much im-

pressed by President Kruger's physical vigor and vitality.

"The following story which I heard proves how the vital posts of the little State are filled, and also that the Grand Old Man of the Transvaal is not without wit and shrewdness. Some of his young relations applied to him for office. He considered a while and said: 'I can do nothing, for the high offices of the State are in firm hands, and for little clerkships you are too stupid.'"

#### THE INFLUENCE OF MIND ON HEALTH.

Dr. Herbert Coryn, in an article entitled "Mind and Disease," bears strong and apparently unintentional testimony to the importance of the practice of beginning the day with worship and meditation, on which the religious teachers of the world have always insisted.

"Man progresses through peace and brotherhood; as man he retrogrades, and as body he becomes diseased, by any reversion to or persistence in the states proper to animal consciousness. Let the day begin at its highest. There are books and passages in books which raise consciousness to its noblest; there are people the thought of whom is an inspiration; there are phrases of music that go home to the center of our being. Any of these will do, and five minutes dwelling thereon at rising will give a keynote that will sound for the day, the morning bath of the mind. Then as the hours go on and consciousness sinks, moves to sensuality, becomes irritable, or inclines to darken with any of the lower states, reach back to the morning, re-create the higher, and thus destroy the awakening germ of disharmony in the soul and disease in the body. In this, as in all other things, practice makes perfect, and the habit of mounting in all unoccupied moments up from the animal is as easy to acquire as is that of descent toward it."

## OTHER ARTICLES.

Mr. Bernard Holland writes on William Johnson, who was the tutor of Lord Rosebery and a master at Eton, whose letters and journals have recently been published under the name of William Cory. Mr. Holland says:

"In England we have too few of this kind. Johnson was a poet, a scholar, as original a mirror of outward impressions as Carlyle or Fitzgerald, as tender-hearted in friendship as a woman or as his Cambridge friend Henry Bradshaw. He could render in perfection the too sweet music of the flying hour."

An anonymous writer dwells upon the hardships suffered by Arthur Crawford, of the Bombay civil service, whose pension Lord Cross stopped because of his having irregularly borrowed money. Mr. H. Kopsch, a merchant in China, maintains that the gold standard operates as a bounty to the yellow man with the white money.

## THE EDINBURGH REVIEW.

THE Edinburgh for January is an average number, with several papers that are very good reading. The first place in the Review is given to an article entitled "Valmy and Auerstadt." It is very largely an exposition of the Duke of Brunswick's campaigns. Of the Duke the writer says:

"Germany has remembered the merits, rather than the failings, of the Duke. Too frequently, no doubt, he had been found to be 'naturally prone to delay' when rapid action was desirable, and had preferred 'cautious counsels' when bolder measures were required by the situation, and thought it wise 'to calculate chances' rather than to trust to fortune; but all this was forgiven, because not only had he in peace proved himself one of the wisest and most liberal rulers of the time, but also, and mainly, because he fell for his country on the field of battle, sword in hand, in the time of need, and thus justified the early judgment of his royal uncle that nature had destined him for a hero."

## DONGOLA.

This is an article topographical rather than literary. It is an attempt to take stock of the character of the country which has been reacquired by the successful campaigns of the Egyptian Sirdar. The extent of this territory may be inferred from the following paragraph:

"The expedition brought last year to a successful conclusion by Sir Herbert Kitchener resulted in the restoration to Egypt of no less than four hundred and forty miles of the Nile valley abandoned in 1885. Since then, by the renewed advance of the same general, again admirably conducted, upon Abu Hamed and Berber, after the length of some three hundred and fifty miles of river has been won back to civilization, and the Berber and Suakim route has again been opened."

## MR. BRYCE'S SOUTH AFRICA.

"Mr. Bryce on the Future of South Africa" is the title of an article devoted to the description of Mr. Bryce's book. The reviewer says:

"Mr. Bryce has written a singularly interesting book, affording much food for thought, and which may help, perhaps, to clear people's eyes as to the true uses and abuses of colonization. He may have put more questions about the future than anything except the future itself can answer. He has discussed topics provocative of bitter feeling on the whole with impartiality and moderation, and he has looked with a philosophic mind beyond the controversies of the moment to those great causes and forces which will ultimately make or mar the future of Europe in South Africa."

## BRITAIN'S INDIAN FRONTIER POLICY.

The writer of the article on "Indian Frontier Policy" hinks that England has gone too far to draw back. After a survey of the situation and what is proposed to be done, he says:

"It seems to us that, looking at the question of policy as a whole, there is really no choice, and that the course to be followed for the future is one upon which all men of mark on both sides are practically agreed. It is too late to go back now. For good or for evil we have abandoned the Lawrence policy on the frontier and adopted another policy, all of us alike, whatever our political creed. The fundamental principles of that policy are to respect and support the independence of Afghanistan and to organize for defense the tribal belt. To those principles we must adhere."

Unlike most of those who advocate the forward policy, this reviewer is not a Russophobe, for he says:

"We should do well also to show less distrust of the intentions of the Russians. It is seventy years now since Russia has made any serious encroachment on the frontiers of Persia, and this is a fact worth remembering when we are considering the probability of her violating the frontiers of Afghanistan. Let us, therefore, act deliberately and carefully, avoiding unnecessary

expense and unnecessary interference with the internal affairs of the tribes, especially those tribes whose country leads nowhere."

## RUDYARD KIPLING.

Rudyard Kipling's varied and multifarious contributions to the world of books are dealt with by a reviewer who shakes his head severely over the enormous multiplicity and variety of Mr. Kipling's writings. Speaking of his stories the reviewer says:

"They are sufficient to justify the idea that he might, if he gave his best mind to it, produce a novel of modern life equal to the novels of Thackeray; but he has shown no disposition to make the effort, and in spite of his own protest in "The Light That Failed," he has to a great extent been frittering away his remarkable and exceptional powers in playing to the gallery."

Of his poems, the reviewer deplores the way in which he revels in slang, and sums him up as a verse writer as follows:

"Taking his verse compositions altogether, one may say that the author has just let us see that he might be a poet if he would, but has done but little yet toward a serious achievement of the position."

Kipling's best work, he thinks, is in his interpretation of animal life:

"Of all Mr. Kipling's works, 'The Jungle Book,' in two series, is the most remarkable and original, and the one which, so far, offers the best promise of retaining a permanent place in our literature."

## THE BIRDS OF LONDON.

The ornithologist who writes the article on this subject confines his London to the four miles round Charing Cross:

"The number of species which breed in the British Islands is one hundred and eighty-four; and out of these, the following lately nested within four miles of Charing Cross: The thrush, blackbird, robin, hedge-sparrow, white-throat, sedge-warbler, reed-warbler, great-tit, coal-tit, blue-tit, wren, starling, jackdaw, crow, rook, fly-catcher, swallow, martin, greenfinch, sparrow, chaffinch, cuckoo, wild duck, wood-pigeon, moorhen, and dabchick."

This is a very respectable list, but it is not surprising that "the history of the birds of London is the history of a steadily diminishing community. Every year some species which used often to be seen becomes rarer until it is extinct; and not only do the number of species become less, but the individuals become fewer. Last year there was but one rookery left in London. The only exception, we believe, to these decreasing numbers are the wood-pigeons, which have astonishingly multiplied."

The solitary surviving rookery within the four-mile area consists of three nests in Sir Francis Bacon's garden:

"Within sounds of the roar of Holborn, in the gardens of Gray's lnn, the rooks still build. There were many alarms that the birds were about to leave; but in spite of the felling of the trees and building of new houses all round, the rooks have remained faithful to the garden which was planted by Sir Francis Bacon. Most of Bacon's elms are now gone, and instead of thirty or forty nests, as there used to be twenty years ago, there are only three to be seen, each one solitary, in the highest tops of three plane-trees."

The other articles deal with the house of Blackwood

and "The Harley Papers." The latter article is a compost of extracts from the correspondence of the Earl of Oxford.

## THE QUARTERLY REVIEW.

THE Quarterly Review is a very readable number.
We notice the paper on "The London County Council" elsewhere.

The article on "Ireland in '98" is an exposition of what the reviewer regards as the most picturesque episode in modern Irish history—of course from the point of view of the *Quarterly*. The reviewer says:

"Those who would commemorate the rebellion as a movement for the establishment of Ireland as a Roman Catholic Ireland entirely mistake both its origin and its objects, and attribute to the leaders of the movement views and opinions which it is plain that not one among the earlier United Irishmen ever for a moment entertained.

"If, again, the commemorative celebration now being arranged in Ireland is represented as indicating the rooted and irreconcilable aversion of Irishmen to English rule, let it be remembered that of the grievances in which the rebellion originated not one now remains. The speeches and writings of the men of '98 may be searched in vain for the statement of a single wrong that England has suffered to remain unremedied."

## THE SECOND DUKE OF BUCKINGHAM.

The article on "George Villiers, Second Duke of Buckingham," is a very bright and brilliant specimen of the biographical papers which constitute the chief attraction of the Quarterly. George Villiers presented a tempting subject. George Villiers, Duke of Buckingham, Dryden's "Zimri," summed up the talents, the whims, and the vices of the Restoration. He was a curious product of the civil war, exile, and the reaction against puritanism. The reviewer deals with his mixed character with sympathy and appreciation. It is odd to find that after the Duke had spent the prime of his manhood in dissipation, he had still sufficient energy left when he was sixty years of age to ride three hours at a time after a fox in Yorkshire, the pace being so severe that the Duke and his huntsman alone were in at the kill, and both of them had ridden their horses to

## NELSON AND LADY HAMILTON.

The writer of the article on Nelson, while praising Captain Mahan's biography to the skies as an exposition of Nelson's naval genius, laments that the American biographer should take so severe a view of Nelson's relations with Lady Hamilton. He says:

"The whole of this pitiful tragedy belongs only to the last seven years of Nelson's life. Captain Mahan allows its shadow to overhang his whole career. From first to last throughout his pages we are shown the fatal passion for Lady Hamilton, rising up like an avenging Nemesis to besmirch the radiant fame of a man who for nearly forty years of a noble life had been chivalrous as a Lancelot and loyal as an Arthur. We can discern no sufficient reason in morals, and therefore none in literary art, for this method of treatment."

But while uttering that criticism, the reviewer himself is by no means disposed to idealize the relations between Nelson and his mistress. He says:

"There are letters in the Morrison collection, too coarse to quote, which show plainly enough that Nel-

son's infatuation for Lady Hamilton was essentially and passionately physical, and never rose to the level of an ennobling and redeeming inspiration."

## OTHER ARTICLES.

Other articles in this number are the inevitable review of Mrs. Oliphant's "House of Blackwood" and an interesting sketch based on General Read's "Historic Studies in Vaud, Berne, and Savoy," entitled "Gibbon at Lausanne."

## THE WESTMINSTER REVIEW.

THE Westminster Review for February opens with a very long paper, covering thirty pages, entitled "The Year of Shame." It is written by an original member of the Eighty Club, and is devoted to an exposition of the causes which, in the opinion of the writer, have covered England with infamy. He says at the beginning:

"Never during the last two centuries has England been brought so low in the councils of the world or been so false to her own traditions and the great principles of freedom and justice as in this vaunted year of the Queen's jubilee."

After going through the whole narrative of the foreign policy of Lord Salisbury, he comes to a close by insisting on the following moral lesson:

"If we would be great it is certain that we must have the courage to be great. It is not by putting our conscience into commission, it is not by playing second fiddle in an inharmonious and futile concert that we shall uphold the national dignity or safeguard the interests of our great empire."

## THE BIAS OF JUDGES AGAINST WOMEN.

The article signed "Ignota" deals with the question of judicial sex bias. The writer maintains that the bias of judges against women, which was shown notably in the English case when the judges decided that women were not eligible to sit on county councils, is one of the great obstacles which women have to face in the effort to secure recognition of their rights. For, "Ignota" argues, women are claiming no new rights. They are only asking for the restitution of their ancient privileges. She says:

"It is beyond all question that from the earliest known periods women had been possessed at least of the local franchise which entitled them to be members of the body corporate of any corporate borough. The old burgess-rolls of many of our ancient cities and boroughs bear witness to this, notably London and Edinburgh. Indeed, in our ancient London certain abbesses are known to have been among the official rulers of the city even before the date of the earliest charters."

She then proceeds with her paper, the object of which, she says, "is to show how continuously, either from sex bias or from sheer ignorance or forgetfulness of facts in which women are deeply interested, our judges and other highly placed officials have been paring down the rights and liberties of women in almost every direction."

So deeply rooted is this prejudice against women that "Ignota" seems to fear that, sooner or later, the English courts will discover that women have no right to sit either on school boards or on boards of guardians. She says:

"The lesson to be drawn from the insecurity of all

rights and privileges of women which depend either upon legislation or upon the legal interpretation of the law is the strongest argument possible for giving to them that equitable share of control over legislation, and thereby over the makers of the law and over its interpreters, which the position of the Parliamentary franchise can alone secure."

## OTHER ARTICLES.

Mr. B. N. Oakeshott discusses at some length Mr. Mathew Arnold as a political and social critic. "His chief failure," says Mr Oakeshott, "is that he can suggest no remedy for the evils of the time. The great danger of the development of culture without a corresponding development of morals is one with which he does not cope." There is a somewhat crude article by H. E. Harvey, entitled "Science as a Moral Guide," the point of the writer being that science alone can help us to preserve the true balance between the extremes of selfishness and unselfishness. Mona Wilson expounds the present condition of the law in relation to employers' liability and workmen's compensation. The arti--cles on "The Development in the Idea of the State" and Professor Crooke's psychical research address do not call for any special remark.

## THE ENGLISH HISTORICAL REVIEW.

In the January number of this Review Sir Henry H. Howarth begins a series of papers on "The Early History of Babylonia," in which he attempts to set forth consecutively the result of the discoveries which have been made in Babylonia in recent years. No theme can be more attractive, but the article itself hardly fulfills the expectation. Sir Henry Howarth is of opinion that the records take us back to at least 5000 B.C.

Mr. F. Baring follows the march of William the Conqueror and his invading army by the traces which it leaves in Doomsday Book. Doomsday gives the value of the manors just before and just after the Conquest. The evidence shows that he marched on a very narrow front, and that he had probably no more than twenty-five thousand men when he left Canterbury. On the whole, he appears to have laid a very light hand on the southeastern counties. Few manors lost more than 10 per cent. of their value, but by far the greater number were returned as worth just as much in 1067 as they were in 1065.

W. F. Stevenson discusses the date of King Alfred's death, and decides that he really died on October 26, 899. Several pages are devoted to reproducing the letters of Richard Cromwell, which are now in the possession of the Rev. E. Warner, of Stoke Rectory, Grantham. The earliest is dated 1675 and the latest 1708. Richard Cromwell was then eighty-two years of age. He died when he was eighty-six.

## BLACKWOOD'S MAGAZINE.

TO American readers the most interesting article in Blackwood's for February is that entitled "The Spanish Crisis," from which we have quoted at some length in another department.

Mr. Ernest N. Bennett, the correspondent of the London Times in Crete last year, describes his experience among the Christian insurgents of that island.

There are three articles on subjects connected with India. Mr. J. M. Bulloch finds in the exploits of the

Gordon Highlanders on the northwest frontier a text for an article on "The Gay Gordons: A Study in Inherited Prestige." Prof. Robert Wallace describes the Allahabad fodder and dairy farm, for the purpose of proving that by properly selected and well-managed farms in various parts of India abundance of fodder could be raised to supply the transport service and provide good milk for the British troops. Another contribution on an Indian subject is a tribute to "John Nicholson, of Delhi."

The article entitled "Queen Oglethorpe" puts together all that can be learned as to Miss Oglethorpe, whose story is so closely associated with James Stuart, the Pretender. The Meath Home for Incurables at Westbrook Place, Godalming, close to the railroad, and said to be haunted by the ghost of Prince Charlie, was formerly inhabited by Miss Oglethorpe, where she plotted and planned how to help the Pretender.

## THE CORNHILL MAGAZINE.

N the Cornhill for January Mr. Fitchett tells the story of "Blake and the Dutchman" in his series of "Fights for the Flag." Mr. Ghosh tells some good tiger stories, more or less incredible, and Mr. W. L. Alden draws a humorous sketch of an imaginary adventure, in the course of which his hero became the president of a South American republic. Mrs. Earle, writing on "Mistresses and Servants," lays stress upon the importance of training young girls for domestic service, and touches incidentally upon many problems which perplex housekeepers. Mr. F. T. Bullen relates in his usual effective fashion an experience which befell him when a mere boy. He was shipwrecked in the tropics owing to a drunken captain running the vessel ashore when all on board were fast asleep. Mr. E. V. Lucas gossips "Concerning Breakfast," and in "A Desert Dream" E. and H. Heron impress the imagination with a vision of "The Frontier Men of England" whose recruiting sergeant is dead. Squadrons and squadrons of mounted men gallop past a pioneer who is dying in an African swamp. "They start with us on our expeditions, they head our armies, the frontier men of England, reënforced in every border-fizzle, by the bullet, by the stab, by the swamp fever. . . . No one dies alone in the waste or the desert. You are always there to see him die. They are always there—waiting."

## LONGMAN'S MAGAZINE.

OME original letters of Thackeray and Dickens are quoted in the article by Mr. S. Arthur Strong, entitled "The Kindest Hearted of the Great," in Longman's Magazine for February. Mrs. Clement Shorter contributes a ballad entitled "The Fetch." Mr. Eric Parker discusses the position of assistant masters in preparatory schools, and Mr. Hankin, in an article bearing the somewhat fantastic title of "The True Sublime in Boating," waxes eloquent in praise of the pastime of taking a Canadian canoe and paddling down the current of an English river from the first point where its waters become navigable.

## COSMOPOLIS.

THE February number of Cosmopolis contains an argument on "The Theoretical Foundation of Socialism" by Mr. W. H. Mallock, in reply to Mr. Hyndman's article of the preceding month. Mr. Mal-

lock's position has been made known to the reading public very generally through his books. In his view the changes proposed by the socialists, as a rule, "leave the impossible and approach the absolutely impossible in precise proportion as the socialists set value upon them."

Zangwill, the novelist, attempts in this number to deal with the historical Spinoza as he has previously dealt with the historical Heine, making him the central figure in a realistic tale, "The Maker of Lenses," and revitalizing the personality of the great Jewish philosopher.

Edmund Gosse says of Alphonse Daudet: "He is vivacious, brilliant, pathetic, exuberant, but he is not subtle; his gifts are on the surface. He observes rather than imagines; he belongs to the fascinating but too

often ephemeral class of writers who manufacture types and develop what the Elizabethans used to call 'humors.' And this he does, not by an exercise of fancy, not by a penetrating flash of intuition, but as a 'realist,' as one who depends on little green books of notes and docketed bundles of 'pièccs justificatives.'"

Nevertheless, says the critic, "the love of life, of light, of all beautiful things, of all human creations, illuminates the books of Alphonse Daudet," and he concludes that in so cynical an age as ours "our thanks are eternally due to a man who built up for us a world of hope and light and benignity."

In our department of "Leading Articles" we have quoted from Professor Wagner's criticism of Liebknecht in the German section of Cosmopolis.

## THE CONTINENTAL REVIEWS.

## REVUE DES DEUX MONDES.

M. BRUNETIÈRE'S review for January can, at any rate, boast the negative distinction of containing no article on the Dreyfus agitation—a circumstance likely, perhaps, to commend it more to French than to English readers.

## THE TROUBLES OF A LIBRARIAN.

M. Funck-Brentano, in his paper on bibliographical problems and their solutions in the first January number of the *Revue*, does not go far wrong in describing the year 1897 as the year of bibliography. In London the world congress of librarians met in the summer, there has been a bibliographical conference in Brussels, and M. Stein has issued a new addition of Petzhold's "Bibliography of Bibliographies."

The question of classification is of the greatest importance to the large and increasing number of persons who are in the habit of consulting public libraries. There are to-day no fewer than one hundred and thirty distinct systems of classification, and of course there is no real agreement of the experts about any of them. The problem to be solved is to give every inquirer a readily accessible list or conspectus of all that has been published on or in connection with this particular subject, and the difficulty of doing this has been enormously increased by the great development of the newspaper and magazine press. Articles are nowadays published in more or less ephemeral journals which would some years ago have been reserved and probably expanded for publication in volume form. The scientific societies are exerting themselves to establish an international scientific bibliography, and that, if accomplished, would certainly be a great step in advance, and would tend perhaps to prevent such waste of energy as recently occurred when three learned men, in Japan, in Germany, and in Paris respectively, made simultaneously the same discovery. But after all science is only one department of knowledge, and what we want is an international conspectus of all that has been published in the whole field where the human intellect is exercised. This is an age of organization, and when even poets are catalogued, it is clear that the inanimate productions of the printing-press cannot be allowed to escape. M. Funck-Brentano discusses and rejects the decimal system of classification invented by Mr. Melvil Dewey, now director of the New York State Library. M. Funck-Brentano makes a good suggestion at the end of his article for the establishment of a library of critical bibliographies.

## LANIER, THE POET-MUSICIAN.

In the second January number of the Revue dcs Deux Mondes, Th. Bentzon has an interesting critique of Sidney Lanier, the American poet-musician. Lanier was the veritable antithesis of that perverse and somber genius, Poe, though it is curious to think that Baltimore claims them both; Poe by origin and Lanier by adoption. Among Lanier's best friends were Mr. and Mrs. Lawrence Turnbull and their son, Percy, in memory of whom was established the well-known lectureship at Johns Hopkins University. Lanier is portrayed in Mrs. Turnbull's story, "A Catholic Man," and his lines—

"And I am one with all the kinsmen things That e'er my Father fathered"—

attest the singular pantheism, which was nevertheless essentially Christian, which formed his message to his age.

## STOCK-EXCHANGE GAMBLING.

It is to be feared that M. Anatole Leroy-Beaulieu comes to rather a lame conclusion when he says that the admitted evils of financial gambling are moral in their nature and can only be remedied by moral means. The law and the state are, he says, powerless to suppress the evil. In France, M. Leroy-Beaulieu explains, all corruptions form a chain of which the links hang together—the pornographic press and the shameless stage being supporters and accomplices of the venal politicians and the rapacious bourse speculators.

## OUR SLEEPING AND OUR WAKING SELVES.

M. Mélinand writes a very interesting paper on the familiar but largely unexplained phenomena of dreams. We have all been struck by the extraordinary resemblance of our dreams to the perceptions of our waking life, and Descartes puts the matter very clearly when he says that there are no certain signs by which we can always clearly distinguish when we are asleep from when we are awake. Nevertheless, "dream" and "reality" are commonly used as opposite terms, and all theories about dreams are based on the postulate that our waking perceptions are true and our perceptions while dreaming are false and illusory. This postulate may seem to be a deduction from the frequent absurdity of our dreams, but a cynic might legitimately

argue that no human being could ever dream things more absurd than are to be found in what is called real life. Man ought certainly be a laughing animal if by day he is diverted by the follies and absurdities of his fellow-creatures and at night by his own extraordinary visions. But, seriously, it is necessary to assume the reality of our waking perceptions if we are to discuss the matter at all.

## OTHER ARTICLES.

Other articles include a number of letters written by various officers in Algeria to General de Castellane, at dates between December 31, 1835, and April 2, 1848. They form part of a forthcoming edition of the general's correspondence which is to appear under the superintendence of his daughter, the Comtesse de Beaulaincourt. M. Goyau contributes an important study on the evils of large landed estates in Calabria.

In the second January number M. Houssaye begins a series of articles on the battle of Ligny in 1815, which promise to be of great interest to tacticians and military historians. M. Bréal has a charming study of "An Officer of Old France," the Comte de Thorane, who lived for several years with Goethe's father during the Seven Years' War.

## REVUE DE PARIS.

X E have noticed elsewhere Anatole France's eulogy of Alphonse Daudet. The personal element looms large in both January numbers of the most vigorous of French reviews. Very instructive and valuable, from a historical point of view, is the correspondence exchanged between Renan and Berthelot during the eventful winter of 1871. Renan was in Paris, his friend at Bordeaux, and, as was only too natural, the two distinguished Frenchmen discussed, almost to the exclusion of all other matters, the tragic state of their country. Both men seem to have keenly deplored the cession of Alsace and Lorraine-indeed, Renan went so far as to describe it as "a mortal blow struck at the soul of France." At this time he seems to have lost all hope: "a heap of shifting sand is not a nation, and universal suffrage can but transform the country into a heap of sand composed of atoms all lacking cohesion." Although Renan's sympathies were all against the commune, he evidently considered the populace more sinned against than sinning, and he actively concerned himself to save several of his "red" acquaintances from the vengeance of the Versaillais.

## VICTOR HUGO TO HIS WIFE.

In the second number of the Revue are given some curious letters written by Victor Hugo just after the Coup d'Etat to his wife. He had escaped, disguised as a workman, to Belgium, and these notes, dispatched from Brussels, were all addressed to "Madame Rivière," for the poet's wife had been obliged to take refuge with friends under a false name in order to escape possible imprisonment. At the present time these old epistles acquire a topical interest if only because they prove that the France of 1851-52 was not so very different from the France of to-day.

An excellent map of Crete illustrates M. V. Bérard's third article on the Eastern crisis.

## OTHER ARTICLES.

Among the other contents of the Revue may be mentioned Marshal Davout's account of what became of the

Army of the Loire after Waterloo; a rather topical paper by M. Vedel describing a day which he spent at Canton, where his adventures were not different to those of the average glob-trotter; and a very elaborate historical résumé of how Voltaire saved Calas—a precedent which has been lately appealed to by various members of the "Dreyfus Syndicate" in connection with M. Zola's action.

## NOUVELLE REVUE.

E have referred elsewhere to M. Albalat's article on Alphonse Daudet in the first January number of the Nouvelle Revue. To be candid, there is not much else of interest in either number, except M. Hamelle's article on Sir Wilfrid Laurier, which is also dealt with in another column. M. Muteau concludes his account of his trip through Senegal and French Soudan in the suit of M. Lebon, the French colonial minister. It is interesting to note that he strongly recommends the occupation of the Soudan by France, on the ground that it is more fertile and more populous than Senegal. He foresees that the capital of the future Soudan will not be at Kayes, but on the banks of the Niger.

M. de Wailly's article, "Hawaii Free," is an extremely well-written and amusing plea for this veritable earthly

paradise and its jolly brown inhabitants.

In the second January number of the Nouvelle Revue an anonymous general officer has an important article on "The Fleet and the Army," in which, in view of the struggle at Peking, it is curious to note that he considers what would happen if France, Germany, and Russia were arrayed against England. Such a coalition would, of course, be a natural consequence of England's "insufficiently scrupulous cleverness, her insatiable greed, the unjustified ambitions with which she wearies all the nations, her pride, her weakness (resulting from her limitless expansion and her defective military organization), her character as a nation, and finally the unavoidable necessities which weigh on the three greatest continental powers of Europe." The general says that the coalition would be able to put into the field ten millions of good troops against England's two hundred thousand, while their united fleets would give a good deal of trouble to the British navy, which, in addition to fighting them, would have to protect the colonies. So there would be a new battle of Hastings, which would remind the world that it is not enough to have an appearance of strength.

Following this exposure of England's "splendid isolation" and approaching downfall comes an article by Commandant H. Chassériaud, in which he complains that though France possesses all sorts of ships of war, arsenals erected at great cost, engineers of the first rank, an administrative staff full of knowledge and integrity, and a personnel thoroughly well trained from sailor to admiral, yet she has no navy in the true sense of the word—that is to say, no fundamental naval doctrine coördinating all these forces and directing them to a single end.

## THE ITALIAN REVIEWS

THE Civiltà Cattolica (January 15) contains an article, "The Path of Just Reparation," which has excited some attention as indicating a supposed new departure in Vatican policy. In the first place, how-

ever, the Civiltà, the organ of the Jesuits, cannot be taken in any official sense as the organ of the Pope; and secondly, the article says very little more than might have been heard in ecclesiastical circles for the last year or two. Any modus vivendi as between the Vatican and the Quirinal is regarded as an impossibility. How, then, can the Pope recover his rightful position without sacrificing the national integrity of Italy? The present deadlock between Church and state, the article suggests, has arisen not from the fact of Italian unity, "but from a special mode and form of unity and integrity concrived and carried out with the main object of ousting the spiritual power of the Church." The Jesuit writer goes on to point out that Switzerland, Germany, and the United States are all triumphant proofs that national unity is quite independent of the monarchical form of government; in other words, that a federation of Italian States presents the simplest solution of the dilemma which lies at the root of all the Italian troubles to-day. The article may be regarded as a ballon d'essai in view of the decreasing popularity of the house of Savoy; at the same time it should be remembered that the republican party has little influence in Italy and is bitterly anti-clerical.

The Italian reviews were full of literary interest last month. Gabriele d'Annunzio continues in the Nuova Antologia (January 1) his gospel paraphrases with the parable of Dives and Lazarus, in which he paints in his most luxuriant style the voluptuous pagan pleasures of the rich man. The result is distinctly unpleasant. Besides excellent critical articles on Daudet and Anatole France, the number contains a review of Italian fiction for the past year, of which the author, D. Oliva, is unable to give a very lauditory account. He selects for special commendation Matilde Serzo's "L'Infedele," and for more critical approval "Spasimo," by De Roberto, and "L'Incantesimo," by E. A. Butti. The mid-January number leads off with an article on Leopardi, fully illustrated, in which is quoted a critical appreciation of the poet, written by Gladstone for the Quarterly Review in 1850. The same number contains a sprightly and entertaining article on the forms and origin of kissing, by E. Mancini.

Mrs. Browning is the subject of two articles, the result of the recent publication (by Treves, of Milan) of a volume of her selected poems translated by T. Massarani. These are most favorably reviewed in the Antologia by the Deputy P. Molmenti, while to the Rassegna Nazionale (January 16) Fanny Zampini Solazar, who has done more than any one to cultivate an appreciation of the Brownings in Italy, contributes an interesting critical study of "Aurora Leigh."

The Revista Musicale Italiana is a mine of information for all music-lovers. Some fifty pages are devoted to an article (in French) by John Grand-Carteret on the illustrated title-pages of ancient music books, with numbers of beautiful old engravings admirably reproduced. There is also the first of a series of articles on English music, dealing with the sixteenth and seventeenth centuries, and careful critiques of much recent music.

## SCANDINAVIAN MAGAZINES.

N. STARCKE contributes to Nordisk Tidskrift
an article on "The Scientific Treatment of Sociology." It is divided into four parts: (1) The general
methodical rules of science; (2) sociology as a science;
(3) the special methods of sociology: (4) the causes of
sociological phenomena; from which titles a fair idea
of the gist of the article may be gathered.

A lighter tone is given the number by Helena Nyblom's "Reminiscences of Southern Tyrol." The Tyrolese she describes as a sterling, sober-minded people, polite and well behaved, but lacking in lightness and gayety. There is something in the Tyrolese type that strongly reminds one of the Norwegians. They are model church-goers, and listen with rapt attention to their preachers. In describing the beauties of the Tyrol, the writer refers to "Maria Rast," a little pilgrims' chapel surrounded by a garden which is full of white lilies and roses. There is a curious legend in connection with the altar-picture of the Madonna, who is portrayed with the Christ-child in her arms and a wound in her forehead from which blood-drops are falling over herself and the child. The legend says that up in Dalsland, in Sweden, there lived in the sixteenth century a man who had wasted his substance in gambling and evil living, and so thought to put an end to himself by flinging himself in the Vänern. But on his way he became aware of a Madonna picture which had been suffered to remain there, a relic of the Catholic days, and which now fixed upon him reproachful eyes. Enraged at this unexpected interference in his plans, he picked up a stone and flung it at the forehead of the Madonna. To his surprise and terror, blood began to flow from the brow of the pictured face and trickle down over mother and child. Needless to say, he refrained from his sinful act, reformed his ways, and died a model of piety. For several days the picture bled, and crowds came to see the marvel. A Tyrolese artist, then living in Sweden, made a copy of the picture, which afterward came into the possession of a titled family in Eppan, and was finally put up in the little chapel "Maria Rast."

## THE NEW BOOKS.

## RECENT AMERICAN AND FOREIGN PUBLICATIONS.

## HISTORY AND POLITICS.

France. By John Edward Courtenay Bodley. Two vols., 8vo, pp. 364—510. New York: The Macmillan Company.

It must suffice at this time to make a merely preliminary mention of this extremely important work, an advance copy of which is laid upon our table as we go to press. Mr. Bodley is an Englishman who has spent the past seven years in France, studying under the best auspices, in all parts of the republic, the political and social conditions of the country. As he remarks in his introduction, he might three or four years ago have given us the result of his studies in four large volumes. Having, however, continued his labors for several years longer, he has been able to digest his materials and present his conclusions in two volumes of moderate size and open print. The compass of the work is not as broad by any means as that of Mr. Bryce's "American Commonwealth." Mr. Bodley's volumes are mainly devoted to the study of political history and the working of political institutions since the great revolution of the last century. Undoubtedly the work will at once command high and authoritative rank.

Modern France, 1789-1895. By André Lebon. 12mo, pp. 500. New York: G. P. Putnam's Sons. \$1.50.

This fresh volume in the "Story of the Nations" series appears in a new style of binding which that very popular series is henceforth to wear. M. Lebon, the author of this book on modern France, is a member of the Chamber of Deputies. The story that he tells is chiefly that of revolutions, dynasties, and political movements, from the outbreak of the revolution of 1789 down to our day. The book is a marvelous summary of information.

Essais et Études. Par Émile de Laveleye. Troisème Série, 1883-1892. Paper, 8vo, pp. 418. Paris : Félix Alcan.

The principal works of the late Prof. Émile de Laveleye form a long list which will stand for generations to come as a testimony to the remarkable intellectual activity of that eminent observer and thinker. Besides the books he produced, M. de Laveleye was constantly writing articles of first-class importance for the French, Belgian, Italian, English, and American periodicals and reviews. Since his death these magazine articles have from time to time been making appearance in collected book form. A third such volume has reached us from the press of Félix Alcan, in Paris. The papers collected in this third volume are all of them worthy of preservation and are of great variety in their subjects. They deal with questions of political economy, of international politics, of science, geography, religion, and various Belgian questions.

Essays on the Civil War and Reconstruction and Related Topics. By William Archibald Dunning, Ph.D. 12mo, pp. 385. New York: The Macmillan Company. §2.

All but one of the essays included in this volume have been published by Professor Dunning in the Political Science Quarterly, the Yale Review, and the papers of the American Historical Association. The author's aim is to present to the younger generation of readers a view of the political and constitutional, rather than the military history of the civil war. Professor Dunning has made one of the first serious attempts to set forth the really profound problems embraced in what we term "reconstruction."

Thirty Years of American Finance. By Alexander Dana Noyes. 12mo, pp. 292. New York: G. P. Putnam's Sons. \$1.25.

Mr. Noyes' title-page aptly explains the scope of his book. The secondary title is as follows: "A Short Financial History of the Government and People of the United States Since the Civil War, 1865-1896." The attempt is made "to narrate the series of events which influenced American financial history between 1865 and 1897, and to point out clearly and concisely the relation of those events to one another." The successive chapters deal with The Inflation Period, The Struggle for Resumption, Resumption of Specie Payments, The Silver Problem, The Surplus Revenue of 1888, The Two Laws of 1890, The Expulsion of Gold, The Panic of 1893, The Government Loans and the Tariff of 1894, and The Bond Syndicate Operation. The point of view is that of the gold-standard, sound-money men. Those who may not agree with the line of argument will at least find the book stimulating and its presentation of facts both accurate and extremely valuable.

The Study of City Government: An Outline of the Problems of Municipal Functions, Control and Organization. By Delos F. Wilcox, Ph.D. 12mo, pp. 282. New York: The Macmillan Company. \$1.50.

It is by an oversight that our readers have not had their attention most favorably attracted to a work by Prof. Delos Wilcox, published several months ago, entitled "The Study of City Government." It is a compact little volume in which the student will find summed up most intelligently and clearly the present-day problems encountered in the administration of cities, and the methods by which cities at home and abroad are undertaking to deal with those questions. Dr. Wilcox has availed himself of the best information, has utilized the work of others—always, of course, with due acknowledgment—and has presented the whole subject in a well-proportioned and comprehensive fashion.

The Liberty and Free Soil Parties in the Northwest. By Theodore Clarke Smith, Ph.D. 8vo, pp. 363. New York: Longmans, Green & Co. \$1.75.

Dr. Smith's volume in the "Harvard Historical Studies" is devoted to the local history of the political anti-slavery movement, a subject essentially new to historical writers, nearly all of whom have approached the question from the national point of view. The material incorporated in Dr. Smith's volume has a direct bearing on the origin and development of the present Republican party. After reading this account of the rise and influence of anti-slavery parties in the States of the old Northwest Territory, we can readily understand why the "anti-Nebraska" agitation of 1854-56 was more successful in those States than elsewhere.

The Neutrality of the American Lakes and Anglo-American Relations. By James Morton Callahan Ph.D. Paper, 8vo, pp. 192. Baltimore: The Johns Hopkins Press. \$1.50.

The first of the Johns Hopkins historical studies to appear in 1888 is an elaborate paper by Dr. James Morton Callahan, on "The Neutrality of the American Lakes and Anglo-American Relations." This is a more ambitious treatise than has recently appeared in the Johns Hopkins series. Dr. Callahan begins with a brief discussion of "The American Peace Policy." He then proceeds to consider the conditions which led to the treaty of 1783 and their bearings on

our northern lake boundary. The story of the passing of the control of the great lakes from British to American hands, in the War of 1812, forms another chapter. The writer then discusses the agreement of 1817 regarding the reduction of naval forces on the lakes, the Canadian rebellion and the resulting entanglements, the part played by the great lakes in our civil war, and the adjustment of irritating questions that has since taken place. Dr. Callahan has spared no pains in consulting all available American and Canadian authorities, and his monograph is doubtless the most thorough exposition of the subject that has yet been written from any point of view.

The War of Greek Independence, 1822 to 1833. By W. Alison Phillips. 12mo, pp. 443. New York: Charles Scribner's Sons. \$1.50.

The rewriting of the story of the Greek war of independence, which occupied so long a time in the earlier years of the century, seems to have been demanded by the general interest in the events of 1897. The aim of Mr. Phillips in preparing this brief account has been to make more generally accessible this interesting chapter of modern history. The work is provided with an excellent map.

Hawaii's Story. By Hawaii's Queen, Liliuokalani. 8vo, pp. 409. Boston: Lee & Shepard. \$2.

This book, attributed to the person who still calls herself "Hawaii's Queen "—although she had a year or two ago duly renounced that title and acknowledged the legitimacy of the Hawaiian republic—has been put forth at this time, presumably, in the interest of the movement against annexation. So far as it may have any influence on the determination of that question, it will be likely to help the annexationists.

## TRAVEL, DESCRIPTION, AND ADVENTURE.

Klondike: The Chicago Record's Book for Gold-Seekers. 8vo, pp. 424. Chicago: The Chicago Record Company. \$1.

The Chicago Record was one of the first newspapers in the United States to procure full and reliable reports of the Klondike gold discoveries last summer, and the fund of general information about the Yukon region which its correspondents accumulated was quite encyclopedic. From this a volume has been compiled which is well fitted to serve as a hand-book for the intending prospector or settler in the Alaskan gold regions. The book is well illustrated and is the most complete publication of its kind yet put out.

Alaska: Its Neglected Past, Its Brilliant Future. By Bushrod Washington James. 12mo, pp. 444. Philadelphia: The Sunshine Publishing Company. \$1.50.

Dr. James has been a student of Alaskan problems for some years. The aim of his present volume is to arouse such an interest in the country and its needs as may lead to comprehensive legislation by Congress for the government of the Territory. The book's descriptive chapters are based on actual observation, and there are numerous maps and illustrations. The author discusses the sealing and boundary questions from an American point of view, while the gold-fields, of course, demand their share of attention.

Across the Sub-Arctics of Canada: A Journey of 3,200 Miles by Canoe and Snowshoe Through the Barren Lands. By J. W. Tyrrell, C.E. 8vo, pp. 280. Toronto: William Briggs.

This account very well supplements the story of our own Caspar Whitney's travels through the desolate regions lying between Great Slave Lake and Hudson Bay. It is the record of an exploration made for the Canadian Geological Survey in 1893. Appendices contain a valuable classified list of plants collected on the expedition and an Eskimo vocabulary of words and phrases.

Affoat on the Ohio: An Historical Pilgrimage of a Thousand Miles in a Skiff, from Redstone to Cairo. By Reuben Gold Thwaites. 12mo, pp. 333. Chicago: Way & Williams. \$1.50.

Mr. Thwaites has a unique gift in his ability to combine a tale of mild and natural adventure with an easy sort of historical narrative. This was illustrated in his sketches entitled "Historic Waterways," and is even more evident in his present story of a boat trip down the Ohio, the object of which was to get "local color" for more serious work in Western history.

Trail and Camp-Fire: The Book of the Boone and Crockett Club. Edited by George Bird Grinnell and Theodore Roosevelt. 8vo, pp. 353 New York: Forest and Stream Publishing Company. \$2.50.

Among the important papers in this third volume issued by the Boone and Crockett Club we note Mr. A. P. Low's "Labrador Peninsula," Mr. Wm. Lord Smith's "African Shooting Trip," Mr. George Bird Grinnell's "Wolves and Wolf Nature," and Mr. Roosevelt's "On the Little Missouri." There are also interesting descriptions of "Bear Traits," and the club's interest in questions of public concern is shown in the discussion of the Adirondack deer law and the account of the origin of the New York Zoölogical Society. The volume is illustrated.

A World Pilgrimage. By John Henry Barrows. Edited by Mary Eleanor Barrows. 12mo, pp. 479. Chicago: A. C. McClurg & Co. \$2.

In this volume Dr. Barrows' observations of the life and customs of European and Asiatic peoples are recorded in the form of a traveler's first impressions. The writer's broad sympathies and unfailing good sense have contributed much to the human interest of this series of letters. Such books make more real a sense of the growing cosmopolitanism of our time.

Korea and Her Neighbors. By Isabella Bird Bishop. With a preface by Sir Walter C. Hillier. 8vo, pp. 480. New York: Fleming H. Revell Company. \$2.

Mrs. Bishop's new travel book, based on studies made during four visits to the "hermit nation" between January, 1894, and March, 1897, is the most comprehensive description of that strange land and people yet published. The author has had the advantage of seeing the country at the most important crisis of its recent history, and she has the faculty of vividly portraying what she has seen. The illustrations of the book are reproductions of photographs taken by the author.

Going to War in Greece. By Frederick Palmer. 12mo, pp. 192. New York: R. H. Russell. \$1.25.

Mr. Frederick Palmer, the correspondent of the New York Press, was exceptionally fortunate in seeing every engagement of the month's campaign which ended so disastrously for the Greeks in the spring of 1897, and he scored several journalistic "beats" of no mean order. His little book gives an inside view of the modern war correspondent's trials and triumphs. Moreover, it helps us to a clearer conception of the real animus of the Greco-Turkish conflict and some of the underlying causes of its quick termination.

A Note-Book in Northern Spain. By Archer M. Huntington. 4to, pp. 275. New York: G. P. Putnam's Sons. \$3.50.

Mr. Huntington has confined his notes and sketches to those parts of Spain that are often, mistakenly, regarded as less interesting to the traveler than the more famous cities and villages of the South. In his rambles among the Pyrenees he unearthed a wealth of local tradition on which he has freely drawn for the benefit of his readers. The volume is beautifully printed and illustrated with special care and success.

Two Ladds' First Trip Abroad. By Anna M. Hager Ladd. 18mo, pp. 348. Minneapolis, Minn.: Published by the author.

Mr. and Mrs. Ladd, of Minneapolis, had no exceptional experiences in their first visit to Europe, and Mrs. Ladd evidently does not regard her book as an important contribution to the literature of travel. She has made a very attractive narrative, chiefly for the benefit of her own circle of friends. It is a narrative that gives particular attention to the minute details of travel and of foreign life that came under Mrs. Ladd's observation, and for that very reason it has a certain value as contemporary testimony that many a more ambitious book lacks altogether.

Men I Have Fished With. By Fred Mather. 8vo, pp. 371. New York: Forest and Stream Publishing Company. \$2.

With one or two exceptions Mr. Mather's fishing comrades, while doubtless excellent sportamen, were not distinguished greatly in other lines. Mr. Mather's sketches are clever revelations of character and stories of adventure with rod and gun, "from the killing of little fishes and birds to a buffalo hunt," as the author puts it. If Mr. Mather has not made a very important contribution to American biography, he has at least told some good stories and written a wholesome and invigorating book.

#### BIOGRAPHY.

Horace Mann and the Common School Revival in the United States. By B. A. Hinsdale, Ph.D. 12mo, pp 326. New York: Charles Scribner's Sons. \$1.

The far-reaching services of Horace Mann to what may be termed educational statesmanship in the United States have been duly recognized by American school men. Professor Hinsdale's volume in the series of "Great Educators" summarizes those services and gives them a proper setting in their historical relations.

Eighty Years and More (1815-1897): Reminiscences of Elizabeth Cady Stanton. 8vo, pp. 474. New York: European Publishing Company. \$2.

Mrs. Stanton's book of reminiscences appears in the semi-centennial jubilee year of the woman-suffrage agitation. The famous Seneca Falls convention, in which Mrs. Stanton was one of the leading spirits, was held in July, 1848, and from that day to this her name has been associated with that of Susan B. Anthony in the world movement for the enfranchisement of women. Her career as a reform lecturer and agitator has been a long and notable one, beginning as it did in the anti-slavery days. Few Americans now living have enjoyed so wide an acquaintance with the distinguished men and women of the second half of the century as this book reveals.

Reminiscences of William Wetmore Story, the American Sculptor and Author. By Mary E. Phillips. 12mo, pp. 291. Chicago: Rand, McNally & Co. \$1.75.

William Wetmore Story, a man of remarkable gifts and attractive personality, died in Rome in 1895. Several years before his death the writer of this memoir had obtained from him, through a letter of introduction from Miss Elisa Allen Starr, of Chicago, much interesting and valuable information regarding his life-work. This is supplemented, in the present volume, with manuscript materials furnished by Miss Starr.

Twelve Naval Captains: Being a Record of Certain Americans who Made Themselves Immortal. By Molly Elliot Seawell. 12mo, pp. 233. New York: Charles Scribner's Sons. \$1.25.

The twelve naval officers selected for this record are those who most distinguished themselves in the American Revolution and the War of 1813 and during the intervening period. The first biography in the book is that of Paul Jones, our first national naval hero, and the last is a sketch of James Lawrence, whose "Don't give up the ship has been the watchword of the American navy from his time to ours.

John Hunter, Man of Science and Surgeon (1728-1738). By Stephen Paget, M.A. 12mo, pp. 272. New York: Longmans, Green & Co. \$1.25.

William Harvey. By D'Arcy Power, F.S.A. 12mo, pp 283. New York: Longmans, Green & Co. \$1.25.

Sir James Young Simpson and Chloroform (1811-1870). By H. Laing Gordon. 12mo, pp. 237. New York: Longmans, Green & Co. \$1.25.

The series of biographies entitled "Masters of Medicine," which was well begun under the editorial supervision of the late Ernest Hart, is an enterprise of more than ordinary merit. It is a strange fact that comparatively little is known about the lives of such benefactors of the race as Harvey. Jenner, Hunter, and Simpson beyond the most meager accounts of their services to science. Readable medical biographies have been few indeed. This new series fills a real gap in our literature, and we hope that the death of the editor will not prevent the execution of the original plan. Each volume has a photogravure frontispiece portrait.

Ambrose Paré and His Times (1510-1590). By Stephen Paget. 12mo, pp. 309. New York: G. P. Putnam's Sons. \$2 50.

The story of the great French surgeon of the sixteenth century should be known outside of France. Mr. Paget's work is based on the standard authorities (untranslated) and is illustrated with an interesting portrait and several reproductions from ancient prints.

Sir Walter Ralegh: The British Dominion of the West. By Martin A. S. Hume. 12mo, pp. 449. New York: Longmans, Green & Co. \$1.50.

To Americans it will seem especially fitting that the new biographical series of "Builders of Greater Britain" should begin with a sketch of Sir Walter Ralegh, the man who really conceived the idea of Anglo-Saxon domination this Western world. It is true that the direct results of Ralegh's statesmanship were in after-years largely lost to Britain, but that "is another story." Ralegh was in the truest sense the creator of that "British dominion of the West" which in the seventeenth and eighteenth centuries made the "Greater Britain" and laid the foundations of another great English-speaking nationality.

New Letters of Napoleon I., Omitted from the Edition Published Under the Auspices of Napoleon III. From the French. By Lady Mary Loyd. New York: D. Appleton & Co. \$2.

The publication of more than five hundred "new" letters of Napoleon is an event which would once have roused far more curiosity and interest than at the present day, when the general conception of the Napoleonic character has become so fixed and definite that no amount of self-revelation through rediscovered letters is likely to greatly change it. The correspondence included in this volume is addressed to many persons in various stations and relations to Bonaparte, and it touches on a multitude of subjects. The Emperor's directions to his ministers are among the most piquant pasages in the book. American affairs are touched upon, but only incidentally.

## RELIGION AND ETHICS.

The Holy Bible, Polychrome Edition. A New English Translation, with Explanatory Notes. 4to. The Book of Judges, by Rev. G. F. Moore, D.D. \$1.25. The Book of Psalms, by Horace Howard Furness. \$2.50. The Book of the Prophet Isaiah, by Rev. T. K. Cheyne, M.A., D.D. \$2.50. New York: Dodd, Mead & Co.

The general plan of the polychrome Bible was fully described in this REVIEW for December, 1896. The distinctive

typographical feature of the work, which gives the edition is name, is the arrangement of colors on the background of the page to show the various sources from which the books have been composed. This device helps to an understanding of many of the more important results of modern critical scholarship. The services of the world's greatest biblical scholars have been enlisted in the work of translating and annotating. Thus the English rendering of the Psalms has been done by that accomplished student of English letters, Dr. Horace H. Furness, of Philadelphia, while the notes to the text have been prepared by Wellhausen, the great German critic, who also furnishes an appendix on the music of the ancient Hebrews. Each volume contains illustrations from Assyrian and Egyptian monuments or from photographs of biblical scenery.

The Modern Reader's Bible. St. Matthew and St. Mark and the General Epistles. Edited, with notes, by Richard G. Moulton. 16mo, pp. 330. New York: The Macmillan Company. 50 cents.

Professor Moulton's presentation of the books of the New Testament in modern literary form will be welcomed by all who have followed his work in the Old Testament. The present volume includes the gospels of Matthew and Mark and the epistles of James, Peter, and Jude, with a critical introduction and notes.

An Introduction to the Literature of the Old Testament. By S. R. Driver. 8vo, pp. 588. New York: Charles Scribner's Sons. \$2.50.

This is the sixth edition of Canon Driver's scholarly work, with matter which in former editions appeared in appendices incorporated in the main text, so that the results of the latest criticism are stated in appropriate order.

Prayers Ancient and Modern, Selected and Arranged for Daily Reading. By the editor of "Daily Strength for Daily Needs." 16mo, pp. 377. New York: Doubleday & McClure Company. \$1.

Many authors have contributed to this collection of prayers. Among modern writers one would hardly turn to Robert Louis Stevenson in a quest for this form of literature, but two prayers by Stevenson are included in the little volume before us. One of the most voluminous contributors is Christina Georgina Rossetti.

Hymns That Have Helped: Being a Collection of Hymns Which Have Been Found Most Useful to the Children of Men. By W. T. Stead. 16mo, pp. 276. New York: Doubleday & McClure Company. 75 cents.

Mr. Stead's collection of testimonies from the men and women who have been helped by the hymns included in his little book is very interesting. Several of the hymns selected for this publication are favorites of long standing, while others can hardly be said to be familiar to American ears, but the reasons for their inclusion are brought out in the editorial notes. The American edition of "Hymns That Have Helped" should have as marked a success as the English edition enjoyed.

Scientific Aspects of Christian Evidences By G. Frederick Wright. 12mo, pp. 362. New York: D. Appleton & Co. \$1.50.

Earlier works, and especially "The Logic of Christian Evidences," have shown Professor Wright's marked qualifications as a writer on the relations of science and religion. This author's position is indeed unique, for he has become an expert in two distinct fields. For many years he has pursued the study of glacial action (from which has resulted his important book on "The Ice Age in North America"), and during the same time he has continually held a chair in a theological seminary. All the recently discovered external evidences of Christianity have appealed to him with unusual force, and in his new volume they will be found clearly

stated. Professor Wright has a literary style well suited to his purpose; his books are readable as well as logical.

The New Puritanism. Papers by Lyman Abbott, Amory H. Bradford, Charles A. Berry, and others. Edited by Rossiter W. Raymond. 12mo, pp. 275. New York: Fords, Howard & Hulbert. \$1.25.

This volume contains the addresses given on the occasion of the semi-centennial anniversary celebration of Plymouth Church, Brooklyn. The Rev. Dr. Berry, of Wolverhampton, England, spoke on "Beecher's Influence Upon Religious Thought in England," Dr. George A. Gordon on "The Theological Problem for To-day," Dr. Washington Gladden on "The Social Problems of the Future," and President Tucker, of Dartmouth, on "The Church of the Future." These addresses, together with the two on modern Puritanism by Dr. Abbott and Dr. Bradford, are all worthy of preservation, apart from the temporary interest connected with Plymouth's commemoration services.

The Service of God: Sermons, Essays and Addresses. By Samuel A. Barnett. 12mo, pp. 846. New York: Longmans, Green & Co. \$2.

This book is full of the spirit of the author's service of humanity in East London, where as warden of Toynbee Hall Mr. Barnett has had unusual opportunities to study the problems of modern philanthropy and practical religion as they present themselves in the crowded city. Mr. Barnett's point of view is well known to many of our readers; he represents the "moderate" wing of the English Christian socialists.

Antichrist: Including the Period from the Arrival of Paul in Rome to the End of the Jewish Revolution. By Ernest Renan. Translated by Joseph H. Allen. 8vo, pp. 442. Boston: Roberts Brothers. \$2.50.

This the fourth volume in Renan's series entitled "History of the Origins of Christianity" has been commended to readers as exhibiting the author's traits as a historian with especial clearness. Professor Allen's translation should be of service to those readers of "Quo Vadis" who wish to broaden their information concerning the time of Nero.

Christianity and the Progress of Man, as Illustrated by Modern Missions. By W. Douglas Mackenzie. 12mo, pp. 250. New York: Fleming H. Revell Company. \$1.25.

This book attempts to cover in a summary way the ground which Dr. Dennis has explored with great care in his work on "Christian Missions and Social Progress." Professor Mackenzie writes with full and accurate information and with fervent interest in missionary enterprise. His father and mother have served as missionaries in South Africa for the past forty years.

Christianity the World-Religion. Lectures Delivered in India and Japan. By John Henry Barrows, D.D. 12mo, pp. 412. Chicago: A. C. McClurg & Co. \$1.50.

These lectures, delivered by Dr. Barrows through the generosity of Mrs. Haskell, a wealthy benefactress of the University of Chicago, attracted world-wide attention and did much to enhance respect for the Christian faith in the Orient. An interesting account of the reception accorded to Dr. Barrows in India is given in an appendix to this volume by the Rev. Dr. Robert A. Hume.

Buddhism and Its Christian Critics. By Dr. Paul Carus. 12mo, pp. 316. Chicago: The Open Court Publishing Company. \$1.25.

Perhaps the most sympathetic study of Buddhism that has recently appeared in the English language. The tone of the book is not, however, hostile to Christianity. The author addresses himself mainly to such Christians as wish to get an insight into the teachings of Buddhism. His chapters may be read with profit, even if at times without full acceptance of all his propositions, by the open-minded student of comparative religion.

Practical Ethics: A Collection of Addresses and Essays. By Henry Sidgwick. 12mo, pp. 260. New York: The Macmillan Company. \$1.50.

Professor Sidgwick represents in England the views and purposes for which Dr. Felix Adler and the ethical culturists stand in this country. His last volume of essays deals with the practical problems attending the work of the ethical societies that were founded about ten years ago in London and Cambridge.

#### REFERENCE.

Students' Edition of a Standard Dictionary of the English Language. 8vo, pp. 923. New York: Funk & Wagnalls Company. \$2.

The convenient abridgment of the Standard Dictionary, "designed to give the orthography, pronunciation, meaning, and etymology of over sixty thousand words and phrases in the speech and literature of the English-speaking peoples," is certainly superior to earlier attempts in the making of "school" and "students" dictionaries. The selection of words has been made with great care. Students in American colleges and preparatory schools will find that special effort has been made to retain all words occurring in the series of "English classics" on which college entrance requirements in English are based. The abridgment shows every evidence of skill and good judgment on the part of the compilers. It is a compact and handy volume, useful at the office desk as well as in the library or study.

Dictionary of Quotations (Classical). By Thomas Benfield Harbottle. 8vo, pp. 648. New York: The Macmillan Company. \$2.

This dictionary of classical quotations has been prepared as far as possible along the lines laid down in the "Dictionary of English Quotations" by Colonel Dalbiac. A special effort has been made to produce a volume serviceable to non-classical as well as to classical students, and the compiler has taken particular pains to avoid the perpetuation of errors.

Punctuation: With Chapters on Hyphenization, Capitalization, and Spelling. By F. Horace Teall. 16mo, pp. 199. New York: D. Appleton & Co. \$1.

One important merit of Mr. Teall's little manual is its economy in the formulation of rules; the author relies rather on the enunciation of well-defined principles and the citation of examples of their application. The book is clearly written; the pros and cons of controverted questions are fairly stated and judiciously determined, and probably no better guide can be found for the perplexed literary worker.

## EDUCATION AND TEXT-BOOKS.

- Elements of Constructive Geometry, Inductively Presented. By William Noetling. From the German of K. H. Stöcker. 12mo, pp. 62. Boston: Silver, Burdett & Co. 36 cents.

EXQUISITE CLEANSER. SOOTHING. ANTISEPTIC.

HAIR AND SKIN

# WEARING APPAR

# New Suits for Spring, \$5.

Our new Spring Catalogue of styles is a mirror of fashion for dressy women. We show in it all the newest Parisian ideas in Tailor-made Suits, Skirts, etc., and will mail it free, together with samples of materials to select from, to the lady who wishes to dress well at moderate cost. Our designers and tailors pay particular attention to the little details of graceful hanging skirts, smart jackets and dainty effects, which go so far toward making a woman appear stylish and well dressed. All of our gowns are made to order, giving that touch of individuality and exclusiveness so dear to the feminine heart. We understand fitting from measurements sent by mail. Our new Spring Catalogue illustrates charming costumes fashioned after La Mode's latest dictates.

Tailor-Made Suits, \$5 up.
In Covert Cloths, Whipcords, Wool Poplins, Broadcloths, Serges, Cheviots, etc., in all of the newest Spring shades.

Outing and Blazer Suits, \$4 up.
In Duck, Crash, Pique and Linen Suitings, delightfully cool for Summer wear.

Separate Skirts, \$4 up.

We carry a full line of Skirtings, including Mohairs, Crepons, Storm and Cheviot Serges, Diagonals, Whipcords, Black Figured Goods, Silke and Sating Goods, Silks and Satins.

Bicycle Suits, \$4 up.
In Corduroys, English Tweeds, Covert Cloths, Serges, Scotch Cheviots, Mixtures, Mohair, Crash, Linen and Duck.

Bicycle Skirts, \$2.50 up.

Our new designs in Bicycle Skirts are recognized everywhere as the most practical skirts for wheeling that have yet been produced.

Capes and Jackets.

We carry a special line of fine light-weight Kerseys, Diagonals,
Worsteds and Covert Cloths, especially suited for Spring and Summer Wraps.

We pay express charges everywhere. Our line of samples includes the newest materials for Spring and Summer wear, many of them being exclusive novelties not shown elsewhere. We also have special lines of black goods and fabrics for second mourning. Write to-day for Catalogue and samples; you will get them by return mail.

THE NATIONAL CLOAK CO., 119 and 121 West 23d St., New York City.

# The World of Thrift and Money Matters.

The Cotton Crop of 1897.—It is particularly interesting, in view of the cut in wages at Fall River and other New England manufacturing towns—explained by some as the result of the development of cotton mills at the South—to note the increased proportion of last year's cotton crop manufactured in the cotton-growing States. Ten years ago this section manufactured not more than 6 per cent. of a 6,500,000 bale crop, while in 1896—97 they used 11 per cent. of a crop which aggregated 8,500,000 bales—an increase from less than 400,000 bales to nearly 1,000,000. There were last year 402 mills in operation, whose 3,344,327 spindles took 981,991 bales of cotton.

The total crop amounted to 8,532,705 commercial bales, which was apportioned among the various States as follows: Alabama, 833,789; Arkansas, 605,643; Florida, 48,730; Georgia, 1,299,340; Indian Territory, 87,705; Kansas, 61; Kentucky, 414; Louisiana, 567,251; Mississippi, 1,201,000; Missouri, 24,119; North Carolina, 521,795; Oklahoma, 35,251; South Carolina, 936,463; Tennessee, 236,781; Texas, 2,122,701; Utah, 123; Virginia, 11,539.

The crop of sea island was the largest on record by some 10,000 bales, reaching the number of 104,368. Georgia supplied 64,668 of this, Florida 26,431, South Carolina 10,769, and Texas 2,500. The total amount of land devoted to cotton-raising was 23,273,209 acres, which gives an average of 0.37 per acre. The value of the uplands crop averaged 6.65 cents a pound, aggregating \$285,810,606, while the sea island at 16.58 represented a total value of \$6,000,958.

Our Trade With China.—That American trade interests in China are far more than speculative is evidenced by the report of Consul Fowler, of Chefoo, who declares that our trade in the Shanheng region has trebled in the last three years. With the present condition of fierce com-

petition in every department of business, such an unlimited market as could probably be developed in the Flowery Kingdom is a matter worthy of all attention. Consul Fowler says:

"The quarterly returns of the customs are very brief and do not give the details, but there is every reason to believe that United States trade has made great leaps in all lines-groceries, machinery, household goods, stoves, watches, and condensed milk. I know that through my efforts three lines of manufactures have been introduced here during the past four months. It is gratifying to see all the shops filling up with American goods which find a ready sale-goods that in many cases were unknown here two years ago. I was surprised last winter to find that no one here knew what rubber boots were, and yet the ground was covered with snow. This winter customers will be able to buy good American boots, and to many of them they will be a novelty. United States butter, cheese, milk, canned vegetables, meats, bacon, ham, stoves, imitation gold watches, clocks, hand sewing machines, California wines, beer, whisky, flour, oil, and cotton are having increased sales, and can be found in English and German as well as Chinese shops."

The following table shows the imports at Chefoo for the quarter ending September 30, 1897:

<sup>\*</sup>Decrease, +1895.

**Japanese Railroad Development.—**Japan has adopted, along with other Western conditions, the labor irritation which we in America know only too well. Wages are said to be rising rapidly in all skilled industries. And the frequent strikes, particularly common among the railroad-shop workers, have greatly retarded the construction of railroads which is being forwarded with such extensive aims. The leading line of the country, the Nippon Railroad Company, has set out to double the present capacity of its road, and proposes to expend about \$18,000,000 on these improvements, and American manufacturers of cars, rails, and locomotives can reasonably expect that a large part of this will come to the United States. The Imperial Department recently purchased from the Illinois Steel Works, through the China and Japan Trading Company, 24,515 tons of rails and accessories at a price of about \$833,000—the shipment to be delivered at Yokohama and Kobeand orders for American locomotives are constantly coming in despite the hard work of the agents from British builders, who are making very special efforts to gain this particular branch of trade. The latter claim that the English locomotives last much longer and need far less repairing than those manufactured in the United States, but our builders seem to be emerging triumphantly from this competition, for 60 or 70 locomotives were recently ordered here by the government and the Japan Railroad Company. Takatu & Co. have lately purchased 20 from the Brooks Locomotive Works, and there have been various other orders, including that by Mitsui Bussan Kwaisha of 10 from the Schenectady Locomotive Works. The East is speedily becoming a most important factor in the manufacturing world.

New York's Plan to Better Trade.—A noteworthy instance of advertising on a large scale is to be found in the volume now being prepared by the New York Merchants' Association. This newly formed organization has rapidly assumed importance. It now has on its list of non-resident members more than 26,000 merchants throughout the country, while the resident members foot up to nearly 1,200. A statement recently issued shows that in the last three months there registered at the rooms of the association 3.824 representatives of out-of-town buyers from forty-nine different States and Terri-The work of the association along the lines of reducing railroad rates to visiting buyers and disseminating information in the shape of maps and circulars has been so uniformly successful that it is now proposed to extend its field

of operations in a novel manner. On the principle that a true idea is just as true on a large scale as on a small one, it has decided to advertise the city of Greater New York by an elaborate volume, which is planned to cost over \$40,000. In this will be gathered complete descriptions of the attractions of the metropolis, with its most notable features of every sort. The book will be profusely illustrated by the finest artists, the collection of such men as Will H. Low, Kenyon Cox, and E. H. Blashfield having been secured, and it will be a unique résumé of the greatest of American cities. It is hoped that the work can be completed in time to use the volume next season.

Reduction of the Insurance Rate.—From the very beginning of life insurance in this country all its calculations have been founded upon a basis of 4 per cent. interest, and the recent an-

THE PRUDENTIAL INSURANCE CO. OF AMERICA

Home Office: NEWARK, N. J.

JOHN F. DRYDEN, President.

Real Petate

nouncement by a number of leading companies of a new and uniform table of rates based upon the American tables of mortality at  $3\frac{1}{2}$  per cent. interest has been widely discussed. Mr. Richard A. McCurdy, president of the Mutual Life Company, has explained the change as follows:

"A continued depression in the rates of interest obtainable upon the best forms of investments, which began about ten years ago, has become more marked within the past year or two, so as to create a doubt whether the average rates of interest safely obtainable may not at some time in the future fall below the 4 per cent. which has from the beginning been established as the foundation for all life insurance calculations in this country.

"There is no reason to apprehend that for a long period to come there will be any marked reduction in the average rates obtainable on the funds now invested in the best interest-bearing securities, or that there will be any future necessity to strengthen the basis of reserves on existing business. These are safely provided for, and the present change has been adopted only with reference to new business, which will on the average remain in force to a much later date than the company's existing business.

"A favorable and by no means improbable change in financial conditions may be productive of an increase in future rates of interest, and in that case the dividends of surplus to the policy holders will be correspondingly increased. Whether this proves to be the case or not, there will be no relaxation of effort on the part of the company's management to maintain the highest possible ratio of interest income. It is probable that this conservative action may also be adopted by the other life insurance companies of this country, and it is fitting that the first step should be taken by those leading American organizations which have hitherto been regarded as the chief exponents of life insurance throughout the civilized world. The immediate effect of this change of reserve basis will be a slight increase in the rates of premium to be charged upon endowment and limited-payment life policies, and also upon ordinary life policies issued on young and middleaged lives. At the older ages, from fifty upward, a decrease in rate occurs, inasmuch as experience has shown that the present rates charged at advanced ages can in equity be reduced, and therefore should be. It is scarcely too much to say that the history of American life insurance is contained in the record of the great companies which are foremost in this movement, and it is therefore eminently proper that they should again point out the path of orderly and energetic conservatism which leads in safety to success."

Positively removes wrinkles, crow's-feet, and traces of age. Used for seven years past and indorsed by ADELINA PATTI, Mrs. Gov. JOHN P. ALTGELD (Illinois), IODJESKA, MELBA, LILLIAN RUSSELL, Mrs. LANGTRY, and thousands of society women everywhere. Sample goc.

Price \$3.00 for Large Jar. One Year's Supply.

Send \$1.50 at once, mentioning the Review of Reviews, and we will send you a half-size jar and elegant illustrated book containing facsimile letters from Patti, Modjeska, Professor Cooley, of Vassar, and numerous other high authorities. All questions and inquiries promptly and courteously answered. Special advice given in individual cases. Correspondence solicited. Write teday.

GAGE DRUG & CHEMICAL CO.,

N. W. Cor. Drexel and Oakwood Blvds., CHICAGO, ILL.

# Cures Without Medicine.

Do not punish yourself with violent drugs that poison your system and tear your vitals. It is a mistake to suppose that a sick man can be made well by taking nauseous drugs whose first function is to make him more ill.

NORTH CAROLINA SUPREME COURT.

RALEIGH, N. C.

We have found the Electropoise very valuable—especially for children. I got one last May, and I am sure I have saved three times its cost already in doctors and drug-store bills. From my experience with it and observation, I can safely recommend it.

Yours truly,

WALTER CLARK.

(Ass. Justice.)

RHEUMATISM.

45 BROADWAY, NEW YORK,

Nov. 18, 1896.

DEAR SIR: I have given a very thorough trial to your Electropoise for rheumatism, and find it to be a very valuable remedy for that complaint. If thoroughly used, I believe it will give satisfactory relief to those who may be similarly affected.

WILLIAM FULLERTON.

(Ex-Supreme Court Judge and Ass.

Justice Court of Appeals.) Nov. 18, 1896.

MARYLAND'S COURT OF APPEALS

STAUNTON, VA.

Not a

**Battery or** 

Belt.

GENTLEMEN: I most cheerfully put my Gentlemen: I most cheerfully put my late letter at your disposal and assent to its publication. I have great faith in the Electropoise and would be glad to aid in promoting the general use of it. If you wish I will write out a description of my wife's case in general terms, but, nevertheless, such as will sufficiently indicate the nature of her sufferings. Yery truly, WM. SHEPARD BRYAN. (Justice Md. Court of Appeals.)

The Electropoise is a simple remedial instrument that cures many diseases and benefits all, without medicine or shock and without inconvenience of any sort. Whatever your trouble, it is worth your while to investigate this simple and effective remedial agent. It costs only a postal to get our booklet containing 250 letters from which the above have been selected. Address your request for booklet to

Gentlemen:—Answering yours of December 20th, asking what I think of the REX wheel after having ridden it for a year, beg to say that I have ridden a wheel for seven years and hope to ride a

having ridden it for a year, beg to say that I have the same of th

REX CYCLE COMPANY, City.

No. 2523 Wabash Ave., CHICAGO, OCTODER 1, 1001.

Gentlemen:—After riding the REX 468 miles without rest in forty-six hours, eight hours in the rain, and part of route through sandy roads, I must say that it is the greatest road wheel on earth. After finishing my ride I was as fresh as when I left Chicago at start. No soreness or tired feeling. As for coasting, it is the finest: a two-wheel bicycle is not in it.

In future all my road riding will be done on a REX.

Respectfully, (Signed) G. S. PIERCE, Long Distance Road Rider.

MERRITT W. PINCKNEY. GUSTAVUS J. TATGE. PINORNEY & TATGE, Attorneys and Counselors Suite 503-504, First National Bank Bldg:

Telephone Main 8631.

CHICAGO, ILL., December 22, 1897.

REX CYCLE COMPANY, No. 84 Adams St., Chicago.

Gentlemen:—After a thorough test of the REX tandem last summer and fall, on all kinds of roads, and with many different people, it gives me great pleasure to say that it is the easiest riding machine I ever mounted.

My wife and I have ridden your machine on roads so rough that we could not have stayed on any other tandem. The rougher the roads the more marked is the superiority of your wheel over other wheels. Your wheel, properly introduced, will prove a world beater.

Sincerely yours, (Signed) M. W. PINCKNEY.

NOTE.—ALL REX CYCLES ARE FULLY WARRANTED, AND IF NOT FOUND ALL WE CLAIM FOR THEM WE WILL TAKE THEM BACK AND REFUND FULL PURCHASE PRICE.

"THE REX CYCLE IS A MARVEL OF INVENTIVE SKILL

#### REX CYCLES ARE THE ONLY STRICTLY HIGH-GRADE WHEELS NOW EXTANT

Our Tandems can be turned in their own space. Think of it. If Chainless Gears prove a success we can easily apply it to the REX, BUT WE WILL NOT EXPERIMENT. It is not a question of Gears, but SPEED AND COMFORT.

#### One streng root of each free by mail for 25c.

Austria is a bright yellow, while Italia is orange scarlet bordered golden yellow. If potted now they will flower in a few weeks' time, and can be transferred to the garden in May, producing their magnificent spikes of gorgoous flowers through the entire summer.

In addition we will send FHEEE to each purchaser our Garden Calendar for 1898, the handsomest catalogue published; also a copy of our Sixetleth Anniversary Souvenir.

HENRY A. DREER, 714 Chestnut Street, PHILADELPHIA, PA.

# SEEDS & PLANTS

# Hardy Climbing Yellow Rose.

The Vellow Rambler. Rosarians have been for many years crossing or hybridizing various Roses with a view to obtaining a hardy yellow climbing Rose, but the combination of climbing habit and yellow color with hardiness was one that it seemed impossible to obtain, and was almost despaired of. The Yellow Rambler has been found to successfully withstand, without protection, a continued temperature of from zero to fifteen degrees below, which proves it to be the only hardy yellow climbing Rose yet introduced. It can be successfully grown in all the northern parts of the United States and Canada; in fact, anywhere that other Roses succeed at all well. Did we say nothing more about the Rose, we think that this would be sufficient to establish its value, for what lover of Roses in the North has not bewailed the severity of climate which nearly deprives his garden of the most attractive color of all—yellow. The flowers are borne in immense clusters, after the same manner as the Crimson Rambler, often as many as one hundred and fifty bloesoms in a bunch, and the trusses have the same handsome pyramidal shape as those of the Crimson Rambler. The color is a decided yellow.

REMEMBERS, this is the enty hardy climbing Yellow Rose. We have an immense stock of this grand new variety. If you want the genuine Yellow Rambler Rose, send to us for it. Price, 25 cts. each: three for 50 cts.

A GREAT 50 CENT 'TRIAL COLLECTION of New Ever-Blooming Roses. Nothing better offered. The following six new Roses for only 50 cents.

President Carnot.—Lovely fawn. Mosella.—Golden-yellow, bedding or pot Rose. Climbing Meteor.—Rich, velvety crimson. Will either climb or can be trained in bush form; hardy. this Treat

Our Scientific Catarrh Inhaler is the latest, best, and simplest now in use, endorsed and recommended by physicians for the cure of Catarrh, Colds and pains in the head, Asthma, Bronchitis, Influenza, Catarrhal Deafness and Sore Throat.

Our treatment has been so successful in curing these diseases that we have sufficient faith in their virtue and merits to send our Inhaler with medicine for one year to the public, free, on three days trial. If satisfied, kindly send us \$1.00, if not, please return. Send for it to-day. Address. P. M. STOKES CHEMICAL CO., Cincinnati, Ohio.

Miss S. C. NEAL, Graduate New York City Training School for Nurses.

PATENTEE AND MANUFACTURER OF THE

This is one of the daintiest and most practical articles of its kind on the market. The manufacturer being herself a trained nurse, findon the market. The manufacturer being herself a trained nurse, finding the great need of a bathing apparatus where an infant and sick child could be bathed comfortably and do away with the cold, cumbersome tin tub from the nursery, the problem has been solved, and bathing the baby has now become a pleasure to child, mother, and nurse. There are hundreds of testimonials which could be added, beginning at the White House (for the three little daughters of the President have used the Neal Bath-Tub), and hundreds of such homes, and Richard Folsom Cleveland thinks it is the nicest thing in the world to swim and fish "Beware of Imitations."

These goods are not to be found at any rubber stores or drug stores, but are on sale at all leading dry goods stores.

Send for catalogue.

Miss S. C. NEAL, 114 Fifth Avenue, NEW YORK CITY.

# Malt Nutrine

Pure Extract of Choicest Malt.

Malt-Nutrine is no experiment. Years of practical test and careful and innumerable analyses have resulted in the one perfect tonic, known to-day as Malt-Nutrine. It is the pure extract of the choicest malt and contains 14.60 per cent. of extract matter and less than 2 per cent. of alcohol, being therefore absolutely non-intoxicating. Malt-Nutrine imparts vigorous and permanent health and is invaluable to nursing mothers, feeble children, the aged, infirm and persons suffering with debility, exhaustion and wasting diseases, and is a preventive of insomnia. Malt-Nutrine is prepared by the famous Anheuser-Busch Brewing Ass'n, which fact guarantees its purity, excellence and the merits claimed for it.

Price \$8.00 to \$12.50 Interesting book. "Health and Beauty, free. Good agents werefed. Robinson Thermal Bath Ca., 954 Summit Street,

HUNTER McGUIRE, M.D., LL.D., President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va., says:

BUFFALO LITHIA WATER Spring No. 2, has very marked adaptation in diseases of the digestive organs. In that condition especially known as Nervous Dyspepsia, frequently caused by over-mental labor, it will be found highly efficacious. It has never failed me as a powerful nerve tonic when I have prescribed it as such, producing a decided calming effect in men and women whose broken-down nervous system had kept them in perpetual motion, who could not sleep and who could not rest. I sometimes think it must contain hypophosphites of lime and soda. It acts as that compound does—as a tonic and alterative."

Dr. HARVEY L. BYRD, of Baltimore, President and Professor of Obstetrics and Diseases of Women

and Children in the Baltimore Medical College, formerly Professor of Practical Medicine, etc.:

BUFFALO LITHIA WATER Spring No. 2, is an admirable general tonic and restorative, increasing the appetite, promoting digestion, and invigorating the general health. It is powerfully anti-acid and especially efficacious in acid dyspepsia. It is strongly commended to a very large class of sufferers by a peculiar power as a nerve tonic and exhilarant, which makes it exceedingly valuable, where there is nothing to contra-indicate its use, in all cases where nervous depression is a symptom."

Dr. J. ALLISON HODGES, Professor of Anatomy and Clinical Professor of Nervous and Mental Dis-

eases, University College of Medicine, Richmond, Va. Referring to Spring No. 1:

"BUFFALO LITHIA WATER properties, and is an efficient remedy in a wide range of Nervous Disorders. In all of the many cases of Nervous Indigestion and Neurasthenia in which I have prescribed it, it has proved highly beneficial.

"I would especially mention the case of a sufferer from Nervous Indigestion, who, after visiting most of the noted health resorts, both in this country and Europe, without material benefit from any, received decided and permanent benefit from this water."

Dr. WM. O. BASKERVILLE, Petersburg, Va.:

BUFFALO LITHIA WATER well as to the blood. I have known it to produce magical effects in Nervous Prostration, resulting from overwork, prolonged mental strain, etc., and convalescents from adynamic diseases have been restored to health in a surprisingly short time, the water being a direct blood producer, a valuable heart tonic and a physiological diuretic. As a tonic, anti-dyspeptic and restorative, it is without a peer. It exerts a happy effect on the hepatic cells, causing a healthy secretion and excretion of the bile—a sine qud non in perfect digestion."

BUFFALO LITHIA WATER is an undoubted, positive remedy for many of the most serious and most common health. An illustrated book can be procured on request, containing the testimony of the most famous physicians of this country and Europe (men whose very names will impress you) as to the wonderful power of Buffalo Lithia Water in Gout, Rheumatism, Bright's Discase, Gravel, Indigestion, Nervous Dyspepsia, Nervous Exhaustion, Malaria, Alcoholism, Rezema and Blood Disorders, Discases of Women, etc. The list is long, but the testimony is stronger. If your health is not satisfactory, send for the book and judge for yourself. Springs open for guests from June 15 to October 1.

### RHEUMATISM NEURALGIA.

Hichardson's Celebrated Magneto-Galvanic Bings have cured Bheumatism, Neuralgia, Gout, Weak Back, and all blood impurities. Why? Because they act on the blood by Electricying it, and as the "Blood is the Life," so is Electricity the life-riving current.

and as the "Blood is the Lite," so is

Electricity the lite-giving current.

HE MESSRS. APPLETON have in course of publication a modern and enlarged edition of their Cyclopædia of American Biography. It is a work national in character, American in every particular-a compendium of the lives of all those noble men and women who evolved from the crude continent discovered by Columbus, the glorious constellation of republics that now give protection to millions of free men and harbor the advance arts of a grand civilization. In no other form, certainly none so complete, so reliable, so readable, and so instructive, has the information here contained ever been collated before.

The editors and publishers have spared no pains or expense to make this great work as valuable and as nearly perfect as possible. Under the direction of Gen. James Grant Wilson and Prof. John Fiske are associated as consulting editors many of the most eminent of their contemporaries in Church and State, in law and literature, in the army and navy, in art and music, and the field of invention and science.

The Library contains about 2,000 illustrations, on wood, of natives and foreigners whose acts have contributed to American history, with illustrations of their homes, birthplaces, monuments, etc., forming a most valuable and attractive portrait galiery of illustrious Americans.

As, according to Emerson, "all history is made up of biography," this work is in reality not only a complete history of the United States, but of all portions of North and South America.

For the purpose of advertising and popularizing this new edition, a special introductory offer will be made.

> An advance fee of ONLY ONE DOLLAR (to cover expense of boxing, expressage, etc.) entitles you to secure the popular standard edition for a subscription of a dollar and a half (\$1.50) monthly for twelve months; or, for the half-morocco edition, twelve (12) payments of two dollars and fifty cents (\$2,50) each. The initial fee of one dollar in each case is guaranteed to cover delivery expenses in all sections of the United States and Canada.

Send \$1.00 to D. APPLETON AND COMPANY, 72 Fifth Avenue, New York, stating which binding you prefer, and the two volumes now ready will be sent at once. Then we deliver one volume monthly until the set is completed in six royal octavo volumes of 5,000 pages. We recommend the half-morocco edition.

To secure sample pages, etc., simply send postal. Mention this magazine.

D. APPLETON AND COMPANY, 72 FIFTH AVENUE, NEW YORK.

# TOILET ARTICLES

### THE UNIVERSITY OF CHICAGO JOURNALS

The Biblical World Edited by President W. R. Harper. Monthly; about 80 pages, with special numbers in June and December. A popular monthly magazine; illustrated; devoted exclusively to biblical study. The best magazine published for the busy minister, the Sunday-school teacher, and the thinking layman.

\$2.00 a year; foreign, \$2.50; single copies, \$0 cents.

The School Review Edited by Charles H. Thurber. Monthly, except in July and August; averages about 80 pages. This publication is distinctively the national representative of high-school and academic work. Special number in June. \$1.00 a year; foreign, \$200; single copies, 20 cents.

The Botanical Gazette Edited by John M. Coulter. Monthly, illustrated; at least 80 pages. Devoted to the science of botany in all its departments, containing results of research, book reviews, notes for students, and news items. TOILET ARTICLES

By JOHN EDWARD COURTENAY BODLEY, M.A.

### FRANCE.

Now Ready. 2 volumes. Cloth, demy 8vo, \$4.00 nct.

Mr. Bodley gives a concise description of the country, its people and institutions.

VOLUME I

Preface—Chronological Table—Introduction.

Book I. The Revolution and Modern France.

Book II. The Constitution and the Chief of the State.

Volume II.

Book III. The Parliamentary System.

Book IV. Political Parties.

Each volume contains an adequate index.

The Spectator adds: "We have in this work a most lucid, able, impartial, and comprehensive treatment of the political situation in France . . . no reader of this work will doubt for one moment that he has before him a competent and genuine survey, by a trained political thinker, of the situation of the France of to-day, so far as its political conditions are concerned . . . it presents through every page a most luminous exposition not alone of the politics, but of the temper, feeling, and genius of the French people."

#### My Life in Two Hemispheres.

By Sir Charles Gavan Duffy. Two volumes, medium 8vo, with portraits. Cloth, price \$8.00.

"An autobiographical history of a remarkable career—we should rather say of two careers... The first ended in failure and our author left Ireland in despair; the second terminated in his attainment of high office,... and in the practical adoption of his policy, which still prevails."—The Athenaum.

#### William Shakespeare.

A Critical Study. By GEORG BRANDES. Translated from the Norwegian by WILLIAM ARCHER. In two volumes, demy 8vo. \$8.00 net.

Dr. Georg Brandes' "William Shakespeare' may be best called, perhaps, an exhaustive critical biography. Keeping fully abreast of the latest English and German researches and criticism, Dr. Brandes has achieved German thoroughness without German heaviness, and has produced what must be regarded as a standard work.

#### The Science of Law and Law-Making.

AN INTRODUCTION TO LAW AND GENERAL VIEW OF ITS CONTENTS, AND A DISCUSSION OF THE QUESTION OF CODIFICATION WRITTEN FOR LAYMEN AS WELL AS LAWYERS.

By R. FLOYD CLARKE, of the New York Bar. Cloth, crown 8vo. Just Ready.

#### Outlines of Sociology.

By LESTER F. WARD, LL.D., Columbian University, Washington, D. C., author of "Dynamic Sociology," etc. Cloth, crown 8vo, \$2.00.

The plan of the book is two-fold: In Part I., Social Philosophy, to distinguish sociology from allied sciences, showing what these are and how related to it; in Part II., Social Science, to lay out the science itself in a definite scheme of laws and principles susceptible of true scientific treatment.

#### American History Told by Contemporaries.

By ALBERT BUSHNELL HART, Harvard University. Price per set, \$7.00; per vol., \$2.00.

Vol. I. Era of Colonization, 1492-1689. Vol. II. Building of the Republic, 1689-1783. Vol. III. National Expansion, 1783-1845. Vol. IV. Welding of the Nation, 1846-1896. Now Ready.

In Preparation.

ZOLA'S GREAT TRILOGY OF THE THREE CITIES. In Three Parts, each 2 vols., \$2.00.

#### By M. Zola. PARIS. Just Ready.

Studies of the different ways in which the most vital questions of life and religion are regarded by the blindly superstitious in ourdes. Lourdes, by the priest in Rome, and by men of the most brilliant city in Europe. Paris is brim- Rome. ful of life and incident, and only through it can one realize the full force of its author's recent denunciation of official corruption.

A NEW NOVEL by Agnes and Egerton Castle.

### THE PRIDE OF JENNICO.

Being the Memoir of Capt. Basil Jennico. Cloth, 12mo, \$1,50

The adventures of an Englishman in the Bohemian marches, including a thrilling ride by night.

#### THE CELEBRITY.

By Winston Churchill. Cloth, 12mo, \$1.50. "No such piece of inimitable comedy, in the literary way, has appeared for years."—The Inter Ocean, Chicago.

#### The Gospel of Freedom.

By Robert Herrick. Cloth, 12mo, \$1.50. The motif is that of personal independence, appealing especially to women.

#### Four-Footed Americans; With Their Non-Footed and Wing-Handed Kin.

By MABEL OSGOOD WRIGHT, author of "Tommy-Anne and the Three Hearts," "Citizen Bird," etc. Edited by Frank M. Chapman. With illustrations by Ernest Seton Thompson. In Preparation.

The second issue of the HEART OF NATURE Series, of which the first was "Citizen Bird;" a work which aims to do for the most notable American species of running and creeping things what that book has done for birds.

#### Studies in American Literature.

By Charles O. Noble, Professor of the English Language and Rhetoric, Iowa College, Grinnell, Iowa. Illustrated with Portraits of American Authors. Cloth, medium 8vo. Nearly Ready.

#### Stories from the Classic Literature of Many Nations.

Edited by BERTHA PALMER. Cloth, 12mo.

Just Ready.

A volume of such stories as have been considered the most interesting through many generations in many nations.

For further information in regard to any of the above, please address

THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

The best and newest Books about the Garden, the Orchard, the Farm.

#### LESSONS WITH PLANTS.

#### Suggestions for Seeing and Interpreting Some of the Common Forms of Vegetation.

By L. H. Bailey, Cornell University. With Delineations by W. S. Holdsworth, Assistant Professor of Drawing in the Agricultural College of Michigan. Cloth, 12mo. Price, \$1.10, net.

The aim of the book is to suggest methods, not to present facts. It is valuable to teachers and parents alike. Send for specimen pages.

"I unhesitatingly recommend the book to all."-From a review in the New York Herald.

A briefer volume containing a selection of these lessons can be had by those who wish for 40 cents. No lesson is abridged; there are merely fewer of them.

#### Other Works by L. H. Bailey,

PROFESSOR OF HORTICULTURE, CORNELL UNIVERSITY.

A book of instruction for the beginner in garden work.

#### GARDEN-MAKING.

A book of reference for the skilled gardener.

SUGGESTIONS FOR THE UTILIZING OF HOME GROUNDS.

Uniform with the Garden Craft Series. Cloth, \$1.00, net. Just Ready.

#### A GUIDE TO DAILY PRACTICE IN THE GARDEN.

This is a description of GARDEN MAKING, whether that garden be a city back yard or an inclosure of acres. While it will present scientific truths, it will in no sense be a mere scientific treatise, but instead will give in simple language such information as every man or woman needs who buys a single packet of seed or attempts to grow a single plant. It is profusely illustrated. No modern American work covers this important field.

#### In the GARDEN CRAFT SERIES.

By L. H. BAILEY, Professor of Horticulture, Cornell University.

THE HORTICULTURIST'S RULE-BOOK: A compendium of useful information for fruit-growers, truck-gardeners, florists, and others. Fourth edition. 312 pages. 75 cents.

This is the standard work of reference for horticulturists, and is now so well known that a detailed description is no longer necessary. The fact that the index contains 2,000 entries shows the great range of its contents.

PLANT-BREEDING: Being Five Lectures upon the Amelioration of Domestic Plants. 293 pages, 20 illustrations. \$1,00.

"I shall earnestly commend the work to my horticultural classes."—E. J. Wickson, Agricultural Experiment Station, Berkeley, Cal.

THE NURSERY-BOOK: A Complete Guide to the Muttiplication of Plants. Third edition, thoroughly revised and extended. 365 pages, 152 illustrations. \$1.00.

"This book should be in the home of not only every horticulturist, but of every family, irrespective of occupation, who love flowers or ornamental plants, for it treats of the propagation of these as well as of food-plants."—Michigas Fruit-Grower.

THE FORCING-BOOK: A Manual of the Cultivation of Vegetables in Glass Houses. 266 pages, 88 illustrations. \$1.00.

"It would have saved us dollars and dollars if we could have had it a few years ago."—C. J. Pennock, Kennett Square, Pa.

Nearly Ready.

#### THE PRUNING BOOK. Cloth, \$1.50.

An important item to every orchardist, and even to the small farmer, is that of pruning the fruit tree. Here we have the best of advice clearly placed before the reader in a form simple, clear-cut, practical, up to date, and thoroughly scientific and reliable.

## THE RURAL SCIENCE SERIES. The Principles of Fruit Growing. Cloth, \$1.25.

The book is unique, fully illustrated, and of interest to even the skilled orchardist. It brings the very best science of the day to join hands with the very best practice.

#### Independent Volumes by the Same Author.

THE SURVIVAL OF THE UNLIKE.

A Collection of Evolution Essays Suggested by the Study of Domestic Plants. Second edition. \$2.00.

THE EVOLUTION OF OUR NATIVE FRUITS.

The work will present much new matter upon its important subject, and is to be a companion volume to The Survival of the Unlike. In preparation.

PUBLISHED BY

## THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

## D. APPLETON & COMPANY'S NEW BOOKS

MR. SPENCER'S NEW BOOK

#### Various Fragments

By HERBERT SPENCER. 12mo, cloth, \$1.25.

Along with a considerable variety of other matter, these "Fragments" include a number of replies to criticisms, among which will be found some of the best specimens of Mr. Spencer's controversial writings.

#### The

#### Psychologic Foundations of Education

These books are for sale by all booksellers, or they will be sent by mail on receipt of price by the publishers.

(Send for a copy, free, of Appletons' Bulletin of Spring Announcements.)

### D. APPLETON & COMPANY, 72 Fifth Ave., New York

## "The Greatest Biblical Work of the Age."

# THE HOLY BIBLE.

## Polychrome Edition.

#### The following books are NOW READY (and sold separately):

NOTE.—Remittance should be sent with the order. If preferred, the parts will be sent C. O. D., in which case the buyer must pay express charges; otherwise we deliver free. Those who remit with the order have the privilege of returning the books within ten days if not satisfactory, and the amount paid will be refunded.

NEARLY READY: THE BOOK OF EZEKIEL, translated by Prof. C. H. Toy, and THE BOOK OF LEVITICUS, translated by Prof. S. R. DRIVER.

#### A FEW OPINIONS.

#### The New York Tribune says:

"The rendering of Judges invests that archaic book with a life and interest that the Authorized Version fails to impart. Indeed, it becomes a fascinating narrative of old Canaanitish border and clan life. . . . Professor Cheyne, of Oxford, is one of the greatest living authorities on Isaiah, and his translation and analysis of that book represents the most approved Christian scholarship concerning it."

#### Dr. Wm. Hayes Ward says:

"The books will seem new and fresh and fuller of meaning than ever before. The work has been done in a scholarly and reverent way. It will be of the greatest value to students."

#### The Outlook says:

"It is a matter of national congratulation, if not of national pride, that there have been found in America the capital necessary for so great an undertaking, a considerable proportion of the individual scholars to do the work, and the special leaders to direct and to perfect it."

#### The Church Standard says:

"It is one of the most gigantic and noteworthy undertakings of the closing decade of the nineteenth century."

#### The Bishop of Springfield says:

"It is a great achievement, and deserves the gratitude of all who earnestly desire and yearn for the promotion of the knowledge of the truth. It is undoubtedly the most ambitious and able attempt that has ever been made to give in a popular form the results of recent biblical scholarship."

#### Rev. Dr. Charles Cuthbert Hall says:

"A Polychrome page of Judges gives in one instant of time to the average reader a more exact knowledge of the work of biblical scholarship than can be given by volumes of technical explanation or by pages of acrimonious controversy. As a matter of information, as a datum of current opinion, the Polychrome Bible is of equal value to every scholar, whatever his point of view. It is one of the noblest of aids to all scholars."

#### The Minneapolis Times says:

"No translation of the Bible ever made has attempted so much. None of them is as catholic in spirit or scientific in method.

"No student of the Bible can afford to be without this edition. The language is simple and clear, and withal beautiful. It is entirely devoid of the obscurity which marks so many passages of the Authorized and Revised Versions."

#### Rev. Lyman Abbott says:

"Certainly one who wishes to know what are the results which scholars have generally reached, and on which they are generally agreed at the present time, can find that information nowhere so fully, so thoroughly, and so accurately as in the Polychrome Bible."

#### Dr. Joseph May says:

"Its candor and thoroughness, its arrangement, its lucid English style, afford the reader an inestimable help toward an understanding of the biblical documents."

Readers of the "Review of Reviews" should send four cents in stamps for a 24-page illustrated prospectus giving most interesting comparisons of the old and new translations of the Bible, specimen pages of illustrations and notes, and examples of the color printing and an explanation of its purpose.

## DODD, MEAD & COMPANY,

Publishers of the Polychrome Bible,

151 5th Ave., New York.

## SCRIBNER'S NEWEST BOOKS.

A New Novel by Frank R. Stockton.

## THE GIRL AT COBHURST.

M. STOCKTON'S new book resembles some of his most delectable offerings to the fiction readers—like "The Late Mrs. Null" and "The Adventures of Captain Horn"—in not having appeared serially, and the unfolding of the ingenious plot presents, therefore, a succession of surprises. It is a love-story, and each of the characters bears the author's inimitable stamp. The French cook (widow of an "artist," and herself a cordon blue) and the much-physicked, match-making old maid—whose simultaneous endeavors to lead the hero's affections in opposite paths supply some truly Stocktonian intricacies—are figures that could have been drawn by no other hand, and make one realize anew that "of his kind he is the first and only."

#### SOME OF MR. STOCKTON'S RECENT SUCCESSES:

A Story-Teller's Pack, Illustrated 12mo, \$1.50.

"In this latest book of his there is not one disappointment."—William Dean Howells.

Rudder Grange and Pomona's Travels.

New and cheaper edition. Each, illustrated, 12mo.

The Adventures of Captain Horn. 12mo, \$1.50.

Mrs. Cliff's Yacht. Illustrated, 12mo, \$1.50. The London Speaker has said of these two volumes: "Mr. Stockton has touched the high-water mark of romantic fiction, and has shown his power to grasp the magic of Defoe and Stevenson.

#### FOR LOVE OF COUNTRY

A Story of Land and Sea in the Days of the Revolution. By CYRUS TOWNSEND BRADY, Archdeacon of Pennsylvania. 12mo, \$1.25.

"The sea-fights are portrayed with a graphic power well-nigh unexampled in American fiction, while the new view of Washington as he appeared in the Trenton and Princeton campaign gives the book historical importance. The keynote of the love-story is loyalty to country, the hero being a young naval officer."—Army and Navy Journal.

#### **EMERSON AND OTHER** ESSAYS.

By JOHN JAY CHAPMAN. \$1.25.

With his paper on Emerson, which attracted such wide-spread attention as a magazine article by its independence and originality, the author has here grouped critical analyses of Whitman, Browning, Stevenson, the character of Romeo and Michael Angelo's sonnets. The Stevenson essay is hitherto unpublished.

#### NAPOLEON III. AND HIS COURT.

By IMBERT DE ST. AMAND. With portraits. 12mo, \$1.50.

A new volume in a series devoted to the Second French Empire. The period covered is from Eugénie's elevation to the rank of Empress, in 1853, to the birth of the Prince Imperial, in 1856, and the Crimean War and the Great Exposition of 1855 figure prominently in the author's fluent account.

Already Published: Louis Napoleon and Mademoiselle de Montijo. With portraits. 12mo, \$1.50.

#### TALES OF THE CITY ROOM.

By Elizabeth G. Jordan. 12mo, \$1.00.

Ten short stories depicting various phases of life as seen by the woman reporter, and giving many glimpses behind the scenes of this very modern journalistic development.

Richard Harding Davis' new serial. "The King's Jackal," begins in the April Scribner's. It is illus-

trated by Gibson. Ready March 25. Price 25 cents.

#### YOUNG BLOOD.

By E. W. HORNUNG, author of "The Rogue's March," "My Lord Duke," etc. 12mo, \$1.25.

Another of the "good stories" for which the author's name has come to stand. Overshadowed by an absorbing mystery, and with a plucky hero (who gets a start in literature against the greatest odds) and a very original "promoter" of gigantic stock companies for its enief figures, the tale pursues its adventurous way and holds the reader's attention till the last word attention till the last word.

Other books by the same author:
"Mr. Hornung has certainly earned the right to be called the Bret Harte of Australia."—Boston Herald.

My Lord Duke. 12mo, \$1.25. The Rogue's March. A Romance. 12mo, \$1.50.

In the Ivory Series, each 16mo, 75 cents: Irralie's Bushranger and
A Bride from the Bush.

#### AULD LANG SYNE,

By the Right Hon. Professor F. MAX MCLLER, author of "The Science of Language," etc. Crown 8vo, \$2.00.

"It makes capital reading, full of incident and anecdote, and all is told in the happiest manner."—New York Sun.

"This delightful volume of memories is undoubtedly the book of the month."—Baltimore Herald.

#### NOVELS AND STORIES BY "O."

(A. T. QUILLER-COUCH). 9 volumes, each 12mo, \$1.25 The set, in a box, \$11.00.

This is the first uniform edition of the works of Mr. Quiller-Couch, whom the New York Times has declared to be "in many respects the foremost of modern short-story writers."

The volumes are: "The Splendid Spur," "I Saw Three Ships," "Dead flan's Rock," "The Delectable Duchy," "The Blue Pavilions," "Noughts and Crosses," "Wandering Heath," "Adventures in Criticism," "Troy Town."

#### THE EUGENE FIELD I KNEW. By FRANCIS WILSON.

Illustrated. 12mo, \$1.25. Also a limited edition of 204 copies, with special features, each, \$4.00 net.

A volume of reminiscences by the famous comedian of his long and intimate friendship with the Western poet. The author shows Mr. Field not only in those moments of relaxation when his fun-loving nature had freest play, but also in the more serious moods which were less familiar to the public. The volume has, too, much bibliographical interest.

CHARLES SCRIBNER'S SONS, 153-157 FIFTH AVE., N. Y.

## 00KS 0

#### Spain in the 19th Century

By ELIZABETH WORMELEY LATIMER. With many por-

traits. \$2.50.

"With regret one notes that Elizabeth Wormeley Latimer's 'Spain in the 19th Century' is to be the last of her excellent series of 19th century histories. We have come to look upon Mrs. Latimer as quite the most delightful purveyor of historical gossip to be found anywhere. In successive volumes she has sketched the external events in the century in France, Russia, England, Africa, Italy, and Spain, and this final volume is perhaps the most timely and the most needed of all."—The Chicago Tribune.

"To the future historian this concise and very readable story."

"To the future historian this concise and very readable story of modern Spain will prove of exceptional value."—New York

"The entire series is well planned and commendably executed." The Outlook.

Mrs. Latimer's successful historical sketches of the 19th century, illustrated and uniform with "Spain," previously published are:

France in the 19th Century	•		•		\$2.50
Russia and Turkey in the 19th Century		•		•	2.50
England in the 19th Century			•		2.50
Europe in Africa in the 19th Century -		•		-	2.50
Italy in the 19th Century	•		•		2.50

#### A Group of French Critics

By MARY FISHER. 12mo, \$1.25.
"This is a little book full of learning and sound taste which will help Americans to understand what French literature really stands help Americans to understand what French literature really stands for, and to distinguish between the shallow and ephemeral productions of the modern Parisian school of fiction and poetry, and what is really sound and good in French literature. The author renders the reading public a real service by presenting so able an advocate for the pure and beautiful in literature."—Phila-literature. delphia Inquirer.

#### Christianity, the World-Religion

By Rev. John Henry Barrows. Large 12mo, \$1.50. The first course of the "Barrows Lectureship" delivered in India and Japan in 1896-97.

"The book is on broad and primary lines, and as a statement of the claims of Christianity to be, not one among the many religions, but the one religion that can alone fill the requirements of a universal system, it has a missionary importance that is new and profitable."—The Baltimore Sun.

"The reception these lectures met with from Hindus Ruddhists."

"The reception these lectures met with from Hindus, Buddhists, and Mohammedans was a testimony not only to the ability of the lecturer and the personal esteem he has won, but also to the new appreciation which an unsectarian Christianity is gaining among the people of the East."—The Christian World, London, England,

#### A World-Pilgrimage

By Rev. JOHN HENRY BARROWS. Illustrated. Crown

8vo, \$2.00.

"Dr. Barrows is a strong, open-minded, open-eyed man of the kind who make good observers and interesting reporters."—The

Independent.

"Ability and opportunity together have produced a book which

does not contain a dull line, or one without significance."—The Interior, Chicago.
"A bright, charming book of travel, and well named 'A World-Pilgrimage.' . . . A delightful book of push and force, and just as American as it can be."—The Living Church, Chicago.

### Stories from Italy

By G. S. GODKIN. 12mo, gilt top, \$1.25.
"The author of this book has provided for his readers a volume of exceedingly attractive narratives."—The Home Journal, New

York.

"Very agreeable and exceptionally well-told tales they prove to be."—Detroit Free Press.

#### With a Pessimist in Spain

By MARY F. NIXON. Illustrated. 12mo, \$1.50.
"We do not recall reading of late any traveler's record which

we do not recall reading of late any traveler's record which gives us in pictorial story so much of the historic and artistic treasures of Old Spain."—The Boston Evening Transcript.
"A brief and agreeable book of travels."—The Dial.
"The author travels through Spain with the most observant eyes and with a heart full of sympathy for the grand old Moorish past and for what is good in the degenerate present. . . It is a most chatty and readable book."—The Saturday Evening Gazette Roston zette, Boston.

#### An Imperial Lover

By M. IMLAY TAYLOR. 12mo, \$1.25.

"A dramatic and intensely interesting semi-historical romance of Peter the Great's court."—The Evening Bulletin, Philadelphia.

"The tale is one of love, of intrigue, and of adventure, and seems to us even better than its predecessor ('On the Red Staircase')."—The Outlook.

case )."—The Outlook.

"The story is stirring and absorbing, while it does not resort to the narration of deeds of violence to catch and hold the attention. It is purely a love theme, and well worked out. In many respects this book is superior to its predecessor."—The Star, Washing-

BY THE SAME AUTHOR.

#### On the Red Staircase

By M. IMLAY TAYLOR. 12mo, \$1.25.
"A most vivid and absorbing tale of love and adventure.

It will give a far truer, because more striking and life-like, picture of early Russian history than a multitude of laboriously written and ponderous histories of the times."—The Churchman, New York.

#### The Story of Language

By CHARLES WOODWARD HUTSON. 12mo, \$1.50.

"The treatise is infused with scholarship on every page. Though students of language and philologists will be immediately attracted by the native scope and skill of the work, it is of so varied and intimate interest to all studiously intelligent readers that its reach is rather catholic than restricted."—The Washington Times.

"A lucid exposition of a topic that a multitude of minds will find fascinating."—The Press, Philadelphia.

### Notes on the Nicaragua Canal

By HENRY I. SHELDON. With maps and illustrations.

8vo, \$1.25.
"Mr. Sheldon has rendered a great service to those particularly "Mr. Sheldon has rendered a great service to those particularly interested in the canal scheme, not the projector or the engineer, but the business man who wishes to create more business and at the same time to help to extend the power of the republic."—

Engineering, London, England.

"Mr. Sheldon has learned the secret of a terse and simple style, which, while readable and interesting, is also admirably adapted to further an enterprise of very great importance to the country."—The Public Leager, Philadelphia.

For sale by booksellers generally, or will be sent, post-paid, on receipt of price by the publishers,

A. C. McCLURG & CO., CHICAGO.

## Houghton, Mifflin & Co.'s Spring Books.

## Caleb West, Master Diver.

By F. HOPKINSON SMITH, author of "Tom Grogan," "Gondola Days," etc. Finely illustrated, 12mo, \$1.50. (Early in April.)

Mr. Smith here adds to American literature a novel of great interest, with qualities which ought to give it a long lease of popular favor. It is the romance of building a lighthouse, and his experiences as a contracting engineer enable him to make a realistic and very strong story. Caleb West, the master diver, is a striking figure in it, and his feats are worthy of all Mr. Smith's graphic description. Other strong and interesting characters command admiration; the story is one of the manliest and breeziest written for many a day, and it is supplemented with several illustrations of uncommon vigor and expression.

## Penelope's Progress.

By KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," "The Story of Potsy," "A Cathedral Courtship," "Marm Lisa," etc. 16mo, in unique Scottish binding, \$1.25. (In April.)

This is a continuation of Mrs. Wiggin's sensible, humorous, delightul story of "Penclope's Experiences in England." Penclope and her fellow-tourists, Salemina and Francesca, invade first Edinburgh and then the outlying districts, and they take the country and the Scots by storm—an indescribable mingling of good sense, canniness, audacity, and fun. A most readable book.

# Tales of the Home Folks in Peace and War.

By JOEL CHANDLER HARRIS, author of the "Uncle Remus" and "Thimblefinger" stories. With illustrations, 12mo, \$1.50. (Early in April.)

A book of stories of interesting adventures and character studies of the South, most of them during the war or just afterward. They are marked by the keen insight and cheerful philosophy which make Mr. Harris' stories so agreeable and fascinating.

## The Imported Bridegroom, And Other Stories of the New York Ghetto.

By Abraham Cahan, author of "Yekl." 16mo, cloth,

\$1.00; Riverside Paper Series, 50 cents.

These stories take the reader into a field almost entirely unworked as a literary possibility. They relate to Russian Jews in New York City, of whom many have heard, but few know anything definite. The author is familiarly acquainted with them, their antecedents, their condition when they reach this country, their modes of life afterward, their views of religion and of life, and his book is one of uncommon interest.

## Birds of Village and Field.

A very useful and interesting bird book for beginners. By FLORENCE A. MERRIAM, author of "Birds Through an Opera Glass," "A-Birding on a Bronco," etc. Very fully illustrated, 12mo, \$2.00.

## Cheerful Yesterdays.

By Thomas Wentworth Higginson. 12mo, \$2.00.

This book is the very flower of autobiography. It gives in the most attractive manner the most interesting experiences of a singularly interesting life. It describes Colonel Higginson's boyhood in Cambridge, his years and associates in Harvard College, the observations and experiences which made him a reformer, the development of literatare and his own literary work in the fifties, the stirring episode of the Kansas conflicts, and a very modest account of his share in the civil war. The intrinsic and varied interest of the book, its noble and cheerful tone, and its exquisite literary style give it an uncommon charm and value.

# Unforeseen Tendencies in Democracy.

By Edwin L. Godkin, editor of the New York Nation. t vol., crown 8vo. (In April.)

A book of remarkable value, that should be read and deeply pondered by all good citizens. In it the aspects of American political life are stated with explicit frankness but without exaggeration, and current facts, opinions, and tendencies are compared or contrasted with the theories held concerning democratic government by the Fathers of the Republic.

# At the Sign of the Silver Crescent.

By HELEN CHOATE PRINCE, author of "The Story of Christine Rochefort" and "A Transatlantic Chatelaine." 16mo, \$1.25.

Like Mrs. Prince's previous novels, this is a story of modern French life, the scene being for a while at Paris, later and principally at Touraine. The characters include the heroine, who marries a wealthy Jew to restore the fortunes of her family, avery worldly cure, a young Englishman studying French, and a young American studying art. The story is bright, readable, and is quite sure to be a popular summer book.

# The Pilgrims in Their Three Homes.

A fresh, attractive account of the Pilgrims in England, Holland, and New England, by Rev. Dr. W. E. GRIFFIS, author of "Brave Little Holland," "Japan." etc. With illustrations, 16mo, \$1.25; in Riverside Library for Young People, small 16mo, 75 cents.

## The Story of an Untold Love.

By PAUL LEICESTER FORD. Twentieth thousand.

"Never has a hero given a more perfect portrait of himself to the world in the wholesome spirit of humility. . . . A delightful note of purity and adoration characterizes every page."—Boston Herald.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

# Y. CROWELL & COMPANY'S

The Founding of the German Empire by William I. By Heinrich von Sybru, translated by Helene Schimmelfennig White. Vol. VII., completing the set. 8vo, cloth, gilt top, \$2.00.

set. 8vo, cloth, gilt top, \$2.00.

The seventh and concluding volume of this monumental work, which the author, before his death, succeeded in bringing to a successful culmination in spite of the jealous and petty restrictions on the part of the government, brings the story down to the Franco-Prussian war. This is naturally the most dramatic and fascinating of all the volumes, and throws a flood of light on the whole history of turnes, and throws a nood of light on the whole history of Europe during those momentous years, 1868, 1869, and 1870, when Germany's newly won unity was imperilled. No library, public or private, can afford to be without this invaluable contribution to modern history. The last volume contains a tabular view of the principal events of the time covered, and a voluminous index to the seven volumes.

Workingmen's Insurance.

By WILLIAM F. WILLOUGHBY, United States Department of Labor. Vol. XIV. in Crowell's Library of Economics and Politics. 12mo, cloth, \$1.75.

This is a painstaking and exhaustive examination of the problem of the insurance of workingmen against accident, sickness, and old age. There is no work quite like it. It covers foreign systems of compulsory insurance, the various forms of insurance resulting from the voluntary efforts of employers and workingmen, the relief departments organ-ized by railway companies and other large employers of labor, and the insurance work of labor unions in the United States and abroad. The author has had exceptional oppor-tunities for obtaining facts at first hand; and his work ap-peals to all students of social conditions, to those engaged in the management of insurance and relief organizations, and to those who are involved in the vexed question of em-ployers' liability.

Congressional Committees.

By LAUROS G. MCCONACHIR, Ph.D. Vol. XV. in Crowell's
Library of Economics and Politics. 12mo, cloth. (In press.)
Dr. McConachie defines Congressional Committees as

"the agents, the instruments, the channels of connection, between Congress and the nation." With the expansion in between Congress and the nation." With the expansion in recent years, growing ever more and more sapid, of population and complicated interests throughout our land, "the cumbersome organization of slower days" was subjected to a strain it could not bear; and the adoption of a multiplicity of committees, each intrusted with some department, was the only practical way out of a vast difficulty. It illustrates evolution as working in a living, changing political organism, and Dr. McConachie studies its details with great care. He writes with no little vivacity, and with a wealth of interesting illustration. teresting illustration.

What is Art?

By Count Lyor N. Tolstol. Authorized edition. Translated from the Russian by Aylmer Maude. 12mo, cloth.

Advance notice from the London Daily Chronicle:

"Of all the essays in criticism, morals, or social economics which Tolstoï has given us since he gave up the production which Tolstoï has given us since he gave up the production of his own great works of art, this is as characteristic and far-reaching as any. And probably it will be read with even greater interest, for the solution which it suggests, though certainly not more important than his primitive Christian morality, comes to us with greater freshness, and is in more direct contradiction, not merely to generally recognized practice, but to all modern theories and doctrines openly and universally proclaimed as to the meaning and value of Art. . . . It is a great theory, such as we should have expected from the great living prophet."

Brunetiere's Manual of the History of French Literature. Authorized translation, illustrated with portraits. 12mo, cloth. (In press.)

M. Brunetière, the famous French critic, stands decidedly consequently and his latest and most in

M. Drunetter, the immous French Critic, stands decidedly for a conservative criticism; and his latest and most important work may be counted on as sound, reliable, dignified, and wise. The work is brought down to the year 1875, including in this "modern age" the epoch of Naturalism. The style is charming, and the suggestiveness of the thought makes it a model manual for the student and general reader who desires a solid groundwork in French literature.

#### **PUBLICATIONS** RECEN

Facts I Ought to Know About the Government of My Country. By WILLIAM H. BARTLETT, principal of the Chandler Street School, Worcester, Mass., councilor of the American Institute of Civics. 18mo, cloth, 50 cents; flexible leather, \$1.00. Fourth edition.
"I volunteer the statement that no such condensation of facts has been made with such admirable classification for instructure user reference as in this little volume. Because

instantaneous reference as in this little volume. Because everybody ought to know the facts, everybody ought to have the book."—Bishop John H. Vincent, Chancellor Chautauqua Assembly.

DODD, MEAD & COMPANY, \ 158 Adams St., Chicago, III.

#### **IMPORTANT** FOUR

#### IN THIS OUR WORLD by Charlotte Perkins Stetson.

With a Photogravure Portrait. 16mo, cloth ornamental, \$1.25.

Mrs. Stetson's verse, which Mr. Howells has called the best civic satire since the "Biglow Papers," is known to the public only through the paper-covered editions which have appeared on the Coast. This new volume, revised and greatly enlarged, may be expected to bring her work, for the first time, into general notice. Certainly the vigor, the verve, the deep moral earnestness, and the delightful humor and extraordinary talent for satire displayed in these poems have hardly been extraordinary. surpassed.

WOMEN AND ECONOMICS by Charlotte Perkins Stetson.

In writing this book, it has been Mrs. Stetson's purpose to point out, explain, and justify the changes which are now going on in the relations of women to society. In brief, the position taken is that women have for centuries been economically dependent upon men; that as a result they have become more and more feminine and less and less normal members of the human race. The argument is extended to every branch of social activity with remarkable originality, and in a manner to stimulate the interest of every one. It may safely be said that scarcely any book of recent years has treated a confused subject with so much real intelligence and in an attitude so singularly fair and high-minded. Cloth, 12mo, \$1.50.

## SELECTIONS FROM THE PROSE AND POETRY OF WALT WHITMAN.

Edited, with an introduction, by Oscar Lovell Triggy, Ph.D., of the University of Chicago. With a frontispiece portrait. Adequate selection of Whitman's writings has long been called for and is here furnished. Dr. Triggs has successfully attempted to make a book which should be representative of the many-sidedness of Whitman's genius, and at the same time attractive to the general reader. Both as a book of selections, pure and simple, and as an introduction to the study of Whitman, it should meet with a welcome from all those interested in the growing fame of the Poet of Democracy. Crown 8vo, cloth 8-ce. cloth, \$1.25.

THE WOUND DRESSER by Walt Whitman.

A series of letters written from the hospitals in Washington during the War of the Rebellion. Edited by Richard Maurice Bucke, M.D. With two Portraits. 12mo, cloth, \$1.50.

Without doubt the most intimate and vivid account of the hospital life of the Civil War ever put in print. According to the Chap-Buck, the letters are "human documents," without which and the like of which the world were poor indeed." They form, says the Brooklyn Eagle, "a tale that is unique in character and without precedent in literature;" while the Literary World speaks of "their profound sympathy with the suffering and dying, their minuteness of detail, so that by their light you see the cot and the operating-table, and the sunken cheek and the glazing eye, their reproduction of the very colors of the tragic movement of which Washington was the center from 1861 to 1865."

FOR SALE BY ALL BOOKSELLERS.

SMALL, MAYNARD & COMPANY,

## LONGMANS, GREEN, & CO.'S NEW BOOKS

### Shrewsbury

#### A Romance of the Time of William and Mary

By STANLEY J. WEYMAN, author of "A Gentleman of France," etc. With 24 illustrations. Crown 8vo,

"Mr. Stanley Weyman has written a rattling good romantic story that is in every way worthy of the author of the ever-delightful 'Gentleman of France.'"—New York Sun.

uengittui Gentieman of France."—New York Sun.
"Shrewsbury' is a magnificent confirmation of Mr. Weyman's high estate in the world of fiction. His characters are alive, human, unforgetable. His scenes are unhackneyed, dramatic, powerful. The action is sustained and consistent, sweeping one's interest along irresistibly to a denouement at once logical and climactic. And through it all there glows that literary charm which makes his stories live even as those of Scott and Dumas live."—Chicago Tribune.

#### The Memoirs of a Highland Lady

The Autobiography of Elizabeth Grant of Rothiemurchus, afterward Mrs. Smith of Baltiboys. 1797-1830. Edited by LADY STRACHEY. 8vo, 500 pages,

loth, gilt top, \$3.50.

\*\* The Highland Lady of these Memoirs was a clanswoman of the Rothiemurchus Grants. It was from this particular branch of the ancient Scottish family that General Grant claimed descent. Miss Grant's reminiscences of the period of 1797 to 1830 give interesting pictures of the Highlands at the beginning of the century, of social life in Edinburgh and London, and, later, of Ireland.

#### Industrial Democracy

By SIDNEY and BEATRICE WEBB, authors of "The History of Trade Unionism." With 2 diagrams. 2 vols., 8vo, 958 pages, \$8.00.

\*a\* This work is an exhaustive analysis of Trade Unionism and its relation to other Democratic movements, to which "The His-tory of Trade Unionism," published in 1894, may be regarded as an introduction.

#### Allegories

By FREDERIC W. FARRAR, Dean of Canterbury. With 25 illustrations by AMELIA BAUERLE. Crown 8vo, cloth, ornamental, \$2.00.

#### Wellington HIs Comrades and Contemporaries

By Major ARTHUR GRIFFITHS, author of "The British Army," "The Queen's Shilling," etc., etc. With 23 portraits, 13 being in photogravure, besides numerous line drawings and maps of Spain and Belgium. Large imperial 16mo, cloth, extra, gilt top, \$4.00.

#### Servia: the Poor Man's Paradise

By HERBERT VIVIAN, M.A., Officer of the Royal Order of Takovo. With portrait of the King and a map. 8vo, pp. vii, 300, \$4.00.

"This is a vastly readable book and a substantially useful and valuable one. Mr. Vivian has evidently had his eyes about him Servia, and has produced a very lifelike and agreeable picture of the country and its rulers and people."—Glasgow Herald.

## Jesus and the Resurrection

Thirty Addresses for Good Friday and Easter By the Rev. ALFRED G. MORTIMER, D.D., Rector of

St. Mark's, Philadelphia, author of "Catholic Faith and Practice," "The Seven Last Words of Our Most Holy Redeemer," etc. 12mo, \$1.25.

Sold by Booksellers. Sent, postpaid, by the publishers,

LONGMANS, GREEN, & CO.,

01-03 Fifth Avenue,

New York

7,000 Copies Issued

Large Order from London GROWTH, CARE. DISEASES.

TREATMENT

By C. HENRI LEONARD, A.M., M.D., A Professor in the Detroit College of Medicine.

Octavo, 320 pages, limp sides, \$1.00 postpaid. Bound in neat cloth, gilt side title, \$1.50 postpair.

Has over 100 engravings, and gives Self-treatment for all Diseases of the Hair, Beard, and Scalp.

#### 200 Prescriptions in English Given.

If your hair is falling out it tells you how to stop it.

If it is turning gray it tells you how to prevent it.
If it is growing slowly it tells you how to hasten its growth.
If it is all out, and the hair bulbs are not dead, it tells you

how to make it grow again.

If growing in unsightly places, tells how to remove it.

It tells how to bleach or dye it black, brown, red, or a blond

It gives a long chapter upon Hygienic Treatment.

Also several chapters upon the diseases that make it fall out, such as "scall," "milk crust," animal and vegetable parasites, and how to prevent and destroy them.

Also many pages upon its marvelous growth, etc., etc.

#### CIRCULARS FREE.

These books have been highly commended by both the Medical and the Secular press.

DIET for the SICK Cloth, 16mo, 100 pages, postpaid 25c. Favorite dishes used in two hospitals:

for the sick and convalescing; also Diet Tables for various chronic

THE LIVING METHOD FOR LEARNING

\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*

## How to Think in French.

The most successful means yet devised for learning and teaching how to speak French.

#### Sent, postpaid, on receipt of \$1.00.

"I am sure the book will accomplish precisely what is set to be its purpose."—Prof. James W. Bright, Johns Hopkins University.
"You have done a great and beautiful work in the pub-lication of your manuals."—Bishop John H. Vincent, Chancellor of Chautauqua.

## How to Think

sent, postpaid, on receipt of \$1.50. in German.

"As a practical book to aid in quickly acquiring the power of correct and fluent speaking of the German language this work has no equal."—Scientific American. Nov. 11, 1893, p. 316.

# How to Think

Sent, postpaid, on receipt of \$1.50. in Spanish. "The learner is not obliged to think of rules or of English words when he wishes to speak Spanish."—N, Y. Echool Journal, July 14, 1894.

Prof. CHAS. F. KROEH, Author and Publisher,

Stevens Institute of Technology, Hoboken, N.J. \*

## lity Rather Than

Pres. Eliet of Harvard, says: "The International is a wonderfully compact storehouse of accurate information." Pres. Harper, Chicago Univ., says: "It is thoroughly reliable, full of just the information one wishes to secure." Chief Justice Fuller of the U. S. Supreme Court, says: "I have found it in all respects complete and thorough." <del>៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰៰</del>

### The International is Scientific and Practical.

It avoids competition as to size of vocabulary, excluding a multitude of words as having no legitimate standing or as mischievous corruptions of "the well of English undefiled." In arrangement of etymology and definitions it follows the historical order of derivation; the history of a word being the best guide to its correct use. In indicating pronunciation it uses characters familiar to every reader, of a new and strange alphabet. It avoids such running into one paragraph of different titles as is liable to cause difficulty and delay to the consulter.

### It is the School-Teacher of the Republic.

As an authority in the public schools of the country, the position of Websterboth the International and its abridgments-is one of unquestioned supremacy. Fresh testimonials to this effect have been received from all State Superintendents of Schools, and the Presidents of Universities and Colleges. The number of schoolbooks based upon Webster; its exclusive choice wherever a state purchase has

presence of a larger or smaller Webster in the common schoolroom-in these respects no other dictionary or series of dictionaries is to be named in comparison.

😂 Specimen pages and testimonials from eminent persons and publications sent on application.

G. & C. MERRIAM CO., Publishers, Springfield, Mass., U. S. A.

Please mention the Review of Reviews

GREAT BOOKS ONLY—EACH BOOK COMPLETE

When the Best Books are decided upon, they should be read complete. Abstracts and epitomes are but the bones of books without the flesh, and all selections and extracts are nothing more than specimens—and who shall judge of a house by a specimen brick? Selections may be gems, but they almost invariably lose lustre by being torn from their settings.

#### WHICH ARE THE WORLD'S GREAT BOOKS?

For a choice of the "Supreme Books," the publishers have not relied wholly on the judgment of any one man or set of men. They have carefully taken into account the lists heretofore prepared by such high authorities as Sir John Lubbock, Ruskin and Swinburne, and have also availed themselves of the services of the following

#### AMERICAN COMMITTEE OF SELECTION:

REV. EDWARD EVERETT HALE, D.D. HON. THOMAS B. REED

HON. AINSWORTH R. SPOFFORD ROSSITER JOHNSON, LLD., EDITOR-IN-CHIEF

Each member of this committee is an acknowledged authority in one or more of the great departments of literature. Some of them began more than five years ago the preliminary labor and study by seary to accomplish the difficult task of selection, and the result of their work is of the hig. est interest to every one who appreciates what is most instructive, interesting and inspiring in the world of letters.

#### DISTINGUISHED ENGLISH AND AMERICAN CONTRIBUTORS

Elaborate Prefatory Articles by the greatest living writers introduce the several volumes, giving the reader a clearer insight into the life of each great author represented in the series, his place in literature, and the character and value of his work. These articles are in every instance from the pen of the scholar or critic best fitted to write on the author or book of which he treats. For instance: PROF. JOSIAH ROYCE, of HARVARD, writes on Playor, DR. EDWARD EVERETT HALE on DE FOR; HARRIET PRESCOTT SPOFFORD on CHARLOTTE BRONTS; HON. THOMAS B. REED on the "GERAT ORATIONS"; and FRANK R. STOCKTON on the "FAMOUS SHORT STORIES." A few of the other contributors are: ANDREW LANG, THE CELEBRATED CRITIC: DR. JOHN P. MAHAFFY, of TRINITY COLLEGE, Dublin; MONCURE D. CONWAY; HON. W. E. H. LECKY, THE HISTORIAN; THOMAS WENTWORTH HIGGINSON; WILLIAM J. ROLFE, THE GREAT SHAKE-SPEARLIN SCHOLAR. SPEARIAN SCHOLAR.

The World's Great Books will be published in fine library style, printed from new plates, and will contain an abundance of fresh and appropriate illustrations, including full-page portraits of the authors. From a mechanical standpoint, each volume will approximate perfect book-making, and the production of the entire series will constitute

#### ONE OF THE MOST EXTENSIVE AND IMPORTANT LITERARY ENTERPRISES EVER UNDERTAKEN IN THIS COUNTRY

On request, we shall be pleased to send you the final list as perfected by the **COMMITTEE OF SELECTION**, with full particulars, specimen pages and engravitys. We believe that all students of literature will agree that this list does not contain one volume that ought to have been omitted. Yet we believe that the books indispensable to every well selected library are all included.

Those who apply promptly for information will place themselves in a position to participate in the introductory distribution of the valuable first edition, which is particularly destrable because printed from the fresh, new plates, thus bringing out the portraits and engravings with peculiar delicacy and beauty. First edition subscribers will also be accorded a substantial reduction from the regular subscription price of the finally completed work. Those interested should therefore apply promptly for particulars.

## SAVED BY THE WANAMAKER HISTORY CLUB

By joining the Wanamaker History Club instead of purchasing in the ordinary way, our club members have saved over a quarter of a million dollars.

In a very few days the club will be filled and no more members will be admitted. This will complete the greatest book sale ever conducted at the Wanamaker stores.

This success, without precedent even at Wanamaker's, has been possible because—

First.—A general history is a necessity in every home library.

Second.—The preeminence in this field of Ridpath's History of the World enables us to add our commendation to the indorsements of many eminent scholars; and our customers know that this guarantees Dr. Ridpath's History to be satisfactory in every respect.

Third.—By taking an entire edition we reduced the price one-half.

Fourth.—We deliver the complete set at once to club members and spread the payment over fifteen months. Thousands of folks with little book-money have seized the opportunity to enrich their homes with this treasury of historical learning.

## You Can Secure a Set if You Act Promptly

#### 6,500 PAGES. NEARLY 4,000 ILLUSTRATIONS

Write to-day for specimen pages and full information—or, better, send the club fee, which is only **One Dollar.** 

The complete set of eight massive volumes in any binding will be sent you. Examine it for ten days and then send it back if you choose; your money will be refunded. Or keep the books and for fifteen months pay \$1.50 per month for cloth, \$2.00 for half Russia—which we specially recommend as more durable and attractive—or \$2.50 for sumptuous full morocco, and own the greatest history of the world ever written.

Nearly one hundred thousand people have purchased this great history, paying double our club prices. After our club is closed regular prices will again prevail.

PHILADELPHIA IOHN WANAMAKER NEW YORK

## REMEMBER, you have one whole week for careful examination, with privilege of returning if not entirely satisfactory, and your money will be promptly refunded.

Very few of these special sets now remain. Every reader knows that the work is not only an Encyclopædia, treating over 50,000 topics, but the most exhaustive Dictionary published, defining over 250,000 words, which is 25,000 more than any other. They also know that they are securing the work for LESS THAN ONE-THIRD THE REGULAR PRICE, and as a consequence orders are being received daily from all sections of the country.

In taking stock at the close of our business year, we find a few sets of The Encyclopædic Dictionary (in cloth, half-Russia and the special library binding only), of which the sides of some of the volumes are slightly rubbed—not enough to impair their real value or appearance in your library, but sufficient to prevent their shipment as perfect stock at our regular prices of \$42 to \$70 a set. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of \$1 down and \$1 per month until paid for—less than one-third the regular price.

#### BY PROMPT ACTION NOW,

therefore, a number of ambitious readers of the REVIEW OF REVIEWS who desire an up-to-date reference library may now secure these special sets at about cost of paper, ink, and binding.

#### JUST NOW

THEY ARE YOURS FOR A LIFE-TIME THIS EASY WAY.

#### **81 DOWN**

SECURES IMMEDIATE POSSESSION

of the entire set of four volumes. Balance payable \$1 monthly.

Readers must not think that these sets are in any way incomplete or out of date. They are from the regular stock, the prices of sets ranging from \$42 to \$70, according to binding.

#### **WE GUARANTEE**

that these sets, except for slight rubs or abrasions on the sides of some of the vol-umes, are precisely the same as those sold at full prices; yet we cannot offer them as perfect stock, and our loss shall be your gain. This is

Positively the Greatest Bargain ever offered in a strictly high-class standard publication.

#### WHAT THE ENCYCLOPÆDIC DICTIONARY IS.

It contains over 250,000 defined words—nearly twice as many as the largest "unabridged"—and is now accepted as AN UNQUESTIONED AUTHORITY wherever the English language is spoken.

spoken.

It is one of the best of all Encyclopædias, treating over 50,000 encyclopædic subjects—the Britannica has about 27,000. JUST THINK OF IT! The whole range of human knowledge condensed for your INSTANT UNE by mich world-famous scientists as Huxley, Proctor, and a hundred other educators of hardly less renown! It cassily takes the place of any half-dozen other reference books that could be named.

It is an ornament to any Library: beautifully printed, substantially bound, profusely library: one of MORE THAN \$750,000 TO PRODUCE, the regular price being from \$42

#### WHAT THE ABLEST CRITICS SAY.

"Not only are more words defined in this New Dictionary than in any other, but its definitions are more exhaustive." —Chicago Tribune.

"A standard reference power, treating, edge and research in a masterly manner."

—Philadelphia Press. "A standard reference book, treating every branch of knowl-

"It forms in itself a library for the busy man of affairs, the merchant ambitious to advance himself in his line, or the student 

"At the very head of all contemporary publications of its kind, and firmly established as one of the fewgreat reference books of the world."—Christian Herald, N. Y.

REMEMBER These sets are as good for all practical purposes and look as well in your bookcase as those for which we are getting regular prices. We guarantee that the interiors are not injured and the bindings of our standard grade. The most serious harm to any set is no greater than might occur in a few days use in your own home or office. As absolute proof of this statement, you may retain the set for careful examination for one whole week. If not entirely satisfactory you may return the volumes and money will be promptly and cheerfully refunded. This is positively the absolute proof of a Histing. the chance of a lifetime.

How to Secure This Great Bargain Bring or send \$1.00 to the New York Newspaper Syndicate, 23 Fifth Ave., New York, and entire set of four superb volumes, bound in cloth, will be forwarded. The balance is to be paid at rate of \$1.00 monthly for one year. The first payment for either binding is only \$1. In sending your first payment please designate the style of binding you desire, and indicate how you wish the volumes sent, as the charges for delivery must be paid by the purchaser. Remittainess received after this special lot is exhausted will be immediately returned. The limited stock at our disposal cannot last long. To protect ourselves against book dealers, etc., we must decline to send more than 2 sets to any one party, and in every case we must require the full name and address of each person receiving a set. We have only two styles of binding in this lot—cloth and half-Russia—about an equal quantity of each. Order at once, to make sure. The absolute confidence of the Syndicate that the work will be thoroughly appreciated, highly valued, and cheerfully paid for, is clearly shown by sending such a valuable set of books, the subscription price of which is from \$42 to \$70, on an advance payment of only \$1. We refer to any newspaper in New York, Boston, Chicago or San Francisco.

The Haif-Russia Binding will be supplied for 25c, additional per month. The Special Library Binding, FULL SHEEP, 50c, additional per month.

New York Newspaper Syndicate, 91 & 93 Fifth Avenue, New York.

Universities and Colleges.

Universities and Colleges.

#### Virginia University, Morgantown,

THE SUMMER QUARTER WILL BEGIN JULY I AND CONTINUE TWELVE WEEKS.

It will be divided into two terms of six weeks each. Teachers will find the summer quarter especially attractive. Numerous courses in pedagogy and inspiring lectures on educational subjects.

Summer Quarter work will count toward a degree the same as work in any other quarter. All departments will be in full operation. In addition to the regular faculty, eminent specialists from other institutions will lecture—among them

Dr. Lester F. Ward, author of "Dynamic Sociology;"

Miss Jane Addams, of Hull House, Chicago;

Prof. Charles Zueblin, of the University of Chicago and others.

President E. Benj. Andrews, of Brown University; Prof. B. A. Hinsdale, of the University of Michigan; Dr. A. E. Winship, editor of the Journal of Education;

Expenses for the Entire Quarter, including tuition and board, may be made less than \$65.00, and for a term of six weeks, half this amount.

Instruction is Given by Correspondence to those who cannot attend in person. The University grants no degrees for work done entirely by correspondence, but work so done may count toward a degree. Students may take complete college courses and receive degrees by taking correspondence work during the year and attending the University during successive summer quarters.

#### How to Get to the Klondike.

By the middle of February, although this was months before the Yukon River would be at all open, at least 10,000 gold-hunters had set out during 1898 from Pacific ports for Dyea and Skaguay. Late reports declare that 20,000 men and as many tons of freight are blocked at these points, and by the time traffic begins this number will have undoubtedly reached 50,000.

There is a wide choice as to routes to the new gold-fields in the far Northwest Territory. To begin with, there are at least three ways of getting there without taking steamer at all. These overland routes all start from points on the Canadian Pacific Railway and are all the same from Telegraph Creek on, following what is known as the Stickeen trail to Lake Teslin, and then down the Teslin and Lewes rivers to the Yukon. Comparatively little is known about any of these routes yet, so until some of the numerous railroad projects take tangible form it is certain that the vast majority of goldhunters will go by way of Dyea

and Skaguay. From the Pacific coast the principal starting-points are San Francisco, Portland, Tacoma, Seattle, and Victoria and Vancouver, B. C. Prospectors from the East can reach these ports by the Southern Pacific via New Orleans and El Paso, the Atchison & Santa Fé, and Atlantic & Pacific, by way of Kansas City and crossing Northern New Mexico and Arizona; the Burlington, Denver & Rio Grande, passing through Denver and Salt Lake City: the Union Pacific, by way of Omaha and

Cheyenne; the Northern Pacific through St. Paul, Bismarck, Helena, and Spokane; the Great Northern, passing along close to the United States boundary; and the Canadian Pacific, which stretches in a fairly direct line from St. John's to Vancouver. There are also various lines of steamers between San Francisco and all the more northern ports. Just at present the argonaut can take advantage of a fierce rate war which is being waged between the Canadian Pacific and the American roads west from St. Paul and which has made it possible to go from St. Paul to Seattle, a distance of 2,000 miles, for only \$20. The Northern Pacific, the Great Northern, and the Union Pacific have been, of course, obliged to meet this cut, and there is talk of lopping even this absurdly low rate in half, making the fare from St. Paul only \$10.

There is one all-water route from Puget Sound, skirting the coast and passing around to the mouth of the Yukon, the passengers being transshipped at St. Michael, 2,700 miles from Seattle, to shallow-draft steamers in which the seventeen-hundredmile trip up to Dawson City is covered. The North American Trading and Transportation Company runs a regular line of steamers over this route from the first of June on through the summer, and of the various other lines heralded as formed or being formed to accommodate this traffic, probably enough will materialize to prevent any great delay. The cost of the journey is from \$200 to \$300, including freight, according as one goes second or first class.

By far the greatest proportion, however, of those who throng to the mining regions will take steamer from one of the coast points named as far north as Wrangell, Juneau, Dyea,or Skaguay, from each of which landingplaces trails lead across the various mountain passes and strike the head-waters of the Yukon. Three steamship lines-the Pacific Coast Steamship Company, the Washington and Alaska Steamship Company, and the Alaska Steamship Companyhave nearly a hundred sailings scheduled between February 4 and June 4, and there are a num-

### Travel and Recreation

## KLONDIKE:

## The Chicago Record's Book for Gold-Seekers.

424 pages. Nearly 100 illustrations.
Gives location of all gold-fields in Alaska and British Yukon country.

How to get to them.

What it costs to reach them, with necessary outfit.

What to do when you get there.

How to prospect for gold.

Every route described in detail, with good, clear maps and complete tables of distances.

Mining laws and land regulations of United States and Canada, complete.

Method of procedure in locating and filing claims.

In addition, a great store of miscellaneous information of great interest and educational value.

Complete and exhaustive index.

No expense has been spared to make "THE CHICAGO RECORD'S BOOK FOR GOLD-SEEKERS" indispensable to the prospective gold-seeker and a treasure for every library. Of a high order in a literary, typographical, and artistic sense. Bound in art canvas, with beautiful cover design in three colors.

Mailed postpaid on receipt of \$1.00 by

181 Madison St., Chicago.

ber of other lines either in operation or about to begin. The fares from Seattle are as follows: To Wrangell, second class, \$13; first class, \$25; to Junea, \$17 and \$32; and to Skaguay and Dyea, from \$25 to \$40. The journey to the latter towns occupies four days. Each first or second class ticket entitles the holder to carry 150 pounds of baggage, excess being charged for at the rate of three cents a pound. Miners' outfits, provisions, and general merchandise cost \$10 a ton to the same places, while the prospector will be compelled to pay ₹22 to transport a horse or a mule, \$13 for a burro, and \$5 for a dog! It is reported that the steamship companies flatly declined to carry lumber at any price, space being too valuable to devote it to any commodity so bulky.

The route from Wrangell follows the Stickeen River north as far as Telegraph Creek, and from here on it is uniform with the overland trails previously described, passing down the Teslin and Lewesrivers to Fort Selkirk. From Juneau also the traveler may strike off, passing up the Taku River and joining with the trail just mentioned at Teslin

Lake.

From Dyea starts what seems to be the best route of all, leading over the Chilkoot Pass. Along this a tramway will probably be built in time to expedite a portion of the spring traffic. The land journey here is only 30 miles in length, and with a few portages one can go by boat through a chain of lakes and rivers all the way from Lake Lindemann to Dawson. The cost of getting across the Chilkoot Pass is at present anywhere from \$200 to \$400, but it will probably be reduced to something much more reasonable within the next month or two.

If the prospector starts from Skaguay he will go over the White Pass instead of the Chilkoot, and strike at Lake Nares the same water system which is made use of on the former route. Or it is possible to disembark at the little village of Chilkat, a few miles south of Dyea, and crossing the mountain chain by the Chilkoot Pass, follow the Dalton trail—which has several variations—down to the Lewes River.

Produce each a disease Alcohol, having definite pathology. The disease yields easily to the Double Chloride of Gold Treat-Tobacco ment as administered at the following Keeley Institutes.

> West Haven, Conn. Washington, D. C., 905 E St., N. W. Dwight, Ill. Marion, Ind. Kansas City, Kan., Cor. 6th St. & Ann Av.

Hot Springs, Ark. Los Angeles, Cal., Cor. N. Main & Commercial Sts. Crab Orchard, Ky. Keeley Catechism sent on application.

Inebriety, Morphine and other Drug habits are dependent upon a diseased condition of the nervous system.

The victim of the disease again and again puts forth the most heroic efforts to reform, but his disease is too absolutely overpowering to be conquered by resolutions. The will-power he would exercise if he could is no longer supreme. Alcoholic stimulants have so congested the delicate nerve cells that they cannot respond to the performance of their functional duties, and the helplessness of the victim's condition is as inexplicable to himself as it seems inexcusable to his friends.

The Keeley treatment cures this disease by restoring the nerves to a perfectly healthy state. It cures by removing the cause. The result is that the patient is left in a normal and healthy condition, and he has neither craving, desire, nor necessity for stimulants.

Over 270,000 men and women to-day have been permanently cured of the disease of inebriety through Dr. Keeley's treatment, which is admin-istered only at institutions authorized by him.

The treatment at these institutions is pleasant, no restraint is imposed. It is like taking a four-weeks' vacation. He only knows he is cured.

Detailed information of this treatment, and proofs of its success, sent free upon application to any of the following institutions.

Minneapolis, Minn., Park Av. & roth St. S. Kansas City, Mo., 716 W. noth St. St. Louis, Mo., 2803 Locust St. North Conway, N. H. Newark, N. J., 15 Central Ave.

## Early Spring Schedule to Atlantic City

## Pennsylvania Railroad.

Beginning Thursday, March 17, the Pennsylvania Railroad Company will place in effect its spring schedule to Atlantic City.

A new train will be added via the Delaware River Bridge Route, leaving Broad Street Station, Philadelphia, at 9.20 A.M. daily, arriving at Atlantic City 10.50 A.M.; a new seventy-five-minute train will be added to leave Market Street Wharf, Philadelphia, at 3.00 P.M. Saturdays only; a new train will leave Atlantic City at 3.50 P.M. daily, arriving Broad Street Station, Philadelphia, via Delaware River Bridge Route, at 5.27 P.M.; a new Sunday only train will leave Atlantic City at 8.00 P.M., arriving Market Street Wharf, Philadelphia, at 9.20 P.M. These trains will all carry parlor cars.

The 3.50 P.M. train from Atlantic City via the Delaware River Bridge Route will make a direct connection at Frankford Junction on week-days, New York Division train No. 98 being scheduled to stop regularly at Frankford Junction on and after March 17.

### Travel and Recreation Common

## Modern Facilities for Ocean Travel to Italy and the Orient.

WENTY-FIVE years ago but few people could afford the luxury of a trip to England or the continent, and fewer still extended their journey to Italy or as far as Egypt and the Holy Land, and when they did they would write home about their travels and all the strange sights they All who read these accounts were usually anxious for an opportunity to personally visit those strange places and scenes hitherto described by the adventurous travelers, but in most instances the expense proved a drawback. Thanks to the evolution in steamship construction, it is now made possible even to those who have only laid aside a few hundred dollars to visit not only Northern Europe, but Italy, Egypt, and the Holy Land as well, and I was one of those who caught the fever of travel. Having been able to lay aside a few hundred dollars, which I contemplated devoting to

ត់ពីរាំពិពតិការ

a three months' trip to Italy, Southern France, and the Holy Land, I was naturally obliged to go about it carefully so as not to spend this entire fund in ocean travel alone. After visiting all the steamship offices on lower Broadway, studying the circulars and handbills of the various lines, it struck me that the new PRINCE LINE to Italy, with offices at 61 Broadway, New York, offered the

traveling public the greatest advantages at most reasonable rates of passage. In fact, the rate for cabin passage of \$55 to Italy or only \$101.75 for the round trip seemed so low that I concluded that it would be advisable for me to first inspect the accommodations before definitely engaging a The steamer Spartan Prince being in port I went on board, and to my surprise found a steamer that had just left its constructors' hands, with saloon and all staterooms amidships, staterooms with folding wash-stands and electric light, a comfortable promenade deck and smoking-room accommodations, in fact, that fully equaled those on the German lines that were charging almost double the rates. I found, after making careful calculations, that after paying the Prince Line's rate of passage from New York via the Azores and Naples to Genoa, and from Naples to the Holy Land

and return to New York, my fund was ample to reach such interesting objective points as the Azores, Genoa, Nice and the Riviera, Turin, Milan, Venice, Florence, Rome (which, since the new improvements, is said to be as healthy all the year round as New York), Naples, Malta, Alexandria, Cairo, Jaffa, Jerusalem, Beyrout, Damascus, Tripoli, Nazareth, and other places, thus with my small fund being able to personally visit many of the historical and biblical points of interest and see those things that one has hitherto only read about. In this manner I expect to acquire a stock of information to enlarge my mind, broaden my views, and give me a knowledge of the world that I could acquire in no other way.

We sailed from New York on January 15, 1898, with thirty passengers in the cabin, including the best class of Americans, several of whom were bound for the Azores,

which islands we reached on the seventh day, after a voyage free from storms, with glorious sunsets and be a utiful moonlight nights. At St. Michael we were given three hours to go ashore, which was an advantage that we all appreciated highly, for it gave us time to see and visit the many natural beauties of a land that has never seen snow. Our voyage was then contin-

RUINS OF THE ROMAN FORUM.

ued, with nothing remarkable to narrate except passing the Rock of Gibraltar, which was a sight imposing in the extreme, until we finally reached Naples, where most of our cabin passengers land-During the two and a half days that it took to discharge cargo here I was enabled to ascend Vesuvius, visit Pompeii, and to see all the points of interest in and around Naples, returning to the steamer for the night. I am writing this letter on our way to Genoa, where my steamer trip will end for the present, but before closing I desire to say that our passengers not only unanimously expressed their appreciation of the excellent cuisine and the attentions shown them, from the captain down to the stewards and stewardess, but also their satisfaction at the sea-going qualities of the good steamer Spartan Prince.

# Doubleday & McClure Co.'s New Books.

# The Science of Political Economy. By HENRY GEORGE.

(Second edition now ready.) His latest and greatest work, on which he spent the final years of his life. The vital parts of the work were completed and revised for the press, and the book is issued exactly as he left it. 8vo, cloth, gilt top, photogravure portrait, 585 pages, \$2.50. In the introduction he calls it: "The science which treats of the nature of wealth and the laws of its production and distribution; that is to say, of matters which absorb the larger part of the thought and effort of the vast majority of us—

# THE GETTING OF A LIVING."

"If there is any subject on which Henry George thought long and earnestly it is political economy, and we may rest satisfied, therefore, that in this book he has given us some of his best and most mature thoughts."—New York Herald.

"This work of his, outclassing all others from his pen, will be welcomed as a distinct addition to the few really great works in its field."—Philadelphia Call.

"Has all the qualities which have made his most famous work justly famous. It is written in that luminous style which no political economist from Adam Smith down has ever been able to equal."—Boston Daily Advertiser.

# HOW TO STUDY SHAKESPEARE.

By WILLIAM H. FLEMING, with an introduction by W. J. Rolfe, Litt.D. 12mo, cloth, 400 pages, with wide margins for reader's notes, \$1.00.

"For those who know no language but their own there is as much intellectual training to be got from the study of his (Shakespeare's) works as from that of the works of any, I had almost said all, of the great writers of antiquity."—

James Russell Lowell.

# THE SPIRIT OF SWEETWATER.

By HAMLIN GARLAND. Portrait and three photogravures of drawings by W. L. Taylor. 16mo, flexible cloth, 50 cents.

A love story, the scene of which is laid in Colorado, and which has for its theme the restoration of an invalid young woman to health by the encouragement and influence of a strong-willed, healthy man.

# THE OPEN BOAT and Other Stories.

By STEPHEN CRANE, author of "The Red Badge of Courage," "Third Violet," etc. 12mo, cloth, 374 pages, \$1.00.

# The Open Boat; Flanagan; A Man and Some Others; Death and the Child, etc.

Mr. Crane has written nothing stronger and more original than these short stories. They are individual, realistic, and dramatic. They are likely to repeat the sensation raised by "The Red Badge of Courage."

# A MINISTER OF THE WORLD.

By CAROLINE ATWATER MASON. Portrait and three photogravures of drawings by W. T. Smedley. 16mo, flexible cloth, 50 cents.

The experiences of a young minister as village pastor, head of a city congregation, and later, leader of a rescue movement in lower New York.

# LIFE OF NAPOLEON.

By IDA M. TARBELL. A New Edition. "The best short life of Napoleon" is what the book has been called by the highest authorities. 250 illustrations, including all the most famous portraits and paintings connected with Napoleon's career. 8vo, cloth, gilt, \$1.00.

# BIRD NEIGHBORS.

Third Edition. By NELTJE BLANCHARD. Introduction by John Burroughs. Fifty-two full-page colored plates, many of them life-size. 8vo, cloth, 350 pages, \$2.00.

"It is truly a boon to young ornithologists."-Review

of Reviews.

"A book of solid value and lasting pleasure to its possessor."—Recreation.

"Thoroughly popular, yet scientifically accurate."—

## MORE LITTLE MASTERPIECES. Edited by BLISS PERRY.

New Volumes devoted to the best writings of FRANKLIN, WEBSTER, LINCOLN. Each book contains photogravure portrait of the author. 18mo, flexible cloth, gilt top, 30 cents each; flexible leather, 60 cents. Volumes previously issued in this series are devoted to writings of POE, IRVING, HAWTHORNE.

"Infinite riches for a little money."- The Critic.

"These are indeed masterpieces, and every lover of really good literature will wish to possess these attractive little volumes."-Philadelphia Inquirer.

"The publishers are doing a real service to literature in sending out these dainty little books, for they will appeal to thousands who have neither time nor inclination to take up larger works."—San Francisco Chronicle.

"Lack of time cannot serve as an excuse for not reading these carefully compiled selections."-Public Opinion.

"The form and the general air of the typography are here much to be praised for their attractiveness, and Professor Perry's graceful introduction is full of insight."—The Nation.

# DOUBLEDAY & McCLURE CO., Publishers,

141-155 East 25th Street, New York City.

# THE "NECESSARY" BOOKS.

There are a few books that never pass out of use. People who have read them once are likely, sooner or later, to want to read them again; and those who have not read them yet are sure to want to read them some time. These are pre-eminently

# BOOKS FOR THE HOME LIBRARY.

They meet the want of every member of the household.

Our book department has for its special aim the making and selling of books for the home library. It was surprising to find how many persons still needed a good Shakespeare. Following the Shakespeare we have now gathered together eighteen volumes of "necessary" books in a handsome set, with an introduction to the series by DONALD G. MITCHELL (Ik Marvel), who has assisted in selecting the volumes, which we call

# THE LIBRARY OF HOUSEHOLD CLASSICS.

These volumes are not "necessary" as works of reference, nor do they go into the dark ages; they are necessary to any one who wishes to know of the best literature of the century, and they are "good to read" and a pleasure to own. Look at the list, and check the number of books you have read—the unchecked titles will surprise you.

**SPECIFICATIONS.**—They are little books, handy to hold and read, bound in flexible cloth and leather, beautifully printed from fine clear plates on good paper and abundantly illustrated.

# THIS IS THE LIBRARY.

PICCIOLA, By Saintine, THE ATTIC PHILOSOPHER. By Souvestre. ROЛANCE OF A POOR YOUNG MAN.

By Peuillet.
ABBÉ CONSTANTIN. By Halevy
HEROES OF ASGARD. By Keary.
STORIES FROM VIRGIL. By Church.
VICAR OF WAKEPIELD. By Goldsmith.
LUCILE. By Owen Meredith.
CRANFORD. By Mrs. Gaskell.

OUR VILLAGE. By Miss Mitford,
CONFESSIONS OF AN OPIUM EATER.
By DeQuincey.

SARTOR RESARTUS. By Cariyle.
ESSAYS OF ELIA. By Lamb.
LAST ESSAYS. By Lamb.
CROWN OF WILD OLIVE. By Ruskin.
SESAME AND LILIES. By Ruskin.
IN MEMORIAI. By Tennyson.
SKETCH BOOK. By Irving.

**Donald G. Mitchell** says in the introduction: "I am asked—as an old servitor of the public—to place at the front of this inviting budget of household books a few introductory and welcoming words in favor of those old friends and acquaintances who have written the books. I shall do it with zeal and with love—albeit the words of welcome may be unneeded.

"In some shape surely the titles with which we have to do and the names of these writers will have come to the reader's knowledge long ago—perhaps by catalogues, perhaps by study of book-shelves at school or home, perhaps by some pit-pat of the heart throbbing through all the years from the May-day of youth. Indeed, it is only because these old friends now come to us in this prim, jaunty uniform of buckram and gold that we have need of any new words of presentation."

TERMS.—Like all our books, they will be delivered free and upon approval. The price for the set in cloth binding is \$1.00 a month for twelve months, or \$10.80 if the amount is sent at one time AFTER YOU HAVE examined the books. Full flexible leather \$2.00 a month for nine months, or \$16.20 if sent at one time AFTER YOU HAVE examined the books.

# IN ADDITION A YEAR'S SUBSCRIPTION TO MCCLURE'S MAGAZINE FREE.

Beautiful ART VOLUMES, a complete and magnificently illustrated BIBLICAL LIBRARY, for less than the price of an ordinary family Bible, is passing. :: :: :: ::

THIS great Library, beautifully bound in **four sumptuous volumes**, the text printed in large, clear type, comprises the Authorized Version of the Scriptures, a Bible Dictionary, Bible Atlas, Helps to Bible Study, Bible History, Harmony of the Gospels, a most complete Concordance, and a score of other new and valuable encyclopædic features, together with thousands of helpful and illuminative notes, commentaries, explanations, and reflections which make this remarkable Library indispensable to every Bible teacher or Bible scholar.

HIS superb work of art includes the most remarkable series of Bible illustrations ever brought together. They comprise over four hundred full-page photographs of the actual scenes and places of the great events of Bible History. They are the only truthful Bible illustrations ever obtained. They lend a new and striking interest to the scriptural narrative, and make its events vivid and real. They are as fascinating as a personal journey through the Holy Land.

999999999999999999999999999999

THE Club has received thousands of letters from readers who have become members. These letters, without exception, speak of this great Library with unqualified praise. We believe it would be impossible to give greater satisfaction in any way than our Club members have derived from the possession of this great Library. The few letters here given are a fair sample of the thousands the Club has received.

"I have seen no work that will yield a richer harvest of most desirable knowledge, or a higher inspiration in the direction of virtue and duty, than this great production of the closing years of our nineteenth century. Every lover of the Bible should secure this work if it is in his power."

(Rev.) CHAS. E. LORD, Newburyport, Mass.

"I greatly prize it. It is the most beautiful and most useful Bible I have ever seen or ever expect to see. God will surely bless those who are engaged in putting forth His word in so attractive a form."

JAMES A. SCOTT, 710 Third Street, N. E., Washington, D.C.

"It is indeed a work of art in every respect, calculated to create renewed ardor and love for the precious Word of God by making the study most interesting and fascinating."

HELEN DE BRUYN KOPS, Baltimore, Md.

"It surpasses my expectations. I think it truly grand."

HARRY WHITE, Cedar Rapids, Iowa.

"If there is one thing about it that pieases me more than another, it is that there are so many facts, historical and otherwise, brought together chronologically, concisely, and just full enough to be easily remembered. It is a work of art, and likewise of great utility."

ANTHONY McWhirter, New Castle, Pa.

"I only wish I had subscribed for the half-morocco binding. The illustrations and maps are excellent, and the notes the best I have ever seen."

V. SAULL, 9th Street and Girard Ave., Philadelphia, Pa.

"It is the finest thing I ever saw.

I am enthusiastically delighted with it. It adds an intense interest to the study of the Bible."

(Rev.) F. M. LAMB, Kennebunkport, Me.

"I am very much pleased with the books, They are worth their weight in gold."

Mrs. Clara B. Lemon, Calhoun, Ala.

Our readers are well aware that this great work was originally sold at a high price, far beyond the means of many, and it was only possible for our Bible Club to offer readers the present low price on account of having secured an entire edition at an extremely favorable price.

All readers who join our Club will secure this splendid Biblical Library at less than the cost of an ordinary family Bible. We advise you to write at once for complete particulars regarding our present Club price and the comfortable terms upon which the few sets of this great Library we now have left are being offered to those who first apply.

In order to assist readers of the REVIEW of REVIEWs to an understanding of what a truly wonderful work this is, so that no one may miss this great opportunity, the Club will send to any one mentioning the REVIEW a beautiful art portfolio of copyrighted photographic views selected from the remarkable series of 440 full page plates which

photographic views, selected from the remarkable series of 440 full-page plates which so beautifully illustrate this new work. These are 8x10 inches in size, printed from the original plates on heavy enameled paper, and are suitable for framing and home decoration. They were secured for this work at an expense of \$15,000 by a special expedition sent to Palestine and the East for this sole purpose, and constitute the most remarkable collection of biblical photographs the world possesses. The Club enables you to become the possessor of this remarkable Library in the most comfortable way possible.

McClure's Magazine bible club, 141 E. 25th Street, New York.

# CLUB CLOSES THIS MONTH.

Subscription canvass to begin—prices to be immediately advanced.

# Our History Club's

Special Price and Exceptional Terms to be withdrawn the Last Day of April.

Last month we were notified by the publishers of the

# LIBRARY OF UNIVERSAL HISTORY

that as they were to begin the regular canvass at the subscription prices we must discontinue our Club, which was organized for the purpose of acquainting the people throughout the country with the merits of this great Library of History. In order to accomplish this introduction quickly the publishers were willing that the Club should furnish the work to Club members at half price, and allow members to pay for same on the little-at-a-time payment plan.

# OUR HALF-PRICE AND EASY PAYMENTS

have been most satisfactory—thousands of sets have been claimed by members—and as we have less than 200 sets left to distribute, this is the last announcement the publishers will permit us to make.

# What This Great Work Really Is.

The three great epochs, Ancient History, Medieval History, and Modern History, naturally claim the principal portion of the Library, but Recent History also receives the attention its importance and interest demand, and the record of events is brought right down to the present year. The History of Civilization and The Philosophy of History are more fully treated than in any other work ever published in this country. The Illustrations, from the works of such great artists as Meissonier, de Neuville, and Doré, are numerous and brilliant, marking the turning-points of history, and The Historical Maps (there are nearly 100 of them) are more abundant and accurate than in any other work, native or foreign. In every one of those vital features which constitute a comprehensive, accurate, instructive, and valuable History of the World the Library is simply incomparable. It is the Latest and the Best.

What the head of the educational system of the United States,

Dr. WM. T. HARRIS,

National Commissioner of Education, says of the Library and the Club pian:

"I write in the name of the Bureau of Education to state that I appreciate highly the purpose of McClure's Magazine History Club, which is to extend the study of history among the people. I am sure that this will have all the good results claimed for it. History seems to me well described as the study of man's larger self, his social self. This knowledge is evidently the most important kind of self-knowledge.

"I wish the Club all success in extending the sale of such a valuable work on this subject."

If You Do about this wonderful work, and if you desire to possess a splendid Library of History, telling you the entire story of the Not Know human race, the Club will send you, postage paid, an interesting set of illustrations, from the Library itself, including reproductions of many great historical paintings of the world and portraits of many famous makers of history.

We will also send you detailed information regarding the Club plan and the Club terms, showing you how you can secure the greatest work of Universal History ever published at half the publishers' regular subscription price, and on the little-at-a-time Club payment plan.

The Club provides a comfortable way to become the owner of a set of books of life-long value, for study, occasional reading, and for reference on all matters pertaining to history.

McClure's Magazine History Club, 141 East Twenty-fifth Street, - - - New York City.

# UNPARALLELED OFFER TO JOIN THE

# Encyclopædia Britannica Club

READERS OF THE REVIEW OF REVIEWS.

We are preparing a special edition of this great work to be sold at

with a SPECIAL DISCOUNT to club members joining within 30 days.

ENTIRE SET DELIVERED ON PAYMENT

ONLY.

**BALANCE PAYABLE \$2.00** PER MONTH.

# THIS NEW EDITION

of the well-known Allen Reprint of this famous work will be supplied with a New Complete Appendix Volume in addition to our exhaustive American Supplement. This Appendix Volume will take every important title in the work and give all the knowledge that is new or recent concerning it, bringing information down to March 1, 1898. It will contain also 50 new maps, including the new Government Map of Klondike and Hawaii. Thus with our supplemental volumes the Britannica is still the latest as as the greatest.

The volumes will be handsomely and durably bound, in genuine silk-cloth bindings, double-hinged with flexible back, on good quality book paper. It is sewed on the "Smythe Sewer," which makes the most durable of bindings.

# ABSOLUTELY COMPLETE.

This edition will contain every one of the 8,000 illustrations, 700 maps, and 25,000 articles found in the original, and while at less than one-third the price, it will be Essentially Equal

to the Original Edition

to the Original Edition.

No such books have ever been offered of such size and quality for so low a price. They contain the highest character of knowledge and literature in the world, and stand ready to answer every question on physics, history, politics, trade, art, geography, philosophy, etc., to furnish the latest information on every subject.

Consider the advantage of a family which has these volumes over one which has not, or which has a cheap three or four volume, unreliable, so-called cyclopædia. When information is wanted by parents or children, here it is close at hand, and above all it is reliable. They become accustomed to refer to its pages; in a few years they possess a fund of knowledge worth many times the price of the work.

The set may be returned to us any time within 10 days if not satisfactory, and the money will be returned.

TO CANADIAN READERS. This edition will the Copyright Law, but can be sent into Canada.

THE OBJECT OF THE CLUB is to secure to those who join it the LOWEST WHOLESALE PRICE and the MOST FAVORABLE TERMS by doing away with all commissions to agents, etc., and giving you every possible advantage. possible advantage.

JOIN NOW and take advantage of this splendid chance to secure this unrivaled fund of universal knowledge.

BUREAU OF EDUCATION, Washington, D. C.-WM. T. HARRIS, LL.D., United States Commissioner of Education.

No work on literature of like plan, scope, magnitude, and fulfillment has ever before been attempted.

A Work for the Home.

The first object accomplished has been to furnish to households a treasury of the best and most entertaining reading of all ages and nations, and the guiding principle in making a selection has been that it is representative, that it is pure, and that it is readable.

Covers the Entire Field of Letters.

The second object has been to present a conspectus of the literature of the world, affording a comprehensive view of the whole field of letters and all the workers in it, and by this means the reader will be able to follow out any line of reading or investigation to which he is attracted, the main object being to furnish a wast amount of good reading, and incidentally to guide to other good reading.

Critical Treatment of Authors.

A third and scarcely less important purpose is the interpretation of this literature in essays by scholars and writers competent to speak with authority. These essays embody critical, interpretative, blographical, and historical treatises on authors and their works and their place in literature, not by one mind or by a small editorial staff, but by a great number of writers and scholars, specialists and literary critics.

Work of Scholars and Specialists.

Thus the LIBBARY becomes in a way representative of the scholarship and wide judgment of our own time, and also gives much information for the guidance of the reader.

Announcement continued on next page.

# Warner Library Now Complete.

Announcement continued from preceding page.

Selected Literature for the Young.

Realizing the educational importance of fostering a love for literature in youthful minds, the Libbary will devote space to a collection of the best poems and prose selections relating to infancy, childhood, and youth, which will early cultivate a taste for good reading.

Synopsis of Novels, Dramas, and Other Works.

The Library will also give, under a separate alphabetical index, stetches of the plots of all important novels and dramas, and abstracts of the subject matter of many other works. This feature will surely prove useful to those desiring to get at the gist of a book without reading it through, and both convenient and interesting to those wishing to quickly gain an idea of the story told in some particular work of fiction, or to recall the plot and characters in some play or romance once enjoyed, but now dimly remembered. The Library will also embrace an exhaustive Biographical Dictionary of Authors, of area tractical use for reference. great practical use for reference.

# EIGHT NOTABLE FEATURES

# Charles Dudley Warner Library,

Forming together a Magnificent Temple of Literature......

Over 300 Editors and Literary Specialists.

Such a notable galaxy of writers have never before been associated in a single literary enterprise. The names of these great authors are a sufficient guarantee in theniselves of the high character and quality of the work. Under the direction of Charles Dudley Warner as chief editor, the associate editors and the advisory council, composed of professors of literature in the leading universities of this country, the best literary talent of both Europe and America has for over two years been brought to bear upon the preparation of this

2. Over 1,000 Original Interpretative Essays.

These essays present a critical, interpretative, biographical, and historical view of an author and his works and their place in literature. The reader is thus given, as it were, a personal introduction to an author, as he approaches the study of his writings, hand in hand with an authority who has made a life study of the author and his writings.

History of the World's Great Literatures by Noted Specialists.

These essays give the history, rise, development, and present status of the different LITERATURES of the world. All of them, such as, for instance, Chinese, Egyptian, Hindu, Icelandic, Celtic, Anglo-Saxon, Latin-American, and son, have been in each case treated by the scholar whose life work has best fitted him to discuss a certain literature or literary period, and point out what is best in it. To illustrate and explain the literatures under discussion, the witers have chosen most interesting and significant portions, many of which have been specially translated for the LIBRARY, and may now be enjoyed in English for the first time.

The Masterpieces of Literature.

These masterpleces in the LIBRARY from the great authors of the world present a complete view of the literature of all ages, all nations, all languages, the best thoughts of the greatest speakers, writers, and thinkers of the past 6,000 years; the best of poetry and prose, history and biography, oratory, fiction, philosophy, theology, etc.

# 5. Noted Songs, Hymns, and Lyrics.

One volume of the LIBRARY is devoted exclusively to dear and familiar hymns, national songs, and those famous single poems which stand out prominently as the finest examples of poetic genius, the names of whose authors have, in many cases, been lost or forgotten. In fact, this department includes nearly 1,000 of the finest lyric efforts of the human race, the greater part of which are not to be found in the largest private libraries.

# 6. Synopses of the Noted Books of the World.

These synopses so epitomize the famous books of the world that the story, plot, characters of all important works of fiction, dramas, epic poems, etc., can be gained in a few moments' reading. In fact, when read in connection with the essays upon the authors, and the best portions from the books themselves, these furnish a more intelligent view of almost any work as literature than a simple reading of the entire volume without the interpretation and side lights upon it.

# 7. Biographical Dictionary of Authors.

This is the volume of the LIBRARY specially for quick reference, giving the pronunciation of the name, blographical sketch, best works, and place in literature of the thousands of authors from the beginning of authorship to the present time, and is the only one of its kind in existence.

# 8. Complete Analytical and Subject Index.

So complete is this index that it renders every page, author, work, subject, character, or title treated in the entire Library instantly accessible to the rader. Not only does it classify such subjects as art, science, travel, anecdote, love, liberty, ambition, etc., but also classifies the literature by countries, so that one can make a special study of all, Greek, Italian, French, or any other literature, as it is presented in the Library. The best literature of the world thus becomes available at once to the student, the teacher, the general reader, the lawyer, the merchant, the clergyman, the doctor, for purposes of illustration, suggestion, or amplification of any thought or subject that may be under consideration.

The above Eight Features combine to produce the most perfect and complete

Library of Literature, Interpretation of Literature, History of Literature, Introduction to Literature,

AND

Reference Work and Index of Literature

No new publication has ever excited keener interest or had so LARGE AN ADVANCE SALE.

SPECIAL NOTICE.—The printing of the last volume of the Library is being pushed rapidly, and when it comes from the press, as it will this month, the exceptional club offer will be withdrawn.

Application for full particulars regarding the favorable introductory terms to club members should be made promptly.

# THE GREAT WARNER LIBRARY COMPLETED.

The Special Introductory Club Price to be Advanced.

THE completion of the remarkable Library of the World's Best Literature is accomplished. It is indeed the literary event of the present generation. All that remains now, in order that complete sets can be delivered to the thousands of people who have taken advantage of the introductory price as offered by Harper's Weekly Club, is the printing of the last volume.

When this volume comes from the press, as it undoubtedly will some time during the present month, the special price and easy payments, that are just now offered by Harper's Weekly Club, will be withdrawn, and the regular subscription canvass at full prices will be inaugurated.

We have no hesitation in advising our readers to take advantage of the present opportunity, as we believe the Warner Library is a work of such extraordinary character that sooner or later it will find its way into every home of culture and refinement. That such a marvelous survey of the literature of the world, with exposition and criticism of the foremost living men of letters, can be had for a sum less than the cost of the simplest collection of single volumes, makes this a Library which, from the standpoint of economy alone, no lover of books can afford to be without.

A postal card sent to Harper's Weekly Club, 9t Fifth Ave., New York, will receive full particulars regarding the favorable introductory terms upon which it is being offered to Club members, and which will positively be withdrawn as soon as the last volume comes from the press.

In calling the attention of our readers to this passing opportunity, we advise them to read carefully the announcement of Harper's Weekly Club which is published on the three preceding pages.

No. 4.

# THE PROGRESS OF THE WORLD.

Our last month's review of events in-The Topic cluded as its most absorbing topic the destruction of the United States battleship Maine by explosion in the harbor of Havana, with the loss of more than two hundred and fifty The weeks that have elapsed since that fatal event of February 15 have been making history in a manner highly creditable to the American Government and to our citizenship. Captain Sigsbee, the commander of the Maine, had promptly telegraphed his desire that judgment should be suspended until investigation had been made. The investigation was set on foot. at once, and seventy-five millions of Americans have accordingly suspended judgment in the face of a great provocation. For it must be remem-

bered that to suppose the destruction of the Maine an ordinary accident and not due to any external agency or hostile intent was, under all the circumstances, to set completely at defiance the law of probabilities. It is not true that battleships are in the habit of blowing themselves up. When all the environing facts were taken into consideration, it was just about as probable that the Maine had been blown up by spontaneous combustion or by some accident in which no hostile motive was concerned, as that the reported assassination of President Barrios, of Guatemala, a few days previously had really been a suicide. The fact in that case was that a frightful state of civil warfare in Guatemala had been attended with various successful or unsuccessful attempts at assassina-

tion, and Barrios knew that his turn would come. Within the past year nearly every Spanish-American ruler from the Rio Grande to Patagonia has had attempts made upon his life, several of which have been fatal. The fact that Sagasta is Prime Minister of Spain is merely due to the recent assassination of Canovas, who was responsible for Weyler's policy of extermination in Cuba. One of the early incidents of the present war between Spain and Cuba was the assassination of the brilliant Cuban journalist, José Marti, whose eloquence and courage had precipitated the rebellion. Subsequently the Spaniards perpetrated a treacherous plot which resulted in the assassination of General Maceo, who, next to

from a photo taken for the N. Y. World.

THE WRECK OF THE "MAINE" IN HAVANA HARBOR.

Gomez, was the principal military figure on the Cuban side. Assassination is not a usual or an accredited method of warfare or of political controversy among colder-blooded races; but with nations of Spanish blood it is a factor that has to be constantly counted upon and guarded against. This is perfectly understood in the Spanish-speak-

CONSUL-GENERAL FITZHUGH LEE.

ing countries, where—in times of war, revolution, or fierce controversy—treachery is always the one thing most feared; while the assassin's plot is reckoned with as a matter of course.

Now it happens that in no Spanish-speak-Grounds of ing region in all modern times has there been any contest or strife approaching in its destructiveness (with the notable exception of the war of 1865-70 in Paraguay) the war that has been carried on in Cuba for the past three years. The Spaniards have sent across the Atlantic Ocean more than two hundred thousand of their sons to fight against the Cuban rebels, and more than half of these are now dead or hopelessly in-Cuba on her part seems to have lost valided. from a third to a half of the population of the island. It has been the belief of all Spaniards in Spain and of all Spanish supporters and sympathizers in Cuba that the sole reason for the prolongation of this strife has been the aid and comfort afforded to the Cuban insurgents by the people of the United States. The feeling has been, therefore, that Spain's real enemies were the Americans, and that the open outbreak of hostilities was simply a matter of the convenient

time and season, to be determined by exigencies in Spain. All this being true, it has been known perfectly well that Spanish hatred might at any time manifest itself by attempts upon the life of the American representative at Havana, Consul-General Fitzhugh Lee. This danger was felt especially at the time of the Havana riots in January, and it seems to have had something to do with the sending of the Maine to Havana harbor. The Spaniards themselves, however, looked upon the sending of the Maine as a further aggravation of the long series of their just grievances against the United States. They regarded the presence of the Maine at Havana as a menace to Spanish sovereignty in the island and as an encouragement to the insurgents. A powerful American fleet lay at Key West and the Dry Tortugas, with steam up ready to follow the Maine to the harbor of Havana on a few hours' notice. All this was intensely hateful to the Spaniards, and particularly to the army officers at Havana who had sympathized with General Weyler's policy and who justly regarded General Weyler's recall to Spain as due to the demand of President McKin-The American pretense that the Maine was making a visit of courtesy seemed to these Spaniards a further example of Anglo-Saxon hypocrisy.

Drawn by Geo. W. Edwards for Collier's Weekly.

WAITING.
COLUMBIA: "Shall it be peace or war?"

Photographed for the World.

Captain Sigsbee.

General Lee

Father Chidwick.

A SCENE IN THE COLON CEMETERY, HAVANA, MARCH 4, AT THE GRAVE WHERE SCORES OF THE "MAINE'S" MEN ARE BURIED.

That this intense bitterness against the Likelihood presence of the Maine was felt among the military and official class in Havana, was perfectly well known to Captain Sigsbee, his staff, and all his crew; and they were not unaware of the rumors and threats that means would be found to destroy the American ship. It was, furthermore, very generally supposed that the Spanish preparation for the defense of Havana had included mines and torpedoes in the harbor. At the time when the Maine went to Havana it was a notorious fact that the relations between Spain and the United States were so strained that war was regarded as almost inevitable. If war had actually been declared while the Maine was at Havana, it is not likely that the Spanish would have permitted the ship's departure without an effort to do her harm. The Spanish harbor is now and it has been for a good while past under absolute military control; and the American warship, believed by the Spanish authorities to be at Havana with only halfcloaked hostile designs, was obliged to accept the anchorage that was assigned by those very authorities. In view of the strained situation and of the Spanish feeling that no magnanimity is due on Spain's part toward the United States, it is not in the least difficult to believe that the harbor authorities would have anchored the

Maine at a spot where, in case of the outbreak of war, the submarine harbor defenses might be effectively used against so formidable an enemy. To understand the situation completely, it must not be forgotten that the Spanish Government at first made objection against the Maine's intended visit to Havana, and in consenting merely yielded to a necessity that was forced upon it. Spaniards regarded the sending of the Maine to Havana as really a treacherous act on the part of the United States, and most of them would have deemed it merely a safe and reasonable precautionary measure to anchor her in the vicinity of a submarine mine. Doubtless these suggestions will be read by more than one person who will receive them with entire skepticism. But such readers will not have been familiar with what has been going on in the matter of the Cuban rebellion, or else they will be lacking in memories of good carrying power.

American Forbearance. The great majority of the intelligent people of the United States could not, from the first, avoid perceiving that what we may call the self-destruction theory was extremely improbable; while what we may term the assassination theory was in keeping with all the circumstances. Nevertheless, although the probability of guilt was so overwhelming, the Ameri-

can people saw the fairness and the necessity of suspending judgment until proof had been substituted for mere probability. And there was in no part of the country any disposition to take snap judgment or to act precipitately. No other such spectacle of national forbearance has been witnessed in our times. Unquestionably the

REAR ADMIRAL SEGISMUNDO BERMEJO, Spanish Minister of Marine.

whole community has been intensely eager for news; and it is perhaps true that certain newspapers which have devoted themselves for a month or more to criticising the sensational press, might as well have been occupied in a more energetic effort to supply their readers with information. The fact is that the so-called "war extras" which for many days were issued from certain newspaper offices at the rate of a dozen or more a day have not seemed to communicate their hysteria to any considerable number of the American people, East or West, North or South, so far as our observation goes.

An Unprecedented Demand for Newspapers.

The situation has simply been one of a very absorbing and profound interest, while the suspense has been very trying to the nerves. The possibility that our country might soon be engaged in war with a foreign power has been a preoccupying thought not to be dismissed for a single hour. The whole country has known that a fateful investigation was in progress in Havana harbor;

that coast-defense work was being pushed all along our seaboard; that in all the shipyards, public and private, government work was being prosecuted with double or quadruple forces of men, working by night as well as by day; that ammunition factories, iron and steel plants, and every other establishment capable of furnishing any kind of military or naval supplies, were receiving orders from the Government and were working to the full extent of their capacity; that plans were being made for fitting out merchant ships as auxiliary cruisers; that our naval representatives were negotiating abroad for additional warships; that new regiments of artillerymen were being enlisted for the big guns on the seaboard; that naval recruits were being mustered in to man newly commissioned ships; that the railroads were preparing by order of the War Department to bring the little United States army from Western and Northern posts to convenient Southern centers; and that while we were making these preparations Spain on her part was trying to raise money, to buy ships, and to secure All these matters, and many others related to them, have within these past weeks made an immense opportunity for testing the news-gathering resources of the American press. Spain was having fresh trouble in the Philippines. Japan in one way or another was interested in the Spanish The question of Hawaii was incidentsituation. The Spanish attempts to borrow ally involved. money in the European capitals and to gain sympathy and friends in the European courts were worth finding out about. There was something

señor polo y bernabé. (New Spanish Minister at Washington.)

CAPT. F. E. CHADWICK, U. S. N. (A member of the board.)

have printed the largest numbers of extras and sold the most copies per day have simply been doing what they could to supply the almost insatiate demand of the public for news about the war preparations. To say that these newspapers have been creating a war feeling is altogether to put the cart before the horse. Some of them are accused of grave misconduct. Our contention simply is that their behavior has not seemed to bias the judgment of the American people, which has been sensible and shrewd enough to discount all the exaggeration and froth of the bold head-line writers.

immensely interesting and exciting in the rivalry of Spanish and American agents in the shipyards of England, Italy, Germany, and other maritime countries of Europe, in their eagerness to buy vessels. Furthermore, the general situation in Cuba, the condition of the relief work among the reconcentrados, the failure of the autonomy scheme, and above all the mysteries of the Maine's explosion, were full of opportunities for the modern news-gatherer. We are not a militant people, and this has been the first time since 1865, thirty-three years ago, that the American people have witnessed a really serious effort on the part of their own Government to get itself in readiness for war on a large scale. It is only natural, therefore, that every detail should have interested the public intensely. The papers which

The members of the naval board of inquiry appointed immediately after the Inquiry. Maine disaster to investigate its causes were Captain Sampson, of the Iowa, Lieutenant Marix, Commander Potter, of the New York, and Captain Chadwick, of the same vessel. The eminent qualifications of the board were admitted on Captain Sigsbee remained in Havana to render all assistance in his power, and with the help of expert divers an investigation began without delay. It was hoped that only a very few days would be necessary to reach essential conclusions. As week after week passed the tension became severe. It gradually came to be felt that if the Maine had been blown up by an explosion of internal origin the commission would have discovered that fact in very short order, and

Drawn from life by Bengough for the New York Journal.

THE NAVAL BOARD IN SESSION ON BOARD THE LIGHTHOUSE TENDER "MANGROVE" AT HAVANA.

would have made haste so to report, in order to exonerate Spain and relieve the public mind. But although the commission observed the utmost secrecy, it began to be rumored that all the evidence showed that the wreck had been caused by an external attack. The Spaniards went through

introduced the fifty-million-dollar bill.

the form of appointing a commission to investigate on their part, but its inquiry was of the briefest and most perfunctory sort, and its finding was seemingly prepared in Madrid before its investigation was begun. It was of course ex-

pected to report that there was no external explosion and no Spanish complicity.

Meanwhile Miss Signs of a Coming Clara Barton, rep-Crisis. resenting the Red Cross organization, had begun to make very effective distribution of American relief to the starving reconcentrados, and the volume of charitable supplies destined for Cuba was increasing constantly. As a matter of convenience a part of these supplies was to have been transported by government cruisers; but Spain objected, and at the same time intimated its desire that General Lee should be replaced

by some one else. Spain's great warship, the Vizcaya, had left New York and gone to Havana, and it became known that other warships were on their way from Spain, while the Spanish fleet of torpedo boats was being prepared for immediate transfer to Cuban waters. Our Government informed Spain very frankly that General Lee would not be recalled from Havana, but expressed perfect willingness to ship relief supplies by lighthouse tenders instead of armed cruisers. arrangement was accepted by Spain, which also disavowed any intention to object to General Lee's further stay at Havana. Thus what for a moment seemed a critical situation was considerably relieved. But just then all the newspapers, the most conservative as well as the most sensational, concurred in reporting that there was no longer any reason to doubt the multiplying rumors that the Maine had been blown up by an external And swift upon the general acceptance of this opinion came the report that Spain had somehow mysteriously raised a large sum of money and was trying to buy a number of warships in European shipyards, especially certain vessels which had been built for Brazil, Chili, and the Argentine Republic and which were nearly or quite completed.

When, therefore, on March 8 the House of Representatives unanimously voted to place fifty million dollars at the unqualified disposal of President McKinley as an emergency fund for the national defense—this action being followed by an equally unanimous vote of the Senate the next day—it was naturally taken for granted all over the country that the situation

From a drawing by De Lipman for the Journal.

MR. CANNON CALLING UP HIS FAMOUS BILL.

was believed by the President to be extremely The continued delay of the board of inquiry—which had been oscillating between Havana and Key West, conducting its proceedings in secret and mantaining absolute reticence -had naturally served to confirm the belief that its report would show foul play; and it appeared that the President was basing his great preparations of war, in part at least, upon his advance knowledge of the evidence secured by the com-The unanimity of Congress in support of the President created an excellent impression Fifty millions is a very large sum to place in the hands of one man. It might have been supposed that there would have been members in both houses who would have insisted upon the appropriation of this money for specific That not a single man was found to make objection showed a very great capacity for united action in a time of emergency. It also showed, of course, how great is the confidence that Congress and the American people repose in the honor, wisdom, and public spirit of their At the time of the Venezuela inci-Presidents. dent, Congress in similar manner came unani mously to the support of President Cleveland. In that case, however, there was not the remotest possibility of war; and the episode was merely a diplomatic one, in which it was deemed important to show that our Government could rely absolutely upon the whole support of the people. The South on all such recent occasions has been foremost in expressions of patriotism.

THE FIRST GUN—CONGRESS HEARD FROM.
From the Journal (Minneapolis).

NOT ONE CENT FOR BUNKUM—FIFTY MILLIONS FOR DEFENSE.

From Harper's Weekly.

The vote of fifty million dollars, although an extraordinary measure Expenditure. justified only by the imminent danger of war, was clearly an act that no peace-loving man could reasonably criticise; for preparation is often the means by which conflict is avoided. A larger navy was in any case greatly desirable for our country, with its long seaboard on the Atlantic and the Pacific and its vast commerce; while the better fortification of our principal ports was an urgent necessity. Since the preparations that have been made so hurriedly during the past few weeks have been of a defensive nature, and since they have been carried out upon lines which had been duly considered in advance, they will have permanent value, and there will have been involved a very small percentage of If Congress had been wise enough in the past three or four years to lay down more warships in our own yards, it would not have been necessary to contribute millions to foreign shipbuilders. No part of the fifty million dollars will be squandered by the administration; but it is to be regretted that this emergency fund had not been already expended during the five preceding years by more liberal appropriations for coast defense and naval construction. The great shipyards of the United States, both public and private, are now at the point where with a sufficient amount of regular work to do they

would speedily be able to compete on equal terms with the best shipbuilding plants of Europe. Iron and steel supplies are now much cheaper in the United States than anywhere else, and it is only the relatively small amount of shipbuilding that has been demanded by our Government that has made it more expensive to build a war vessel here than elsewhere.

In a time of real emergency, however, America's the resources of the United States would prove themselves great enough to supply our own people and the whole world besides. The quickness and inventiveness of American mechanics, engineers, and manufacturers have no parallel in Europe. On a year's notice the United States might undertake to cope evenhanded with either the Dual or the Triple Alliance—although we have now only the nucleus of an army and the beginning of a navy, while the European powers have made war preparation their principal business for a whole generation. It is to be suspected that one reason why the American people have bought the newspapers so eagerly during the past weeks is to be found in the satisfaction they have taken in learning how a strictly peaceful nation like ours could if necessary reverse the process of beating swords into plowshares. It is true, for example, that we have built only a few torpedo-boats and only a few vessels of the type known as destroyers; but we have discovered that about a hundred very rich Americans had been amusing themselves within the past few years by building or buying splendid ocean-going, steel-built steam yachts of high speed and stanch qualities, capable of being quickly transformed into naval dispatch-boats or armored and fitted with torpedo-tubes. Probably not a single private Spanish citizen could turn over to his government such a vessel as the magnificent Goelet yacht, the Mayflower, which was secured by our Navy Department on March 16; not to mention scores of other private steam vachts of great size and strength that wealthy American citizens are ready to offer if needed.

THE REFITTED "MONITORS," FOR COAST DEFENSE.

It is the prevailing opinion nowadays, War Mowadays a it is true, that nothing is to be relied Question of upon in naval war but huge battleships, which take from two to three or four years to build. But if a great war were forced upon us suddenly, it is altogether probable that American ingenuity would devise something wholly new in the way of a marine engine of war, just as American ingenuity improvised the first modern iron-We have already in our navy a dynamite cruiser, the Vesuvius, which in actual warfare might prove more dangerous than a half dozen of the greatest battleships of the European navies. There has just been completed, moreover, and offered to our Government, a submarine boat, the Holland, which seems to be capable of moving rapidly for several miles so completely submerged as to offer no target for an enemy; and it may well be that the torpedoes discharged from an insignificant little vessel capable of swimming below the surface like a fish might prove as fatal to the battleships of an enemy as the alleged mine in the harbor of Havana was fatal to our battleship the Maine. Nowadays warfare is largely a matter of science and invention; and since a country where the arts of peace flourish and prosper is most favorable to the general advance of science and invention, we stumble upon the paradox that the successful pursuit

THE HOLLAND SUBMARINE BOAT AS TESTED ON MARCH 17, NEAR NEW YORK.

THE SPANISH FLEET OF TORPEDO-BOATS, DESTINED FOR CUBA.—From a recent Madrid paper.

of peace is after all the best preparation for war. Another way to put it is to say that modern warfare has become a matter of machinery, and that the most highly developed mechanical and industrial nation will by virtue of such development be most formidable in war. This is a situation that the Spaniards in general are evidently quite unable to comprehend. Their ideas are altogether mediæval. They believe themselves to be a highly chivalrous and militant people, and that the people of the United States are really in great terror of Spanish prowess. They think that Spain could make as easy work of invading the United States as Japan made of invading China. Their point of view is altogether theatrical and unrelated to modern facts. country like ours, capable of supplying the whole world with electrical motors, mining machinery, locomotive engines, steel rails, and the structural material for modern steel bridges and "skyscrapers," not to mention bicycles and sewing machines, is equally capable of building, arming, and operating an unlimited number of ships of every type, and of employing every conceivable mechanical device for purposes of national defense. In the long run, therefore, even if our preliminary preparations had been of the scantiest character, we should be able to give a good account of ourselves in warfare.

UNCLE SAM TO SAGASTA: "Your move, señor!"—From the Journal (New York).

The loss we might incur, however, at Ship Canals the outset for lack of preparation Future Navy. might be enormous; and on that account prudence calls for a reasonable condition of defense along the seaboard and for a navy of moderate size and high efficiency. The events of the past few weeks have plainly shown how extremely useful it would be to have a waterway under our own control across Nicaragua or some other isthmian point. The commercial uses of such a waterway would probably pay the interest on its cost; but even if they did not pay half of the interest, the canal would be a good investment on naval grounds. Our battleship the Oregon is now on her way from San Francisco to join the fleet at Kev West; and her long passage around Cape Horn will have consumed about ten As our interests on the Pacific coast become more important, we shall have increasing need of war vessels at various points in the Pacific Ocean. With the Nicaragua Canal built, our ships could readily pass from one ocean to the other as circumstances require, and we should not need so large a navy by any means as we should otherwise have to maintain. The difference in the annual appropriation bill for naval construction and maintenance would more than pay, in the years to come, any possible deficit in the yearly operation of the Nicaragua Canal. The enormous growth of our merchant shipping on the great lakes, moreover, has naturally suggested the desirability, from the point of view of our naval auxiliary resources, of a ship canal from the lakes to the sea. With such a canal open, the great lakes in time of war would be the scene of such activity in the building and fitting out of warships as the world had never witnessed before. The national energy that was aroused by the great civil struggle of the early sixties gave us the transcontinental railroads. Is it too much to hope that the stimulus imparted to the nation by the possibility of a war with Spain may hasten the construction of the Nicaragua Canal, and may even set in motion the forces that will give us a deep-water passage from the great lakes to the Atlantic? The combined commercial and naval advantages make a strong argument.

Probably the report of the commission on the Maine will have become public in Sight! news before this issue of the Review is distributed to its readers. That being the case, any attempt at forecast would be hazardous. Nevertheless, certain factors in the situation are not likely to be affected to any extent by the nature of the commission's report. In any case, the American people will have now to decide, through their responsible representatives at Washington, whether or not they will interfere in If the commission should make an inconclusive report, the general situation would remain what it was before. President Cleveland and President McKinley have in succession notified the United States, Spain, and the world that if after a reasonable time the Spaniards should fail to make good their nominal sovereignty and to give peace and a reasonably satisfactory government to the island, the United States would intervene, whether invited to do so or not. Even if, on the other hand, the Maine should be reported by our naval commission to have been blown up by a Spanish mine, the really essential question would seem to us not to be altered. Our Government would merely be able to say that the destruction of the Maine was a very aggravating proof of Spain's inability to maintain order, and therefore a clinching reason why this country ought to intervene and ought to consider that no further probation should be granted. Interference in the affairs of another country is not a holiday undertaking. It is neither safe nor

pleasant. It is for the conscience and the firm will of the American people to say whether or not they will interfere in Cuba. Spain has forfeited all right of sovereignty in Cuba, a hundred thousand times. We have every pretext and every justification to interfere if we choose to do so. On the other hand, we have no reason for the slightest grudge against Spain, and no right to wish anything else for Spain except a happy and prosperous future on her own side of the ocean. She is unfit for colonial responsibility. and her further presence in Cuba is as objectionable as Turkey's presence in Crete.

Quite regardless of the responsibilities the People for the Maine incident, it is apparently true that the great majority of the American people are hoping that President McKinley will promptly utilize the occasion to secure the complete pacification and independence of Cuba. There are a few people in the United States—we should not like to believe that more than one hundred could be found out of a population of seventy-five millions—who believe that the United States ought to join hands with Spain in forcing the Cuban insurgents to lay down their arms and to accept Spanish sovereignty as a permanent condition, under the promise of practical home rule. It needs no argument, of course, to convince the American people that such a proposal reaches the lowest depths of infamy. It is much worse than the proposition made by a few people in Europe last year that the victorious Turks should have the countenance and support of the great nations of Europe in making Greece a part of the Turkish empire. For the Turks had fairly conquered the Greeks; and if Europe had kept hands off, Greece would have been reduced very quickly to the position of an Ottoman prov-But in Cuba it is otherwise. The insurgents, with no outside help, have held their own for more than three years, and Spain is unable to conquer them. The people of the United States do not intend to help Spain hold Cuba. On the contrary, they are now ready, in one way or in another, to help the Cubans drive Spain out of the western hemisphere. If the occasion goes past and we allow this Cuban struggle to run on indefinitely, the American people will have lost several degrees of self-respect and will certainly not. have gained anything in the opinion of mankind.

A TYPICAL CUBAN SCENE, SKETCHED IN HAVANA PROVINCE.

It is greatly to be hoped that the larger Not a issue may not be obscured by the smaller one. The martyred officers and men of the Maine are beyond human aid. No Spanish apologies nor indemities can restore them. But the atrocities of Spanish misrule in Cuba are unabated, and hundreds of Cubans die of starvation every week. If we are to act in any manner against Spain or contrary to Spain's desires, our motive should be the relief of Cuba and not the settlement of the Maine incident. If indeed we should attach first importance to the question of the Maine, we should only have played directly into Spain's hands. For it became clearly evident in the middle of March that the Spaniards were hoping to gain time by diplomatic proceedings following the report of the United States naval board of inquiry. It was assumed, of course, that the board would report that the ship was blown up by a submarine mine; that the mine had been placed in the harbor under Weyler's direction; that the United States vessel had by Spanish orders been anchored in dangerous proximity to the mine; and finally that the explosion of the mine would seem to have been virtually impossible without malicious complicity or culpable negligence on the part of Spanish officials. Such a report, according to Spanish reasoning, would be followed by an immediate demand on the part of the United States Government for a large money indemnity. The Spaniards in turn would deny the allegations of the American naval board, placing over against them the findings of the Spanish board. Whereupon Spain would propose to the United States something in the nature of a joint inquiry into the facts, probably with the assistance of an international commission of experts, and with the idea of an arbitration on the question of damages if the international commission should find that Spain was culpably negligent. Under no circumstances, of course, could it be proved that the explosion was an official act on the part of Spain; and, if we mistake not, it might be extremely hard even to prove negligence. The United States took its own chances when it sent the Maine to Havana. The principal reason for the naval inquiry is one that chiefly concerns ourselves. It was obviously necessary that Captain Sigsbee and our naval administration, including of course the constructors of the Maine, should have the benefit of a naval inquiry in order, if possible, to be officially cleared of all vague charges of carelessness and inefficiency.

So far as Spain is concerned, our one simple and all-sufficient demand should clearing Out! be, not that Spain make us a money payment for the loss of our ship, but that Spain

SENATOR REDFIELD PROCTOR, OF VERMONT.

withdraw, in a complete sense, from the western hemisphere. And this demand, obviously, involves nothing that either party could possibly submit to international arbitration. The loss of the Maine is merely an incident in a much larger We shall make a pitiable mistake if we do not drive straight at the essential issue; and if we are ever to face that issue we must meet it without undue delay. Spain is now bending all her diplomatic energies toward the making of complications that will keep the United States from forcible intervention until after the rainy season has set in. The real facts concerning Cuba were stated in the United States Senate on March 17 by Senator Proctor, of Vermont, who was Secretary of War in President Harrison's administration, and who had just returned from a semi-official visit to Cuba, where he had diligently and competently investigated every phase of the situation. General Proctor is an American public man of the very first rank, whose sagacity is of as high an order as his char-He confirms all that this magazine has acter. from time to time published about the nature and extent of the starvation of the reconcentradus. He denounces Spanish misrule in Cuba as worse

than any other misrule he had ever known about. He finds the Cubans themselves far better fitted for the carrying on of an independent republic than most Americans have supposed—and, in any case, vastly better fitted to administer Cuba than are the Spaniards who have been sent from across the ocean to rule the island. Whether the first steps should be the acknowledgment of Cuban belligerency or the recognition of the independence of the Cuban republic, followed up at once by intervention on the ground of humanity, and the shipment of vast supplies of food and clothing for the suffering peasantry-all these are questions that the authorities at Washington are competent to decide. But it is certainly permissible for the public opinion of the country to express itself plainly on the one general point that the time has now come when Cuba must be emancipated.

Furthermore, in view of all that Nor should Cuba be 8addled with Cuba has suffered, it no longer seems fair that any arrangement should be Spain's Debt! made by which a part of the Spanish debt should be saddled upon the Cuban republic. Not only have the people of the island paid over and over again for all the improvements and public property that Spain must leave behind in her evacuation, but they have also contributed hundreds,

AN EXAMPLE TO ALL NATIONS.

"It will be worthy of a free, enlightened, and at no distant period a great nation to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence."—George Washington.—From Harper's Weekly.

even thousands, of millions of dollars to the Spanish treasury, for which they have had no Two years ago, or return except oppression. even one year ago, it would have been advantageous all around, perhaps, if the Cubans could have bought their independence at a large money But under all the later circumstances, it would be less reasonable that independent Cuba should assume a large part of the Spanish debt than that the United States Government should have assumed the debt of the Confederacy. When France assisted the United States to gain their independence, it was no part of the French proposal that our young republic should take over a share of the public debt of great Britain. European investments in Spanish securities for several decades past have been purely speculative investments, because they have all been made with the full knowledge that Cuban rebellions were liable to break out at any time. Cuba has been reduced by Spanish atrocity from a land of plenty to a howling wilderness; and the restoration of the island will fully tax all the resources of the Cuban people. It is too much to ask that they should pay one penny of principal or interest on the sums squandered by Spain in butchering Cubans and ravaging the island. The American press and the American public should now speak out boldly on these matters. There has been a great and a commendable desire throughout the country not to embarrass the administration, and accordingly many men have hesitated to exhibit the full strength of their opinion. But the time has come when it will help rather than hinder the administration to know the extent of that moral conviction and sentiment of the people of the United States that is ready to sustain it in the execution of its serious duty.

Will Hawaii The Cuban question had naturally overshadowed everything else at Washingby Joint Silaci Resolution? ton. But interest in the subject of Hawaiian annexation was revived by a change of tactics accomplished on March 16. The friends of the treaty had reluctantly come to the conclusion that the necessary two-thirds majority could not be secured in the Senate, and decided, therefore, to try a plan of annexing Hawaii in the mannerthat was employed for the annexation of Texas. Accordingly a joint resolution was introduced in the Senate by Senator Davis, of Minnesota, in pursuance of the method which had for some time been urged by Senator Morgan, of Alabama. If the resolution should pass both houses by a simple majority of those present and voting. President McKinley would of course sign it at once, and annexation would have become an accomplished fact. The process is not a novel one.

It seems probable that the requisite majority will be found in both houses. So far as we can judge, the Cuban question and the war preparations have not directly affected public opinion on the Hawaiian question. It is of course possible that President McKinley's well-known conviction that we ought not to sacrifice the present opportunity to secure Hawaii, may influence some votes in Congress at a time when there is manifest a very general purpose to uphold the President's hands in everything that has a bearing upon our foreign relations. The rejection of Hawaii would seem to us upon the whole a mistaken stroke of policy to be regretted not so much because of the intrinsic importance of our possessing Hawaii as because of the evidence such rejection would convev of shortsightedness as regards the future of this country. At least, the sugar question ought not to decide the fate of a measure so significant on other than economic grounds as the proposed absorption of Hawaii by the United States.

The strained relations between the United States and Spain have inter-Cuban Affair. ested the onlooking nations, but not profoundly. There is no other country in the world which in the past two months has not been too anxiously absorbed in its own affairs to give more than passing attention to the Cuban trouble. On this point our average newspaper reader is likely to be misintormed. No great power in Europe has the slightest intention of aiding Spain to keep her hold upon Cuba as against the United States. The Austrian court of necessity must keep up the appearance of sympathy for Spain, on account of the close family ties that unite the reigning houses of Spain and Austria. The French holders of Spanish bonds, moreover, have, of course, been able to secure the publication of pro-Spanish articles in some of the venal newspapers of Paris. But all this has not the slightest significance for the makers of our policy. Spain will have no allies as against the United States, and our country needs none as against Spain. It is naturally gratifying to the United States that the English newspapers are showing a better feeling than they have generally shown when the United States has had foreign questions on its hands. The plain English people are usually in sound sympathy with America; but the English press has been anti-American. more considerate tone of these English newspapers has been due—as they all admit without pretense of disguise—to the circumstance that England has serious complications on her own hands, and greatly desires the moral support of the United States, if she cannot indeed secure an out-and-out alliance.

The fact is that there has been more war feeling in England within the past six weeks than in the United States.

The American people, who have been on the very verge of war, have been perfectly "calm, cool, and collected." The English people, on the other hand, led by the press and many of their public

PLAIN ENGLISH.

JOHN BULL: "'Scuse me, M'soo. What are you doing on my ground?"

men, have been rather wildly sounding the alarm over a war with France on account of the West African dispute, although there has not been, in point of fact, more than a very remote possibility of serious trouble. It takes two to make a war. and the English have had the war scare all to themselves. For the French people have been quite preoccupied by the Zola trial and their home preparations for the great exposition of 1900, and have had no thought whatever of staking their national existence upon the question of a boundary line between alleged spheres of influence in an unexplored part of West Africa. Naturally the French, who have seen nearly all of the best regions of the outlying world gobbled up by their neighbor John Bull, are anxious to do as many good strokes of business for themselves as they can in northern and western Africa. And although the facts are hard to get at, it seems

likely that in playing the game of grab in Africa, the French have failed to play altogether scrupulously in accordance with the rules of the game as at one time arranged by the rival grabbers. But since there are neither French nor English colonists in the region under dispute, nor any vested interests, it is incredible that these two great civilized powers should fight over such a They might as well wage a bloody war over the question which power should attach its colors to the south pole. For some reason inexplicable to readers at this distance, Lord Salisbury's foreign policy has of late seemed to be gaining the approval of Liberals as well as Tories, although no statesman in the modern history of England has appeared so completely to "muss" every foreign question. In the middle of March it was announced that Lord Salisbury's health had become seriously impaired under the double strain of the Foreign Office and the prime ministership, and that while retaining his place as premier he had deputed to his nephew, Mr. Arthur Balfour, leader of the House of Commons, the duties of minister of foreign affairs. Mr. Balfour is a far more popular man than his distinguished uncle, and the change ought to be greatly for the advantage of England. The by-elections show steady Liberal gains; and it is Lord Salisbury's foreign and Indian policies that are causing the back swing of the party pendulum.

"Wheresoever the carcass is, there will the eagles be gathered together."—From Judy (London).

The French Foreign Office, instead France of taking seriously the West African situation, has seemed to be absorbed with the question of China. The success of Germany in obtaining a ninety-nine year tenure of Kaio-Chau from the Chinese Government, with full jurisdictional powers and various concessions for railroads and public works in the adjacent province, made it inevitable that other powers should demand equivalent priv-Thus, as explained last month, England at once made demands upon China for certain railroad concessions in the provinces adjoining Burmah, besides making a variety of other Whereupon Russia informed the Chinese Government that Port Arthur and that vicinity must be ceded to the Czar on terms as favorable as the Kaiser had obtained for Kaio-Chau, and threatened to march troops into Northern China (Manchuria) if the demands were not granted within five days. At China's earnest entreaty a little extension of time was allowed, in order that the Chinese minister at Berlin might go to St. Petersburg for a conference. But it is reported that the Czar's government is firm and that China must yield. The Russian demand was followed by a memorandum from France, setting forth certain privileges and concessions in the portions of China adjacent to Tonquin that France would regard as her reasonable equivalent for the concessions that had been obtained or asked by the other European powers. And these French demands were accompanied by a great activity in the French shippards and the report that France would make a naval demonstration of a very formidable character on the The rivalry among the European Chinese coast. powers for imperial extension and for commercial advantage was never so keen as at the present time, but on the other hand there is not one of the great powers that wants war or that intends to incur any serious risk of provoking a first-class The people and Government of the United States feel a friendly interest in China, and would be reluctant to see that ancient empire divided among the greedy European powers, while still more reluctant to be shut out from a fair share of the growing foreign commerce of Nevertheless, the United the Chinese sea-coast. States will not interfere directly or indirectly in the course of the great scramble on the other side of the Pacific.

Affairs election this month for a new Chamber of Deputies—which corresponds to our House of Representatives, the term being four years. At present France seems quite as tran-

quil as usual, and it is fairly probable that the republican supporters of President Faure and of the existing Meline ministry will carry the day When we went to press last triumphantly. month the trial of Zola was the great French topic, and the result had not then been reached. On February 23 a verdict was rendered against Zola, and the court sentenced him to a year's imprisonment and the payment of a fine of three thousand francs besides the costs of the trial. The broadly significant thing that our readers should bear in mind about this Zola affair is the marvelous unanimity of French public opinion in condemning the attempt to reopen the Dreyfus case. A brave individual here and there in France has risked his reputation, his business, and his social standing by protesting against the outrageous perversion of the principles of judicial fair play that the successive trials of Dreyfus, Esterhazy, and Zola have exhibited to an astonished world. But it must not be forgotten that the president of the republic, the prime minister and cabinet, the Senate, the Chamber of Deputies, and the judiciary, have stood firmly with the army and navy in demanding that the Dreyfus case should not be reopened, and that Zola should be punished for trying to force it open.

Unanimity
Against
Zola.

Since the Franco-Prussian war, the French republic has made the building up of its military strength the foremost object of all its policy. The agitation of the Dreyfus case has been believed at once to threaten the public confidence in the fidelity and efficiency of the military organization, and also to involve

M. LABORI, ZOLA'S ELOQUENT ADVOCATE.

certain serious embarrassments in the foreign relations of the country. The sole conclusion that an outsider may draw from the manner in which the army leaders conducted themselves in the court-room at the Zola trial is, that as respects matters vitally affecting the army the French Republic is under military rule, and the judiciary

Photo by Gutekunst, Philadelphia.

DR. THEODOR BARTH. (See next page.)

must conduct itself accordingly. Since this view is fully sustained by all the authorities and by most of the French people themselves, there would seem to be no basis for the idea that France may be somewhere near the verge of a revolution. We have lately witnessed in the United States the remarkable unanimity of feeling that results from the need of making the national defense the object and duty of the hour. The attitude of French public opinion toward the Drevfus affair and the Zola trial can only be understood when one knows that France has made these things a question of patriotism, and has thought them to be involved in the fundamental question of national defense. Zola's case was at once appealed to the court of cassation. The novelist's personal standing and reputation will have gained much, even in France, by the ordeal through which he has passed, while the brilliant advocate who defended him, M. Labori, has, in losing his case, gained at a leap the top round of professional standing.

The general election in Germany will not • German come so soon as the French election; but certainly within a few weeks the Reichstag will be dissolved and the new Parliament elected. There is every reason to believe that the popular vote of the Social Democrats will this year be greater than ever. Our readers are asked to note especially the valuable article we publish this month by Dr. Theodor Barth on Germany's present political problems. This is the third of the series on national policies and problems that we recently promised our readers, the first having been on Austria-Hungary and the second on Dr. Theodor Barth is one of the Great Britain. most distinguished members of the Reichstag, and is a leader of the Liberal party, differing, however, at many points from Richter, whose liberalism is less practical and statesmanlike than No other German is by any means so familiar with American politics as Dr. Theodor Barth, who has several times visited this country, and has made a very diligent study of our conditions. He was here during the last presidential campaign, and met many leaders of all parties. The discussion of the Emperor's policy for greatly increasing the German navy took a turn last month favorable to the government's programme, the success of which is now assured.

Twenty-five years ago the Supreme Justice Harlan Court of the United States upheld Rates. the Western legislatures in the socalled Granger laws, which undertook to regulate the rates charged by railroads. More recently the Federal judiciary has from time to time shown a disposition to modify the principle of State control by reserving to the courts the right to decide whether or not in any given case the State's action has been reasonable. This modifying principle has now been greatly elaborated by a decision prepared by Justice Harlan, of the Supreme Court, in a case appealed from Nebraska. Some years ago the Nebraska Legislature passed a so-called maximum-rate bill, under which great authority in the matter of fixing rates was conferred upon the State Board of The United States Circuit Transportation. Court decided that the actual exercise of this power in Nebraska, as shown by the facts produced by the railroads, was unreasonable and in the nature of a confiscation of property. junction was accordingly granted. The opinion of the Circuit Court has now been fully sustained by the tribunal of last resort. The subject is a difficult one, and it is not strange that there should be strong feeling on both sides. public men and journals in the West are denouncing Justice Harlan's decision, while the

financial journals of New York and the conservative press in general are upholding its doc-Under existing circumstances it is probbable that the courts have taken a sound and a necessary position. But surely it is not a position of stable equilibrium. For upon a moment's reflection it appears that the Federal courts have begun to take upon themselves not simply the question of deciding principles of law. but the practical business of regulating in detail from time to time all the rates of all the railroads of the United States. And under the same principle they must in like manner, undertake the regulation of the practical business of street-railroad plants, gas companies, and all other enterprises of a quasi-public nature. It has been fully established that all such enterprises are subject to the public regulation of their charges and to a general public control and oversight. The authorities of the States may reduce charges under this principle of public control: but the courts now say that such action, whether on the part of legislatures, of State railroad commissions, or of the Interstate Commerce Commission, is not to be deemed conclusive in itself, and that all questions of fact and expert opinion, as well as of law, are properly subject to judicial review.

There seems to be a fallacy somewhere in Western this position. It is certainly the business of the courts to say whether or not a law regulating railroad rates is valid and constitu-But it does not seem to be the proper business of a court of law virtually to make and apply the regulations in detail. The opinion of a judge as to what is reasonable in a matter of that kind is not likely to be as good as the opinion of an expert body like the Interstate Commerce The nature of the Western dis-Commission. sent from the doctrines laid down by Judge Harlan is well shown in the following letter, written to the editor of this Review on March 16 by a Western man of high intelligence:

I wonder if I am mistaken in regarding the recent decision of the Supreme Court, written by Judge Harlan, on the Nebraska maximum-rate law, as a more dangerous one than either the Dred Scott decision or that on the income tax?

The Dartmouth College decision attempted to take corporations out from under the police (regulative power of the State by construing franchises as contracts. This decision seems to me to rule that frauds like watering stock and extortions like excessive charges committed under those charters are also contracts.

The Austrian Government made reductions of rates in the adoption of the zone system on the state railroads of Hungary, with the result of an increase in traffic and in the economic and, therefore, social, and even spiritual, happiness of the people. Had these roads been owned by private corporations, and had there been on the bench a judge so ignorant of economic law as not to know that a reduction of rates may mean an increase of revenue, this great step forward could have been prevented.

When the State of Iowa passed laws reducing the railroad rates, it was frantically predicted by all the railroad experts that the result would be not merely a decrease of revenue, but the absolute ruin of the roads. Governor Larabee has shown that the roads

MAJOR-GENERAL MILES, COMMANDER-IN-CHIEF.

In favor of whom a bill was introduced last month to revive the rank of lieutenant-general.)

were made more prosperous by the reduction in rates. This is, indeed, in harmony with a law of railroad economy. Judge Harlan's decision would have prevented this reduction of rates and the benefits which have flowed from it to the people of Iowa and the corporations themselves.

But something more serious still remains to be considered. Under this decision of Judge Harlan's the public authorities can be prevented from regulating the charges of any gas company, street-railroad company, or any other corporation or person doing public service if it has a stockholder in another State, as, of course, all these corporations always do.

There is, then, absolutely no help for the people through the exercise of their reserved powers of regulation and the inslienable right of "police regulation." The corporations have only to place upon the bench a man who is fool enough or servile enough to believe anything a corporation lawyer says about the effect of legislation or ordinance on the revenues of his concern, to defy any interference with them whatever.

This decision applies not only, of course, to attempted regulation of rates, but to any other regulation which has a financial effect. When, in a government of coördinate departments, did a court get the right to say of the act of the Legislature that it was not "due process of law?"

The Supreme Court rules that corporations are persons under the meaning of the Fourteenth Amendment.

The corporations have now added to them what must be almost the last privilege they could hope for—that of having all the privileges of personality, but none of the responsibilities. They are persons in the eyes of our corporation-controlled courts who can have every possible privilege, but are never to be punished like ordinary persons.

The income-tax decision seems to me a trifle by the side of this. This is a Dred Scott decision which says that white men have no right that any corporation is bound to respect.

The above letter is not by any means printed as expressing our editorial views, but it well shows the nature of the criticisms that many Western men are urging against Judge Harlan's very able decision. There is room for a wide range of honest difference of opinion. In this connection we would call attention to Dr. Henry C. Adams' article in the April number of the Atlantic Monthly, reviewing ten years of the experience of the Interstate Commerce Commission.

Congress had been preparing for an un-Measures usually early adjournment. It remains Congress. to be seen what effect the Cuban situation may have upon the prolongation of the ses-The destruction of the Maine and the general emphasis given to defense preparation, made it easy for the committees of both houses to report unusually liberal plans for naval construction—the naval appropriation bill, of course, having no connection with the emergency expenditure of the administration from the fifty-million. dollar fund. Following the naval appropriation bill was a separate measure (for which Mr. Roosevelt, in his capacity as Assistant Secretary of the Navy, was chiefly responsible) for the more efficient organization of the personnel of the navy. There has long been an unfortunate controversy in naval circles over the position of the engineer officers. It is now proposed to merge the engineers with the regular line and place them in due order of promotion. The measure is one of importance on general principles and of urgency in view of the existing situation. Another very important measure before Congress was introduced by Representative Hull, in his capacity as chairman of the Committee on Naval Affairs. This bill provides for the rearrangement of the regiments of the regular army on the three-battalion plan that all other modern armies have adopted, and further provides a skeletonized structure which would make it a comparatively easy thing to increase the army in an emergency to more than one hundred thousand men under trained officers and without embarrassment to the organ-The prompt passage of this bill was deemed certain. A recent administration move has been the rearrangement of the military divis-

MAP OF REARRANGED MILITARY DEPARTMENTS, WITH HEADQUARTERS AND COMMANDING GENERALS.

ions of the country, with a shifting to some extent of the generals in command of the departments. A little outline map on this page shows the boundaries of the departments, together with the head-quarters in each and the name of the general in command. It is to be remarked that the President, Cabinet, and Congress feel entire confidence in the ability and worth of the officers both of the army and the navy. It is believed by those who are entitled to an opinion that no country has

BRIG.-GEN. H. C. MERRIAM.
(Department of the Columbia.)

better reason to be proud of its trained officers of both services than have we Americans.

The prospect of general legislation Little beyond the regular appropriation Legislation. bills and the measures having to do with the army and navy has not seemed encouraging. Each house has passed a bankruptcy bill, but there is much difference in the details of the two measures, and it is doubtful whether an agreement will be reached in the present session. Relatively, the Senate bill takes somewhat the point of view of the debtor, while the House bill is supposed to view the subject from the angle of The bill applying an educational the creditor. test to immigrants, which was vetoed by President Cleveland, seems now not likely to be made a law in the present session. Ultimately, perhaps, a stricter naturalization law may be substituted for the proposed sifting of immigrants. The time would seem very opportune for increasing the revenues of the Government. The crisis which has called for millions to be spent upon coast fortifications and naval enlargement points to the need of a full pocket-book.

The Revenue Question.

It would be a fortunate thing for the country if the emergency were taken advantage of to secure some simple additions to the revenue-producing features of the Dingley act—such, for instance, as an increase in the tax on beer, and perhaps a slight tax upon imports of tea and

coffee. Abundant funds in the treasury and an unstinted expenditure upon means of national defense might well turn the scale between war and peace. Nothing is so much to be desired as the right and just solution of the Cuban question without any clash of arms between the United States and Spain. Plenty of money to spend and a disposition to spend it freely and immediately may save us the trouble and necessity of a war; and it is to be remembered that a very small war would cost us, in money alone, a great deal more than we can possibly spend upon the preliminary preparations that may prevent war.

The trial of Sheriff Martin and his The Acquittal of the Lattimer deputies, who were indicted for the slaughter of a number of striking miners at Lattimer, Pa., last summer, has ended in the verdict of not guilty. Under the circumstances, it would have been manifestly impossible to convict this whole body of men, who were acting in the name of the law. Many of our readers will remember the comments made in these pages at the time of the unhappy occurrence. The evidence brought out at the trial made it necessary to consider that the sheriff and his improvised force believed it their duty to disperse the striking miners, who were proceeding from one town to another. When the sheriff, in the name of the law, ordered the strikers to disperse, it was their duty to obey, even though his conduct in ordering them to disband and go home may have been needlessly arbitrary. Since they did not obey, it was presumably the right of the sheriff to endeavor to compel them to disband. A dozen New York policemen, with billies, would

Copyright, 1897, by Aime Dupont, N. Y.

ADJT.-GEN. H. C. CORBIN.

(Appointed to succeed Gen. Samuel Breck, retired.)

have sent the mob scattering without inflicting any vital injuries. It still seems to us that Sheriff Martin's deputies behaved as if they were potting rabbits, and that the occasion did not in the least necessitate or justify the taking of human life. Nevertheless, it must be remembered that the whole body of deputies was put on trial for the slaughter of one man, and as no evidence was brought to show by whom in particular that one man was shot, no jury in Christendom would

MAJ.-GEN. JOHN R. BROOKE. (Department of the Lakes.)

BRIG.-GEN. WILLIAM M. GRAHAM.
(Department of the South.)

MAJ.-GEN. WESLEY MERRITT.
(Department of the East.)

have brought in a verdict of guilty. The preservation of order in this country frequently calls for the summoning of a sheriff's posse. And it will never do to paralyze the representatives of the law in the face of an angry mob. If some one in the mob is injured after the mob's refusal to heed the riot act, American judges and juries will not find an entire posse guilty of assault or murder. What seems to be necessary is a trained constabulary of some sort, analogous to our city police, to cope with difficulties that now have to be met either by a sheriff's posse or by the calling out of the local militia.

The most noteworthy action of the Public Affairs in New York Legislature last month Pennsylvania. was the adoption of an amendment to the constitution providing for biennial sessions. The voters of the State will probably set the seal of their approval upon this proposal. The plan to ask the people to vote a further grant of money for canal enlargement will probably be postponed until after Governor Black's commission of investigation has reported upon the expenditure of the initial nine million dollars. In view of our former suggestion that the Legislature rather than Governor Black should have appointed the commission, we must say with frankness that the names now announced are a sufficient guarantee that the inquiry will be thorough and unbiased. The remarkable "press-gag" bill that was pending at Albany has been indefinitely shelved, a result for which the credit is generally given to the There was a movement last month the dismissal of the excellent Rapid Transit Commission of New York City, in order that a political bipartisan board might take its place. The defeat of this bad scheme, it is also believed, was due to Governor Black's known determination to veto it. In Pennsylvania, the vigorous preliminary campaign of Mr. John Wanamaker for the Republican gubernatorial nomination was the leading political topic of last The plan to sell the Philadelphia waterworks to private speculators seems to have been defeated for the present by the sensational disclosure of wholesale attempts at bribery of the members of the two branches of the Municipal Through the rest of the present year the political situation in these two States of New York and Pennsylvania will be anything but dull.

London's Municipal Victory on March 3 resulted in decisive victory for the Progressives. This naturally seems to us a very important triumph for all friends of true progress everywhere. The policy of the Progressives in the London County Coun-

cil has always been that of men earnestly desirous of making the great city a fit place for its people to live in. They have sought to equalize taxes so that, the rich West-End parishes should help to pay for education and the support of the poor in the East London parishes, where the working masses live. The Progressives have stood for modern and humane ideas of every

PRINCE GEORGE OF GREECE.

sort. Their opponents in the recent struggle were identified with the Tories, who brought national politics into the local campaign. The great landlords, the private water companies, and various interests that for private and selfish reasons are opposed to administrative and taxation reforms, bore the brunt of the anti-Progressive campaign, and were splendidly defeated. The new London County Council contains a large number of men of eminence and of approved capacity for public affairs.

It was reported last month that the Czar, Russian on the urgent solicitation of the Sultan had agreed not to insist upon the payment out of the Greek indemnity of the money still due Russia on the indemnity that Turkey agreed to paytwenty years ago. This remission, of course, would not be made without an equivalent; and it was generally supposed that the Sultan's tardy acceptance of the candidacy of Prince George of Greece for the governorship of Crete represented the other side of the bargain. France and England have stood with Russia in favoring Prince George, and if the Sultan now accepts him the

German and Austrian governments cannot decently maintain their objections. Every one has learned, however, not to accept as final any report, however credible, about the administration of Crete. Russia continues to declare that her policy in China is an entirely pacific and commercial one, the principal point being the control of a suitable terminus for her Siberian railroad. And her premier has assured England, as also has the foreign minister of Germany, that no partition of China is in prospect nor any closing of China's ports to the general trade of all nations. Russia has no fighting plans on foot, and singularly enough England is the only place in Europe, apart from Spain and possibly Bulgaria, where the recent talk and feeling of the country, as reflected in the press, has been warlike.

The death of Miss Frances Willard was Death of announced last month as our pages were closing for the press. Her portrait was inserted on the page where the monthly obituary list is printed, but there was no opportunity for comment. If Miss Willard had lived until September of next year she would have been sixty years old. Her childhood and youth were spent in two well-known educational centers of the West, namely, Oberlin, Ohio, and Evanston, Ill. Hereducation was broad and thorough, and she was trained for the profession of a teacher, in which capacity for a number of years she served efficiently in different collegiate institutions for young women, until in 1868 she was chosen president of such an institution at Evanston. In 1874, on the organization of the National Woman's Christian Temperance Union, she became its corresponding secretary, and in 1879 she was elected president, which office she retained until her death. She was a woman of great versatility, an orator of the first order, and a reformer of world-wide influence. Miss Willard contributed an article upon the history and development of the World's Women's Christian Temperance Union to our issue for October last. She was an admirable writer and a journalist of rare tact, quickness, and force. It is needless to add that she had a genius for organization and public affairs. Her immediate successor at the head of the W. C. T. U. in this country had been designated in advance, and was ready to take up the work when Miss Willard laid it down. Mrs. Stevens' portrait appears on page 411.

The death of Gen. William S. Rosecrans obtained has removed another of the leaders of the civil war whose name was a household word throughout the country. He was almost eighty years of age, and had been a commis-

sioned officer in the army about twenty years before the outbreak of the great contest. Henry Bessemer and the Right Hon Sir James Stansfield are the most conspicuous English names in our obituary list this month. Henry Bessemer, more than any other man, was identified with the industrial revolution that has followed the cheapened production of steel. He has given his name to two towns in the United Sir James Stansfield was a Liberal politician and a distinguished reformer whose career was a most useful one to his country. The name of George Muller also occurs in the list; and it is sufficient to remind our readers that this Muller is none other than the famous philanthropist of Bristol, whose orphanages have been supported by voluntary contributions to the extent of millions of dollars, in response, as George Muller believed, to his faith and his prayers. He was in his ninety-third year. Mr. Frederick Tennyson, eldest brother of the eminent poet Alfred Tennyson, died late in February at the age of ninety-one. He was himself a poet of some ability.

THE LATE MAJ.-GEN. W. S. ROSECRANS.

# RECORD OF CURRENT EVENTS.

(From February 17 to March 20, 1898.)

# PROCEEDINGS IN CONGRESS.

February 17.—The Senate adopts the resolution of Mr. Turpie (Dem., Ind.) objecting to the terms of the Kansas Pacific sale....The House debates the bankruptcy bill.

February 18.—The Senate debates a resolution providing for a Congressional investigation of the Maine disaster....The House continues debate of the bankruptchill, and passes a resolution appropriating \$200,000 to recover bodies and save property from the Maine.

February 19.—The House, by a vote of 159 to 125, passes the Judiciary Committee's substitute for the Nelson (Senate) bankruptcy bill.

REAR ADMIRAL FREDERICK V. M'NAIR. (Commander of the North Atlantic squadron and a foremost fighting officer of our navy).

February 21.—The Senate instructs the Committee on Naval Affairs to investigate the *Maine* disaster and passes the House resolution appropriating \$200,000 for work on the wreck.

February 22-24.—The Senate, by a vote of 52 to 4, passes a bill providing for two additional regiments of artillery....The House considers the sundry civil appropriation bill.

February 25.—The Senate discusses Mr. Corbett's claim to the vacant seat in the Oregon representation ....The House in Committee of the Whole, by a vote of 118 to 16, decides that appropriations for river and harbor work shall be included in the sundry civil appropriation bill.

February 28.—The Senate, by a vote of 50 to 19, declares Henry W. Corbett (Rep.) not entitled to a seat as Senator from Oregon....The House passes the sundry civil appropriation bill.

March 1.—The Senate adopts a resolution providing for the erection in the national Capitol of a bronze tablet

to the memory of the *Maine* victims....The House begins consideration of the Loud bill amending the regulations for second-class mail matter.

March 2.—The Senate debates the Alaskan homestead and railroad bill....The House continues debate of the Loud postal bill.

March 3.—The Senate debates the Alaskan homestead bill....The House, by a vote of 162 to 119, lays on the table the Loud bill to amend the laws relating to second-class mail matter.

March 4.—The Senate passes the bill extending the homestead law to Alaska and providing for railroad right of way in that Territory, and asks a conference with the House....The House adopts final conference reports on the pension and diplomatic appropriation bills.

March 7.—The Senate considers the District of Columbia appropriation bill....The House passes the bill creating two new regiments of artillery, with but three dissenting votes.

March 8.—The Senate passes the District of Columbia appropriation bill with the House provision for lower telephone rates....The House passes a bill appropriating \$50,000,000 for national defense, after four hours of debate, by the unanimous vote of the 311 members present.

March 9.—The Senate passes the bill appropriating \$50,000,000 for national defense by a unanimous vote, without debate....The House agrees to the conference report on the legislative, executive, and judicial appropriation bill.

March 10.—The House defeats, by a vote of 99 to 136, the Senate amendment to the Indian appropriation bill reviving the free-homestead policy in relation to lands under the control of Congress.

March 11.—The House discusses payment of Southern war claims under the Bowman act.

March 14.—The Senate passes a bill providing for the construction of eight new revenue cutters....The House devotes most of the day to District of Columbia business.

March 15.—The Senate discusses the bill providing for a national quarantine system....The House begins debate on the post-office appropriation bill.

March 16.—Mr. Davis (Rep., Minn.) introduces a resolution in the Senate providing for the annexation of Hawaii.... The House debates the post-office appropriation bill.

March 17.—In the Senate Mr. Proctor (Rep., Vt.) makes a statement of what was seen by him in Cuba ....The House continues debate of the post-office appropriation bill, increasing the allowance for rural free delivery from \$150,000 to \$300,000 by a vote of 108 to 37.

March 18.—Consideration of the post-office appropriation bill is continued in the House.

March 19.—The House passes the post-office appropriation bill and the bill to admit war supplies free of duty.

# POLITICS AND GOVERNMENT-AMERICAN.

February 17.—A naval court of inquiry is appointed by Admiral Sicard to investigate the blowing up of the Maine.

February 22.—The New York Senate passes the constitutional amendment providing for biennial sessions of the Legislature.

February 23.—Postmaster-General Gary and Governor Ellerbe, of South Carolina, offer rewards for the arrest and conviction of the murderers of Baker, the negro postmaster at Lake City, S. C.

February 25.—President McKinley appoints Col. Henry C. Corbin adjutant-general of the army, to succeed Gen. Samuel Breck, retired.

March 1.—Local elections in New York State result in Democratic gains.

March 3.—The New York Assembly passes the constitutional amendment providing for biennial legislative sessions.

March 7.—The United States Supreme Court decides the Nebraska maximum freight rate law unconstitutional....The steam tug Dauntless is seized by the United States Government, charged with taking arms and men to Cuba.

March 8.—President McKinley nominates William J. Calhoun, of Illinois, for Interstate Commerce Commissioner....Governor Pingree, of Michigan, calls an extra session of the Legislature on March 22, to pass laws for uniform taxation.

March 9.—President McKinley signs the bill appropriating \$50,000,000 for national defense, and measures of preparation for war are vigorously pushed.

March 11.—The Secretary of War issues orders rearranging the military departments of the country..... The House Committee on Naval Affairs provides for three

THE LATE SIR HENRY BESSEMER.

new battleships to cost about \$6,000,000 each, one to be named the *Maine*.

March 14.—The Navy Department purchases two Brazilian cruisers just built in England....The special board on auxiliary cruisers appointed by the Navy Department begins the examination of merchant vessels at New York City.....Rhode Island Democrats nominate Daniel L. Church for governor.

March 15.—The New York Board of Education chooses Dr. William H. Maxwell city superintendent of schools, President Draper, of the University of Illinois, having declined the position....The House Committee on Naval Affairs makes provision for the construction of five new dry-docks.

March 16.—Rhode Island Republicans renominate Gov. Elisha Dyer....Georgia Populists nominate Thos. E. Watson for governor....John Wanamaker opens his campaign for the governorship of Pennsylvania.... The House Committee on Naval Affairs decides to provide for six torpedo-boats and six torpedo-boat destroyers, in addition to the three battleships previously decided on; also to the erection of a smokeless-powder factory.

March 17.—Governor Black, of New York, appoints a commission of seven men to investigate the canal contracts....The battleships Massachusetts and Texas are detached from the fleet at Key West and ordered to Hampton Roads.

# POLITICS AND GOVERNMENT-FOREIGN.

February 17.—The House of Commons discusses British interests in Alaska.

February 20.—The Swiss referendum results in popular approval of the proposed purchase of railroads by the federal government (see page 443).

February 21.—The Irish local government bill is introduced in the British House of Commons.

February 23.—At Paris M. Zola is found guilty of libeling the Esterhazy court-martial and sentenced to one year's imprisonment and a fine of 8,000 francs, the maximum penalty.

February 24.—The French Chamber of Deputies debates the Dreyfus agitation and the Zola trial and passes an overwhelming vote of confidence in the government.

February 25.—The army estimates introduced in the British House of Commons call for an increase of 21,700 men.

February 26.—An unsuccessful attempt is made to assassinate King George of Greece....The Spanish Cortes is dissolved, after voting 1,000,000 pesetas for the navy....German members leave the Bohemian Diet.

March 2.—Senhor Campos Salles is elected President of Brazil, and Senhor Rosa E. Silva, of Pernambuco, Vice-President....The Spanish Government makes a reduction in the grain duties....The Bohemian Diet is closed by an imperial order.

March 3.—In the London County Council elections the Progressives (Liberals) secured 68 seats and the Moderates (Unionists) 48.

March 5.—The Austrian cabinet, headed by Baron von Gautsch, resigns, and Emperor Francis Joseph intrusts to Count von Thun Hohenstein the duty of forming a new ministry....Nineteen persons are arrested in Havana charged with conspiracy against the Spanish Government.

March 7.—Count von Thun Hohenstein succeeds in forming a new Austrian cabinet....The Swedish and Norwegian committees on the Scandinavian union submit their reports to the Parliaments....The cabinet of Corea resigns because of the granting of the Deer Island concession to Russia.

March 10.—The naval estimates introduced in the British House of Commons call for an appropriation of nearly \$120,000,000.

March 16.— France mobilizes her fleet for a naval demonstration in the far East.

March 17.—The Budget Committee of the German Reichstag passes the second reading of the naval bill....The Spanish torpedo fleet at the Canaries is ordered not to proceed to Havana.

# INTERNATIONAL RELATIONS.

February 18.—In the French Chamber of Deputies a protest is entered against the importation of Amerrican horses.... The Russian Gov-

WILLIAM H. MAXWELL.

(For eight years superintendent of the Brooklyn schools and recently chosen general superintendent of the schools of Greater New York.)

ernment appoints Count Cassini to be Ambassador to the United States, instead of minister.

February 19.—The request of Spanish officials in Havana for a joint investigation of the wreck of the Maine is declined by the United States.

February 22.—France disclaims all intention of usurping British territory in Africa.

February 24.—Russia's pledge to Great Britain to keep the ports of China free is quoted in the British Parliament.

February 28.—Haiti pays a claim of Italy for illegal seizure and sale of a vessel and cargo belonging to an Italian merchant.

March 1.—The troops of Costa Rica are ordered to the Nicaraguan frontier, and war is threatened.

March 4.—Japan demands of Russia "an immediate and explicit statement" regarding the occupation of Port Arthur.

March 5.—Bulgaria demands of the Turkish Government an explanation of the movements of Turkish troops toward the Bulgarian frontier.

March 7.—China consents to lease Port Arthur and Talien-Wan to Russia for 99 years.

March 8.—The British Minister to China protests unsuccessfully against the cession of Port Arthur to Russia, on the ground that it will destroy the balance of power in China....Russia consents to open Port Arthur and Talien-Wan to foreign trade under Russian laws.

March 12.—Señor Polo y Bernabé, the new Spanish Minister to the United States, presents his credentials to President McKinley....The Russian officials and military instructors in Corea are dismissed by the government.

March 16.—Spain remonstrates against the presence of the United States fleet at Key West and against other measures of defense taken by this Government.

March 18.—The Spanish and Cuban commissioners to negotiate a commercial treaty with the United States meet in Washington.

# INDUSTRIAL, COMMERCIAL, AND FINANCIAL DOINGS.

February 19.—'The Knickerbocker Telephone Company is incorporated, with a capital of \$7,500,000, to operate in New York and New Jersey.

February 28.—Contracts for the Anglo-German loan to China are signed at Peking; the interest is fixed at 4½ per cent., redeemable in forty-five years; the contract price is 83....United States Treasury operations for February result in a surplus.

March 7.—The great cotton mills at Biddeford, Maine, resume work, the strike having been declared off.

March 10.—The Society of Separatists, at Zoar, Ohio, decides to disband, after more than fifty years of communistic life; the property of the community is estimated at \$3,000,000.

March 11.—The Bank of France raises the premium on gold, and buyers for New York transfer their operations to London.

March 14.—The strike in the cotton-mills at Taunton, Mass., comes to an end; resumption of work gives employment to 1,100 operatives.

#### OTHER OCCURRENCES OF THE MONTH.

Photo by Gutekunst.

THE LATE WILLIAM M. SINGERLY.
(Proprietor of the Philadelphia
Record.)

February 22. -President McKinley delivers an address at the University of Pennsylvania.... A mob sets fire to he house of F. C. Baker, negro postmaster at Lake City, S. C., kills Baker and an infant child, and seriously wounds Baker's wife and two daughters.

February 25.— The Spanish cruiser Vizcaya leaves New York harbor for Havana.

February 27.—A large shipment of reindeer arrives in New York from

Lapland, bound for Alaska....The disabled French Line steamer La Champagne, Havre to New York, is towed into Halifax.

March 1.—A hurricane at New Caledonia sinks a French gunboat....The twentieth anniversary of the coronation of Pope Leo XIII. is celebrated in Rome.

March 3.—The University of Budapest confers the degree of Doctor of Letters on "Carmen Sylva," Queen of Roumania.

March 4.—The jubilee anniversary of the Italian constitution is celebrated throughout Italy.

March 5.—More than 20 men are burned to death in a coal mine at Breslau, Prussia.

March 7.—It is announced that New York City property to the value of \$1.100,000 has been deeded to

MRS. L. M. N. STEVENS.

(Who succeeds Miss Willard as president of the W. C. T. U.)

Columbia University by Joseph F. Loubat for a library endowment fund.

March 9.—Sheriff Martin and his deputies are acquitted of the murder of the strikers at Lattimer, Pa.

March 16.—A fire in Chicago causes the loss of more than a dozen lives.

March 18.—An explosion in a mine at Belmez, Province of Cordova, Spain, causes heavy loss of life; 75 men are known to have been killed and many others are unaccounted for.

March 19.—An earthquake is reported to have destroyed the town of Amboyna, in the Spice Islands, with the loss of about 60 lives.

#### OBITUARY.

February 17.—Rt. Hon. Sir James Stansfeld, twice president of the English Local Government Board, 77.

February 18.—Miss Frances E. Willard, president of the World's W. C. T. U., 58.

February 19.—Prof. Alexandre von Liezenmayer, German historical painter, 59....Rev. Dr. Joseph H. Knowles, late general secretary of the American Sabbath Union, 68.

February 21. — Newbold H. Trotter, a well-known American animal painter, 70....Amos R. Eno, a wellknown New York City real-estate owner, 88.

February 22.—John Mulligan, president of the Connecticut River Railroad, 78....Rev. Dr. Thomas R. Howlett, Baptist preacher and author, 71.

February 23.—Tai Wen Kun, father of the King of

February 24.—James Vincent Cleary, Archbishop of the Roman Catholic Diocese of Kingston, Ont., 70.... Ex-Judge Elliott Anthony, of Chicago, one of the best-known jurists of the West, 70....Mgr. Sergius, Metropolitan of Moscow.

February 26.—Frederick Tennyson, eldest brother of Lord Alfred Tennyson, 91.

February 27.—William M. Singerly, Philadelphia journalist and financier, 65....Gen. William Booth Taliaferro, of Virginia, Confederate veteran, 75.

February 28.—Col. J. Thomas Scharf, historical writer, 55....Col. Matthew C. Galloway, founder of the Memphis Avalanche, 78.

March 1.—Prof. William Augustus Rogers, of Colby University, an astronomer of national reputation, 66.

March 3.—Judge Charles E. Vanderburgh, of Minneapolis, ex-Justice of the Minnesota Supreme Court, 68.

March 5.—Judge John Newton Hendren, last treasurer of the Southern Confederacy, 75.

March 6.—Ex-Congressman Hugh J. Jewett, railroad financier and manager, 81.

March 10.—George Müller, philanthropist, 92.

March 11.—Gen. William S. Rosecrans, 78....Ex-Gov. Peter Hansbrough Bell, of Texas.

March 13.—Sir Richard Quain, physician extraordinary to Queen Victoria, 81....Zacharie Topelius, Swedish poet and historian, 80.

March 14.—Sir Henry Bessemer, inventor of Bessemer steel, 85.

March 16.—Jacob Tome, philanthropist, founder of the institute which bears his name in Port Deposit, Md., 87....Thomas McKean, a Philadelphia philanthropist, 56....Aubrey Beardsley, well-known English draughtsman and writer, 24.

March 17.—Rt. Hon. John Thomas Ball, formerly Lord Chancellor of Ireland, 83....Blanche K. Bruce, Register of the United States Treasury, formerly United States Senator from Mississippi, 57.

March 18.—Mrs. Matilda Joslyn Gage, prominent woman-suffrage advocate, 72....Solomon Claypool, a well-known Indiana lawyer, 68.

March 19.—Admiral Popoff, aid-de-camp of the Russian Czar.

# THE HISPANO-AMERICAN CRISIS IN CARICATURE.

UNCLE SAM IS READY.—From Leslie's Weekly.

THE GUILTY SHALL NOT ESCAPE.-From Leslie's Weekly.

HE American cartoonists this past month have devoted themselves almost exclusively to various phases of the one overshadowing topic; and we have chosen to confine our department of caricature to drawings that have a bearing upon the crisis in the relations between Spain and the United States, brought about through conditions in Cuba and the destruction of the battleship Maine. Most of these cartoons are so easy of interpretation that they require no comment. We have opened the department with two striking reproductions from full-page drawings that have appeared in Leslie's Weekly, both of them decidedly indicative of trouble. In the one Uncle Sam tests the whetted edge of his sword, and in the other he lays a firm hand upon a miscreant intended to typify the destroyer of

the Maine. Our Mexican contemporary, El Hijo del Ahutzotc, has published a number of striking cartoons on the situation, four of which we reproduce. The one at the bottom of this page represents the prospect of a

THE YANKEE-GACHUPIN ANTAGONISM, APROPOS OF THE DESTRUCTION OF THE "MAINE."

From El Hijo del Ahuizote (Mexico).

collision, both by land and sea, between the "Yankees' and the "Gachupins," which is the favorite Mexican title for the Spaniards. The five cartoons on the next page are from various sources. The Minneapolis Jour-

nal artist contributes two, one expressive of the unanimity of the parties at Washington in support of the President, the other in commendation of the shipment of relief supplies to Cuba. Another, from El Hijo del Ahuizote, of Mexico, represents Uncle Sam and Sagasta at the world's barcain counters buying ships. Sagasta is supposed to have made his purchases, whereupon Uncle Sam in turn begins to buy. Mr. Nelan's cartoon, from the New York Herald, evidently relates to Uncle Sam's initial purchase of two cruisers building in England for Brazil.

THE RIVALS AT THE BARGAIN COUNTERS .- From El Ahuizote (Mexico).

A HARD RACE AGAINST TIME.—From the Herald (New York)

"PEACE, BY JINGO, IF I HAVE TO FIGHT FOR IT."
From the World (New York).

Mr. Bush, of the New York World, has distinguished himself since the Hispano-American crisis reached an acute stage by the strength of his numerous cartoons dealing with successive phases of the situation, and particularly by the directness with which he has illustrated and enforced the fundamental issue. The four cartoons on this page all bear cumulatively, as have many others by the same artist, upon the one point of the relation of the United States to the emancipation of Cuba. Mr. Bush does not allow himself to be

UNCLE SAM: "Enough of this—get off."
From the World (New York).

diverted from the essential question by any details of a minor nature. No matter by what agency the Maine was destroyed, whether crime or accident, the attitude of the United States toward the question of Cuban liberty is the one thing that Mr. Bush has kept in mind. No proof that the Maine was blown up by purely accidental means, and no indemnity, however great, from Spain, if complicity were proven, could, in Mr. Bush's opinion lessen the urgency of the duty of the United States to rescue Cuba and expel the Spaniards.

"YOU'VE EARNED YOUR INDEPENDENCE." From the World (New York).

"PEACE-BUT QUIT THAT." From the World (New York).

According to Mr. Nelan's cartoon from the New York Herald, reproduced on this page, Uncle Sam, with his fifty-million-dollar credit in his pocket, steps out into the market as a cash customer-whereupon all the nations rush forward with ships, guns, and ammunition to sell. The supply has not been quite so ample as was at first expected; although doubtless if Uncle Sam had been willing to buy "any old thing" at any sort of price, there would have been no lack of owners eager to sell. Uncle Sam's great-

PREPARING FOR WAR .- From the El Ahuizote (Mexico).

est activity, after all, has been not in foreign shipyards and gun foundries, but in his own great national workshop. And the comic artist of El Ahuizote has caught the spirit of the situation in his drawing on this page, which represents the United States as industriously sawing wood. Segasta, as representing Spain, is similarly engaged, but with a very old-fashioned tool. The Minneapolis Journal's cartoonist takes a somewhat cynical view of the British suggestions of an Anglo-American alliance, in view of existing international complications. Expressions of English good will are altogether pleasant and welcome. All that Uncle Sam asks, however, is that European powers observe neutrality. He naturally expects that the American republics will remember their own history, and do nothing detrimental to the cause of a free Cuba.

A CASH CUSTOMER WITH MONEY TO BURN. From the *Herald* (New York.)

THE BROKEN CHAIN.-From the World (New York).

GREAT HEAD, JOHN BULL!

J. BULL: "Hi, there, Brother Jonathan! Hi'll 'elp you lick yer man, hand you 'elp me wallop these saucy cusses on the hother side the fence. We can lick the whole bloomin' houtfit, me 'earty, don't cher know!"—From the Journal (Minneapolis).

UNCLE SAM: "I have fifty millions in my inside pocket."—
From the World (New York).

Mr. Bush's drawing on this page, in which the Spaniard is represented with his guitar, reminds us of the fact that the pleasure-loving people of the Iberian peninsula were last month immensely absorbed in the frivolities of the carnival season, as shown by the illustrated press of Madrid. The Spaniards have been spending money on festivities at home, while the people of the United States have been contributing charity for the relief of Spain's starving subjects in Cuba. The best cartoon of the month, on the whole, is the one on this page from El Ahuizote, which represents the American eagle in the process of hatching out two new

AN INCUBATION OF THE AMERICAN EAGLE.
From El Hijo del Ahuizote (Mexico).

republics. The artist evidently believes that the logical consequence of the establishment of an independent Cuban republic will be a successful republican revolution in Spain. The Denver Post very cleverly depicts the unanimity of the vote in Congress on the fifty-million-dollar national defense bill. It strikes us as one of the most effective pieces of newspaper caricature that the month has produced. As we close this number of the REVIEW for the press, Uncle Sam is still holding in leash the dogs of war; and it is sincerely to be hoped that justice and humanity may triumph without their dreadful participation.

UNCLE SAM: "I'll not slip these dogs of war."—From the World (New York).

## POLITICAL GERMANY.

#### BY THEODOR BARTH.

(Member of the German Reichstag.)

EMPEROR WILLIAM II.

T is remarkable how little one nation enters into or understands the political conceptions and feelings of another, notwithstanding the universal habit of travel. James Bryce's (the Scotchman's) masterly analysis of the political institutions of the United States was like a new discovery in the political field. Even members of Parliament professionally occupied with politics are often very imperfectly acquainted with the political development of other nations, and this fact more than any other perhaps accounts for the petty illfeeling and friction frequently shown in international dealings. A temporary sojourn beyond the boundaries of one's own country as evidence of having had an opportunity of losing some of one's national prejudices, would be a very good condition to lay down for all candidates for parliamentary service in constitutionally governed countries.

We Germans used to have the reputation for cosmopolitanism; we were even credited with the gift of interesting ourselves more in the circumstances and events of other countries than in those of our own. Those days have gone by,

and Germans of to-day know as little about foreigners as foreigners know about them. instance, notwithstanding the many links which trade, commerce, and racial affinities have wrought between the two countries, very imperfect and frequently misleading views prevail in Germany as to the United States. During frequent visits to the United States I have oftener met with an intelligent appreciation of German affairs in America than of: American affairs at home; although occasionally, even in the best-educated circles in America, I have come across some most striking prejudices and mistaken readings of German events. These are shown especially when the conversation turns upon such subjects as the German Emperor or the Social Democrats. The latter are supposed, not only in the United States, but also in other European countries, to be a dangerously revolutionary party, and the German Emperor is conceived to be an absolute monarch who presides over the political weal and woe of the German nation in the most unrestricted style.

#### THE GERMAN EMPEROR.

It is an unfortunate circumstance that people outside Germany judge of the Emperor Wilhelm II. principally by his speeches. The gift of eloquence coupled with a lively temperament easily leads a man to exaggerate, and these outbursts attract all the more attention from the fact that most crowned heads of great countries habitually express themselves with a certain amount of self-restraint. The oratorical points in imperial speeches which have often offended public opinion have sounded much worse than they really were after having gone the round of the world's press disassociated from the particular circumstances under which they were first uttered. Last, not least, the many trials for lese-majesté which have arisen out of the critical interpretations of the imperial speeches have contributed to heighten the false impression as to their significance. Other nations overlook the fact that oratory is not government, and that talking and doing are two very different things. A living statesman, a man of insight, is credited with the following remark upon the Emperor's speeches: "His speeches do not make German politics—they ac-

PRINCE HOHENLOHE, (The present chancellor.)

company them." And this utterance really characterizes the degree of importance to be attached to them.

Of course, in a certain sense, the oratorical exuberance of an emperor has political effects, only they should not be over-estimated. At any rate, the sentence the Emperor Wilhelm II. inscribed in the golden book of Munich, "Suprema lex regis voluntas," lacks foundation both in the constitution and in fact. That sentence does not even hold good in the case of the old Prussian feudal aristocracy (Junkerthum). This class, although numerously represented in the army and in the civil administration, as well as at the court, nevertheless made war upon the commercial treaties, measures specially designated in an imperial speech as a "saving deed." The old Prussian feudal aristocracy was banded together against the imperial chancellor, whose services in the matter of these treaties were conspicuously rewarded by making him a count. A regular fronde had broken out, and the Emperor had not only to endure this violent opposition, but even to forgive it. Imperial utterances especially directed against the Social Democrats have neither changed the course of legislation nor have they altered the attitude of the party. Its members have been publicly denounced by the Emperor as "a rabble," as "unworthy of the name of Germans," as "denationalized enemies of the divine order," as "a gang of traitors." The press took cognizance of these epithets with sarcastic accuracy, but after all had been said and written the matter was laid aside and had no visible political consequences. So little has the Social Democratic party been influenced in its development by imperial utterances that it does not even show an increase of imbittered feeling. It has never been less socialistic, less inclined to extreme radicalism than at the present moment. Its political history is altogether extremely interesting.

#### THE SOCIAL DEMOCRATIC PARTY.

For twelve years—from 1878 to 1890—this party stood under the bann of an exceptional law which was hurried through Parliament by Prince Bismarck's skillful use of the panic produced by two successive attempts on the life of the old Emperor Wilhelm I. by Hödel and Nobiling. These crimes were assumed on very insufficient evidence to have emanated from the Social Democratic party. To heighten the educational effect of this restrictive measure the workmen were to be lured by the bait of a compulsory insurance. It was hoped that the combined effect of these two measures would be the dissolution of the Social Democratic party, but these Bismarckian tactics produced merely negative results.

In the general parliamentary election of 1877, immediately preceding the Coercion law, the Social Democrats obtained 493,000 votes under universal suffrage; in 1887 they had 763,000; in 1890 the number rose to 1,427,000. Then the repeal of the Coercion law took place, but the votes rose to 1,786,000 in 1893. In a few months we shall be in the midst of another general election, and it is not impossible that the Social Democrats may obtain more than 2,000,000 votes. Of all the political parties in Germany, Social Democracy has the largest following. Although they have only 48 out of 397 seats in the present imperial Parliament, the Reichstag, yet nearly 24 per cent. of the total number of votes given in the general election of 1893 fell to their share. When alongside of the steadily increasing number of votes we take their party programme to hand and learn that they openly profess collectivism and republicanism, the outlook seems dangerous in the extreme to capital and monarchy. But party programmes resemble ceremonial speeches: "they do not make politics-they only accompany them." Neither the dogma of collectivism nor a confession of faith in the republican form of government need be seriously taken into account in practical politics. The Social Democratic party has gradually lost its revolutionary character and is settling down into a party of radical reform.

The leaders of the Social Democratic party

have repeatedly protested against the assumption that they wanted violently to overthrow existing society. This winter the septuagenarian socialistic leader Liebknecht, who has been undergoing imprisonment consequent upon an absurd trial for lese-majesté, wrote in the Cosmopolis repudiating the notion that Social Democracy can be served by the overthrow of the ruling social organiza-According to the optimists of this party, tion. Social Democracy can only gradually take the place of the present capitalist state, and the prochandel), I, who am supposed to be of the extreme Manchester school, and a Social Democrat, Dr. Schönbank, were the leaders of the opposition. But even distinctively socialistic measures involving a large increase of power in the hands of the state meet, as a rule, with the most determined opposition on the part of the Social Democrats; as, for instance, the landowners' endeavor to turn the Reichsbank into a pure state institution. The opportunist consideration that it is desirable to resist any increase of power in the hands of

August Bebel.

Wilhelm Liebknecht. THE TWO CHIEF LEADERS OF THE SOCIAL DEMOCRATIC PARTY.

ess will be one of slow growth, into which as yet undreamed-of factors will enter.

To sum up, Social Democracy is revolutionary only in its aims, not in its methods, and the latter are the determining circumstances in practical politics. A foreigner unacquainted with the position of parties in our German Parliament would, on entering, be quite at a loss to recognize that the present members of the Social Democratic party have a programme diametrically opposed in principles to that of the Liberal opposition. With the Liberals they vote against raising taxation on the first necessaries of existence, especially on breadstuffs; with them they steadily vote against bimetallism, and on isolated questions they sometimes vote with the Liberal party in the teeth of the principles of their own programme. Thus two years ago, when the absurd Exchange bill (Borsengesetz) was before the house and the landowners carried through the measure forbidding the corn trade in futures (Getreideterminthe present government and other enemies of Social Democracy outweighs, in their eyes, any advantages to be gained by the homage paid to socialistic principles.

In the face of these facts indicating the position of the Social Democratic party, it is ridiculous to attempt to represent it as an organization highly dangerous to the state; but the reactionary parties are nevertheless never tired of making this attempt, in the hope of deterring that hated party from gaining a yet wider influence among the masses.

The reactionary parties reason thus, and not without foundation. The more this radical party, with its compact body of supporters among the industrial classes, loses its distinctively revolutionary features, the more will it act as a magnet in attracting political malcontents generally. This is what takes place as a matter of fact to-day. The greater number of voters for the Social Democratic candidates do not trouble themselves

about the socialistic programme, but they wish to express their feeling of political discontent with things as they exist by voting for the most violent opposition. This vague radicalism, with its tendency to ignore what is practically attainable, has done much to weaken the cause of liberalism. Herein lies a great danger for the political development of Germany.

#### THE LIBERALS.

Liberalism is in reality the political foundation upon which the modern German empire was The Liberals were the exponents of the national aspiration after unity, and when the German empire became a fact, Prince Bismarck had to make use of liberal political ideas to fit up the edifice internally. The whole course of legislation from 1866 to 1876, and especially all economic legislation during that period, bore the stamp of liberal principles. Industrial freedom, the unshackling of the press, the adoption of the gold standard, our system of banking, the unrestricted freedom to move about—in short, the enormous mass of legislation accomplished during that time was more or less a concrete embodiment of the liberal conception of all social organization and functions. The conservative spirit was too sterile to put forth such creative energy.

Prince Bismarck, then, in the plenitude of strength as a statesman, understood all this perfectly. Although by birth a Prussian "Junker," he made use of liberal ideas, because he knew they were the sole material available for the purpose of constructing the internal fittings of the German empire. Later on—toward the end of the 70s—when the Liberals claimed a share in the government, they became a nuisance to him, and turning round to his old political friends, he made a compact with them to govern in opposition to the Liberal party. He succeeded in disuniting the Liberals, and the Social Democratic party increased at their expense, while moderate liberalism waned.

As a matter of fact, the Liberals became weaker and more divided than they ever were. The three sections of decided Liberals—the South German People's party (Süddeutsche Volkspartei), the German People's party (Deutschfreisinnige Volkspartei), and the Liberal Union (Freisinnige Vereinigung)—do not number together more than the Social Democrats alone. The National Liberals amount to almost as many, but they are subjected more and more to the agrarians; and their distinguished leaders, such as Rudolf von Bennigsen, with a glorious past behind him, are retiring from political life.

Considering the position of all the various sec-

tions of the German Liberal party at the present moment, as well as their history, it would seem a move dictated by the instinct of self-preservation to weld all the small fractions into one large Liberal Union, which should make its weight felt both in Parliament and during election-time in a very different manner from the present feeble efforts of Liberal fractions. Nor are indications wanting among the mass of the voting population that such a move would meet with decided support. Unfortunately personal rivalries among the lead. ers of the Liberal sections still hinder all efforts at union, and the most decided opponent of such a welding together of Liberals is to be found in Eugen Richter, the leader of the section called the "Deutschfreisinnige Volkspartei." He is undoubtedly a most skillful debater, but he is an

EUGEN RICHTER.
(Leader of the Freisinnige Volkspartei.)

exceptionally short-sighted politician. Were our parliamentary circumstances at all analogous to those of Great Britain, or even of France, Eugen Richter would have had a seat in the cabinet half a dozen times over. As matters stand with us he has carried on a niggling policy of opposition for thirty years and has become a one-sided, narrow-minded statesman incapable of taking broad views of any political question having bearings beyond the narrow limits of his fraction of a party.

THE ULTRAMONTANES.

The Center party (Ultramontanes) musters about 100 members, and as the strongest party numerically in the present Parliament, the presi-

dent, Freiherr von Buol-Berenberg, is elected from their midst. And yet this party is born to be a minority. They never can increase their numbers, owing to the fact that they are a Roman Catholic party with strictly dogmatic limitations.

RUDOLF VON BENNIGSEN.
(Leader of the National Liberal party.)

As the Roman Catholics are a minor section in the German empire, they never can hope to command a majority in Parliament. The Center party is a product of the "Kulturkampf," of Bismarck's attempt to break the papal influence in Germany by laws against the Catholic Church, just as the Social Democratic party is a product of the Coercion law against socialism. Both these parties have flourished under persecution, and the remembrance of that fight and persecution still holds the democratic and aristocratic elements within the Center party together. It is a strange group; on constitutional questions it votes as a rule with the Left, on economic questions with the Right. Again and again the dissolution of this party has been prophesied, but the law of inertia exerts its influence over the warring elements within its boundaries.

#### THE CCNSERVATIVES.

Finally we come to the Conservatives in Parliament, who are also divided into two sections

and together number about 90 members. bulk of these are recruited from the ranks of the old Prussian landed aristocracy (Junkerthum), and a small remainder, the Independent Conservatives, represent the less reactionary members of the party. The latter depend upon large manufacturers for support, and their bestknown members are Krupp and Freiherr von While Krupp takes no prominent part in parliamentary life, von Stumm is an energetic debater, his specialty being to fight the Social Democrats, whom he would willingly hand over to destruction by fire and sword. As this gentleman enjoys the personal favor of his sovereign, his influence outside Parliament cannot be overlooked.

Count von Kanitz is the most prominent figure of the section of extreme Conservatives. He is well known through his famous proposal to monopolize the grain imports of the country, in order to grant a fixed prize to the home producer of 165 marks per ton on rye and 215 marks on wheat.

Besides the above, there are several smaller parties, such as Poles, Alsace-Lorraine deputies, Guelphs, and Antisemitic members. One consequence of this motley crowd of parties is that there never is anything like a permanent majority in Parliament, and each question brought before the house causes a fresh kaleidoscopic grouping of parties. Nothing like coherent lines of policy can be followed under these circumstances, and ministers of the crown are in great uncertainty, almost in each important case, as to which group of parties will support them.

#### THE THREE CHANCELLORS.

Prince Bismarck frequently sought to obtain his majorities in Parliament by violent means. He threatened and bullied the separate fractions into compliance. His successor, Count Caprivi, politically as well as personally a gentleman, uniting in his person the highest qualities of a Prussian officer and official, obtained all his parliamentary success by his impersonal treatment of political questions under consideration. conspicuous occasions—on the Military Short Service bill and on the commercial treaty with Russia—he obtained his parliamentary majorities, in the teeth of the most determined opposition, solely by the innate force of calm argument and the tenor of reasonableness in his policy generally.

The present chancellor of the empire, Prince Hohenlohe-Schillingsfürst, has yet another method to attain his ends. He is a decided opponent of Prince Bismarck's method of treating Parliament with offensive brusqueness; neither

COUNT CAPRIVI.
(Successor of Bismarck.)

has he the soldierly straightforwardness of Count He adopts a third plan and steers close to the wind; in other words, he takes a long round to avoid every possible collision. Prince Hohenlohe is a clever and experienced statesman of seventy-nine, an unbiased nobleman, liberal at heart, but not the man to take the initiative. Curiously enough, he never addresses the house. His parliamentary activity is restricted to the occasional reading of explanatory notes on behalf of the government. This very limited parliamentary activity of the insignificant, bent little gentleman stands out in marked contrast to the powerful interference of Prince Bismarck and the penetrative argument of Count Caprivi-two men whose appearance alone commanded atten-Yet it cannot be said that Prince Hohenlohe's limited parliamentary activity has injured his prestige as a statesman, a circumstance showing how much more important are facts than eloquence, even in Parliament.

#### THE SECRETARIES OF STATE.

The secretaries of state by whom Prince Hohenlohe is surrounded are more or less skillful men. Five of the six secretaries entered office during the last twelve months. The home secre-

tary, Count von Posadowsky, took the place of Herr von Bötticher; Bernhard v. Bülow. secretary of the Foreign Office and formerly ambassador at Rome, took the place of Freiherr von Marschall, the present ambassador at Constantinople; the naval secretary, Rear Admiral Tirpitz, the place of Vice-Admiral Hollmann; Chancellor of the Exchequer Freiherr v. Thielmann, formerly ambassador at Washington, the place of Count v. Posadowsky; and von Podbielsky, formerly a general of the hussars, the place of Postmaster-General von Stephan, lately dead. Of all these secretaries of state, two are of special interest to foreigners—the head of the Foreign Office and of the Admiralty.

#### GERMANY AND CHINA.

Herr von Bülow's entry into office occurred at a moment likely to secure for him a certain amount of popularity, owing to the occurrence of events in the far east of Asia which led to the acquisition of Kaio-Chau by Germany. The German nation shows a strong power of expansion, and its rapid industrial development during the last twenty-five years has kindled in the population at large the spirit of enterprise beyond the seas. The first attempt at a colonial policy in Africa may be stigmatized as very nearly a failure; but the last acquisition of territory in China meets with the approval of Liberals who always were skeptical about our colonial policy in Africa.

Herr von Bülow characterized our policy in

BERNHARD VON BULOW, Secretary of the Foreign Office.

China with the words "Live and let live," indicating Germany's intention to throw her political influence into the scale in favor of free competition for all civilized nations alike in China. Germany has no wish to monopolize the trade of a small part of the Celestial empire for herself alone. Such a policy is sound and avoids all possible conflict, with Great Britain in particular. It also promises to deal fairly with the interests of those countries which, like the United States, have not yet fixed themselves on Chinese territory, but which nevertheless have considerable commercial dealings with that empire.

#### THE NAVY.

The question of the increase of the navy, although not immediately connected with our policy in China, has nevertheless an indirect bearing

REAR ADMIRAL TIRPITZ, Secretary of the Navy.

upon the subject, and for the moment it dominates our politics in Parliament. The demands of the government are by no means exorbitant, and the present head of the Admiralty is too well versed in his business to give way to any fantastic proposals. His demands are essentially the following: Seven battleships of the line, two large armor-plated cruisers, and seven small cruisers in addition to the present navy. These additions are to be spread over a period of seven years and involve an expenditure of about 200,000,000 The demand is not excessive for a country like Germany. The main point upon which the debate will concentrate itself will be the increase of battleships which are not to protect our commerce on the high seas, but to defend our coasts at home and to prevent the blockade of There is no doubt now but that the our ports. government will carry their demands for the navy, even were another Parliament elected before the question is settled, for in this matter the country is on the side of the government.

#### THE AGRARIAN QUESTION.

The legislative life of the present imperial Parliament comes to an end in June next, when it will have sat five years. A few months hence we shall be in the middle of a general election, when the increase of the navy will no doubt be discussed, but the agrarian question will produce a much greater ferment in men's minds. This question has for a number of years past been at the bottom of every other question, and has dominated the field of home politics in Germany. To demonstrate how vital this question is for the internal affairs of this nation, I must rapidly survey our economic history during the last fifty years.

In the middle of this century the area of the present German empire contained 35,000,000 inhabitants; at the present time it has in round numbers 54,000,000. Fifty years ago about four-sevenths of the population were engaged in agriculture; nowadays only about one-third is thus employed. Formerly 95 per cent. of the total amount of food required for the population was raised in Germany, and only an insignificant fraction was imported. Moreover, the country with its forests and mines yielded the raw materials used in manufacture. The most flourishing branch of German manufactures—the textile industry—was in those days dependent upon foreign imports of silk and cotton only; the raw materials for linen and woolen goods were exclusively drawn from the home market.

Germany's total imports and exports in those days amounted to 1,500,000,000 marks, whereas by the end of the century they will probably overstep the sum of 9,000,000,000 marks. The imports of 1896 already amounted to 4,558,000,000 marks, the exports of the same year to 3,753,000,000 marks. Both these sums apply exclusively to goods exchanged with Germany,

and do not include the imports and exports conveyed through Germany en route for other countries.

The imports of agricultural and forest produce amount to 2,000,000,000 marks after the ex-

(Leader of the Industrial wing of the Conservatives.)

ports of the same kind of produce have been deducted. Of the above total about 500,000,000 marks are to be expended on grain; 200,000,000 marks on legumes, oil-seed, etc.; about 100,-000,000 marks on manure; from 60,000,000 to 70,000,000 marks on fruits and wine; 300,000,-000 marks on live-stock and manufactured products used as animal food; 400,000,000 marks on wool, hides, bristles, hair, animal entrails, etc.; about 120,000,000 marks on fowls and their products; about 200,000,000 marks on forest produce. On the other hand, German forestry and agriculture together only yield produce to the amount of 6,000,000,000 marks. The deficit in the supply has to be met by imports from abroad; these amount at the present moment to about one-third of the produce raised at home.

The deficit between demand and supply increases, of course, from year to year, as the population grows at the rate of 750,000 every year. On the other hand, agricultural produce cannot be largely increased in amount by improvements in cultivation in Germany.

In order to meet the ever-increasing demand for agricultural produce, Germany is forced to extend her trade with other countries. She is compelled by the course of her industrial development to become more and more a manufacturing country and to seek markets for her goods in every quarter of the globe.

In 1896 the exports in manufactures alone

amounted to upward of 2,300,000,000 marks A certain portion of the raw materials of manufacture have to be imported—silk and cotton, for instance—because they cannot be produced in As a result of her whole industrial Germany. development, Germany is compelled to extend her international trade relations; she must import food to feed her increasing population and export her manufactures. She is vitally interested in being free to compete with other nations in foreign markets, and as German trade shows a spirit of enterprise as great as that of England. she must in her own interest be as free from all hampering trade restrictions as England is. This conviction is gaining ground now among our merchants and manufacturers. It has led to the conclusion of a number of commercial treaties with other nations, some of which are tariff treaties, fixing the duties to be levied on certain classes of goods for a number of years; others are treaties with the clause of the most favored nation.

Count Caprivi has earned imperishable laurels by inaugurating a policy of commercial treaties in the beginning of the 90s, but against his

COUNT POSADOWSKY, Home Secretary.

policy all agrarian parties are uniting with increasing bitterness in their opposition. The agrarian protectionists control the Conservative party in Parliament completely; they are strongly represented in the Center, or Catholic, party, and are not without a considerable following among the National Liberals. The Antisemitic party,

COUNT KANITZ.

(A leader of the "Junkers.")

the Poles, and other small parties are all infected with the agrarian protectionist ideas. The only decided opponents, as well as the only decided free-traders, are to be found among the three Liberal sections and the Social Democrats.

#### A HOPELESS REACTION MOVEMENT.

The agrarian protectionists not only wish to annul the commercial treaties, because these hinder them from raising the protective duties on agricultural imports (these duties are by no means low-for instance, 35 marks per ton on rve or wheat), but the extreme members of the party advocate the abolition of the gold standard and the adoption of a so-called bimetallic—in reality a silver—standard. The most rabid among them oppose the cutting of canals, because foreign produce would thus enter Germany on cheaper terms. In short, the agrarian protectionists oppose the natural evolution of all economic progress. They are the natural allies of all the reactionary elements in Germany, the worst enemies of material progress and of political development in consequence.

I must point out another circumstance deserving attention. The old Prussian feudal aristocracy (Junkerthum), forming the pith and marrow of the agrarian movement, has never been well off; but for the last twenty years they have suffered from the competition with the whole world, which is felt so keenly in all old countries, in the reduction of the rent of land.

They have sunk deeper and deeper into debt, while the standard of material comfort has risen throughout all classes in Germany. The "Junker" has long since given up the hope of making both ends meet by his own industry, and while endeavoring to raise the rent of land by various kinds of protective measures, he is really at the same time struggling for bread-and-butter and upholding a tradition of political supremacy.

No government can really satisfy these claims, and hence each in turn is compelled, sooner or later, to oppose the agrarian movement. However, considering the strong influence the Prussian "Junker" exerts in the army, in the ranks of government officials, and at court, practical statesmen deem it advisable to avoid any open rupture with the pack of famished wolves. fate of conservative statesmen such as Count Caprivi and Freiherr von Marschall, whose political conscience compelled them to pursue an anti-agrarian policy, is not likely to tempt other statesmen to follow an energetic policy in opposition to the agrarians. And thus it comes about that the imperial government, and still more the government of the largest state within the federation, Prussia, are both inclined to conceal their real convictions as to the impossibility of complying with the extreme agrarians' demands.

PRINCE BISMARCK.

Men in government circles are inclined to dally with them and offer them here and there a sop, so as to ward off their dangerous enmity, and if possible to create a little good-will toward the government.

#### MIQUEL AND THE "JUNKERS."

The most skillful representative of our present opportunist policy is Herr von Miquel, Prussian Minister of Finance and Vice-President of the Prussian Cabinet. He is at the present moment the most influential statesman in Germany. As may be inferred from the name, French blood flows in his veins; his personality is a compound

HERR VON MIQUEL,
Prussian Minister of Finance.

of the northern Saxon and the southern Gascon. Born in the province of Hanover, in modest circumstances, he rose to be one of the leaders of the National Liberal party, and was for some years engaged in the direction of one of our largest banks, the Disconto-Kommanditgesellschaft. Shortly before becoming a minister of state he discharged the duties of the chief magistrate of the city of Frankfurt-on-the-Main.

This statesman of seventy is endowed with a sharp intellect and great powers of eloquence, coupled with a large amount of political skepticism that so often helps a man to secure small political successes and debars him from attaining great ones. By numerous small concessions and a decorous parliamentary treatment of their fads he basks in the full sunlight of agrarian favor. The agrarians persuade themselves that Herr von Miquel will do more for them than he can—or has any intention of doing—but in the meantime he keeps them in good humor and prevents them from disturbing his spheres of influence.

But all these skirmishes are only so many pauses on the eve of the great political struggle which must one day be undertaken with the "Junkers," that old Prussian remnant of feudalism, economically and politically an anachronism in modern society. The fate of the "Junker" was sealed, notwithstanding any partial successes. ever since Germany began her mighty march forward on the lines of industrial progress. Not all the dust cast up by our petty party wrangling can conceal the magnitude of those wider issues which have been really raised by the rapid industrial development of the country.

All our political parties are undergoing a process of change, and it is only a question of time when they will make room for larger groups. The two most interesting phenomena in the field of German politics are the inevitable decay of the old Prussian landed aristocracy (Junkerthum) on the one hand, and the ascendency of Social Democracy on the other. Both these phenomena are intimately connected with the evolution of Germany as an agricultural country into a modern industrial state. Both phenomena are products of natural development which certainly are calculated to bring about political crises, but they do not threaten the existence of the German The German nation is sound at heart empire. and in vigorous health. There is every reason for a German to look forward with hopeful trust not only to the economic, but also to the political development of his country in the future.

#### FOREIGN POLICY.

When Prince Bismarck's dismissal by Emperor Wilhelm II. in 1890 removed what had long

DR. LIEBER.
(Leader of the Center party.)

been the most prominent figure in the European concert, the opinion was entertained in many quarters that the states of Germany would suffer in consequence in the eyes of other nations. Experience has not borne out this opinion, nor do Germany's diplomatic relations with other countries afford any cause for uneasinesss. Facts prove that her status is determined by the degree of potential power she can throw into the scale of European deliberations, and that the greater or less diplomatic skill of individual statesmen is a secondary consideration.

The relations of the German empire to the great military states of Europe are imperfectly shown by the grouping of countries known as the Triple Alliance and Dual Alliance. Triple Alliance, comprising Austria-Hungary, Italy, and Germany at its head, is not really inimical to the Dual Alliance between France and Russia. However desirable it may be for Russia to have a willing ally, capable alike from a military as from a financial point of view, she cannot possibly wish to entangle herself in a war with her western neighbors, Germany and Austria-Hungary. Russia is preëminently Great Britain's rival in Asia, while the political interests of Germany and Russia come nowhere into serious collision. To assume that Russia will make an enemy of Germany simply to help France to regain Alsace-Lorraine would be to offer a gratuitous affront to Russian diplomatic ekill. France will avoid attacking Germany

FREIHERR VON THIELMANN, Secretary of the Exchequer.

single handed. The experiences of 1870-71 were not tempting enough, and in the meantime Germany's population has increased by about 12,000,000 since then, while that of France has remained well-nigh stationary.

The danger of a rupture of European peace is not great at the present moment, nor are any serious fears entertained in this direction. Nevertheless we cannot dream for a moment that our armed millions will be even partially disbanded or disarmed. With a few exceptions everybody in Germany is convinced of the truth of the sentence, "Si vis pacem, para bellum!" and no movement of any weight exists in favor of disarmament. The heavy expenditure on our armaments is borne as a hard necessity. full well that it involves our national existence. The German army is probably the most highly trained, as well as the promptest in action, in Europe; and even although enormous sums are required for the support of this army-our military budget for the year 1898-99 exceeds 600,000, 000 marks—Germans console themselves with the thought that it is the price of peace, and that other nations pay still more for similar objects. Does not the pension list of the United States show a greater expenditure than our military budget? Leaning on such a terrible weapon as the army, every possible government in Germany may pursue European diplomacy with some tranquillity of mind.

For a long time past the southeastern corner of

Europe has been the volcanic center whence outbursts threatening European peace have come, and not a little diplomatic cool-headedness is necessary to prevent that ever-smoldering fire from assuming dangerous proportions. Prince Bismarck once employed the metaphor with

FREIHERR VON BUOL-BERENBERG, President of the Reichstag.

reference to the Eastern question, the settlement of the Balkan Peninsula is not worth the bones of a single Pomeranian musketeer in the eyes of Germany; and the present foreign secretary, Herr von Bülow, lately said in Parliament that Germany had only undertaken the part of flutist in the orchestral performance of Turkish music; should serious discords arise in the European concert, then the flutist would lay down his flute on the table and leave the concert-room. Of course this play of diplomatic fancy must not be literally construed. The concert-room is Europe, and Germany cannot leave her place vacant. She is also too powerful to look calmly on with folded arms.

Besides, Turkey is linked to Germany by many economic interests. German capital is largely invested in railroads both in Turkey and in Asia Minor, under the direction of the Deutsche Bank. Among other things, the railroads of Anatolia are under the control of the above-mentioned bank.

Absolute passivity in the Eastern question is therefore economically and politically impossible for Germany. Nevertheless, of all European countries concerned in the matter, Germany is least involved, because—as Bismarck once said—the German national edifice does not front the Mediterranean Sea.

Entanglements with other countries may proceed from trade and commercial questions for Germany if the agrarians in our midst should succeed in their protectionist policy by initiating a war of prohibitive duties. But also in this matter facts are stronger than infatuated politicians, and although threats of a tariff war, mostly directed against the United States, are not wanting either in Parliament or in the press, they find little support in the country. There is no reason to believe that any of our leading statesmen have any inclination toward a commercial policy ab irato.

The more complicated and delicate the economic and political organization of the larger European nations becomes, the more will a peaceful development of their resources appear to them a prime necessity. The countless threads woven between nations by economic interests lead them irresistibly to the conclusion that the violent interruption of intercourse between two nations—even by prohibitive duties—is an act of consummate folly, and few statesmen are willing to accept the responsibility of initiating even a war of tariffs, let alone a real war.

In the interesting notes written by Francis Ayme, the former French teacher of Emperor Wilhelm II., the following remark, made by the Prince, then seventeen years of age, is given: "Ministers who provoke a war should be forced to oppose one another in single battle, and in the literal sense of the word stake their lives on the issue." I venture to assert that the thought of fighting a duel would commend itself more readily to any of our present ministers of the crown than the thought of the fearful responsibility of bringing about a war on a European scale, with the precision of modern implements of destruction. A realization of the appalling devastation which must ensue is the greatest guarantee for peace.

Berlin, March 1, 1898.

# DOES COSMOPOLITAN LIFE LEAD TO INTER-NATIONAL FRIENDLINESS?

BY BARON PIERRE DE COUBERTIN.

CANNES-WATER FRONT OF THE OLD TOWN.

HIS question is important. Cosmopolitan life is no longer an insignificant fact, an eccentricity of a few elegant women who, while they live in Paris, have their linen washed in London or betake themselves periodically from Spain or Germany to Biarritz or to Spa. Nowadays the whole aristocracy of Europe leads that sort of life. It scales the mountains of Switzerland or of the Tyrol, makes yachting trips to the flords of Norway, shoots grouse in the highlands of Scotland, goes to Bayreuth to hear Wagner's operas and to Monte Carlo to lose its money; it spends Holy Week in Seville and the Carnival in Nice, ascends the Nile in a dahabeah, and coasts down the frozen slopes of St. Moritz on toboggans in winter. And it is not pleasure alone which makes them come and go thus; they pass from place to place in order to drink the waters here or there, to consult a celebrated physician at Amsterdam, or to undergo a surgical operation in Munich at the hands of a famous surgeon. of letters and artists have followed the footsteps of the leisured classes and have taken to traveling. Paul Bourget hastens from Oxford to Corfu, and his principal work is a vast monograph on the New World. Ibsen and his disciples get their plays acted even in Italy, while Gabriel d'Annunzio, like his German colleague. Sudermann, requests the French reviews to consecrate his success. A magazine in three languages has been founded which is published simultaneously in Paris, London, and Berlin. The painters, in their turn, transport their brushes and colors not only for the purpose of bringing home with them distant landscapes, but in order to make portraits; and while a whole colony of American artists live in Paris, Benjamin-Constant and Chartran go off to Washington to reproduce the features of beautiful American women. As for the scientific men and journalists, a whole series of congresses draws them from their native lands and gives them an opportunity to wander all over the civilized world. All this is cosmopolitan life, and I am wondering whether it creates international friendliness.

#### INTERNATIONAL FRIENDLINESS A NECESSITY.

The day is past when nations could with impunity be ignorant of each other because they were not capable, so far as relations were concerned, of doing anything but make war upon each other. At the present day war would be so criminal, so absurd a thing that even Europe, puerilely armed to the very teeth, like a child who is playing at soldiers, no longer dares to pro voke it. But in place of war a state of things has arisen which is based on rivalry, on compe-

tition, and which will be productive of happy results for humanity only in so far as that rivalry shall be amicable and that competition shall be loyal. Every day incidents arise which can very easily be smoothed away if they are faced in a spirit of knowledge and harmony, and which may degenerate into interminable fatal quarrels if acrimony or only ignorance is applied to regulating them.

This is the case with Cuba. For my part, I can only deplore the manner in which a certain number of Americans and many Spaniards regard this question, because nothing which takes place in the United States is indifferent to me, and because, on the other hand, I think that the work

of raising the nation undertaken by the present government is a very meritorious work. Americans do not understand by what a legitimate and respectable bond Cuba is linked to Spain, and the Spaniards do not perceive that Cuba is linked to the United States by other very real bonds which it is impossible not to take into ac-If France and England knew each other a little better, if there did not exist between the two peoples ancient and inveterate prejudices, how easy it would be to settle the question of the Niger, that of Siam, and perhaps even that of In truth, a friendly internationalism ought henceforth to inspire the acts of civilized nations toward each other, under penalty of the whole world entering upon an era of absolute sterility. This has been well understood by the founders of societies for arbitration, and this permits us to hope for the success of their efforts. But in this drawing together of the nations, what place is held by this cosmopolitanism which is increasing so rapidly, is multiplying journeys, placing the aristocracies of the world in frequent contact, and which railroads and the telegraph render accessible no longer to persons of leisure only, but to business men and actors?

#### THROUGH MY WINDOW.

It is natural that this problem should occur to my mind in a city so thoroughly cosmopolitan as this. It does not allow its character to be forgotten for a moment. In its innumerable hotels all known languages are spoken, and the registers bear the names of all nationalities. I hear simul-

CHATEAU THORENC, CANNES, WHERE MR. GLADSTONE HAS BEEN STAYING AS THE GUEST OF LORD RENDEL.

taneously on Sunday morning the bell of the Roman Catholic church, that of the pretty little English chapel erected in the midst of palms in memory of the Duke of Albany, son of Queen Victoria, and that of the Russian church, of whose small gilded dome I catch a glimpse athwart the eucalyptus trees. Yonder, on the hill, rises the villa where the illustrious Gladstone is wont to come every year to enjoy a well-earned rest, and not far from there, in a more modest dwelling, died two years ago the famous Greek Minister Tricoupis, from whom his rival, Delyannis, had just wrested the power. When I stroll along the Boulevard de la Croisette I meet. the carriages of the Grand Duke Michael of Russia and of the Duke of Leuchtenberg on their way • to the golf club; a little further on our prime minister, M. Méline, who is taking a week's rest and who is sitting on the very spot where three years ago I saw Stanley, still imperfectly recovered from the hardships which he had undergone in Darkest Africa. A group of fair-haired little Americans are playing in the sand not far from two swarthy little Italians, and bicycles, horseless carriages, and horses are passing to and fro along the water front, bearing women and men who certainly are come from the four quarters of the earth. Behold, all these persons whom chance has brought together have many occasions to talk together, to discuss the subjects in which they are interested, to make acquaintance with the countries from which the others come, and their opinions concerning recent events. many other places in Europe where the same

meetings are effected, while Monterey and St. Augustine render Florida and California branches of the Riviera. I take Cannes as a type—Cannes, founded by an Englishman, Lord Brougham, and which owes to foreigners the greater part of its prosperity.

#### DAILY HABITS VERSUS BROAD VIEWS.

The first thing which strikes me is that all these people who mingle do not penetrate each Each one leads in his own home the life of his own country, remains the slave of his own petty habits. An English company—the same one which owns the Hotel Metropole in London -has built very near Cannes an enormous hotel which is filled with English people. Why do they go there instead of to other hotels equally as well, or even better, situated? Because the wallpapers, the furniture, the stuffs, and even the fenders, all come from London; because they gave bacon for breakfast in the morning and toast and muffins at afternoon tea; because, in short, they provide themselves with the illusion of being on the shores of the Mediterranean without having left England. What do the Frenchmen who are passing through London seek at the Hotel

STATUE OF LORD BROUGHAM, FOUNDER OF CANNES.

Savoy unless it is French cooking and French servants? To tell the truth, I do not believe that this anxiety over things in themselves tolerably insignificant possesses the importance which certain persons attribute to it; for there is a class of travelers who think that one cannot know a country unless he adopts its manner of living, even in the most minute details. These are the old-fashioned travelers. They will not feel as though they have seen Rome unless during their brief stay they have taken their meals in a little osteria on the banks of the Tiber, the dirtiest one possible, and the point which interests them most in the life of the Arabs is that among them boiled mutton is eaten with the fingers. I have always noticed that travelers of this sort know no more

about the countries which they have visited than do the former sort. This is because in both cases they waste their time and fetter their minds by taking into consideration only the frame instead of looking at the picture. What connection can possibly exist between the fact that the Americans drink iced water and eat fried oysters and their methods of government and education? Would they be any the less good republicans if they ate macaroni, and would the Russians change their character if they ceased to like caviar? Now, I greatly regret that I am obliged to note the fact that the information possessed by many cosmopolitans concerning the peoples whom they have visited does not exceed that range of ideas. Daily habits constitute a slavery from which it is difficult to free one's self. Forain, the Parisian caricaturist, who had come to Chicago during the World's Fair, one day complained in my presence that the hotel where he was staying was lighted with electricity. "When I come home at night," he said with comical vexation, "what would I not give to have the porter hand me my candlestick—my old candlestick with a candle in it!" Well, many travelers are like that. They cannot get used to the absence of their "old candlestick," and this mere trifle suffices to put them in a bad humor and prevents their understanding what surrounds them. Thus in every way the daily habits constitute an obstacle to true internationalism. Whether yours keep you at home or those of the people whom you visit interest you, amuse you, and rivet your thoughts, in either case the effect produced is the same: either you learn nothing of what goes on outside or you draw from what you see false conclusions, for the appearances of the daily life of the citizens are infinitely deceptive as a basis upon which to judge the collective life of the nation.

#### INTERNATIONAL PREJUDICES TOO STRONG.

I seek the proof of this and am not long in I question a French writer, well known beyond sea, where many of his romances have been translated and read; moreover, he is very well educated, knows many languages, and has often spoken of the English and the Americans in a manner which proves that he knows what is taking place among them. I ask him if he believes in the future of the United States and what he thinks of their incessant progress. "Good heavens!" he replied. "The Americans are enjoying only a temporary power, which is entirely industrial and commercial; but that power rests on nothing. The family does not exist among them. They live in hotels! People who live in hotels do not form families, and where there are no families there is no nation!"

RUSSIAN CHURCH AT CANNES.

there you have the American people judged by an eminent man, according to data which possess no value; for, in the first place, the Americans do not live in hotels, and, in the second place, it has not been proved that one cannot live in a hotel without entirely losing the family spirit. It makes no difference that this prejudice is very widely spread throughout Europe and not in France alone. The idea that family bonds do not exist at all in the United States is an idea which is to be met with in the conversation of a German, as well as in that of a Spaniard. Let us now pass on to an Englishman who loves France and who often comes hither. He is convinced that she is profoundly demoralized by the bad books which are published here, and that the literature here is the faithful reflection of manners and customs. Nothing could be more inexact. It is deplorable and even shameful for my country that such books should be published in such great numbers, but the persons who read them are not in the majority, and if a man is impartial he must admit that these books are purchased in large quantities by foreigners. Here, again, is a Frenchman whom I question concerning Italy. He does not believe that anything good can be found in Italy. All Italians are knaves, are jealous and cruel. They have a habit of stab-

bing and a taste for plotting. They are not to be trusted; moreover, they are vain to excess, liars. and so forth. He can never finish the enumeration of their faults, and imagines that in this manner he possesses an exact view of the Italian nation, to whom he attributes as a whole all the defects which he has observed in individuals. And I must confess that I have met far too many Americans who judged the peoples of Europe in exactly this manner. I always wonder how a person can judge a nation from an individual from less than that, sometimes, from an incident: and I recall an amusing adventure that happened to a French lady who was traveling in Switzerland with her maid. She was desirous that the latter should derive some profit from her travels, and therefore, on setting out, she had given her a small blank-book and urged her to write down therein daily the names of the places through which they should pass and a memorandum of what was interesting there. On their return she wished to learn her maid's impressions of travel and asked for the blank-book. In it she found this solitary reflection, dated from Zurich: "Today, for the second time, we have had an umbrella stolen. The Swiss steal umbrellas by preference because there is a great deal of rain in their country in winter." How many educated persons exercise no more conscientiousness or care in forming their judgments on a nation.

#### THE DEFECT OF COSMOPOLITAN CITIES.

There are cosmopolitan cities of various sorts. Chicago, for example, does not resemble Cannes in the least. Is it possible to make a comparison between that town which is in a fever of work, whose dwellings are crowded together, where figures and the practical sides of life constantly force themselves on the attention of man, and that other city made for pleasure, where the houses are hidden in beautiful gardens and where the art of wasting one's time agreeably is so universally cultivated? Yet both are cosmopolitan cities. At Hull House, the settlement which she founded in the poor quarter of Chicago, Miss Addams showed me a plan of the immense city upon which were indicated in different colors the groupings of the various nationalities: there was a Slav quarter, a Scandinavian quarter, a German quarter, an Italian quarter, a French Canadian quarter. In each quarter a different language was spoken, and more or less hostile sentiments were professed for that of the neighboring Let us suppose that a plan of Cannes were to be drawn up on the same basis. You would see that the villas are mingled together: this one belongs to an Englishman, that other to a German, that one, a little aside, to a Greek.

They know each other, they meet at the Cercle Nautique or on La Croisette,\* and are animated by kindly sentiments toward each other. reality, they are as ignorant of each other as are the people in Chicago; their good feeling is as common as hatred is in that other city; they know nothing of each other. This characteristic of manners and customs is to be found in all cosmopolitan cities of whatever sort. People are, in general, far less advanced in them than in homogeneous cities, and far less desirous of learning. Daily contact seems to eliminate all interest in the contrast of races. Each person seems to be lost in the mass of the city and seems to shut himself up within himself and to show on the outside only commonplace. We are thus led to conclude that cosmopolitan life is not favorable to the development of civilization, and that man is not made to live amid those who are not his compatriots. He gains by visiting them, by making their acquaintance; he loses by living habitually in the midst of them. And diplomacy furnishes us with another proof of this. Who is there who has not noticed that diplomats in general are very superficially acquainted with the countries to which they are accredited, and even make gross mistakes as to their merits and their defects? One curious point is this, that the representatives of the United States are often among the diplomats those who understand best foreign countries. I attribute this fact to the circumstance that their stay abroad is brief, and also to the circumstance that as they are not overburdened with useless labor like their colleagues from Europe, they have leisure to go and come and make their studies on the spot. Study-this is the true secret of international friendship; ignorance maintains prejudices; study alone expels them.

#### LEARN AND THEN SEE.

In order to understand a country it is not enough to see it live; its present state must be compared with its recent past. A nation is an eternal invalid; there is not one which is not ill, which has not some ulcer of a more or less dangerous nature. But that which it is most important of all to know is, what is the course of its One must decide whether the disease is inclined to increase or whether, on the contrary, it is on the way to a cure. Do not hope to know this until you yourself have compared yesterday and to day. For this history is indispensable, and especially the political history of the present century. In my opinion it is almost impossible to understand a modern country if one is not acquainted with its political history for a period of

the past eighty years; and I would like to say that it is regrettable that one should visit a country before he has made such a study. The English are sometimes great travelers and sometimes very sedentary. I have known some who were admirably well acquainted with France, and that almost without having seen it, and others who had traversed it repeatedly and knew almost nothing about it. The former were not always intellectually superior to the latter, but they had acquired the habit when they read their newspapers of never passing over anything which concerned France without pausing, without meditating upon it, and especially without finding out what the French themselves thought about it. This is the proper manner of judging things. One cannot understand, for example, the movement which is about to thrust Norway out of her union with Sweden if he does not study this movement from its origin and if he knows nothing of the phases through which it has passed since the Swedish-Norwegian kingdom was constituted. For my part, I have searched the point where I always try to get outside of myself, in a way, when I have to judge an international ques-

GARDENS OF THE VILLA ELLENROCK, CANNES.

tion. I say to myseif: "What would I think about Cecil Rhodes if I were an Englishman? What would be my opinion on India if I were a What would I desire in the East if I Russian? were a Hungarian? What would be my colonial ideas if I were a German?" And I think that in our modern world this manner of forming one's judgment is the only one which affords any chance of arriving at the truth and consequently of doing any good.

#### THE FRANCO-AMERICAN UNION.

If I may be permitted to allude again to my personal experiences, I will confess that I have often been vexed with the Americans, in spite of

<sup>\*</sup>The promenade along the seashore.

the very profound affection which I cherish for them, when I have heard them—not in the East, where they know more about it, but in the West -speak of France in terms which showed so complete an ignorance of her present state, such an absolute lack of intelligence as to her ambitions and her efforts. But getting angry leads to nothing, not to mention that in my case when it is a question of the United States the irritation never I love that country too passionately. lasts long. Therefore I was anxious to understand the cause of this ignorance, and I discovered it without difficulty by studying the history of the United There I found that after the service rendered in the beginning France had completely lost her interest in the United States, and sent them none of her great men, had in nowise aided them in their literary or artistic development, had often displayed for them an impolitic disdain, and had even very stupidly irritated them by her proceedings in Mexico and her attitude during the war of secession. On the other hand, I discovered several wrongs on the part of the Americans—of their historians, for example, many of whom have aided in disseminating false ideas about my country and making statements which they would not have been able to prove. is the use of dwelling on the past unless with a view to making amends for it? Then it was that I set myself the task of bringing together France and America in an intellectual reconciliation. Progress is rapid. Here are eminent lecturers crossing the ocean to speak in the American universities, in whose very existence they were hardly willing to believe ten years ago! I am convinced that before long I shall have succeeded in getting the French to study the history of the United

States, as I shall have led the students of the principal American universities to study the history of modern France. But this result will be due to the interchange of ideas, and not to an exchange of persons. The American colony in Paris is composed of gentlemen and ladies who are very agreeable to meet and whose elegance and grace are greatly appreciated by us. Nevertheless, if they were less numerous the Parisians would have fewer false ideas about the United States, and I am afraid that the majority of the Frenchmen who reside in America have contributed a great deal toward giving the people there a bad idea of France.

#### MY CONCLUSIONS.

Therefore my conclusions are very clear. In order that cosmopolitan life should beget international friendliness, that life must be intellectual. not material. The fact that people live in a foreign country does not banish their prejudices against that country, and very often, on the contrary, it gives rise to new ones. And as for the society which, by reason of its customary existence, gets called cosmopolitan society, it is generally not greatly to be recommended. It displays many vices, much corruption, and it is not even of use to serve as a link between the different countries. One gains nothing by contact with it; it can teach you nothing; it is not good for anything. Properly speaking, cosmopolitanism suits those people who have no country. while internationalism should be the state of mind of those who love their country above all, who seek to draw to it the friendship of foreigners by professing for the countries of those foreigners an intelligent and enlightened sympathy.

GRAND HOTEL AT CANNES.

### BARON PIERRE DE COUBERTIN.

BY ALBERT SHAW.

OSMOPOLITANISM has its various types and phases. The best cosmopolitan, undoubtedly, is the man of patriotism who visits other countries and studies the life of other nations, in order that he may apply the knowledge of what is best abroad to the improvement of conditions at home. The author of the preceding article, than whom no more loyal Frenchman can be found, is earnestly serving his own nation by studying educational and social progress elsewhere. Since M. de Coubertin has written frequently for this magazine and is to write for it in the future from time to time, our readers will naturally like to know something of his personality and career. Much of what follows is reprinted from the introduction by the present writer to M. de Coubertin's remarkable volume, "The Evolution of France under the Third Republic." \* The fresh interest aroused in French politics by the recent Drevfus-Zola affair lends a particular timeliness to M. de Coubertin's book, in which will be found satisfactory answers to many questions that intelligent American newspaper readers are asking as regards the actual nature and strength of existing French institu-

Although still a young man, M. de Coubertin has acquired a broad point of view through wide travel and deep study. He is peculiarly qualified, therefore, to interpret the institutions of his own country for the benefit of Americans or Englishmen. No foreigner could have written certain chapters in his book with the insight that the author displays. other hand, no Frenchman not exceptionally familiar with the history, politics, and social life of America and England could, in the writing of a book like this, have rendered a direct service to English-speaking readers while primarily addressing his own countrymen. The international and comparative cast of mind has come to be second nature with M. de Coubertin-a thing that can be said of very few Frenchmen. that regard he is the De Tocqueville of our day. Quite as De Tocqueville, now more than sixty years ago, visited the United States and England in order to write books which should interpret American democracy and English life to the Frenchmen of the 30s who had just placed Louis Philippe on a "throne surrounded by re-

BARON PIERRE DE COUBERTIN.

publican institutions," even so M. de Coubertin has for many years past been busily studying and interpreting to the young men of the Third Republic certain phases of English and American life which he has believed might well be incorporated into the French scheme of existence. M. de Coubertin is a philosophical observer and a constructive reformer; and he is one of the really notable and remarkable young men of our day.

Our author's study of the political history of his own country during the past quarter century would seem to me to show a rare talent for political and institutional history. For the very rea-

<sup>\*</sup>Boston and New York: T. Y. Crowell & Co., publishers.

son that he belongs to the new generation, and did not therefore participate in the events that followed the catastrophe of 1870, he finds it the easier to render even-handed justice to all the men and parties that were active at that time. have not read any book which shows with such convincing logic as M. de Coubertin's the relation of one movement in French politics to another. His characterization of men is remarkably just Thiers, MacMahon, Gambetta, and felicitous. Jules Ferry, Grévy, De Freycinet, Jules Simon, Carnot, Boulanger, Clémenceau—these and many others stand out in clear relief, and one feels that with a few skillful touches the author has given us true and trustworthy portraiture. Furthermore, his study of constitutional modes and parliamentary methods shows a remarkable power of analysis and discrimination.

Nothing could be better in its way than his argument for parliamentary government as tending by virtue of its very instability and fickleness to give the republic a real security. With ministerial rigidity there might in France be danger of revolution; but where it is so easy to make and unmake ministries, the popular emotions expend themselves harmlessly, and the great mechanism of government goes on undisturbed. de Coubertin, of course, lays due stress upon the value of the permanent organization of governmental business under chiefs who do not change and who owe their loyalty to their bureaus or departments and to the country itself, rather than to parties or ministries. Our author would certainly not be so optimistic and easily satisfied as to extol the constant changing of cabinets as the ideal arrangement; for he could not fail to admit that better results would be secured from a higher degree of ministerial stability.

One's confidence, indeed, in M. de ('oubertin's competency as historian of the Third Republic increases from page to page as one notes the evidences of fairness and sees how calm and objective is his discernment. It is so rare a thing to find the sympathetic faculty and the constructive imagination conjoined with the trained and alert employment of the critical habit of mind. It is this combination of gifts—sympathy to interpret, imagination to unify and correlate, analytical insight to make just distinctions, together with industry in research, accuracy in detail, and the sense of form, proportion, and style—that has given me a high regard for the work of this author and a belief that it is entitled to international recognition.

The Baron Pierre de Coubertin is the scion of a family now old in France, where it has been domiciled more than four hundred years. It came originally from Italy, by favor of Louis

XI., who conferred honors and titles upon the head of the house. The family came to be known by the name of Coubertin some time after 1650, by virtue of the fact that its principal seigneuric was situated at Coubertin, near Versailles, in the renowned valley of Chevreuse. The Baron Pierre de Coubertin, with whom we have to do, was born on January 1, 1863. His life and career have thus far been noteworthy chiefly on the He was educated in Paris, educational side. first at the Jesuits' day-school in the Rue de Marat, known as the Ecole Saint Ignace, and afterward in the University of Paris, where he obtained successively the degrees of bachelor of arts, bachelor of sciences, and bachelor of law. He also took a post-graduate course in political science at the École des Sciences Politiques.

It was in 1884, when only twenty-one years of age, that M. de Coubertin began his visits to England, with the prime object of acquainting himself intimately with the life of the great public schools-Rugby, Eton, Harrow, and the others of that type. He had become strongly convinced that there was an element in English education that was sadly lacking in the French schools. Obviously and conspicuously, the English training in athletics and the English devotion to outdoor sports and exercises were almost totally unknown in French lyceums and collegiate insti-But Coubertin clearly perceived that something even more serious was concerned than the mere question of physical culture. He understood that in the rowing, football, and cricket of the English schools, and all their other games, contests, and field-day exercises, there was involved an element of moral discipline and strength that supplied in some sense a key to the secret of England's power. Not merely a manliness expressed in muscular force and physical bearing was developed in the English arena of school sports or neighborhood contests and pastimes, but also a fine spirit of fair play, a hatred of meanness, lying, and all forms of deceit, and that fundamental kind of honor and integrity of character that cause Englishmen to be trusted and respected, even if not greatly beloved, by all races. in all lands. Furthermore, this love of hardy games and contests seemed to Coubertin the best sort of protection to the young men of our times from the temptation to unworthy indulgences that tend to undermine personal vigor and thereby to diminish the vitality of the nation.

The drift in France among young men of education was toward softness and over-refinement and the vices that are somewhat dangerously skin to certain phases of sethetic development. The ideals of youth in England seemed, as compared with those of France, to make for the clear eye,

the steady hand, the firm will—in short, for selfcontrol and the conservation of energy. therefore, with no mere boyish fondness for the excitement of athletic contest, considered as a thing desirable in itself, that M. de Coubertin devoted himself to the development of the revival of a high type of manhood among French stu-Older men than he had perceived, after the disastrous war with Germany, that French education was lamentably behind the age, and that German military superiority was due in large part to the high intellectual training to which the whole nation had been subjected as a part of a far-sighted national policy. The ministers of education could improve the school system by securing better laws and spending more money. But there was also needed the personal devotion of men who could, by giving their best effort and enthusiasm, work a change in the spirit of student

Happily, M. de Coubertin has not been obliged to do this work in isolation and without help and sympathy; but he has been the most active spirit in it, and has worked with such assiduity, as well as tact, intelligence, and fine spirit, that already great results are evident. M. de Coubertin was not content with any merely casual study of English school life, nor did he jump at quick conclusions or attempt to propagate theories of French educational reform until he had tested his views and impressions by repeated comparative inspections of the educational life of the two countries. Thus for four years he went back and forth between England and France, making two or three sojourns a year on the English side of the channel. In 1887 he began to publish articles in French magazines and journals, dealing with the reform of French education and the rôle that sport should play in school life. Some of these, also, were interpretative studies of the characteristics of contemporary social and educational life in England, with particular reference to the schools and universities.

He was ready at length in 1888, at the age of twenty-five, to publish his book, "L'Éducation en Angleterre," an account of school life in England, which, while valuable on any account, was of particular use in the advancement of the cause to which all his efforts were really devoted. The book attracted very favorable attention in France, and its success gave the young author and reformer prestige enough for the public launching of his practical movement, this taking the form of a "committee for the propagation of sports and physical exercises in education," with that eminent statesman, scholar, and educational authority, Jules Simon, as president of the committee.

In the following year occurred the Paris Exposition of 1889, with its congresses and its various opportunities for the exemplification of progressive ideas and methods. M. de Coubertin was alive to the value of the occasion, and he was instructed by the authorities of the exhibition, in connection with the displays and exhibits showing educational methods in foreign countries, to organize an international congress on physical education. The congress was not only successful in itself, but especially valuable for the influence it was able to exert upon French public opinion.

At this time M. de Coubertin published a book on "L'Éducation Anglaise en France;" and before the exhibition season had ended in the autumn he had the satisfaction of receiving a commission from the National Department of Public Instruction to visit the United States and prepare a report for the benefit of France upon the organization, work, and life of American colleges. accepted the commission and came promptly to this country, and his visit is remembered pleasantly by numerous Americans who met him at one institution or another. He visited many colleges and universities in New England, in New York and the other Middle States, in the far South, and in the Mississippi Valley and the Northwest, and extended his tour to Canada. His observations were embodied in a book published at Paris the following year, entitled "Universités Transatlantique." He also founded, upon his return to Paris, a monthly magazine, the Revue Athletique, which he conducted for two or three years as the organ particularly of the athletic interests of French schools and universities.

Meanwhile all this work for the encouragement of the athletic spirit in the French institutions had begun to tell strongly; and in the season of 1891-92 it was possible, under M. de Coubertin's leadership, to organize what is now the wellknown Union des Sociétés des Sports Athletiques. This central body is a confederation of about two hundred French athletic clubs and societies, half of which are in the universities and colleges. With a view to keeping the French student's interest from flagging, M. de Coubertin endeavored to make some plans for English and American Thus, in 1892, international footcompetitions. ball matches were begun between French and English teams, Lord Dufferin himself presiding over the first one held at Paris. M. de Coubertin also succeeded in securing the recognition of the French Union by the Henley Regatta Committee and the admission of the French rowing crews to the university contests on the Thames. Again, in that same season, he secured the visit to Paris of a team of American university athletes, as the result of the efforts of an American

committee which he had organized and in which his friend Professor Sloane, then of Princeton University, was especially active. The practical aspects of M. de Coubertin's work for that season of 1892 should be further illustrated by mention of the seven days' athletic and intercollegiate tournament in and about Paris, participated in principally by the athletes of the various French universities and schools, under the honorary presidency of the Grand Duke Vladimir of Russia.

To crown the work of the year, M. de Coubertin, at the end of November, gave a lecture in the amphitheater of the Sorbonne, in which he disclosed his plan for the reëstablishment of the Olympic games. The enlistment of American interest in this ambitious project for a modern quadrennial tournament of games and sports that should be open to amateurs—particularly those of the student class-from all nations was much facilitated by M. de Coubertin's second visit to the United States, which occurred in 1893. had the honor to come again with a commission from his government, for he had been appointed one of the organizing committee of the French section at the World's Fair, while also designated by the World's Fair authorities at Chicago as one of the honorary heads of the Congress on Higher Education.

He improved this opportunity to visit the Pacific coast, where he inspected the University of California at Berkeley, the Leland Stanford University, and other institutions. In each of these two California universities, as well as at Princeton and in Tulane at New Orleans, M. de Coubertin founded a debating prize that will make his name familiar to many future generations of American students. This prize takes the form of an annual medal awarded to the best student debater on some subject relating to French politics or political history. M. de Coubertin's object in founding these very interesting contests in forensics was to promote among the educated young men of the United States a better acquaintance with France through a discussion of French politics every year in several universities. Before leaving this country in the autumn of 1893 he had aroused a very general interest, especially in the college world, in his plan for the Olympic games.

A little later, in the early weeks of 1894, he was actively at work in England holding conferences and forming his committee for the promotion of the idea of the quadrennial athletic tournament. In June of the year the subject was taken up by a great conference or congress held at the

Sorbonne in Paris, a dozen or more nations being represented. King George of the Hellenes sent his best wishes, and the eight-day conference, with its accompanying feles and sports in the Bois du Bologne, was fairly successful, resulting in the formation of an international committee to carry the Olympic plan into effect. cided that the first games should be held in Greece in 1896, with the further understanding by common consent that the competitions of 1900 would be held at Paris as a feature of the proposed international exhibition, while somewhat more vaguely it was anticipated that the games of 1904 would be held in the United States. M. de Coubertin then betook himself to Athens, with the result of forming an enthusiastic Greek committee and perfecting plans for the first games. with the Crown Prince of Greece as presiding officer for the occasion. The games as they actually occurred at Athens in 1896 attracted a world-wide attention; and the illustrated articles in which they were described in the periodical press of every part of the civilized world would fill a number of volumes.

Meanwhile M. de Coubertin had been married to Mademoiselle de Rothan, daughter of the late M. de Rothan, who was a distinguished ambassador and well-known author. In the past two years his pen has been unusually busy; for, besides the present work on France under the Third Republic, he has completed a volume on his recent travels, entitled "Souvenirs d'Amérique et de Grèce." Furthermore, he has contributed a number of important articles to the leading French journals and reviews, besides his valuable papers written for this REVIEW, and still other literary work. As illustrating M. de Coubertin's thoroughness as a student and worker, I may be permitted to remark that at my suggestion he has written some of his articles in English. acquired English after attaining manhood and to be able not merely to read and speak the language, but to write it for publication with full command of vocabulary and with an excellent use of idioms, is an unusual thing, particularly M. de Coubertin's mastery of for a Frenchman. English is simply an indication of his earnestness and persistence in all things to which he may have set his hand.

M. de Coubertin has been appointed to important positions in the creation and management of the great French Exposition of the year 1900, and will have charge of certain educational and athletic exhibits. He is to make another visit to the United States in the early future, in promotion of his departments of the exposition.

# THE GOLDEN HEART OF THE SIERRA MADRE.

BY H. D. SLATER.

ON THE GUAYNOPA TRAIL-ASCENDING CANDELARIA.

THERE is something intensely fascinating in the idea of digging in the earth for buried wealth; there is something amusing in the sight of strong men taking infinite chances, undergoing innumerable hardships, in a wild scramble for a few little yellow specks. But when has the time been that men would not follow a rainbow promise or spend their possessions in trying to find the starting-point of traditions of hidden treasure?

Ever since Cortés and his legions cut through the continent Sierra Madre has signified wealth. "Mountains of gold and silver and precious stones, gleaming in the eternal sunshine," wrote the Spanish chroniclers. The Spaniards worked mines for centuries in these mountains; the Mexicans—that is, the natives—worked them after the liberation; the Apaches killed the natives then and the mines were lost.

It needed Yankees to bring apple-corers into the hills and examine the core. It needed modern workers with modern methods to compel the little men of the mountain to bring their sacks of gold out of hiding. The last three years have seen such an upturning as this section of Mexico has never known. The Yaquis and Temochics have been subdued and pacified; a railroad has been built from El Paso, Texas, into the south country; wagon roads traverse the mountains and flourishing settlements lie where Apaches have been wont to hold their awful orgies. Twenty miles from town—only twenty miles beyond civilization—lies the heart of gold.

Men are going in by the score; hundreds more

are waiting for some information a little more accurate and trustworthy than the irresponsible tales of Indians and scouts. Much might be written about the romances of lost mines, the traditions of dreadful massacres and buried bullion, the Indian tales of pot-holes in deep canyons where golden eggs accumulate faster than they can be carried away. But this article is written in a practical way for practical men, and is the result of actual experience supplemented by observation.

#### WHAT IS THE "YAQUI COUNTRY?"

Men have gone to Guaymas, on the Californian gulf, and have traveled 190 miles inland. They have seen the Yaquis, but have found no gold. An old prospector went to Hermosillo, in Sonora; he returned disgusted and penniless, cursing the lying stories of unlimited gold and decrying the whole country. He had been within 200 miles of the gold country, perhaps. Scores of men have been, they say, "all through the Yaqui country," and they "know it like a book." They have not exhausted the country shown on this map.

IN THE PINE WOODS NEAR GUAYNOPA.

The Chico and Paphigochic rivers unite to form the Rio de Aros (the word means bends, or hooks); where the Bavispe and the Aros come together the river breaks out of the highest Sierras and becomes the Rio Yaqui. The Yaqui flows southwestward into the Gulf of California. Grandes is 150 miles by railroad from El Paso, Texas. Pacheco, Corrales, Garcia, and Chuichupa are Mormon settlements connected with Casas Grandes by a good wagon road. Chuichupa is 90 miles from Casas Grandes. A half day's easy march from Chuichupa is Candelaria peak (8,915 feet high); from it one can overlook the country for forty miles around. The view is magnificent; the photographs give but a poor impression of the remarkable roughness and rugged beauty of the Devil's Caldron, as the region has been fitly named. The Guaynopita trail descends from an elevation of 8,915 feet on Candelaria peak to one of 3,575 feet at the bed of the Rio Aros—more than one mile straight down in a distance of eight The contorted and twisted rock masses, the ridges, canyons, and peaks rising and falling in confusion remind one of an angry sea arrested and turned to stone as it dashed madly against the granite walls which had stood since the creation of the world.

The "Yaqui mineral district" extends from Chuichupa west and south indefinitely. The old Guaynopa trail leads over Candelaria peak to Guaynopa and thence to Nacori. From Guaynopa it is easy to reach any part of the mining region over well-marked trails—easy, that is, as the roughness of the country will permit. Another good way into the country, if one wishes to go south of Dolores, is by way of San Miguel and Babicora. The least-known parts of the territory lie between Guaynopa and Nacori and west of the great hook of the Aros.

#### THE ROCK FORMATIONS AND METALLIC ORES.

The country rock of the mineral region is lime-But most of this portion of the Sierra Madre is blanketed with a capping of eruptive rocks thousands of feet thick. Probably one hundred different varieties of these rocks may be found here. A few miles west of Candelaria, however, the limestone crops out, and a little farther on the formation seems to resolve into a series of parallel belts, not continuous or regular. but coursing generally with the continental divide and extending indefinitely north and south. These belts are mainly composed of lime rock, intersected by numerous dikes and blow-outs of eruptive rocks and veins of quartzite and crystalline calcite. The formation may often be traced for miles across country. The strata of the lime are twisted and overlapped in every conceivable way.

The exposed limestones are frequently impregnated with ores of silver, copper, and lead. Much of the silver ore is very rich, assays showing 400 to 700 ounces of silver being not unusual, while

some recent discoveries give 8,000 to 13,000 ounces upon assayer's test. Some of the richest silver ores also carry the greatest proportion of gold. Nearly all the paying silver-copper ore found contains enough gold to pay for working.

Gold occurs throughout the region south and west of Candelaria, in quartz and calcite veins

(The Rio Aros lies eight hundred feet below. The ridges are three thousand feet above the river.)

traversing limestone, in iron oxides, and sometimes in eruptive rocks. It is generally supposed that this region is the very heart of the country, the source of the gold in the Yaqui and its tribu-Many miners have come to the conclusion that the so-called "mother lead" lies in the Devil's Backbone, or in other words that "the best fishing is on the other side of the creek." Hitherto that particular ridge has been thought most dangerous to prospect. It is true that it is terribly wild and rough, but so far as Apaches or renegades are concerned, the chance of molestation is probably small. The richest free-milling gold ore so far found is a dark red ferruginous rock, filled with specks of gold easily visible to the unaided eve. There is a deposit of this class of ore near Dolores and another not far from Huisopa.

The placers of this region are of unknown extent. They are known to exist in many of the tributaries of the Rio Aros from Guaynopa west and south, in the Aros itself, in the Yaqui, and in streams flowing into the Yaqui west of Sahuaripa. Most of the gold in the placers so far discovered is in the form of flakes or fine flour. Naturally simple panning is not in every case remunerative. Nuggets of considerable size have been displayed at various times by Indians and Mexicans, and stories of rich deposits of gold in

THE BEAUTIFUL BURRO.
(Men are desirable; the burro indispensable.)

that form will not down. Americans have not yet found many large lumps. The Grand Cañon, shown on the map west of Guaynopa, has for years been thought to contain unlimited wealth, and while many have essayed to reach the bed of the canyon, no white man has so far succeeded. If a party of white men, feeling no fear of Apaches or renegades, should determine to descend into that abyss and take the chances, it might result in a rich discovery. No guide should be employed. Most of them know nothing; if they know they will intentionally mislead. It is not hard to find the canyon; the thing to do then is to get into it and make a thorough exploration.

So crude have been the methods of most of those who have tried their luck in this region that the finely divided gold which constitutes most of the deposit has been allowed to run to waste. There is apparently plenty of gold, in placers and in ledges, but it must be won by modern methods and modern men.

NEAR THE HEAD OF THE AROS.

HOW TO GO.

There is little to fear at this day from savage The Yaquis and Temochics are peaceable; the Apaches are dispersed. In the district above described there are few settlements of any sort, and men are seldom encountered. or a bear sometimes crosses the trail. From Chuichupa southward two men may travel together with little chance of being molested. There is always danger of accident or sickness, however, and two is rather a small party for the best work. Toward the westward the country is particularly wild and dangerous, and for a long time it has been the reputed hiding-place of a band of desperate renegades. Nothing is certainly known as to this, but fear has held fact at bay, so that the country is almost unknown.

The way to go through this country is afoot, packing burros. These absurd little beasts can do more work and last longer with less care and

ON THE ROAD TO THE YAQUI COUNTRY.

feed than either a horse or a mule. The trails are often difficult and dangerous, but the little animals are generally sure footed, and even if one falls several hundred feet over a ledge it is likely to hurt the pack more than it does the burro. However, it is well to provide a few extra burros at the start. A party with burros leaving Casas Grandes can camp on the Rio Aros at the end of a week and at Huisopa the second week.

Through nearly all the region west of the Santa Maria River there is game unlimited. There is no better hunting-ground to be found anywhere than along the Piedras Verdes River, where deer may be seen in bunches, lion tracks may be counted by the hundreds, and bears and wild turkeys are often brought to earth. Game is

plenty as far as Chuichupa and again beyond the Aros. There is fish in the rivers of the west slope.

The mineral country may be entered at any time of the year; the best time is at the end of

PROSPECTORS ON CANDELARIA.
(Going in to Chuichupa for supplies.)

the rainy season, about September 15. From that time until January the feed is abundant, and water may be found anywhere in the mountains. In the spring the feed is dry and poor and stock must be fed on corn. At all times there is enough water for camping purposes. In the winter the nights are often very cold, owing to the high altitude. The days as a rule are warm and sunny, and the climate is healthful and generally pleasant. The outfit necessary for two men three months would include:

Flour, 160 pounds; corn meal, 10 pounds; side bacon, 100 to 200 pounds; dried fruit, 10 pounds; salt, 5 pounds; baking powder, 3 pounds; pepper, ½ pound; sugar, 10 pounds; coffee, 10 pounds; two gold pans; two prospector's picks; one good pick, shovel, and axe; plates, cups knives, forks, and spoons, three of each; bread pan; Dutch oven; frying pan; coffee pot; large saucepan or camp kettle: water bucket; canteens; soap; matches: tobacco; whisky; quinine; arnica; vaseline; Jamaica ginger; bandages; absorbent cotton; mercury; simple chemicals for tests; burros enough so there will not be more than one hundred pounds apiece; pack saddles: plenty of rope; extra cinches; rifle, revolver, knife, one each apiece; cartridges; bedding; wagon sheets; plenty of canvas and burlap sacks; extra shoes.

This outfit for two men three months would require perhaps from \$125 to \$140 in gold.

The Sierra Madre is without question rich in the precious metals. There is room for thousands of Americans in the "Yaqui country," and development is sure to come. If it is not a Klondike in richness, neither has it Klondike's climate.

## THE REFERENDUM AND THE SWISS RAILROADS.

BY J. R. MACDONALD.\*

N Sunday, February 20, 1898, the people of Switzerland were called upon to decide whether they would become the owners of their railroads or whether these should remain in the hands of private companies. Throughout each canton voting papers were distributed with this question upon them: "Will you accept the Federal Law of October 15, 1897, for the Purchase and Administration of Railways by the Federation and for the Organization of Swiss Federal Railways?" Opposite, as in our own ballot papers, was a space for the answer, "Yes" or "No," and the addition of any other word would invalidate the vote; copies of the law were also distributed among The large majority answered in the the voters. affirmative, 384,148 voting for the bill, and less than half that number, only 177,130, against it. As the result, the principal lines in Switzerland will in five years be the property of the nation. This is a very different result from that of a referendum which was held on the same question, but with reference to the lines of one railroad company only, six years ago, December 6, 1891, when 289,406 voted against and only 130,729 in favor of the acquisition of the Central Railway by the Federation. It has been a long business on the part of the advocates of state railroads in Switzerland to educate the people up to their views. The question is one of special importance to the whole country, for by its geographical position, far away from any sea front, with intercommunication between one part and another hampered by chains of mountains, it owes its commercial development to its railroad engineers, who have made it the highway of nations, and also the holiday ground for the wealthy of all countries. The lover of nature may give a shudder as he sees the black line creeping along the magnificent gorge, and even desecrating the regions of perpetual snow, but to those who live among the heights it means possibilities of development formerly unattainable, and to take it away would be to take away their livelihood. But the same physical features which make rail-

roads specially important to the country make them also specially difficult to build and to finance, and hence the question of their public control, though it has been so much agitated, has been shirked until the present time.

#### 'TIS FIFTY YEARS SINCE.

The idea was first put prominently forward in the debates on the Constitution of 1848. then declared that Article 23, providing that the Confederation may carry on at its own expense or may subsidize public works, and giving it to this end the right of expropriation with indemnity, has special reference to railroads, and it has been impossible since then for private companies to maintain in opposition to this their claims to undisturbed possession. It was even proposed at that time that the state should open up its own Our engineer Stephenson was conrailroads. sulted as to the practicability of such an enterprise, and declared that it would be impossible, owing to the difficulty of construction, to estimate the expense beforehand; but he and other experts seem to have been strong in their condemnation of the extortions practiced by private companies elsewhere. The Federal Council and a committee of the National Council declared themselves in favor of state enterprise, the latter closing its report on the subject in May, 1852, with this stirring injunction: "Declare resolutely that the Swiss railroads shall be a national work, an indissoluble bond between our different populations, a fresh undertaking of a democracy full of life, an imposing monument of our new Constitution. But the Federal Assembly could not face the risks of such a great undertaking; they would not even take partial liability and partial authority in the schemes of private companies, but put all responsibility on the shoulders of the cantonal governments, reserving to themselves only the right of refusing sanction to plans which threatened danger from a military point of view.

#### THE RAILROADS AND THE LAW.

Under the cantonal authority difficulties soon became manifest; the development of railroads soon proved to be an affair of much more than local importance; international questions entered in and caused complications; cantonal jealousies made it easy for the private companies to dictate their own terms; and then again when these went

<sup>•</sup> Mr. Macdonald, who writes this account of the popular vote in Switzerland in favor of the nationalization of the railroads, is a correspondent of the New Age, a weekly paper, edited by Mr. A. E. Fletcher, in London. Mr. Macdonald has recently contributed to that paper a very interestin series of letters from the United States, descriptive of political, social, and economic conditions. We republish the present article with acknowledgments to the New Age.—The EDITOR.

too far and became too dictatorial the cantons refused even their reasonable requests, so that the companies appealed for protection against them. At last the Federal Government stepped in, and in 1872 took back power into its own hands by the Federal law of 1872, which remains in force to the present day. By this act it provided for the enforcement of any breach of contract against the companies for the regular administration of postal, telegraph, and military communication, and for the exercise of its authority in various other directions. The Federal Council (who correspond to a certain extent to our Cabinet) in their report at the time remained faithful to their old ambition for state control which they had cherished from the beginning, and declared that if the companies failed to give satisfaction the next law should provide for their supersession by Since then many subsidiary laws have been passed, dealing with the railroad companies, such, for instance, as that of 1890, limiting the hours of work of their employees.

#### FIRST ATTEMPTS AT NATIONALIZATION.

Meanwhile the companies themselves had been gradually opening up the country amid all the ups and downs of fortune of which the state had fought shy. By the end of 1894 they had altogether lines to the extent of 3,544 kilometers, a capital of 1,182,258,354 francs, and had suffered losses amounting to 94,941,532 francs. Many of the companies which started independently had amalgamated; while small local lines such as those objectionable funiculars up the mountain sides remained unabsorbed. Great engineering feats had been accomplished which were the wonder of the whole world, but they had entailed, as was foreseen, great risks, and the suffering and loss caused by failures and panics had been more severe in the case of private companies than they would have been if borne by the The extreme anxiety to make money had also blinded the companies to the interests of the people and had caused unnecessary waste and inconvenience. These things were noted by the watchful Federal Council, and in 1883 they tried to make use of the power which fell to them in that year to give notice that in 1888 the companies would be bought up by the state. the financial basis of this arrangement was found to be unsound; the twenty-five years' purchase which the state was bound to pay amounted in the case of each company except one to more than its first value; and it was therefore decided that instead of taking over the property of the companies a law should be passed forcing them to keep their accounts in such a way as to form a fair basis for future purchase. Not discouraged

by this failure, the Federal Council in 1887 put forward another attempt. It proposed to take over the lines of the Northeastern Company by friendly agreement, but received such cold support from the Chambers that it was obliged to break off negotiations. In 1890 the Federal Assembly took a step in advance by using powers which the Federal Council had legalized in 1857 and buying up so many shares in the Jura-Simplon Railway that they became entitled to a considerable voice in its management. At the same time they paved the way for the great move which they have now taken, and which has now been ratified by the people; for they made stipulations that the Confederation should have the right to buy up all the lines in May, 1903. This opportunity the Federal Council was determined not to let slip; five years' notice was required x for the purchase, and this accordingly falls due in the spring of this year in the case of five of the large companies, the St. Gothard being purchasable two years later. Meanwhile they made, as we have already seen, still another attempt in 1891,  $\chi$ when they proposed to buy up the Central Railway Company, and were defeated at the referendum.

#### THE COUNCIL'S ARGUMENTS.

On March 25 of last year the Federal Council sent a "message" to the Federal Assembly laying before them the proposed law, which, with a few alterations, was circulated among the people before the vote, with details as to its financial issues, etc., and giving the history of the development of railroads in Switzerland and of former attempts at nationalization. They also devote a considerable space to arguments in favor of state control, among which we see all those which are so often urged among us, but with far less persistency and publicity. First and foremost, they put the argument that while a private company acts primarily in the interests of its shareholders, the state's first object is the convenience of the They lay down most stringently that after paying the interest on the capital borrowed for the purchase, all profits shall go, not into the state funds, but into the improvement of the service, by increasing its efficiency and lowering the fares. They then show very clearly and practically the advantages to be gained by-

1. Unity of administration, involving saving of labor, simplification of bookkeeping, less expense in providing railroad plant, greater security of traffic. They lay down the principle of a "living wage" for their employees, and promise to carry out more fully than the companies have done the provisions as to limitation of hours and the arrangements for pensions and sick benefit which already exist.

- 2. The cheapening of transit, both for passengers and goods.
- 3. The establishing of a sinking fund for the redemption of the original capital.
- 4. Finally, the freedom from foreign influence which may creep in with foreign shareholders, and the entire distinctness of the railroad funds from those of the state, so that they may be devoted to improvement of the service.

#### STATE MANAGEMENT.

The financial basis of the arrangement had been settled in the former charters given to the companies as amended in 1883; the sum to be paid by the state is to be twenty-five times the average profits for the past ten years. The boards which shall have the management of the business under the state are to be constituted with a view both to continuity of action and also ample repre-

sentation both of federal and cantonal interests. It is only the six largest companies which are to be taken over at first; the smaller ones can be safely left to local management for the present.

The plan thus carefully drawn up and explained by the Federal Council was under discussion in the Chambers for several months last year. On October 15 it was finally accepted by them, and then followed the final agitation to bring the merits of the scheme before the people at large, which, as we know, has just now come to an overwhelmingly successful issue. We shall all watch with interest the further working of this measure which has been so long fought over, so often delayed, and which is of importance not only to the country which has adopted it, but to others to whom its success or failure will be a practical object-lesson.

## BACCHYLIDES, THE RISEN BARD.

BY J. IRVING MANATT.

In this dispensation of things as they are, it is something of an anachronism for a poet to be born. But for one to shake off the mold of twenty-four centuries and rise from the dead is a flaunting miracle.

Bacchylides was born in Keos toward the end of the sixth century before Christ; he was born again in Egypt the other day, to irradiate as a new-kindled star the dying years of the nineteenth century after Christ. As a youth, from the heights of his native Ioulis he may have watched the Persian galleys steering for Marathon; in his early manhood, when he had already tried conclusions with Pindar in the song-tourneys attendant on the games of Greece, he must have seen the fleet of Xerxes flying from Salamis. And now he wakes up in Egypt to find the realm of Amasis an appanage of England, and his own fatherland, that then beat back the myriads of the Mede, given over to the tender mercies of the The New Zealander on London Bridge two thousand years from now can hardly have greater surprises in store.

We may well pause a moment in the mad rush for gold and the nobler stress of our own grave issues to take note of this strange return and give ear to this far-borne voice. To those among us who yet believe that the past has lessons for us—who hold our birthright dearer than any

mess of pottage—that voice is doubly welcome. Beyond its own essential sweetness, it breathes hope and strength. It is one more guarantee of stanch allies-even the stars in their coursesin our fight for the ideal. Indeed, whenever the heathen rage and the Philistines beset us with uncommon fury, the very graves open to be our armories. When Homer lay hacked and mangled under the cleaver of a critical and denying age, Schliemann came with the heart of a child and the vision of a poet and laid bare to all men's eyes the real world of Homeric song. Out of mist and myth Troy rose again a strongfenced city, proof against fire and sword and all-devouring time, and Mycenæ with her royal tombs still rich in gold. With the walls and towers, the palaces and tombs, the arms and jewels, the tools and art of the Heroic Age in full evidence, we must now recognize in Homer the most objective of poets, if not indeed the veritable father of history. One or many, it matters not: "Iliad" and "Odyssey" stand out living and coherent transcripts of a world too real to be gainsaid.

It is but one instance of the new light breaking forth out of the old Greek world on the written word it has left us. But it is out of Egypt that the written word itself is coming back. A few years ago in my house in Lyceum Street in Athens—possibly on the very spot where

the Stagirite taught and wrote—it was my felicity to read Aristotle's "Athenian Constitution," a work which no human eye had seen for twelve (it may be eighteen) centuries until an Egyptian tomb gave it up in 1890. Its reappearance was then hailed as "the most striking event in the history of classical literature" since the Renaissance. But it was neither the first nor the last event of its kind. We had already recovered in the same way the speeches of Hypereides, "the Sheridan of ancient Athens," and we have since got back Herondas and a precious fragment of Menander—to say nothing of new bits or new texts of classical writers already in our possession.

But from the point of view of pure literature, none of these recoveries is to be compared for a moment with the last. In Bacchylides we welcome back one of the sweetest of old Greek singers. So he was rated by the ancients—notably by that Mæcenas of the fifth century, Hiero of Syracuse, who preferred him even to Pindar; and he appears to have held his place as a popular favorite for a thousand years. Then he vanishes out of the world's ken—all of him but a hundred odd lines that had drifted down to us in the wreck of ancient literature-until recently another Egyptian tomb was rifled and the most precious of its plunder found its way to the British Museum. It was a torn papyrus roll, some 15 feet in aggregate length, with 39 columns containing 20 measurably complete poems which range from 14 to 200 lines in extent. The roll was written about the middle of the first century B.c.—possibly before the burning of the great Alexandrian library in B.c. 48—but was not consigned to its long repose before the end of the century following. It was an easy matter to identify the author, for 24 out of the 107 lines of Bacchylides already known to us are found again in the These poems are now before us in an admirable editio princeps prepared by Mr. F. G. Kenyon—who had already edited the new-found texts of Aristotle, Herondas, and Hypereidesand published by the British Museum.

To all who concern themselves directly with classical literature this new book, which has waited twenty-four centuries for a publisher, must for the present overshadow all other new books. But has it any message for a wider public? It is in the conviction that these old songs appeal to man as man, in every age and clime the same, that they are here considered. And there has hardly been an age between the old fifth and the new nineteenth century more responsive than our own to the dominant note of Bacchylides. For he is, first of all, the laureate of manly sport. Not of a mere muscular athleticism, but of that old Greek discipline which wrought at once on brawn

and brain and which made Olympia a training school in patriotism and religion as well as a nursery of art and song. Of the twenty odes now recovered, fourteen celebrate victories in the national games. Readers of Pindar need not be reminded that the epinician ode took a wide and high range, often comparable to the sweep of our great secular commemoration odes. The immediate event of a successful sprinter or a sweep-stakes steed or a winning four horse chariot afforded the poet a text; but the text opened upon all that was inspiring in Hellenic story.

Let us look for a moment at Bacchylides' performance in this kind. Four of the odes, and these among the shortest and simplest, commemorate athletes from his own sunny isle of Keos; one only, an Athenian whose name is lost. but whose glory as an all-round winner on eight fields of sport, is here embalmed forever; while three are addressed to Hiero of Syracuse, who appears to have prized a triumph at Olympia hardly less than his overthrow of the Etruscans at Cumæ and to have held the society of poets as dear as either. Thus we find at his court Æschylus and Simonides, the great laureates of war, as well as Bacchylides and Pindar, rival singers of the victories of peace. Could we transport ourselves back to that brilliant court in the fourth year after Salamis (476 B.C.), we should witness a noble Sängerfest. At Olympia Hiero's race-horse Pherenikos (Victor), after two previous successes at Delphi, has just broken the record again; and Syracuse is en tête. We do not know about the fireworks and parade, but the immortal part of the occasion survives. it Pindar composed his splendid first Olympian, a lyric we have always known: for it, too, Bacchylides composed a noble ode (the fifth in Kenyon's arrangement) of two hundred lines which is now restored to us in its integrity. And so we may listen for the first time in fourteen centuries at least to these great voices as they are raised in friendly emulation. We hear the measures of the Theban rising and swelling like organ notes as he proclaims the unmatched glories of Olympia, salutes but briefly the royal patron and the winning horse, and then launches out on the tale of Pelops and that first Olympian chariot race that won him a kingdom and a bride as well as the glory of founder of the games. The glorious strain is ended with a prayer: "May it be thine to walk loftily all thy life and mine to be the friend of winners in the games, winning honor for my art among Hellenes every where.

And then another choir advances into the great hall of the palace (it may have been a Keian choir with the poet himself at its head) and sings to the accompaniment of lyre and flute the simpler strains of Bacchylides--"the violet-crowned Muses' delightsome gift to Hiero, a hymn woven with the deep-zoned Graces' help by Urania's glorious servitor," who forthwith in a noble flight figures himself as an eagle breasting the upper deep and thus usurps a favorite property of Pindar. And here, with a prayer that God may not weary of blessing Hiero, he comes to the sweepstakes.

Beside wide-whirling Alpheios and eke at holy Pytho Eos of the golden arms saw Victor victorious-foal of the chestnut coat and whirlwind course. And, laying hand on earth, I do avouch that on the track no rival's dust e'er smote him as to the goal he flew. For swift as Boreas' blast, obedient to the pilot's will, he speeds to win for hostly Hiero fresh acclaims of victory.

Then with a brief transition the ode passes to its central theme, which is Herakles' descent to Hades, where he encounters the shade of Meleager and hears from his lips the tale of the Calydonian boar hunt and his own untimely "taking off."

There of ill-starred men the souls he met beside Cocytus' streams like leaves the wind doth stir on Ida's gleaming forelands clothed with flocks. And amid them towered the wraith of stout-souled, spear-wielding Meleager. Him as he saw in arms resplendent, Alkmene's hero son set shrilling bow-string to the hook and then forth from the opened quiver drew an arrow barbed with brass. But facing him forthshowed the shade of Meleager, and knowing well bespake him: "Scion of mighty Zeus, stand in thy place and calm thy mood. Speed not in vain the keen shafts from thy hands at dead men's ghosts. Naught hast thou to fear."

He said; and awe took hold on Prince Amphitryon's son and thus quoth he: " Who of immortals or of mortal men nursed such a sprout and in what land? Who slew thee? Him, in sooth, fair-zoned Hera at my head will straightway hurl. But that, I ween, is blonde

Him answered Meleager all in tears: "Hard task to turn aside gods' purpose toward earth-born men. Else had my sire Knight Oineus stayed the ire of lily-crowned, white-armed Artemis, revered, with prayer and sacrifice of many goats and red-backed kine. But, seized with wrath invincible, the maiden god let loose on fair-choired Calydon a mighty boar unshamed in fight. There in o'er-swollen strength he wasted orchards with his tusks and slaughtered flocks and every man that came to face him. With him six days long we waged a stubborn fight, we of Greece the bravest as befits the brave; and when Heaven gave victory to Ætolia's sons we buried whom the raging boar in furious onset had laid low. . . . For them a deadly doom destroyed, poor souls! ere yet the fleryhearted huntress, Leto's child, had stayed her wrath. And so about the tawny hide we strove amain with the Kouretes stanch in fight. Then in the surging throng I struck down Iphiklos and goodly Aphareus, my mother's brethren swift: for in the tug of war hard-hearted Ares knows no friend, but blindly out-of-hand the bolts go flying and bear death to whom Heaven will."

Then Meleager recites the mother's mystical vengeance and his own doom, whereupon Herakles consoles him with that famous word already known to us in a fragment of our poet:

> "For mortal man not to be born is best, Nor e'er to see the bright beams of the day."

But, cutting the condolement short, he asks the illustrious shade if he had left on earth a sister of the same heroic mold for him to wed. this Meleager responds with a word about "fairthroated Deianeira," and the poet pauses abruptly on the threshold of another famous story.

On the ears of Hiero's guests what is here set down in word for word prose would fall in strains of noble music; and it is to be hoped that some true poet of our time may yet sing all these sweet songs over again for English ears. time, any true interpretation, however faulty in form, must let something of the old poet's spirit shine through. His dramatic power, his rapid movement, his serene simplicity must appeal to the modern reader.

But it is in another poem of a different class that we have the poet at his best. The seventeenth ode is an idyl of the deep sea without its match in Greek or perhaps in any other literature. It is a new version of the old story of Theseus and the Athenian tribute to the Minotaur. Minos himself is carrying off the young hero and his hapless company to Crete. Smitten by the charms of Eriboia, one of the devoted band, the tyrant lays hands upon her: she appeals to Theseus, who rates him roundly and is challenged in turn to prove himself Poseidon's son by plunging into the deep and bringing back the tyrant's ring. the poet shall tell his own story:

The dark-prowed ship, that bore unflinching Theseus with twice seven bright Ionian youth, now clave the Cretan sea as on her shining sail the north winds fell-thanks to brave Athene of the battle-shield. And Minos' heart was stung by fair-browed Kypris' fearsome gifts, till that he stayed his hand no more, but touched a maid's fair cheeks. Then Eriboia cried to Prince Pandion's bronze-mailed heir; and Theseus saw, and 'neath their brows his dark eyes flashed and flerce pangs smote his heart. And thus he spake:

"Son of sovereign Zeus! within thy breast thou steerest now no holy will. Curb, hero, this high-handed arrogance-force. What Heaven's doom omnipotent decreed and as the scale of justice falls, that lot foredoomed we will fulfill whene'er it come. But stay thou thy grievous lust. If erst on Ida's slope Phœnix fair maiden of the lovely name [Europa] shared Zeus' couch and bare thee, bravest of mortal men, yet me rich Pittheus' daughter to sea-god Poseidon bare, and for her bridal the violet-tressed Nereids gave a golden veil. For that I charge thee, war-lord of the Knossians, forbear this woeful wantoning. I could not choose to see ambrosial Dawn's dear light shouldst thou do wrong to one of these unwilling youths. Ere that

our hands' might we will show, and Heaven shall judge Thus spake the hero of the valorous spear, and every

the event."

sailor marveled at the challenge bold. But Helios' kin waxed wroth at heart and wove a wondrous plot, and said:

"Sire Zeus omnipotent, hear thou! If in sooth fairarmed Phœnissa bare me thy son, now from heaven flash forth a swift fire-bristling levin brand, sure sign for men to read. And if Trozzenian Aithra to Poseidon, shaker of the earth, bare thee, then plunge thee boldly to thy father's halls and forth from the deep sea fetch back this golden jewel of my hand. Thus shalt thou prove the Kronian thunder-king, who guardeth all, if he doth hear my prayer."

The unmeasured prayer was heard of father Zeus, and exceeding honor he bestowed on Minos, his dear son, fain to own him in all men's sight. The lightning flashed; and, that gracious portent seen, the hero battle-proof spread his palms to ether bright and spake:

"Theseus, herein thou seest Zeus' assuring gifts. Now plunge thee down the roaring flood and then thy sire Kronides, King Poseidon, shall grant thee supreme

renown in sylvan land!"

Thus spake he; and the hero's soul recoiled not, but, treading the firm deck, he sprang, and the ocean-mead received and welcomed him. Then, inly glad at heart, the son of Zeus bade hold the well-built ship adown the wind; but Fate ordained another way. The bark flew on her course and strongly blew the north wind in her wake. That young Athenian band was smit with dread what time their leader leaped into the sea, and all their lily eyes rained tears in stress of grievous need.

But dolphins that haunt the deep swift bore great Theseus to the mansion of his knightly sire, and to the gods' great hall he came. There amazèd he beheld blest Nereus' damsels fair. From those radiant forms shone light so as of fire, and round about their tresses coiled ribands of spun gold as they with liquid feet and merry heart disported in the dance. And ox-eyed Amphitrite in her lovely halls he saw, his sire's dear spouse august. On him she put a purple robe and on his curling locks she set a blameless wreath with roses dusk—a wreath which erst deceitful Aphrodite gave her on her wedding day.

Naught that gods will is past sane men's believing. Instant beside the light-helmed ship he showed. Alack! how well he pricked the Knossian war-lord's proud conceit as forth he came unwetted from the sea, amazing all; for on his limbs shone gifts of gods. Then bright-throned maids with all good cheer restored made joyous outcry till the deep sea rang again, and the youth anear with lovely voices raised the strain of victory.

"O Delian, heart-warmed by Keian choirs, grant us a god-sent store of blessings to our lot."

Whether it fall upon our ears in the solemn cadence of the Keian choir which first chanted it at some Athenian festival or we merely con the tale divorced from the perfect words and the perfect music of the old Greek bard, this is vital poetry. And it gets an added charm from art.

It is the story painted by Mikon on the Theseum walls long before the Parthenon was reared; and it was a subject dear to the old vase-painters as well. On the great François Vase at Florence, which may be fifty years older than Bacchylides himself, we have two of the poet's scenes—the hero's return from his submarine excursion and the landing in Crete; and within the Euphronius cylix at the Louvre we have a charming picture of Theseus' audience with Amphitrite in her deep-sea halls.

A few years ago, when Bacchvlides was yet more a memory than a presence, I made a pilgrimage to the island of his birth and breeding. Keos was still sunning herself in the fame of Simonides, laureate militant of Leonidas and Thermopylæ, rather than of his nephew Bacchvlides, then chiefly remembered as a piper of peace. As I climbed the long way to his native Ioulis still no mean city—and entered its walls, I could not dream that its younger poet was to return to us in a blaze of glory that should eclipse the elder; or that Keian athletes forgotten for ages were to take a new lease of immortality with him and his songs. But even then there was enough salvage to hint at the worth of what we had lost —enough to accredit Bacchylides among the singers whom the Muses gladly own. In proof of this I subjoin a rendering of the old fragment in praise of Peace by my colleague, Prof. Francis Greenleaf Allinson, who sees in the personification of Wealth and Peace in the first lines a possible anticipation of a famous work of plastic art now at Munich-"the beautiful Eirene with the infant Plutus in her arms, the look of a Madonns These lines of Bacchylides may well on her face. have been among the pictures in the artist's busy brain while his hand was fashioning the statue:'

"And now for mortals Peace, the mighty mother, giveth

To Wealth, and bears culled flowers of honeyed minstrelsy: She makes on sculptured altars to the gods to blaze Thigh pieces, in the yellow flame, of bullocks and of deepwooled lambs;

And makes the youths give thought to athletes toil and flutes and revelry;

Now in the steel-bound hand-loops of the shield are Stretched the dusk-red spiders' woven tapestries; The barbèd spears, the two-edged swords are cankered o'er: The trumpet's brazen blare is still;

Nor are the eyelids robbed of sleep—sweet sleep like honey that doth clog the sense—

That warms my heart;

The streets are thronged with lovely revelers and lovers' hymns burst forth ablaze."

## LEADING ARTICLES OF THE MONTH.

#### INTERVENTION IN CUBA.

I N the North American Review for March Mr. John H. Latané has an important article on the subject of "Intervention of the United States in Cuba."

This writer reminds us that the question is by no means new to American diplomacy; at inter vals during more than three-quarters of a century it has confronted our legislators and molders of public opinion; many volumes of our diplomatic correspondence have been devoted to it, our political parties have dealt with it in their platforms, and so have our statesmen in their speeches and messages. The present critical situation presents hardly a phase that has not had a parallel at some former time.

Prior to 1845 we were concerned only in applying the Monroe doctrine to Cuba. We steadily resisted all attempts on the part of Great Britain and France to acquire the island, and we tendered to Spain our military aid to resist any effort on the part of a European power to take Cuba from her.

During the Mexican War, however, and for fifteen years thereafter, Cuba became an object of desire to many of our statesmen, especially to those of the South as an acquisition to slave territory. There were filibustering expeditions which endeavored to annex the island to the United States by force. The abolition of slavery in this country largely did away with the motives for annexation, and after our civil war we contented ourselves with urging on Spain the abolition of slavery in Cuba, the establishment of a more liberal form of government through independence or autonomy, and the promotion of commercial relations between the United States and Cuba.

THE "TEN YEARS' WAR" AND THE AFFAIR OF THE

At the beginning of the Cuban uprising of 1868 the Spanish authorities issued certain decrees which violated treaty obligations to the United States, especially as regarded the search of vessels on the high seas. This Government at once notified Spain that the assumption of war powers over our commerce would be regarded by the United States as a recognition by Spain of a state of war in Cuba. As Spain would not admit the existence of actual war on the island (such an admission would at once have led to the granting of belligerent rights to the insurgents by the United

States), she was compelled to suspend the enforcement of the search order as applied to our ships, but other obnoxious decrees affecting the treaty rights of American citizens in Cuba remained in force.

Early in his administration President Grant offered the good offices of the United States in mediation between Spain and Cuba on the basis of Cuban independence and the payment of a stipulated sum by Cuba to Spain, but this offer was withdrawn, at Spain's request, because it was interpreted by the Spanish press as implying the purpose of the United States to extend recognition to the Cubans, and "no Spanish cabinet could stand under the odium of having made a concession to the Cubans under a threat from an outside power."

The short-lived Spanish republic was recognized by the United States in 1873, at a time when all the powers of Europe, except Switzerland, withdrew from diplomatic relations with the new government. The pleasant relations between the United States and Spain were of short duration, however. On October 31, 1873, the steamer Virginius, sailing under American colors and carrying a United States registry, was captured on the high seas by the Tornado, a Spanish war vessel, and taken into the port of Santiago de Cuba, where sixteen of the passengers, the captain, and the entire crew of thirty-six men were condemned to death by court-martial, despite the protests of the United States consul, and executed.

#### INTERVENTION PROPOSED.

At an early stage of the negotiations resulting from the *Virginius* affair, our minister to Spain, General Sickles, resigned his post and was succeeded by Mr. Caleb Cushing. What followed can best be told in Mr. Latané's own words:

"In his general instructions to Mr. Cushing before his departure for his post Mr. Fish expressed the policy of the administration at considerable length. Among other things he said: The President cannot but regard independence and emancipation, of course, as the only certain and even the necessary solution of the question of Cuba. And, in his mind, all incidental questions are quite subordinate to those, the larger objects of the United States in this respect.' Nearly two years after this passage had been written the Grant administration determined in view of the unchanged condition of

the struggle, to bring matters to an issue, and to force, if need be, the hand of the Spanish Government. On November 5, 1875, Mr. Fish addressed a long letter to Mr. Cushing, in which, after reviewing the course of the insurrection, which had been extended over seven years, the interests of the United States affected thereby, the numerous claims arising therefrom (many of them still unsettled), the persistent refusal of Spain to redress these grievances, and her general neglect of treaty obligations, he concludes:

"'In the absence of any prospect of a termination of the war or of any change in the manner in which it has been conducted on either side, the President feels that the time is at hand when it may be the duty of other governments to intervene, solely with a view of bringing to an end a disastrous and destructive conflict and of restoring peace in the island of Cuba. No government is more deeply interested in the order and peaceful administration of this island than is that of the United States, and none has suffered as the United States from the condition which has obtained there during the past six or seven years. He will therefore feel it his duty at an early day to submit the subject in this light and accompanied by an expression of the views above presented for the consideration of Congress.'

"Mr. Cushing was instructed to read this note to the Spanish minister of state. same time a copy was sent to General Schenck, United States Minister at London, with instructions to read the same to Lord Derby, and to suggest to him that it would be agreeable to the United States if the British Government would support by its influence the position assumed by the Washington cabinet. In the course of a few days copies of this note were sent to our representatives at Paris, Berlin, Vienna, Rome, Lisbon, and St. Petersburg, with instructions to communicate its purport orally or by reading the note to the governments to which they were accredited, and to ask their intervention with Spain in the interests of terminating the state of affairs existing in Cuba."

In his message to Congress in December, 1875 (quoted at length by President McKinley in his annual message), President Grant discountenanced the recognition of either independence or belligerency, but intimated intervention as a possible necessity.

#### CONSEQUENCES.

The replies of Great Britain and the other powers to the American note were unsatisfactory. On the other hand, Spain gave assurances of immediate suppression of the rebellion, the abolition of slavery, and the introduction of administrative reforms The United States, therefore, made no further attempts at intervention. The Cuban struggle continued for two years longer. The

terms of pacification, announced early in 1878, included representation in the Spanish Cortes and the freedom of the slaves of the insurgents. The Cuban deputies in the Cortes, however, have not been representative men, but men of Spanish birth designated usually by the captain general. By gradual emancipation slavery ceased in the island in 1885.

Mr. Latané concludes his article as follows:

"The present insurrection has presented in the main the same features as the ten years' war; the same desultory methods of warfare; the same disregard by both parties of the rules of civilized nations; and the same liberal concessions on the part of Spain when intervention is spoken of. The Spanish Government is lavish of promises, but slow of fulfillment. If the Government of the United States should ever consider it its high mission to intervene in the affairs of Cuba. whether in the cause of civilization or of humanity or of American interests, it must be armed intervention, and when once decided upon it must be carried to fulfillment, without regard to Spanish promises of reform."

## THE AMERICAN NAVAL OFFICER OF THE FUTURE.

PASSED ASSISTANT ENGINEER Mc. FARLAND, of the United States navy, a member of the board appointed by Secretary Long to consider the claims to status of the different branches of the service, writing in Cussier's for March, describes the American naval officer of the future as "a fighting engineer."

The "personnel board" was composed of seven line and four engineer officers, with Assistant Secretary Roosevelt as president. The engineers, who for many years have maintained that a proper status in the service was not accorded them, submitted a statement of their claims as follows:

· 1. The right to exercise military command over the men of the engineer department. It may surprise those who are unfamiliar with naval laws and regulations to learn that such a claim should be necessary; but existing law and regulation explicitly deny the right of command to all staff officers, which includes engineers.

"2. The right, under proper circumstances, to command any enlisted man. At present, with the right of command denied to staff officers, there have been cases in which it was attempted to subordinate a commissioned staff officer to an enlisted man.

"3. Actual instead of 'relative' rank, in order that the legal right to command enlisted men should not be questioned.

"4. The military title indicative of this rank, but with the name engineer corps added, in order that there might be no confusion with officers of the line, and following the custom of the army with respect to officers of the various corps and departments."

These claims met with determined opposition from the line officers, who constituted a majority of the board, and a deadlock seemed inevitable, when a solution was offered in the form of a proposition from one of the line officers to make the engineers line officers, to abolish the separate engineering corps, and to have all the engineering duty performed in future by line officers. This proposition was made by Capt. Robley D. Evans.

#### EVERY OFFICER AN ENGINEER.

To those who will find it difficult to understand why the engineer corps should be abolished at the very time when everything about the battleship is done by machinery, the engineer's force making, in some cases, almost half the crew, Mr. McFarland explains:

"It will be observed that the scheme is not one of destruction, but of construction. The engineer corps, as a separate body of officers, disappears, but not its duties. These are, in the future, to be the work of the entire list of line officers, so that instead of about two hundred engineers there are to be about one thousand, who, however, will not be called engineers, but will retain the old titles of naval officers. In short, naval evolution and the effect of environment have made the naval officer an engineer."

"The modern torpedo is an intricate machine, whose service involves other machinery also, and in one navy at least this has brought out a special corps of torpedo engineers. Then there are the numerous electrical machines; in fact, as already stated, everything in a modern man-of-war goes by machinery. At present, the officers who have to handle and care for much of this machinery are not trained as engineers, and they have to learn their duties by the method of trial and error. Those who have natural mechanical aptitude make fewest mistakes and become proficient soonest.

"Much of the duty performed by line officers on shore is also engineering work, such as the superintendence of the gun factory at Washington, the inspection of torpedoes, rapid-fire guns, small arms, and of steel material for various purposes."

Thus many of the line officers have become engineers in fact, although not in name, and at present our navy has two sets of engineers, one of which differs from the other in education rather than in the nature of the official duties assigned to each.

The two things of supreme importance, as Mr. McFarland points out, are the handling of weapons and the management of the motive power, both of which mean the command of large numbers of men and engineering training.

"In the navy of the future, as sketched by the board, every officer is to be competent for duty in either of these fields. He is to be an engineer who is competent to care for and manipulate any of the engines on board ship, and who has been trained to command the men who actually handle these various engines. He is a specialist who has been given careful training for the particular work he has to do, which is different from that coming on any other engineer; he is, in short, a fighting engineer."

## THE MARINE ENGINE AND MODERN NAVAL STRATEGY.

OMMODORE MELVILLE, Chief Engineer of the United States Navy, writing in the North American Review for March on the subject of "Our Future on the Pacific," utters some timely words relative to the progress of steam in marine propulsion as a factor in shaping the policy of nations and in changing the scope and methods of naval strategy.

In 1805, when Nelson pursued the French fleet over 7,000 miles of sea, his ships averaged but 93 miles a day, or less than four knots an hour.

"'Salt beef and the French fleet are better than roast beef and champagne without it,' said the great admiral in beginning his stern chase. He found that fleet and with it death; but in the finding, through those lagging months, while drifting or beating over those leagues of sea, he must have felt to the full the limits which stinted the sea-power of his time.

"Steam has changed all this. Over the same Western Ocean which Nelson, bitterly impatient, crossed and recrossed so slowly in 1805, the United States cruiser Columbia swept, ninety years later, at a speed of 18.41 knots per hour, or four and three-quarter times that of the ships which, dull sailers though they were were very sure and deadly in their work at Trafalgar.

"This passage, in its sustained speed through such a distance, was not only a triumph, yet unequaled, for American naval engineering; it was, as well, a flashing illumination of the strategic fact that America's isolation, militarily, from European and Asian nations had diminished in this age in most marked degree. While it is not yet possible for the performance of the swift Columbia to be equaled in a transatlantic run by armored battleships, it seems quite certain that Nelson's speed can be increased nearly threefold, and that within two weeks a European fleet of any required strength could be thrown upon our Atlantic coast with one-third of its coal supply remaining."

#### GEOGRAPHIC ISOLATION NO SAFEGUARD.

Commodore Melville has no faith in geographic isolation as an assurance of safety to any nation. Ancient Peru, many leagues from Spain, fell a victim to Pizarro and his soldiery, and in later times China learned a similar lesson at the hands of the English. "While her officials babbled of invading England overland through Russia, the war of 1840 was waged against her by the people of that small island, parted from her by a hemisphere; and that war wrested Hong Kong from her shore-line, seized, in indemnity, \$21,000,000 from her treasury, and by force opened five of her ports to the commerce of the world

"These examples, it is true, come from the conflicts of higher civilizations with those differing from them more in kind than in degree; but the world's annals are not bare of similar illustrations from the wars of less unequal foes. It is well to remember that during the Revolution there were landed in America nearly 50,000 foreign troops; that in the War of 1812 British forces of nearly 25,000 men attacked the territory of the United States; that our ports were blockaded; and that in 1814 our Capitol was burned."

# MR. WALKER INTERVIEWS THE HON. T. B. REED.

MR. JOHN BRISBEN WALKER, in the April number of his magazine, the Cosmopolitan, contributes the first of the series of "Studies of Our Government," from his own pen, the first essay dealing with the power of the Speaker of the House of Representatives, and consisting largely of an interview which Mr. Walker has had with Hon. Thomas B. Reed, of Mr. Walker approached Mr. Reed with the frank statement that the course of a Congressman as Speaker seemed to Mr. Walker subversive of the very principles on which the representative government stood, expressing great interest to know the standpoint from which the Speaker himself looked at the matter. Here is Mr. Reed's answer:

"The whole matter is very simple. You have a representative body to legislate for a great country. Many thousands of bills are introduced

at each session. If the House worked night and day it could not give intelligent consideration to one-half of these measures. In practice it is found impossible to act upon one-tenth of them. What, then, shall we do? Shall there be no legislation because not all can be done that should be done? If some must be favored for consideration, who shall select these?

"The committees? Yes, but there are many committees, all pressing for legislation which they deem important, and the House has only so much time at its disposal. In order that anything like attention to the most important interests shall be given, there must be a process of selection. This work cannot be well given over. The Speaker alone is responsible to the entire House. He must aim, of course, to carry out the desires of the committees, and should he act in an arbitrary or unfair way he would be very quickly brought to book by them. He cannot exist without their support, and his power depends upon their opinion of his wisdom and in discriminations exercised by him. Who shall exercise this power if the Speaker does not?"

#### THE SPEAKER AN AVOWED PARTISAN.

"To what extent are you partial in giving recognition to those seeking the attention of the House?"

"Well, I may say to begin with that I make no distinction in the recognition of personal friends over enemies. I try to be fair at all times."

"But do you not almost invariably give the advantage to your own party?"

"Certainly," Mr. Reed replied in a tone that quite suggested "Why should I not?" "I give my own party invariably the advantage. I be lieve their objects most truly represent the best interests of the American people."

"But to return to your recognition of members: ought it not to be the duty of the presiding officer in a legislative body to draw out the fullest discussion, especially from the minority? Ought he not to seek to give the fairest opportunity for every argument to be heard which will throw light upon the subject under discussion?"

"Theoretically you are right; in practice many difficulties interfere to block the attainment of such theoretical perfection."

Then the conversation drifted off to a consideration of the comparative efficiency of the citizen acting as a member of a party and acting as an independent voter.

"What standing," I asked, "would a man of high intelligence and high character have to-day on the floor of the House if he belonged to none of the political parties?" "None at aff," was the quick reply. "So many measures are under discussion before the public that the House practically agrees to regard as unimportant and unworthy of consideration everything which has not been sufficiently advanced in public discussion to receive the sanction of some party."

#### THE WEAKNESS OF INDEPENDENCE.

"But suppose that the party with which a man would naturally affiliate were under the control of corrupt elements, or of a gang using the organization for selfish purposes. Would a member who stood aloof under such circumstances be powerless as the House is organized to-day?"

"Practically so. And very justly, it seems to me. If a man has a reform to carry out let him first convince one of the great political parties of its justice. He will have but half as many people to bring over in this way as if he were to undertake to impress his doctrine upon the entire nation."

The reply to this was that the history of reforms showed that they always sprang from without existing political parties.

"I need not argue that," he answered, "for you must concede that eventually they either were taken up by one of the old parties or required a new party for their consummation."

## ENGLAND VERSUS GERMANY.

In the April Harper's an Englishman, a Fellow of the Royal Geographical Society, Mr. Sidney Whitman, writes on "England and Germany," and the competition, and recognition of the competition, which has grown up between the two countries, especially in commerce and manufactures. Mr. Whitman is very outspoken and strong in his urging that it is no more England's true interest to foster the present feeling of antagonism toward Germany, than it is against that of Germany to continue sterile railing against the English. He thinks that the geographical situation of the two countries will in all probability preclude any coming to blows.

#### " MADE IN GERMANY."

"With regard to the English, the sooner they drop the contemptuous railing at things "made in Germany," the sooner they banish the fantastical project—more currently harbored than is generally believed or acknowledged—of sinking Germany's fleet, bombarding German towns, and ruining Germany's commerce, the better for all parties, themselves included. In competing with England, Germany is only fulfilling her national destiny—a competition which the English them-

selves invited and hailed with cordial welcome in 1851. But even if England's wish is to frustrate the realization of Germany's destiny, she is utterly powerless to prevent it or to stop her progress toward a great commercial, industrial, economic future. Germany to-day is already a wealth-producing country to an extent little dreamed of in England. It is too late to prevent Germany, even without a fleet, from occupying that position in the world in the twentieth century which her history in the Middle Ages-set back temporarily in modern times by the Thirty Years' War and its consequences—points to as her inevitable birthright in the center of Europe. A casual glance at Germany to-day, at the busy life-I had nearly said the magnificence of German towns such as Hamburg or Berlin, Cologne, Dresden, and many others—at the thousands of industrial centers, at the earnest work done in the laboratory, in the study, at the many national seats of learning—this, at least, might suffice to bring the conviction home even to the most patriotic Englishman that Germany in many practical matters is already ahead, has already left England in the rear.

#### ENGLAND'S SUPREMACY GONE.

"The qualities of energy, ingenuity, the capacity for self-sacrifice, the possession of wealth, which made England great, are doubtless England's still, but she is no longer to the same extent paramount in these possessions as of yore. The leadership in many important practical matters is no longer exclusively in the hands of England and Englishmen. In some things it has already irrevocably passed into the hands of Ger-This may be an unpalatable statement and seem an incredible one. But it is a fact, nevertheless, and one already seriously realized by the 'few,' even in England. Unfortunately for the progress of mankind, it is ever only the 'few' that 'see.' In France, in 1870, or rather in Berlin, it was one man only, Baron Stoffelthe French military attache—who 'saw' and warned, but nobody listened—nobody ever does It is a hare-brained idea to think of bombarding Germany's ports (Saturday Review, September 11, 1897)—as if a few 'wicked' English ironclads were going to sound the knell of a country which is marching onward in its predestined course to the sonorous strains of Wagner's 'Nibelungen.' There may be war-there has ever been war—there will always be war. In this case it is also war—the subtlest if not the most cruel-economic war! And victory will be to the most disciplined, the most intelligent, the most thrifty—shall I add, the most virtuous —the fittest!"

## JAPAN AND CHINA IN THE WORLD'S MARKET.

A N article on "Japan: A New Commercial Competitor" is contributed by Mr. Jerome-Dyer to the New Century Review for March.

Looking at the matter from the British point of view, this writer finds cause for alarm in Japan's rapid industrial and commercial progress. During the three years ending 1895, in the trade with India, China, Canada, Australia and certain other Pacific ports, British exports fell off more than £7,500,000, while the Japanese increased more than £1,500,000. Yet that was the time of the war with China. He says:

"The Japanese are peculiarly a manufacturing and artistic people. Almost every private dwelling is a manufactory of some description. are shrewd, energetic, and enterprising, and being a people of a quick wit, a keen eye, and a cunning hand, should prove skillful artisans and astute traders. They possess the splendid qualification of being able to combine the development of agricultural industry with that of manufacturing, for both are proceeding swiftly on the upward grade. The development of the latter may be gauged by the following: During the ten years ending 1894 their spindles increased from less than 50,000 to nearly 700,000. the same period the number of companies and manufactories (firms and private companies excluded) increased from 650 to 1,500; steamships, from 400 to 520; mileage of railroads, from 249 to 2,220; telegraph offices, from 320 to 720; miles of telephone wires (1890 to 1894), from 258 to 1,831; reserves in some of the leading banks, from £460,000 to over £3,400,000; and the total foreign trade for this period of ten years, from £7,900,000 to £28,800,000. Throughout this period, while no manufacturing company paid less than 5 per cent. in dividends—and many paid 15 and 16 per cent.—average wages increased from 21d. to over 3d. per day. The year 1896 shows no decrease in the industrial activity and commercial expansion of the country, excepting a temporary falling off in the exports of certain staples through the failure of crops. the end of 1896 the number of spindles had increased to 1,300,000; the number of joint-stock companies to 1,729, with a total capital (no doubt nominal) of \$270,916,797."

#### COMMERCIAL ACTIVITY SINCE THE WAR.

The activity manifested in industrial and commercial undertakings since the war is shown by the amount of total capital invested in railroads, banks, and companies, which in 1895 was \$339, 840,290 and in 1896 \$939,649,500.

"The Japanese are by no means restricting themselves to the few manufactures in which they already do a foreign export trade. Apart from splendidly equipped cotton and woolen mills, they are already manufacturing, for local supply, clocks and watches, boots, clothing, saddlery, furniture and fancy goods, leather bags, brushes, buttons, rope and navy canvas, cabinet organs and violins, scientific instruments and photographic cameras and wares; and news is to hand of the formation of large bicycle manufacturing companies."

Yet this prospect, serious as it is, is nothing compared to what the writer expects from the

wakening up of China:

"Portentous as these newcomers into the arena are, they form but an atom to the element which the Chinese promise in the near future. At present this heaving mass of misdirected industry slumbers for want of purpose and leadership, but the hundreds of thousands who have wandered into other lands have quickly developed those qualities which will make the whole race the fear and pester of future civilization. They are quietly but speedily dislodging their 'white brothers' in every port in the Pacific where they are permitted settlement."

#### THE PROBLEM TO BE SOLVED.

The danger from the yellow race is put thus by the writer:

"The extraordinary industry, increasing activity, and insidious encroachments of these people must convince those who study the question that, whatever other nations may do, Great Britain cannot long endure with its present equanimity the rapidly expanding competition of this race, which in methods, habits, and customs so completely differs from our own. It will simply be a question of living at their wage and enduring what it entails, or protecting ourselves so that our wage-earners may not suffer."

The remedy of "protection" is hinted at, rather than openly advocated, at the commencement of the article. A fence round the British empire—a customs duty on foreign goods to equal the freight from distant portions of the empire, or a subsidy to shipping companies to

lower the freights—is suggested:

"Such an agreement between the mother country and her colonies would prove the strongest incentive to the voluntary emigration of desirable people from all countries to those free and fruitful colonies of the empire so wanting in population, so attractive in those circumstances which tend to make life a period of happy contentment, and with such a prosperous future as such an arrangement would open out."

This article makes it clear that England is at last waking up to the Eastern industrial situation.

## TEA-FARMING IN SOUTH CAROLINA.

N the April Cosmopolitan Mr. L. F. I. Parks gives a brief description of "Successful Tea-Growing in America" as it is practiced near Summerville, S. C. Summerville is in a region of the South which has been largely settled by sickly Northern people attracted thither by the healthful advantages. One gentleman has had charge of this tea-growing experiment, and has succeeded so well that on his farm there was raised last year 1,100 pounds of the finest tea obtainable, and this year's crop will amount to more than 2,000 pounds. Dr. Shepard, in an interview, says that his plants afford him a production greater than China's average and almost equal to that of India and Ceylon. a ready sale, being marketed from Massachusetts to Florida, and to a certain extent in the central and Western States. The great difficulty, of course, in raising tea in America, as compared with the farms of the Orient, is that the labor required for this purpose in the East costs a small fraction of the labor in America. The fact, however, that every pound of tea which is imported from China and India has paid several large profits to middlemen makes it possible to compete even under this advantageous labor condition. Dr. Shepard says in his interview that just the picking of the fresh leaf costs as much in America as the raising, picking, and packing of the same quantity of tea sent from Asia. He says that there are, therefore, two alternatives presented to the would-be American tea-grower. · He must raise the quality of his product above that of the cheaper Oriental grades, or he must reduce the cost of production with us. former course has been maintained at Pinehurst, with promising results."

## THE MANUFACTURING PROCESS.

"A suitably equipped factory is indispensable to even a moderate-sized garden. For the present only black teas are made at Pinehurst, and consequently a brief description of what is requisite for their manufacture must suffice. The first step is the withering of the fresh leaf. This is done by thinly spreading out the leaf on floors or trays, so that every pound shall cover about ten square feet. As each pound of finished tea represents four and one-fifth pounds of fresh leaf, it will be seen that an output of 100 pounds of dry tea per diem requires about 4,000 square feet of withering surface—in itself an expensive item. The purpose of withering is to render the fresh leaf susceptible of being rolled without breaking. As it comes to the factory it is crisp and elastic; it crackles when compressed in the hand; when bent it immediately resumes its former shape.

Withering requires a light, airy room; but it is better to exclude direct sunlight. A few hours sometimes suffice for the change, but usually a whole day's exposure is necessary."

#### MACHINERY VERSUS HAND-POWER.

Dr. Shepard continues his interesting description of the manufacturing processes:

"When sufficiently withered the leaf loses its elasticity and feels like an old kid glove; no longer will it crackle when compressed, nor will it regain its shape. Fresh leaf has neither distinctive taste nor odor. Withered leaf has a faint odor; peculiar, but not suggestive of the By rolling (either by hand or finished tea. machinery), the oily cells in the leaf are broken up and the juice is pressed upon the surface of There it becomes foamy from the action of the air and the continued rolling. oxidation begins, which is prolonged by exposure to the air. By rolling and oxidation (formerly and erroneously termed fermentation) the strength and, in part, the flavor of the tea The rest of the flavor and are developed. fragrance are the result of the final process of 'firing' or drying. In most of these operations it has been found advantageous to substitute machinery for hand-power, especially where the production is sufficient to warrant the expense of buying and erecting the especially devised And aside from economy in promachines. duction, the greater uniformity of product and the greater cleanliness of the manufacture are

PRINCE KRAPOTKIN contributes to the Nineteenth Century an article on "Some of the Resources of Canada," which is full of inter-There are few writers who have esting matter. such a gift of lucid exposition as that enjoyed by Prince Krapotkin, and this article of his is no exception to the rule. He was struck by the resemblance between Canada and Siberia and much impressed with the immense resources of the dominion. Of many other observations which he makes, perhaps those most worth quoting are those in which he describes the great success of the Mennonites in Manitoba. Prince Krapotkin came upon their villages in the far Northwest, where he found them thriving. He says:

"Mennonites prosper everywhere. Thev were prosperous in Russia and they prosper in Canada. If they are compelled to emigrate, they send first their delegates, who select the best spots—so they did in Manitoba; and they emigrate in whole villages. They settled in Canada on the distinct understanding that they should receive the land in a block and be left entirely to themselves; otherwise they would have gone to the States, to South America, or even to Greenland, to join the Moravian Brothers. tled in villages, and in these villages they maintain the institutions of mutual support and peace, which they consider to be the essence of Christian religion—a practice for which they have been persecuted for three centuries in succession by Christian churches and states.

"On approaching a Mennonite village, one is at once transported to Russia. After some stay in Russia the Mennonites adopted the institutions of the Russian village community, slightly modified, and they have transported them to Canada. The community's cattle is kept on the common, or on the common meadow, or on fallow land, under the watch of the communal shep-

herd.

#### AN ANTI-POVERTY SOCIETY.

- "The unanimous testimony of all Canadians is that the Mennonites are the wealthiest settlers in Their houses are spacious that neighborhood. and have an air of homeliness which is often missing in other hamlets; there are more trees in their villages than in all the surrounding prairie, and these plantations protect the houses and the yards from the snow-drifts; and there are no signs of poverty, although the Mennonite population has multiplied in twenty years out of every reasonable proportion. They proceed as they proceeded in Russia—namely, a special communal fund is reserved for buying more land when need is felt.
- "Mennonites, as is known, refuse to take part in any function of the state, and especially in military service. . . . With all that, they are not communists: they recognize private ownership, and those of them who take to trade make fortunes. They have communal mills, but have not yet come to the idea that they might keep communal stores as well.
- "It is extremely interesting to see these communities holding their own, surrounded as they are by a very different civilization. It must be owned that one-third of the Mennonites have left the communities and carry on farming entirely for themselves. But it must also be said that this desertion is due chiefly to moral causes. . . . The chief motive, I was told on all sides, was to

get free from the control of the 'elders,' which ; grows only more oppressive when the community has to live among uncongenial surroundings. To ; take one instance only—education. All teach ings of modern civilization being a glorification of unbridled egotism, the 'elders' cling only the more to the Bible, on account of the descriptions of communist life which they find in it. look with suspicion upon all scientific education. . . . Altogether, the authority of the 'elders' is nearly absolute, and, as always happens in religious communities, it is less directed toward the maintenance of the economical and social bases of life which have proved to be successful or to a reasoned analysis of these fundamental principles. than to the maintenance of those traditional beliefs which are supposed to be the only possible sanction of the semi-communistic forms of life. Still, it is a remarkable fact that amid that capitalist civilization some twenty thousand men should continue to live and to thrive under a system of

### THE NEW YORK LEGAL AID SOCIETY.

partial communism and passive resistance to the

state which they have maintained for more than

three hundred years against all persecutions."

In the Charities Review for March appears an address by Mr. Frederick W. Hollis on the origin, aims, and work of the Legal Aid Society in New York City.

This organization had its origin in the German Society, which was founded in 1784 by Baron von Steuben and has been most fruitful in many forms of beneficence, especially among poor im-

migrants. As Mr. Hollis says:

"In the early days of Castle Garden, this society and its vigilant agents afforded the only protection from the horde of unscrupulous scoundrels who, under the guise of lodging-house keepers, money-changers, ticket-sellers, etc., awaited the ignorant and bewildered new-comer and often left him robbed of everything and utterly helpless at the threshold of a strange land."

For many years a committee of the German Society, in cooperation with a charitably inclined lawyer, attended to cases of need and oppression

calling for legal redress.

"Whole organizations for the plunder of immigrants, especially by means of counterfeit money and forged railroad tickets, were broken up; an official inspection of lodging-houses was introduced, and exemplary punishments obtained for some of the worst offenders. It soon became apparent, however, that strangers ignorant of our language and customs were considered fair game for scoundrels of every description long after

ey had left the neighborhood of Castle Garm. The number of civil suits necessary to aforce unquestioned rights became larger every ear."

In 1875 the burden became too great to be forne by this committee, and the German Legal and Society was organized. In the first year 12 cases were disposed of, and this number has teadily increased, till in 1897 it was 7,473. In all cases of actual collections for clients a minimum charge of 10 per cent. was made, and wherever practicable a retainer, besides the payment of disbursements, has always been insisted on. In the twenty-three years of its existence the society has had nearly 100,000 clients, and has collected for them over \$650,000.

The society has dropped the "German" from its name, and is now thoroughly "Americanized." It is Mr. Hollis' belief that few institutions in New York are doing so much practical work "in the way of Americanizing ignorant foreigners, impressing them with the reality of American law and justice, and laying the foundation of a patriotic regard for their new home, as the Legal Aid Society. To most immigrants this country appears solely as a land where money can be more easily made and a pittance for old age more readily saved than in their original At the same time they come with the suspicions of ignorance—alas! only too often well founded—against the American standard of honesty and justice. Thousands of these people have learned from our society that the interests of the poor in the country of the Stars and Stripes are as well protected as abroad, and that right and justice have the same meaning the world over."

#### MILD WINTERS DESTINED TO BE UNIVERSAL.

A VERY delightful prospect is opened up by Mr. Grant Allen in the paper on "The Seasons of the Year" which he contributes to Longman's for March. A common impression prevails that the earth must ever grow cooler and cooler, and consequently less habitable, until, as Camille Flammarion pictured it, the last human being is frozen to death under the equator. But however little this ultimate goal may be altered, Mr. Allen gives a more genial outlook for the less distant future. The glacial epoch was, Mr. Allen avers, perhaps the greatest revolution our planet has ever suffered.

"Most physicists now accept more or less the theory put forward with great ingenuity by Mr. Croll, which sets it down to a period of extreme eccentricity in the earth's orbit; but some weight must also be allowed, as Mr. Alfred Russel Wallace has clearly shown, to the local arrange-

ment of land and water on the globe at the time of its origin, as well as to the occurrence of mountain ranges just then at the poles, and to other purely terrestrial causes. Never before, in all probability, had the poles been occupied by great. glacier-clad mountains. It seems most likely, indeed, that we are now practically at the end of the glacial epoch, and that if only we could once get rid of the polar ice-caps, which keep a stock of chilliness always laid on (I speak the quite comprehensible language of every-day life), we might recur forthwith to the warm and almost imperceptible winters of the pre-glacial period. But, as things stand, the stock of ice at the poles never gets melted away in the existing northern or southern summer; fresh ice accumulates on top of the old mass with each winter; prevailing winds blowing over this ice chill regions lying much further toward the tropics; icebergs detach themselves and float off, thus lowering the temperature of the sea in the middle zones; arctic or antarctic currents spread round the coasts and absorb the solar heat in enormous quantities."

#### THE REASONS FOR THE SEASONS.

"The cause of the seasons as a whole is the obliquity of the earth's axis with the resulting inclination of either pole toward the sun alternately." Seasons have thus always been more or less marked, and originally answered by corresponding changes in plants and animals. Ever since the glacial epoch, the natural reality of the year has been plainly perceptible to man:

"Even before the coming on of the glacial epoch, the seasons were probably somewhat more marked in the temperate and polar regions than in the tropics, the longer day in summer and the greater directness of impact of the rays making the summer months always warmer. But for various reasons, among which we may presumably rank the absence in early ages of high land at the poles and of an accumulated polar ice-cap, together with the existence of warm sea-currents from the tropics to the poles, the winters of preglacial ages seem to have been relatively mild, perhaps (if we may judge by the types of plantlife) milder than those of South Carolina and Georgia in our own period. No cold winds of importance seem then to have blown with blighting effect from glaciated or snow-clad districts. (Mars in our own time appears to enjoy winters somewhat of this character, though a little colder, with a temporary snow-cap.) The seasons as we know them in temperate and arctic climates, however, seem to be largely the result of the glacial epoch and its persistent legacy, the arctic and antarctic ice-caps."

## ANECDOTES OF EDISON.

N the April Ladies' Home Journal there is an article under the title, "The Anecdotal Side of Edison," a group of very short stories of the great inventor, accompanied by some very interesting photographs of him and his family. One of the stories is rather startling, if it truly represents Mr. Edison's habits as a correspondent. "He had just returned from a few days' absence to find a small mountain of letters awaiting him. He was not in a mood for the reading and answering of letters, but his secretary pressed him to begin. This irritated Edison, and taking the whole basket of letters dropped its entire contents into the burning grate fire. 'There,' he said, 'that is the easiest way to settle that,' and went off to his work. Three months later a friend recalled the incident to him. 'Yes,' said Edison, with a chuckle, 'and do you know I never heard from a blessed one of those letters, which shows you how important a public man's mail is.' "

"Mr. Edison is as small a sleeper as he is an eater, but when he sleeps he does that and nothing else. He never dreams and is never restless, getting more rest from two hours' sleep than most men do from six. A short time ago, when working night and day at some experiment, he went to bed at half-past 5 in the morning and was up again at 7. At breakfast some one asked him how he felt. 'Oh, I feel very well,' he said, 'but I'd feel much better if I hadn't overslept myself a half hour.'"

#### THE WIZARD'S WIT.

Most of the samples of Mr. Edison's wit that are in this article do not seem very striking, but the following incident at any rate is pleasantly suggestive of his inimitable perseverance: "The spirit of fun never leaves him. He conducts a great many of his chemical experiments in openmouthed tumblers—ordinary thick glass flatbottomed kitchen tumblers. On one occasion, when he had used over four hundred tumblers in an experiment which had proved a complete failure, one of the assistants said, 'Well, Mr. Edison, what shall we do next?' Mr. Edison scratched his head for a moment, and then looking at the array of glasses he said slowly, 'Well, I think the first thing to do is to get some more tumblers.'"

"Once, when asked to give his definition of genius, Mr. Edison replied: 'Two per cent. is genius and 98 per cent. is hard work.' At another time, when the argument that genius was inspiration was brought before him, he said: 'Bah! Genius is not inspired. Inspiration is perspiration.'"

## IBSEN, THE DRAMATIST.

A PROPOS of Ibsen's seventieth birthday celebration, on March 20, Mr. William Henry Schofield contributes to the April Atlantic a chapter of "Personal Impressions of Björnson and Ibsen."

Björnson's characteristics have been often described. He is almost the opposite of Ibsen. A friendly man, enthusiastic, outspoken. exuberant, fond of his family, interested in his fellows—such is Björnson as Mr. Schofield and others have found him.

"Ibsen, reserved, cold, cautious, taciturn, never caught off his guard, always alone. Björnson has been called the heart of Norway, Ibsen its head. Björnson delights in being the center of an admiring gathering. Ibsen abhors the curious crowd. Björnson has always a word for every one, an opinion on every question, an eloquent speech for every occasion. Ibsen is one of the most uncommunicative of men: he has almost never been induced to address a meeting; he avoids expressing his opinion on any subject whatever. Björnson fills columns of the radical newspapers at a moment's notice. Ibsen keeps his ideas to himself, broods over them, and produces only one book every two years, but that as regularly as the seasons return. Björnson tells you all about his plans in advance. As for Ibsen, no one (not even his most intimate friends, if he may be said to have such) has the remotest idea what a forthcoming drama is to be about. He absolutely refuses to give the slightest hint as to the nature of the work before it is in the hands of the booksellers, though the day on which it is to be obtained is announced a month ahead. Even the actors who are to play the piece almost immediately have to await its publication.

"So great has been the secrecy of the 'buttoned-up 'old man (if I may be allowed to translate literally the expressive Norwegian word tilknappet which is so often applied to him) that the inhabitants of the far-off Norwegian capital, who have, as a rule, but little to disturb their peaceful serenity, are wrought up to an unusual pitch of curiosity on that day during the Christmas-tide when Ibsen's latest work is expected from the Copenhagen printers. Orders have been placed with the booksellers long in advance, and invariably the first edition is sold before it The book then becomes the one topic of conversation for days and weeks afterward. What does it mean?' is the question on every lip; and frequently no answer comes."

Once a German lady asked Ibsen what he meant by "Peer Gynt."

"A dead silence reigned for a moment in the little group surrounding the old man, and I ex-

pected him to change the subject without answering the query. But no; he finally raised his head, threw back his shock of white hair, adjusted his glasses, looked quizzically into the woman's eyes. and then slowly drawled out, 'Oh, my dear madam, when I wrote "Peer Gynt" only our Lord and I knew what I meant; and as for me, I have entirely forgotten."

#### IBSEN'S ISOLATION.

What most impressed Mr. Schofield was Ibsen's persistence in ignoring other literatures and other writers:

"No writer in recent times has been less influenced by the works of other men. He has deliberately refrained from extensive reading, and has kept himself from under the sway of dominating personalities, ancient or modern. He does not understand a word of English or French when spoken, and can scarcely read even a newspaper article in either language. The assertion commonly made until lately, that he has been much influenced by French authors, is the veriest nonsense; he hardly knew of their existence.

"This may be a weakness, but it is the result of his theories of life, or rather of the peculiar circumstances of the life he himself has been forced to lead. He is content to live within himself, and refrains from blaming as much as from praising others. It is possible, indeed, that this ignoring of the works of other writers may even have contributed to make Ibsen what he is, one of the most original authors of the century, the acknowledged leader of a new movement which has affected creative effort in almost every European land. It would, of course, be a misfortune if many followed his example with respect to lonely insularity. But we dare not criticise in the case of the master: his plan has permitted the fruition of his genius."

"Let every man, he teaches, make the most of the talents God has given him, strive to develop to their full the peculiar powers with which he has been endowed, so that dull uniformity shall cease, and curbing conventionality no longer check the advance of mankind."

After all, as Mr. Schofield well says, there is something inspiring in Ibsen's career:

"The poor apothecary boy in a tiny country village, hopelessly remote from the great centers of literary endeavor, has risen by the sheer force of indomitable will and by unswerving fixity of purpose to be perhaps the greatest writer his land has ever known; the one Norwegian in this century who, above all others, has succeeded in influencing profoundly the thoughts of men far, far beyond the confines of that wild but glorious land which gave him birth."

#### IAN MACLAREN AND THE THEATER.

IN the March number of The Woman at Home Ian Maclaren has a dialogue on "Amusements," in which as the rector he gives his views of the theater. He begins by satirizing charades and says that he is sure that if anything could cure one of theater-going it would be seeing dumb charades and having to guess the words. more chastening than comic singing, and that is, I think, the most solemn exercise invented by the human mind." In answer to the question "Why should people want to go to the theater?" he responds:

"For amusement very largely; the pressure of life grows harder every day, and both men and women require relief; they want to see something bright and interesting; and so the 'new' magazine is selling by the hundred thousand and theaters are flourishing in every town.

"'That's so,' broke in Mrs. Goodwin. know a place in the North where the one theater used to be periodically bankrupt and hardly a respectable person went near it. Now it is open most of the year, and the church-going set have most of the boxes."

The question is also asked, "Why should people have such a craze for the theater?" and the answer is, "Because the dramatic instinct is born in us." In conclusion, Dr. Watson says that "what good people ought to do is not to ostracize the theater, but to purify it.

"How can they do that? Why, by encouraging managers to produce pure and noble plays and supporting well-living actors, till the higher drama be profitable and the lower be left to vicious people, where it will die through destitu-You can never reform by repression; the Puritans tried that method, and the result was the grossness of the Restoration. You can only reform by replacing. . . . I wish well to every man and woman who helps to make the stage a blessing and not a curse to society. And I expect before I die to see a clean, wholesome theater in England."

It is one thing to theorize and quite another to put your theories to the test by supporting their practice in real life. In these days when much is said about the elevation of the drama, it must be put to Ian Maclaren's credit that as a clergyman he has not disdained to give his sanction to a dramatic performance which is certain to promote that end. It has already been widely noted that a dramatization of his three famous books, "Beside the Bonnie Brier Bush," "The Days of Auld Lang Syne," and "Kate Carnegie," has been made by Mr. James MacArthur, co-editor of the Bookman, and Mr. Tom Hall, a writer of humorous verse. That the play which is called "Beside the Bonnie Brier Bush" is pure, wholesome, and true to Drumtochty life may be vouched for by the fact that after reading it Dr. Watson wrote approving of it. "I commend the play," to quote from his letter, "to my friends in America whom I hold in grateful remembrance." Messrs. Frank L. Perley and Fred M. Ranken, of New York, will present the play at McVicker's Theater, Chicago, for the first time on Easter Monday, April 11, after playing a preliminary week, beginning March 28, in Washington, D. C. Dr. Watson is to be congratulated on having the courage of his convictions in supporting sane dramatic art, and the result will be eagerly awaited by all his friends in America.

## LITERARY GOSSIP BY AMBASSADOR HAY.

M. FRANK BANFIELD reports in Cassell's for March a pleasant chat he had with the American ambassador in London, Col. John Hay. Colonel Hay declined to be interviewed about himself, but talked frankly about his literary preferences. A few of his remarks may be given here. On payment for literary work he said: "If no pay was given for writing, as many people would write as write now. . . . The ordinary law of supply and demand does not hold in literature."

"When, in America, we paid hardly anything for literary work, we had a galaxy of brilliant writers, Bryant and Poe and Longfellow and Whittier and Lowell in his youth, and they didn't receive as much as one poet of to-day, who said to me that the whole product of his poetry didn't pay for his washing."

Edgar Allan Poe, "one of the greatest men in prose and verse that we ever had," dreamed of founding a magazine which might reach a circulation of forty thousand copies. "Now we have several magazines circulating half a million each, and they rarely publish anything that reminds

you of Edgar Poe's work."

"'The most successful book of our time was written by a man who wasn't a writer, published by a man who wasn't a publisher, and read by people who never read."

"That sounds paradoxical, your excellency.

What is the name of the book?'

"" The Life of Grant," by himself,' said Mr. Hay. 'Seventy thousand pounds was paid at one time to his widow for that. The success of a book depends infinitely more on whether it is wanted or not than on how it was written."

Colonel Hay confessed to admiring Kipling "enormously." Browning he declared is "ethically the greatest poet of his time: Tennyson is the greatest artist."

A curious paradox of parody was mentioned by Colonel Hay. The measure in which Bret Harte wrote "The Heathen Chinee" was identical with and suggested by Swinburne's

"Who shall seek, who shall bring,
And restore thee the day
When the dove dipped her wing
And the oars won their way,
Where the narrowing Symplegades whiten the straits
of Propontis with spray."

The ambassador's views of modern realism may

be gleaned from this observation:

"I said to a French man of letters once, 'Why doesn't one of your great writers indulge in the novelty of a decent story? Every man wants his children to read good French. It would sell by hundreds of thousands of copies in France, England, and America.' His answer was, 'No Frenchman could write such a book and retain his self-respect.'"

Colonel Hay says of British hospitality: "Of all the countries on the face of the earth, this is the one most cordially and generously hospitable."

## THE ENGLISH MAGAZINE WRITER'S MARKET.

THE Sorrows of Scribblers" is the title of a racy and unsigned article in the National Review for March. There is much amusing criticism of contributors and defense of editors. The most serious part deals with the question of remuneration. Magazine-writing is not presented as precisely the most lucrative of pursuits:

"Journalism offers, at any rate, daily bread; while magazines often keep their contributors waiting so long for insertion and payment that any one who did it for a living would have to have something else to go upon. There may be, perhaps, some twenty or thirty people in England who make £200 a year by magazine-writing; their names are well known to the public and are a safe 'draw;' while outside these is the large army of magazine contributors whose earnings average, say, from £20 to £50 a year—hardly enough, indeed, to keep body and soul together."

#### A SCHEDULE FOR ASPIRING JOURNALISTS.

Then we are furnished with a list of rates of pay given by a few out of the innumerable family of magazines. It illustrates the inexorable advance of publicity. What it was once thought somewhat indelicate to inquire about, except in confidential whispers, is now blazoned for all the world to see. As a kind of commercial review of reviews, the schedule has its place here:

"The following is an account of the various sums paid and the kind of contributions accepted by the current journals. We may not, perhaps, be quite 'up to date' as to all of them, but here, such as it is, is the information gleaned from personal experience during fifteen years' magazinewriting. It is a list which may prove useful to the young aspirant. I myself invariably send it by return of post in answer to those well-known and pathetic appeals as to 'how to get my article into a magazine.'"

Argosy: Accepts articles that are pleasantly discursive, frivolous, and not too long. 10s. 6d. a page.

Atalanta: For girls; semi-artistic and not too improving. About 15s. a page.

Bow Bells: About £1 10s. for a story of ten pages.

Cassell's: £1 a page (of two columns).

Chambers's Journal: For short "facty" papers.

Cornhill: Pays better than any within my experience. £1 1s. per page (small pages of big type, not doublecolumned) and counts half pages as pages.

English Illustrated: A kodak paper or an article accompanied with sketches has the best chance here. Very alive and very modern. £1 1s. a page.

Family Herald: About £3 10s. for 8,000 words. Stories must be written in a popular style—with plenty

Gentleman's: Pays by the story and not by the page. Girl's Own Paper: "Facty," practical, and very improving.

Good Words: Articles generally not to exceed four

pages. £1 per page.

Household Words: Not easy to get into. 5s. a column. Leisure Hour: Religious and exclusive. 8s. a page. Macmillan's: £1 1s. a page, double-columned (and counts half pages). High literary standard.

Monthly Packet: Exclusive, very churchy, and slightly priggish, though improving. Conveys the idea of a

feminine touch.

Nineteenth Century: You must either have something new to say or, if you have not, you must have a handle to your name. £1 1s. or re a nage.

Quiver: Same pay as Cassell's. Stories must be moral and of the "religious sensational" type.

Strand: Quite impossible without "cheek" or a kodak. Sunday at Home: Goody-goody, with sermons. Temple Bar: Anecdotic. £5 for a short article.

Windsor: Modern; goes in largely for illustrations and facts.

Woman at Home: Extremely personal.

"This list, of course, is not complete. Indeed, I have had to weed the original manuscript care. fully, for I find that several of the magazines on my list are now extinct (indeed, it is a mortifying reflection that the mortality among magazines to which I have contributed has been unusually severe and sudden). I have also had to omit several magazines to which my marginal notes were 'pay-nothing devils,' 'very hard up,' and For the old-fashioned essay articles the like. Cornhill and Macmillan's offer still the best field. Elsewhere there is little chance now (unless you happen to have a name) for that kind of article."

### BROWNING AS A CHAPEL-GOER.

HE Young Man for March publishes an article entitled "At Chapel with Browning: A Talk with the Rev. Edward White." Mr. White, who is now over eighty years of age, was full of reminiscences concerning the worshipers at York Street Chapel, Walworth, which is now used as the headquarters of Walworth Settlement and known as Browning Hall. Dr. Moffat, the Bechuana missionary, was one of the regular attendants at this old chapel, and the body of James Wilson, the captain of the first missionary ship, the Duff, was buried in the graveyard at the back of the chapel.

#### THE BROWNING PEW.

The most interesting associations, however, connected with the old place are those which link it with the childhood of Robert Browning. White says:

"The pulpit in those times stood against the middle of the wall adjoining the old burial ground; the galleries came round the whole circle of the building and ended on the two sides of the pulpit—in a single seat on each side of it. The Browning family occupied the right-hand gallery seat nearest to the rostrum, and Robert Browning as a boy for years sat in the corner seat nearest and quite close to the right hand of our then pastor, the Rev. George Clayton.

"Yes, his face is vividly present to my memory through the sixty years that have intervened. It was the most wonderful face in the whole congregation—pale and somewhat mysterious, and shaded with black flowing hair, but a face whose expression you remember through a lifetime. Scarcely less memorable were the countenances

of his father, mother, and sister.

"It has always proved to myself one of the most mysterious providences that such a man, such a poet, should have been trained in early life under so unimaginative a preacher of the Georgian era as was our most excellent pastor. But perhaps minds that live in steadfast godly prose-when they are thoroughly good, as Mr. George Clayton was-provoke and stimulate by reaction the poetic faculty in their nearest neigh-At all events, I have always thought that 'Sordello' would not so certainly have been written had it not been for Browning's early discipline under a regular pulpit system of three heads and a conclusion!

## THE POET'S PURITAN INFLUENCES.

"Robert Browning never threw off the foundation beliefs in which he had been brought up by his father and mother, whose noble faces I remember so well. Their daughter, who used to

THE RIVAL CLAIMS AND GARRIBONS IN WEST AFRICA.

sit next to Robert, had a countenance which was a combination of both their noblenesses and sweetnesses

"In considering Browning's poetry and its general tendency and influence, I understand how much—after youth had passed—he had to learn still in England, and in Italy, and in his blessed marriage with another of the most soulsoothing poets of our century, beyond all the lessons he had received in this home of his childhood and youth. Yet it is safe to affirm that if a radiance of faith and hope rests upon and hovers over the grave in Westminster Abbey, where he lies enshrined in eternal fame, that faith and hope were nursed into stronger life under the Puritan influences to which I and so many others owe the final direction and consecration of our lives-influences which came from York Street Chapel.

"Browning's mother—or, as she then was, Sarah Anne Wiedemann—joined the church at York Street in 1808, and married Robert Browning, senior, in 1811. The poet was born in 1812, and eight years after that his father also joined the church.

"The facsimile of Browning's baptismal record is taken from the church register, which also records the baptism of Sarah Anne, the poet's sister.

"While the boy Browning was attending the York Street Chapel, his future wife, Elizabeth Barrett, was attending another old Nonconformist chapel—Paddington Chapel, in the Edgware Road."

## FRANCE AND ENGLAND IN WEST AFRICA.

I N the London Review of Reviews Mr. Stead makes a vigorous plea for arbitration in the pending dispute between England and France as to the respective possessions of those nations in West African "hinterland." Mr. Stead sums up the matter as follows:

"The situation in West Africa lies in a nutshell. Since last April we have been in a state of suspended war with France, owing to the fact that the French have occupied and are now occupying territory which until their invasion was recognized by the French themselves as belonging to the British sphere. The situation is as if a French regiment had occupied the Isle of Wight, and was allowed to remain there under protest until we were ready either to induce France to recall the regiment or to make the force prisoners of war. There are many questions, but there is only one question. That is the question of the right of the powers which possess the West African coast to enjoy the right

٠..

to their hinterlands. This question would possess little importance if the French and Germans would agree with us to adopt a uniform customs tariff, and would allow the same freedom of trade to all comers within their respective territories. Unfortunately, the French, unlike the British, when they occupy territory, do so for the purpose of securing for France a monopoly of the Hence, if we are not to see the native markets. British coast settlements ruined, we have to maintain their right to their back gardens. Sierra Leone and the Gambia have suffered from the way in which their hinterlands have been seized by the French, and the memory of their evil fate has made us very careful to assert and reserve all our rights to the hinterland of the Gold Coast and of Lagos.

#### THE RIVAL GARRISONS IN BUSA.

"The accompanying map will explain better than pages of letter-press the exact position of affairs. The French, it will be seen, after recognizing that the Say-Barua line marked the limit of their advance from the Upper Niger toward the sea, have endeavored to render that agreement null and void by swarming across the Lagos hinterland so as to establish themselves on the Lower Niger below Say. They first tried this on when Lord Rosebery was in office. deference to his prompt representations the French Government recalled their troops from Busa, recognizing what, indeed, even the maps published by the Temps admitted then, that the whole of the territory known as the Nikki-Say-Busa triangle was outside the French sphere. When Sir George Goldie, at the head of the forces of the Niger Company, went to Busa at the beginning of 1897 there was no question as to British sovereignty over Busa, both capital and But when he proposed to establish a garrison in Busa town the head man objected. presence of soldiers, he said, always made trouble To avoid these women palavers, with women. he hoped the garrison would not be stationed in the town. Sir George Goldie agreed, and planted the British garrison at Fort Goldie, several miles to the south of Busa town, and established another at Liaba, thirty miles to the north, both commanding the chief trade routes in Busa state. No sooner had Sir George Goldie returned to this country than the French marched back into Busa, from which they had been recalled in deference to Lord Rosebery's representations, and there they are until this day.

"The two governments exchanged notes and began negotiations, but so far these negotiations have led to no result. Meanwhile, in order to support the French case, other contingents of

Senegalese troops under French command were pushed forward into the Lagos and Gold Coast hinterlands. Ignoring the British treaties concluded with the native head men, the French concluded fresh treaties ceding them sovereign rights, and then they reënforced their 'treaty rights' by the appearance at least of 'effective occupation. All over the Lagos and Gold Coast hinterlands there are sprinkled tri-color flags and Senegales garrisons under the command of French officers chafing against the command laid upon them by M. Hanotaux, that they are not to attack the few British garrisons which defend the treaty rights of Great Britain in the territory of our hinter-No British post has been established in the hinterland of either French or German colonies. All the trouble has arisen from the intrusion of the French into territory below the Say-Barua line, and especially into the Busa territory on the west bank of the Niger."

#### Admiral Maxse's Views.

Admiral Maxse sums up the British case in the West African dispute with France for the readers of the *National Review*.

From the British point of view there are three principles on which the West African question might have been settled. These are stated by Admiral Maxse as follows:

"1. The hinterland theory, which gives prior claim on the back land of the colony occupying the sea-coast.

"2. The Anglo-French agreement of 1890, which debars us from going north of a line between Say on the Niger and Barua on Lake Chad, and which it was also understood at the time, by both the French and ourselves, debarred the French from invasions to the south of the line.

"3. Prior treaties with native chiefs acknowl-

edging our protectorate."

Admiral Maxse asserts that the French Government's treatment of these principles of settlement has been "both contemptuous and insulting."

As to the hinterland theory, France recognizes it only so far as it can be claimed for the benefit of a French colony. Wherever possible, she endeavors to cut off the British hinterland—and often with success.

The frontier formed by the Anglo-French agreement of 1890 is good enough for the French as against British incursions, but counts for nothing as a restriction of the French.

So, too, in the matter of prior treaties. Those which the British have made with native chiefs are "invalid, and may be superseded by French treaties that become valid. Captain Lugard, for instance, preceded the French at Nikki and made

a treaty with the chief. A fortnight afterward the French arrived and superseded his with one of their own which has become a sacred document."

#### DOES FRANCE HATE ENGLAND?

Admiral Maxse has at last reluctantly come to the conclusion that France is inspired by a fixed enmity to England, so far as may be judged from the conduct of her government and the lan-

guage of her newspapers.

"We have found determined hostility upon the question of Egypt, the Upper Nile (over the Anglo-Congo agreement), Newfoundland, Siam, Madagascar, and West Africa. We have vainly endeavored to propitiate her by concessions. Each concession has been accepted as a sign of weakness and forgotten. We gave way at Madagascar, Tunis, Siam, and upon innumerable occasions in West Africa. We remained silent when France violated all her engagements concerning the evacuation of Tunis. It was friendly and considerate on our part to do this, but our forbearance stands in striking contrast with the campaign she perpetually wages against us in Egypt, where our position is precisely analogous to here in Tunis, except that we have not yet declared a protectorate in the former country. She has also disregarded all her undertakings to us at Madagascar and ruined our connection with that She tore up our Anglo-Congo agreement and substituted a treaty of her own. She refuses to settle the Newfoundland dispute, and pays extravagant bounties to French fishermen to cross the Atlantic and maintain some trivia rights—trivial to France, but most vexatious a the people of Newfoundland.

"If I have drawn up these accusations, they are intended less as accusations than as an explanation of a situation the creation of which we

profoundly deplore.

"The French people want war as little as w It is melancholy to think they may be blurdered into it by incompetent statesmen. If only there were such a thing in France as public opinion (apart from press opinion)—if the ill-informed French people could know the real situation! But the daily newspapers of Paris monopolize all the channels of information and pervert the reading public. There is no chance of getting a word heard in British justification. The hopeless thing is that we may be drifting into a war which each nation would make strenuous efforts to avoid. It may be avoided if the French Government is given to understand that the limit of surrender has been reached. If it is not understood Perfide Albion will seem more perfidious than ever."

### GERMANY IN CHINA-A JAPANESE VIEW.

R ECENT German aggression in China forms the subject of some vigorous editorial paragraphs in *Greater Japan*, an able review published at Tokio, partly in English and partly in Japanese.

The editor states that most of the Japanese newspapers have regarded "the high-handed action of Germany" with contempt, calling it a significant opening of the policy long premeditated and especially entertained by Russia, Germany, and France—"the policy to devour the Chinese empire as soon as her disorganization sets in." It is natural, he says, that these powers should seek to quicken such disorganization by various means of external disturbance, as the rotting of an apple may be hastened by breaking its skin; but every step in this direction is a menace to Japan's declared policy of maintaining peace in the East.

Greater Japan holds that the murder of the two German missionaries was not an affair of sufficient importance to justify Germany's diplomatic procedure. Interference in a case of this kind, properly coming within municipal jurisdiction, should be limited to the bare execution of justice. Germany, however, insists on the punishment of the local authorities, which, in the editor's opinion, is exceeding the demands of justice.

#### GERMAN AMBITION A MENACE TO THE EAST.

"Again, why does Germany require of China those special privileges of opening coal mines and of constructing railroads throughout the Shangtung province? Why does she demand a portion of the Chinese territory for use for a coaling station for her navy? Is this a part of the justice to be exacted from China? Nay, this is the exploitation of the weak by the strong. The exploitation is not so bad, but the permanent establishment of a coaling station on the Chinese coast and the increase of the naval force of Germany in Chinese waters are beyond our understanding. Germany has no colony here in the Why, then, does she require a coaling station and a squadron of eight war vessels? We are inclined to suspect her of political ambition, which is a menace to the tranquillity of the East."

The editor also objects to Germany's method of enforcing her demands by the hasty assembling of a naval force before the resources of diplomacy had been exhausted, and, finally, exception is taken to Germany's conduct on moral and religious grounds.

"We venture to say that the conduct of Germany will in the end retard the progress of Christianity in the East and foster the fanatical

suspicion that is entertained by the Chinese in regard to the meaning and purpose of Christian missions. Truly, they regard them as instruments for territorial aggrandizement. Political spies and the present case have abundantly confirmed them in this suspicion."

"Throughout the progress of this unusual diplomatic procedure of Germany against China, England, who has the paramount interest in the East, has kept completely silent. The reason of her being silent is evident. First, she had not entertained any suspicion whatever concerning the German movement; and, secondly, she believed that Germany was rendering service to Christendom by punishing China for her perpetual indolence in protecting the lives and property of Christian missionaries."

## ENGLAND AND JAPAN.

IN the Fortnightly Review Mr. H. W. Wilson discusses the question whether or not England should form a firm fighting alliance with Japan in view of contingencies in the far East. Mr. Greenwood, it will be remembered, last month strongly denounced such a proposal as too heinous to be seriously entertained by any civilized European. Mr. Wilson is of a different opinion. He thinks that unless the officials of the British Government had contemplated an alliance with Japan their conduct at the beginning of the year might be described as criminal At the time when Sir Michael Hicks-Beach was threatening war England had eleven fighting ships in the far East, while Russia had seven, France three, and Germany six. If she had had to fight the alliance she would only have had eleven ships against sixteen, and the alliance would have been superior to her in weight of broadside, number of heavy guns, and number of torpedo-tubes. Therefore Mr. Wilson inclines to think that when Count Ito had his six hours' interview with Lord Salisbury they arrived at an understanding as to what should be done if the worst came to the worst. This understanding, he hopes, is still in existence.

"Our margin of naval superiority is so very diminutive against France and Russia alone—against France, Russia, and Germany it is non-existent—that we cannot afford to be too strong at any one point lest we should be too weak at others. In itself the Japanese fleet is a factor which makes her alliance appear desirable. She possesses a navy which is, when all is said, actually and potentially the most formidable individual fleet in the East at this moment. She has now available two new battleships superior to anything east of Suez, eleven good cruisers—one of which

has just been bought from Brazil—a reserve fleet of older ironclads and cruisers, and some forty torpedo craft. Strong though this force is, it is to be vastly strengthened in the immediate future. By the Austrian Marine Almanach for 1898 Japan has now building five large battleships—three of which but for the strike would have been delivered early next year—four large armored cruisers, eleven smaller cruisers, and twelve destroyers or torpedo-boats."

England has since then reenforced her navy, but she is still not in a position to be so squeamish as to allow her policy to be swayed by objections as to the color of her allies or their religious beliefs. Mr. Wilson says:

"We shall perhaps confess that by our policy of isolation we have been driven into a corner, and have been so out-maneuvered that an alliance with a yellow power has been forced upon us. Would it not be wisest to recognize the unpalatable truth, to conclude a definite agreement with Japan which should restrain her from violent or premature action, but which should at the same time guarantee her from any such attack as seems to be maturing? Included in the terms would be stipulations for the maintenance of the 'open door,' by force if necessary, in the markets of the East-supposing British statesmen are in earnest in bringing forward such demands. Without force we cannot maintain them, and we shall be put off with paper promises for the present, to be repudiated in the near future."

#### An Opposing View of England's Interests.

Mr. Fred. T. Jane contributes to the Contemporary Review an article on the far East, in which he differs toto calo from the advice of Mr. H. W. Wilson. Mr. Jane is quite sure that, so far from a Japanese alliance being in the line of British interests, England's best course would be, leaving morality on the one side, to pick a quarrel with Japan and destroy her power once for all. Fortunately there is no prospect of this advice Notwithstanding his conclubeing followed. sions, Mr. Jane's paper is much more cheerfully conceived than Mr. Wilson's, for Mr. Jane is quite sure that, thanks chiefly to England's command of coal and the superior coal-carrying capacity of her warships, she has nothing to fear even if Germany, Russia, and France combined to attack her in the far East.

"To sum the matter up in a single sentence, France, Germany, and Russia are all practically without bases, without supplies, without hope of reënforcements, without, in fine, a single thing necessary for war."

Mr. Jane has his own views on the subject. He does not believe that the partition of China has anything to do with the recent reënforcement of European fleets in far Eastern waters. He undertakes to prove that—

"1. Germany's occupation of Kaio-Chau has nothing to do with the general problem, with us,

with Russia or any other power.

"2. That no combination of the naval forces of Russia, France, and Germany could affect our naval position, and that they must be fully aware of the fact.

"3. That Russia's policy is entirely independent of any German or French influence, and that it is not hostile to us in any way whatever."

The real danger is the future of Japan. Russia and Japan are watching each other like cat and mouse, and all the recent movements of navies were governed by contingencies arising out of that fact. This is Mr. Jane's idea of Russian wishes in the far East:

"Our aid or beneficent neutrality is of far more need to Russia just now than anything else. What Russia would like to see, what her diplomatists may well be endeavoring to bring about, is war between us and Japan, at present our very good friend, since that best suits the Mikado's A war with Japan would be a hard nut for us to crack; we should be powerless till several first-class battleships had been brought up The aid of the Russian fleet already in the far East-and this fleet will soon number two first and one second class battleships, five armored cruisers, some ironclad gunboats, and numerous other vessels—the aid of the menace of Russian troops now massed near Vladivostock would make our triumph immediate instead of eventual. By way of reward, Russia would get Port Arthur and what she covets in Korea; Japan, that thorn in Russia's future, would be obliterated, and after that the 'eternal Eastern question' might reach Indeed, the ultimate picture of what an finality. Anglo-Russian alliance would produce is a can vas too daring to be yet painted. France, Austria, Italy would all gradually disappear from their present position in the world's politics, and the most of English and Russian aims being so different and non-antagonistic, it is not impossible that something very like the longdreamed-of millennium would be ushered in. Such, I take it, is the real dream of Russian statesmanship, and, whatever may be said about it, it is a great dream."

Mr. Jane concludes his article by declaring that to make war on Japan in order to make "friends with Russia would be our most diplomatic course every idea of morality and sentiment is against such an action. Whatever views may prevail in public circles, in the inner ring of things the cards are more or less on the table; Germany's

action at Kaio-Chau and the talked-of partition of China are merely froth; the real problem is the future of Japan. China sleeps, and sleeps in peace: not for her, nor for designs on her, has a single warship left European harbors."

## THE FIRST GERMAN PARLIAMENT.

IT is just half a century since the first German Parliament met in the Protestant Church of St. Paul at Frankfort-on-the-Main, in 1848, and the Germans, ever ready to commemorate a national event, have not overlooked the present occasion.

Karl Biedermann, who recounts his personal reminiscences in *Nord und Sūd* of January and February, is one of the very few members still living out of the original 267 who voted for an hereditary empire on March 27, 1849, and the following notes of those troublous times are taken from his paper.

#### SURVIVORS OF 1848.

He was one of the founders of the famous "Erbkaiserpartei," and he tells us that the very youngest members were about twenty-five and twenty-six, but many were much older men. Six were over seventy, and the father of the party, Ernst Moritz Arndt, the poet, was seventy-eight. In 1878 about sixty of the members were still alive, and in 1885 the number was reduced to about thirty. To-day only eight survivors are to be found:

H. H. Meier, of Bremen, founder of the North Ger-

man Lloyd Steamship Line, eighty-eight.

Dr. von Simson, president of the Frankfort Parliament, later president of the so-called Union Parliament at Erfurt, and still later president of a number of Reichstags, eighty-seven.

Karl Biedermann, eighty-six.

Geheim-Commerzienrath Mevissen, of Cologne, eightyfour.

Dr. Schrader, curator of the University of Halle, sighty.

William Jordan, of Frankfort, the poet, seventy-nine. Professor Backhaus, seventy-nine.

Professor Haym, of Halle, seventy-six.

#### THE REVOLUTION OF MARCH.

It is not always possible to trace the sources of a revolutionary movement, but there is no doubt that it was the news of the flight of Louis Philippe and his family from France on February 24 that kindled into flames the movement on the other side of the Rhine, and by the 27th a great popular assembly demanding a new constitution, freedom of the press, and other concessions took place at Offenburg, in Baden. The movement spread rapidly, but there seems to have been no collision between the military and

the people except at Berlin, in what is generally known as the March Revolution of 1848. Nor did the movement grow suddenly in the night, as many pretend. Preparation enough for it had been made on every side by the misrule in most of the German states, yet the insurrection was in a great measure of a spontaneous character. In its aims, the movement of 1848 in Germany bore no resemblance to the great historic revolutions of 1640 and 1688 in England or to the revolutions of 1789, 1830, and 1848 in France. These completely upset the existing order of things, whereas the German revolution "stood still before thrones."

#### THE GENESIS OF THE PARLIAMENT.

From the beginning of the 40s a moderate liberal party had gradually been forming with national ideas—that is to say, the members began to look beyond their own little state to the whole German fatherland. Men like Dahlmann the historian, the two Beselers, Heinrich von Gagern, and others, were of the number, and their organ in the daily press was the Deutsche Zeitung, edited by Gervinus and Häusser. But it was not till 1847 that the party first met in open conference at Heppenheim to discuss the general condition of the country. On March 5 of the following year, the men of Heppenheim, 51 in number, held a second conference under the ruins of Heidelberg Castle, and decided on a number of essential constitutional reforms; and on March 30 they went a step further, and summoned a more national assembly, representative of all Germany, at Frankfort, to consider their programme. This is generally called the "Vorparlament," or preliminary Parliament.

#### HOW IT WAS COMPOSED.

The Constitutional Diet, or National Assembly proper, was not opened in St. Paul's Church till May 18. On paper, this first Parliament consisted of 649 members (about one to every 70,000 inhabitants); but the actual number in attendance at Frankfort was between 500 and 600. When the vote as to the form of government to be adopted came to be taken, they were 530, but according to the figures given by Karl Biedermann, 56 of these did not vote at all. The figures stand thus:

For a constitutional monarchy	107
M-4-1	

In his second installment Karl Biedermann tells the history of the revised constitution of March 27, 1849, and of the vote in favor of the hereditary empire, which was carried by 267 against 263—a small majority for so momentous an issue.

#### Martyrs and Ploneers.

Here, however, we must take leave of Karl Biedermann's political retrospect to get a glimpse of some of the quiet preparations which preceded the eventful 1848. This is given us by Johannes Proelss, under the title of "Martyrs and Pioneers," in Heft 1 of the Gartenlaube.

As was the case with the origin of the Swiss Confederacy, the German revolution may be said to have had its beginnings in a secret meeting-place. Its "Rūtli" was at Hallgarten, in the Rheingau, the estate of Johann Adam von Itzstein; and in this secluded spot a number of "Friends of the Fatherland" met in conference almost every year for about ten years before the revolution came to a head. Close by, it is curious to learn, was Schloss Johannisberg, the summer retreat of Prince Metternich; but who would ever have suspected conspiracies and conspirators in the immediate neighborhood of so feared a ruler?

It would be impossible to allude to all the events which led Itzstein in 1839 to invite to his house Welcker and other politicians to consider in secret the "German question." It will suffice to say that to the oppression of the people had been added the persecution of all poets, professors, and university students of liberal tenden-The sad experiences of Fritz Reuter, Heine, Uhland, and many more, and finally the expulsion of the seven Göttingen professors in 1837, had roused the greatest indignation when Itzstein devised his plan. The patriots knew well what risks they were running, and acted with the utmost caution, coming to the trystingplace by different roads and one or two at a time. It is interesting to find that the secret was never divulged till March, 1848.

"The German question," or the question of German unity, as was to be expected, brought to the front all the poets of the times. In 1840, when Frederick William IV. came to the throne and promised the people a new constitution, the poets were not slow to take up the theme of the new birth of the fatherland. It was an honor of Welcker that Hoffmann von Fallersleben's new poem, "Deutschland über Alles," was first sung amid the wildest enthusiasm-with disastrous consequences to both poet and politician. new sovereign's promises proved to be a delusion, and with the punishment of these two men it was clear that the Hallgarten patriots must resort to sterner methods. They now made it their business to disseminate among the people all the political literature which had escaped the censorship of the press. It was also about this time that the poets Ferdinand Freiligrath and Gott-fried Kinkel were drawn into the contest.

Very little is known of the patriots who actually took part in the Hallgarten conferences. Friedrich Hecker, in some reminiscences of 1843. mentions a few names and tells how the secret decisions of the Vienna conference first saw the light. In 1845 the patriots met at Leipzig, and in the autumn of 1847, when they met at Heppenheim, there was no further need for secrecy.

#### 1848 in Europe.

In the Revue Bleue of February 19 there is a short article on the days of February, 1848—the taking of the Hôtel de Ville. It is by W. de Fouville, one of those engaged in it.

The revolutionary period, 1848-49, in Austria is represented by "Conversations with Gen. Arthur von Görgey," by Wilhelm von Vragassy, in the February number of the Deutsche Revue. Another article on the social question in the Vienna Revolution of 1848, by Dr. Maximilian Bach, appears in the Deutsche Worte for February.

## THE PASSING OF THE GERMAN PEASANT.

MR. G. W. STEEVENS contributes to Blackwood a picturesque and thoughtful study of German country life. He speaks highly of the German landowning class—"an aristocracy in hobnailed boots"—but finds the peasant, though "well educated, scholastically speaking, surprisingly dull and unintelligent."

"Everywhere you will find the gentleman farming his own land, the same clean-skinned, simple-hearted, hard-headed, plain-living, highmannered lord, the same peasantry, penurious, but secure of livelihood, living hard, but scarce as yet taught to resent hardship."

German agriculture shows method, industry, conscience, but not great aptitude or energy. The agrarian party still believes itself the nation, forgetting that "Germany is transforming herself from an agricultural into an industrial country almost as fast as did Britain in the 30s." The old half-feudal, half-patriarchal life is doomed already:

"The fate of rural England is already settling over Germany—the depopulation of the villages. Walking with the proprietor among the stocks, you meet a dumpy, bowed, hairy man, and a not less brutish-looking woman, who to his greeting return only an inarticulate grunt. They are Russians, hired for the harvest season, because German labor is not to be had. Throughout Germany west of the Elbe there is a trade in Russian and Polish labor. This labor steals over

the Russian frontier and makes its way to Breslau, the great mart of the trade. There it sells itself to contractors, who sell it in bulk, put on the rail on payment of carriage, to anybody who is short of hands for the harvest. They talk no word of German beyond Ja and Nein. Each drove has its foreman; the drove is given a location, and there in bare huts men, women, and children pig together. Their life seems hardly enviable even in good weather, but it appears to be to their liking. For they seldom return to Russia—where, indeed, the authorities would not welcome them with cordiality—but remain to be bearers of burdens in Germany. The German bearer of burdens is off to the mills in the big town whose smoke hangs yonder behind the hill."

## AN OPTIMISTIC VIEW OF AUSTRIA'S FUTURE.

WRITING in the Nineteenth Century on "Austria-Hungary and the Ausgleich," Dr. Emil Reich indulges in the sanguine anticipation that all difficulties in Austria will disappear as soon as it is shown that any further delay about the Ausgleich will break up the Triple Alliance, and practically force Austria-Hungary from the rank of the great powers. So far from regarding the scenes in the Reichsrath and the furious disputes which are raging in Bohemia as symptoms of national dangers, he regards them as the best evidence of the vigorous vitality of the empire-kingdom. He says:

"We cannot but recognize in all that the unmistakable symptoms of a great revival. Now at last there is hope for a final remedy of that secular false position of the empire. Now through the intensified life of each nationality there is prospect of an intellectual renascence of peoples who have hitherto been slumbering on the pillows of sloth. The Czechs, stung to the quick by their political antagonists, will still more advance their national literature, which even now is considerable, pace Professor Mommsen. Already in music the Czechs have embodied their national gifts in the very remarkable works of Dvorak. The Poles of Galicia are a very gifted race, and great things may be expected from them both in science, literature, and art. Through the inevitable competition the Germans of Austria will be induced to multiply their efforts at intellectual supremacy in Austria. The vast progress made by Hungary in all the departments of life, political and intellectual, in the last forty years, owing to the burning ambition of the Magyars, is a sure guarantee of similar results among the nationalities of Cisleithania. It is incalculable how much commerce and trade and industry will be benefited by that revival of all the mental and moral

energies of the empire. Already the material progress of both halves of the monarchy during the last fifteen years has been very considerable. It will, aided by the immense natural wealth of the empire, be increasing at a rate distancing that of all former periods. The enemy of a nation is not to be found in great civil disturbances and commotions. Woe to the nation that knows of no inner conflicts!"

## THE ZOLA TRIAL

A N anonymous writer in the Contemporary Review takes the Zola trial as his text for the purpose of expressing a very gloomy estimate of the present demoralization of France.

Speaking of the Dreyfus case he says:

"The three phenomena which have grouped themselves around the Dreyfus agitation are a firm belief in the infallibility of the army; the union of clericalism, militarism, and anti-Semitism; and the utter demoralization of the 'healthy kernel' of the nation. But the case is highly interesting in another way: it has brought out in clear relief certain of the essential characteristics of the French nation, the knowledge of which may prove serviceable to the world. It has revealed to us the repulsive spectacle of an . entire people, with its army, press, politicians, and clergy, rising up against a defenseless and wretched man, and threatening to demolish the fabric of the state if simple justice were done to him; a government which invokes the interests of the national defense to screen indefensible breaches of equity, and whose press organs publish the names and addresses of the jury before they have given a verdict; an army whose select representatives threaten the jury with their resignation if the verdict be different from what they expect, and a legislative assembly whose enlightened members refuse to raise their voices on behalf of the victim of injustice, lest at the coming elections they should lose their seats.

## THE SIGNIFICANCE OF THE SECRET DOCUMENT.

"If this story of the secret document be true, and it now seems indubitable, then there can no longer be question of an error of justice, but of such a fiendish crime against every form of human justice and equity as the majority of British convicts would refuse to perpetrate. Maitre Démange, who defended Dreyfus, exclaimed on first hearing of this document: 'The act would constitute such a brutal infraction of the elementary prescriptions of justice that I cannot believe it.' Yet the story stands unchallenged.

"The defective ideas of judicial procedure

entertained by Dreyfus' military judges led to the Dreyfus gachis which we now behold in France, and the desire to justify the results of the court-martial, rather than compromise the judgment of the officers, was the opportunity longed tor and utilized by the clerico-military party to set themselves above the state."

## THE EXTREME OF PESSIMISM.

This writer takes the most pessimistic view of present conditions in France.

So far as one can ascertain by a careful study of the intellectual, political, and religious movements of the last hundred years, there is not the faintest trace of any ennobling principle, of any sublime ideal, or even of any glorious aspirations which can be pointed out as French

by origin, or even by adoption.

"The third republic, on the contrary, born of the unnatural union of clerical demagogy and infallible militarism, has let loose not one hungry family, but a whole legion of place-hunters, to satisfy whose ravenous appetite the resources of the country, the credit and prestige of the nation, the doctrines of republicanism and principles of a far more sacred character have been ruthlessly sacrificed nem. con.

"The greedy public policy of colonizing whole continents abroad, the egotistic private practice of limiting families at home to two or three children, the prevalent politico-ritual theology, the apotheosis of the army and the infallibility of its chiefs, the defilement of literature, the prostitution of the drama and of pictorial art to the passions of the human beast, the total negation of science, the universal conviction that the nation is invincible by land and by sea, and the concomitant proditomania, combined with the cheerful certitude that France is still the light and life of the world, are inevitable consequences of the four conditions enumerated above and unerring symptoms of the dire disease which has eaten into the vitals of the citizens of the third republic."

#### The Dominance of the Army.

In the Fortnightly, Baron Pierre de Coubertin writes on the "military paradox" which is to be observed in France. The article was obviously written before the French generals had entered the witness-box in order to dictate their verdict to the jury under threat of a strike of the general staff. His paper is indeed devoted to an exposition of the exceeding loyalty and obedience of the army to the civil power, but, notwithstanding this, he makes it abundantly clear that it is the army, and the army alone, which is really sovereign in the affections of France.

#### WHY THE ARMY IS SUPREME.

He gives many reasons why this should be so, the first of which is the "great sacrifices" which the French have made in order to equip and maintain the army, the second the fact that the army has given them a sense of security which only those can appreciate who have for some years been deprived of it. The third reason is that the army has been a great school of physical vigor. He says:

"When the colleges fail to fulfill their mission, as is the case in France, military service is, I believe, the only means of giving back to a young man some of the virility which he lacks.

"The service which the army has rendered is no less great. It has served as a regulating force in politics. Whenever the interests of the army have been touched all parties have made truce, in the Chamber as in the street."

## HOW IT AFFECTED THE ZOLA TRIAL.

The peasants and the humbler citizens, who hardly know the names of the ministers of the republic, were outraged at the thought that the army had been insulted by Zola. Baron de Coubertin himself shares this feeling so much that, although he admits the illegality of convicting Dreyfus by the production of a secret document which was withheld from the accused and his counsel, he deprecates any attempt to remedy this distortion of the forms of justice on the ground that it might diminish the prestige of the army, and so be highly prejudicial to its power. He admits that the officers may be brave, but they are the last persons in the world to exercise judicial functions:

"All who are well acquainted with the intellectual temper of our officers affirm their complete inability to understand civil life and direct Foreign policy interests them simply because military affairs are involved in it in many ways; but unless they happen to belong to an extremely reactionary or extremely clerical milieu, home policy leaves them cold. As for the principles of civil law, they have not a notion of them. feel that sentiment, common enough in military circles, of undisguised attempt for les pékins, as they call everybody who does not wear uniform: and this contempt is readily transferred from men to institutions. Sometimes they even affect to ignore certain points of jurisprudence which are a matter of common knowledge."

#### THE FEELING OF THE OFFICERS.

Baron de Coubertin's account of the normal attitude of an officer's mind, coupled with his vivid description of the continual disappointment of the military profession, which exists solely for war, and is doomed to see year after year pass by in peace, impresses the reader with a sense of the peril that lies beneath the surface, and which has just now made itself visible in the Zola trial. Baron de Coubertin says of the officers:

"Not one of them failed in the hour of Boulangism; not one supported the dictatorial candidate. This was not the spirit of the military men of 1849; in the "Mémoires du Général Fleury" we see with what calm indifference they adhered to the projects of Louis Napoleon, even when they least understood them."

#### THE MENACE TO THE REPUBLIC.

But he admits that had it not been for the diversion occasioned by colonial expeditions this patience and loyalty might have broken down. He says:

"Without the colonial wars in Africa and Tonkin many of our officers would have been simply unable to hold out any longer, and it may be said that Jules Ferry has rendered Europe an incalculable service by turning the energies of France in this direction. He had staved off a situation which threatened to become dangerously strained."

He then quotes De Tocqueville's saying as to the army being the greatest obstacle to the foundation and stability of the republic of France, and adds:

"No doubt his theory is still perfectly correct. At present the case of France happens to be an exceptional one, and consequently one which will not last. As the memories of 1870 recede farther and farther into the past, as the social condition of Europe becomes more and more modified, the equilibrium between the civil and the military power will tend more and more strongly to self-destruction."

# SHOULD THE UNITED STATES PRODUCE ITS SUGAR?

SECRETARY WILSON, of the Department of Agriculture, contributes to the Forum for March an able article in advocacy of the domestic production of sugar. The importance of this subject to the people of the United States may be seen from the fact that during the past five years the average amount paid out by them for imported sugar has been \$101,575,293. The refined product from mported sugar during the year 1897 was 1,760,607 tons, while the production of sugar from all sources in the United States during 1897 amounted to 335,656 long tons, as follows: 41,347 tons from sugar-beets; 289,009 tons from ribbon-cane; 5,000 tons from maple trees, and 300 tons from sorghum-cane.

Thus the total consumption in the United States for the year was 2,096,263 tons.

#### THE SUGAR-BEET.

Approaching the subject from the farmer's point of view, Secretary Wilson says:

"The farmers of our country produce from the soil grains, cotton, tobacco, vegetables, fruits, horses, cattle, hogs, sheep, various animal products, and the like; and if we can add to our farm systems any crop that yields an article of common use, is not exhaustive of plant-food, and whose by-product is valuable in making meat and dairy products, it will find favor with producers. There are very few crops or manufactures of them of which this can be said so emphatically as it can be said of sugar-beets. The grains are well-known soil-robbers. They carry from the soil nitrogen, potash, phosphoric acid, lime, magnesia, and the other elements of plant-food. Tobacco is peculiarly severe in this regard because none of its by-products are fit for animal food; and what is sold from the farm carries away so much mineral plant-food that most soils are soon exhausted if not replenished by commercial fertilizers, the purchase of which is out of the question in many parts of the United States. Meats take away comparatively little plant-food from the soil compared with their money value. cotton-plant is not exhaustive if the stalks are plowed under and the seed is returned to the soil, either directly or through the instrumentality of domestic animals. The oil of the cotton-seed may be sold without taking any plant-food from the farm, as it comes from the atmosphere through the leaves of the plant. Butter is also harmless in this respect, and does not impoverish the land on which the cow grazes. Sugar is as harmless as oil and butter; it comes from the carbonic dioxide of the atmosphere. sugar-beet is hauled to the factory and the pulp taken back to the farm, no plant food is lost to the soil."

#### SORGHUM-CANE.

Secretary Wilson also shows the advantages of growing sorghum-cane in certain parts of the country:

"The sorghum-cane promises well for sections of our country where beets do not thrive. The Department of Agriculture and Directors of Experiment Stations have been developing the sugar content of this plant for some years, until it now averages 14 per cent. of sugar in the juice, which is 90 per cent. of the stalk. The cotton-growing States require a carbonaceous plant to feed with their cotton-seed cake. Several of these States produced sufficient nitrogenous matter from cotton-seed in 1897 to have finished all the 390,000

fat cattle exported to foreign countries in that The sorghum-cane, which is admirably adapted to this purpose without extracting the sugar, is also about as well adapted after the sugar is extracted. This plant is now extensively grown in our Southwestern and some of our Eastern States, where the rainfall is not sufficient to grow maize. It would seem to be a plain duty to experiment with this high-heredity sorghumseed, simultaneously with beets, to ascertain where each will be most profitable; and during the coming season this will be done. tories now in successful operation in the United States have had machinery in the field and factory imported from foreign countries. American ingenuity, however, has been at work, and has replaced every feature with machinery of our own manufacture that does the work more expeditiously and economically.

"In the dry localities of the West, where the rainfall is not always sufficient to insure a maize crop, the sugar-beet and sorghum-cane make profitable crops and are giving greatly increased value to the land. Hail-storms that utterly destroy all other crops have the effect of cutting off only the leaves of the sugar-beet, which promptly grow out again."

#### A NATIONAL POLICY.

Secretary Wilson is at some pains to show that the United States is not in duty bound to consider the welfare of sugar-producing countries in withdrawing from them the money we now pay for sugar. He presents trade statistics showing that our imports from cane-producing countries could be wholly discontinued and still leave a trade balance in favor of those countries of more than \$60,000,000, and that our total imports of sugar from the various countries of supply amounted to only about 11 per cent. of our total imports of all kinds of merchandise from the same countries.

Several European countries are now threatening to exclude American farm products from their markets.

"From each of these countries," says Secretary Wilson, "we buy sugar. The home production of this article will make us independent We have been proto the extent of its value. ducing raw materials for the nations of the world. The grain we sell to them is turned into horses, cattle, meats, poultry, and dairy products that compete with our own products of like nature in the world's markets. Every bushel of grain sent abroad takes so much plant-food from our soil and reduces the land's producing power, while the sugar we purchase in return brings no plantfood to our shores. The factory should, therefore, be established on the farm in every neighborhood, so that skill, art, and science may change the raw materials of the farm into higher-selling goods.

"Instead of sending our mill-feeds abroad in the shape of oil-cake, bran, cotton-seed meal. gluten meal, and similar by products, we should ourselves convert them into live-stock, meats, and other animal products, in which form they can be sold in foreign markets to greater advantage. When we make our own sugar and divide \$100. 000,000 among our farmers, laborers, and capitalists, we can afford to that extent to keep our raw materials at home.

"Germany produces about as much sugar as the United States imported in 1897. It was grown on a little over a million acres. sugar we now purchase abroad were produced in this country, four hundred factories would be required to work up the necessary amount of sugar-This would afford capitalists a field, as safe and permanent as any now offered, for the investment of \$200,000,000, and would reduce to a very large extent the vast sum we annually pay for agricultural products that might be grown within the United States."

## PUBLIC CONTROL OF THE PRIMARIES.

SEVERAL proposed reforms in our nominating machinery are ing machinery are described by State Senator Frank D. Pavey, of New York, in the March Forum.

Mr. Pavey shows that the subject of primary reform has taken on a new significance since the adoption of Australian ballot laws in so many States during the past ten years. when it was possible for independent candidates to print their own tickets and circulate them, the party managers had a wholesome fear of "bolts" when candidates charged trickery or fraud in primaries or conventions; for such candidates, if defeated in the primary, could run as independent candidates at the election, and often succeeded in winning over the "regular" nominee. candidacy was liable to become a dangerous factor in an election.

The establishment of an official ballot with party columns has largely done away with this possibility of successful "bolting." When a candidate has once been defeated for a regular party nomination he cannot easily get his name on the official ballot. If he does get it on, by means of a petition, signed and verified, it must have a place in the outer column, frequently remote from his party column, and it becomes difficult to explain to his friends how his name is to be voted without risk to the validity of the entire

ballot. This puts the independent candidate at a serious disadvantage. Not only that—it makes the "regularly" nominated party candidate, whether his nomination has been secured by fair means or foul, far more sure of success at the polls, and so puts a premium on "regular" nominations, and marks the party caucus, primary, and convention, even more distinctly than before, as the centers of political manipulation.

#### PREVALENT ABUSES.

The rights of members of parties at primary elections have never been legally determined beyond question. Violations of these rights are grouped by Mr. Pavey in three classes: (1) Those affecting the right to membership in a party; (2) those affecting the exercise of the franchise at a primary; and (3) those affecting the rights of delegates in a convention.

"Where the rules and regulations of a political party require an enrollment of its members as a prerequisite to the right to vote at a caucus or primary, the following are the prevailing offenses of the first class: Concealing the time and place of enrollment; refusal to permit enrollment; striking names off the rolls; and padding the rolls, either by leaving on them the names of persons who have removed or died, or by putting upon them the names of fictitious persons—or persons of another political party—and having some one impersonate and vote for them.

"In open caucuses and primaries, where a previous enrollment is not required, the same sort of evil is perpetrated by persons actually belonging to another political party, who make application to vote and, if challenged, swear in their votes by taking an oath that they are members of the political party holding the primary.

"Under the second class the most common offenses are: Concealing the time and place of holding the primary; shortening and lengthening the time of holding the primary; holding the primary outside of the proper district; making false poll-lists; failing to permit an inspection of the ballot-box at the opening of the primary, to canvass the ballots in public, and to give a certificate of election to the persons elected.

"Under the third class the violations are mainly perpetrated in connection with the organization of the convention. The committee or party officer who makes up the temporary roll of members of the convention places upon it the names of contestants who are favorable to his faction. Contests are planned and instituted for the express purpose of providing contestants whose names can be thus placed upon the temporary roll. The number of such contests is limited only by the necessity of creating a tempo-

rary majority. These temporary delegates vote upon the choice of the temporary presiding officer. He, in turn, appoints a committee on credentials, which 'hears the contests' and reports in favor of the temporary delegates already seated. The report is confirmed and they become permanent members of the convention. A convention so organized is one of the 'regularly constituted authorities of the party.'"

#### THE "KENTUCKY PLAN."

Assuming that all reform legislation should begin with the defining and safeguarding of the right to party membership, Mr. Pavey describes the provisions of the Kentucky primary election law to show how this right may be secured to the individual.

Each person who applies to be registered to vote at a general election will be asked the question, "Do you desire to register for the purpose of participating in the primaries of the political party with which you affiliate?" He is not required to answer, nor does his failure to do so in any way affect his right to register for the purpose of voting at any election. If he answer in the affirmative he will be asked the additional question, "With what party do you wish to affiliate?" The name of the party must be recorded in the column of the registration-book provided for the purpose, which becomes a public record, open to inspection by any voter. Those whose party affiliation has been thus stated and recorded, and those only, shall be entitled to participate in the caucuses and primaries of their respective parties for the period of one year next following such registration.

"The plan does not violate the constitutional provision for secrecy in voting. It contains no statement as to how a man will vote, nor does it imply any further inference than actual participation in party work. It fixes by law the status of each elector, so far as the question of his membership in a party is concerned. It defines his right to the franchise at a primary. mented by other provisions for the protection of the actual exercise of the franchise at a caucus or primary, it must eradicate or materially reduce the present evils which bring party management into such disrepute. General adoption of some form of official registration of the members of parties is a certainty of the near future in political legislation."

#### "THE RECORD PLAN."

Mr. Pavey also outlines the proposition sometimes styled "the Record plan," from its advocate, Mr. George L. Record, of New Jersey. This is more radical than the "Kentucky plan;" it abolishes conventions and applies the Aus-

tralian ballot system to caucuses and primaries. Nominations are made by direct vote of the peo-

ple, and a plurality nominates.

"The first day of registration is made a primary or nominating day. The board of inspectors at the several places of registry acts not only as a board of registry, as at present, but also as a board of primary inspectors for all political parties. Only official ballots can be used. Each ballot contains all the names, alphabetically arranged, which have been filed with the city clerk by certificate. Any fifty voters belonging to any political party can sign a certificate requesting the proper officer to print upon an official primary ballot the name of the person mentioned in the certificate as a candidate of their party for any particular office.

The voter, on the day of registration, goes to his place of registry, registers, announces his party affiliation, receives from the board an official ballot of his political party, enters the booth, erases all names except his chosen candidate for each nomination, and deposits this ballot in the box. The candidate having the plurality on each party ticket is declared to be the nominee of that party for the office in question, and his name is printed on the official ballot of that party pre-

pared for the general election.

"The advantages claimed for this plan are:

"1. General and public notice of the time and place of holding caucuses and primaries. Many voters do not know when and where their party primary is to be held, but every one knows when and where to register, and most voters do register.

"2. Greater interest in caucuses and primaries. Many voters do not care to attend primaries now, because they can only vote for a delegate to a convention, whose action at such convention is uncertain and is often exactly contrary to the wishes of the voters at the primary. Under the new plan every man can express directly his preference for party candidates at a convenient time and place.

"3. The selection of better men as candidates for office, or rather, the selection of men under better conditions. The present system limits the selection to a little coterie of politicians. The proposed plan throws the selection open to the whole people, and the successful candidate owes nothing to any machine or set of politicians.

"4. This system sets apart a day for the selection of candidates. The sole question of their relative fitness is then passed upon by the voters. This choice is not complicated by public questions.

"5. The corruption of the primaries would probably disappear. The great improvement in the practices of Election Day since the introduction of the Australian ballot law sustains this hope."

## POLITICAL AND MUNICIPAL LEGISLATION IN

I N the Annals of the American Academy Dr. E. Dana Durand reviews the State legislation of last year bearing on special political and municipal problems. One of the most interesting enactments considered is the constitutional amendment proposed in North Dakota to establish compulsory voting and fix penalties for failing or refusing to exercise the suffrage. In South Dakota the question of woman suffrage will be submitted to popular vote at the general election of 1898.

#### PRIMARY ELECTIONS.

After Massachusetts, California and Wisconsin seem to have made the most noteworthy progress in legislation for the control of primary elections. The act adopted by California in 1895, for San Francisco only, has now been improved and extended throughout the State. It provides that all parties must hold their primary elections for choosing delegates to nominating conventions at the same time and place and under the joint supervision of officers elected by the county election commissioners from representatives of the leading The number of delegates is officially fixed, and official election registers are used to determine the qualifications of voters. Each voter may cast his ballot for delegates to the convention of any one party he sees fit, on taking oath that he expects to support the party at the election. Rigid provisions are made to prevent fraud, "packing" of primaries, etc.; while, following the example set by Ohio last year, each candidate is required, after the convention and before election, to make a detailed statement of his expenses incurred for the purpose of securing the nomination, the total of such expenditures being limited on the same principle as are those of candidates for election.

The Wisconsin law of 1897 is likewise based on one of 1895, which applied to Milwaukee city and county only. The present act is mandatory in all cities of over ten thousand population, and may be adopted by any town, village, or city on popular vote. Each party has a separate primary and chooses its own officers. Preliminary meetings are, however, called a few days before the primary, at which any person may, at will, propose names of delegates to the party convention. The names are all placed, in an order to be determined by drawing at random, on a blanket ballot. The voter at the primary, in secret, marks a cross opposite those whom he wishes for delegates, up to the number to which the precinct is Any voter duly qualified, as shown by entitled. the official election registry lists, must be allowed to take part in the primary, provided that in case

he is challenged he swears that he voted for the party at the last election.

Tennessee, Missouri, and Nebraska absolutely forbid contributions by corporations to parties or candidates, or for influencing elections in any way.

An Indiana statute gives legal recognition to the polling of voters by political parties before election.

#### INITIATIVE AND REFERENDUM.

The South Dakota Legislature proposes a constitutional amendment, to be voted on this year, in the following terms:

The people reserve to themselves the right to propose measures, which measures the Legislature shall enact and submit to a vote of the electors of the State, and also the right to require that any laws which the Legislature may have enacted shall be submitted to a vote of the electors of the State before going into effect, . . . provided that not more than 5 per cent of the qualified electors of the State shall be required to invoke either the initiative or the referendum.

The sister State of Nebraska has meanwhile enacted a law, to take immediate effect, introducing the same principle for all local subdivisions—counties, townships, cities, villages, and school districts—but not for the State government A petition of 15 per cent. of the voters is necessary to initiate measures or to demand the reference of proposed measures to the people. The question must then be submitted to a vote at the next general election, but if the petition be signed by 20 per cent. of the electors and contain a request for a more immediate vote, a special election must be held. The local legislative body may suggest amendments to measures proposed by popular initiative. In such case the original and modified propositions must both be placed on the ballot. Unless a majority declares itself against both forms, the form receiving the most affirmative votes becomes law. .

## MUNICIPAL FRANCHISES.

Dr. Durand notes the growing tendency to regulate the granting of franchises to private individuals and corporations. The chief advances in this kind of legislation are in limiting the duration of grants, in demanding some commensurate payment for them, and in making them subject to direct public control. The Kansas law of 1897 applying to light, heat, power, and water plants requires the grantees of franchises to report in minute detail the exact cost of constructing their plant, and semi-annually thereafter the exact receipts and expenditures of every sort. A profit of 6 per cent. per annum is to be allowed on the actual investment shown by these statements, and the entire surplus of re-

ceipts is to go to the public treasury, unless a higher allowance be made to the holders of the franchise by consent of three-fifths of the taxpayers. No grant may be for more than twenty years, and after ten years the municipality may buy the plant at an appraised valuation.

"This law," says Dr. Durand, "imposing terms even more severe than those regulating public franchises in any European city, will, if strictly enforced, probably hinder investment of capital in municipal enterprises, and, while perhaps just theoretically, may prove of doubtful expediency. Had provision been made for sharing between city and franchise-holder the surplus profits, the law would be more advantageous."

Perhaps the most iniquitous franchise law of the year was that passed in Illinois and properly designated by Dr. Durand as "a measure really designed to prevent the Chicago City Council from reducing street-car fares." This legislation took the form of a general act declaring that the right to charge five-cent fares, granted by existing ordinance in any city, may not be taken away during the term of the original franchise; and that city councils may extend any street-railroad franchise—without the consent of abutting property owners which is required for the original grant—for fifty years, the rate of fare to be not more nor less than five cents during the first twenty years. On new grants the fare may be fixed at any rate not over five cents, but may not then be altered for twenty years.

#### THE FRANCHISES OF GREATER NEW YORK.

In reviewing the history of New York City's dealings with municipal franchises in the current number of the Yale Review, Dr. Max West shows that the city's revenue from the ferries has always exceeded that from any other class of franchises. In 1896 they yielded about \$330,000. The duration of the ferry franchises has been limited since 1853 to ten years, and the franchises are sold at auction.

Street-railroad franchises, on the other hand, were without time limit, and in some cases they were given away without compensation. The license fees formerly required of stages were made applicable to street cars, but from some lines no percentage of receipts was required.

"Although all the surface railroad lines in the borough of Manhattan have been brought under the control of two giant corporations, their financial obligations to the city remain the same as before; and thus it happens that from some the city receives only the license fees which survive from the period of stages, while others pay a stated amount yearly or a percentage of their

The Third Avenue Railroad Company refuses to pay anything whatever on account of its main line, on the ground that the old license fees do not apply to cable cars; and the highly favored 'Huckleberry' road to the Bronx, whose franchise was granted by special act of the Legislature, also pays nothing at all. The total receipts from street railroads in 1896, exclusive of taxes, were only \$302,111, or much less than the corresponding revenue from the ferries; nor is this an exceptional case. Yet it is evident enough that the street-railroad franchises are much more valuable than the ferry franchises, especially as the city of New York as heretofore constituted has had jurisdiction and control over only one end of most of the ferry routes."

Of the elevated roads, the southern half of the Ninth Avenue line was built on a franchise which required the annual payment to the city of 5 per cent. of the net receipts; the other lines pay

nothing whatever.

Of the gas companies on Manhattan Island, only one is required to pay a percentage of its receipts. Electric-light and telephone companies and other corporations using electricity pay noth-

ing.

Dr. West disproves the assertion that these corporations have reduced their charges to the public sufficiently to make up for the lack of cash payments to the city. He shows that the surface railroads are still charging the same fare as in the middle of the century. It is true that consolidation of the companies has made possible a free-transfer system affording longer rides for the money, but the cost of short rides remains unchanged.

The fall in the price of gas has not begun to keep pace with the cheapening of production, and the reductions now ordered, which will bring the price down to a dollar a thousand by the end of the century, "are probably no greater than a far-sighted self-interest would have led the com-

panies to adopt of their own free will."

## THE CHARTER AND THE FRANCHISES.

Dr. West shows that the new charter simplifies the law regarding future grants of franchises by the greater city in two ways: it brings all five boroughs under the same statute and it prescribes a single set of regulations for all kinds of street franchises. The chapter on franchises opens with the significant declaration that "the rights of the city in and to its water front, ferries, wharf property, land under water, public landings, wharves, docks, streets, avenues, parks, and all other public places" are inalienable.

The instrument then proceeds to limit the duration of all street franchises and prescribe the pro-

cedure necessary for granting them. chise or right to use the streets of the city may be granted for a longer period than twenty five years; but provision may be made for renewals at fair revaluations covering not more than a second quarter of a century. At the expiration of every franchise the plant and the property in the streets belonging to the grantee are to become the property of the city, either with or without compensation, according to the terms of the original grant. When compensation is provided for, there must be a fair valuation of the property. excluding any value derived from the franchise itself; and the city must then carry on the business on its own account for at least five years, after which it may either continue municipal operation or lease the property and franchise for limited periods as it leases the ferries and docks. But if the property is taken without compensation, the city has a choice between municipal operation and a renewal or new lease for not more than twenty years, as it may prefer. It is further provided that every grant shall make adequate provision for efficient service at reasonable rates and the maintenance of the property in good condition.

All these franchises, including the extensions and renewals, are to be granted by ordinance, and only after due publication of all the terms and conditions, including the fares or other charges; and the passage of an ordinance granting a franchise will require a three-fourths vote of all the members elected to each branch of the Municipal Assembly, or a five-sixths vote in case of a veto by the mayor. Moreover, no franchise may be granted without the approval of the Board of Estimate and Apportionment, after an inquiry into the money value of the franchise with reference to the adequacy of the proposed compensation; and at least thirty days must intervene between the introduction and final passage of the ordinance.

The chief defect in the charter's provisions regarding franchises seems to lie in the apparent repeal of the requirement that street-railroad franchises should be sold at auction. On this point, as Dr. West points out, two of the charter's provisions are apparently in conflict, and no one can say positively what the law really is. The principle of competitive sale, in Dr. West's opinion, should not have been discarded. In place of this rule the new charter offers only the requirement of a large majority of the Municipal Assembly, together with the qualified veto power of the mayor and the absolute veto power of the Board of Estimate and Apportionment. As to the requirement of a five-sixths vote in case of the mayor's veto, Dr. West reminds us that this

would not have been sufficient to prevent the Broadway franchise steal, while without the expedient of competitive sale the Board of Estimate and Apportionment will have no means of determining the value of a given franchise.

### THE LEASE OF THE PHILADELPHIA GAS-WORKS.

In the American Journal of Sociology Mr. Clinton Rogers Woodruff gives a succinct account of the operations culminating in the lease of the Philadelphia gas-works by the city to the United Gas Improvement Company in November last.

Mr. Woodruff shows that in June, 1896, the Philadelphia Common Council declared its emphatic disapproval of any proposition to place the gas-works in the hands of a corporation, and its approval of a plan "to increase the facilities of these works and to maintain the plant as the property of the city," and that within a year and a half from that time the same body passed, by a vote of 79 to 51, an ordinance leasing the same gas-works to a corporation offering the city by far less favorable terms than competing companies offered—ten million dollars less, in fact, than was offered by a responsible syndicate for the same lease.

Mr. Woodruff declares that the citizens, so far from desiring to have such a bargain made, had pronounced unequivocally against it:

"The people in town meeting assembled had declared in no uncertain terms that the gas-works should be retained. At a score of ward meetings held in all sections of the city and in every instance largely attended the citizens had declared against the parting with the gas-works on any terms. Municipal reform organizations, patriotic societies, and labor unions protested against the lease, and in one ward, where the question was submitted to an informal vote at the general election held on November 2, over 2.800 voted against leasing and but 32 in favor."

Nevertheless, the ordinance was rushed through the committees with what Mr. Woodruff terms "indecent and indecorous haste."

"The same undue haste was shown in both chambers of Councils; in Common Council no arguments were presented by those favoring the lease; to every appeal for further time and a fuller consideration the reply of its advocates was, 'We have the votes,' and the moving of the previous question. Before Common Council had passed the ordinance on Monday, a special meeting of Select Council was called for Tuesday; in the latter body the lease's principal advocate devoted the larger part of his address to an attack

on those who had been active in opposing the lease, especially the officers of the Municipal League, and I could continue this enumeration of incidents of the passage of the ordinance through its several stages if it were necessary, all tending to show a disregard, not only of the wishes of the people and the previously expressed views of the members, but even of the common decencies of parliamentary procedure; but enough has been said to establish clearly my point that the people's interests and influences were set aside and ignored; while those of a rich and powerful corporation were carefully subserved and followed."

#### WERE THE GAS-WORKS PROFITABLE?

Mr. Woodruff further denies that city management of the gas-works had reached such a crisis as could be held to justify the relinquishment of the plant at so great a sacrifice. He quotes the words of Col. John I. Rogers, himself the president of a gas company, to show that in 1896 the plant yielded a net profit of more than half a million dollars.

In his last annual message, April 5, 1897, Mayor Warwick had said:

The gas manufactured by the Philadelphia gas-works is equal in quality with that made in any city of the Union. In other words, the gas in the holder, before distribution, is a good illuminant of the necessary candle power, but unfortunately, by reason of our method of distribution, when it reaches the consumer it has lost much of its illuminating quality. This matter of distribution should be taken up and considered with the greatest care, and perhaps it would be advisable under all the circumstances to have an estimate made of the cost that would be involved in effecting the desired changes.

The gas-works are a most valuable asset and should never pass from the absolute control of the city. The plant is valued at about thirty million dollars, close to the actual debt of the city at this time, and money will be well expended if the changes suggested are carried out.

If the friends of the lease had arguments with which to justify the ordinance, it is Mr. Woodruff's testimony that they failed to use them. The measure was "jammed through" in silence.

## A Different View.

Mr. William Draper Lewis contributes to the Quarterly Journal of Economics a dispassionate study of the question, from which the only conclusion that the puzzled reader can form is that the works were run at a decided loss, but that the people either did not know it or were unwilling to try the experiment of a lease.

"During the time the ordinance was before Councils, public discussion was active. The socalled better element was divided. Had the question been left to a vote, the lease would have been overwhelmingly defeated. As far as the writer could observe, the chief arguments for the lease were the statement of the facts in the city's reports showing an annual loss, the bad condition of the mains and works, and the constitutional restrictions which so hampered the city's borrowing powers that, in view of the better advantages desired in the way of water, streets, and schools, it would be extremely inconvenient for the city to borrow the five million dollars necessary to put the gas plant in good condition."

"There is an almost universal belief among all classes in the city that bribery has been used to obtain the acceptance by the city government This belief is not confined to those of this lease. who are opposed to the lease, but is shared by many who were strongly in favor of it. The words 'eminent respectability,' had they not been used in an offensive sense, would accurately describe the men connected with the company. The belief that these men used bribery to obtain property shows to what depth of degradation we have come. It is possible for a large part of the community to believe without direct evidence that some of the first of their fellow-citizens have acted as rascals."

## DO FOREIGN MISSIONS PAY?

I N the North American Review for March the Rev. Francis E. Clark, D.D., sets forth the grounds of his belief in foreign missions as a paying investment, from the point of view of material as well as spiritual interest.

The United States and Great Britain now have about 100 Protestant missionary societies at work in foreign fields, employing about 9,000 missionaries, with an income of nearly \$11,000,000 a year. What have these missions added to the world's stores of knowledge? What have they done for commerce and civilization? These questions Dr. Clark undertakes to answer in his article.

"Consider," he says, "the one science of geography alone. What royal geographical society has such a record in discovery and exploration as have the missionary societies of America and Great Britain? The two names of Livingstone and Moffat would never have appeared in the list of the world's great geographers were it not for the missionary impetus that sent them forth. Stanley and Baker and Chanler have gone to Africa to make brief journeys from coast to coast; Livingstone and Moffat and Stewart, and scores of others, have gone to Africa to live. Their explorations have not been matters of weeks or months, but of a

lifetime, and they have often pioneered the way for men bent on purely scientific research. The names of a few great missionaries are familiar to all the reading world, but it is not so well known that the contributions to geographical science by scores of unknown men have been scarcely less important."

#### CONTRIBUTIONS TO SCIENCE.

"The same qualities which have led the missionaries to contribute so largely to geographical science have made their contributions to geology and meteorology of inestimable value. have not been professional geologists, but they have gone to the remote corners of the world. and have gone there to live. The phenomena of earth and air and sea have been forced upon their The treasures of the coral have been disclosed to them on their journeys from island to island, the volcano has exploded its magnificent fireworks for them alone so far as white man's eyes were concerned, and cloud and hurricane have yielded up unguessed secrets to their observing eyes, for there were none others to behold them.

"In the realm of archæology their contribution to the world's knowledge has been simply incalculable, and to give even a catalogue of the towns which they were first to explore and with whose location and ruins they have made the world familiar, would be of itself beyond the limits of this article."

#### THE STUDY OF LANGUAGES.

"The immense work that has been done for the study of language is shown by the fact that one of our American missionary associations alone does its work and prints its literature in forty-six languages. . It is no empty boast to say that these missionaries are among the best masters of the Chinese language, the Tamil and Marathi, the modern Syriac and Kurdish, the Turkish, Armenian, and Bulgarian, also the Arabic and modern Greek, the Zulu, Kaffir, Grebo, and Mpongwe, and other languages of South Africa. Besides these languages, the missionaries of this one society have been proficient in Hebrew. Spanish, Ancient Syriac, Gudjerati, Sanskrit, Hindoostanee, Portuguese, Persian, Telugu, Siamese, Malay, Dyak, Japanese, Marquesas, Minocresiah, Crete, Osage, Seneca, Abenaquis, Pawnee, and three languages of Oregon. More than twenty of these languages were reduced to writing by the missionaries of this board.

"When we remember that this is only one American society, and that its total expenditures are but little over half a million dollars a year, and that other missionaries of other boards are doing an equally important work, it is evident that if philology must answer the question, 'Do missions pay?' it would be with a very emphatic affirmative."

#### EDUCATION.

Dr. Clark has been much impressed on his tours around the world by the extent of the educational work conducted by missionaries. Every missionary in the foreign field, he says, is also an educator.

"Under the care of the Protestant missionary societies of the world there are almost a million pupils under instruction, or to be exact, according to the very latest statistics, 913,478. It is probable that every three years at least a million new pupils come under the instruction of our missionaries. Who can estimate the tremendous leavening power constantly exerted in all the dark corners of the world through this agency? So thoroughly is the vast utility of missions as an educative force recognized by those who have looked into the matter, that in India and other British possessions the appropriations for educational purposes which are made by our missionary boards are doubled by government grants. That is, for every dollar which the church people of America contribute for missionary schools in India, the British Government adds another dollar on condition that the pupils pass a reasonable examination and show ordinary proficiency. These government grants, it must be remembered, are not made because of any partiality to the tenets and doctrines taught by the missionaries, not because of any great love of British statesmen for evangelistic services, not because they are philanthropists or yearn for the conversion of the heathen, but because, as hard-headed men of business and politics, they see that the cheapest and best way of civilizing their subject races and of fostering their own commerce and the prosperity of the empire is by working hand in hand with the missionaries. In the opinion of the British Foreign Office evidently missions do

"But the educational work of missions is not confined to elementary schools or to the lower classes of the population. The colleges and universities which have been built up through the purely philanthropic gifts and labors of the lovers of missions are some of the noblest monuments to the value of this great nineteenth century movement. There are missionary colleges in many parts of the world which would compare not unfavorably with Dartmouth or Williams or Rutgers. There are colleges in all missionary lands with fine buildings, modern equipment, and fair endowment, and the number of whose stu-

dents is limited only by the possible accommodations. Such institutions are the great colleges of the Free Church of Scotland in Madras and Bombay, the Methodist College in Lucknow, the Presbyterian College of Beyrout, and those most useful institutions started by the American Board, Robert College in Constantinople and the Doshisha in Japan."

The influence exerted by the graduates of these colleges is out of all proportion to the amounts invested in them.

"There is no other educating influence worth comparing with them for a moment. The graduates of Robert College are influential in half a dozen nationalities of Southeastern Europe, and the Doshisha of Japan is one of the mighty influences which, within a quarter of a century, have brought old Japan out of the Middle Ages into the brightest electric glare of nineteenth-century civilization."

#### THE GAIN TO CIVILIZATION.

Dr. Clark also shows that peoples have been lifted out of savagery as the direct result of missionary effort. Commerce, he says, has brutalized and degraded the people.

"It has brought 'fire-water' and tobacco and lust and disease. It has enfeebled and almost annihilated the weaker races when it has touched them. The missionary influence alone has kept them alive and given them the large measure of prosperity which many of them to-day enjoy.

"One of the islands of the Pacific, which a little more than a generation ago was inhabited by cannibals of the lowest type, during the recent famine in India sent no less than \$4,000 to relieve the sufferings of their far-away neighbors. Had any one predicted at the beginning of this century that before its close Fiji would be occupied by a civilized, God-fearing, benevolent people who should give \$4,000 of their hard earnings for the relief of the sufferers in India, he would have been laughed to scorn as a foolish visionary.

"Were there space, it would be pleasant to relate more specifically what peculiarly large dividends missions have paid to our own country. The few millions of dollars which during the century our people have contributed have returned many thousand per cent. in actual cash dividends. Hawaii alone, whose civilization is entirely due to missionaries, and which to-day would be a desolate waste in the Pacific if commerce alone had been left to have its way, has sent back to the United States in trade returns more millions of dollars than have been spent by our people in all foreign missionary operations the world around."

## THE METHODIST DENOMINATION IN THE UNITED STATES.

MANY interesting facts in relation to the growth and present strength of Methodism in America are set forth in a recent number of Frank Leslie's Monthly by the Rev. Dr. Ferdinand C. Iglehart. The following paragraphs in Dr. Iglehart's article are especially significant:

"The Methodist is the largest Protestant denomination in America. The membership, which at the close of the Revolutionary War numbered 15,000, has increased to 5,500,000, which includes one-thirteenth of the entire population of the United States and one-third of the Protestant Church membership of the country. It has 34,000 ministers, 52,000 churches, valued at \$135,000,000. In the number of ministers, of church organizations, of church buildings, and in the value of churches, the government census for 1890 places the Methodists in advance of all others, Catholic or Protestant."

"The rapid numerical increase of Methodism has been because it has sought and found the The two Wesleys were poor common people. sons of a poor village rector. Whitefield's household goods were levied upon by an officer to satisly a debt contracted in behalf of his orphanage. With a few exceptions the nobility paid no attention to the Wesleyans, unless it was to pity or make fun of them. They had no state influence; it was against them. They had nowhere else to go but to the prisons, the factories, the mines, and the poor people for their audiences and con-No men ever went more happily to their In America the apprentices soon became proprietors, the clerks and hired hands the owners of establishments, the children of the plain people the stars in the learned professions. And Methodism, in saving the plain people, soon became rich in money, in talent and culture, as well as in the multitudes of the poor. Ulysses S. Grant and other eminent men of the country were the poor children of pioneer Methodist homes.

"Methodism includes in its membership President McKinley, from his boyhood a loyal communicant; Senators, Congressmen, governors, judges, scholars, men eminent in all the learned professions, millionaires, and hundreds of thousands of the poorest people in the humblest parts of the humblest towns in the country. Its mission is to everybody—high and low, rich and poor.

"We do not believe the oft-repeated statement that the Church is losing its hold upon the masses. The best hold most denominations have is upon the masses, and it is their hope and glory that it is so. Methodism has a strong grip upon the common people. Of the 5,500,000 of its mem-

bers in this country, less than 100,000 belong to the classes, leaving 5,400,000 who belong to the common people, which does not indicate any great loss of hold upon the masses. If the constituency of a church is three times its enrolled membership, as is generally calculated, then the Methodist constituency of this country alone includes one-seventh of the entire Anglo-Saxon population of the globe, and comes in sight of a new century weighted with a responsibility that has seldom rested upon any institution."

## MR. GLADSTONE AS A SPORTSMAN.

M. R. W. ARTHUR WOODWARD, writing in Pearson's Magazine on "The Personal Interests of Mr. Gladstone," gossips about Mr. Gladstone's personal side. He says that Mr. Gladstone permits Hawarden Park to be open to bicyclists on Sunday, on the ground that the bicycle is no more than a perfect means of loco-Mr. Gladstone has never cared for fishing or gardening, although he has studied botany and is a lover of flowers. He hates the telephone, detests the camera, thinks that chess and whist are too exacting for real relaxation, but plays backgammon nearly every evening. He detests the smell of tobacco. Mr. Woodward says Mr. Gladstone has fifty thousand volumes in his library. He reads constantly six languages. Of foreign languages he likes Greek and Italian the best. Mr. Gladstone is said to regard Émile Zola as the first contemporary writer of fiction.

"Though Mr. Gladstone was never a whip, he was always a keen horseman. It is true that he never found time for hunting, but even during the most absorbing period of his parliamentary career he was to be seen riding every morning before breakfast in Rotten Row. And this habit of riding before breakfast he continued until

nearly seventy years of age.

"I think it is hardly known how much Mr. Gladstone was of a sportsman. At school he made a favorite game of football and was in the second eleven at cricket. While at college he earned quite a reputation as an oar, and until late in life a day spent on some quiet reach of the Upper Thames was a pleasure he reserved for relaxation after any particular stress of mental harassment. He would frequently stay from Saturday to Monday at Clieveden with the Duchess of Sutherland, and part of his visit was nearly always spent sculling on the river.

"Another sport in which Mr. Gladstone showed a keen interest was shooting. He was indefatigable tramping over the fields after partridges, or through the woods that surround the park when the pheasant season commenced."

## THE PERIODICALS REVIEWED.

#### THE CENTURY.

PROF. BENJAMIN IDE WHEELER tells in the April Century what "The Seven Wonders of the World" were. The list which he is inclined to accept goes as follows: First, the Pyramids; second, the Hanging Gardens of Babylon; third, the Statue of Zeus at Olympia; fourth, the Colossus of Rhodes; fifth, the Mausoleum at Halicarnassus; sixth, the Temple of Artemis; seventh, the Pharos of Alexandria. There are many rivals for the seventh place, and Mr. Wheeler tells us what the claims of the Pharos were. It was a lighthouse at Alexandria. It was built by Ptolemy, and the Arabs transmit the story that each of its four sides was said to measure "It was built of a white at the base 600 feet. stone, in many stories, each narrowing toward the top. Its upper story had large openings toward the sea, through which the light of the great pitch-wood fires gleamed out upon the treacherous approaches to the harbor. Far off at sea it could be seen, lifting itself like a planet in the sky, hours before the low coast of the delta could be descried."

There is an interesting account, by Dr. A. Slaby, a professor in the Technical High School at Charlottenburg, of recent experiments in telegraphy with sparksthat is, without the use of wires. He describes the apparatus which has been recently perfected by the Italian Marconi, but objects to the term "telegraphy without wires." "Telegraphy by sparks," he says, is more logical. Professor Slaby himself tells how he, under the direction of the German empire and with the assistance of the balloon department of the army, succeeded in telegraphing with extraordinary clearness through a distance of twenty-one kilometers on October 7 last. He thinks that the use of spark telegraphy will be more especially valuable in military fields; besieged fortresses and advancing armies which have the enemy between them could make use of spark telegraphy to-day as a method of communication. The system works just as surely on a bright day as by night and in a fog, though to be sure only in cases where balloons can beemployed, since the distances reached from towers, masts, and the tops of high trees would hardly suffice in cases of this kind. Quite as important is the usefulness of the discovery for the navy. In place of balloons the modern kites might be used. There is also, aside from military operations, a use for the sparks for lighthouses and lightships. There is one weak point in spark telegraphy inherent in the very nature of the system; that is, every telegram is imparted to the whole world; every receiver can take it up.

This number opens with a poem of considerable length by Bret Harte, more in the original vein of this writer than anything we have seen for some time. The verse purports to be "Her Last Letter," "Being a Reply to his Answer."

Mr. Henry Edward Rood has a useful study of "A Pennsylvania Colliery Village," succeeded by "An Artist's Impressions of the Colliery Region," by Jay Hambidge. Mr. Edward Atkinson writes on the commercial advantage possessed by England and the United States in their coal supplies, and Mr. Edward W. Parker gives statistics of the Pennsylvania anthracite deposits.

#### HARPER'S MAGAZINE.

THE April Harper's contains an article by Mr. Sidney Whitman on "England and Germany," which we have quoted from at greater length in another department.

Mr. Worthington C. Ford writes on "Commercial Aspects of the Panama Canal." Mr. Ford goes into a vast body of statistics concerning the productions and commerce of China, Australia, and South America, and their relations with those of the United States, and comes to the following conclusions: "The existing lines of trade seem sufficient to carry the products between countries that are in a line with an isthmus canal. To multiply ships will not make trade, as the products to be traded in must first be raised. A survey of the East and its needs and supplies leads to the conviction that an economic revolution must take place before any great change in production and expansion of commerce can be expected. In South America the centers of production are on the eastern coast, and would receive little demand from Asia or the west of the United States. What is obtained from the west coast of South America will bear a transport around the Horn. The carriage of merchandise between the Atlantic and Pacific coasts of the United States alone may offer a prospect of some small increase, but this increase cannot be measured. The rise of the Suez passage in importance is no gauge of a Panama canal, for the productions of India and Australia, which have more and more appealed to the markets of Europe and made the canal what it is, will still use that path, and find little or no advantage in passing through Panama. My conclusion is that a canal will be an undoubted commercial convenience; it is not a necessity. It will not result in immediate or extensive development of trade among the continents, and the commercial interests of the United States in any event are of even less importance than the interests of Europe."

This number opens with a circumstantial account by Mr. Arthur C. Humbert of killing an African buffalo, and especially of photographing the beast when wounded. One may thrill with sympathy for the hunter and the feat of killing, and yet doubt the humanity of the half dozen photographic pictures representing the animal in various stages of death-struggles.

Some charmingly delicate drawings by Joseph Pennell accompany his article on "How to Cycle in Europe." Gen. George A. Forsyth, U. S. A., gives a spirited account of "The Closing Scenes at Appomattox Court House." Frederic Remington tells about the cavalry tactics of the United States troops in the far West, an accompaniment to his magnificent pictures of horses and their soldierly riders.

#### SCRIBNER'S MAGAZINE.

THE April Scribner's contains the first chapter of Mr. Richard Harding Davis' new novel, "The King's Jackal." It introduces us to the high company which Mr. Davis has been more recently accustomed to move among in a literary way—the Sultan of Morocco, the King of Messina, etc.

The magazine opens with a chapter of the beautifully illustrated "Story of the Revolution," by Henry Cabot Lodge; some of the pictures by Mr. Ernest Peixotto are really gems. Another contribution in which the illustrations are a feature is the travel sketch, "Letrels, Brittany," by Cecilia Waern, with drawings by Henry McCarter. In this appreciation of the art department of Scribner's there should not be lacking a word of mention for W. R. Leigh's drawings for Mr. Wyckoff's "The Workers"—pictures instinct with truth to the last conscientious detail.

Mr. Brander Matthews closes with a characteristic essay on "The Conventions of the Drama." After examining into the various conventions, some of them absurd enough when looked at from a philosophic point of view, he divides them into those that have come into being from the physical condition of the theaters and those for reasons which cannot be conjectured. "Although every convention makes art remoter from nature—what of it? Nature is not art; indeed, if it were, art would have no excuse for existence. What art does is to give us a skillfully chosen part so arranged as to suggest the whole. No one who enters a theater really expects or desires to be shown an exact presentation of life; and the spectators are ready, therefore, to enjoy the artistically modified representation of life."

### McCLURE'S MAGAZINE.

THE opening article of the April McClure's is an account of the heroic deeds of the Gordon Highlanders, that famous British regiment that was organized in 1794 among the clansmen of the Duke of Gordon. It has recently come out that there are very few Highlanders at present in the Gordons, but this does not lessen the interest of the McClure stories of the times when the Gordons were really Gordons.

Hamlin Garland makes a romantic story out of a very plain and circumstantial account of the Grant & Ward failure, which almost all grown men still remember—how the cunning rascal, Ferdinand Ward, formed the firm of Grant & Ward, used the good name and personal influence of General Grant to borrow huge sums of money, and then brought the whole structure of an immense business down by his frantic and secret speculations.

Mr. Herbert E. Hamblen concludes his stories of a railroad engineer's experiences with an exciting chapter that includes adventures with train-robbers, organizing a strike, running into an excursion train, and an encounter with a drunken engineer—a record which even the "novels of incident" could scarcely surpass.

Mr. Charles A. Dana's "Reminiscences of Men and Events in the Civil War" deal this month with Mr. Lincoln and his Cabinet. It is an especially striking chapter. Mr. Dana, in the frank manner that made him what he was, deals with Lincoln as a "supreme politician." "He understood politics because he understood human nature." As a sample of Lincoln's shrewdness and of his willingness to be the politician when a gigantic result justified the means, Mr. Dana tells how he, for President Lincoln, bought two votes in favor of the Fifteenth Amendment—two votes which Lincoln and Dana saw were necessary, and which could only be had by the promise of offices for the friends or protégés of the two critical Congressmen.

### THE COSMOPOLITAN.

THE April Cosmopolitan contains a brief article on "Tea-Growing in America," by L. F. I. Parks, and an essay in the "Studies of Our Government," by John Brisben Walker, which we review among the "Leading Articles."

The magazine begins with an article, apparently by an expert, on the picturesque subject of "Mine Salting," with some very good pictures of scenes below the ground in deep gold and silver mines. The moral of Mr. Dobson's account is that the buyer of mining properties can always afford to pay anything that is necessary for an expert and thorough investigation. "The examiner should be a man of sufficient experience to enable him to meet the Greek. He should be incorruptible and he should know his profession. A man so qualified costs money, to be sure, but he saves money, too. To detect frauds or 'salting' he should insist on staying for a mill run-if it be a 'milling proposition.' The whole mine should be turned over to him and his assistants. Let them get the mill into shape, clean it up and send down not less than five hundred tons as a sample."

Blanche Gray Hunt describes "The Great Drainage Canal of Mexico," and some unusually excellent illustrations appear in large half-tone views of the canal and engineering operations. This monster engineering project is designed to carry off the sewage of the City of Mexico. "It extends nearly forty miles, and passes through the mountains, where a tunnel over six miles in length is necessary. The canal is from 45 to 168 feet wide at the top, and slopes to the bottom at an angle of fortyfive degrees, which makes the sides so steep that you wonder how any one could walk up and down it with a basket on his back; but the natives cut rows of shallow steps that extend down to the water's edge, and traverse the sides of the canal in every direction." About 4.000 men are employed on the work, each receiving an amount equal to twelve and a half cents a day.

William J. Lautz tells some interesting things about "The Flight of the Carrier Pigeon." He says that pigeonflying has long ceased to be a mere sport, and such work as bringing news home from yacht races, from points where no telegraph wire can be run, and in war, bearing the messages of importance from fighting battleships, and in such special services as bringing the news from Andrée's balloon, the carrier pigeon serves a very real and useful purpose. Some records that the birds have made are certainly wonderful. Mr. Lautz tells of the bird Queen, which traveled 500 miles at the rate of 1,120 yards per minute. Another, Lady Gainsville, flew 614 miles in less than fourteen hours. But fanciers do not care to risk their birds at such long distances. The longest race ever flown by a carrier pigeon was from Lake Charles, Louisiana, to Philadelphia, which was covered by the bird Sadie Jones in sixteen days, the exact distance being 1,212 miles. The speediest flight ever made was last year, when a bird belonging to Mr. Whatten, of Newark, N. J., flew 100 miles in one hour and twenty-nine minutes, a rate of nearly one and oneeighth miles per minute. These birds are sometimes very costly. The head of the pigeon-flyers of this country, Mr. Mahr, recently sold eight birds for \$1,070.

The April contribution in the series on "Modern Education" consists of various answers of President Thwing, of Western Reserve University, to questions put by the Cosmopolitan. President Thwing is not a

bit persuaded to decry the value of Latin and Greek. While not opposing the value of any modern language, he would be interpreted as saying that "Greek and Latin do have a unique value. They can do for the student of modern languages what no other linguistic agent can accomplish."

### MUNSEY'S MAGAZINE.

THE April Munsey's has a beautifully illustrated article on "The New York Navy Yard," which describes the various craft in the yard, from the tenthousand-ton battleship to the diminutive torpedo-boat, and which has some timeliness at present.

Mr. Jerome K. Jerome nominates "David Copperfield" as his favorite book and Dickens as his special

fancy among the novelists.

Two excellent pictures are published in Munsey's of President Sanford B. Dole, of Hawaii, and Mrs. Dole, in a paragraph which is prompted by President Dole's visit to the United States. Munsey's says that it is understood his purpose is to terminate the existence of his own government and to surrender the independence of Hawaii under an annexation treaty, making him the first and last President of Hawaii. He is described as a striking and interesting figure in person. He is six feet tall or more, with a silvery beard of patriarchal aspect, of strong but kindly features, and of dignified but courteous bearing.

Writing on a recent incident in the life of yellow journals, Munsey's says that one of the one-cent morning papers of New York, in its fight with a certain trolley line which was supposed to interfere with popular rights, determined to get no less a person than President Cleveland to argue its case in court. It dispatched an emissary to Princeton, and offered the ex-President a sum for one day's work in court which is said to be not much short of three thousand dollars. "To the intense surprise of the munificent publisher the offer was peremptorily refused by Mr. Cleveland, on the ground that it would be an injustice to the other members of his profession to emerge from his retirement and come into the great white light of newspaper fame for a single moment, merely for the sake of a large fee which ought really to be given to some lawyer in active practice."

### THE CHAUTAUQUAN.

PROF. N. S. SHALER has a brief essay in the April Chautauquan on "The Changes of the Seasons." He says that in regions where a deep coating of snow covers the ground through the winter, spring has already far advanced before the snow passes away. "As it goes it leaves the ground in fair order for the development of seeds and for the escape of the insect life which in the grub state has hibernated within it. The melting of the snow supplies in a gradual manner abundant moisture; moreover, the snow has some little ammonia in it, which, in a degree, serves to fertilize the plants. Owing to its protective quality and to the help which its water on melting gives the plants, the snow was long ago termed in English phrase 'the poor man's manure'that is, the fertilizer of the small farmer who could not have much of other means for aiding his crops."

"An Insider" writes of "New York Editors and Daily Papers." Most of the editors have been written about and talked about enough, goodness knows. Perhaps the only one who has not become very well known to the public is Mr. Paul Dana, the new editor of the Sun. Mr. Paul Dana is not as young a man as one would think from the way the other New York papers have spoken, being over forty-five years of age, and he is not many years younger than was his father when he became the editor of the paper. He has been trained for a career in editing and gained editorial experience as his father's assistant for years. He is not a profuse writer and does not furnish much copy of his own for the Sun's use. But he quickly selects from his daily supply of manuscripts those articles which he regards as suitable to print, and keeps a watchful eye upon the pages of the paper. Mr. Dana is a fine-looking New Yorker, wellfeatured, tall, athletic, agile, and healthy. He is a Harvard man; he is acquainted with several modern languages. Mr. Charles A. Dana left a very handsome inheritance, of course, and Mr. Paul Dana's tastes lead him to live in the style for which this furnishes the basis. He is fond of music, dancing, and all sports, and belongs to the approved set in society.

### LIPPINCOTT'S MAGAZINE.

HE short novel of the month in the April Lippincott's is by Amélie Rives and is entitled "Meriel." It will be read with a considerable degree of interest by those who considered Miss Rives to be easily the strongest and richest literary producer among the women of this country—to ascertain what may be the promise of her maturer years. From a hasty examination, the evolution of this remarkably talented young lady does not seem to be altogether reassuring. The rich, exuberant vitality, the fascinating unconsciousness, and the truth of observation in the Virginia stories do not seem to be present, or at any rate dominant, in this rather nervous, high-strung romance of Monaco and Mediterranean tourist life. The story is not, however, without that fire which distinguishes Amélie Rives' novels from the merely gushing utterances of certain of her sister story-writers.

Henry Willard French writes of the exciting scenes "In an Australian Camp," describing the methods of living and fighting among the black fellows of the

island continent.

R. G. Robinson discusses "Florida Storms," of which several species exist, some of them tremendous in their strength and ferocity. In the great storm of 1880, for instance, 56 inches of water fell in South Florida. It continued uninterruptedly for three days and nights. In some counties every church and nearly all two-story houses went down. If a building withstood the fury of the wind it was flooded with water. All previous records, however, were broken by the storm of September 29, 1896, the shortest and most disastrous ever known. In its path across Florida alone 100 lives were lost, thousands were made homeless, 4,000,000 acres of timber were destroyed, and the damage to property amounted to more than \$10,000,000.

### THE BOOKMAN.

In the Bookman's literary gossip of the month it is stated that the Messrs. Harmsworth, in London, are proposing to revolutionize again the business of publishing magazines, by fixing the price of their new periodical, the London Magazine, at threepence, keep-

ing the contents in quality and quantity equal to the Strand, Pearson's, the Windsor, etc. It is thought that the London Magazine will have a circulation of half a million.

Isidore Harris contributes an interview with Mr. Israel Zangwill. Mr. Zangwill was born in London in 1864, and spent his youth in those East-end scenes which he has portrayed in "The Children of the Ghetto." He became a teacher in the Jews' Free School at Spitalfields. He was a most eminently successful teacher, accomplishing the feat of passing his entire class, without a single exception, of sixty boys. He does not have a large literary output. He lives in an unfashionable London suburb, and has no luxuries except horseriding and traveling. He does not even smoke. His library is bare, with no handsome editions. The only books one misses from the shelves are the author's own works, of which he can never keep a set; they are either begged, borrowed, or stolen. As for papers, they litter the whole room and overflow into an adjoining one. Drawers are stuffed full of letters from all sorts of eminent people, many from professionals who write to say how reading of "the master" has helped them in their life-work. A large trunk is crammed with presscuttings. Every two or three days there is a clearance of the papers that accumulate on the writing-table. Israel Zangwill is the brother of Mark Zangwill, the artist, and Louis Zangwill, the novelist.

Prof. Harry Thurston Peck answers the question, "What is Good English?" in a characteristic essay, and there is an article on "Kipling's View of Americans,"

chiefly taken from his "American Notes."

### THE ATLANTIC MONTHLY.

ELSEWHERE we have quoted from Mr. William Henry Schofield's "Personal Impressions of Björnson and Ibsen" appearing in the April Atlantic.

The number opens with an important paper on "A Decade of Federal Railway Regulation," by Prof. Henry C. Adams. The conclusion drawn from this review of experience under the Interstate Commerce act is a negative one. Professor Adams declines to accept as final the record of the Interstate Commerce Commission, "as it bears upon the theory of public control over monopolistic industries through the agency of commissions." The courts have attacked the authority of the commission, and Congress has not upheld or strengthened that authority. Furthermore, the proper administrative machinery has not been created. So far as the public is concerned, the case stands just where it stood ten years ago. The question of government ownership vs. government control is still an open one, unsolved by experience.

Mr. W. J. McGhee describes from personal experience the various stages of thirst in the desert. The record of his sensations is good material for the experimental

psychologist:

"Deceived by a leaky canteen on the plateau of the Book Cliffs of Utah, I held myself in the real world by constant effort, aided by a mirror, an inch across, whereby forgotten members of my body could be connected with the distorted face in which my motionless eyes were set; yet I was rent with regret (keen, quivering, crazy remorse) at the memory of wantonly wasting—actually throwing away on the ground—certain cups of water in my boyhood; and I gloried in the sudden dis-

covery of a new standard of value destined to revolutionize the commerce of the world, the beneficent unit being the rational and ever ready drop of water. I collected half a dozen double-eagles from each of four pockets, tossed them in my hand, scorned their heavy clumsiness and paltry worthlessness in comparison with my precious unit, and barely missed (through a chance gleam of worldly wisdom) casting them away on the equally worthless sand. In this stage of thirst fierce fever burns in the veins, but the deliberate doctor is not there to measure it."

Mr. Herbert Putnam relates the romantic history of the famous Ashburnham collection of rare manuscripts and the accomplished knavery of Count Libri, who purloined from French libraries material of unique value, skillfully disguised its origin by mutilation, and finally sold it to Lord Ashburnham for eight thousand pounds

Prof. George H. Darwin contributes a learned paper on "The Evolution of Satellites;" Mr. Bradford Torrey writes a charming nature-study entitled "A Nook in the Alleghanies," and John Muir describes the Yellowstone National Park. There are also scholarly papers on the teaching of English and on the reading of Greek tragedy, the former by Mark H. Liddell and the latter by Prof. Thomas D. Goodell.

### THE NORTH AMERICAN REVIEW.

ELSEWHERE we have quoted from Dr. Clark's article on the material value of foreign missions, in the North American for Marca, and also from Mr. Latané's review of American intervention in Cuba, appearing in the same number.

Prof. Goldwin Smith tells us in no uncertain terms that our Constitution is in some respects outworn, that so long as party conflict rages among us revision is hopeless, and that we may never expect to have it in thorough repair, though "the edifice may be patched so as to stand." The want of responsible control over finance is the break which should first be mended.

Commodore Melville writes on "Our Future on the Pacific—What We Have There to Hold and Win." He shows that geographic isolation is no longer a safeguard for any nation, that we have enormous wealth on the Pacific exposed to blockade, raids, and bombardment by a hostile power, and that our commerce with China and Japan is as yet undeveloped.

On the subject of "Personal Morals and College Government" President Thwing concludes that "the college man is none too good, but he is growing better with each passing generation. He now represents the highest type of young manhood. He will continue to grow better with each passing generation; he will embody yet finer and nobler type of manhood. Worthy freedom under worthy conditions represents the best method and agency."

In an interesting discussion of "Patriotism: Its Defects, Dangers, and Duties," Bishop Doane, of Albany, declares that the hatred of other countries is not only not the only sign, but no sign at all, of the love of our own. "It is neither necessary nor natural for a man to show his love for his mother or his wife or his daughter by being a misogynist in his feeling toward all other women in the world."

A paper of great interest to military men is contributed by Lieut.-Col. Rogalla von Bieberstein, of the German army, on the question, "Could Russia Take British India?" This writer's general conclusion seems to be that in the long run England, with her great resources of all kinds, could successfully defend her Indian possessions, although at the outset Russia might be able to muster a greater fighting force.

The second installment of Sir William Howard Russell's "Recollections of the Civil War" recounts that vivacious correspondent's experiences among the Southern leaders just after the evacuation of Sumter.

In the department of "Notes and Comments," Dr. J. H. Girdner writes on purging the pension list, the Rev. A. W. Quimby on the question "Have We Too Many Churches?" Prof. M. V. O'Shea on "Some Social Aspects of School Teaching," and the Rev. J. H. La Roche on "Masters and Slaves in the Old South."

### THE FORUM.

I N our department of "Leading Articles" we quote from Secretary Wilson's plea for home-grown sugar and from Senator Pavey's article on primary election reform, both of which appear in the March Forum.

Senator Morgan, of Alabama, writes on "The Duty of Annexing Hawaii," and Senator Money, of Mississippi, on "Our Duty to Cuba." Each gentleman expresses views that have become tolerably familiar to the readers of recent Senate debates. Senator Morgan is known as an enthusiastic advocate of Hawaiian annexation, and Senator Money is one of the most earnest friends of the Cuban cause in Congress.

Ex-Governor Stone, of Missouri, writes a defense of the Chicago platform as the true creed of the Democratic party.

The subject of "Brazil: Its Commerce and Resources" is treated in an article by the Hon. Thomas L. Thompson, late United States Minister to Brazil. Concerning recent developments in Brazilian politics, Mr. Thompson says:

"It was hardly to be expected that a radical change in the government of a great nation could be effected without engendering friction and dissension. In my opinion, however, notwithstanding the recent attempted violence against the president and the reports of a turbulent character following that dastardly assault, there is noorganized party of monarchists now in Brazil; nor is there likely to be at any future time one strong enough to overthrow the existing form of government. The latter is as heartily supported by the overwhelming sentiment of the people as it is by intelligently governed State organizations composing the Federal Union."

Mr. A. Silva White brings together the well-known arguments used in England to justify the British protectorate of Egypt.

In an article on "Some Recent Municipal Gas History," Prof. Edward W. Bemis devotes considerable attention to the case of the Philadelphia gas-works, the details of which are given elsewhere in this number of the Review. With regard to the general prospects for municipal ownership in this country, Professor Bemis says:

"There is no reason why American cities should not have equal success in public ownership of lighting plants with that existing across the water, as soon as our people are as anxious to have such success. As long, however, as the so-called 'leading citizens' of our cities prefer to do their 'leading' in the direction of

their private interests, as involved in valuable franchises, and so long as the rest of the community are not prepared to take the leadership into their own hands, just so long will the present corrupting relationship between private-owned franchises of enormous value, on the one hand, and city and State government on the other, continue to exist."

The well-known French organist, M. Alexandre Guilmant, who has spent several months in the United States, contributes an article on "Organ Music and Organ-Playing." For pure organ music, M. Guilmant regards Bach as the greatest of all composers. He thinks it simply marvelous that Bach should have been able to play, on the organ of his day, works so exacting in technique as his own; even with the modern mechanical appliances they are sufficiently difficult. M. Guilmant's opinion is that organ builders should give less time to mechanical improvements and more to improving the voicing of their instruments.

In a review of "Recent Astronomical Progress," Prof. Simon Newcomb says that the greatest astronomical work now going on is the construction of the international photographic chart of the heavens, for which the plans were outlined at a conference held in Paris in 1887.

"A dozen observatories, perhaps, in the southern as well as the northern hemisphere, have engaged in the work; and several of them are rapidly pushing their task toward completion. When this work is done, all the stars bright enough to impress a negative will be depicted on some twenty-five thousand photographic plates; each star, for certainty, being taken on two plates. The total number will be many millions, quite likely a hundred millions or more. A rich field for research will thus be opened, the cultivation of which may well occupy the next two generations of astronomers."

Prof. G. R. Carpenter discusses the notable fondness of our people for the old-fashioned historical romance, declaring that while we appreciate the subtlety, the complexity, and the richness of the novels of the newer school, we still retain our affection for the works of Scott and Dumas and their followers.

Mr. Henry E. Rood undertakes the solution of the tramp problem, and Mr. Edwin J. Prindle replies to a recent article in the *Forum* entitled, "Is It Worth While to Take Out a Patent?"

### THE NINETEENTH CENTURY.

THE Nineteenth Century calls for no special remark. We notice elsewhere Dr. Emil Reich's article on "Austria-Hungary and the Ausgleich" and Prince Krapotkin's study of Canada's resources.

Mr. Archibald S. Hurd, in an article on "The Navy and the Engineering Dispute," maintains that the insane struggle which paralyzed British industry last year has had a most disastrous effect upon the strength of the British navy. With so many engineers lying idle, it was impossible to carry out the shipbuilding programme of the Admiralty. The result of this is, says Mr. Hurd, "we are at the present moment short of two battleships, four first-class cruisers of the Diadem class, three second-class cruisers of the Arrogant type, seven cruisers similar to the Pelorus; and, moreover, all the other work of construction, both in the dockyards and in private shipbuilding yards, is lamentably behindhand. However anxious Mr. Goschen may be to continue the energetic policy of construction that Lord George Hamilton initiated, he will find himself unable to make any heroic effort, unless he decides to put a larger proportion of the new ships out to contract than has been usual, and at the same time enlarges the list of private firms who are permitted to tender."

### VIVISECTORS AND INQUISITORS.

Mr. W. S. Lilly describes the methods of the Inquisition. Mr. Lilly, although a Catholic, regards the revolt of mankind against the Inquisition as one of the most gratifying events of human progress; but he reminds us that the inquisitor of last century has his representative in the vivisector of to-day:

"The vivisector is, to say the least, as indifferent to the sufferings of his victims as was the inquisitor. Curiosity as to the attainment of the desired result, not pity, is the emotion produced in his mind by the agonies and cries which, like the officials of the Holy Office, he carefully, perhaps complacently, notes. We are not justified in attributing to him, any more than to the inquisitor, abnormal hard-heartedness. like the inquisitor, he illustrates a tendency in human nature to shrink from no savagery toward others ad eruendam veritatem—in the attempt to elicit truth. That tendency I, for one, hold to be evil in itself. The doctrine so ignorantly imputed to certain schools of casuists, that a good end will justify any means, is simply false, and inconsistent with the first principles of morals. We have no right to employ physical torture in order to elicit truth, whether in judicial or scientific investigation. It is an unethical means; and that is the true objection to it in both cases."

### THE FUTURE OF MANCHURIA.

Capt. Francis Younghusband writes enthusiastically concerning the prospects of British commerce in Manchuria. His article was written in India before the recent developments in the far East. He has traveled in the country, and he believes in it with his whole heart. He says:

"It is a country of exceeding richness and of promise scarcely less than that of the Transvaal itself, and compared to which the whole of Central Africa, from Uganda to Khartoum, is of paltry insignificance. Its soil is not barren, but of surpassing fertility. Its inhabitants are not listless semi-nomads nor fanatical barbarians, but the most industrious agriculturists in the world. And they do not number a few hundreds of thousands, but a score of millions. Here is a market as yet scarcely touched, but which will in the future yearly incease in value. For in Manchuria there is not only immense natural wealth, but, what is of equalperhaps more-importance, an advanced and civilized people who do not need, like barbarians, to be educated to feel their wants, but have considerable wants already.

"Here, then, is a promising market for the sale of our cotton goods, implements, machinery, and other requirements of an advanced and thriving community. This market is as yet scarcely touched, and we have to bear in mind that the population will not only increase both by immigration and by natural growth till at the end of another half-century there will probably be forty million inhabitants in Manchuria, but that this population, once the railroads which strategical reasons have forced upon the country have been completed, will find their requirements doubling and redoubling in amount.

What they want from us to-day is no standard of the vastly increased amount they will require from us to-morrow. With political obstacles removed Manchuria could compete with British Columbia in the timber trade of the world. Manchuria is equally rich in its production of cereals, and in the southern portion of such crops as indigo and tobacco."

### OTHER ARTICLES.

Mr. Arnold Forster, writing on "The Army and the Government's Opportunity," makes no secret of his conviction that the British Government has lost its opportunity, and that Mr. Brodrick's proposals merely formulate "the intention of the War Office to compel Parliament to indulge in a lamentable waste of public money, and of their determination to refuse at any cost to reform either the system which has failed or the office which has produced the failure." Mr. Frederick Wedmore discourses on the short story in England and France. The Countess of Jersey tells the true tale of how two French girls were enslaved by the blacks of San Dömingo. They were subsequently rescued. Lord Burghclere contributes a translation of the First Georgic in blank verse.

### THE FORTNIGHTLY REVIEW.

THE Fortnightly Review for March is varied, entertaining, and thoroughly up to date. We notice elsewhere the articles on "England and Japan' and on the position of the army in France.

### REMINISCENCES OF JUDAH P. BENJAMIN.

From the papers of the late Baron Pollock, Mr. Morley seems to have exhumed a fragment containing some reminiscences of Judah P. Benjamin, who served in turn as Attorney-General, Secretary of War, and Secretary of State in the Confederate Cabinet of Jefferson Davis, and in after-years attained a high position at the English bar. The paper begins as follows:

"It is more than thirty years since, to my great gain, I came to know J. P. Benjamin. From that time till his leaving England for Paris, not long before his death, we lived on terms of the closest intimacy, and when he was taken from us I felt that I had lost a charming companion, an accomplished brother lawyer, and a true friend, one I could not easily replace. His ways, his habits of thought, and modes of expression could never be forgotten."

### THE FRENCH ON THE NILE.

Mr. F. A. Edwards writes an article on this subject which concludes as follows:

"The French aim is to keep the English out of all possible markets for trade, and it was in view of this that the London Chamber of Commerce passed a resolution in April, 1895, approving the claim of her majesty's government to the sphere of British influence over the whole course of the Nile, and recommending that effectual measures should be taken to assume the control of the valley of the Nile from Uganda to Fashoda. This might have been done peacefully without all that expense of a great military expedition involved in our present progress up the Nile Valley. The French Government does more to develop trade than does our British Government, and this fact is one which should impress itself upon 'a nation of shopkeepers.'"

### A NEW VOTING MACHINE.

Mr. W. H. Howe describes the perfect machine by which he claims that he has reduced to a minimum the difficulties of securing a free, secret, and absolutely accurate vote.

"The work of the elector has been reduced, in the proposed change, to passing through a cage-turnstile, in doing which the machine—which is an inclosure outside the circle of the cage—is revealed, and he is enabled to select his candidate in secret, after which the further movement of the cage records the vote, or makes his selection effectual, without the possibility of a mistake, or of spoiling his ballot-paper, or of his intention being discovered—the machine being seen only by the elector who is passing through the cage. In recording his vote, moreover, the elector shuts himself out, so that he is quite unable to vote twice."

### THE DELUSIONS OF THE FRENCH.

Mr. Albert D. Vandam, in a paper entitled "Side Lights of the Revanche Idea," sets forth at some length the evidence as to the extraordinary fashion in which the French have deceived themselves as to the causes of their disaster in 1870-71. Mr. Vandam says:

"A careful study of the most trustworthy documents on both sides breeds the inevitable conclusion that the reverses of the French were absolutely due to the collective incapacity of the majority of their leaders, and not to the blundering, indecision, ill-luck, and overweening confidence of an isolated few. Europe was and is willing to abide by that conclusion. Not so the French; they were determined from the outset that there should be one or two scapegoats, in order to afford the rest of their captains what, in sporting terms, we call 'a consolation prize.'"

Marshal Bazaine was one of these scapegoats, General de Wimpffen another, and Mr. Vandam reminds us that a French jury actually confirmed by their verdict the belief that the disaster at Sedan was entirely due to General de Wimpffen's gross incapacity. If Marshal MacMahon had not been wounded, the legend goes, the French would have won a brilliant victory.

### IN PRAISE OF PRESIDENT KRUGER.

Mr. F. Reginald Statham sets forth an "Apology and a Defense" of President Kruger. Mr. Statham is delighted that his hero has once more been elected President of the Transvaal. He says:

"Mr. Kruger appears in the light of one of the most remarkable figures of the present century. Impervious to flattery; gifted with an unrivaled shrewdness in his estimation of men and events; penetrated by a religious conviction as deep and as sincere as that of the founders of the evangelical school in England; patriotic in every fiber; courageous, watchful, patient, humane; possessed of a humor as genuine as that of Abraham Lincoln; as little to be drawn aside from his conscientious convictions by the pressure of his own burghers as by the threats of foreign agitators—thus fashioned by nature and educated by experience, Mr. Kruger may well and worthily stand forward as the representative of a race."

### OTHER ARTICLES.

Mr. G. H. Thring describes the recent attempts at British copyright legislation, and strongly condemns the proposal of the Copyright Association to deal with the question of copyright. Augustin Filon, in his sixth paper on "The Modern French Drama," deals with the new comedy, a slightly hybrid and bastard variety. M. Charles Bastide, in "An Elysian Conversation" between Merimée, Renan, and Maupassant, touches lightly upon some literary and political questions which are prominent in Parisian society.

### THE CONTEMPORARY REVIEW.

THE Contemporary Review opens well with an anonymous article on "The Demoralization of France." This we notice elsewhere, as well as the article by Mr. F. T. Jane on "Policy in the Far East."

### THE SECRET OF BALDNESS.

Mr. J. Clarke Nuttall embodies in a few pages the results of the investigations of M. Sebouraud, a former pupil of Pasteur's, who has discovered the microbe of baldness. Mr. Nuttall thus describes the way in which this microbe kills our hair at its roots:

"The development and growth of the microbe causes certain changes in its environment—the breaking up, for instance, of substances around from which it obtains necessary food and energy-and the cycle of results thus brought about gives the production of a substance poisonous to the root of a hair. This toxin passes down to the root and acts as a slow poison, not killing all at once, but inducing certain characteristic symptoms; the hair becomes lighter in color until its pigment has practically disappeared, its diameter gradually lessens, it becomes brittle and dried up, and eventually dies and falls out. The root, though weakened by the poison, sends up another hair to replace the fallen one, but the new outgrowth begins life feebler and poorer than its predecessor, so it too, only with greater speed, becomes a victim. So it goes on; each successive outgrowth starts more weakly its fight against the insinuating poison and more quickly succumbs, until a point is reached when the root can no longer make a fresh effort, for it has also fallen completely under the noxious influence and is killed. This course of events, occurring as it does simultaneously in hundreds of adjacent hair-follicles, naturally results in complete baldness."

M. Sebouraud found that this microbe which makes men bald is so deadly to hair that it is possible that animals inoculated with it lose all their fur:

"He took a rabbit and inoculated it deeply under the skin with the fluid. As he hoped and anticipated, the rabbit speedily began to lose its fur, and in between five and six weeks it was completely denuded—in fact, it had become entirely bald."

It is rather disappointing to know that although the microbe of baldness has been discovered, M. Sebouraud thinks that nothing can be done to extirpate him.

### THE MORALITY OF PUBLIC DEBTS.

Mr. A. J. Wilson has an article on "The Immorality and Cowardice of Modern Loan-Mongers," in which he repeats his familiar warning as to the evils which modern states are incurring by running deeper and deeper into debt. He says:

"Where debts are manufactured merely because preceding debts demand feeding with moneys a nation's actual income cannot supply, as is the position with at least three-fourths of modern borrowing countries, and where representative institutions exist but in name, it will be difficult to affix much of a moral stigma upon debt defaults in the future. And even in cases like those of our own Australian possessions, the moral responsibility will have to be divided between the people who inhabit them and have votes and the money-lenders in London by whom they are beguiled. The truth is that the entire modern custom in relation to the contracting of public debts requires revision in the interests of public morals. Future generations are, for the most part, left completely out of the reckoning in these affairs, and very rarely is the effect upon the present generation given much greater thought."

### THE CHESTERFIELD OF ANTIQUITY.

Dr. Dillon translates from the Syriac the Book of Ahikar the Wise, which is referred to in the Book of Job. Dr. Dillon's theory is that "it was a Jewish tale, composed in Hebrew in the third century B.C., and shortly afterward done into Aramaic."

The story of Ahikar is, he says, "a sort of 'hand oracle of world wisdom,' a compendium of rules of conduct such as was published in Spain by the Jesuit Balthazar Gracian nearly three hundred years ago."

It is interesting to come upon a collection of maxims for the guidance and governing of youth written two thousand years before Lord Chesterfield penned his famous maxims. Apart, however, from these maxims, the story is very interesting.

### THE GERMAN STUDENTS' STRIKE IN AUSTRIA.

Dr. Samuel Schidrowitz, the able and alert London correspondent of the Neue Frete Presse, tells the story of the recent strike of the German students in the Austrian universities. He says:

"But the German students at the Austrian universities and other high schools in Vienna, Prague, Brünn, Gratz, and Innsbrück decreed a general strike, and decided not to attend the lectures nor to allow the professors to 'read' (the technical expression for a professor's lecture), because after the riots in Prague the government had forbidden the German university students in Prague to sport in the public streets their 'coulcurs'i.e., to appear in public with their colored caps, sashes, and other emblems of German students' societies. Such a 'strike decree' on the part of the students must appear to Englishmen very strange; but perhaps still more surprising remains the fact that the students carried the day, that the government had to close prematurely all the above-mentioned universities in the midst of the 'Semester' in order to prevent riots and perhaps still more serious disturbances of the peace in several provinces of the monarchy."

### OTHER ARTICLES.

Miss Emma Marie Caillard writes on "The Relation of Choice to Freedom," and Mr. Mitchell-Innes, late Colonial Treasurer of Hong Kong, describes the characteristics of the Chinese and Japanese in an article entitled "The Dragon and the Chrysanthemum."

### THE NATIONAL REVIEW.

THE March number of the National Review has plenty of variety and is well up to date. Separate notice is claimed for Admiral Maxse's "Face to Face in West Africa" and "The Sorrows of an Anonymous Scribbler."

ENGLAND'S SHARE IN THE PARTITION OF CHINA.

Mr. John Foreman, writing on "The Coming Partition of China," regards it as a settled purpose with Russia that the Trans-Siberian Railway shall cross Chinese territory and terminate on the Chinese coast. Germany has obtained a portion of China. If Russia and France seek to follow the same policy of annexation, Mr. Foreman thinks it will be incumbent on Great Britain to take a share.

"In that event what we want is an extension of our Kowloon possession facing Hong Kong. So far apossible we should seek natural boundaries and take all that point of the mainland opposite Hong Kong bounded on the west by the Canton Estuary, on the north by the Tong Long River as far as the town of Whee Choo, and thence strike a straight line south to Bias Bay for an eastern boundary. . . . We should also acquire by treaty with China or by force, as circumstances may permit or compel us, Chusan Island and its dependencies, whence we could defend our large established trade and divers interests on the Yangtse-Kiang River and Shanghai district."

He also recommends the taking of Woo Choo Island, within thirty hours' steam of Port Arthur. France, says Mr. Foreman, may be regarded as a negligible quantity, for she is "but the dupe of the Great Bear," and "in open competition the French are nowhere."

### "THE HIGHER RASCALITY."

This, according to Mr. H. E. M. Stutfield, consists in the new Macchiavellism, or the law of the beasts, being carried from politics to commerce, and especially to the "promoting" of corporations.

"This peculiar immorality, or rather unmorality, is of comparatively recent growth, and its origin is not altogether clear. Perhaps it is Mr. Cecil Rhodes, with that magnetic personality of his, who has infected with somewhat of his own noble scorn of unctuous rectitude, of which his followers are so justly proud:
... At the present rate of progress we bid fair to be turned during the next century from a nation of shop-keepers into a community of company-mongers, wherein the Hebrew adventurer and his satellites will reign supreme. The new notions of trying short and shady cuts to fortune appear to be growing in all classes of society."

Legislative check on the abuses of the limited liability system is the remedy suggested.

### OTHER ARTICLES.

The Hon. Herbert C. Gibbs, writing on the Indian crisis, calculates that the gold reserve which the Indian Government will need to keep the rupee at par under the proposed gold standard would be £50,000,000. He proposes instead that the mints should be reopened to silver, and revives Mr. Goschen's suggestion that England should gradually withdraw the half-sovereign and issue in its place ten-shilling notes based on silver This would liberate the £22,000,000 now in the form of half-sovereigns, would lessen the strain on gold, would give the government a clear profit of £11,000,000, and would naturally raise the value of the rupee to 1a 3d.

Sir Edward Bulwer reviews the history of Lord Cardwell's scheme for the reorganization of the British army, recalls its unfulfilled proposals, and suggests that the supply of troops will keep pace with the demand if recruits are freely taken at the age when they are most willing to come, and are offered inducements either to remain with the colors or to pass into the reserve.

### THE CORNHILL.

HE Cornhill this month has some good papers. Mr. Fitchett's account of Lord Anson and the Centurion, the third of his "Fights for the Flag," deservedly occupies the first place. Mr. Strong writes about "Lewis Carroll." Mr. Dodgson lived like a recluse at Oxford, and Mr. Strong says that his great originality of mind was his chief danger in his works on logic and mathematics. He read comparatively little of other people's books, and preferred to evolve his theories out of his own mind without being influenced by others. Mr. A. G. Graves contributes a short essay on "Mangan, Poet, Eccentric, and Humorist." Lady Jane Ellice's "Stray Fragments of a Past" carry us back for more than three-score years and ten. Mr. Parker describes "The Life of a Chinese Mandarin," and Mr. Down writes about "Gold Mining at the Klondike," to which reference is made elsewhere. There are two good stories in the article entitled "Of 'Scores,'" one Irish and one Scotch. The first, which may be familiar to some of our readers, is "a story told of Chief Baron O'Grady, who was trying a case in an assize town where the court-house abutted on to the fair green and a fair was in progress. Outside the court were tethered a number of asses. As counsel was addressing the court one of these began to bray. Instantly the chief baron stopped the speaker. 'Wait a moment, Mr. Bushe; I can't hear two at once.' The court roared and the advocate grew red. But presently, when it came to the summing up, the judge was in full swing when another ass struck in-whether by the counsel's contrivance or not, who shall say? Anyhow, up jumped Mr. Bushe with his hand to his ear. 'Would your lordship speak a little louder? There's such an echo in the court."

The second one tells how at a Liberal meeting in North Britain, when the proceedings were being opened by prayer, a reverend gentleman prayed fervently that the Liberals might "hang a' thegither." He was interrupted with a loud and irreverent "Ahmen." "Not, O Lord," went on the speaker, "in the sense in which that profane scoffer would have ye to understand it, but that they may hang thegither in ahcord and concord." "I dinna so much care what sort o' cord it is," struck in the voice, "sae lang as it's a strong cord."

### BLACKWOOD'S.

R. ANDREW LANG, in Blackwood's for March, endeavors to do justice to the memory of the murdered Cardinal Beaton. He claims to show that the charge of forgery against Beaton is unproved. His murder he traces to revenges for his punishment of abbey-robbers, and then to hopes of reward, political hatred, and the blood-feud for Wishart. He also claims to have exposed for the first time "the amazing corruption" of the ultra-Protestants, who offered first to kill the cardinal "for a consideration," then became the firm allies against the Anglophile Scots under Angus, and finally veered round and murdered Beaton. Mr. lang also takes credit for vindicating for the first time for its real author, Knox, the tract reporting Wishart's trial. He does not spare the memory either of Wishart or of Knox. "The style of the great reformer is remarkable for the luscious freedom of its invective. Nobody who has ever heard Knox scold can mistake him for any other artist."

"The Cries of Paris" heads the first paper in the magazine, and is about as contemptuous a treatment of current excitement in the gay capital as ever made Frenchmen hate Englishmen. Happily the writer concludes with the reflection that "the cries of Paris are but faintly echoed in the larger world of France; and France, whose thrift and energy have survived defeat, is still strong enough to resist revolution."

Mr. E. A. Irving describes a curious kind of fishing called "tuba-fishing," in which the Malays cast tuba or poison from the upas tree, so drug the fish, and then harpoon them.

### THE WESTMINSTER REVIEW.

THERE are two good articles in the Westminster this month. The first, a quite unusual article to find in a magazine, is Miss J. Hudson's elaborate compilation of all references to dogs in English poetry. The article suggests the possibility of a new series of poetical anthologies devoted to each of the animals which are the friends and companions of man. The other article referred to is a sequel to the paper which appeared last month on "Judicial Sex Bias."

Mr. G. A. Dewer, in an article entitled "Is Parliament so Shocking?" quotes from a letter which he received from Mr. Gladstone, whom he had written to upon the subject. Mr. Dewer asked him if he thought the behavior of the House of Commons had deteriorated in the course of his parliamentary career.

"'I should say,' wrote Mr. Gladstone, 'that since I entered the House of Commons in 1832 (1) the moral standard of legislation has been raised; (2) that of personal conduct lowered; (3) that of manners (despite a glaring instance to the contrary some years back) not deteriorated; (4) the respect and deference of the individual members for the House have been greatly lessened.'"

### THE GEOGRAPHICAL JOURNALS.

R. JACKSON'S narrative of his three years' ex-VI ploration in Franz Josef Land is given in the Geographical Journal for February, and a very graphic and exciting story it is. Mr. Jackson has an attractive way not merely of doing generous justice to the merits of his human comrades, but of making the reader even more interested in his four-footed companions, as, for example, the retriever dog who proceeded to dine off the sleigh-dogs, or the pony who was provided with snow-shoes, who gorged herself to repletion on stolen dried vegetables, and had to be dosed with twenty-two pills intended as human correctives, and who had a facility for slipping into glacier crevasses. Mr. A. E. Pease, M.P., describes a volcanic crater in Northern Somaliland. Dr. Hugh Robert Mill suggests a classification of geography by a series of alphabetic notations, so that regions and ranges and oceans and seas should be cited by symbols, like chemical compounds. Mr. F. H. Newell contributes valuable facts in the hydrography of the United States. An annual rainfall of 40 inches gives in mountainous regions a run-off of about 30 inches, on rolling prairies and foot-hills a run-off of 5 inches, while an annual rainfall of 20 inches yields only 7 inches run-off in mountainous regions and only 2 inches on the prairies. Hence, with a mean annual rainfall of 10 to 15 inches, no living streams can be expected outside the mountainous parts.

The principal feature in the Scottish Geographical Magazine for February is the account of his journey through Somaliland by Mr. A. E. Pease, M.P. He urges that if changes must be made, the protectorate might be transferred from the Indian Government to the Colonial Office. He has faith in the future political importance and commercial value of this little-known region. The climate of Canada is the theme of instructive tables and comments by Prof. R. F. Stupart, whose conclusions are reassuring. Only the southern parts of Europe have more sunshine in the summer months than Canada. The annual percentage of bright sunshine in the Dominion is over 40, while only a very few places in England exceed 36. Mr. A. J. Herbertson discourses on "the parlous plight of geography in Scottish education," caused by the omission of this subject from the list of second-year preparatory studies required from teachers.

The National Geographic Magazine (Washington) for March has an interesting article on "Dwellings of the Saga-Time in Iceland, Greenland, and Vineland," by Cornelia Horsford. Charles Hallock describes the mighty Kuskokwim, second only to the Yukon among Alaskan rivers, a stream eight hundred miles long and so wide at its mouth that its shores are invisible from mid-channel. The tides run one hundred miles upstream, and are a counterpart of those for which the Bay of Fundy is celebrated; they rise fifty feet. This number of the Magazine also contains the latest information about the alleged appearance of Andrée's balloon in the Caribou District of British Columbia in August last.

### COSMOPOLIS.

I N the English section of Cosmopolis for March there is a singularly interesting and helpful survey of "The Literary Movement in Germany," by John G. Rob-

ertson. This writer makes it clear that the novel is at present inferior to the drama as a literary expression of German thought, but he confesses admiration for what he terms the "many-sidedness of novel-writing in Germany, as well as for its artistic merits." He thinks it would be difficult to find in the fiction of any other contemporary literature "books so widely different in character and scope and so full of interest for the literary student."

Arthur Symons contributes a pen-picture of Naples which is hardly calculated to enhance our regard for the Neapolitan in his native haunts. Much of the description would apply to any savage tribe that we have ever read about. Indeed, Mr. Symons asserts that the Neapolitans "have an absolute, an almost ingenuous, lack of civilization." He says, too, that after seeing the Neapolitans he has more respect for civilization.

Zangwill's story of Spinoza, "The Maker of Lenses," is continued in this number, and room is made also for George Meredith's ode, "The Revolution," the first of a series "in contribution to the song of French history," announced for early publication in the United States.

In "The Globe and the Island" Mr. Henry Norman discusses "the Chinese puzzle" of our day. Mr. Norman warns his government that while all this discussion is going on about what the European powers will do in China, some attention should be paid to what Japan may do there. Japan, he says, has very clear ideas on this point.

In the French and German sections the discussion of socialism is continued. Paul Deschanel, Vice-President of the Chamber of Deputies, writes in French; Adolph Wagner concludes his criticism of the socialistic ideal begun in the preceding number (in German), and two "open letters" from Germans are published on the same subject.

### THE FRENCH, GERMAN, AND ITALIAN REVIEWS.

### REVUE DES DEUX MONDES.

THERE is no separate article in the Revue des Deux Mondes for February on West Africa, or on the Zola trial, or on China. It is true that M. Charmes in his chroniques devotes himself to some extent to Dreyfus and Zola, but he is evidently chiefly interested in the interminable negotiations of the concert over the rival claims of M. Numo Droz, Colonel Schäffer, the Voivode Bozo Petrovitch, and Prince George of Greece to the post of Governor of Crete. Perhaps M. Brunetière is wise to have refrained from commissioning what must necessarily have been somewhat hurried pronouncements on the Chinese and West African questions, but his readers may be pardoned for experiencing some feeling of disappointment at this significant silence on the acute issues which have arisen between England and France.

### ZOLA.

M. Charmes takes the official view of the "question Dreyfus," being apparently unable to see that it is no longer Dreyfus' conviction, but French justice, and especially French military justice, which is arraigned. He cannot overlook the passionate interest which the whole of Europe took in the Zola trial, but all that he can urge is that that interest was exhibited in an

indiscreet way, and that reflective minds in France are unable to understand the facility and rapidity with which outside observers jumped to their practically unanimous conclusion.

### "BLOOD AND IRON."

M. Dastre's curious article reminds us how large a part iron plays in all organic life. Chemistry reveals to us seventy-two elements, or primary simple substances, which cannot be broken up into other substances, but of these scarcely twenty are found in animal and vegetable life, and of the twenty at most a dozen can be regarded as essential ingredients, iron being probably the most important. M. Dastre goes into rather long and technical explanations of combustion and oxidation in living animals and vegetables. It is, however, interesting, even to the non-scientific layman, to know that the iron in his blood is not present there by itself, but in close combination with a great number of other substances. Thus, one molecule of the red matter which colors blood consists of 1 atom of iron, 712 of carbon, 1,130 of hydrogen, 214 of azote, 245 of oxygen, and 2 of sulphur.

### NAPOLEON III.

M. Ollivier, the Academician, begins in the second February number of the Revue a series of articles on

the third Napoleon. The subject of his first articlethe creation and procedure of the imperial government -is familiar to historical students, and need not be summarized here; but characteristic anecdotes of the Prince-President are always acceptable. Napoleon arranged that the members of the Senate were to be unpaid, except some to whom the Prince-President was to give allowances of thirty thousand francs. "No one will consent to be an endowed senator !" cried Montalembert. "You think so, Monsieur de Montalembert?" said the Prince, caressing his mustache with an almost imperceptible smile. M. Ollivier shows us a Napoleon impassive, without illusions, ever seeking the truth of things, and by no means eager to grasp the imperial crown. The part played by Mrs. Howard in the Coup d'Etat is curiously enough ignored, though we are told that the Emperor's advisers were dreadfully afraid that he might marry her. Some of them recommended to him the daughter of Queen Victoria's half-sister, and it was understood that the Princess herself was not averse to the idea, but the Queen and Prince Albert would not hear of it. The Princess ultimately married a minor German potentate, and her daughter is now German Empress, but it is curious to reflect how different the last half of this century would have been if the match could have been arranged. It is pretty clear, though M. Ollivier does not say so, that the Emperor received quite a number of rebuffs at various courts to which he carried his matrimonial ambitions, and though he was no doubt sincerely attached to the beautiful Eugénie de Montijo, yet it is significant that his speech to the great officers of state in announcing his approaching marriage to her was full of a certain pique. The Emperor, Marshal Vaillant testifies, was rough in his correspondence. "The extreme gentleness, the patience of a saint, which he exhibits in conversation, disappears entirely in his letters."

### GERMAN INDUSTRY.

England has been so much alarmed by doleful vaticinations about German trade competition in the markets of the world that it is amusing to see the other side presented in M. Levy's article on German industry. Of course he does justice to that enormous expansion of German manufacturing enterprise which within a generation has transformed Germany from an almost entirely agricultural country to one of the principal manufacturing states of the world. But the important point to notice is that in Germany itself this transformation is regarded with grave misgiving. It is evident that the competition of Russia, India, and Japan countries where labor is for the most part extremely cheap—is creating great alarm in Germany. Prof. Adolphus Wagner has satisfied himself that the German export of manufactured goods is in several cases stationary or even declining, owing to the competition of Japan and the United States. The action of English capital in developing German industry is also noted with disapproval, and the question seems to be general in Germany, "How long is our manufacturing prosperity going to last?"

### OTHER ARTICLES.

M. Talmeyr has a terrible account of the sufferings of the glass-workers at Carmaux, induced partly by the dangerous character of the trade itself, partly by the failure of their strike. He was profoundly impressed by the spirit of negation and revolt, the basis of nihilism and the mania of destruction which characterize the workpeople.

### REVUE DE PARIS.

HE most interesting contribution to the Revue de Paris is a further installment of Victor Hugo's letters, written from Brussels during the years 1851-52. Even more than that published last month, this installment of Victor Hugo's letters to his wife is well worth reading, if only because of the light the letters throw on the relations which existed at that time between the great poet and the woman round whose personality centered of late years so much regrettable gossip. In those days the Hugos were very closely united, and the writer's greatest sorrow in exile seems to have been his separation from his wife. As seems to be so often the case with literary genius, Hugo was perpetually tormented and harassed by petty money troubles. At the very time that he was receiving enthusiastic ovations for his courageous stand against a corrupt government, and at a period when the whole world eagerly bought and read his works, he and his wife found themselves deprived of the ordinary necessities of life, and he looked forward to selling a manuscript in order to buy a new pair of boots. Hugo's life was at the time much harassed by his children. His son Charles, who was with him, had none of his father's love of work, and Hugo gives a touching and absurd account of the efforts he made in order to persuade the youth to occupy himself in some useful manner. At one time he actually bribed him by an offer of pocket-money, Charles being given ten shillings a week on condition that he rose every morning at 8 and worked till 11. "He has accepted this bargain with enthusiasm," wrote the poet to his young hopeful's mother, "and the first and second days he carried out his side of the contract, but already he is beginning to give way; yesterday he worked for half an hour and to-day he has done nothing."

Then are incidentally given some curious details as to how Hugo himself got through the prodigious amount of work he managed to accomplish during this decade of his life. He rose at 8 and worked till 11, when he ate a simple French lunch; from 1 till 3 he held a reception, and then worked once more for two hours; dinner was at 5, and he spent the evening with friends till 10, when again he worked two hours till midnight. Physical exercise seems to have played no part in his life.

At that time Hugo was busily engaged on his famous book "Deux Decembre." "This dirty work over," he wrote to his wife, "I shall wash the wings of my soul and publish verse."

M. Byéal devotes two long articles to analyzing Goethe's "Die Natürliche Tochter." The writer believes that Goethe took the idea of his drama from a volume of memoirs written by Stephanie Louise de Bourbon in the last century, and he enters very elaborately into his reasons for this belief. Of more actual interest is a curious account, by J. Dornis, of the poetry of Gabriel d'Annunzio. The author of the "Triumph of Death "began his literary career by writing verse, and he was only fifteen when was published his first volume, "Primo Vere," a collection of poems which made a considerable impression on Italian critics. At the age of eighteen he published a second volume of verses, "Canto Novo." The writer gives a number of curious French translations of Annunzio's best known and most characteristic poems, and from these fragments it is easy to understand the enthusiasm with which continental critics have greeted the work of this remarkable Italian writer. In the second February number the place of

honor is also given to an Italian novelist, Mathilde Scrao.

M. Masson, who has constituted himself the modern historian of the Bonaparte family, publishes in the Revue those chapters from a forthcoming book dealing with Napoleon, and attempting to found an hereditary consulate which should descend from father to son, or at any rate be kept in the Bonaparte family.

M. C. E. Bonin supplies the inevitable travel article by an interesting account of his visit to the tomb of Genghis Khan. Although subject to China, the sovereign of Mongolia enjoys some curious privileges at the court of Pekin; thus he has the right to choose one wife among the seventy feminine members of the imperial family. He can also enter the imperial palace on horseback, and remain mounted even in the presence of the Emperor.

The famous tomb of Genghis Khan is situated in the middle of the Mongolian Desert. It has become a place of pilgrimage, and can certainly claim to be one of the wonders of the world, for the bricks and stones of which it is constructed had to be brought over the desert, brick by brick and stone by stone, on the backs of camels. The coffin in which repose the remains of Genghis Khan is of solid silver, and in the building are religiously preserved many of the personal relics of the great Emperor, including his saddle and his sword. The saddle, which is very similar in shape to those actually now used in Mongolia, is of gold and iron; on the pommel are carved two dragons, round which some curious legends gather; thus it is said that when Genghis Khan was in battle, the dragons sprang into life and mixed in the fray, tearing the enemy to pieces with their claws. Once a year-on March 21, supposed to be the anniversary of his death-a great ceremony takes place in his honor, and the coffin is exposed to the veneration of the faithful. The tomb is closely guarded night and day by a number of Mongolians who consider themselves directly descended from Genghis Khan.

There are two articles concerning the imbroglio in the near East, one entitled "Cretan Affairs," by V. Bérard, the other "Peace in the East," by E. Lavisse, in which the writer analyzes the various motives which influence the conduct of those countries composing the concert of Europe—that is, the Triple Alliance, the Dual Alliance, and Great Britain.

### NOUVELLE REVUE.

F the three leading French reviews Madame Adam's publication is the only one which can be considered as up to date, either as regards home or foreign affairs. M. Lightenburger, who is probably Alsatian by birth, gives a shrewd inside account of the socialistic propaganda now going on among the German agrarian populations. Till lately socialism in an active form was entirely confined to the towns and to the skilled workmen and factory hands of great industrial Now, however, the socialist leaders have grasped the fact that if they mean to make headway they must reach the class from which the army is mainly recruited, and a powerful effort to obtain the same advantages as to length of working hours and a minimum wage for agricultural laborers as for their more fortunate town comrades is being made by Bebel, Liebknecht, Vollmar, and Schippel. The writer gives a curious glimpse of rural Germany. The great landowners, who not so long ago lived the simple wholesome

lives of country gentlemen farmers, are now going into trade, and, not content to make a modest if sufficient living, their one idea is to earn money, if not in one way, then in another. The "Junker" no longer regards his tenants as those to whom he owes a duty, but as possible sources of wealth, and each farm is being gradually transformed into an agricultural factory where the beet-roots are promptly transformed into sugar and the potatoes into rum. This state of things is gradually completely altering all the conditions of country life, and now the rural populations are ripe for socialism.

M. de Pouvourville contributes some instructive information on the Chinese question as viewed by the Chinese themselves. He points out that those who govern the Celestial empire have always been accustomed to seeing various European nations encamp, as it were, on the edge of China. England has long been at home in Canton, France counts Tonkin one of her most precious possessions, Russia is mistress of Manchuria, and even China's enemy, Japan, is firmly established at Wei-hai-wei. Not till Kaio-Chau was attached by Germany did China realize that dismemberment might be at hand. The French diplomat considers that the part lately played by the British Foreign Office will ultimately secure the whole of the Chinese trade to Great Britain, to the manifest detriment of France and Russia.

A French general, who for obvious reasons prefers to remain anonymous, discusses the "Colonial Army." that is, those troops specially concerned with the conquest and military government of France's colonial empire. He points out that this important section of the French army suffers from an extraordinary anomaly: when the troops in question are in France they are subject to the minister of marine; when actually engaged in colonial warfare they depend on the minister of the colonies. It is a significant fact that since 1893 only those soldiers composing the "colonial army" can be called upon to expatriate themselves; and practically this picked body of men, who all volunteer for this branch of the service, are largely recruited from old soldiers who are fairly sure of promotion when once there is a question of forming native regiments. France's colonial troops have little or nothing to do with her Foreign Office, and those in command are naturally anxious to please the colonial party, who alone take an interest in their welfare.

Other articles consist of an historical study on Plutarch's probable sojourn in Egypt, France's fiscal reforms, eulogies of General Saussier and Henry George and a gossiping account of Madame de Tencin and her famous salon.

### THE GERMAN REVIEWS.

In connection with the Heine centenary there is a bibliographical causerie on Heine's "Buch der Lieder," by Gustav Karpeles, in the February Zeitschrift für Bucherfreunde. After Schiller and Goethe, this collection of poems, says the writer, has achieved the greatest popularity. With a copy of the first edition of the book (1827) before him, he describes the style of the book—paper, type, binding, etc.; he notes that every poem in the collection had been published before, and that Heine received no payment whatever for the book. At first the publisher was not anxious to undertake the publication, but after it was put in hand,

Heine was very particular about the printing and general get-up, corrections, etc. Success was slow to come. It took ten years to exhaust the first edition of five thousand copies. Other editions followed in 1837, 1839, 1841, and 1844, and up to the last Heine continued to make corrections and improvements. At his death thirteen editions had been published. Many interesting details are given of the history of this monumental book—future editions, illustrations, musical settings, autograph copies, etc.

In the February Velhagen, Fedor von Zobeltitz gives a history of that wonderful German romance of a robber chief entitled "Rinaldo Rinaldini," together with some account of its many successors and imitators in Germany. The original author was Christian August Vulpius, Goethe's brother-in-law, and the story appeared anonymously in three volumes in 1797-98. Schiller's "Robbers" seems to have suggested the idea to Vulpius. The book had an extraordinary success, with the result that Vulpius wrote several others of the same type and a host of imitators followed with stories of robbers in similar style.

Students of Goethe will turn to the article in the Preussiche Jahrbücher for February on Suleika, a German poetess, by Franz Sandvoss ("Xanthippus"). The lady here referred to is Marie Anna Katharina Therese Jung, 1784–1860, who became the third wife of Geheimrath Joseph Jacob von Willemer about the time that Goethe made her acquaintance. The correspondence of Goethe and Marianne von Willemer was edited by T. Creiznach, and published at Stuttgart in 1877. It is well known that in the "West-Eastern Divan" cycle of songs Goethe himself was Hatem and that Suletka (Marianne von Willemer), who answered him, was herself the writer of at least two of the songs. The "Divan" was published in 1819, and the poet was engaged about five years in composing it.

In the February Deutsche Rundschau, Dr. Julius Rodenberg, the editor, concludes his article on London and Emanuel Deutsch. George Eliot, in her letters and journals, refers to Deutsch as "a very dear, delightful creature," and it is possible she had him in mind in depicting her hero in "Daniel Deronda." He died in Alexandria in 1873. The inscription on his tomb in Hebrew, German, English, and Arabic describes him as having been for eighteen years an official at the British Museum.

The Neue Deutsche Rundschau for February contains three important articles. Georg Swarzenski, who writes on William Morris, tells the story of the development of the modern decorative style in England; Karl Heckel continues the letters of Wagner to Emil Heckel on the origin of the Bayreuth festivals; and George Simmel has an article on the sociology of religion.

ln Nord und Süd (February) Carl Fuchs' article on "Musical Criticism" is concluded; the notice of Edgar

Tinel, by T. Schmid, in the Stimmen aus Maria-Laach, is also concluded in the February number.

### THE ITALIAN REVIEWS.

'ANNUNZIO continues to attract much attention in the Italian magazines. The Rassegna Nazionale (February 1) publishes two energetic protests in the name of the sanctity of the Gospel against his "disfiguring" treatment of two of the gospel parables in recent numbers of the Nuova Antologia, one of the writers describing the paraphrases as "an atrocious offense against human sentiment." The same number contains, further, a long critique of d'Annunzio's new tragedy, the "Città Morta," which agrees in the main with French criticism of the piece on its production at the Renaissance Theater. The mid-February number begins a series of articles describing pedestrian tours through Northern Italy and Switzerland, which would be of use to any one wishing to cover the same ground. The first article describes the road from the plains of the Po to the Lake of Lucerne.

The Civiltà Cattolica—whose utterances, inspired at Jesuit headquarters in Rome, have a certain importance—frankly identifies itself, in an article on the Dreyfus case (February 5), with the anti-Semitic movement in France, and does not hesitate to attribute the whole recent agitation for a fresh trial to Jewish and Masonic machinations. It does not seem to occur to the Jesuit writer that, rightly or wrongly, men may honestly believe in the innocence of Dreyfus, and may merely have been anxious to redress what they deemed a ghastly judicial blunder. As for the future, the Civiltà recommends that while Jews should be treated in accordance with "humane and Christian laws," they should be denied all rights of citizenship in civilized countries!

Employers' liability and workmen's insurance against accidents form the subject of a long and able article by Prof. P. Villari in the Nuova Antologia (February 1). The learned senator gives a useful summary of the principal points of recent legislation on the subject in England, Germany, Switzerland, etc., and urges on his compatriots the necessity of initiating legislation on similar lines, while pointing out the unreasonableness of expecting to arrive at a perfect solution of so complex a problem in any single bill. The same number devotes several pages to a critical analysis of "The Christian." The author, C. Segrè, finds much to protest against in the character of John Storm, and affirms that "the mixture of pulpit eloquence and sensual love, of asceticism carried to a dangerous extreme, and of appetites and passions which have absolutely no connection with the kingdom of heaven, not only throws a somewhat grotesque light over the whole book, but infuses into it an element at once immoral and unhealthy."

### THE NEW BOOKS.

### RECENT AMERICAN PUBLICATIONS.

### HISTORY AND TRAVEL.

The Historical Works of Francis Parkman. Champlain edition. Twenty vols., 8vo. Boston: Little, Brown & Co. Each volume \$3.50.

The writings of our historical scholars form no small part of the permanent literature thus far produced on our side of the Atlantic; but without disparaging the excellence of any other American historian, it may well be agreed that the late Francis Parkman stands easily at the head of the entire list. His great historical narrations have all the charm of romance, and all the merits of pure literature of the highest order of prose composition. But these fine literary qualities in Francis Parkman's writings are never a substitute or a mask for inaccuracy of statement or unsoundness of conclusion. A lifetime of unsparing, scientific research is embodied in these volumes; and taken as a whole they may be said to form the general introduction to the history of North America. It is altogether probable that the historian who takes his retrospect from the vantage ground of one or two centuries hence, will find that the most thrilling periods of North American history are, first, the period of adventure, exploration and colonization which terminated with the victory of Wolfe over Montcalm, and, second, the wonderful period of development and settlement which has followed our great Civil War. In a very important sense, the writings of Francis Parkman serve to illumine the story of our own times. We have built railroads and cities where Parkman's voyagers and explorers trafficked with the Indians and dreamed of future empire. There is a great sweep through these narratives that helps the reader to feel the strength of the movement which has made America great, and which also helps him to realize that this movement is by no means ended yet. The country as a whole is just now beginning to appreciate the splendid quality of Parkman's histories; and so it is a good work to encourage our readers. young and old, who wish to ground themselves in a true understanding of our American history, to read Parkman, as not only fascinating and delightful, but as essential to a proper knowledge and conception of the foundations of our national life. To those who can once in a while afford to indulge in an especially fine set of books, we beg to commend the Champlain Edition of Parkman's works, upon which the publishers have spared no pains, and which in paper, typography and wealth of artistic and instructive illustration, is above praise. The Champlain Edition, moreover, is not merely a showy set of books; on the contrary, its volumes are of a convenient size and most delightful for actual use and reference. The elaborate introduction by Professor John Fiske, with its account of Parkman's life and work, adds very materially to the value of this edition. The Champlain edition is in twenty volumes, and the nine distinct works which comprise the connected series are arranged in the following order: "The Pioneers of France in the New World," "The Jesuits in North America," "La Salle and the Discovery of the Great West," "The Old Regime in Canada," "Count Frontenac and New France under Louis XIV.," "A Half Century of Conflict," "Montcalm and Wolfe," "The Conspiracy of Pontiac," and "The Oregon Trail." A more admirable set of books, in paper, printing, binding, and illustration, it would be difficult indeed to devise or to imagine.

A Bibliography of British Municipal History, Including Gilds and Parliamentary Representation. By Charles Gross, Ph.D. 8vo, pp. 495. New York: Longmans, Green & Co. \$2.50.

The title of this book would perhaps be misleading to

the ordinary reader. Dr. Charles Gross is a most learned investigator of the early records and history of the old local governments and municipal corporations of England; and this volume, which is really a monumental piece of industry, is devoted first to a bibliography of general works, then to particular towns and localities in Great Britain taken alphabetically. No brief notice can give any adequate idea of the thoroughness and value of this remarkable piece of work. It will add to the enviable reputation that Dr. Gross has already earned both here at home and also in England.

Servia, the Poor Man's Paradise. By Herbert Vivian. M.A. 8vo, pp. 856. New York: Longmans, Greet. & Co.

If the traveler be intelligent and conscientious in his description of the land he visits, his book will be all the better for the qualities of enthusiasm and strong sympathy. Mr. Herbert Vivian has given us a most delightful book on Servia, in which he enables us to see the life of the country, and to comprehend its recent history, its political, military, and ecclesiastical organizations, its industry, commerce, and agriculture, its literature and education, and the social life of the people, in the spirit of a friendly investigator willing to see the best side of Servian life, and not afraid to speak warmly of the things that please him. This then is abook we can very highly commend to readers who wish to know about the Servian people and their progress. There is no other book on Servia in the English language that can be compared with it.

Our Alaskan Wonderland and Klondike Neighbor: A Personal Reminiscence and Thirty Years After. By DeB. Randolph Keim. 16mo, pp. 352. Harrisburg: The Harrisburg Publishing Company.

Mr. Keim is a veteran American journalist, of a vast range of experience, whose Washington opportunities and duties made him intimately conversant with the circumstances under which we acquired Alaska more than thirty years ago. His present volume is edited from a series of newspaper letters. It begins with our Alaskan purchase, describes the country and its resources, and concludes with very useful chapters on Alaskan gold discovery and the Klondike. It is a particularly timely little volume.

A Students' History of the United States. By Edward Channing. 12mo, pp. 645. New York: The Macmillan Company. \$1.40.

A History of the United States for Schools. By Wilbur F. Gordy. 8vo, pp. 508. New York: Charles Scribner's Sons. \$1.

The appearance of two new school histories of the United States calls attention to the increasing interest in this subject among the secondary schools. It is now coming to be recognized, as Professor Channing maintains in his preface, that the study of American history belongs to the maturer years of school life. Hence serious efforts have been made of late to provide text-books fitted for the last year of the high school. Professor Channing's book is notable for the comparative neglect of the details of military history and for the extended treatment of the nation's constitutional, political, and industrial development.

Principal Gordy also eliminates much of the material that commonly finds a place in the grammar-school history. He devotes more special attention to the country's economic development, and particularly to the settlement and expansion of the West. Both books are well supplied with maps

and illustrations.

Select Documents Illustrative of the History of the United States, 1776-1861. Edited, with notes, by William Macdonald. 8vo, pp. 470. New York: The Macmillan Company. \$2.25.

Professor Macdonald has collected and published in this volume a number of "such documents as any one pretending even to an elementary acquaintance with the history of the United States may fairly be expected to know." Publication in this form renders these documents at once accessible to students who lack the privileges of great libraries.

A God-Child of Washington: A Picture of the Past. By Katharine Schuyler Baxter. 4to, pp. 651. Published by Subscription. New York: F. Tennyson Neely. \$10.

This book is a repository of interesting historical and biographical material relating chiefly to old New York State families. The "God-Child" was the youngest daughter of General Schuyler, of Albany, at whose baptism General Washington and his wife officiated as sponsors in the spring of 1781. The Schuyler family history serves as the thread on which is strung much collateral information. The volume abounds in portraits and other illustrations.

The History of South Carolina under the Proprietary Government, 1670-1719. By Edward McCrady. 12mo, pp. 771. New York: The Macmillan Company. \$3.50.

Mr. McCrady, who is a member of the Charleston bar, has made an exhaustive study of the historic origins of his State. South Carolina has contributed so largely to the settlement of other States and has herself borne so notable a part in national affairs that her early history has far more than a local significance. This volume is a welcome evidence of an increasing interest in historical research in the South.

Colonial Mobile. By Peter J. Hamilton, A.M. 8vo, pp. 458. Boston: Houghton, Mifflin & Co. \$3.

Before the region tributary to Mobile Bay was absorbed by the United States, it had passed under French, British, and Spanish rule; no part of the South had suffered greater vicissitudes. Mr. Hamilton has retraced in this volume the whole three centuries of exploration, settlement, and growth. The close of the War of 1812 marked the acquisition of this territory by the United States. The nation at that time was young, but Mobile was already old, and the history of this ancient settlement is hardly surpassed in interest by any chapter of Southern colonial annals.

The People of the Longhouse. By Edward Marion Chadwick. 8vo, pp: 166. Toronto: Church of England Publishing Company.

Major Chadwick's study of the Iroquois Indians, otherwise known as the Six Nations, discloses many interesting facts in the history of those remarkable tribes, and at the same time offers a suggestive commentary on the methods of the Canadian Government in dealing with the Indians as contrasted with those employed in the United States.

Orderly Book of General George Washington, Commander-in-Chief of the American Armies, Kept at Valley Forge, May and June, 1778. 8vo, pp. 54. Boston: Lamson, Wolffe & Co. \$1.

Notes and Queries, Historical, Biographical, and Genealogical, Relating Chiefly to Interior Pennsylvania. Edited by William Henry Egle, M.D., M.A. Annual Volume, 1897. 4to, pp. 243. Harrisburg, Pa.: Harrisburg Publishing Company.

Early Long Island Wills of Suffolk County, 1691-1708.
With genealogical and Historical Notes. By William S. Pelletreau, A.M. 4to, pp. 301. New York:
Francis P. Harper. \$5.

Contemporary American Opinion of the French Revolution. By Charles Downer Hazen, Ph.D. 8vo, pp.
325. Baltimore: The Johns Hopkins Press. \$2.

This monograph won for its author the distinguished honor of the John Marshal prize for 1897 at the Johns Hopkins University. Dr. Hazen, who holds the chair of history in Smith College, has made a careful study of the opinions of Americans at home and abroad during the years of anarchy in France which immediately followed the establishment of our own national government. In this study Dr. Hazen has explored ground quite unfamiliar to most Americans of the present generation. Jefferson's views on the French Revolution are probably better understood than those of any of his contemporaries, but there is much in the thought of other statesmen of the time that deserves our consideration, and for the elucidation of this the thanks of historical scholars are due to Dr. Hazen's able treatise.

The Cid Campeador and the Waning of the Crescent in the West. By H. Butler Clarke, M.A. 12mo, pp. 896. New York: G. P. Putnam's Sons. \$1.50.

The story of Spain's national hero is told in this volume with all possible detail and with ample accompaniment of illustration. In scholarly completeness the book does not fall below the exceptionally high standard set by preceding volumes in the "Heroes of the Nations" series, while the style and method of the narrative adapt it for popular use.

Spain in the Nineteenth Century. By Elizabeth Wormeley Latimer. 8vo, pp. 441. Chicago: A. C. McClurg & Co. \$2.50.

Like the preceding volumes in her "Nineteenth Century" series, this latest book from Mrs. Latimer's pen is not so much a history as a convenient compilation of interesting data gleaned from works of history, blography, travel, and various other sources. The style is attractive and the matter well brought up to date. In view of the Cuban situation the book has a peculiar timeliness. There is probably no other book in existence covering the same ground.

The Flags of the World, Their History, Blazonry, and Associations. By F. Edward Hulme. 12mo, pp. 183. New York: Frederick Warne & Co. \$2.

In this little volume a great deal of information about the flags and banners of all civilized nations has been compiled. A valuable feature of the book is the series of colored plates in the appendix.

Satan's Invisible World Displayed; or, Despairing Democracy. By W. T. Stead. 12mo, pp. 300. New York: R. F. Fenno & Co. \$1.25.

Mr. Stead has certainly found a very striking name for his annual monograph. Once a year, at Christmas time, he has been accustomed to issue in London from the office of the English Review of Reviews a study of some current phase of contemporary history wrought in the form of a story. At the end of 1896, for example, his brochure dealt with the Jameson raid. As he was casting about for a topic for 1897 he happened to become interested in New York politics through the chance of interviewing Richard Croker; and his attention was further directed toward the American metropolis by the fact that he came into possession of a set of the bulky volumes in which are buried the full reports of the famous Lexow commission, which, under the lead of Dr. Parkhurst and Mr. Goff, investigated corruption in the police department of New York in the year 1894. That Lexow commission certainly did display a section of "Satan's world" that had been to most eyes previously "invisible." Mr. Stead's offering, therefore, to his English readers for Christmas, 1897, was a condensation of the revolting testimony presented to the Lexow commission. Unhappily there seems a large and insatiate English appetite for books tending to show that the experiment of democratic government in the United States is in a bad way; and this appetite was particularly catered to by Mr. Stead's sub-title of "Despairing Democracy." Mr. Stead's previous book about the United States was entitled "If Christ Came to Chicago;" and it was devoted principally to an exploitation of vice, distress, and misgovernment as exhibited in the slums of the great Western city. "Satan's Invisible World" is avowedly a companion volume to the earlier book.

Our criticism is not in the least meant to apply to the book as respects its essential value to serious readers in our American cities. It would merely seem to us that the book is not calculated to benefit the average reader in England. who is not so situated that he can share in the responsibility for American municipal reform. The ordinary British reader will only derive from it the impression that America is such a very bad place that Englishmen ought to be thankful enough for English conditions as they are to-day, and ought not to be too exacting in their demands for further domestic reforms. Mr. Stead has caught the nature of the new charter remarkably well, and characterizes it as "hamstrung Cæsarism." His chapters on the new administrative machinery that we have created for ourselves in New York are at once keen in their analysis and exceedingly pithy and readable in their manner of presentation. Nothing could be more absurd than the notion expressed by certain newspapers that Mr. Stead as an Englishman has somehow committed an offense in writing books about American matters. The only reasonable ground of adverse criticism would be that Mr. Stead's numerous English readers are in danger, through reading Mr. Stead's books, of becoming deeply shocked, all for no practical purpose, inasmuch as it does not lie with them to remedy our American ills.

### LITERATURE.

An Introduction to American Literature. By Henry S. Pancoast. 16mo, pp. 406. New York: Henry Holt & Co. \$1.

This is a companion-book to the author's "Introduction to English Literature." An attempt is made to trace the literary development of each section of the Union. Convenient tables in the appendix give, in parallel columns, important dates in English and American political and literary history.

A Short History of Modern English Literature. By Edmund Gosse. 12mo, pp. 420. New York: D. Appleton & Co. \$1.50.

To Mr. Edmund Gosse has fallen the extremely difficult task of compressing into four hundred pages the story of English literature from Chaucer to Tennyson. Mr. Gosse has, to a certain extent, made a virtue of a necessity, and his book depicts the nation's literary progress more graphically, perhaps, than a larger work would have done.

The Later Renaissance. By David Hannay. 12mo, pp. 394. New York: Charles Scribner's Sons. \$1.50.

To the series entitled "Periods of European Literature," edited by Professor Saintsbury, a volume on "The Later Renaissance" is contributed by Mr. David Hannay, who devotes much the larger portion of his space to the literature of Spain, though he finds room for a critique of the Elizabethan English writers and for briefer chapters on the French and Italian literature of the period.

The Story of Language. By Charles Woodward Hutson. 12mo, pp. 392. Chicago: A. C. McClurg & Co. \$1.50.

### THE FINE ARTS.

The Year's Art, 1898. Compiled by A. C. R. Carter. 12mo, pp. 454. London: J. S. Virtue & Co. New York: Brentano's. \$1.40.

The nineteenth annual issue of "The Year's Art" is an excellent summary of the progress made in British art circles during 1897, together with such information regarding the exhibitions of 1898 as may be had in advance. It is a most useful publication for the purposes of American art students expecting to have some time to spend in England during the present year.

Essays on Art. By James Fairman, A.M. Paper, 8vo, pp. 74 Pittsburg: H. Kleber & Brother. 30 cents.

These papers in art criticism were originally contributed to the Pittsburg Dispatch during the progress of the competitive exhibition of 1897 in the Carnegie Art Galleries of that city, and they include notices of pictures in that exhibition. Their general scope, however, and the writer's clear and vigorous statement of recognized principles in criticism, together with the popular style of treatment adopted, give these essays more than a transient or local interest.

The Painter in Oil: A Complete Treatise on the Principles and Technique Necessary to the Painting of Pictures in Oil. By Daniel Burleigh Parkhurst. 12mo, pp. 414. Boston: Lee & Shepard. \$1.25.

This is a book for the amateur painter and the elementary art student. The author wisely devotes a large proportion of the volume to the fundamental principles of his subject, but the practical applications of those principles are well worked out in the latter half. There are two colored plates showing the tints of modern oil colors, and many other illustrations.

Water Color Painting. By Grace Barton Allen. 12mo, pp. 250. Boston: Lee & Shepard. \$1.25.

A book conforming in general plan and purpose to the other volumes in this series of "Practical Art Hand-Books." The illustrations are the work of the author; two colored plates exhibit the washes of modern water colors. Many helpful suggestions are given for the benefit of amateurs.

What is Good Music? Suggestions to Persons Desiring to Cultivate a Taste in Musical Art. By W. J. Henderson. 12mo, pp. 218. New York: Charles Scribner's Sons. \$1.

Mr. W. J. Henderson, the well-known musical critic, attempts in a few brief essays to expound the theory of correct musical taste. As to the concrete applications of this theory, it would probably be difficult to secure an agreement among Mr. Henderson's readers, but his book has at least the merit of presenting with unusual clearness the canons of criticism now most generally accepted by cultivated music-lovers.

### NATURAL SCIENCE.

Birds of Village and Field: A Bird Book for Beginners By Florence A. Merriam. 12mo, pp. 455. Boston: Houghton, Mifflin & Co. \$2.

Everyone must have noticed the recent multiplication of helpful books about bird life. The latest popular work of this class is Miss Merriam's new manual for beginners in ornithology. This treatise, while adapted to youthful readers, abounds in exact and well-ordered information about a large number of our native birds. This is preceded by certain practical and useful directions under the headings, "How to Find a Bird's Name," "Where to Find Birds," "How to Watch Birds," "How to Keep Birds about our Houses," etc. There is also a "Field Color Key" to all the birds mentioned in the book. The cuts are numerous and well executed.

Lessons with Plants: Suggestions for Seeing and Interpreting some of the Common Forms of Vegetation. By L. H. Bailey. 12mo, pp. 522. New York: The Macmillan Company. \$1.10.

Profeser Bailey has not added to the already long list of formal botanical text-books; he has simply embodied in a convenient and well-printed volume certain important suggestions to both teacher and pupil on the study of plant life. His chief aim seems to have been to introduce the student of botany to the subject-matter of his study without the intervention of any scheme of definitions or other apparatus such as is commonly employed in teaching the science. The student is first to become acquainted with the plants themselves, after which generalization and definition should fol-

ow as natural processes. Professor Bailey's book, from first olast, is a clear and practical exposition of the "natural aethod." It is fully illustrated.

The Story of Germ Life. By H. W. Conn. 16mo, pp. 199. New York: D. Appleton & Co. 40 cents.

Professor Conn points out in this little book the usefulness is well as the malignity of bacteria; while most people think of these organisms only in relation to disease, this writer embasizes their importance in other natural phenomena and n the arts. He shows that these creatures are not to be rejarded primarily as our enemies, but in a very real sense as our friends.

Darwin, and After Darwin. By the late George John Romanes, M.A. III. Post-Darwinian Questions. 12mo, pp. 181. Chicago: The Open Court Publishing Company. \$1.

The third and final volume of the "Darwin and After Darwin" essays discusses the post-Darwinian questions of isolation and physiological selection. These papers have been edited and prepared for the press by Mr. C. Lloyd Morgan. The frontispiece of the book is a portrait of the Rev. John T. Gulick, the naturalist, an intimate friend of Professor Romanes.

The Sun's Place in Nature. By Sir Norman Lockyer, 8vo, pp. 876. New York: The Macmillan Company. \$2.75.

In this volume Sir Norman Lockyer replies to objections made to his views as expressed in the work entitled "The Meteoric Hypothesis" and summarizes the results of recent investigations.

Light, Visible and Invisible. By Silvanus P. Thompson. 12mo, pp. 306. New York: The Macmillan Company. \$1.50.

A series of six lectures on the theory of optics, the last of which, on the Röntgen rays, is especially important. Each of the lectures is illustrated with diagrams.

Popular Readings in Science. By John Gall, M.A., and David Robertson, M.A. 12mo, pp. 392. New York: Longmans, Green & Co. \$1.50.

Some Unrecognized Laws of Nature: An Inquiry into the Causes of Physical Phenomena, with Special Reference to Gravitation. By Ignatius Singer and Lewis H. Berens 8vo, pp. 527. New York: D. Appleton & Co. \$2.50.

Constituents of the Universe. By John E. Atwood. 12mo, pp. 65. San Diego, Cal.: James Edward Friend.

### SOME VOLUMES OF VERSE.

Poems now First Collected. By Edmund Clarence Stedman. 12mo, pp. 210. Boston: Houghton, Mifflin & Co. \$1.50.

Mr. Stedman is a poet whose work is all the more precious because its quantities are so modest. The present volume includes a large number of well known poems that have appeared in scattered form within the past few years. The themes are almost as various as possible. Particularly noteworthy and of a certain cumulative power and interest is the connected series entitled "The Carib Sea," that forms the fourth part of the volume. It breathes the spirit of history and romance in the West Indies quite as successfully as it suggests the colors of sea and land and the softness of the fovery climate.

Songs of Liberty, and Other Poems. By Robert Underwood Johnson. 16mo, pp. 107. New York: The Century Company. \$1.

Mr. Johnson's verses, collected in this slender little volume, have not only a rare perfection of form and certain distinguishing traits that lift them quite above the commonplace, but many of them have a splendid ring. The paraphrases from the Servian poet Znai, which Mr. Johnson has worked out from literal translations by his friend Nicola Tesla, are particularly to be mentioned as having a three-fold claim upon our attention. The spirited apostrophe to Greece is none the less welcome in view of that little country's recent misfortunes. This volume is consistently American in its standpoint while international in its range of subject matter.

Rubáiyát of Omar Khayyám: A Paraphrase from Several Literal Translations. By Richard Le Gallienne. 8vo, pp. 105. New York: John Lane. \$2.50.

Omar Khayyam is currently believed to have lived in the twelfth century, in Persia, and to have been the author

From a new photo by Rockwood, New York.

### MR. RICHARD LE GALLIENNE.

of a marvelous collection of enchantingly beautiful verses which form the chief treasure of Persian literature. These verses have been translated into literal English prose by a : umber of different hands. They have been immortalized, however, in English literature by the metrical work of Fitz. Gerald. In the volume before us we have a very beautiful English poem by Richard Le Gallienne wrought out of that same body of Persian verses. It should be understood that FitzGerald's poem is not properly to be entitled a translation. It is not even a metrical paraphrase. It draws, for its philosophy and its similes, and even for most of its material in detail, upon old Omar. But whereas Omar, as he has come down to us, is disjointed and arbitrarily arranged, Fitz-Gerald has constructed a noble and coherent poem. Mr. Le Gallienne makes no pretensions to Persian scholarship. Indeed, it is hard to see what assistance he would have derived from a knowledge of the language in which Omar Khayyam

wrote. It has quite sufficed for Mr. Le Gallienne's purpose to study the English prose translations. FitzGerald's poem does not utilize nearly all the body of Persian verses attributed to Omar Khayyam. Mr. Le Gallienne bases his poem in considerable part upon materials in the original quarry that were not selected by FitzGerald. The merits of Mr. Le Gallienne's work are in no manner dependent upon the result of a comparison with Mr. FitzGerald's. It is our opinion that Mr. Le Gallienne has produced a worthy addition to English poetry. Mr. Le Gallienne's own suggestion is that there had come down to us from Omar Khayyam a great assortment of wine-stained rose-petals, and that out of these Mr. FitzGerald had constructed a glorious, symmetrical red rose; while Mr. Le Gallienne himself had now arranged another smaller blossom-a modest yellow one-to place by the side of Fitz-Gerald's queenly rose. The idea is not only a clever one, but fairly expresses the method of both English poets in utilizing the Omar Khayyam material. It is to be observed, by the way, that since our last number was published Mr. Le Gallienne has come to the United States, with the expectation of remaining for some months, and perhaps for a year. The appearance of this volume, a foretaste of which had been given in the Cosmopolitan Magazine, is therefore especially timely.

Poems. By Stephen Phillips. 12mo, pp. 108. New York: John Lane. \$1.50.

The same parcel which brings us Mr. Le Gallienne's Omar Khayyám, from John Lane's "The Bodley Head," contains a slender volume devoted to the poems of Stephen Phillips. Mr. Le Gallienne has remarked to American friends since his arrival that he considers Stephen Phillips the most promising young poet now writing in England. The readers of literary news and notes will have observed that this young writer has been rewarded with a prize for the excellence of his recent poetical work. The first poem of Mr. Phillips which attracted attention is entitled "Christ in Ilades," and it is reprinted in the present volume. The reception accorded to that poem by the literary press of London was altogether remarkable. All of Mr. Phillips' work is deeply serious, and the larger part of it is religious either in subject or in quality and spirit.

The Hope of the World, and Other Poems. By William Watson. 16mo, pp. 83. New York: John Lane. \$1.25.

This little volume would not seem to indicate any departure in Mr. Watson's now well known method and scope. He is a serious poet of a high order of talent.

The Poetical Works of Elizabeth Barrett Browning. 8vo, pp. 878. New York: The Macmillan Company. \$1.75.

It is highly convenient to have the poetical works of Mrs. Browning brought within the covers of a single volume, and it is especially interesting to know that the volume is more exhaustively complete than the standard copyright edition in six volumes.

The Lovers' Shakspere. Compiled by Chloe Blakeman Jones. 16mo, pp. 194. Chicago: A. C. McClurg & Co. \$1.25.

Shakespeare's Men and Women: An Every Day Book. Chosen and Arranged by Rose Porter. 16mo, pp. 239. New York: E. R. Herrick & Co. \$1.25.

The Reader's Shakespeare. By David Charles Bell. In three vols., Vol. III. 12mo, pp. 521. New York: Funk & Wagnalls Company. \$1.50.

The first of these three books is a compilation of passages from Shakespeare on the subject of love, and the second is a year-book with two citations for each day, one of them applicable especially to men and the other to women. These two books, like scores that have preceded them, illustrate afresh the marvelous knowledge of human nature and unfailing wealth of quotable dicta and characterizations that are to be found in the plays of the immortal William. Vol.

III. of "The Reader's Shakespeare" is unquestionably very useful for certain purposes of schools, public reading, etc. This volume embraces the comedies, much expurgated and condensed.

The Golden Treasury of American Songs and Lyrics. Edited by Frederic Lawrence Knowles. 16mo, pp. 329. Boston: L. C. Page & Co. \$1.25.

This anthology has the particular merit of a wide range and of great freshness. It includes poems by a considerable number of our immediate contemporaries.

OR. MAX MULLER.
(See next page.)

The Choir Visible. By Mary M. Adams. 12mo, pp. 185. Chicago: Way & Williams. \$1.50.

This attractive collection of verse has throughout a strong religious quality; and its somewhat practical character is well expressed by its title, which it takes from the name of the opening poem, suggested obviously by George Eliot's lines.

The Spinning-Wheel at Rest: Poems. By Edward Augustus Jenks. 8vo, pp. 196. Boston: Lee & Shepard. \$1.50.

"The Spinning Wheel at Rest," by a New Hampshire poet, has marks of unusual maturity of thought, and a fine and tender feeling for nature.

Where Beauty Is, and Other Poems. By Henry Johnson. 12mo, pp. 92. Brunswick, Maine: Byron Stevens. \$1.25.

A little volume of poems on nature, art, love, and various themes, with a dozen sonnets, showing much poetical feeling and insight, and also a considerable degree of skill.

Cornell Verse: A Volume of Selected Poems. Written by the Students of Cornell University. Compiled by Henry Adelbert Lyon. 16mo, pp. 160. Philadelphia: Historical Publishing Company.

This selection of poems and songs by Cornell students is of course intended principally for those who have at some time been members of Cornell University. But it is eminently characteristic of American student life, and has a documentary value for the side lights it throws upon the lighter phases of the associated activities of our American undergraduates.

Alamo, and Other Verses. 12mo, pp. 165. Florence, New Mexico: Edward McQueen Gray. 75 cents.

Mr. Gray is evidently an English rancher in New Mexico, and his little volume of poems is in the main devoted to themes pertaining to that region—although it contains various other poems, including two or three highly loyal ones apropos of the Queen's Jublice.

Poetical Sermons: Including the Ballad of Plymouth Church. By William E. Davenport. 12mo, pp. 278. New York: G. P. Putnam's Sons. \$1.50.

Mr. Davenport's Poetical Sermons are done in language which is throughout a careful imitation of Walt Whitman's splendid carelesness. Most men are agreed that Whitman's work is poetry, regardless of metrical considerations. Mr. Davenport's work, however, will probably by the majority of readers be considered as prose, broken up typographically to look like verse. The spirit of the book is most commendable, and it moves on with an energy and vigor that makes its sermons more palatable than printed sermons usually are.

Minnewaska: A Legend of Lake Mohonk. Sequel to Longfellow's "Hiawatha." By Ina E. Wood Van Norman. 8vo, pp. 243. Chicago: Donohue & Henneberry. \$1.50.

The Bouquet: A Poetic Treasury of Flowers, their Classics and Vocabulary. By G. H. Walser. 8vo, pp. 275, Liberal, Mo.: Published by the Author.

Whatever Mr. Walser's merit as a poet may be, there can be no doubt of his knowledge of flowers and his love for them. Each of the many poems in this collection seems to be inspired by some particular flower or shrub in Mr. Walser's garden.

Beautiful Women of the Poets. Selected and arranged by Beatrice Sturges. 16mo, pp 171. New York: E. R. Herrick & Co. \$1.25.

This is a compilation of a great number of passages from a wide range of poets.

When Love Laughs. By Tom Hall. 16mo, pp. 120. New York: E. R. Herrick & Co. \$1.25.

### BIOGRAPHY.

My Life in Two Hemispheres. By Sir Charles Gavan Duffy. Two vols, 8vo, pp. 346—405. New York: The Macmillan Company. \$8.

Fifty years ago Charles Gavan Duffy, the editor of the Dublin Nation, was imprisoned in Newgate on a charge of sedition. He was then and had for years been one of the foremost agitators for Irish independence. After his acquittal he served in Parliament, and in 1855 removed to Australia, where for a quarter of a century he had an important part in public affairs, returning to his native land in 1880. His reminiscences of Irish politics are appropriately given to the world in the year which marks the commemoration of Ireland's great struggle for national independence.

SIR CHARLES GAVAN DUFFY.

Auld Lang Syne. By F. Max Müller. 12mo, pp. 330. New York: Charles Scribner's Sons. \$2.

Max Müller's entertaining reminiscences, which were keenly enjoyed last year by the readers of Cosmopolis, now appear in book form under the title, "Auld Lang Syne." Among the Americans who were Dr. Müller's guests at his Oxford home in former years were Emerson, Lowell, and Holmes. The paragraphs devoted to these American friends of the author are among the most interesting passages in the "Literary Recollections" which make up the most important section of "Auld Lang Syne."

Recollections of Dante Gabriel Rossetti. By T. Hall Caine. 12mo, pp. 310. Boston: Roberts Brothers. \$1.50.

In this volume (first published in England in 1882) Mr. Hall Caine distinctly disclaims the character of Rossetti's biographer. His contribution purports to be merely "a volume of Recollections, interwoven with letters and criticism, and preceded by such a summary of the leading facts in Rossetti's life as seems necessary for the elucidation of subsequent records." As to Mr. Hall Caine's collection of letters from Rossetti, the poet himself declared them to be "among the largest bodies of literary letters I ever wrote."

Christina Rossetti: A Biographical and Critical Study. By Mackenzie Bell. 8vo, pp. 421. Boston: Roberts Brothers. \$2.50.

Mr. Mackenzie Bell's study of Christina Rossetti has been censured by the critics for its blind devotion to unimportant details, but its general accuracy as to biographical fact and its usefulness as a guide to Christina Rossetti's writings are freely acknowledged. The book has been largely compiled from Miss Rossetti's letters. To admirers of her poetry, if not to others, these letters are of interest. It was

CHRISTINA ROSSETTI AND HER MOTHER.

not as a letter-writer, however, that the sister of Dante Gabriel Rossetti was at her best.

The Life of Philip Schaff, in Part Autobiographical.

By David S. Schaff, D.D. 8vo, pp. 540. New York:
Charles Scribner's Sons. \$3.

"A Swiss by birth, a German by education, an American by choice" were the words in which the late distinguished theologian, Dr. Philip Schaff, was wont to epitomize his career. The European birth and training of this excellent man never stood in the way of his complete adaptation to American customs and methods. He had an important part in the religious movements of his time, but he never sought controversy. His learning was solid and comprehensive. The story of his long service as a theological professor is fully told in this volume by his son. It contributes not a little to the religious history of the century.

The Life and Adventures of Nat Foster, Trapper and Hunter of the Adirondacks. By A. L. Byron-Curtiss. 12mo, pp. 286. New York: Baker & Taylor Company. \$1.

Nat Foster is supposed to be the original of Cooper's "Natty Bumppo." His biographer has brought to light much curious information connected with the settlement of the Mohawk valley and the early exploration of the Adirondack wilderness.

The Story of Evangeline Cisneros, Told by Herself. Introduction by Julian Hawthorne. 12mo, pp. 257.

New York: Continental Publishing Company. \$1.

The rescue of the young Cuban woman, Evangelina Cisneros, from an Havana jail in October, 1897, was one of the dramatic events of the Cuban revolution. The news of the rescue made an impression in the United States that will not soon be effaced. The whole story has been told by Miss Cisneros.

neros herself and appears, together with the narrative of Mr. Karl Decker, her intrepid rescuer, and an introductory chapter by Mr. Julian Hawthorne, in a neatly printed volume illustrated by Frederic Remington, Thomas Fleming, and other artists.

### SOME AMERICAN STORIES OF HISTORY, LOCALITY, AND CONTEMPORARY LIFE.

A Hero in Homespun: A Tale of the Loyal South. By William E. Barton. 12mo, pp. 415. Boston: Lamson, Wolffe & Co. \$1.50.

At last the sufferings and heroism of the mountain loyalists of East Tennessee and Kentucky in our Civil War have given the novelist a theme. Mr. Barton's homespun hero, obscure, rude, and unlettered though he was, deserved to have his deeds commemorated, and we do not know how this could have been done more effectively than through the medium of realistic fiction. In Mr. Barton's pages this loyal mountaineer, whose fathers had fought at King's Mountain and at New Orleans, tells in his own homely phrase the story of the great conflict in the 'Sixties, from which his people emerged victorious, but terribly chastened.

Southern Soldier Stories. By George Cary Eggleston. 12mo, pp. 251. New York: The Macmillan Company. \$1.50.

Mr. Eggleston, who has been for many years one of the most prominent journalists in New York and is a brother of Dr. Edward Eggleston, happened to be a valiant boy soldier on the Confederate side. He has written various books, among them "A Rebel's Recollections." His latest volumis made up of sketches and incidents that throw many a sidelight upon American character as manifested in time of war.

Where the Trade Wind Blows: West Indian Tales. By Mrs. Schuyler Crowninshield. 12mo, pp. 308. New York: The Macmillan Company. \$1.50.

It is a wonder that the striking contrasts and romantic suggestions of West Indian life have not been more frequently drawn upon as literary material by the writers of the United States. These stories show well how charming are the possibilities; and when we shall have annexed Cuba and bought a few more islands in that region, the books will doubtless multiply rapidly.

Carita: A Cuban Romance. By Louis Pendleton. 12mo, pp. 247. Boston: Lamson, Wolffe & Co. \$1.25.

We have here a story which will doubtless gain some especial attention by reason of the prominence of Cuba as a topic, although this is neither historical nor political, but a romance pure and simple.

The Man who Outlived Himself. By Albion W. Tourgée. 16mo, pp. 215. New York: Fords, Howard & Hulbert. 75 cents.

This little volume contains three stories by Judge Tourgée, all of them thoroughly readable,—the first one, which gives the title to the volume, being a story of New York city life, the second one, "Poor Joel Pike," a Northern story of farm life, and the third, "The Grave of Tante Angélique," a Louisiana story.

Whether White or Black, a Man: A Plea for Civil Rights and Social Privileges for the Negro. By Edith Smith Davis. 12mo, pp. 199. New York: Fleming H. Revell Company. 75 cents.

This story is advertised as "The Modern Uncle Tom's Cabin." Whatever its merits, it is a well-intended plea for the laying aside of race prejudice.

The Pride of the Mercers. By T. C. DeLeon. 12mo. pp. 368. Philadelphia: J. B. Lippincott Company. \$1.25.

An extremely "plotty" story of Southern life, well written and readable. The unfortunately parted hero and heroine betake themselves the one to fighting for Cuba Libre, and the other to trained nursing in New York. The trained nurse of course gets a chance to nurse her hero back to life, and all ends happily.

Tales of Trail and Town. By Bret Harte. 16mo, pp. 348. Boston: Houghton, Mifflin & Co. \$1.25.

Mr. Bret Harte, in this new volume of short stories, is faithful to his old field, as the following titles would sufficiently show: "The Judgment of Bolinas Plain," "The Strange Experience of Alkali Dick," "A Night on the Divide," and "The Youngest Prospector in Calaveras."

Like a Gallant Lady. By Kate M. Cleary. 12mo, pp. 292. Chicago: Way & Williams. \$1.25.

A Nebraska love story. The hero is a young Englishman, has taken up life on a ranch, and the heroine, an Eastern girl, who is visiting her ranching brother.

Tales of the City Room. By Elizabeth G. Jordan. 12mo,pp. 232. New York: Charles Scribner's Sons. \$1.

A volume of readable stories evolved out of experiences on the reporting staff of a New York daily newspaper.

REV. DR. CYRUS TOWNSEND BRADY.

For Love of Country: A Story of Land and Sea in the Days of the Revolution. By Cyrus Townsend Brady. 12mo, pp. 354. New York: Charles Scribner's Sous. \$1.25.

The Rev. Dr. Brady, Archdeacon of Pennsylvania, has in this volume given us a worthy addition to our list of historical novels dealing with the Revolutionary period. There are some very thrilling chapters of naval warfare in this book; and George Washington figures conspicuously in connection with the Trenton and Princeton campaigns. Captain John Paul Jones, Lord Cornwallis, and various other historical personages are characters in the story.

A Colonial Dame: A Pen-Picture of Colonial Days and Ways. By Laura Dayton Fessenden. 12mo, pp. 220 Chicago: Rand, McNally & Co.

There is more romance than colonial history in this story,—but the atmosphere of the revolutionary period is well preserved, and the prominence of well-known historical characters, particularly Major Andre, is to be noted. The Hudson river region furnishes the scene for the events described.

Vivian of Virginia: Being the Memoirs of Our First Rebellion, by John Vivian, Esq., of Middle Plantation, Virginia. By Hulbert Fuller. 12mo, pp. 377. Boston: Lamson, Wolffe & Co. \$1.75.

A novel of the early colonial history of Virginia, its events following Bacon's rebellion of 1676, with Governor Berkeley as a conspicuous character.

The Head of a Hundred: Being an Account of Certain Passages in the Life of Humphrey Huntoon, Esq. By Maud Wilder Goodwin. 16mo, pp.: 225. Boston Little, Brown & Co.

White Aprons: A Romance of Bacon's Rebellion, Virginia, 1676. By Maud Wilder Goodwin. 16mo, pp. 339. Boston: Little, Brown & Co. The two volumes, \$6.

Flint: His Faults, His Friendships, and His Fortunes. By Maud Wilder Goodwin. 16mo, pp. 362. Boston: Little, Brown & Co. \$1.25.

It will suffice to call attention to the fact that Mrs. Goodwin's successful romances of early Virginia life have been reissued in a very attractive form, while her recent novel, "Flint," a story of the present day,—its scenes being laid in New York and at a summer resort in New England,—is well worth reading, and establishes the fact that Mrs. Goodwin has fairly entered upon an important literary career.

In Buff and Blue: Being Certain Portions from the Diary of Richard Hilton, Gentleman, of Haslet's Regiment, Delaware Foot, in our Ever-Glorious War of Independence. By George Brydges Rodney. 16mo, pp. 206. Boston: Little, Brown & Co. \$1.25.

This story gives prominence to Revolutionary events from the Delaware point of view. The diary of its hero, Richard Hilton, carries the reader through the entire Revolutionary period in a way that touches the whole course of that memorable struggle. There is the usual romantic love story interwoven.

Mademoiselle de Berny: A Story of Valley Forge. By Pauline Bradford Mackie. 12mo, pp. 272. Boston: Lamson, Wolffe & Co. \$1.50.

An Unwilling Maid: Being the History of Certain Episodes During the American Revolution in the Early Life of Mistress Betty Yorke, born Wolcott. By Jeanie Gould Lincoln. 16mo, pp. 263. Boston: Houghton, Mifflin & Co. \$1.25.

Of these two Revolutionary tales, each of which includes a happily completed love story, one belongs to the region of New York and the other to that of Philadelphia. Both are well written and do not omit to bring the eminent personages of the period into the cast.

The Celebrity: An Episode. By Winston Churchill. 12mo, pp. 302. New York: The Macmillan Company. \$1 50

Mr. Winston Churchill's manner of telling a story was pleasantly shown a year or two ago in "Mr. Keegan's Elopement," an amusing naval tale, contributed to the Century Magazine. Mr. Churchill is a graduate of the Naval Academy at Annapolis who has since had editorial experi-

ence in New York magazinedom, and has of late been devoting himself to writing. "The Celebrity," which is his first long story, has made a decided hit, if one may judge from the newspaper reviews. It is in a light vein, but none the less worth while as a capital American story which moves of itself from beginning to end, and which is cleverly and truly representative of certain phases of American life. The principal scene of the story is a quiet little summer resort on one of the Western lakes. The "celebrity" who gives title to the story is a popular young novelist who is tired of

MR. WINSTON CHURCHILL.

social attentions at the fashionable Eastern resorts, and turns up in the West under an assumed name, ostensibly to escape flattering admiration. We shall not, however, attempt to tell the story. Busy people may safely make a note of it for next summer's vacation reading, if they have not time to read it sooner. Mr. Churchill, it is said, is engaged now upon a very stirring naval story of the American Revolution, and is also to give us in the future a volume of short stories, all or most of which will have something to do with our modern navy. Nobody could be more American than Mr. Churchill; and newspapers are hereby warned not to attribute his excellent work to a certain young Englishman, son of the late Lord Randolph Churchill, as some of them have-erroneously done.

An Elusive Lover. By Virna Woods. 16mo, pp. 254.
Boston: Houghton, Mifflin & Co. \$1.

This is a California love story, the heroine being a girl from the East who supports herself by teaching music, and the hero a young artist from Germany.

The Man of the Family: A Novel. By Christian Reid. 12mo, pp. 336. New York: G. P. Putnam's Sons. \$1.

This is a story of the Bayou Teche country of Louisiana.

The Hermit of Nottingham: A Novel. By Charles Conrad Abbott. 12mo, pp. 332. Philadelphia: J. B. Lippincott Company. \$1.25.

Dr. Abbott has written numerous charming books about

nature and outdoor life; and this story, which is based upon facts in the life of a hermit who lived in the New Jersey woods for about fifty years, grows naturally out of the author's own experiences and knowledge.

The Queerest Man Alive, and Other Stories. By George H. Hepworth. 12mo, pp. 271. New York: R. F. Fenno & Co. \$1.25.

A volume of short stories by the well-known clergyman of the New York *Herald's* editorial staff.

For Pity's Sake: A Story for the Times. Being Reminiscences of a Guest at a Country Inn. By Sarah Nelson Carter. 12mo, pp. 191. Boston: DeWolfe, Fiske & Co. \$1.

This book is a story the scene of which is laid in Andover, Mass., and the avowed purpose of which is to stimulate interest in the better care and treatment of dumb animals.

The General's Double: A Story of the Army of the Potomac. By Captain Charles King, U. S. A. 12ma. pp. 446. Philadelphia: J. B. Lippincott Company. \$1.25.

A very readable story by a well-known writer, which throws a good deal of light upon the great sectional struggle that began thirty-seven years ago.

Warrior Gap: A Story of the Sioux Outbreak of 1868. By Captain Charles King, U. S. A. 12mo, pp. 277. Chicago: F. Tennyson Neely. \$1.25.

In writing a story of the Indian war in the Northwest thirty years ago, Captain King is dealing with material with which he is especially familiar.

The Mystery of Choice. By Robert W. Chambers 16mo, pp. 288. New York: D. Appleton & Co. \$1.25.

This volume contains six or seven short stories which, like everything that Mr. Chambers writes, are at once very novel and very readable.

A Book of True Lovers. By Octave Thanet. 16mo, pp. 277. Chicago: Way & Williams. \$1.25.

This Western author has gathered together a number of her recent love stories that have appeared in various periodicals.

Mrs. Knollys, and Other Stories. By F. J. Stimson. 12mo, pp. 207. New York: Charles Scribner's Sons. \$1.50.

A collection of seven short stories by the well-known author of "King Noanett."

The Great Stone of Sardis: A Novel. By Frank R. Stockton. 12mo, pp. 230. New York: Harper & Brothers. \$1.50.

One of Mr. Stockton's most ingenious creations, the period chosen being the middle of the coming century, and the chief interest attaching to the exploits of a very brilliant inventor.

Don Luis' Wife: A Romance of the West Indies. From her Letters, and the manuscripts of the Padre the Doctor Caccavelli, Marc Aurele, Curate of Samana. By Lillian Hinman Shuey. 12mo, pp. 235. Boston: Lamson, Wolffe & Co. \$1.50.

This story of the experiences of an American girl who became the wife of a gentleman of fortune on the island of San Domingo, purports, for the purposes of literary art. to have been compiled from her letters and from various manuscript memoranda by Dominican Spaniards, which had in the course of events found their way to California.

An American Mother, and Other Stories. By Mary Lanman Underwood. 12mo, pp. 290. Wausau, Wis.: Van Vechten & Ellis. \$1.50. The Love of a Caliban: A Romantic Opera in One Act. By Elia W. Peattie. 4to, pp. 41. Wausau, Wis.: Van Vechten & Ellis. \$2.

It is interesting to observe the rapid progress of the making and publishing of books in the West. Two volumes have this month come to our table from the "Philosopher Press," so-called, of Wausau, Wis., and they are both very creditable specimens of typographic art and of binding. The stories by Mrs. Underwood are reprinted from various periodicals, and are characteristic studies of our American domestic life and manners. Mrs. Peattie's tale is cast in the dramatic form, and is entitled an "opera in one act." It shows versatility on Mrs. Peattie's part, but its excellence is not that of her best short stories.

The King of the Town. By Ellen Mackburn. 16mo, pp. 152. Boston: Houghton, Mifflin & Co. \$1.

A melodramatic story of an army post and a mining town in the far West.

### **SOME S**TORIES OF FOREIGN LIFE, PRESENT AND PAST.

Among the Dunes. By Mrs. D. L. Rhone. 12mo, pp. 896. New York: F. Tennyson Neely. \$1.25.

"Among the Dunes" reads like some of the best work of the new school of Scandinavian writers; but it is in fact an American book, the production of a Pennsylvanian lady. The scene is laid in Jutland, and the story, which is quite out of the common, is full of an intense romantic interest and charm.

Young Blood. By E. W. Hornung. 12mo, pp. 330. New York: Charles Scribner's Sons. \$1.25.

This British author's specialty is the story that oscillates between Australia and England. In this particular tale the hero comes back to the old home from South Africa in the first chapter, and has exciting experiences with rogues and detectives through the rest of the book.

A Voyage of Consolation. By Sara Jeannette Duncan (Mrs. Everard Cotes). 12mo, pp. 325. New York: D. Appleton & Co. \$1.50.

It is sufficient to say of this new book that it is the nature of a sequel to the experiences of "An American Girl in London," which was by all odds the most clever of Sara Jeannette Duncan's seven or eight previous books.

A Son of Israel: An Original Story. By "Rachel Penn." 12mo, pp. 306. Philadelphia: J. B. Lippincott Company. \$1.25.

A very thrilling story, which is laid in the Russian city of Odessa, and the motive of which is the present bitter antagonism between the Jews and the Russian Christians.

The Broom of the War God. A Novel. By Henry Noel Brailsford. 12mo, pp. 337. New York: D. Appleton & Co. \$1.25.

A story of the recent war in Greece, which appears to have been written by one of the numerous English war correspondents who flocked to Athens last year.

The Disaster. By Paul and Victor Margueritte. Translated, with an Introductory Memoir, by Frederic Lees. 12mo, pp. 439. New York: D. Appleton & Co. \$1.50.

An ambitious and important story of the Franco-Prussian war, with especial reference to Metz and Sedan. It is by the sons of General Margueritte, who was one of the bravest of the French generals of that unhappy war. The book contains more history than fiction, and in its original French form has been much commented upon in Europe.

A Desert Drama: Being the Tragedy of the Korosko. By A. Conan Doyle. 12mo, pp. 277. Philadelphia: J. B. Lippincott Company. \$1.50. Dr. Conan Doyle's new book is a contemporary story of the English army in the upper Nile region, and of course strikes the present mood in England.

Shrewsbury: A Romance. By J. Stanley Weyman. 12mo, pp. 418. New York: Longmans, Green & Co. \$1.50

Another historical romance in Mr. Weyman's best vein, dealing with the plots of the Jacobites in the early years of the accession of William and Mary to the English throne.

From The Other Side: Stories of Transatlantic Travel. By Henry B. Fuller. 16mo, pp. 229. Boston: Houghton, Mifflin & Co. \$1.25.

This little volume, containing four short stories, is by a well-known Chicago writer, and its character is sufficiently denoted by the sub-title, "Stories of Transatlantic Travel."

A Dog of Constantinople. By Izora C. Chandler. 12mo, pp. 215. New York: Dodd, Mead & Co. \$1.50.

This also is a story that will have a particular interest for those who like books and tales about animals.

Kallistratus: An Autobiography. By A. H. Gilkes. 12mo, pp. 241. New York: Longmans, Green & Co. \$1.50.

A story which tells in the first person the experiences of an Athenian Greek who lived in the period of the wars between Rome and Carthage and witnessed Hannibal's campaigns, and who recounts much that has historical interest and value in the summing up of his experiences.

Fabius the Roman; or, How the Church Became Militant. By Rev. E. Fitch Burr, D.D. 12mo, pp. 388. New York: The Baker & Taylor Company. \$1.50.

A story of the persecution of the Christians under the Roman Empire in the fourth century of our era.

### RELIGION.

A History of Methodism in the United States. By James M. Buckley. Two vols., 8vo, pp. 492—481. New York: Harper & Brothers. \$5.

The able editor of the Christian Advocate is probably the one man in the denomination to whom well-informed readers, by common consent, would turn for information on the affairs of American Methodism, past and present. Dr. Buckley seems to have conceived his office as the historian of the church in the United States to be limited to the recording of fact; he has refrained from extended comment, as a rule, although his readers, we are sure, would often have been interested in his personal opinions on controverted points. The expression of his own views, however, was no part of the historian's function, as he understood it, and he has held himself strictly to the task of setting forth in proper proportion and sequence the events which mark the progress of Methodism from John Wesley's day to this. These facts are sufficiently remarkable in themselves; they need no literary embellishment. Dr. Buckley has chosen to tell the story in the simplest possible way, with no straining whatever for dramati: effect. His purpose has been admirably carried out; the result will be universally accepted as the standard history of the Methodist Church in this country. More than one hundred portraits and several other illustrations are scattered through the two volumes.

Even as You and I. By Bolton Hall. 16mo, pp. 270. New York: F. Tennyson Neely.

The first part of this little book is a series of parables designed to illustrate the foundation principles in the author's philosophy of life. The second part is an exposition of Tolstoi's theories as they are embodied in his treatise, "Of Life." In connection with this exposition there appears a brief appreciation of the Tolstoi philosophy by Mr. Ernest Howard Crosby. The book as a whole is an admirable expression of the ideals and aspirations of advanced Christian socialism.

- The Book of Books; or, Divine Revelation from Three Standpoints. By Rev. J. W. Book. 12mo, pp. 280. Indianapolis: Catholic Record Print.
- Suggestive Illustrations on the Gospel according to Matthew. By Rev. F. N. Peloubet, D.D. 12mo, pp. 477. New York: E. R. Herrick & Co. \$1.25.
- A Harmony of the Books of Samuel, Kings, and Chronicles. In the Text of the Version of 1884. By William Day Crockett, A.M. 4to, pp. 375. New York: Eaton & Mains. \$2.
- A National Church. By William Reed Huntington. 12mo, pp. 109. New York: Charles Scribner's Sons. \$1.
- How to Make the Sunday School Go. By A. T. Brewer. 16mo, pp. 191. New York: Eaton & Mains. 60 cents.

- The Breath of Life: A Series of Self-Treatments. By Ursula N. Gestefeld. 12mo, pp. 63. New York: The Gestefeld Publishing Company. 50 cents.

### PSYCHOLOGY AND ETHICS.

- Outlines of Descriptive Psychology: A Text-Book of Mental Science. By George Trumbull Ladd. 8vo, pp. 439. New York: Charles Scribner's Sons. \$1.50. Professor Ladd's latest work on psychology is intended for use in colleges and normal schools and may be combined by the student with the author's previous treatises on physiological psychology. The present work recognizes the fact that the methods of physiological research, from which so much is hoped by the present-day psychologists, are still unable to explain the more complex of mental phenomena. It is left to what is termed descriptive psychology to deal
- A Primer of Psychology. By Edward Bradford Titchener. 12mo, pp. 330. New York: The Macmillan Company. \$1.

with such matters as the growth of intellect and the for-

mation of the higher sentiments and emotions.

- The most recent elementary text-book of psychology embodying to any extent the results of modern research is Professor Titchener's little volume, intended as a "first book" in the science.
- The Psychology of Suggestion: A Research into the Subconscious Nature of Man and Society. By Boris Sidis, Ph.D. With an introduction by Prof. William James. 12mo, pp. 396. New York: D. Appleton & Co. \$1.75.

Those investigators especially interested in the study of the subconscious will find in this book by Dr. Sidis a discussion of the latest theories and a full account of the most instructive experiments. The work is enthusiastically recommended by Professor James.

- The Subconscious Self and Its Relation to Education and Health. By Louis Waldstein, M.D. 12mo, pp. 171. New York: Charles Scribner's Sons. \$1.25.
- The Psychology of the Emotions. By Th. Ribot. 12mo. pp. 474. New York: (imported by) Charles Scribner's Sons. \$1.25.
- The Psychology of Health and Happiness. By La Forest Potter, M.D. 12mo, pp. 163. Boston: Philosophical Publishing Company. \$1.

A wise and temperate discussion of the proposed treatment of disease through the vital association of the mental and the physical—in short, a scientific form of "mind cure."

- A Case of Partial Dematerialization of the Body of a Medium. Investigation and Discussion by Mons. A. Asakof. Translated by Tracy Gould. 12mo, pp. 197. Boston: Banner of Light Publishing Company
- Evolutional Ethics and Animal Psychology. By E. P. Evans. 12mo, pp. 386. New York: D. Appleton & Co. \$1.75.

The author of this strikingly original work discusses the ethical relations of man to the lower animals, making an ingenious plea for the recognition of the rights of animals—rights which he holds as subordinate only to the rights of our fellow-men.

### CHILD-STUDY.

The Study of Children, and their School Training. By Francis Warner, M.D. 12mo, pp. 284. New York: The Macmillan Company. \$1.

Dr. Warner's method of observing and describing children is based on an experience of twenty years as a London physician, and has been tested by personal examinations of one hundred thousand school children. Besides describing his method of child-study in detail, his book has chapters on the child's body and brain, adolescence, and school hygiene. The book is full of practical suggestions of the greatest value to teachers and parents.

Children's Ways. By James Sully. 12mo, pp. 201. New York: D. Appleton & Co. \$1.25.

This volume consists of selections from Professor Sully's "Studies of Childhood," with some additional matter, chiefly in the form of stories. Abstruse discussions have been omitted, and the order of treatment has been somewhat altered.

A Manual of Mental Science, for Teachers and Students: or, Childhood: Its Character and Culture. By Jessie A. Fowler. 12mo, pp. 250. New York: Fowler & Wells Company. \$1.

A treatise on child-study from the phrenological point of view. The photographs of children which serve as illustrations add to the book's interest.

Child Culture in the Home: A Book for Mothers. By Martha B. Mosher. 16mo, pp. 240. New York Fleming H. Revell Company. \$1.

FROM A WATER COLOR BY IRVING R. WILES. "BABY'S BATH."

Nothing is more easily affected by irritation than the dainty, delicate skin of a young child.

Ivory Soap is healing, cleansing and refreshing. It is wholly free from impurities, and leaves the tenderest skin soothed by its mild, creamy lather.

Copyright, 1898, by The Procter & Gamble Co., Cincinnati.

Any person wishing an enlarged copy of this picture may mail to us 10 Ivory Soap Wrappers, us receipt of which, we will send a copy (without printing) on enamel plate paper, 14x 17 inches, a suitable size for framing. THE PROCTER & GAMBLE CO., CINCINNATI, O.

"The Value of Systematic Shampooing in Properly Caring for the Hair and Scalp" mailed free on application.

THE PACKER MFG. CO. (SUITE 87B), 81 FULTON STREET, NEW YORK.

'When you wish the latest styles write to us.'

We have recently made some exquisite Easter and Summer costumes for leading New York society ladies and prominent actresses, who are famed for the good taste which they display in the selection of their toilettes. Photographs of these ladies and the garments which we made for them are shown in our new catalogue, which is now ready. To the lady who wishes to dress well at moderate cost we will mail free this attractive catalogue and a complete line of samples of new materials to select from. We keep no ready-made suits, but all of our gowns are made to order, giving that touch of individuality and exclusiveness so dear to the feminine heart.

We pay express charges everywhere. Our catalogue illustrates:

Tailor-made Suits, \$5 up.

Made of a splendid line of all the new Spring colors in broadcloths, wool poplins, cheviots, whipcords, etc.

Separate Skirts, \$4 up.

Made of mohairs, crepons, Bayadere stripes, black figured goods, cheviots, covert cloths, silks, and satins.

Outing and Blazer Suits, \$4 up.

Made of denim, crash, linen, duck, cotton covert cloths, pique, etc.

Bicycle Suits, \$4.50 up.

In English and Scotch tweeds, double-faced bicycle suitings,

cotton and wool covert cloths, mohairs, corduroys, crash, duck, linen, etc.

Bicycle Skirts, \$3 up.

We have supplied many bicycle clubs with fashionable suits and skirts. Can we not make your wheeling costume?

New Marseilles Suits, \$4 up.
We introduce for Summer wear the new Marseilles suits, and shall be pleased to forward samples of this fashionable fabric on request. Marseilles is an extremely popular fabric in Paris this season, and we are the only American house carrying a line of the

Capes and Jackets.

We have a special line of the fine light weight kerseys, choice covert cloths and other fabrics especially suited for Spring and Summer capes and jackets.

Our line of samples includes the newest materials, most of them being exclusive novelties not shown elsewhere. We also have special lines of black goods and fabrics for second mourning. Write to-day for catalogue and samples; you will get them by return mail.

THE NATIONAL CLOAK COMPANY, 119 and 121 W. 23d St., New York City.

# The World of Thrift and Money Matters.

Signs of Western Prosperity.—It will be a poor time this year for politicians and orators to make capital out of "hard times and mortgaged homes." One of the most noteworthy features of the financial year lately ended has been the astonishing decrease of indebtedness throughout the West; indeed, the record shows that in every single State and Territory the total sum due on farm and home mortgages decreased Nebraska seems to have been the during 1897. banner State in this respect. In 1896 the mortgages filed in that State amounted to \$12,033,500, while the releases were only \$11,398,000, a decided retrogression. In 1897, however, with new mortgages which footed up to a total of \$11,-844,000, the releases reached the gratifying figure of \$14,767,000, or a net gain of \$2,923,000 -showing a prosperity such as the Western farmer has not made in a great many years. in the cities has not fallen behind that of 1896, the figures for the last half of 1897 being: filed, \$1,890,000; released, \$4,245,000. In 1896 the new mortgages amounted to \$4,441,000, while the releases were \$6,884,000.

Further West much the same tale is met with, except that here the wave of prosperity is largely ascribed to the business and traffic created by the The first week of March Klondike excitement. showed an advance of 52 per cent. in the bank clearings over the corresponding week of 1897. That this was largely due to the gold fever which is creating so much excitement along the Pacific coast is shown by the way in which the percentage of increase varied in different cities: in San Francisco it was 25.3 per cent.; in Tacoma it reached 128.7 per cent.; in Portland 151.9 per cent.; and in Seattle it reached the remarkable figure of 256.5 per cent. In those towns unaffected by the Alaska trade the growth was comparatively small.

Boston's Yearly Commerce.—Boston, too, has had her share of the good times, 1897 having been a record-breaking year both as regards imports and exports, and her ratio of increase in foreign trade having exceeded that of any other American port. The total of imports amounted to \$85,688,149, representing an increase of fully 30 per cent.; the exports were valued at \$104,-191,690, an increase of \$2,725,478. The exports of provisions headed the list, and this city continued to hold its position as the largest exporter of cattle. Merchandise also valued at \$10,450,703 passed through Boston in transit to foreign countries.

Commercial Openings in China. - Following our notes of last month on the opportunities of developing an export business to China this letter may be of interest. It was received by the United States Export Association from one of its correspondents and emphasizes the point, made before, as to the necessity for more intelligent cataloguing and listing in extending all branches of our business in China: "We have had a number of inquiries lately from the Chinese for many different articles of machinery, among which were a lithographic press, a photographic engraving plant, and a flour-mill plant, and in our researches for information and prices we find that the American manufacturers suffer very much by comparison with the catalogues as issued by European merchants. We would suggest the advisability of your association calling the attention of its members to the necessity of making up their catalogues with the fullest information. manufacturer in the States makes a flour mill he stops with the illustration, and in many cases his catalogue contains 'Prices will be given upon application,' and there is, as a rule, so very little information that commission merchants, even if

they were disposed to do business with America, not being practical themselves, would find it almost impossible to work upon the American lists and catalogues. The English manufacturer, if a certain part of machinery used in the manufacture of certain articles is required, will give, in addition to that which is manufactured by him, a detailed description of all the different parts necessary to make a complete mill, including boilers, engines, shafting, pulleys, belting, and even down to small hand tools, with their prices, and no doubt each manufacturer, seeking for export trade, is working in conjunction with manufacturers of component parts of machinery used in the various plants, etc., and the prices are in their catalogues. They very often have a rough plan of a building, giving section of all the different parts of the machinery. They also give the weight and measurement of the goods packed ready for shipment, so that the commission agent can calculate the freight. We notice that your association is making an intelligent effort to increase the export trade of the United States, and if we may be allowed to suggest, the first step necessary for those interested with yourself would be the proper making of catalogues, as you can no doubt understand there is probably no commission merchant who is practical upon the requirements of the different plants, and if a customer inquires from him, 'What can you obtain a plant for me to make flour for?' we must be in a position to give him what the price is laid here, its capacity, and how we can increase or lower the cost of this plant, according to the amount of money they wish to spend."

We have been engaged for twenty-two years in lending money on first mortgages on real estate. The mortgages thus obtained are deposited with a trustee, and bonds which are the direct obligations of the Company are issued against the mortgages so deposited. They are issued in denominations of \$200 and upward. They are payable in gold and bear 5 per cent. interest per annum, payable semi-annually. We offer these bonds at par and interest. Investors who prefer may purchase the mortgages themselves.

About 3,000 investors in our securities include insurance and trust companies, savings banks, universities, colleges, trustees, guardians, and individuals.

## The Battle-Line of Freedom

is in the Island of Cuba.

Every lover of liberty should help the cause of Cuban independence by purchasing

### CUBAN BONDS.

It is now clear to almost every mind that Cuba will achieve her independence, when these bonds, now selling at 50 per cent., will be worth more than par, and if ('uba joins the Union of States, which is very probable, they will become U. S. bonds.

Further particulars upon application.

SPECIAL NOTICE.

Every friend of Cuban independence and every person who has contributed in any way to the cause of Cuba should place themselves in communication with

## ■ INSURANCE

Canadian Fisheries.—The total value of the Dominion's fisheries last year was \$20,400,. 000, the product of 75,000 men, 30,000 of whom were workers in the deep-sea fisheries. was invested in this business a total capital of \$9,750,000, and some 36,000 vessels of all sizes were needed to harvest the catch. Of the above amount the salmon catch contributed \$4,000,000, the cod \$3,619,000, the herring \$2,900,000, and the yield of lobsters \$2,200,000. In the fur seal and Bering Sea fisheries there were 41 vessels, with crews comprising 500 whites and 587 In-These secured some 30,000 skins, half of which came from Bering Sea. New Brunswick, Quebec, and Ontario showed an increase over last year's business amounting altogether to \$575, 000; all the other provinces fell behind last year, their entire deficit reaching \$367,000.

Live-Stock in the United States.—The Department of Agriculture has sent out the following bulletin on the live-stock of the country:

"The returns of the number of live-stock on farms in the United States on January 1 show there to have been 13,960,911 horses, 2,257,665 mules, 15,840,886 milch cows, 9,264,197 oxen and other cattle, 37,656,960 sheep, and 39,759,-993 swine. These figures show a decrease of 403,756 in the number of horses, 100,841 in that of milch cows, 1,244,211 in that of oxen and other cattle, 840,283 in that of swine. the other hand, there is an increase of 840,283 in the number of sheep and 42,011 in that of While there has been an increase in the number of milch cows in each of the New England States and a somewhat considerable increase in the Northwestern States, there has been an increase throughout almost the entire South, and this fact, together with a slight decrease in New York, Pennsylvania, Ohio, Michigan, Indiana, and Illinois, reduces the total for the country at large to six-tenths of 1 per cent. below that of last year. Of the seventeen States reporting a total of over 1,000,000 hogs, Pennsylvania, Ohio, Georgia, Missouri, Kansas, and Nebraska show an increase, and Indiana, Illinois, Iowa, and eight Southern States a decrease.

"There is a marked incease in the value of live-stock on farms reported from almost every section of the country, the total value of farm horses having increased during the year by \$25,713,011, that of mules \$6,729,972, of milch cows \$65,573,833, of oxen and other cattle \$104,367,213, of sheep \$25,700,191, and of swine \$8,073,639; a total increase in value of \$236,162,859, or 14.27 per cent."

Ferdinand F. French, BOSTON, MASS.

#### THE BICYCLE OF 1898.

A NY consideration of the bicycle conditions in the current year must at the outset come face to face with the great question of chain or chainless. If any of the latter varieties are half what their advocates claim for them, the development of the wheel has undoubtedly marked a greater advance than has come since the introduction of the safety and the pneumatic tire.

#### THE NEW CHAINLESS WHEEL.

There has been such a tremendous exploitation of the new gearing in the newspapers and the wheeling magazines that one is apt to be a little surprised in looking over the list to find what a large proportion of the manufacturers have not yet adopted these changes. Even those who are making chainless wheels are without exception announcing the former style also, and there are really not more than half a dozen firms who have accepted the innovation at all.

It is only fair to notice first of all the new Columbia model, for no matter what dealers or buyers think of comparative excellences, nobody would for a moment deny that Colonel Pope has influenced the growth of the bicycle in America perhaps more than any other one man; and anything new upon which he has decided to venture the reputation his wheels have acquired must be at least worthy of serious consideration.

The Columbia chainless is driven by what is known as the bevel gear, in which the motion from the pedals is transferred by slanting cogs to a shaft, at whose opposite end an exactly similar arrangement applies the power to the driving-This is one of a number of methods with which the experimenters have been working for a long time. The obvious disadvantages of the chain have been a sore point with the "bicycle cranks" almost ever since Lawson devised it eighteen years ago. As every rider has experienced, a chain grows steadily less serviceable from the first day it is ridden. No matter how exactly the teeth of the sprocket may index when fresh from the shop, there is no possibility of preventing the slight irregularities that result from mutual wear at the points of contact Slight as these imperfections are at first, their result helps to accelerate the process each week, and the wasted power due to this and to the stretching of the chain is well known to the least observant wheelman. Then, too, the difficulty of keeping a chain clean and the impossibility, when exposed, of lubricating it properly, on account of the consequent collection of dust and grit, are inevitable accompaniments of its use which have long called for amelioration. Among the many forms of power transmission in which relief has been sought the bicycle men enumerate

leather belts, metallic bands with holes to engage the sprockets, combinations of pneumatic and hydraulic devices, toggle joints, drive ropes, cranks connected by rods, combinations of cams and rollers, systems of levers and cranks, rows of spur gears between driving centers, clutches and ratchets connecting with levers, trains of balls engaging sockets in the sprocket wheels, balls working in special grooves on the axles, combination of spur gears and friction rollers, and gearings of pin wheels.

A great many people have been certain that the principle of the beveled gear was the most correct and the one promising best results; but the mechanical difficulties have proved no small obstacle, many investigators having become convinced that it was impossible to cut the bevels with sufficient accuracy and cheapness. The first patent of this sort was taken out in this country in 1885, and there are now over a hundred different devices, on which patents have been issued, that come within the general definition of bevel gears. In 1894 a company was formed which marketed a thousand machines of this description, but the general construction was too clumsy to give them any great success.

It is the patents of this company, since defunct, on which the Pope Company has founded its chainless machine. They now claim to have perfected the cutting and hardening of the teeth and also to have solved the problem of making a frame rigid enough not to spring or yield and yet without too great weight. They declare that their "Chainless" will go faster and further than the chain-driven machine with the same expenditure of effort; that it is easier to keep clean; that there is no lost motion; that the driving mechanism is not affected by rain, mud, or dust; that it has no teeth or links to catch in the rider's garments; and that it becomes more perfectly ad-The present season will doubtjusted with use. less decide a great many of these points one way or another, although the vast majority of the wheeling fraternity—particularly those away from the larger cities—are still too skeptical of the new system's merits even to try it.

A formidable rival of the new Columbia is the chainless machine which will bear the Humber name-plate this season. In this the bevelgear principle has been discarded as "neither practicable nor desirable." Indeed, the Humber pronunciamento carries the war into the enemy's country, declaring that "there is greater friction, and thereby greater loss of power, in propelling a cycle by means of bevel gears than by means of the chain when the chain is correctly made and the sprockets accurately cut. . . "

Here is a difference of (interested) expert opinion which should make the year's wheeling

experience of peculiar interest. The Humber manufacturers pin their faith to a "spur gear," two large cogged wheels on a third smaller one, working squarely into each other instead of at an angle as in the bevel type. They offer to convert a '98 chain Humber into a chainless, for \$18 should the buyer be dissatisfied, and an 1897 can be thus transformed for \$50. In general, however, these makers do not advocate any change from the chain wheel, and are evidently by no means convinced that the days of the latter are numbered.

The chainless wheel put out by the Iver Johnson firm is of what is known as the Sager pattern, with a system of roller gears for which the same advantages are claimed by its backers as in the case of the Columbia. The Sterling Cycle Works, too, has a chainless wheel for this season, whose beveled miter gears operate a good deal like the Columbia. These shafts and bearings are practically running all the time in a bath of oil, and being inclosed, the necessity of lubricating and the need of a guard are at once elimi-A feature peculiar to the Sterling is a changeable gear arrangement by which the two rear gears may be reversed, giving the rider a 72 or 78. In the Dayton Chainless all the bearing points of the transmitting mechanism are incased and the motive power is transmitted to the rear hub equally on both sides of the frame. mechanism consists of a pair of connecting rods running from cranks on each side of the rear hub to the front crank hangers, where they join a link belt passing over a pair of double-flanged pulleys. The makers place their chief advantage over the bevel gear in the lessening of friction, estimating a gain of 25 per cent. in this This is one of the most radical dedirection. partures adopted by any of the standard wheels. The Spalding product, following the bevel-gear idea, is not unlike the two just described, the most noticeable difference being that it adheres to the old rear lines of the chain type.

#### SOME IMPROVEMENT IN CHAIN MODELS.

Perhaps the most noticeable difference between the 1898 regular types and those of last season is the preponderance this year of wheels with some sort of protection for the gearings. Those manufacturers who are still unbelieving as to the value of the chainless types have realized that the only way to compete with these is by guarding from mud and dirt the mechanism which has been the cause of the new development; and there are a good many models of gear cases on the market. Some of these are of rolled steel, inclosing the chain and the front sprocket teeth, but not interfering with the adjustment of the rear axle nut. Others are of aluminum and more

THE "RIPEST FRUIT OF INVENTION."

## Rex Cycle Tandem.

READ WHAT PEOPLE WHO RIDE THE REX SAY. We Have Such Letters by the Hundred.

We do not need any particular Saddle or Spring Seat post, or roads built for our wheel. Rex Cycles are built for any kind of roads. Absolutely non-vibrating and free from joits and jars.

PINCKNEY & TATOB, Attorneys and Conselors,
Suite 503-504, First National Bank Bldg.
Telephone Main, 3631.
CHICAGO, ILL., December 22, 1897.
REX CYCLE COMPANY, No. 84 Adams St., Chicago.
Gentlemen:—After a thorough test of the Rex

Tandem last summer and fall, on all kinds of roads Tandem last summer and tall, on all kinds of roads and with many different people, it gives me great pleasure to say that it is the easiest riding machine lever mounted. My wife and I have ridden your machine on roads so rough that we could not have stayed on any other tandem. The rougher the roads the more marked is the superiority of your wheel over other wheels. Your wheel, properly introduced will prove a world beater. Sincerely yours, (Signed) M. W. PINCKNEY.

Gents' Rex Wheel.

REX CYCLE CLUBS are the fad of 1898. Why not organize one is your town? They are exclusive and are protected by the individuality and High Grade of Rex Cycles.

NOTE.—All Rex Cycles are fully warranted, and if not found all we claim for them we will take them back and refund full purchase price.
"THE REX IS A MARVEL OF INVENTIVE SKILL."

We refer to the Globe Nat'l Bauk of Chicago or any other names given in our 1898 Catalogue. Send for it. REX CYCLES ARE THE ONLY STRICTLY HIGH-GRADE WHEELS NOW EXTANT.

OUR TANDEMS CAN BE TURNED IN THEIR OWN SPACE. THINK OP IT. IF CHAINLESS GEAR PROVES A SUCCESS
WE CAN EASILY APPLY IT TO THE REX, BUT WE WILL NOT EXPERIMENT. IT IS NOT A QUESTION OF
GEARS, BUT SPEED, AND COMPORT.

REX CYCLE COMPANY, - - 280 Wabash Ave., CHICAGO, ILL.

# BICYCLES

nearly approximate the laced guards formerly in use. Another variety, the Frost, is said to be entirely noiseless, and both chain and sprockets can be examined and removed without disturbing it. It is absolutely tight, the joints being sealed by elastic rubber. There are also cases made of celluloid which are semi-transparent and quite light.

#### SOME OF THE OTHER NEW FEATURES.

The new Ramblers show a novel style of reenforcements of fish-mouth design; a strengthening spear head inside the front fork taking the strain off of the ball cup; a fiber handle, said to be unbreakable; and a crank handle in two pieces brazed together and forming the outside reenforcements of the frame.

One of the chief improvements in the Keating wheels is a modification of their "double roller noiseless chain," by which the side links are so joined to the bushing that stretching becomes impossible. Their crank hangers are lengthened this year, but the tread has not been widened. With these and a few minor alterations these bicycles are much the same as in 1897.

The principal change in the Howard wheel is a new form of bearings and adjustment. They have also substituted drop-forged crank shafts in place of the two-piece ones formerly in use. The Eclipse Company lays greatest stress on its method of alternating the gear of its wheels and upon an automatic coaster and brake, set in operation by back-pedaling and instantly released by a forward movement. The rider can coast or set the brake merely by varying the back pressure on the pedals, the leverage being sufficient to stop-the wheel altogether.

In the '98 Clevelands the differences observable are an internal expanding and reversible handlebar binder, improved Burwell bearings, an automatic oiling device, an overhanging sprocket. (not dished), which reduces the tread three-sixteenths of an inch, and button-hole spoke holes in the rear hub by means of which rear spokes can be inserted without removing the back sprocket. The new Fentons are much the same as last put, having adjustable handle bars, concealed plunger brakes, and bearings adjusted by turning the axle, the surface relation of the carps and comes to the balls never being changed. The "cycloidal" sprocket is one of the strong points of the Tribune manufacturers. The teeth of their sprocket is formed on the curve of this name (the line made by a fixed point, say on the periphery of a circle when rolled along a plane surface), and the makers believe that this shape materially reduces friction and increases the freedom of action in the Saddles and tires will be made specially for these wheels this year.

DESCRIPTIVE CATALOGUE FREE

The Crescent bicycle is more largely used in this country than any other. This leaves little to be said. Crescent bicycles stand and Crescent brices are never cut.

WESTERN WHEEL WORKS

New York

Chicago

# BICYCLES

The well-known Remington cycles will embody several new points. The frames are reënforced inside and outside, and the crown is a two-piece hollow forging. The sprocket also is in two sections, and in the construction of the chain the usual blocks have been done away with, the same quality of steel being now used throughout and the grain of the metal running lengthwise. The ball pocket of the crank hanger is eccentric and removable, permitting the removal of the entire crank shaft and bearing and making it possible to adjust the chain from this point. The Remington people are using the Frost gear case.

On the rear wheel of the new Falcons are two sprockets of different sizes, and by an ingenious device the rear wheel may be reversed, thus giving a change of gear without interfering with the chain. The frame is flush throughout, and the fork crown is an oval, between the usual straight and arched styles. The pedals are very simple,

consisting of only five pieces.

The makers of the Liberty machine have been working hard over their front sprockets to decrease the chain friction, and they have originated a very novel design. Only every fifth tooth actually takes hold of the chain, the intermediate ones being cut so small that they do not come into contact with it and serve only to keep it in line and to throw off mud. The idea is that five teeth will do the actual work of propulsion just as well as twenty-five and that every contact saved means a saving of power expenditure. The bearings are of the style known as "inverted," the balls being on the inside while the cups are placed against the hubs—a construction said to improve the adjustment and prevent play. The whole axle with races and balls attached can be removed without disturbing the adjustment.

It is evident from the foregoing that, outside of the chainless types, the chief variations in construction this season are in matters of chain protection and sprocket fittings. There are, of course, some more radical novelties, such as the racycle (geared up to 124 and with a new style of crank hanger and a celluloid gear case), and the Rex wheels, peculiar affairs in which the seat rests on a curving backbone passing over the second wheel and ending in a small rear wheel—three tandem.

In the matter of novel sundries there are lamps burning acetylene gas, for which most astonishing qualities are claimed, and many electric-light attachments, besides minor variations of former oil lamps; one company is putting an "anti-leak" preparation called "puncturoid" on the market, and the Gormully & Jeffreys firm advertises an ingenious steam vulcanizer for tire repairs; there are various detachable tires and chains; and the usual crop of new "hygienic" saddles has by no means failed.

DON'T BUY A CAMERA Except one that just suits you—one you can handle easily, that has no fits and freaks. There's only one way to find out—actual test. Don't buy at random—it's risky; don't begin to swap and trade—it's expensive. You can have the best—a '98 Pocket Kozy—on 10 days' trial. If it suits, payfor it; if it doesn't, send it back. That's an unprecedented offer: you can't afford to miss it. But it is purely an advertising proposition on our part. Experience teaches us that the best way to advertise a really good thing, is to send it right out among the people, to be seen and tested. The 1,000 Kozys distributed now on 10 days' trial, and at special prices until April 30, will open the way for a sale of 100,000 in 1898. Kozy Superiority will make Kozy Sales. We make this wonderful offer because we know that the New Pocket Kozy Camera will give perfect satisfaction—positive delight-to amateur and professional alike. It is unique—nothing like it in the market; and it's the

## TAKES LARGE PICTUR

The new Kazytakes 12 plotures (3½ x 3½ inches) without reloading. Its size when closed is ¼ inches thick, 4½ inches wide, 5¾ inches long; weighs 15 ounces. It slips casily into your locket, and may be packed in your "grip" without crowding out everything else. It is simplicity simplified; nothing to swell and stick; Tothing to swell and stick; nothing to swell and stick; nothing to go wrong at the critical moment; nothing for you to do but point and push-you get a picture every time.

is strictly a film camera, using Fastman cartridges, sold throughout the world—cheap, light, convenient. The films go in easy and come out easy. The Koxy worksperfectly anywhere and in any climate. It

### **Loads by Daylight**

No dark room required, Anyone can learn to operate it. After one hour's study of our "Directions", the merest novice can handle the Kosy as skilfully as a school-boy manipulates a jack-knife, It's a plain, "open and shut" case.

## tR--Until April

Send us your name and address, mentioning this magazine, and stating occupation and references, with a deposit of \$1.00. The Kozy will be forwarded, all charges prepaid. For ten days after its receipt, you are to test the camera to your satisfaction. If, at the expiration of that time, you decide to keep it you are to send us \$3.00, and thereafter \$3.00 a month for 5 months, making a total payment of \$13.00. Or, if you are not entirely satisfied after ten days trial, you are to return the camera to us, charges prepaid, and we will immediately refund your deposit of \$1.00. This special offer will be withdrawn on April 30, or sooner if the 1,000 cameras are taken before that date. If you prefer to send cash in full with application, we will furnish the new Kozy for \$10.00 cash until April 30. Catalogues and full particulars free on application.

**FOLDED FOR YOUR POCKET** 

#### **We Guarantee Satisfaction or no Pay**

You take no risk, for we don't want your money, unless the Kozy is just what we claim, and you are to be judge and jury. Isn't that fair enough? We refer to the Mechanics' National Bank, of Boston, as to our responsibility. Write to-day; never again will such an opportunity be presented. Address to-day

### Globe-Wernicke Cabinet.

A business house of any size nowadays must file away papers and documents of all shapes and sizes. A separate cabinet for each kind of paper or document would be cumbersome and expensive.

The Globe-Wernicke Cabinet is composed of sections uniform in size and shape, and fitted with different interiors, some of which are shown in the above illustration. These sections or units are placed one above the other or end to end, each tier resting on a base and surmounted by a cornice, the whole ingeniously and securely locked together. Can be arranged in cabinets embracing only one style of file or a variety as may be desired, and can be extended by the addition of other units without disturbing the original cabinet arrangement.

Catalogue showing details of construction and different interiors by mail—free.

## Malt Nutrine

Ask Your Family Physician.

Mait-Nutrine is a wonderful strengthening tenic, which insures an immediate gain in flesh, For thin, debilitated people there is no medicine half so helpful. It enriches the blood and gives it power to nourish—aids digestion, sharpens the appetite and tones up the entire system. Mait-Nutrine is an invaluable aid during convalescence. Fever patients and others who find it slow work "picking up strength" will be benefited by Mait-Nutrine. Any physician will tell you so. Mait-Nutrine is prepared by the Anheuser-Busch Brewing Ass'n, which fact guarantees the purity, excellence and merit claimed for it.

# The Shepard Consumption Treatment for Consumption

and all diseases of the lungs and throat, which was perfected about eight (8) years ago at Elgin, Ill., by Dr. W. A. Shepard, has commanded such an increasing number of patients that permanent headquarters have been established, within the last year, at Denver, Colo. The Elgin office will be maintained and an additional office has been opened at Albuquerque, N. M. A book explaining The Shepard Treatment will be sent free upon application. Address office nearest you, as follows:

The Shepard Treatment

Kittredge Block, Denver, Colo. Commercial Club Bldg., Albuquerque, N. M. Towns Block, Elgin, Ill.

Indigestion Has No Terrors For Him.

That salt-shaker is filled with PEPSALT. It cures and prevents indigestion. Season your food with it. It tastes like salt; in fact is salt, into every grain of which is incorporated digestive substances natural to the stomach. The PEPSALT mixes with every particle of your food and digests it all. Send for sample in salt-shaker bottle and try it. Price, 25 cents, postpaid.

## WILSON'S "Common Sense" EAR DRUM.

sician's pen.

Wilson Ear Drum Co.:
Gentlemen—I take pleasure in reporting to you the good results I have secured from the use of your Common Sense Har Drums. More than a year ago I put in a pair for J. A. Hudson, editor of the Times, Macon, Mo. From the very first day he wore them he reported a decided improvement in his hearing and very great relief from a trouble he had experienced due to the cold air reaching his middle car. He has worn them constantly since that time only having them removed at long intervals to be cleansed. He says now that he would not be without them for ten times their cost. I have had experience with other appliances, but have found these the only thing of any value.

Your very truly, W. L. WINN, M. D.

ENGINEERING

S NOT only convenient and economical, enabling working men and women to obtain an education that will uplift them; but as conducted by THE INTERNATIONAL CORRESPONDENCE SCHOOLS it is also the most suitable method for young people whose circumstances will not warrant a course at college or the technical schools.

THE notable success of THE INTERNATIONAL CORRESPONDENCE SCHOOLS since their establishment in 189 is best illustrated in the successful careers of their graduates, details of which will be furnished interested persons. The experiences of students who have risen rapidly in their trades and professions while studying and as a result of their studies, furnish inspiration for every individual who is ambitious to succeed.

THE INTERNATIONAL CORRESPONDENCE SCHOOLS have long since passed the experimental stage. Their standing and achievements fully warrant the

Guarantee—that a student therein who studies conscientiously and digently will gain a greater amount of practical knowledge of the theory of a given trade in a given time, than can possibly be obtained in any other institution or by any other method.

The Colliery Engineer Company, proprietors of the Schools, have a paid-up capital of \$750,000.

The Schools have recently erected new buildings in Scranton, costing

Their employees number 500-professors, instructors, draftsmen, ac-

Their employees hands countaints, printers, etc.

The copyright Instruction Papers, which are the clearest, simplest, briefest presentation of the various subjects in existence, were written and illustrated at a cost of \$150. The work occupying a large force of specialists six years.

ists six years.

All instruction is by mail. Each student receives careful, considerate individual attention from competent teachers. Each student regulates his

own hours of study.

When a course is paid in full it is transferable and non-forfeitable, and included instruction in all the subjects of the course until the final examination is passed. Training is given in the following

# Technical Subjects

Machine Design; Electricity; Steam Engineering; Mechanical and Architectural Drawing; Bridge, Railroad, Municipal, and Hydraulic Engineering; Architecture; Plumbing, Heating, and Ventilation; Sheet Metal Pattern Drafting; Chemistry; Mining and Prospecting; English Branches; Bookkeeping; Stenography.

Terms of Payment: \$2 Down and \$2 per Month. Send for circular of information, stating subject you wish to study.

The International Correspondence Schools, SCRANTON, PA., U.S.A. P. O. Box 276,

# "Light Expense"

## The Plea of Incompleteness.

Another correspondent writes: "And he (C. D. E., advertising agent at large) claims that being under light expense, he is able to do our advertising at a much lower price than a large agency. What have you to say to this?"

- WE HAVE several things to say; but first let us thank you for again locating the "light expense" specialist, who is not always easy to find.
- THE CLAIM you mention is one of the hardest worked in the advertising business, and a great favorite with specious beginners.
- FROM THE "light expense" point of view the peddler is the highest business ideal (for he is the acme of "light expense"), while the man with a store or business home is to be avoided. But the peddler himself will serve also to illustrate the insincerity of the "light expense" advertising solicitor's plea, for the moment that either of them succeeds in getting business of any magnitude they find they must care for it, and the "light expense" claim is quickly abandoned.
- WHAT THINK YOU would become of your own business under the sway of the "light expense" idea? Are the facilities which you have worked hard to obtain to be counted as reasons for giving trade to your competitors?
- FROM OUR point of view business expense is another name for efficiency. The expense under which a first-class railroad is operated does not concern the passengers so much as the service which the expense insures them. Is it not in fact its great expense which makes a railroad first-class—and largely patronized?
- SPEAKING NOW for ourselves, we mention the case of the many who have tried our service and are with us to-day. They are not regarded as spendthrifts in any other respects; upon what basis can their continued patronage of such a large agency be explained other than the receipt of the best return for their money?
- AS WE ENDEAVOR always to give every customer, whether small or large, the advantage of everything we have, it would seem that the more expense we are under, the more an advertiser may expect to receive.
- THE LENGTH of this reply and its appearance here may seem like giving undeserved attention to the "light expense" claim; but whatever causes an intending purchaser to stumble is worthy of our attention, and, besides, business men often fail to apply to newspaper advertising the same good judgment they use in more ordinary lines. Once let them see the tendency and the fallacy of this "light expense" idea, and we are quite willing to leave plea and pleader both in their hands. We have no fear that any considerable number will consent to reverse the wheels of progress and enterprise and back down the track to the scanty facilities of bygone days.
- IF YOU ARE a present or intending advertiser, please accept this as an invitation to call on us, to look over our plant, our people, and our system, and to determine what our great expense has enabled us to do for other people, and what it would permit us to do for you.

# The New Macmillan Novels.

#### A Thrilling Romance.

# The Pride of Jennico.

Cloth, \$1.50.

The Celebrity.

Cloth, \$1.50.

"An exceptionally clever mixture of wild romance with modern psychology . . . an artistic production and original."—The Tribune, New York.

"Told with an intensity of style which almost takes away the breath of the reader."—The Transcript, Boston.

By
AGNES and
EGERTON
CASTLE.

#### Why Three Editions Already?

"When a book reaches its third edition within a month from the time it is issued and before one gets around to reviewing it there is an obvious inference to be drawn. It is a book that is liked by the public, and the question becomes, Why is it kiked? In the present instance there is more than one reason.

. . . In a word, Mr. Churchill's book is as modern as the latest thing in boots, and we suspect that this quality more than any other accounts for the three editions."—The Times, New York.

By
WINSTON
CHURCHILL

#### A Study in Modern Sociology.

# The Gospel of Freedom.

Cloth, \$1.50.

The appeal of a life of personal independence to the ambitious, eager, restless, artistic, receptive woman of modern American development. There are scenes in Paris, Chicago, and Florence.

[Ready very shortly.

#### By ROBERT HERRICK.

## True Soldier Stories.

# Southern Soldier Stories.

Cloth, \$1.50.

"A crisp, bright, often thrilling book, which boys especially will delight in. The stories are full of Southern ginger and the roar of battle. . . . If once you begin you will want to read every line of this book."—Education.

By GEORGE CARY EGGLESTON.

### Tales of West Indian Life.

# Where the Trade Wind Blows.

Cloth, \$1.50.

Paris.

Two Volumes.

Price, \$2.00.

"One of the most original and distinctive of current books. . . . It is a collection of tales descriptive of life in the West Indies. . . . But even the shortest has central idea plot and development; is a compact little drama. We commend this book to any who want something fresh and good in fiction."

—The Evening Telegraph, Philadelphia.

By Mrs. SCHUYLER CROWNIN-SHIELD.

### A Sequel to M. Zola's "Lourdes" and "Rome."

""Paris' is undoubtedly Emile Zola's greatest achievement. It is an epic whose power of visualization is tremendous."—The Times, New York.

"Each character stands out clear and distinct, and there are many intensely dramatic scenes and marvelous bits of description."—The Herald, New York.

"Not since the publication of 'La Débâcle' has he written anything which approaches his 'Paris' in power and intensity, and it will inevitably take rank among his greatest productions... if indeed it does not take precedence over them."—Commercial Advertiser.

By EMILE ZOLA.

# New Works on Law, Philosophy, and History, ANCIENT AND MODERN.

#### The Science of Law and Law-Making.

R. FLOYD CLARKE, of the

New York Bar.

Being an Introduction to Law and Gen-ERAL VIEW OF ITS CONTENTS, AND A DIS-CUSSION OF THE QUESTION OF CODIFICA-TION FOR LAYMEN AS WELL AS LAWYERS.

Cloth, 8vo. Price, \$4 net.

THE ATTEMPT HAS BEEN:

First, To write an introduction to law which shall enlighten the intelligent lay reader as to the beauty and interest of its problems.

Second, To remove the discussion of the Code Question from the generalities in which it has always been obscured to the contem-plation of the practical working of the two systems in concrete

Third, To elaborate the idea of the fundamental and intrinsic difference between the two forms of writings, statute and case law; and Fourth, To draw the proper conclusions and apply these prin-

ciples to actual legislation, judicial or legislative, and to determine by a practical test the provinces of each and the best way to con-serve them.—From the Author's PREFACE.

#### Evolution. Aristocracy and

By W. H. MALLOCK,

**Author of** " Is Life Worth Living?" etc.

A STUDY OF THE RIGHTS, THE ORIGIN, AND THE Social Functions of the Wealthier Classes.

"The book opens with a criticism of Herbert Spencer's 'Sociology,' and demonstrates the importance as a factor in modern progress of the wealthy minority."—Book Reviews.

Medium 8vo. Cloth. \$3.

" The worthy outcome of wellspent years. The Times, London.

## FRANCE.

"Masterly in conception and painstaking execution."

— The Tribune, Chicago.

## By JOHN EDWARD COURTENAY BODLEY, M.A.

Two Volumes. Demy 8vo. Price, \$4 net.

"An invaluable social and political study, and at the same time one of the most readable productions of the day. . . . Many piquant anecdotes are preserved, and along the line Mr. Bodley gives us the benefit of his personal acquaintance with some of the chief makers of modern French history."—The Tribune.

"We would strongly advise the reading of these volumes and their careful study, for we are of the opinion that 'France' is the most therough and careful of works, possessing just those points which have been heretofore overlooked or carelessly treated."—The Times.

## The History of Greece.

By ADOLF HOLM.

Price Per Set of Four Volumes, \$10 net

Just Ready. Four Volumes.

Translated by

From the Commencement to the Close of FREDERICK CLARKE. THE INDEPENDENCE OF THE GREEK NATION.

Each, \$2.50 net.

## Pausanias' Description of

The work is divided as follows, but is sold only in sets:

Vol. I. Introduction. Translation. Critical Notes on the Greek Text.
Commentary on Book I. (Attica.)
Commentary on Books II., V. (Argolis, Laconia,
Messenia, Elis I.) Vol. Vol. III.

Vol. IV. Commentary on Books VI.-VIII. (Elis II., Achia, Arcadia.)

Vol. V. Commentary on Books IX., X. (Bœotia, Phocis.) Addenda.

Vol. VI. Indices. Maps.

Translated with a Commentary by J. G. FRAZER. LL.D.

The general purpose has been to present a fairly complete picture of ancient Greece, its monuments and its scenery, so far as that can be done from a study of the descriptions of classical authors, the existing remains of antiquity, and the appearance of the country at the present day.

Freely Illustrated. Cloth, 8vo. \$25 net.

For further information please address

## THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

# SCRIBNER'S NEWEST BOOKS.

# The Girl at Cobhurst. By FRANK R. STOCKTON.

A N entirely new love-story which contains some of Mr. Stockton's best humorous work. The scene is laid in one of the little country villages he knows so intimately, and the characters all bear the stamp of his inimitable genius. The development of the plot is strikingly ingenious, even for such a past-master in these intricacies as the author has for years shown himself to be.

"His unique stories always hit the mark."—Century.

"Mr. Stockton has touched the high-water mark of romantic fiction and has shown his power to grasp the magic of Defoe and Stevenson."

—The Speaker. "Mr. Frank R. Stockton's gift is one of the most characteristic which has yet appeared in our literature. The fact that it is humorous and light must not make us obtivious of its original quality."—The Outlook.

"I have been reading him now a good many years with an increasing pleasure which his constant public seems to share, and I am certain that our literature does not know a more original or originative spirit."

—William Dean Howells.

"His name alone carries a laugh with it."—The Dial.

"There is no more thoroughly entertaining writer before the public to-day than Mr. Stockton. He writes to amuse and he succeeds admirably."—Boston Globe.

#### THE EUGENE FIELD I KNEW.

By Francis Wilson. Illustrated. 12mo, \$1.25. Also a limited edition of 204 copies, with special features, each \$4.00 net.

A volume of reminiscences by the famous comedian of his long and intimate friendship with the Western poet. The author shows Mr. Field not only in those moments of relaxation when his funloving nature had freest play, but also in the more serious moods which were less familiar to the public; and the book has also much bibliographical interest.

#### ARS ET VITA.

By T. R. Sullivan, author of "Day and Night Stories," etc. Illustrated by Albert E. Sterner. 12mo, \$1.25.

Mr. Sullivan's collections do not come very often, and they are always welcome; for he is one of the most versatile of our fiction writers, "and." as the *Nation* says, "his tales are always perfectly written."

#### PASTIME STORIES.

By THOMAS NELSON PAGE. With 22 illustrations by A. B. Frost. 12mo, \$1.25.

This volume contains more than a score of Mr. Page's fascinating Virginia stories, among them being such gems as "Billington's Valentine," "How Jinny Eased Her Mind," and "The True History of the Surrender of the Marquis Cornwallis."

#### FOR LOVE OF COUNTRY.

A Story of Land and Sea in the Days of the Revolution. (Third Edition.) By CYRUS TOWNSEND BRADY, Archdeacon of Pennsylvania. 12mo, \$1.25.

"As a romance the story will satisfy the most fastidious in the variety of incident and the charm of its love-story, and as a direct transcript from the history of the day it is unsurpassed for accuracy and graphic interest."—Philadelphia Public Ledger.

#### MUSIC: How It Came to Be What It Is.

By HANNAH SMITH. With many illustrations. 12mo, \$1.25 net.

Contents: Musical Acoustics—Ancient Music—Mediæval Music—The Belgian School—Music in Italy—The Modern Scale— The Opera—The Oratorio—Instrumental Music—The Pianoforte—Pianoforte Playing—The Orchestra.

Miss Smith has prepared for the untechnical music-lover a clear account of the growth of modern music and musical instruments. Her history of this development is made as concise as is compatible with thoroughness, the essentials, and these only, being given.

#### THE UNQUIET SEX.

By Helen Watterson Moody. 12mo, \$1.25.

Mrs. Moody's clever essays have been pronounced by Dr. Edward Everett Hale and other eminent critics to be the sanest and wittiest contribution yet made to the "woman question."

#### TALES OF UNREST.

By Joseph Conrad. 12mo, \$1.25.

Five stories, with a range of scenes from London to Malaysia, by an author whom the best critical journals of England declare to be unquestionably "a writer of genius." The tales are: "Karain: a Memory," "The Idiots," "An Outpost of Progress," "The Return," and "The Lagoon."

#### EMERSON AND OTHER ESSAYS.

By John JAY CHAPMAN. 12mo, \$1.25.

CONTENTS: Emerson — Walt Whitman — Romeo — Michael Angelo's Sonnets—The Fourth Canto of the Inferno—Robert Browning — Robert Louis Stevenson.

"It shows an independence of judgment, a fearlessness of thought, and an individuality of style that indicate a wholesome tendency in our national thought and writing. The essays are refreshing and uncompromisingly American."—Boston Bracon.

## THE DULL MISS ARCHINARD.

By Anne Douglas Sedgwick. 12mo, \$1.25.

An affecting story of artist life in London and Paris, introducing much of the peculiar atmosphere which surrounds the literary and artistic workers in the latter city.

#### STORIES BY FOREIGN AUTHORS.

To be in 10 volumes, each 16mo, 75 cents.

Two volumes ready: French—I., containing stories by Daudet, France, About, Bourget, De Maupassant, Sardou; and French—II., by Coppée, Zola, Souvestre, Droz, and Mérimée.

#### **AULD LANG SYNE.**

By the Rt. Hon. Prof. F. MAX MÜLLER, author of "The Science of Language," etc. Crown Svo, \$2.00. (Second Edition.)

CONTENTS: Musical Recollections—Literary Recollections—Recollections of Royalties—Beggars.

"A unique volume of reminiscences by a character of international fame, some lively, some sentimental—and all delightfully entertaining."—New York Herald.

Now Being Published:

## A New Edition of The Works of George Meredith.

Containing the author's final revision of his work. To be in sixteen volumes, printed from new plates and very handsomely bound, with photogravure frontispieces by Bernard Partridge, Harrison Miller, etc. The first two volumes, "The Ordeal of Richard Feverel" and "Rhoda Fleming," now ready; "Sandra Belloni" and "Vittoria" ready shortly; other volumes to follow two at a time until the edition is completed in the fall. Each, crown 8vo, \$1.50.

Charles Scribner's Sons, 153-157 Fifth Avenue, New York.

A GREAT BIBLICAL ENCYCLOPÆDIA-VOLUME I. NOW READY.

# A DICTIONARY OF THE BIBLE.

Dealing with its Language, Literature, and Contents, including the Biblical Theology.

Edited by JAMES HASTINGS, M.A., D.D., with the assistance of John A. Selbie, M.A., and A. B. Davidson, D.D., LL.D., of Edinburgh; S. R. Driver, D.D., Litt.D., of Oxford, and H. B. Swete, D.D., Litt.D., of Cambridge.

A special inducement is offered to early subscribers which will hold good only until the publication of the second volume. By this arrangement the volumes will be delivered as issued, on easy installment payments. For terms, descriptive circular, and specimen pages address the publishers.

The work is published by Charles Scribner's Sons conjointly with Messrs. T. & T. Clark, of Edinburgh, and will be complete in four large octavo volumes of about 900 pages each, with illustrations and maps. It will be sold only by subscription, Volume I. being now ready, and subscriptions being taken only for the entire set.

Dr. Robertson, of Durham,
on "Romans," etc.

on "Romans," etc.

Prof. Ryle, of Cambridge,
on "Israel," etc.

Prof. Salmon, of Aberdeen,
on "St. Mark," etc.

This great work aims to furnish an encyclopædic dictionary of the Old and New Testaments, together with the Old Testament Apocrypha, according to the Authorized and Revised English Versions, with continual reference to the original tongues, and to bring within the reach of all the wonderfully illuminating results of latter-day scholarship.

The necessary facts have been presented concisely, and speculative generalities have been avoided, along with the personal opinions which have not yet won general acceptance; and the careful editing has given a strong tone of dignified conservatism to the new matter which figures so prominently throughout the work.

It contains articles (with the names of the authors appended, in all except minor instances) on all persons and places, on the antiquities, and archæological subjects of the Bible, its ethnology, geology, and natural history, on biblical theology and ethics, and upon the obsolete or archaic words occurring in the English translations. Its scope and standard may be gathered from the fact that Volume I. alone contains more than 3,500 articles, ranging from mere dictionary entries and cross-references to long discussions of ten or fifteen

SOME OF THE NOTABLE CONTRIBUTORS.

Prof. A. C. Headlam on "Acts." Prof. A. H. Sayce on "Amorites."

on "Amorites."

Prof. W. Flinders Petrie
on "Architecture."

Prof. W. M. Ramsay on "Asia."

Dr. H. Clay Trumbuli on Palestine Geography

Dr. Post, of Berlin, on Natural History.

Prof. Candlish, of Glasgow, on "flediator," etc. Prof. Purves, of Princeton, on "Crown," etc.

pages, some of which, like the articles on Assyria and Babylonia, by Professor Hommel, are monographs of notable importance.

In the building of this monumental structure of biblical learning, practically all the great theological specialists of the day have assisted, this same first volume showing a list of a hundred and twenty names, the standing of which may be inferred from those given herewith.

By a careful system of black-lettering and cross-referencing, and by the intelligent selection of headings, the accessibility of the work as a book of reference has been raised to the highest point, and the maps and illustrations (the latter being chiefly from drawings made in Syria by Rev. G. M. Mackie, M.A.) supply the necessary pictorial assistance throughout.

The work, therefore, excels all others of its kind in Fullness, Authoritativeness, and Accessibility, and not only the biblical student, but the intelligent reader of every description, will find it invaluable.

CHARLES SCRIBNER'S SONS, 153-157 Fifth Ave., New York.

# Little, Brown and Company's Spring Books

New Novels to be Published Early in May.

## THE DUENNA OF A GENIUS.

By Mrs. Frances Blundell, author of "In a North Country Village," etc. 12mo, cloth, extra, \$1.50.

A musical story. Its scene its laid chiefly in England, and the heroine is a young Hungarian violinist, who with her sister has come to London with the hope of a career. The meeting of the violinist with a great planist in a most romantic manner, and their subsequent marriage, form a charming as well as wholly unique love story.

## HASSAN: A FELLAH.

A Romance of Palestine. By Henry Gillman. Crown 8vo, cloth, 600 pages, \$2.00.

The author of this powerful romance lived in Palestine for over five years, and during his residence there had unusual and peculiar advantages for seeing and knowing the people and the country, enabling him to enrich his story with local color, characteristics, and information not found in any other work of the kind on the Holy Land. He has selected the present time for the story, but has drawn freely from all the rich treasures of the past for ornament. The pen-portraits of the people are studies made upon the spot, and the descriptions of Jerusalem and the surrounding country are word-pictures of the land as it is to-day, and therefore of special value. The portions connected with the "Thar," or blood-feud between the Syrian villages, and the insurrection in Crete, are not only of uncommon interest and power, but are also intensely dramatic. Sensational and extraordinary as some of the incidents are, the author has facts for all of them. The book is dedicated to Mr. Gladstone, with his special permission—a very unusual exception on his part.

## THE KING'S HENCHMAN.

A Chronicle of the Sixteenth Century. Brought to light and edited by William Henry Johnson. 12mo, cloth, extra, \$1.50.

This is a story of pure love and stirring action. It purports to be told by an inseparable attendant of Henry of Navarre. Incidentally that here of a hundred fights and as many gallant adventures is made to live again for us. He moves across the stage at the head of a brave procession of fair women; makes love and war in quick alternation; now wins a great battle, now rides off the field with an armful of captured banners, to lay them at the feet of his love.

# Timely Works on Naval Subjects.

# JOHN LANE'S ANNOUNCEMENTS

#### FOURTH EDITION NOW READY.

THE ROMANCE OF ZION CHAPEL. By Richard Le Gallienne. With a Cover Design by Will Bradley. Crown 8vo, \$1.50.

This new book by Mr. Le Gallienne is uniform with "The Quest of the Golden Girl," which is now in its tenth edition.

The New York Times says: "Mr. Le Gallienne sketches his characters with a firm hand, and knows how to breathe into them the breath of life. . . . The author has not only a brilliant touch and a keen insight, but a wide range of sympathy and an exquisite tenderness."

Time and the Hour says: "Surely in these brief intimate chapters Mr. Le Gallienne has made something like a very small masterpiece. Such writing has a flavor and grace of its own that should make it memorable with the few, while its plain sincerity, its rare kindliness and sympathy must endear it to many."

The Boston Post says: "It is pathetic, witty, and tenderly humorous."

#### FOURTH EDITION IN PREPARATION.

#### POEMS BY STEPHEN PHILLIPS. Crown 8vo, Boards, \$1.50.

To Mr. Stephen Phillips has been awarded by the proprietors of *The Academy* (London) a premium of one hundred guineas, in accordance with their previously proclaimed intention of making that, and a second gift of fifty guineas, to the writers of the two books which should be adjudged worthy to be "crowned" as the most important contributions to the literature of 1897.

The London Times says: "Mr. Phillips is a poet, one of the half dozen men of the younger generation whose writings contain the indefinable quality which makes for permanence."

The London Academy says: "How could language express more? It has an almost physical effect upon the reader, in the opening of the eyes and the dilation of the heart."

#### THE KING WITH TWO FACES. By M. E. Coleridge. Crown 8vo, \$1.50.

The London Times says: "Is one of the very rare novels which yield so much pleasure that it almost stifles criticism. The author's quality is that of perfectly original brilliancy in romantic narration."

THE HEART OF MIRANDA, and Other Stories. By H. B. MARRIOTT WATSON.

THE MAKING OF A PRIG. A Novel. By EVELYN SHARP. Crown 8vo, \$1.50.

A MAN FROM THE NORTH. A Novel. By E. A. BENNETT. Crown 8vo, \$1.25.

ADMIRALS ALL, and Other Poems. By HENRY NEWBOLDT. Wrappers, 35 cents.

A BISHOP'S DILEMMA. By ELIA D'ARCY. Crown 8vo, \$1.00.

CARPET COURTSHIP. By THOMAS COBB. Crown 8vo, \$1.00

THE SPANISH WINE. By Frank Matthew. Crown 8vo, \$1.00.

THE CHILD WHO WILL NEVER GROW OLD. By K, Douglas King. Crown 8vo, \$1.25.

REGINA. By HERMAN SUDERMANN. Translated by Beatrice Marshall. Crown 8vo, \$1.50.

**IOURNALISM FOR WOMEN.** By E. A. BENNETT. 75 cents.

COMEDIES AND ERRORS. By HENRY HARLAND. Crown 8vo, \$1.50.

SUMMER MOTHS. A Play. By WILLIAM HEINEMANN. Crown 8vo, \$1.25.

SOME NOTES OF A STRUGGLING GENIUS. By G. S. Street. No. 4 Bodley Booklets. Wrappers, 35 cents.

THE HEADSWOMAN. By KENNETH GRAHAME. No. 5 Bodley Booklets. Wrappers, 35 cents.

PAGAN PAPERS. A Volume of Essays. By Kenneth Grahame. Uniform with "The Golden Age." \$1.25.

To be had of all booksellers, or will be sent, postpaid, on receipt of price by the publisher.

## 140 FIFTH AVENUE, NEW YORK CITY.

## NEW NOVELS.

#### SIMON DALE.

By Anthony Hope, author of "Phroso," "The Heart of Princess Osra," "The Prisoner of Zenda," etc.

Princess Osra," "The Prisoner of Zenda," etc.

A new novel by the greatest of all living romantic writers.
The story is laid in the time of Charles II. and anschiefly to do with the English and French courts. These furnish materials for a tale of love, intrigue, and adventure that could not be surpassed, and the author has availed himself of his opportunities in a remarkable manner. The work lies in a slightly different field from that which he has previously cultivated, although the same brilliant and original touch which is so strongly shown throughout "Phroso" and "The Prisoner of Zenda" is noticeable in this new story.

Nell Gwyn, Charles II. of England, and Louis XIV. of France figure prominently in this romance.

"There will be no question as to the excellence of Mr. Hope's latest book or to the author's right to a place in the foremost ranks of romancists."—New York World.

"Brilliant and life-like."—Boston Beacon.

12mo, cloth, with eight full-page illustrations by W. St.

12mo, cloth, with eight full-page illustrations by W. St. John Harper, \$1.50.

#### THE WHIRLPOOL.

By GEORGE GISSING, author of "In the Year of Jubilee," "Eve's Ransom," etc.

Mr. Gissing's late work has attracted a great deal of attenin in England by its strength and truth. Harold Frederic, in a recent issue of the New York Times, dwelt upon this fact at length, and predicted still greater success for him in the future. The Whirlpool" is a story of modern English

the tuture. "In e Whitipool" is a story of modern English life, and is of absorbing interest.
"It is a great story—a story which will appeal to human sympathies and reach human hearts."—Chicago Record.
"One of the most remarkable books of the year."—San Francisco Chronicle.

12mo, cloth, with a cover designed by WILL BRADLEY, \$1.25.

#### THE SON OF THE CZAR

By JAMES GRAHAM.

An unusually interesting historical novel, dealing with Peter the Great, Catherine his wife, and the weak and unfertunate Czarowitz Alexis, the heir to the throne, who met a miserable A most thrilling and instructive romance.

The great revival of interest in the study of the life and character of Peter the Great makes the publication of this realistic picture of his time most opportune.

"No more interesting historical romance than 'The Son of the Caar' has appeared for a long while. .. Per-sonally I like 'The Son of the Caar' as well as Weyman's 'Shrewsbury' and Anthony Hope's 'Simon Dale.''—The Herald.

12mo, cloth, \$1.25.

#### THE SCHOOL FOR SAINTS.

By JOHN OLIVER HOBBES, author of "The Herb Moon," etc.

The latest work by this distinguished author, dealing with English political and social life in the time of Disraeli. With a cover especially designed by WILL BRADLEY.

A brilliant, witty, powerful, and absorbing work. George W. Smalley, the famous correspondent of the London Times, says of Mrs. Craigie:

"Mrs. Craigie has taken a place among the novelists of the day. It is a high place and a place apart. Her method is her own, and she stands not exactly on the threshold of a good career, but already within the temple of fame."

"The School for Saints' is not merely one of the wit-tiest books of the year; it is one of the most human, sym-pathetic, and passionately actual."—New York Tribune.

12mo, cloth, \$1.50.

For sale by all booksellers or sent postpaid.

### Co.'s New Books. Houghton. Mifflin

## Cheerful Yesterdays.

A most delightful autobiographical book, by THOMAS WENTWORTH HIGGINSON, giving the most interesting experiences of Colonel Higginson's remarkably interesting life, including his years and associates at Harvard, how he came to be a reformer, the time of the Fugitive Slave law, the Kansas struggle, and the civil war. 12mo, \$2.00.

### Tales of the Home Folks in Peace and War.

Stories of interesting adventures and character studies of the South, most of them during the war or just afterward, by JOEL CHANDLER HARRIS, author of the "Uncle Remus" and "Thimblefinger" stories. With capital illustrations. Crown 8vo, \$1.50.

## Penelope's Progress.

A delightful book of travel, sight-seeing, and fun in Scotland, by KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," "The Story of Patsy," "A Cathedral Courtship," "Marm Lisa," etc. 16mo, in unique Scottish binding, \$1.25.

## Caleb West, Master Diver.

By F. HOPKINSON SMITH, author of "Tom Grogan," etc. Finely illustrated. 12mo, \$1.50.

This is a romance of the building of a light-house, and affords the best possible opportunity for Mr. Smith's characteristic gifts as a story-teller. It is not only the best novel he has yet written, but one of the strongest. manliest, most readable stories published for many a day, supplemented by several uncommonly good illustrations.

## Unforeseen Tendencies of Democracy.

By EDWIN L. GODKIN, editor of the New York Nation. Crown 8vo, \$2.00.

A book of remarkable value, that should be carefully considered by all good citizens. In it the present aspects of American political life are stated with explicit frankness, and current facts, opinions, and tendencies are contrasted with the theories held concerning democratic government by the Fathers of the republic.

Sold by all booksellers. Sent, postpaid, by

## D. Appleton & Co.'s New Books.

Mr. Crockett's New Romance,

#### THE STANDARD BEARER.

An Historical Novel. By S. R. Crockett, author of "The Lilac Sunbonnet," "Cleg-Kelly," "Lads' Love," "Bog-Myrtle and Peat," etc. 12mo, cloth, \$1.50.

Mr. Crockett stands on ground that he has made his own in this romance of the Scottish Covenanters. The story opens in 1685, "the Terrible Year," with a vivid picture of the pursuit of fugive Covenanters by the dragoons. The hero, who becomes a Covenanting minister, sees many strange and stirring adventures. The charming love-story which runs through the book is varied by much excellent fighting and many picturesque incidents. "The Standard Bearer" is likely to be ranked by readers with Mr. Crockett's most successful work.

#### Studies of Good and Evil.

By Prof. Josiah Royce, of Harvard University. 12mo, cloth,

\$1.50. The unity of this interesting and important book is derived from the author's application of his theories of philosophic idealism to relatively practical problems. He shows how his philosophical theory may be applied to the study of various issues relating to good and evil. The "problem of evil" as illustrated in Job, the case of John Bunyan, "Tennyson and Pessimism," together with various suggestive and illuminating studies of self-consciousness and some discussions of special issues, among which is the "Squater Riot of 1850 in Sacramento," are among the themes which are treated in a way that illustrates the intimate relation of every fragment with the whole in the universe as idealism conceives it. The original thought and acute observation of the author find most original thought and acute observation of the author find most striking phases of expression.

#### Outlines of the Earth's History.

By Prof. N. S. Shaler, of Harvard University. Illustrated. 12mo, cloth.

Professor Shaler's comprehensive knowledge and graphic style have imparted to this popular study of physiography a peculiar distinction. In its wide range of information and the lucidity with which the various themes are treated, the book possesses a value which will be appreciated by many readers and by students.

#### Italian Literature.

By Richard Garnett, C.B., LL.D. A new volume in the Literatures of the World Series, edited by Edmund Gosse. 1200, cloth, \$1.50.

"Excellent as the histories of literature in this series have been,

none is better than the history of Italian literature, by Dr. Richard Garnett. His new book fills us with wonder at the extent of his information."—London Times.

#### A French Volunteer of the War of Independence

By the Chevalier **De Pontgibaud.** Translated and edited by Robert B. Douglas. With introduction and frontispiece.

12mo, cloth, \$1.50.
This entertaining book is a distinct addition to the personal side I his entertaining book is a distinct addition to the personal side of Revolutionary literature, and it is peculiarly valuable because of its presentation of American life and of the fathers of the republic as seen by a French visitor. The hero's stormy youth and his adventurous and varied career give his reminiscences an intimate interest rarely to be found in historical fiction, while their historical value is obvious. His recollections include his association with Washington, Hamilton, Burr, and other conspicuous founds. figures.

#### Political Crime.

By Louis Proal. With an introduction by Prof. F. H. Giddings, of Columbia University. A new volume in the Criminology Series, edited by W. Douglas Morrison. 12mo, cloth, \$1.50.

## D. APPLETON AND COMPANY,

78 Fifth Avenue, New York.

READY MAY 15.

# Over the Great Ice.

By Lieut. ROBERT E. PEARY, Civil Engineer, U. S. Navy.

'HE most important book of 1838. No work of exploration of similar value and importance, and of such general interest, has been issued in many years. Peary's narrative abounds in infinite variety, as it deals with land and sea. terrific storms on the Ice Cap, and the pursuit of big game on water and on land, together with most carefully collected information regarding the strange people with whom he lived, and who aided him in his work. The book includes most interesting descriptions of

#### THE ARCTIC OASIS AND THE ARCTIC HIGHLANDERS.

the latter being the most northerly of all human

beings in their habitat.

The discovery and successful transportation to the United States of

#### THE GREATEST KNOWN METEORITE.

weighing ninety tons, is another feature of great interest.

The publication of "Northward" at this juncture is especially interesting, because of Peary's coming determined attempt to reach the Pole.

mined attempt to reach the Pole.

That he is likely to succeed in this hitherto impossible task seems probable, owing to his years of training and preparation, and to the fact that his matured plans are pronounced by experts more practicable than those of any other explorer.

As a specimen of bookmaking, "Northward" is worthy of its contents. The publishers have devoted their best efforts and many thousands of dollars to make it a fitting

efforts and many thousands of dollars to make it a fitting

efforts and many thousands of dollars to make it a fitting memorial of Peary's heroic labors and brilliant discoveries. It is in two volumes of about six hundred pages each. The set will contain over eight hundred half-tone engravings, made from Peary's wonderful photographs, together with valuable maps, diagrams, etc.

No other work of exploration sever published (without exception) can vie with this in the number, interest, and excellence of its illustrations.

Printed from (new) large type (pica) in the best manner, on coated paper especially manufactured for the work, gilt tops, boxed.

Send for Illustrated Descriptive Circular.

2 vols., 8vo, cloth. Price, \$6.50 net; half leather, \$12.50 net; full leather, gilt edges, \$18.

Address

THE FORUM PUBLISHING COMPANY. III Fifth Avenue, New York.

#### NOTES FOR READERS.

A new publishing house was started last fall when the Doubleday & McClure Company began the publishing of books selected and edited upon the same lines which brought to McClure's Magazine its monthly sale of 365,000 copies. This great circulation has been the natural result of presenting the very best literature of our time, and the new department is doing the same thing in book-publishing.

#### BOOKS ON APPROVAL.

A new plan has been devised to put our books in the hands of readers who do not go to book stores or have no convenient access to them. Any of the publications of the Doubleday & McClure Co. will be sent to any reader of the Review of Reviews at our own expense and without any advance payment. Tell us on a postal which of our books interest you, and they will be forwarded, postpaid, to be returned or paid for after examination. This plan has led to an extensive business among the subscribers of McClure's Magazine, and the readers of the Review of Reviews are invited to send for books under the same conditions.

#### THE NEW BOOK ABOUT BIRDS.

Perhaps you have already heard of "Bird Neighbors," with 52 plates in natural colors (not lithographs), written by Neltje Blanchan, annotated and with an introduction by John Burroughs. It was published last November, and already 10,000 copies have been printed. There are many "bird books," but only one reliable volume for people who want to identify their bird neighbors by means of color photography—successful at last. Good book judges said the book "would stand \$4.00." We preferred to make it \$2.00 and to sell twice as many.

From John Burroughs' introduction:

"When I began the study of birds I had access to a copy of Audubon, which greatly stimulated my interest in the pursuit, but I did not have the opera-glass, and I could not take Audubon with me on my walks, as the reader may this volume, and he will find these colored plates as helpful as those of Audubon or Wilson."

[Size, 10½ x 7½, 52 colored plates, 246 pages text, strong cloth binding, \$2.00.]

#### MORE LITTLE BOOKS.

The idea of publishing books convenient for the hand, in flexible cloth and leather bindings, was a real success from the start. Up to this writing over 190,000 volumes of these handy books have been put forth, and we are but just beginning. The newest editions are three vol-umes of the "Little Masterpieces," edited by Prof. Bliss Perry, each devoted to the most representative writings of Benjamin Franklin, Abraham Lincoln, and Daniel Webster. The books of this series are of the helpful and inspiring kind, and are being adopted in colleges and schools all over the country for class read-We have literally scores of letters commending them, and Yale, Princeton, Cornell, the Chicago University are among the colleges who have adopted them. We stand by the volumes as the best specimens of book-making at the price (30 cents, cloth; 60 cents, full leather). Each has a photogravure frontispiece, and the materials from cover to cover are of the best make. The volume on Franklin is particularly designed for young men starting on their careers—it is a guide to success and right living quite unequaled.

#### SHAKESPEARE IN SMALL VOLUMES.

The success of "Little Masterpieces" led to the printing of what is really a Shakespearean library, a set of 18 handy volumes which includes not only the plays and sonnets, but 2,000 pages of additional matter, giving the text of old histories, ballads, stories, etc., which the best scholars believe Shakespeare used, edited and

arranged by Prof. Henry Morley, the English scholar. Thousands of these sets have been sold to readers of McClure's Magazine on these terms: The books are sent on payment of \$1.00 for eight months, and includes a year's subscription to McClure's Magazine, free. Double the price for full flexible leather. Ten per cent. may be deducted if remittance is made at one time. Like all our books, the approval plan applies to this set.

#### HOW TO STUDY SHAKESPEARE.

We began by preparing a pamphlet entitled "How to Organize a Shakespeare Club," which we send without charge to those who ask for it. This booklet is practical, and has led to the gathering together of people in many communities for the study of Shakespeare. They needed, further, a book to guide their studies and to answer questions, to suggest subjects for papers and debates, to explain unusual words and phrases—in fact, they needed a book the like of which did not exist. We have undertaken to make it in a volume entitled "How to Study Shakespeare," prepared by Mr. William H. Fleming, a scholar thoroughly familiar with the needs of clubs and individuals. He secured the cooperation of Dr. W. J. Rolfe, probably the best known of American Shakespeare scholars, to help by his advice and suggestions and to write the introduction. [4½ x 7, 427 pages, \$1.00 net.]

#### THE LIBRARY OF HOUSEHOLD CLASSICS.

We are fortunate in having the assistance of Donald G. Mitchell (Ik Marvel) in the selecting and introducing of this set of "necessary" books. The special aim of our book department is to supply the needs of the home library. Our "Shakespearean Library" succeeded from the beginning, and this new collection of 18 volumes, convenient in size and admirable as to manufacture, appeals to the same audience of booklovers. The monthly payments are small and you run or risk in having the set sent for examination. A year's subscription to McClure's goes free with each set.

#### HENRY GEORGE'S BOOKS.

A recent achievement of the book company was the securing of Henry George's new book, "The Science of Political Economy," upon which he spent the last six years of his life, his crowning work (octavo, price \$2.50). We are about to publish an adequate and fitting memorial edition of these works in ten volumes, including a biography of the author by his son, Henry George, Jr., limited to 1,000 sets, the particulars of which we will send to all interested.

#### "HOW TO BUILD A HOME."

This is the only practical book published on this subject. It is not a book of designs, but tells how to get the best for the investment -stands at the elbow to help the untechnical builder, tells how to build chimneys which "can't smoke," specifications, contracts, etc. The author is F. C. Moore, who has spent years of study, and whose experience will save time and money to the amateur home-builder. [Strong binding, 5 x 7/2, 260 pages, \$1.00.]

#### STEPHEN CRANE'S NEW BOOK.

The author of "The Red Badge of Courage" has written in "The Open Boat and Other Stories" a book which bears out the promise of his first great success. They are chiefly tales of war and adventure, realistic and stirring. [Size, 4½ x 7,300 pages, \$1.00.]

#### A BOOK-LOVERS LIST.

We are compiling a list of book-lovers to whom particulars concerning new books and new plans will be acceptable. Address Doubleday & McClure Co., 141-155 East Twenty-fifth St., New York.

## DOUBLEDAY & McCLURE CO. (SEE NEXT PAGE.)

# DOUBLEDAY & McCLURE CO., New York.

# Books to Send For.

Any of these volumes sent on "the approval plan"—which means that we deliver the books prepaid into the hands of readers of the Review of Reviews without any advance payment. The books to be returned or paid for after examination.

# For \$1.00 a Month

# The Library of Household Classics.

DONALD G. MITCHELL (IK MARVEL) has written the introduction for and helped to select the new Library, which is just ready, in 18 beautiful little volumes, superbly illustrated.

Our book department has for its special aim the making and selling of books for the Home Library. It was surprising to find how many persons still needed a good Shakespeare. Following the Shakespeare, we have now gathered together eighteen volumes of the books necessary to a knowledge of the literature of the century in a handsome set.

TERMS.—Like all our books, they will be delivered free and upon approval. The price for the set in cloth binding is \$1.00 a month for twelve months, or \$10.80 if the amount is sent at one time AFTER YOU HAVE examined the books. Full flexible leather \$2.00 a month for nine months, or \$16.20 if sent at one time. This includes in addition a year's subscription to McCLURE'S MAGAZINE FREE.

# The Shakespearean Library.

Edited by HENRY MORLEY, including all the plays and sonnets and 2,000 pages of extra matter. In 18 pocket volumes. \$1.00 a month for cloth, \$2.00 a month for leather for eight months, or \$7.20 cash for cloth, \$14.40 cash for leather, being 10 per cent. off regular price. Including a year's subscription free to McClure's Magazine. Books to be returned if unsatisfactory.

We wish to hear from Shakespeare reading or study clubs, as we have some special ideas to put before such organizations.

## HOW TO STUDY SHAKESPEARE.

By WILLIAM H. FLEMING, with an introduction by W. J. Rolfe, Litt.D. The only book giving practical suggestions for conducting Shakespeare clubs, and a careful course of intelligent study for the individual student. 12mo, cloth, 400 pages, \$1.00 nct.

## LITTLE MASTERPIECES. Edited by BLISS PERRY.

These are the volumes ready:

I. POE.

IV. WEBSTER.

II. IRVING.

V. FRANKLIN.

III. HAWTHORNE.

VI. LINCOLN.

These books have been adopted by the leading authorities as presenting the best of the writings of these great Anaricans. The effort has been to make books of the highest character at the lowest prices. Cloth, 30c., leather, 60c. a volume, with photogravure frontispiece.

"The publishers are doing a real service to literature in sending out these dainty little books, for they will appeal to thousands who have neither time nor inclination to take up larger works."—San Francisco Chronicle.

"The form and the general air of the typography are here much to be praised for their attractiveness, and Professor Perry's graceful introduction is full of insight."—The Nation.

# DOUBLEDAY & McCLURE CO., Publishers, 141-155 East 25th Street, New York City.

"A most valuable book for women."

Universities and Colleges.

Universities and Colleges.

#### University, Morgantown,

THE SUMMER QUARTER WILL BEGIN JULY I AND CONTINUE TWELVE WEEKS.

It will be divided into two terms of six weeks each. Teachers will find the summer quarter especially attractive. Numerous courses in pedagogy and inspiring lectures on educational subjects.

Summer Quarter work will count toward a degree the same as work in any other quarter. All departments will be in full operation. In addition to the regular faculty, eminent specialists from other institutions will lecture—among them

Dr. Lester F. Ward, author of "Dynamic Sociology;"

Miss Jane Addams, of Hull House, Chicago;

Prof. Charles Zueblin, of the University of Chicago;
and others.

President E. Benj. Andrews, of Brown University;

Prof. B. A. Hinsdale, of the University of Michigan;
others.

Expenses for the Entire Quarter, including tuition and board, may be made less than \$65.00, and for a term of six weeks, half this amount.

instruction is Given by Correspondence to those who cannot attend in person. The University grants no degrees for work done entirely by correspondence, but work so done may count toward a degree. Students may take complete college courses and receive degrees by taking correspondence work during the year and attending the University during successive summer quarters. ### How the War Talk Has Affected Tourist Travel.

The very first mention of the international trouble which has absorbed us for the last two months showed that the stock market is by no means the only "industry" affected by warlike news. Among the earliest sufferers were the transatlantic steamship companies, and slight as the actual danger may have been, the middle of April saw a decided "backwardness about coming forward" on the part of these tourists. In short, there is an impression abroad that for the time being the Atlantic coast and ocean are not especially salubrious. People must go somewhere, however, when the heated term begins, so the proprietors of inland resorts and the railroads reaching them will benefit largely by their competitors' bad luck unless something altogether unforeseen soon blows away the lowering war clouds.

Far up among the hills which skirt the great primeval forests of Maine lies Moosehead Lake, whose scenery-lake and river and towering Mt. Kineo and Mt. Katahdin-proximity to the real wildness of the woods, and excellent facilities for the angler attract more and more visitors each year. To the southwest and on the border, between Maine and New Hampshire, the chain of Rangeley Lakes affords much the same advantages, rather closer to civilization.

Still coming southwest we reach the famous White Mountains, possessors of that indiscriminately applied title "The Switzerland of America."

North Conway and Intervale, at the southeast corner, are

# The First Step

BOWRING & ARCHIBALD,
Ploor, Produce Exch. Annex Building, N.Y.

widely known indeed. From tall Kearsarge here one gets a fine view of the whole range, culminating in the sixty-two-hundred-foot summit of Mt. Washington. Bartlett, Jackson, Gorham, Glen, Jefferson Hill, Crawford, Fabyans, Twin Mountain, and the Profile House in the Franconias are among the noted stopping-places.

and

Sixty miles north of the White Mountains and close to End Dam on the Rangeleys lies Dixville Notch, where is to be found far bolder scenery than any part of the White Mountains affords. On the south side lies Lake Winnepesaukee, stretching out 25 miles and offering many summer water pleasures. Alton Bay, Wolfboro, Weirs, and Center Harbor are the principal stopping-places.

To the westward and in the adjoining State of Vermont lie the Green Mountains. Waterbury and Stowe are the headquarters for those wishing to ascend Mt. Mansfield or to visit the Smugglers' Notch, while Ridley, 6 miles from Waterbury, is the point of attack for the Camel's Hump. At the northern border of the State lies Lake Memphremagog, with a good reputation for coolness as well as for fighting muscalonge and trout in their perfection. About midway along the lake Owl's Head Mountain rises precipitately for over 2,700 feet. Some of the best fishing is just off here, and the scenery is marvelously picturesque. From Newport, at the southern end, to Magog (in Canadian territory), at the northern, a steamer visits all the settlements along the lake shores.

The Berkshire Hills, in Massachusetts, are really a continuation of the Green Mountains. Great Barrington, Stockbridge, Lee, Pittsfield, North Adams, near the Great Hoosac Tunnel, Williamstown, and Lenox, upon whom Fashion long since set the stamp of her approval, are names familiar to every ear.

Had we gone west instead of south, however, from Memphremagog we should have found ourselves in a section even more renowned—a section containing Lake Champlain and Lake George, the Adirondacks and the Catskills, Saratoga Springs, Trenton Falls, Watkins Glen,

"Up in the cool Northland."

Among the balsamic mountains surrounding beautiful

CHARLES H. HAYNES, Proprietor.

Sharon Springs, Cooperstown, Richfield Springs, Cobleskill, Rum Hill, Chittenango Springs, Skaneateles, Clifton Springs, Canandaigua, Keuka Lake, Grove Springs, Chautauqua Lake, and a host of others. New York State is no niggard in the matter of summering-places. The Adirondacks alone, with their 500 mountains, more than 1.000 lakes connected in a series of perfectly labyrinthine systems by rivers and streams, the whole tract covering some 15,000 square miles, undoubtedly comprise the most elaborate and satisfying summer pleasure grounds, all things considered, in these United States.

In the Connecticut Valley are Northampton, Hadley, Hatfield, Mount Holyoke, Mt. Tom, Fellows Falls, and Newbury; close to New York City lie Lake Mohonk, N. Y., Lake Hopatcong, Budd's Lake, Schooley's Mountain, etc., in New Jersey; the Shawangunk region of New York includes Ellenville, Liberty, Neversink, and Guymad Springs; the Delaware Water Gap, Mauch Chunk, the Wyoming Valley of Pennsylvania, and the innumerable springs of Virginia and West Virginia are perennially attractive; and the lake country of Wisconsin and Minnesota, the Thousand Islands. the St. Lawrence, and the great lakes will in themselves accommodate no inconsiderable portion of our summer travelers.

# TRAVEL AND RECREATION

# REMEMBER, you have one whole week FINAL + for careful examination, with privilege of returning if not entirely satisfactory, and your money will be promptly returned.

Very few of these special sets now remain. Every reader knows that the work is not only an Encyclopædia, treating over 50,000 topics, but the most exhaustive Dictionary published, defining over 250,000 words, which is 25,000 more than any other. They also know that they are securing the work for LESS THAN ONE-THIRD THE REGULAR PRICE, and as a consequence orders are being received daily from all sections of the country.

and as a consequence orders are being received daily from all sections of the country.

In taking stock at the close of our business year, we find a few sets of The Encyclopædic Dictionary in Cloth and half-Russia (the Special Library Binding) and Full Sheep, of which the sides of some of the volumes are slightly rubbed—not enough to impair their real value or appearance in your library, but sufficient to prevent their shipment as perfect stock at our regular prices of \$42 to \$70 a set. There being only a limited number of these sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of the sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of the sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of the sets, we shall not go to the trouble of rebinding them, but have decided to let them go on easy payments of the sets of the country.

At once a Cyclopædia and a Dictionary.

Boe-

It contains over 250,000 defined words—nearly twice as many as the largest "unabridged"—and is now accepted as AN UNQUESTIONED AUTHORITY wherever the English language is

UNQUESTIONED AUTHORITY wherever the English language is spoken.

It is one of the best of all Encyclopædias, treating over 50,000 encyclopædic subjects—the Britannica has about 27,000. JUST THINK OF IT! The whole range of human knowledge condensed for your INSTANT USE by such world-famous scientists as Huxley, Protor, and a hundred other educators of hardly less renown! It easily takes the place of any half-dozen other reference books that could be named.

It is an ornament to any Library: beautifully printed, substantially bound, profusely illustrated, COSTING MORE THAN \$750,000 TO PRODUCE, the regular price being from \$42 to \$70 a set.

WHAT THE ABLEST CRITICS SAY.

A Library

in itself.

"Not only are more words defined in this New Dictionary than in any other, but its definitions are more exhaustive." —Chicago Tribune.

"A standard reference book, treating every branch of knowledge and research in a masteriy manner." -Philadelphia Press

"It forms in itself a library for the busy man of afairs, the merchant ambitious to advance himself in his line, or the student merchant ambitious to advance mines,"
or apprentice just making a beginning."
—Scientific American.

"At the very head of all contemporary publications of its kind, and firmly established as one of the few great reference books of the world."—Christian Herald, N. Y.

REMEMBER These sets are as good for all practical purposes and look as well in your book-case ast hose for bindings of our standard grade. The most serious harm to any one set is no greater than might occur in a few days' use in your own home or office. As absolute proof of this statement, you may retain the set for careful examination for one whole week. If not entirely satisfactory you may return the volumes and money will be promptly and cheerfully refunded. This is positively the chance of a lifetime.

How to Secure This Great Bargain Bring or send \$1 to the New York Newspaper Syndicate, 22 Fifth Avenue, New York, and entire set of four superb volumes, bound in cloth, will be forwarded. The balance is to be paid at rate of \$1 monthly for one year. The first payment for either binding is only \$1. In sending your first payment please designate the style of binding you desire, and indicate how you wish the volumes sent, as the charges for delivery must be paid by the purchaser. Remittances received after this special bot is exhausted will be immediately returned. The limited stock at our disposal cannot last long. To protect ourselves against book dealers, etc., we must decline to send more than 2 sets to any one party, and in every case we must require the full name and address of each person receiving a set. We have only three styles of binding in this lot—cloth, half-Russia, and full sheep—about an equal quantity of each. Order at once, to make sure. The absolute confidence of the Syndicate that the work will be thoroughly appreciated, highly valued, and cheerfully paid for, is clearly shown by sending such a valuable set of books, the subscription price of which is from \$43 to \$70, on an advance payment of only \$1. We refer to any newspaper in New York, Boston, Chicago or San Francisco.

The Half-Russia Binding will be supplied for 25c, additional per month. FULL SHEEP, 50c, additional per month.

New York Newspaper Syndicate, 91 & 93 Fifth Avenue, New York.

Only a few sets of the great

# BIBLICAL LIBRARY

are now left for the CLUB to distribute. These will be allotted to those who first become members. Timely notice is given to all that this is

OUR FINAL OFFER TO REVIEW OF REVIEWS READERS.

The most wonderful Biblical production in existence. . . . . . . It has excited the interest and admiration of the whole world.

# A GREAT LIBRARY

It is beautifully bound in four sumptuous volumes. The text, printed in large clear type, comprises the Authorized Version of the Scriptures, a Bible Dictionary, Bible Atlas, Helps to Bible Study, Bible History, Harmony of the Gospels, a most complete Concordance, and a score of other new and valuable encyclopædic features, together with thousands of helpful and Illuminative notes, commentaries, explanations and reflections which make this remarkable Library indispensable to every Bible teacher or Bible scholar, and because it stimulates Bible reading, especially among the young, it is likewise indispensable to every Christian home.

# A SUPERB WORK OF ART.

Not only is this magnificent work printed in the highest style, on super paper and in beautiful bindings, but it includes the most remarkable series of Bible illustrations ever brought together. They comprise ever four hundred full-page photographs of the actual scenes and places of the great events of Bible History. They are the only truthful Bible illustrations ever obtained. They lend a new and striking interest to the Scriptural narrative and make its events vivid and real. They are as fascinating as a personal journey through the Holy Land.

We believe it impossible to have given greater satisfaction than the Club has done in providing the most comfortable way for all to possess the Greatest Biblical Production in existence, for enjoyment, reference, and study.

ence, and study.

In this, our last announcement, we desire to notify you that the Club will do all in its power to enable you to obtain this great Library.

McClure's Magazine bible club, 141 E. 25th St., New York.

# ISTORY CLUB'S QUICK

MEMBERS of the Club have taken all the sets the publishers would permit us to distribute, with exception of a few in Cleth and Half Meresce. These have been used for exhibition purposes only, and while they are just as good as new, we cannot, of course, offer them as perfect stock. There being an extremely limited number of these exhibition sets, we shall not go to the trouble of rebinding, and to effect a quick clearance, thus close the Club, we have decided to offer them at ene-third the regular publishers' price, and further will extend to you the little-ext-a-time payment plan. It you desire to possess this great historical library, you can secure one of these sets just now at about the eest of making.

WE GUARANTEE that the most serious harm to any one of these special sets is no greater than would occur in a few days' use in your own home.

# This Library of Universal History

#### IS POSITIVELY THE GREATEST BARGAIN EVER OFFERED AND WILL NEVER BE DUPLICATED UNDER ANY CIRCUMSTANCES.

Words of Praise for the Work.

PRES'T E. BENJAMIN ANDREWS, of Brown University, says: "The educational value of the 'Library of Universal History' is sure to be very

DR. W. T. HARRIS, U. S. Commissioner of Education, writes: "I appreciate highly the importance of stimulating historical study by the distribution of such a valuable work on the subject."

REV. FRANCIS W. GREENE, Philadelphia, Pa., writes: "The binding, paper, type, and illustrations are beautiful. I have never bought anything in my life that I am better pleased with than I am with this set of books."

### WHAT THE GREAT WORK REALLY IS.

The three great epochs, Amelent History, Mediaval History, and Medera History, naturally claim the principal portion of the Library, but Mecens Mistory also receives the attention its importance and interest demand, and the record of claims of the present which the history of Olivilian-ties and The Philosophy of the present who created than in any other work ever published in this country. The Illester city treated that he notes of such great artists as Meissonier, De Neuville, and Dore, are thereof with the training points of history, and The Historical Maps (there artificiant are of them) are more abundant and accurate than in any other work, artifice of greeker. In every one of those vital features which constitute a comprehensive, accurate, in structive, and valuable History of the World, the Library is simply incomparable. It is the Latest and the Best.

TERMS FOR THIS SALE ONLY. Cloth Binding, \$1.00 upon examination and \$1.00 a month for 15 months. Half Morocco or Special Library Binding, \$1.00 upon examination and \$1.25 a month for 15 months. On filling out coupon, designate style of binding desired. Owing to the low prices the work is sold at during this sale, the purchaser must pay delivery charges. You have the right to retain the work one week for inspection, and if not satisfactory you may return. Our confidence that this great 8-volume Historical Library will not only prove satisfactory, but will be thoroughly appreciated, highly valued, and cheerfully paid for, is shown by sending this valuable set of books, the publishers' price of which is from \$40.00 to \$60.00, without an advance payment.

This QUICK CLEARANCE SALE provides a comfortable way for you to become the owner of a set of books of life-long value, for study, occasional reading, and for reference on all matters pertaining to history.

McClure's Magazine History Club, 141 E. 25th St., N. Y.

# **Request**

We have received from our members many requests to provide them, in library form, bound so as to protect the sheets, a selection of the masterpieces of vocal and instrumental music. As it is the mission of the Association to supply members with whatever they desire, we have had prepared and are now ready to deliver to members, or those who join the Association this month, such a collection of choice

# MUSIC AS HAS NEVER. BEFORE BEEN.

AS HAS NEVER . GATHERED TOGETHER.

Over 200 selections of vocal and instrumental emusic.

Over 200 magnificent illustrations. 640 pages.

Biographies of famous composers, all in library form, in 2 beautiful volumes.

Entire work printed on extra super calendered paper.

# The Association,

Through its cooperative plan, provides members sheet music and musical instruments of all descriptions at manufacturers' prices, thus saving three profits, the jobber's, the wholesaler's, and the retailer's.

# Correspondence Invited.

From all who are not members we request an opportunity to explain the benefits of the Association. It matters not whether one is a beginner or a finished musician, the Association will save you money.

Special Offer for Month of May.

For this month only, we are offering over \$50 worth of music, printed upon extra super paper, beautifully bound in two magnificent volumes containing 640 pages, over 200 selections of vocal and instrumental music, embellished with over 200 illustrations, containing biographies of famous composers of the world, in combination with a membership certificate, which entities you to all the benefits of the Association, at so small a price and upon such easy monthly payments that no one who needs music for study or desires it for the pleasure afforded should neglect to investigate this present opportunity.

rompt attention will be given all requests for full particulars regarding the Association and the attractive offer which is being made during the month of May.

Standard Musical Association, cor. 5th Ave. & 17th St., New York.

..Completed.

# The Achievement of the Century.

It represents the wealth of ten thousand unsifted volumes.

The hundreds of critical essays are written by recognized authorities and provide endless delightful excursions into every field of literature.

With the Library the reader no longer explores the treasure land of books at random, but with accurate knowledge and clearest insight.

It is a biographical history of literature such as has never before been written.

Everything one wishes to know of the world's immortals is here.

It is the most complete and comprehensive reference library of literature in any language. As a means of study, reference, or for refreshing one's memory the department devoted to Famous Books of the World is of inestimable service.

The anthology of famous masterpieces of poetry, lyrics, hymns, and the like sweeps the whole field, ancient and modern.

The distinct literatures of different ages and countries are treated in elaborate signed articles by scholars who are first authority in their several fields.

The dictionary of authors is such as has never before been compiled, and is absolutely unique. The exhaustive indices and cross-indices make it invaluable for quick reference.

Here one lives with the poets, historians, orators, scientists, philosophers, dramatists—in fact, with the great writers and thinkers the world has produced.

# It is Economy in Books.

By joining the Club the Library can be obtained for a sum far less than the cost of the simplest collection of single volumes, and from a standpoint of economy no lover of books can afford to be without it.

# Thousands of Dollars Saved.

All who join the Club enjoy a special price, and the saving to those who have become members aggregates hundreds of thousands of dollars.

# This is the Club's Last Announcement.

The Club, in order to quickly and thoroughly introduce the Library, has offered every possible inducement to Club members. That the Club has been successful in its mission is evidenced by its tremendous advance sale (over a million volumes during publication). We believe we are fair to all in making the statement that the Warner Library is not only the best known, but the most thoroughly appreciated work that America has produced. Sooner or later the Library (even at the full subscription price) will find its way into every home of culture and refinement.

### We Now Offer Attention Called.

for the last time to readers of the REVIEW OF REVIEWS all the advantages of the Club. Full particulars will be sent upon application to

VOL. XVII.

NEW YORK, MAY, 1898.

No. 5.

# THE PROGRESS OF THE WORLD.

Cuba's Charter of Freedom.

Under the following title:

Joint resolution for the recognition of the independence of the people of Cuba, demanding that the government of Spain relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect.

The full text of the momentous declaration which bears the foregoing legal title may well be put on record herewith:

WHEREAS, The abhorrent conditions which have existed for more than three years in the island of Cuba, so near our own borders, have shocked the moral sense of the people of the United States, have been a disgrace to Christian civilization, culminating, as they have, in the destruction of a United States battleship, with two hundred and sixty of its officers and crew, while on a friendly visit in the harbor of Havana, and cannot longer be endured, as has been set forth by the President of the United States in his message to Congress of April 11, 1898, upon which the action of Congress was invited) therefore be it resolved:

First—That the people of the island of Cuba are, and of right ought to be, free and independent.

Second—That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the government of Spain at once relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

Third—That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States to such an extent as may be necessary to carry these resolutions into effect.

Fourth—That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people.

The resolution was signed by Presi-A Memorable dent McKinley on the morning of the next day, April 20, the Cabinet having meanwhile advised him in the drafting of an ultimatum to Spain, which was immediately The ultimatum informed the Spanish , Government of the nature of the joint resolutions, and gave three days within which Spain might decide to meet our demands and avoid a war. In any event, the passage of these resolutions marked the end of Spanish sovereignty in Cuba. The real independence day that the Cubans will celebrate in time to come will be the 19th day of It is true that there was no reason whatever to believe that Spain would yield to the ultimatum without at least some show of fight, and there can never be a show of fight without the danger of serious loss on both sides. any country that draws its sword against another foretell how soon it may turn again to its plow-Nevertheless, it is true for Cuba that the long-desired boon of independence was perfectly assured when Mr. McKinley signed the joint resolution declaring that the people of the island of Cuba are, and of right ought to be, free and independent. The events of the 19th and 20th of April came as the culmination of a period of many days' discussion that was at times exceedingly violent, yet which upon the whole disclosed a remarkable unanimity about the essential fact that Spain had inevitably forfeited ('uba.

Impressive Unanimity at Washington. There was no radical difference to be overcome between the views of the President and those of Congress, nor was there any really vital antagonism between the prevailing opinions of the two legislative chambers. There were, of course, a few so-called peace-at-any-price men. Their point of view seemed altogether an anachronism, because for the most part they were raising questions that the American people had asked and answered as

long ago as the year 1896. The protests they were making in the month of April, 1898, ought to have been made when the Republican National Convention at St. Louis, in the summer of 1896, unanimously adopted the independence of Cuba as one of the planks in its platform; while the Democratic National Convention at Chicago committed itself almost, if not quite, as explicitly. Ever since the Cuban revolution broke out in the early weeks of the year 1895, there has been a growing determination in the minds and hearts of the American people that this time the Spaniards must go. They saw that we had erred in failing to liberate Cuba at some time in the course of the ten years' struggle that was ended twenty years ago under promises of reform on Spain's part which were never fulfilled; and they were inwardly resolved not to repeat the mistake.

Even if the peace-at-any-price men The "Peace Men" had been justified in ignoring the Awoke a Year Too Late. actions of the great national conventions almost two years ago, there can be no excuse, from their own point of view, for the silence they kept when President Cleveland in his elaborate discussion of the Cuban question in his message of December, 1896, declared that he saw no prospect of an early termination of the Cuban struggle, and that the United States might in the near future have to recognize "higher obligations" than the duty of neutrality to Spain, and intervene to save the island from absolute ruin. This, let it be remembered, was before the reconcentration policy of General Weyler had wrought its mature results. Since Mr. Cleveland's prophetic message, the situation has grown steadily worse; and the tide of moral indignation in the United States has risen higher and higher. And yet there are educated people in the United States—most of them, it would seem, residing in the city of New York-whose bewilderment and surprise in the middle of April, 1898, showed plainly that they had never for one moment been aware that the Cuban question had so much as existed for anybody in the United States except for the readers of what they were pleased to call the "yellow journals"—which journals they had sedulously excluded from their clubs as well as from their homes. They were as ignorant, in fact, of the actual state of American opinion as were Marie Antoinette and the lighter element of the French court as late as June, 1789, that a really serious revolution was impending. particular sort of innocence did not, of course. play any influential part at Washington last month. The small group of men who struggled ably to the very last to prevent intervention were perfectly well informed and knew exactly what they

were about. They represented the so-called "business interests" set in motion by the Rothschilds. But they were only a handful. Apar from them, it was agreed that Cuba must be relieved, even at the expense of a war on our part.

The "Maine" It has been frequently remarked that Incident Caused Delay, the disaster to the Maine had preci-Not Haste. itated the crisis that led to the climax of April 19-21 much sooner than we should otherwise have reached the point of intervention ly This, however, may at least be ques-We had sent our warships to the vicintioned. ity of Cuba in the middle of January, apparents with the intention of presenting an ultimatum at a very early day. The whole country—always excepting Wall Street and that peculiar element of educated persons who are apparently never able to understand things until they have receded into historical prospective—was ready for action on grounds of humanity. As a preparation ir a vigorous policy, the President had collected from our consuls in Cuba a great mass of reports confirming all the assertions of the newspapers about the starvation of the reconcentrados. Colgress had called for these reports, and the President was just on the eve of giving them to the Senate and to the world, when the news of t Maine explosion came. The excitement came by that event led the President to defer makin. public the consular reports. It was feared that the reports, plus the Maine disaster, would lead Congress to declare war on the instant. And so there followed the anxious period of susperse while the Naval Board was making its tedious inquiry. On March 28, more than forty days after the explosion, the President transmitted the report of the Naval Board to Congress, with a brief message, in which he said that he could m: permit himself to doubt that "the sense of justice of the Spanish nation would dictate a course of action suggested by honor and the friendly relations of the two governments."

It was understood that the transmission The Longof this report of the Naval Board, which pointed to culpable negligence, if not direct complicity, on the part of the Spanish authorities, would soon be followed by an elaborate and vigorous message from the President dealing with the whole Cuban question. Date after date was set for the sending in of his message, and again and again some excuse was given for 15 postponement. The impatience of Congress was simply a reflex of the anxiety and impatience of the country at large. Congress and the country showed, however, a most extraordinary patience. while the President was occupied with well-ment

PRESIDENT WILLIAM M'KINLEY.

(As he appeared to De Lipman, of the Journal, in April.)

but futile schemes of diplomacy. Finally, on Monday, April 11, the belated message actually arrived. The nervous excitement of the country had only become the more intense by reason of waiting, and the message fell short of the wishes of those whose overwrought feelings demanded vehement and burning expressions. It was, nevertheless, a wise message, and its conservatism was not of a kind to thwart the development of a strong policy by Congress. It set forth the attempts that had been made to deal with Spain by negotiation and admitted that nothing further in that direction could be done. It recited the horrors of Spanish methods in Cuba and declared that the war must stop. It argued against the recognition of Cuban independence, upon the wellestablished ground that recognition should follow rather than precede the accomplished fact. policy that it recommended to Congress was "the forcible intervention of the United States as a neutral to stop the war, according to the large dictates of humanity." The President's long argument and review led up to the following conclusion and advice:

The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests, which give us the right and the duty to speak and to act, the war in Cuba must stop.

In view of these facts and of these considerations. I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens, as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes.

It is to be noted that the message did Action in not explicitly side with the insurgents in Congress. their demand for independence, although there was little reason to believe that the President's policy could result in anything but the extinguishment of the Spanish title. The President, however, declared himself ready to execute any policy that Congress might adopt. The question was at once taken hold of by the proper committee in each house. At length, on the 13th, the Foreign Affairs Committee of the House of Representatives reported a resolution which was adopted on the same day by a vote of 322 to 19. This resolution directed the President to intervene at once in Cuba, authorized him to use the

SENATOR J. B. FORAKER, OF OHIO.
(Author of the resolutions that were finally adopted.)

army and navy, and further directed him to establish in the island a free and independent government of the people. Thus it was made certain that pacification should not be followed by a compromise which would retain even a nom-

SENATOR CUSHMAN K. DAVIS.

(Author of the Senate committee's report.)

inal Spanish sovereignty. In the Senate, the Foreign Relations Committee reported on April 14 resolutions identical with those printed on our opening page (except the last section, afterward unanimously added as an amendment). were accompanied by a powerful and brilliant report prepared and presented by Senator Cushman K. Davis, chairman of the committee, which, next to the President's papers, is to be regarded as the most important of the documentary records The Senate has no machinery for of the month. shutting off debate; but the committee's resolutions would have been adopted in short order but for the introduction of an amendment recognizing the existing provisional government of the Cuban republic. The most conspicuous advocates of this amendment were Senator Foraker on the Republican side and Senator Turpie on the other. The Democrats formed by far the greater part of the supporters of the amend-On the 16th the recognition amendment was voted upon, and it was carried by a majority of 51 to 37. The resolutions as thus amended were then adopted by a vote of 67 to 21. was on Saturday.

It was well known that the House The would not readily concur in recog-Question of "Recognition." nizing the provisional republic, and it was feared that a protracted deadlock might Patriotism, however, was triumphant over preference; and after a fourteen hours' session, which extended from the time of assembling on Monday until nearly 2 o'clock on Tuesday morning, the report of a joint conference committee was accepted by both houses. This report substituted the Senate resolutions for those of the other chamber, but omitted the clause recognizing the present Cuban Government. The plan as adopted had the fullest approval of the President, and would seem by all means to have been the wiser and safer one for the country to pursue. Recognition of the Masso government may indeed follow at a very early day, but at the outset of armed intervention the United States ought not to be hampered. Under the circumstances, our demand that Spain should withdraw her troops and relinquish sovereignty in Cuba can mean nothing except that she is to relinquish authority to the United States. We are in the position of a court which assumes temporary control of an estate with a view to its proper disposal. We distinctly avow that in taking it upon ourselves to expel Spain from Cuba we also assume the duty and responsibility of restoring order in the island and of protecting the lives and rights of all elements of the population. We have further pledged ourselves explicitly in our turn to relinquish authority just as soon as we shall have been able to supervise the establishment of an independent Cuban republic. This, doubtless, will mean the extension of the existing

(Commander of the auxiliary cruiser St. Paul.)

republic under President Masso and his cabinet to all parts of the island. Nevertheless, for the time being it is the United States, and not President Masso's government, that stands before the whole world responsible for conditions in Cuba; and where there is responsibility there must also be authority. We should be embarrassed in doing for the Cubans what we have set out to do if President McKinley had to shoulder the responsibility while by our own premature act of recognition we had accorded to President Masso all the rightful authority. If we had acknowledged the Cuban republic, our logical course would have been to form an offensive and defensive alliance with that neighboring and sovereign power, and then in a strictly subordinate way to cooperate with Gen. Maximo Gomez. But this would have involved us in all the losses and dangers of a war with Spain, while increasing the chance of its being a long rather than a short war. In any case, of course, our forces will avail themselves of the indispensable cooperation of General Gomez' "Army of Liberation."

The War Preparations.

In the week beginning Monday, the 18th, the railroads were busy moving the regular army and its equipments to points where embarkation for Cuba would be easy. Chickamauga National Park was made a general rendezvous, but troops were also sent in considerable bodies directly to New Orleans, Key West, and other seaports. The national guard was prepared to respond to the daily anticipated call for volunteers. Admiral Sicard was at Washington as adviser to Secretary Long, while

Captain (now Admiral) Sampson had taken charge of the squadron at Key West. Commodore Schley was in command of the flying squadron at Hampton Roads, which was momentarily awaiting orders to sail. A new squadron had been formed for purposes of the patrol of our Atlantic coast and put under command of Admiral Howell. It was composed largely of well-built liners which had been purchased and converted into armed cruisers. Conspicuous among these were four admirable ships of the Morgan line, which had joined the navy under the picturesque names of the Yankee, the Dixie, the Prairie, and the Yosemite. The splendid American-built transatlantic liners St. Paul and St. Louis had also been impressed into the naval service, and Captain Sigsbee, of the ill-starred Maine, had been given the command of one of them. The liners New York and Paris were also taken and rechristened the Harvard and the Yale. The attempt to buy warships abroad had brought a very small aggregate of results. The transformation of merchantmen and yachts into a naval auxiliary fleet had, however, been accomplished in a remarkably successful manner. In all the work of naval preparation the highest credit was accorded by everybody to Assistant Secretary Theodore Roosevelt—the President and Secretary Long leading in the recognition of Mr. Roosevelt's good work. It was understood as we went to press that Mr. Roosevelt had determined to resign his position (to be filled probably by some naval officer, such, for example, as Admiral Walker, retired) and to seek active service in the army. Mr. Roosevelt's courage and pluck have long been an

inspiration to the young men of the whole country. He has always sought the hard task.

The new Spanish Cortes was called by Attitude of Spain. The Queen to assemble on April 20, a date some days earlier than the one originally fixed. The party groups held preliminary meetings on the afternoon of the 19th, when the action of the American Congress was fully known in Madrid. Prime Minister Sagasta, as the head of the Liberal party, made statements of the most

COMMODORE W. S. SCHLEY.
(Commander-in-chief of the flying squadron.)

uncompromising character, and war was declared inevitable, alike by all Spanish statesmen and newspapers. It was generally believed in the United States that Spain would resort to some evasive diplomatic scheme for the purpose of gaining more time; but on the other hand it was well known that President McKinley had resolved to countenance no further procrastination. Consul-General Lee and our other consular representatives in Cuba had been withdrawn during the week that ended Saturday, April 9; and General Lee on the way to Washington received ovations of the sort bestowed upon conquering heroes. It was understood that he desired to take an active part in the campaign and rumored that he would be appointed a major-general of volunteers. The Spanish minister remained at his post until on

the 20th he was served from the State Depart. ment with a copy of the President's ultimatum. Whereupon he asked for his passports, left the archives of his legation and the oversight of Spanish interests in the keeping of M. Cambon, the French ambassador, and immediately departed from Washington by way of Niagara In Spain, the cabinet was Falls to Canada. more alert than Minister Woodford, and succeeded in delivering to him a note informing him that diplomatic relations were severed, and that the action of Congress and the President was regarded by Spain as equivalent to a declaration of This was on the morning of the 21st. Minister Woodford was thereupon given escort as far as the boundary line on his way to Paris.

The news of General Woodford's dis-The Blockade missal from Madrid was received at of Cuba Ordered. Washington as sufficiently marking the actual beginning of war. The delivery of the ultimatum to Señor Polo at Washington had taken the place of its presentation at Madrid by General Woodford, and the note of Señor Gullon, the foreign minister, referring to the proceedings at Washington, was of course all the answer that Spain intended to make to the American demands. War had, therefore, actually begun. Orders were at once sent to Admiral Sampson to proceed to Havana and institute a blockade of the island of Cuba. This command was carried into effect on Friday, the 22d. There was no immediate intention to bombard Havana or other Spanish ports, but only to cut off communication and prevent the landing of any food supplies or munitions of war. Commodore Schley's famous flying squadron was ordered for the present to remain at Hampton Roads, Spain's plans being The Spaniards had, in the days imunknown. mediately preceding, been assembling a very extensive fleet at St. Vincent, in the Cape Verde Islands (see our frontispiece map for the theater of naval and military operations), and it was doubtless to await some desired information concerning the sailing of this Spanish fleet that our flying squadron was detained. Otherwise it would probably have been sent immediately to Porto Rico. It was further understood that Commodore Dewey, commanding our ships which were assembled at Hong Kong, was under orders to proceed at once to Manila, the capital of the Philippine Islands, in order to harass Spain in those important colonial possessions.

Incidents and Conditions of the War.

Congress to lose no time in passing a bill author-

From a drawing for the New York Herald.

PRESIDENT M'KINLEY RECEIVING THE REPRESENTATIVES OF THE SIX GREAT POWERS.

izing the Executive to issue a call for volunteers. The details of this bill were agreed upon by a conference committee of the two houses on Friday forenoon, and President McKinlev in the course of the same day signed the bill and issued the call for 100,000 troops, each State being assigned its quota in the ratio of its population. With the Spanish West Indies under blockade the war was fairly begun. It is scarcely probable that the opposing fleets can meet in a sea fight in the days that will have intervened before this magazine reaches its readers on May 1. It is well understood that the United States does not intend to issue letters of marque or to permit privateering. On the other hand, the commercial nations of Europe will do what they can to restrain Spain from resorting to privateering, and will not readilv permit the exercise of the right of search, but will take high grounds respecting the immunity of ships flying a neutral flag. It will be only in a modified sense, probably, that England will treat coal as contraband of war. It is hoped that the effective blockade of Cuba may bring Spain to a point of readiness to negotiate a peace on reasonable terms. But nobody can now tell

whether the campaign is to remain bloodless or to reach the stage of fighting. Nor can anybody say whether, if actual fighting comes, the war will be sharp and short or long drawn out. That it may be short and not destructive is of course the wish of every person of right and rational mind.

The Joint Note of the Some criticism was aroused by the President's reception of the six ambassadors and ministers representing the great powers which form the so-called concert of Europe, when they appeared in a body to present a joint note expressing the hope on the part of their governments that peace might be maintained. The note was as follows:

The undersigned representatives of Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, duly authorized in that behalf, address in the name of their respective governments a pressing appeal to the feelings of humanity and moderation of the President and of the American people in their existing differences with Spain. They earnestly hope that further negotiations will lead to an agreement which, while securing the maintenance of peace, will afford all necessary guarantees for the reëstablishment of order in Cuba. The powers do not doubt that the humanitarian and dis-

interested character of this representation will be fully recognized and appreciated by the American nation.

The President's reply had been carefully prepared in advance, and was immediately submitted, its purport being sufficiently indicated by the following sentence:

The Government of the United States appreciates the humanitarian and disinterested character of the communication now made on behalf of the powers named, and, for its part, is confident that equal appreciation will be shown for its own earnest and unselfish endeavors to fulfill a duty to humanity by ending a situation the indefinite prolongation of which has become insufferable.

It is only fair to say that the British European minister, Sir Julian Pauncefote, did The Talk not act with the representatives of the continental powers until he had assured himself that there was no design of menace in the proceedings, and that the affair should be considered as a mere bit of formality. Nevertheless, our Government might reasonably have declined to be addressed by the particular group of six European powers which has of late years assumed to impose its mandates upon all parts of the We in this country can never consent world. to have the concert of Europe, as such, act diplomatically in any affair which concerns us. dealing with all foreign powers we act independently upon our own behalf, and we expect every foreign power in dealing with us to act in that same It is true that the President's reply was

tantamount to informing the powers that we should act apon our own responsibility and not upon their sugges-Yet it appears that the fact that we allowed them to communicate with us at all in the collective sense emboldened one or two of the continental powers to attempt, a few days later, the organiza tion of Europe for the purpose of a distinct menace against this country. whole proceeding was an excellent object-lesson to the American people, and the country has learned not a little by the experiences of the past few weeks. At present. it is true, Europe could not possibly bring itself into agreement against the United States, for a variety of reasons. Nevertheless, it would be perilous for the future peace of the world if we should allow the continental powers for a moment to entertain the idea that at some future time they might act collectively in dictation to our Government.

The European powers, though jealous of Treatment the rapid progress and great prosperity of Spain. of the United States, are also aware or the thoroughly peaceful character of our people and our Government. Their jealousy of us is a trifling matter when compared with their jealousv of one another. All that is necessary to save us from European interference is to know our own mind, to be less boisterous in talk, and to be more prompt and decisive in action. To justify one-fiftieth part of the talk we have done in this country, we ought long ago to have driven out the Spaniards and emancipated Cuba. the sensational newspapers that have had a sole monopoly of the talking. Presidents, cabinets. diplomats, and above all Congress, have done The discussions of the Cuban their full share. question in the messages of President Cleveland and President McKinley have been of a nature which in any European country would have been promptly followed by the mobilization of troops and a declaration of war. From the moment when Mr. Cleveland made his famous intimation that we should have to interfere on high grounds of humanity if the Cuban war were not soon ended, a war between this country and Spain has been practically inevitable. The whole course of

A CONFERENCE ON THE CALL FOR VOLUNTEERS.

FORT JEFFERSON, AT DRY TORTUGAS, THE NEAREST AMERICAN FORTIFIED POST TO CUBA.

our diplomacy with Spain has been—when one substitutes plain words for diplomatic phrases—nothing but a series of menaces. Our conduct has been one constant assault upon the dignity and amour propre of a highly punctilious nation. When one is dealing with a proud people, this kind of proceeding must mean, in the end, war and nothing else. We might have observed strict neutrality. In that case our President's messages would not have discussed the possible duty of our taking a hand in the Cuban row. Nor would our diplomacy have undertaken to fix dates for a friendly nation to meet in quelling colonial insurrections. Much less would we have presumed to force the withdrawal and appointment of colonial governors and captains-general.

When we went further than diplo-Oid We Begin macy and assembled a powerful navy at the point on our coast which was nearest to Havana, we had replaced menacing language with menacing acts. Probably there was not a Spaniard in the whole world who did not really believe that the sending of the Maine to Havana was potentially an act of war. In any case they regarded it as the threat of a strong nation against a weak power distracted with colonial difficulties in both hemispheres, while tormented at home by anarchist plots and by threats of a Carlist outbreak. The peo ple of the United States have had good reason to call the destruction of the Maine an act of war treacherously conceived in a time of nominal But it must not be forgotten that the people of Spain have also believed that our sending the Maine to Havana—with our whole fleet, ready for action, only a few miles away—was also in the nature of an act of war in a time of nominal peace. They considered that we had taken advantage of Spain's unpreparedness to utilize our natural strategic advantages of position. The die was really cast when the fleet was mobilized

with orders to concentrate at Key West and the Dry Tortugas. That was in the month of January. Menaces of that sort mean action sooner or later. And it is generally true that to act sooner rather than later is the part of mercy and true wisdom. At that moment the Government at Washington was in full possession of the facts concerning the hideous results of starvation and disease that had followed the ravages of insurgents and Spaniards alike, and that had been greatly intensified by the brutality of the Weyler policy of reconcentration.

RECENT ENTRANCE OF SPANISH TROOPS TO PORTO RICO-PARADE ON CHIEF STREET.

"HANDS OFF"—AN ENGLISH VIEW OF THE SITUATION.

From Black and White (London).

We have not since had an ounce of What Might Have justification for making war against Spain that we did not possess in Decem-Nor has anything that has since happened made it easier for Spain to withdraw without a There is much reason to believe that if we had possessed the full courage of our convictions at that time, we would have made the strongest possible naval demonstration at Havana, instead of making it at Key West. And we should have been able, very possibly, without firing a gun, by our mere word of authoritative command to have enforced an armistice upon the contending parties in Cuba, and then by vigorous and cool-headed negotiations to have secured the evacuation of the Spaniards. It is true that our preparations for a war were not extensive at that time. But on the other hand Spain was without any real preparations whatsoever for a naval fight. Her warships were not upon this side of the ocean, and practically none of them was in condition for service. blockade of Cuba would have been instantly effective. We should, without the slightest difficulty, have prevented any Spanish ships from coaling at Porto Rico. We should have been able to land small arms, field-pieces, and food supplies in unlimited quantities for the use of the insurgents. And by the simple process of

preventing any food supplies or munitions of war from being landed for the Spanish army, we should have put Spain in a position where we could dictate the terms of a peace that would have been honorable to all parties concerned. What we did when we sent the Maine to Havana was to serve notice upon Spain that we intended to fight. Whereupon we gave her a number of months in which to make such preparations as would render it at least possible that the fight, when it came off, might be exceedingly injurious to both parties, although the outcome could not be in doubt. This is not said in reproach of any one nor in a spirit of superior wisdom. It is even yet too early by far to estimate at their rightful importance the arguments and counterarguments that were used in discussing the question how and when to force the issue with Spain to a conclusion. But be it remembered that a conclusion had to be reached sooner or later.

Bpain's Deliberate Guitt. The Queen Regent of Spain, who is pictured as a woman much to be admired, is not known to have made the mildest sort of protest against a policy that would have disgraced the worst of the Sultan's Kurdish cavalry in Armenia. All of the Spanish illustrated papers have been full of lively accounts and showy illustrations of the recent extravagant carnival revels throughout Spain. At that very time the whole world was ringing with

the horrors of the Spanish policy in Cuba; and American charity was endeavoring to find a way As far as reports go, there was to carry relief. not so much as a single peseta contributed in the whole of Spain for the relief of the Queen's suffering subjects in the "Ever Faithful Isle." Yet the Spaniards, with all their oft-mentioned impoverishment and lack of resources, had wealth enough to lavish money upon carnival frivolities. Meanwhile the Spanish Government, evidently satisfied with its policy of extermination in Cuba, was finding money to spend all over Europe in the purchase of munitions of war and of additions to the navy, with the purpose of fighting the United The Spanish element in Havana was able to give brilliant public balls and theatrical entertainments for the raising of money by the hundreds of thousands of dollars to aid the Spanish navy, while contributing inappreciably for the relief of the wretched people who were dying daily in the very streets of Havana. Subsequently, as a part of the play to the galleries of Europe, so to speak, the Spanish Government went through the form of appropriating several hundreds of thousands of dollars for the relief of the reconcentrados, and announced an entire change of policy; but there is not very much reason to believe that a penny of that money was ever intended to be used for the purpose proclaimed or that any of it has since been so employed. As Consul-General Lee pithily remarked to the United States Senate Committee on Foreign Affairs, even if the money ever actually passed out of the Spanish treasury, none of it would succeed in running the gantlet of the Spanish officials, who would certainly have stolen every dollar of it before it could have reached the poor wretches for whom it was nominally intended.

And yet the self-professed "friends of peace" in the United States de-Consistent. clared up to the last moment that they were totally unable to discover any possible reason why we should even give ourselves the slightest degree of concern about what was going on in Cuba. The bewilderment of the community at large respecting the behavior of these advocates of peace at any price was not lessened by the fact that, to some extent, these were precisely the same gentlemen who, only a few months ago, had vehemently demanded that the United States should make war upon the Turkish empire, for no reason whatever that related to a now existing condition of things, but solely because the Turkish Government had not paid over to our Government some thousands of dollars considered by us to be due for certain educational property destroyed by mobs several years ago in Asiatic Turkey. And a few of them a year or two ago would have embroiled us with England over a matter of catching seals on the high seas! Some of them had denounced with anger and pathos the starvation of "seal pups" on the Pribiloff Islands, yet they seemed unmoved when the starvation of Cuban children was mentioned. If these gentlemen have been working to prevent war between the United States and Spain with clean hands and pure hearts, on disinterested grounds and with the highest love of humanity in their hearts, they have at least been unfortunate in the company they have kept. For it was undoubtedly true last month that some of them were working in close and intimate conjunction with powerful agencies inspired by the holders of Spanish bonds.

The financiers' Work at Washington. The chief object of these efforts has been to keep the Spanish flag floating over Cuba. The greater the extermination of the Cuban population, the more likely in the end, naturally, would be the retention in Cuba of Spanish sovereignty. Greater or smaller degrees of the pretentious nonsense called "autonomy" were of slight consequence to the interests that these agencies were representing; for if Spain retained sovereignty in Cuba, quite irrespective of the nature of the purely domestic administration of the island, there could

scarcely be involved any repudiation of public loans already outstanding which Spain had issued upon the pledge of Cuban revenues. The separate public debt of Spain now amounts to about This would appear not to in-**\$**1,500,000,000. clude the debt which the Spaniards have fastened upon Cuba, and which must now amount to at least \$400,000,000, and the interest upon which is paid out of the revenues collected in Cuba. The vast debt saddled upon the impoverished island represents nothing whatever except the expenses incurred by the Spaniards themselves in fighting the Cubans. A great part of it undoubtedly represents money stolen by Spain's corrupt civil and military establishments. Now, if Cuba should succeed in winning her independence, it was obvious that she would give herself no concern whatever with any part of Spain's indebtedness, none of which had ever been incurred by authority of the Cuban people, and none of which had ever been expended for their benefit—while on the contrary a great part of it had been expended in diabolical warfare against Not only was there involved in the question of Spain's continued sovereignty in Cuba the \$400,000,000 of so-called Cuban indebtedness, but there was further involved, undoubtedly, the total bankruptcy of Spain. say, the value of the \$1,500,000,000 of indebtedness issued directly in the name of the Madrid government, of which something like a thou

sand millions was in the form of the permanent consolidated 4 per cent. debt, was in dire peril. The prospect of war with the United States, to be followed by Cuban freedom, had been causing the steady decline of the Spanish consolidated 4s in the money markets of Europe.

The Church and 1.5 Holdings of Spanish Bonds. It next becomes important, if we would really know what was going on at Washington, for us to understand something of the distribution of this Spanish debt. In the early part of the present century, the property of the Church in Spain had so accumulated that it might be said almost without exaggeration that the ecclesiastical establishment had absorbed the wealth of the country. Whereas there are now perhaps thirty-five thousand priests and monks in Spain, there were in 1820 not less than one hundred and fifty thousand of these Spanish clergymen, not to mention the scores of

thousands of nuns (of whom there are now only about fifteen thousand). Clericalism has played a very large part in the struggles of dynasties, factions, and parties in Spain throughout the entire century. The success of a particular dynastic faction in 1835 meant the defeat of the clerical party; and this was followed by sweeping confiscatory decrees, which led to a protracted quarrel between the Vatican and the Spanish Government. This quarrel was kept up for nearly a quarter of a century, and was finally compromised in 1859 by a new Concordat between the Spanish Government and the Pope, in accordance with which a large amount of church property was sold off, and there was issued to the Church several hundred millions of dollars of interest-bearing Spanish bonds. This huge block of securities held by the Roman Catholic Church to-day must of necessity make that ecclesiastical organization especially anxious for the mainte-

nance of Spanish credit. A war with the United States means Spanish bankruptcy almost beyond a peradventure; and it is hard to see how the holdings of Spanish bonds by the Catholic Church could be protected in the general break-up of Madrid finances. The particular plan by which the Church came into possession of the chief part of the Spanish internal debt was arranged with the Vatican itself, and it would be strange indeed if the Vatican should not now, in this critical time, have felt very keenly its responsibility for doing everything in its power to protect what it had been able forty years ago to save out of the far greater possessions formerly held by the Church in Spain. All this was reasonable enough.

The Efforts Pope Leo, that venerable figure the loftiness of whose personal character has won for him the esteem of good men of all communions, is not for a moment to be charged with any sordid or improper motives in what has been on his part a commendable effort to secure a solution of the Cuban question without a war between Spain and the United States. The only unanswered question is, why the Pope had not intervened on behalf of his suffering Catholic subjects in Cuba. The Vatican has had no lack of wise advisers in this country, and has clearly perceived, if we mistake not, that Spain must inevitably give up her hold on the island. It seems to have become the cherished hope of Leo that Spain might be persuaded to withdraw under some terms that would not sacrifice Spanish pride at every point, while the essential features of the demands of American public opinion should have been granted. It was to this end that the Pope offered his services as a mediator; but there were ample reasons why from the point of view of the Government at Washington this was impossible. And the Spaniards on their part declined the Pope's services. came the Pope's urgent request that we should at least abstain from armed intervention until we had allowed a certain number of days to elapse in which the Vatican, with the cooperation of certain European governments, should bring moral pressure upon Spain to see what concessions might be secured at Madrid in the interest of peace. It was this effort of the Pope, undoubtedly, that led to the postponement of President McKinley's message from Wednesday to Monday.

The Mystery It is simply to be remarked here that Business at it would have been safe enough to Washington. have allowed the country to know the facts. It was a mistake to countenance the news reports that the message was withheld on account of some possible danger that its delivery

ARCHBISHOP IRELAND.

to Congress might inflict upon Americans in Cuba. The European governments are adepts at the game of diplomatic mystery; but our Government at Washington is not organized for that kind of business. With us, nothing succeeds half so well as downright frankness, and the influence of Mr. McKinley during the month of April was on more than one occasion sadly imperiled by the secrecy surrounding highly honorable efforts which required no mystery. The efforts that his holiness Leo XIII. was making were wholly creditable to him. They furnished a good and sufficient reason for the postponement of President McKinley's message. It would have been decidedly better, therefore, if the real reason had been known and the sham reason—the absurdity of which was bound to be exposed—had not been sensationally foisted upon the country. Archbishop Ireland, who is understood to have been the man whose explanations to the President had secured the postponement of the message, is an American of the highest quality of patriotism. He has had a clear comprehension of all the factors involved in the complicated situation. His opinion, therefore, expressed to the President, that the Pope, if a little more time were accorded, might be able to use his influence upon the solidly Catholic population of Spain to accomplish the evacuation of Cuba without our resorting to the fearful necessity of war, furnished an ample and conclusive reason for granting the desired time. Secrecy was observed solely for the sake of the effectiveness of the negotiations.

How the Brokers Unhappily, the speculators on the pere Wise and the People stock market were informed of the important negotiations upon which the hope of peace was based, while the great mass of the plain, honest people of the United States were kept in total ignorance and were suffering agonies from suspense. When to the average man war seemed inevitable, the big brokers in Wall Street looked wise and said that their confidential advices were all of a pacific complexion. And stocks went up instead of down. When the whole country, including nearly every man in both houses of Congress, and even the Cabinet itself, had the best reason for supposing that the President's message was to be sent to Congress on Wednesday, April 6, the leading stock brokers in Wall Street professed to have information that it was not going in before Unfortunate occurrences the following Monday. of this kind caused anxiety and distrust throughout the country, and hot-heads made accusations even against the honor of the President of the United States. All this was as mistaken as could The President was doing his duty with as good conscience as George Washington or Abraham Lincoln would have exercised under the same circumstances. It simply happened that the efforts to pull Spain off-and thus to end two wars, one actual and one prospective, at the same time—were not confined to the Pope, but were participated in by the government of Austria and the government of France, abetted and urged on by the European financiers whose assurances to Wall Street were sustaining the market and whose action also was in good faith.

Why Austria The motives of the Austrian Governfrance were ment were not so much financial as dynastic. The people of Spain happen to be ruled over by a branch of the Austrian Nothing could be more disgustingly mawkish than the affectation of sympathy in the United States with the small boy whose mother is naturally trying to keep the Spanish throne for his benefit when he gets old enough to occupy it. Nevertheless, the house of Hapsburg could not in decency neglect its own; and it has been using every possible diplomatic means to protect the interests of the Queen Regent Christina and her son and ward, the lad Alfonso. The French Government, on the other hand, has been impelled to a somewhat active diplomatic interest in the whole situation by the fact that French investors have absorbed the major part of the huge permanent 4 per cent. foreign debt of Spain, and that a war between Spain and the United States would be likely to take all the value out of those bonds. It is well remembered in France that after the conclusion of the ten years' war of 1868-78, accompanied and followed as it was by costly civil strife in the Peninsula itself, the public debt of Spain had risen to a point where on January 1, 1881, it reached about \$2,600,000,-That was more than the financial back of the country could bear, and there was a scaling down, virtually a repudiation, of a full half of this amount, the interest-bearing debt on January 1, 1884, amounting to less than \$1,-300,000,000. A war with the United States, even of short duration, would oblige Spain to resort to forced loans, with the result of a subsequent readjustment of her whole indebtedness, either with direct repudiation or by a process of insolvency. At least this has seemed likely.

In short, the situation has imperiled The International investments to the extent of many Character of "High Finance." hundreds of millions of dollars. Now, the investment market is an international affair that has its ramifications everywhere. While it is true that no appreciable part of the Spanish debt is held in the United States, it is, on the other hand, equally true that the great bankers of Europe, who have immense interests at stake in the maintenance of Spanish credit, have also an intimate connection with great banking houses in the United States, and that they are able to secure the most energetic cooperation of large financial interests in this country. Gigantic monetary operations in the United States in such directions as the reorganization or consolidation of railroads, the floating of new trusts and industrial combinations, and other matters of a comparable nature, are at this very time dependent for their success upon the European money centers. And the rich award that the great financial institutions of Wall Street are accustomed to reap from such business operations is due almost wholly to the ability of these Wall Street houses to enlist the cooperation of European capital. But it is obvious that if European capital serves them in their American schemes, they in turn must be at the service of European capitalists when national or international politics at Washington would seem to threaten at any point the welfare of the great investment interests of Europe. Thus the closely related bankinghouses of Paris, Frankfort, Berlin, Vienna, and London, whether named Rothschild or otherwise, having direct interests at stake in the support of Spanish credit, are in a position to say to Wall Street that the United States must not precipitate Spanish bankruptcy by making a war on The argument is too obvious behalf of Cuba. to need any explanation. The merest suggestion of it is enough.

Lest these pages should seem to be No Scandal making accusations and casting reflec-Imputed. tions, there remain two things to be said with the utmost clearness. First, although this great combination of financial interests could have afforded to spend unlimited sums of money to influence action at Washington, we do not for a moment believe that its work done at Washington was attempted upon corrupt lines. We believe that the Government of the United States, in all departments, is incorruptible. more, we believe that the great business interests to which we refer had a perfect right to be heard at Washington and to exert themselves with all the influence they could legitimately wield on behalf of the investors whose money was at stake. It is not in the least for the purpose of finding fault with the holders of Spanish securities, nor yet with the European bankers, nor again with the great Wall Street houses concerned with the financing of American railroads and industries, that we have commented upon the immense pressure exerted last month at Washington by the representatives of "conservative business inter-Our comment has been solely for the purpose of analyzing a situation which might well have mystified many of our readers.

" Business" The "conservative business interests" Right to Ita assuredly had a right to be heard. Argument. And the ingenious methods employed by them to make a show of public opinion through resolutions adopted by chambers of commerce and through the activity of professional philanthropists were simply phases of modern organizing methods not in the least discreditable. These methods were perfectly understood by the members of Congress, none of whom was deceived into supposing that the circular letters and mimeographed resolutions represented any spontaneous movement of public opinion. interests are always extremely sensitive. have within recent years learned the art of international and national organization for influence upon governmental action. It is not necessary to rebuke this exercise of influence, provided only it presents itself openly and seeks its ends in its own name and right. It deserves rebuke only when its motives are disguised and when it assumes the tone of moral superiority. It seemed for a few days last month to be laboring under the mistaken impression that it had some sort of a claim upon the President of the United States, and that he was on its side as against the public opinion of the country. The only thing to be said in serious criticism of it was that whereas it really represented something less than the loftiest of the motives that were actuating the conflicting

forces struggling for the mastery at Washington, it pretended to represent the very highest.

In the thick of what was deemed, at least England by the newspapers, an unusually critical France. period in the international relations of England, the world last month enjoyed the striking spectacle of the ruling heads of the British state all absent on foreign soil at the same The Queen was in her favorite retreat at Cimiez, in the south of France, the Prince of Wales was at Cannes, and Lord Salisbury, uniting in his own person the two great offices of prime minister and minister of foreign affairs, was at Beaulieu on the Riviera. Mr. Balfour, while keeping his cabinet place as first lord of the treasury, looked temporarily after the routine of the Foreign Office; but the fact remained that the prime minister and the Queen were at the same time resting themselves in the balmy climate of southern France, while the jingo newspapers in England and the Chauvinist press of France were noisily talking as if the British empire and the French republic might be on the very eve of a war over a boundary line in the unexplored wilderness of western Africa, or over some possible rivalry on the far upper Nile beyond Khartoum. Just before Lord Salisbury's arrival in France, M. Hanotaux, the foreign minister, when asked whether a war with England was at all likely, made the following answer:

As for our foreign relations, I can affirm that they are good with everybody. We have the best relations with all the powers. In certain foreign papers we are represented as having less cordial relations with England. Queen Victoria is at Nice, the object of our most respectful solicitude, the Prince of Wales is at Cannes, and Lord Salisbury arrives in France on Monday. That is my sole reply, and I hope this triple stay will be as prolonged and as agreeable as possible.

It is reported that Lord Salisbury's period of rest in France has been improved by him to help in the promotion of an understanding about the question of the respective limits of French and British possessions in West Africa, and that an agreement has already, virtually at least, been secured.

England's Stand About China. There would seem to have been a much larger measure of anxiety in England than the real facts have warranted about the progress of affairs in China. Under the lead of Sir Ellis Ashmead-Bartlett the House of Commons had in March unanimously voted that under any and all circumstances it was essential to the trade of England and her great interests in the far East that the territorial integrity of the Chinese empire should be maintained. This

action seemed something like a needless advertisement of England's weakness; for it was taken at the very time when the European powers were pocketing concessions from China which amounted to that very sacrifice of China's sovereignty and independence that the English statesmen were unanimously voting must be maintained. It is gratuitously humiliating to put one's self on record as opposed tooth and nail to the very thing that is happening, unless one means to fight. And England has not had the remotest intention of indulging in war to prevent the dismemberment of China. Mr. Stead, writing from the point of view of the British position and policy, makes the following pertinent comments:

The Independence and Integrity of China.

As the immediate result of this imbecility, Russia and France proceeded to compel the independent Chinese Government to grant them leases and concessions.

sions which made mince-meat of the integrity of Chinese Russia secured a lease with immediate occupation of the great fortress of Port Arthur, which is the key to Peking, while France demanded a coaling station at Kwang-Chau in Hainan, the right to make a railroad into Yunnan, and a promise that no cession of territory shall be made to any other power in the Yang-tse valley and in certain other provinces, which include the region opposite Hong Kong. This put our government into a very pretty hole. For they could not protest against the French demand for a veto on cessions of Chinese territory on the ground that such a veto would forbid our acquisition of Mirs Bay, because the House of Commons had unanimously declared in favor of the independence of Chinese territory. Neither could they consistently seize any Chinese land or island without falsifying their own declaration. So when the news came that China had given way, all the warships in Hong Kong were ordered to steam off in hot haste with full bunkers and magazines to the northward. What they have to do there does not as yet appear. Ministers, thanks to their temporary obsession by Sir Ashmead-Bartlett, appear to have with perverse ingenuity locked against themselves every door through which they might have found an exit.

The Russians at Port Arthur and Tallen-Wan. When all this Ashmead-Bartlettism is brushed away from the brain, it will appear that things have gone very well. Our interests in China, we have declared

times without ceasing, are not territorial, but commercial. If Russia had obtained Port Arthur and Talien-Wan without undertaking at the same time to respect the existing liabilities of the estate, we should have had fair reason to fear that our commerce might be strangled by a prohibitive tariff. But Russia has carefully avoided doing anything to which we can take exception. She has carried out to the letter the programme which Madame Novikoff frankly proclaimed in the Observer months ago. She has acquired a right to the usufruct of Port Arthur, and she is going to make an open icefree port of Talien-Wan. She is not annexing Port Arthur; she is only utilizing it. All China's sovereign rights remain intact. Every power retains intact its existing privilege of sending its warships into the har-

bor of Port Arthur. At the same time she acquires a position at the gates of Peking which enables her to dominate the Chinese Government. She will bring her railroad to Talien-Wan, and it is stated that Count Mouravieff has undertaken that it shall be a treaty port, with only one difference: the 5 per cent. import duty which, with two and a half likin duty, is the maximum which can be charged on goods entering any treaty port, will be collected by Russian officials instead of by those under the orders of Sir Robert Hart. As it is absolutely certain that Russia, by bringing the Siberian overland railroad to Talien-wan, will quadruple British trade with Manchuria, it ought to have been an object of our policy to help her to get there as speedily, as possible. Mr. Balfour recognized this twelve months ago. If he had only stuck to it and snuffed out Sir Ashmead we should not have had the foolish flusterwhich shamed us before Europe and Asia last month,

MR. GEORGE CURZON.

(Parliamentary under-secretary for the Foreign Office.)

Russia The Russians seem to have done their business with a steadiness and resolution which com-Japan. mand our respect and admiration. They seem to have not only compelled the Chinese to do their bidding, but, what is much more marvelous, to have come to terms with the Japanese. They seem to have satisfied the latter that they are not going to annex Corea, and there is talk of some understanding about Wai-Hai-Wei. Of course, if we were going to fight Russia we might well be alarmed at a rapprochement which deprives us of our only possible ally in the far East. But as we are not going to fight Russia, it is very much to be desired that Russia should establish good relations with Japan. Acute antagonism between Japan and Russia would be a constant menace to the peace of the world. Our interest as a commercial nation-nay, as the queen of all the commercial nations-is to promote all efforts to establish good relations between our neighbors. Our friendly offices as peacemaker should be at the service of all those who are in danger of a misunderstanding threataning the peace of the world. Instead of this, the Ashmead-Bartletts—inferior and superior—and their henchmen in the press habitually assume that it is our interest to set the nations by the ears—at least, when one of the nations happens to be Russia.

England Since Mr. Stead wrote the foregoing paragraph the situation has made and Joins paragraph the Scramble. further progress, in a manner which entirely sustains his point of view. The British Government has obtained the lease or cession of Wei-Hai-Wei on terms identical to those upon which China had granted Port Arthur, in the immediate vicinity, to the Russians. At present, as ever since the close of her war with China, Japan remains in possession of Wei-Hai-Wei, awaiting the full payment of the indemnity due from China. There is probably an understanding between England and Japan; and we shall expect to see the Japanese secure compensation, either in some other part of China or-what is more probable—in Corea. Color would seem to be given to this last suggestion by what has appeared within the past few weeks to be the gradual withdrawal of Russia from all attempts at the exercise of paramount influence in Corean Mr. Balfour made a great speech in the House of Commons early in April on the Chinese question, in which he predicted the speedy collapse and partition of the Chinese empire—a complete abandonment, let it be observed, of the position that had so recently been taken by the House of Commons at the instigation of Sir Ellis Ashmead-Bartlett and young Mr. Curzon. It is Mr. Balfour's idea that England must reconcile herself to the inevitable and prepare to get her full share in the game of grab. He holds firmly, however, to the idea that no matter who gets the pieces, there must be no exclusive trade policy exercised, but, on the contrary, all parts of the Chinese empire must be thrown open on equal terms to the commerce of the world.

England's The British press and public were a Attitude little slow in gatting all America. up about the Cuban question and the impending conflict between the United States and Spain. But nothing could have been more clear-sighted, fair-minded, and in general, also, well-informed, than the views that had been adopted by almost the entire United Kingdom as the situation grew acute in April. friendship of the British Government has been highly appreciated by our authorities at Washington and by American public opinion at large. This friendship—which has not involved any failure on the part of Great Britain to treat Spain with all the courtesy that has been due to her as also a friendly nation—has in point of fact been

of more real use and satisfaction to us in America than a treaty of alliance could have been. For if the rapprochement between England and America had been too marked we might have been embarrassed in our friendly relations with some of the continental powers, and thus a coalition might have been provoked for the benefit of All that we wanted from England was courtesy, fair play, and an open-minded readiness to believe that we were not acting without ample reason or proper motives. It is precisely this treatment that we have in fact received; and it will not be forgotten. Our traditional friendship with Russia remains undisturbed, and it might be a fortunate thing upon the whole for the peace and progress of the whole world if the steadily growing friendship between England and the United States should be accompanied by a similar growth of friendly relations between the British empire and Russia. Although in another paragraph we have frankly deprecated the joint action of the powers in addressing the United States Government on the Cuban question, it is certainly to be admitted that Sir Julian Pauncefote's consent to accompany the other ambassadors was very tactful, inasmuch as Spain was thus left without any excuse or reason for complaining that England was openly siding with the United States.

A Brateful Change of Policy. The attitude of England at the present juncture is in very agreeable contrast to that which she assumed when, late in the ten years' Cuban war, we were disposed to intervene. Mr. Stead—who reminds us that even the Turk never gives up a province without a fight, and that it was all along futile to hope that Spain would withdraw from Cuba peaceably—comments as follows upon the changed attitude of England:

In 1876, when American intervention in Cuba was on the tapis, the British Government was sounded as to whether it would support the action of the cabinet of Washington. Lord Derby, then foreign minister, refused. The other European powers were even more hostile, and the intervention was abandoned. It is not likely that America will invoke either British or European support on this occasion. Spain, however, maj appeal to the great powers for support against American "aggression." In such a case the action of our government should be the reverse of that of Lord Derby in 1876. We should tell Spain outright that she had better cut the loss, and thank God she is quit of a possession which has been a running sore for years and which never again can become a valuable property. America neither seeks nor needs our help. If the worst comes to the worst she needs no help to whip the Spaniard. But she may welcome our support in combating any disposition on the part of European powers to help Spain and in bringing the strongest moral pressure to bear at Madrid to avert war.

Mr. Stead goes on to apply the Bulgarian parallel in a specific and a highly pertinent manner:

Readers of the preface to the last edition of Kinglake's "History of the Crimean War" will remember the account which he gives of the effect of the death of Nicholas Kireeff, who was killed at the beginning of the Servian war, upon the national sentiment in Russia. Nicholas Kirceff-the brother of Madame Novikoff and an officer of the guards-had gone to Servia as a Russian volunteer, and fell fighting pierced with five wounds at the head of a Servian regiment at Zaitschar. His heroic death fell, says Kinglake, like a spark upon the charged mine of Russian enthusiasm. It was that which made the Russo-Turkish war inevitable. It was the incident that fired the popular imagination that precipitated war. Just so in the United States. The fate of the Maine has decided the destinies of Cuba. The need for intervention in Cuba, as in Bulgaria, was not made one whit more urgent by the dath of Kirceff or the blowing up of the Maine. But it was made more obvious, and the result is likely to be the same in both cases.

Cuba is America's Bulgaria. As Russia was Bulgaria. Cuba in 1876, so is the United States to Cuba in 1898. The Spaniard, like the Turk, is holding on to a province which he has long since

forfeited all right to govern. The Cubans, like the Bulgarians, have suffered horribly. The entire country population in the four western provinces of Cuba, about 400,000 in number, were driven last year by General Weyler's order into rough improvised open-air pris-These prisons are constructed by digging a trench round a village or town, stringing a barbed-wire fence on the outside of the trench, and placing a small blockhouse garrisoned by soldiers at intervals along the trench, so that every part of the rude fortification is covered by their rifles. Within this prison wall the miserable inhabitants were free to starve to death or perish of pestilence. For, unlike the inmates of other prisons, the luckless reconcentrados, or concentrated ones, were provided neither with food nor medicine. They died like rotten sheep. In plain English, the Spaniards have murdered by slow torture 200,000 out of 400,000 of their subjects as a mere measure of precaution, and 100,000 are slowly dying under indescribable torments. The Spaniards have sent 200,000 troops to the island to repress the insurrection. Of these, only 60,000 remain fit for duty. The whole island is a shambles and a pest-house.

Mr. Stead's point of view respecting Peace, War, and Moral the clear duty of the United States to Leadership. step bravely into Cuba and restore order is simply the view that prevails overwhelmingly among the best, most humane, and most peace-loving people of Great Britain. Nothing would be more incomprehensible to these Englishmen—the very men who in that country are the leaders in movements for peace and arbitration-than the language and conduct of certain gentlemen in the United States who have clamored for peace at any price. These Americans have either totally ignored the conditions that prevail in Cuba or else have boldly taken the cynical position that Cuban distress is none of our concern. In their attempts to rebuke the nation's real conscience, courage, and sense of duty, these men have only discredited their own claims to moral leadership.

General Kitchener's Advance
on the Nile.

The absorption of the American
newspapers in the Cuban question
must account for the fact that the
great battle on the Nile, fought at daybreak on
the morning of Friday, April 8, seems to have

MAP ILLUSTRATING THE ADVANCE TO SOUDAN AND THE BATTLE OF APRIL 8.

attracted almost no attention whatever in this country. From time to time we have commented upon the leisurely but effective advance of the Anglo-Egyptian expedition that is moving up the Nile toward Khartoum, under the leadership of the Sirdar of the Egyptian army, Gen. Sir Herbert Kitchener. Many a previous expedition up the Nile, in ancient as well as modern history, has proved disastrous. The present movement now bids fair at every stage to be a brilliant success. What has made the difference? Certainly not the numerical magnitude of the invading army, nor yet, on the other hand, failure of the fanatical men of the desert, the "dervishes," to fight with fierce courage, in great numbers, and with no small degree of skill. Where others have failed Sir Herbert Kitchener is succeeding, because he is using machinery. The new forces of that sort must henceforth turn the scale in all serious warfare. Sir Herbert is proceeding on the plan of moving a stage at a time and pausing until his corps of railroad builders have brought their construction clear up to his camp. The railroad brings plenty of supplies and obviates all necessity of haste. On the Nile itself, moreover, he has an abundance of gunboats of very light draught, all armed with Maxim and other rapid-fire machine guns. Great care has been taken to protect the rear and keep the railroad open—although at one time a few weeks ago, with his encampment at Berber, some distance in advance of the rail, it had been feared that the dervishes might cut in behind.

This, however, has not happened. What Decisive the dervishes did was to cross the Nile at Shendy and advance up the river as if to meet the British and Egyptian troops at Berber. They selected their ground at Dakhila, where the Atbara River joins the Nile. Meanwhile the British gunboats had pressed forward and captured Shendy, and the dervishes, who were 20,000 strong, were cut off from their supplies. The British advanced promptly to meet them in their intrenched position. Sir Herbert Kitchener commanded some 12,000 Egyptian troops, besides several battalions of British regulars. fighting lasted several hours and was no mere The dervishes, who were totally routed, left about 2,000 men dead upon the field. The British troops sustained very slight loss, while the Egyptian army seems to have sacrificed 50 or 60 men killed, with 300 or 400 wounded. The great slaughter of dervishes was evidently due in large part to the effective use of the terrible Maxim guns, which discharged bullets like a hail-storm. The railroad will now be pushed forward as fast as possible, and it is to be supposed that the headquarters will be advanced to Shendy. The gunboats will have to wait for high water in order to get past the sixth cataract; and after that the advance to Khartoum ought to be quick work. The dervishes were composed of two main bodies of troops, one of them led by Osman Digna, who has somewhat recently composed his differences with the Khalifa, in order that the whole Soudanese world might make a united stand against the British. The Khalifa keeps his headquarters at Omdurman, opposite Khartoum. His troops were led in the fight of April 8 by the Emir Mahmoud, who was captured with all his belongings, while Osman Digna had the luck to escape.

The English are indeed giving a good india and English Parties. account of themselves in this Nile campaign, and are plainly doing a necessary work for progress and civilization. It is a pity that they cannot show an equal claim upon the world's approval in their struggle with the tribesmen on the northwest frontiers of India. The British Liberals gain steadily whenever a by-election gives them a chance to show that the party pendulum is beginning to swing back; but they would gain more rapidly if they should concentrate vigorously in opposition to the series of blunders that has characterized the Indian policy of the Salisbury administration. worst of these blunders, of course, is the needless, costly, and destructive war on the frontier. there are other mistakes only less serious, among which are the enforcement of a press-gag law that is almost as arbitary in its censorship as anything in Russia, while arrest and detention on suspicion without trial has also become a feature of the present government of India, and other serious grounds of criticism could readily be mentioned. It would seem that the Liberals must first decide among themselves who is to be their permanent leader before they can present as strong a front as the facts in the political situation would readily afford them. Mr. Gladstone is steadily growing feebler, and the sad news of his death may be expected at any time in the early future. It is reported that his literary executor and biographer is to be Mr. John Morley. His political heir, however, is not as yet distinctly visible. At one time it was supposed without doubt that Lord Rosebery would hold his own as the fully accepted head of the Liberal party; and there are signs that he is about to emerge from his retirement and throw himself actively again into political life. Leadership is the crying need of the Liberals, and until the party is reorganized it will have to look to the London newspapers for its opinions and guidance.

There has been very much more dis-Leadership and cussion, however, of the question Cabinet Government. upon whose shoulders Lord Salisbury's mantle should descend than about the future leadership of the Liberals. It seemed quite probable a few weeks ago that Lord Salisbury's health might compel him to retire altogether from official life. This event would have vacated at once the premiership and the Foreign The friends of the Rt. Hon Joseph Chamberlain—with whom the London Times seems now also to be identified—would doubtless do everything in their power to press that gentleman's claims at least to the Foreign Office, if not to the premiership, in case of Lord Salisbury's retreat to private life. It is more probable, however, that the Duke of Devonshire would become prime minister. The old-fashioned Tories are opposed to the rapid advance of Mr. Chamberlain, whom they still look upon as Liberal Unionist rather than as Conservative. They would probably rally around Mr. Arthur Balfour for the Foreign Office. The tendency to govern the country by the executive rather than by the legislative will is now being much commented upon in England. The cabinet decides upon its own policies, and it pushes them through the House of Commons with much less regard for debating than a few years ago. And the cabinet as a whole is ruled by its inner circle, which in turn reflects the will of the prime minister. There is much complaint that the House of Commons is losing its initiative and that the cabinet is growing autocratic. The past two or three administrations have witnessed precisely the same tendency in the United States, where the immense pressure upon Congress to subordinate its views to the policy preferred by the executive constitutes a wide departure from the spirit and intention of the Constitution, and also a decided change from the practice that formerly prevailed.

Mr. Gerald Balfour—who is Irish Sec-Success of the Irish retary in the present ministry and, like his brother, the Rt. Hon. Arthur Balfour, a nephew of Lord Salisbury and a member of the "family ring" that is supposed to run the cabinet—has made himself a great man at a stroke by his remarkable success in securing the acceptance of his Irish Local Government bill. He had in a very frank and conciliatory way submitted the advance draft of his bill to the leaders of all parties, and particularly to the Irish members of Parliament themselves. The bill has been making its way rapidly and prosperously through the successive stages of Parliamentary consideration, and may be regarded as already safely upon the statute-books. Some of the

Orangemen have protested vehemently that this Tory measure is worse than Mr. Gladstone's proposed home rule, but nobody has given much attention to their complaints.

The march of events has been strength-Cecil Rhodes on Top Again. ening the British position in South Africa that was so rudely shaken by the criminal blunder of the Jameson raid. Cecil Rhodes has been in England the past month, and has found himself solid once more in the directorate of the British South Africa Company, with everybody relying upon him for the further development of Charterland. success of his railroad projects has not only strengthened his personal hold upon the situation in the new regions north of the Transvaal, but has also put the touch of final certainty upon the supremacy of Great Britain in that part of the world. Furthermore, the partisans of Mr. Rhodes have secured an important victory in the Cape Colony elections, and it is considered altogether likely that he will soon be back in his old place as prime minister of Cape Colony, while directing the immense affairs of the South African Company and controlling the administration of the vast region known as Charterland.

The month of March witnessed the The Federcompletion of the work of the convenation of Australia. tion which had been sitting for two months in Melbourne elaborating the so-called Commonwealth bill for the creation of a united The month of April has in its turn witnessed a great agitation and discussion in the various colonies over the question of ratifying the constitution adopted by the Melbourne conven-All the colonies were represented in the convention except Queensland. If any three colonies ratify the scheme it will go into effect as respects such colonies, with the hope and expectation that the other colonies will in due time seek and gain admission to the union. It is not, however, certain that even three of the colonies will at once ratify the convention's scheme. opposition exists, and the fight will be a doubtful Nevertheless, the new activity of the one. European powers in the Pacific will doubtless have some effect to make the people of Australia realize the importance of the maxim that there is strength in unity. The matured project now under consideration has really been in the making for a number of years. In its present shape the bill not only provides for the direct popular election of the members of the lower house of the federal Parliament, but it abandons the original plan of electing the upper house by the colonial Parliaments.

# RECORD OF CURRENT EVENTS.

(From March 21 to April 22, 1898.)

### PROCEEDINGS IN COMGRESS.

March 21.—The House passes the Maine relief bill.

March 22.—The Senate debates the national quarantine bill....The naval appropriation bill is reported to the House from committee.

March 23.—The Senate passes the Maine relief bill....
The House decides the contested election case of Thorp against Epes, of the Fourth Virginia District, in favor of Thorp.

March 24.—Mr. Thurston (Rep., Neb.) addresses the Senate on the Cuban question, advocating armed intervention....The House debates the naval appropriation bill

March 25-26.—The House debates the naval appropriation bill.

March 28.—President McKinley sends to both houses the report of the *Maine* Court of Inquiry, accompanied by a message. In the Senate the documents are referred to the Committee on Foreign Relations, and in the House to the Committee on Foreign Affairs.

March 29.—Resolutions on the Cuban question are introduced in both houses.

March 30.—The Senate passes the Alaska civil government bill....The House resumes consideration of the naval appropriation bill.

March 31.—The Cuban question is discussed in both houses.

April 1.—The House passes the naval appropriation bill, so amended as to provide for increasing the number of torpedo-boats and torpedo-boat destroyers from six to twelve each, and carrying a total of more than \$39,000,000 in direct appropriations.

April 4.—Speeches favoring intervention in Cuba are made in both houses.

April 5.—In the Senate five members speak in favor of an immediate declaration of war against Spain.

April 6.—The Senate debates the sundry civil appropriation bill....The House considers the army reorganization bill.

April 7.—The House recommits the army reorganization bill, after striking out everything except the first two sections, providing for the three-battalion formation.

April 11.—President McKinley, in a message to Congress, asks authority to intervene in Cuba by force to reestablish peace and order in the island.

April 12.—The Cuban question is debated in both houses.

April 13.—The House passes, by a vote of 322 to 19, the resolutions reported by the Committee on Foreign Affairs, directing President McKinley to intervene in Cuba; there is much excitement and disorder.

April 14-15.—The Senate debates the Cuban intervention resolutions reported by the Committee on Foreign Affairs....The House passes a bill settling title to lands in Indian Territory.

April 16.—The Senate passes the Cuban resolutions reported by the Committee on Foreign Relations by a of 67 to 21, and an amendment recognizing the indeence of the republic of Cuba is adopted by a vote

of 51 to 37, and a further amendment disclaiming any intention to exercise sovereignty over the island, except for purpose of pacification, is agreed to unanimously.

April 18.—The House agrees to the Senate Cuban resolutions, with the exception of the amendment recognizing the present republic. Conferences between the

HON. THEODORE ROOSEVELT.

houses finally lead to the Senate's acceptance of the resolutions in this form, and they go to President McKinley for approval.

April 21.—The Senate passes the bill providing for the enlistment of State militia under the national Government in time of war, amending it so as to make the term one year instead of three.

April 22.—After conference, the national volunteer bill is passed by both houses of Congress in amended form, with two years as the term of enlistment.

THE UNITED STATES AND SPAIN—PREPARATIONS FOR WAR.

March 21.—Secretary Long names the two Brazilian cruisers recently purchased the *New Orleans* and the *Albany*.

March 23.—The monitors *Terror* and *Puritan* are ordered to join the fleet at Key West....The government auxiliary naval board purchases a steel tug at New York City.

March 24.—The dispatch boat Dolphin and the yacht Mayflower are placed in commission at the New York Navy Yard....Restrictions regarding enlistments in

the navy are removed....Admiral Sicard is relieved from command of the fleet at Key West on account of ill health, and Captain Sampson is ordered to succeed him.

March 25.—The Spanish report of the cause of the Maine disaster is received at Madrid....The United States purchases a first-class torpedo boat built in Germany....Commodore Schley is ordered to command the flying squadron at Hampton Roads....Three large steam yachts and a tug are added to the auxiliary fleet for service as dispatch and patrol boats.

March 26.—The verdict of the *Maine* Court of Inquiry is communicated to the Spanish Government....The New York national guard and naval reserves are ordered to hold themselves in readiness for action.

March 27.—The United States cruisers San Francisco and New Orleans sail from England for this country.

March 28.—The testimony taken by the *Matne* Court of Inquiry is made public....The Spanish Government announces that it will make no objection to the sending of relief to the Cuban *reconcentrados...*.Commodore Schley takes command of the flying squadron.

March 29.—United States Minister Woodford holds a conference at Madrid with Premier Sagasta.

March 30.—The United States buys the steam yacht Aegusa in Sicily for \$300,000.

March 31.—Captain-General Blanco issues a decree abrogating the reconcentration edict of General Weyler in the western provinces of Cuba....Captain Sigsbee makes a statement regarding the *Matne* disaster to the Senate Foreign Relations Committee....New York Legislature votes \$1,000,000 as an emergency war fund.

April 1.—The Spanish cruisers *Vizcaya* and *Oquendo* sail from Havana....The Iowa Legislature appropriates \$500,000 for a war fund.

HON. CHARLES EMORY SMITH.

(Nominated April 21 as Postmaster-General to succeed
Mr. Gary, who retires because of ill health.)

THE PRINCE OF WALES FIRING A MAXIM GUN.

(Mr. Maxim stands at his side.)

April 2.—It is announced that the Spanish torpedoboat flotilla has reached the Cape Verde Islands....An 1,800-ton cruiser is purchased in England for the United States....It is ordered that salvage operations on the wreck of the *Maine* in Havana harbor be discontinued ....Secretary Gage and Chairman Dingley, of the House Ways and Means Committee, hold a council with President McKinley on war-revenue measures.

April 4.—Pope Leo XIII. offers to mediate between Spain and Cuban insurgents, and urges Spain to suspend hostilities....Steamers are sent from Key West to Havana to bring home Americans....The flag is removed from the wreck of the *Matne...* Many Spaniards enlist in the volunteers at Havana....The Navy Department orders the immediate purchase of ten auxiliary cruisers.

April 5.—Consul-General Lee is ordered to return from Havana.

April 7.—In reply to a joint note from the European powers in the interest of peace, Sefior Gullon, the Spanish foreign minister, states as the opinion of the cabinet that Spain has reached the "limit of international policy in the direction of conceding the demands and allowing the pretensions of the United States"....The diplomatic representatives in Washington of the six great European powers present a joint note to President McKinley expressing the hope that peace with Spain may be preserved; the President, in reply, declares that the war in Cuba must cease.

April 8.—The ram Katahdin joins the flying squadron in Hampton Roads.

April 9.—The Spanish cabinet decides to suspend hostilities in Cuba....The Spanish armored cruisers Cristobal Colon and Infanta Maria Teresa sail from Cadic to join the torpedo flotilla at the Cape Verde Islands.... The United States cruiser Topeka and the United States torpedo-boat Somers sail from England to the United

States....The Massachusetts joins the flying squadron....Consul-General Lee and the other American consuls in Cuba sail for the United States.

April 12.—Consul-General Lee declares before the Senate Committe on Foreign Relations that Spanish officials in Havana knew of a plot to blow up the Maine.

April 13.—The Spanish cabinet votes an extraordinary war credit....The Navy Department at Washington orders the purchase of the American line steamers St. Paul and St. Louis....The flying squadron sails from Hampton Roads on a practice cruise....The Michigan Legislature appropriates \$500,000 for emergency military purposes.

April 14.—A council of the Spanish cabinet decides to convoke the Cortes on April 20, five days earlier than the date set for its assembly....Negotiations for the sale of the cruiser Gartbaldt by Italy to Spain are suspended....The cruiser New Orleans, lately purchased from the Brazilian Government, arrives at New York with the cruiser San Francisco.

April 15.—The British Government instructs the Jamaica authorities that coal will be contraband of war....Orders are issued to concentrate nearly all of the regular army of the United States at the Gulf ports of New Orleans, Mobile, and Tampa, and at Chickamauga Park....The Government charters the steamships St. Louis, St.-Paul, Paris, and New York, of the American line....The Twenty-fifth Infantry, U. S. A., goes into camp at Chickamauga Park....The Massachusetts Legislature appropriates \$500,000 to increase the efficiency of the national guard.

April 16.—The Navy Department orders the purchase of the steamships *Yorktown* and *Juniata...*.The army officials call for bids for the transportation of troops to Southern points.

April 18.—Commodore Howell is placed in command of the North Atlantic patrol fleet, consisting of the Yosemite, the Prairie, the Yankee, and the Dixie.

April 19.—United States troops from many garrisons move to the points of mobilization on the Gulf and at Chickamauga Park.

April 20.—President McKinley signs the resolutions of Congress and sends an ultimatum to Spain demanding that her land and naval forces withdraw from Cuba and requiring an answer before noon of April 23 .... The Spanish minister at Washington requests and receives his passports.... The Spanish Cortes meets in Madrid; the Queen Regent reads a warlike speech from the throne.

April 21.—Before Minister Woodford can deliver the ultimatum of the United States to Spain he is notified by the Spanish Government that diplomatic relations with the United States are at an end; he then leaves Madrid for Paris, under guard, after intrusting legation affairs to the British embassy....After notifying representatives of foreign powers of its intention to blockade Havana, the Government at Washington orders the fleet at Key West under Admiral Sampson to sail....A blockade of the Philippine Islands by the Asiatic squadron under Commodore Dewey is decided on at Washington....The Navy Department buys the Brazilian warship Nictheroy and the yachts Corsair and Penelope....Rhode Island appropriates \$150,000 to equip militia.... Enlistments of volunteers are reported throughout the Union....The Spanish Government orders out 80,000 reserves....Great Britain notifies Spain

that coal will be considered contraband of war....Spain lands 5,000 troops on the Canary Islands....Captain Sampson is raised to the rank of rear admiral.

April 22.—It is decided to issue a call for 100,000 volunteers....The Spanish merchantman Buenaventura is captured by the United States gunboat Nashville off Key West.

## POLITICS AND GOVERNMENT-AMERICAN.

March 23.—The New York Legislature passes the bill for the reform of the primaries (see page 587).

March 24.—The battleships Kearsarge and Kentucky are launched at Newport News.

March 25.—Democrats, Populists, and Free Silver Republicans in Oregon adopt a common platform.

March 29.—Governor Black, of New York, signs the primary reform bill.

March 31.—The New York Legislature adjourns.

April 5.—Municipal elections are held in many interior and Western cities. In Chicago a majority of the aldermen elected are pledged to oppose the granting of fifty-year franchises to street railroads; in Milwaukee David S. Rose, Silver Democrat and Populist, is chosen to the mayorship; in Kansas City, Mo., Lincoln, Neb., and Tacoma, Wash., the Republicans were generally successful.

April 6.—Governor Dyer (Rep.), of Rhode Island, is reëlected by a large majority.

April 12.—A committee of the Nebraska Legislature reports that the amount of money lost to the State through negligent and dishonest officials is more than \$1,300,000.

April 14.—The Michigan Legislature concludes its extra session, having increased from 1 to 5 per cent. the tax on the business of express companies....Governor Wolcott, of Massachusetts, signs the bill providing for electrical executions.

April 21.—Postmaster-General Gary resigns office; President McKinley nominates Charles Emory Smith as his successor.

#### POLITICS AND GOVERNMENT-FOREIGN.

March 21.—The Austrian Reichsrath reassembles.

March 22.—The annual conference of the British Liberal Federation opens at Leicester.

March 23.—By a vote of 207 to 7, the Italian Chamber of Deputies adopts the report recommending "political censure" against ex-Premier Crispi on account of his pecuniary relation to the Bologna branch of the Bank of Naples.

March 24.—The Chinese Government agrees to all of Russia's demands in the matter of leasing Port Arthur and Talien-Wan.

March 25.—Elections in Cape Colony result in a small majority for the Progressives....Signor Crispi resigns his seat in the Italian Chamber of Deputies....One hundred officers of the Russian Black Sea fleet and dock-yard officials are arrested, charged with bribery and corruption; Admiral Kopyloff is dismissed.

March 26.—Orders are issued for the mobilization of the British fleet at Hong Kong.

March 27.—Elections in Spain for the lower house of the Cortes are favorable to the Sagasta ministry.

March 28.—The German Reichstag adopts the naval bill without division.

March 29.—The British House of Commons appoints

a committee to consider the advisability of placing the Indian currency on a gold basis.

March 30.—The entire autonomist cabinet of Porto Rico resigns....The British House of Commons, by a vote of 243 to 138, rejects a bill to amend the Irish land laws in favor of the tenants and providing for restoration of evicted tenants.

April 4.—It is announced that England has arranged with China and Japan to take the port of Wei-Hai-Wei when the indemnity to Japan shall have been paid by China.

April 5.—The Radicals secure a majority in the Danish parliamentary elections.

April 11.—The elections to the Spanish Senate result in a large majority for the ministry.

## INDUSTRIAL, COMMERCIAL, AND FINANCIAL DOINGS.

March 22.—The Chinese loan is largely oversubscribed in Berlin.

March 24.—It is announced that the Bank of Spain will lend the Spanish Government about \$40,000,000, guaranteed by the new treasury bonds.

April 1.—South Wales coal miners to the number of 40,000 go out on strike.

April 2.—The Johnson Steel Company, of Cleveland, is reorganized as the Lorain Steel Company, with a capital of \$14,000,000.

April 11.—Many of the New England cotton-mill operatives on strike against reductions in wages return to work.

April 13.—Spanish 4s suffer a marked decline on the European exchanges.

### OTHER OCCURRENCES OF THE MONTH.

March 22.—Mr. Gladstone arrives at Hawarden.... The bark Almy, bound for Alaska, is found wrecked.

THE LATE GEN. JOAQUIN CRESPO. (Killed in battle in Venezuela April 17, 1898.)

March 23.—Forty-eight men with the Newfoundland sealing steamer *Greenland* perish in the ice-floes while searching for seals.

March 26.—The Oxford-Cambridge boat-race is won by Oxford.

March 31.—An earthquake in California does serious damage, especially to the Marc Island Navy Yard.

THE LATE CARDINAL TASCHEREAU,
Archbishop of Quebec.

April 3.—Shawneetown, Ill., is flooded by a break in the Ohio River levee and many lives are lost.... Avalanches in the Chilkoot Pass, Alaska, cause the death of more than 150 persons.

April 12.—The plant of the Pennsylvania Plate Glass Company in North Irwin, Pa., known as the largest independent glass works in the country, is destroyed by fire, at a loss of \$750,000.

### OBITUARY.

March 20.—Dr. Joseph Henry Allen, distinguished Unitarian clergyman and author, 78.

March 21.—Gen. George Washington Rains, Confederate veteran, 81.

March 24.—Rev. Dr. G. H. Emerson, well-known Universalist clergyman and editor, 75.

March 25.—James Payn, English novelist and journalist, 68....Truman P. Handy, prominent Cleveland banker, 91.

March 26.—Representative John Simpkins, of the Thirteenth Massachusetts District, 36.

March 27.—Mrs. Delia Tudor Stewart Parnell, daughter of the American Commodore Stewart and mother of the late Charles Stewart Parnell, 83....Abner Cheney Goodell, of Salem, Mass., a well-known inventor, 93.

March 28.—Anton Seidl, orchestral conductor, 48.

March 29.—Judge James Goggin, of Chicago, 55.... Judge George W. Harmon. oldest member of the Ver mont bar, 86....William H. Edmonds, founder and editor of the Southern States' Magazine, of Baltimore.

March 31.—James L. Wolcott, formerly Chancellor of Delaware, 56.

April 4.—District Attorney Eugene Burlingame, of Albany.

April 7.—Margaret Mather, the actress, 38....Rev. William M. Thayer, author of books for the young, 78....Lieut. David Daniels, navigating officer of the coast-defense ram *Katahdin*, 42.

April 8.—Gen. William P. Hardin, of the Confederate army, 82....Ex-Congressman S. S. Turner, of Virginia. April 11.—Rev. Dr. Frederick William Conrad, for

many years editor of the Lutheran Observer, 82.

April 12.—Cardinal Taschereau, of Canada, 78.

April 15.—Robert Purvis, last survivor of the original American Anti-Slavery Society, 88....Andrew Akin, Kansas pioneer, 88.

April 16.—Robert M. McLane, formerly United States Minister to France, 83....Charles W. Hackett, chairman of the New York Republican State Committee, 44.

April 17.—Gen. Joaquin Crespo, formerly President of Venezuela, 54.

April 19.—George Parsons Lathrop, poet and novelist, 47.

April 21.— United States Senator Edward Cary Walthall, of Mississippi, 67.

## SUMMER AND AUTUMN GATHERINGS OF 1898.

POLLOWING are the announcements of some of the more important conventions and assemblies for various purposes to be held during the coming six months:

SCIENTIFIC AND PROFESSIONAL.

The American Association for the Advancement of Science will celebrate its fiftieth anniversary in Boston August 22–27. It is expected that this will be the most important scientific gathering ever held in the United States. As a number of foreign scientists will take part and foreign institutions send delegates, the meeting will have an international character. During and immediately preceding the general meeting several affiliated societies will meet in Boston, including the American Forestry Association, the American Geological Society, the American Chemical Society, the Society of Economic Entomologists, the Society for Promotion of Agricultural Science, the American Mathematical Society, and other important bodies.

The National Educational Association is to meet this year at Washington, D. C., July 7-12.

The American Society of Mechanical Engineers will meet at Niagara Falls, from May 31 to June 3, the American Institute of Electrical Engineers at Omaha, June 27-29, and the American Society of Civil Engineers at Detroit, July 28-29. The annual convention of the American Institute of Architects will be held in Washington, D. C., November 1.

The American Academy of Medicine and the American Medical Association will meet at Denver June 4-10, and the American Institute of Homocopathy at Omaha, June 24-29.

The American Philological Association will hold its annual meeting at Trinity College, Hartford, Conn., July 5.

MEETINGS IN THE INTEREST OF SOCIAL AND POLITICAL REFORM.

The American Social Science Association will hold its annual five days' session at Saratoga, beginning August 29. Papers will be read and discussed in the departments of Health, Jurisprudence, Education, Finance, and Social Economy. These sessions will follow meetings of the American Bar Association and the International Law Association at the same place, beginning August 22.

The quarter-centennial meeting of the National Conference of Charities and Correction will take place in

New York City May 18-25. This body held its first meeting in New York twenty-five years ago and has met annually since that time. It now has a membership of nearly 1,200 in the United States, Mexico, and Canada. It is announced that the National Prison Association will meet at Indianapolis in October.

The annual convention of the National Association of Labor Commissioners and Officials of Bureaus of Labor Statistics will be held at Detroit June 14-16, and the International Association of Factory Inspectors will hold a session at Boston September 5.

The annual meeting of the National Municipal League and the sixth National Conference for Good City Government will be held at Indianapolis May 11-13. The principal features will be the president's address by James C. Carter, New York City, the secretary's review of the year's developments along municipal lines by Clinton Rogers Woodruff, and the report of the Committee of Ten appointed at the Louisville Conference, to be presented by Horace E. Deming, of New York. The various features of the report will be discussed in supplemental papers by Dr. Albert Shaw, of New York, Charles Richardson, of Philadelphia, Dr. Frank J. Goodnow, of New York, and others, including Mayor Quincy and Hon. Charles Francis Adams, Gov. Hazen B. Pingree, Samuel B. Capen, Dr. E. R. L. Gould, and Lucius B. Swift.

The League of American Municipalities will hold its second annual convention at Detroit August 1-4. Memberships in this body are held by municipalities throughout the United States and Canada. The conventions are attended by the mayors and other officials of these cities.

INDUSTRIAL AND COMMERCIAL CONGRESSES.

An International Mining Congress will meet at Salt Lake City July 6-9. This organization is the outgrowth of the Gold Mining Convention at Denver last year. Its aims are, in brief, to promote the interests and develop the resources of the mining industry in North and South America.

The Farmers' National Congress will hold its next meeting at Fort Worth, Texas, December 6-14. It is expected that Great Britain, France, Germany, Russia, Holland, Denmark, Sweden, and nearly all American countries will be represented by delegates.

The next convention of the National Association of Credit Men will be held at Detroit June 22-24. The American Bankers' Association will meet in Denver about September 1.

#### RELIGIOUS GATHERINGS.

The great International Christian Endeavor Convention will be held this year at Nashville, on the exposition grounds, July 6-11. Although this will be the seventeenth of these annual conventions, it will be the first one to be held on Southern soil.

Mr. Moody's unique series of conferences, held annually for Bible study at Northfield, Mass., will begin this year with the World's Student Conference, July 1-10, which will be addressed by eminent speakers. The Young Women's Christian Association Conference will fill the time from July 13 to July 22, and the General Conference for Christian Workers from July 29 to August 18. During July and August Camp Northfield, for young men, will be open at very small expense for tent and board.

The National Council of Congregational Churches will assemble at Portland, Ore., July 7-13. The Congregational Home Missionary Society will meet at Cleveland in June, and the American Missionary Association and the American Board of Commissioners foreign Missions in October, the former at Concord, N. H., and the latter at Grand Rapids, Mich.

The General Convention of the Protestant Episcopal Church will meet in Washington, D. C., October 5. Of the purely ecclesiastical meetings of the year, this will doubtless be the most important. This body meets triennially.

The Brotherhood of St. Andrew will hold its annual convention in Baltimore September 28-October 2.

General assemblies of the various churches holding the Presbyterian system are to be held this year as follows: Presbyterian Church in the United States of America, commonly known as the Presbyterian Church North, at Warsaw, Ind., May 19; Presbyterian Church in the United States, commonly known as the Presbyterian Church South, at New Orleans, May 19; United Presbyterian Church of North America, at Omaha, May 25; Cumberland Presbyterian Church, at Marshall, Mo., May 19, and the Presbyterian Church in Canada, at Montreal, June 8. The General Synod of the Reformed Church in America will meet at Asbury Park, N. J., June 1.

The national Baptist anniversaries will be held this year at Rochester, N. Y., May 16-22. The Baptist Publication and Educational Societies, however, are to meet at Norfolk, Va., May 5, in connection with the Southern Baptist Convention.

Denominational meetings of young people will be held as follows:

The Baptist Young People's Union of America is to hold its eighth international convention at Buffalo, July 14-17.

The Young People's Christian Union of the Church of the United Brethren in Christ will hold its fifth biennial convention at Toledo, Ohio, June 16-19.

The Young People's Christian Union of the United Presbyterian Church of North America will hold its tenth annual convention at Saratoga, August 3-8.

The ninth annual convention of the National Young People's Christian Union of the Universalist Church will be held at Chicago, July 13-20.

The third convention of the Luther League of America will be held in New York City, October 19-21.

The Catholic Total Abstinence Union of America meets this year in Boston, August 10-12.

## MEETINGS OF WOMEN.

The National Congress of Mothers will convene again in Washington, D. C., May 2, and will remain in session a week. Provision has been made for a large attendance, and addresses will be given by prominent women on topics covering a wide field of interest.

The fourth biennial convention of the General Federation of Women's Clubs will be held in Denver, June 22-27. This will be a notable meeting, for the reason that women of the East and West will be brought together as never before in the history of the club movement.

#### REUNIONS AND ENCAMPMENTS.

The thirty-second national encampment of the Grand Army of the Republic will be held in Cincinnati, September 5-10. In the same month the Sons of Veterans will hold their annual encampment at Omaha.

The triennial conclave of Knights Templar will be held at Pittsburg, October 10-14. At Indianapolis will be held the biennial convention of the Supreme Lodge and the Uniform Rank Encampment of the Order of Knights of Pythias, August 22.

The Scotch-Irish Society of America has planned to hold its annual congress in Chicago during the first week of June.

The League of American Wheelmen will assemble at Indianapolis August 9-13.

#### EXPOSITIONS.

The Trans-Mississippi Exposition at Omaha will be open during the months of June-October inclusive, and during that time a number of conventions will be held at Omaha. The dates of several of these are noted elsewhere in this article.

The International Health Exposition will be the center of interest in questions of domestic sanitation and municipal hygiene in New York City during the month of May. The exhibits, particularly in the trained nurses' department, promise to have a distinct educational value.

### MUSIC FESTIVALS.

The national Saengerfest will be held at Davenport, Iowa, July 28-31. This annual singing festival of the Northwestern Saengerbund will probably be one of the largest conventions to be held in the middle West this year. At least fifteen hundred singers will participate, representing sixty or more societies among the German-American people of Iowa, Illinois, Wisconsin, Minnesota, Missouri, Indiana, and Kentucky. This festival is a biennial occasion.

The usual "May festivals" will be held by musical organizations in many American cities, east and west. In October will occur the famous Worcester festivals.

#### SUMMER SCHOOLS.

The coming season at Chautauqua will mark the twenty-fifth anniversary of that institution. The general session will open June 29, the collegiate department July 9, the Missionary Institute July 30, and the assembly August 2, with closing exercises August 22.

Among the summer schools devoted to special lines of work Syracuse University offers a two weeks' course in sociology, to be conducted by Prof. John R. Commons and Prof. James H. Hamilton. The sessions of this school will begin June 27. The summer law school of the University of Virginia, which was established as long ago as 1870, will hold its twenty-ninth session this year.

## THE WAR QUESTION IN CARTOONS.

DEPART.-From the Criterion (New York).

READY.-From the Criterion (New York).

A GAIN through the month of April, as in March, the American cartoonists were occupied almost exclusively with one absorbing topic—the crisis in the affairs of Spain and the United States. The European car-

toonists were only beginning to deal with that situation when the final rupture occurred on April 21. We have a large assortment of their offerings on other themes; but our readers will scarcely care this month for drawings on the Chinese question, on Lord Salisbury's temporary retirement, or on the Australian struggle over the question of federation. The two cartoons at the top of this page are reproduced from striking cover designs published by the Criterion on successive weeks last month. Mr. Wagner's drawing is strong and impressive and is notable for its refinement. In the first of the two, Columbia, as the champion of downfallen Cuba, orders Spain to depart. In the second, Columbia has taken her stand on the quarter-deck, and a row of our warships appears in the distance on the horizon. At the bottom of the page is one of the characteristic

cartoons of El Ahutzote (Mexico), in which Uncle Sam is offering Señor Sagasta his choice between Cuban freedom and war. As it turns out, the Cubans get their freedom while Señor Sagasta takes his war.

UNCLE SAM: "Take your choice, Sefior Sagasta, FREE CUBA or WAR!"

From Le Abutzote (Mexico).

PEACE OR WAR-TAKE YOUR CHOICE.-From the World.

Mr. Bush, of the New York World, has turned out, in the course of the month, a great variety of striking work. The four cartoons on this page are selected from a large number, all dealing with the Spanish question, and all of them boldly conceived and powerfully drawn. We commend particularly the one in the lower right-hand corner to those excellent people who have insisted all along that they could not, for the life of them, understand what the war was about. The phrase "Remember the Maine" may be a good fighting motto for

THE COMMISSION.—From the World (New York).

the navy; but the thing always to be kept in mind—"lest we forget, lest we forget "—is the fiendish career of the Spaniards in Cuba, and the moral duty that rests upon us to drive them out of the western hemisphere.

All of the cartoons on the following page are from the recent Spanish papers published either in Madrid or Barcelona. The cartoonists of Spain always represent

"VAMOOSE!"-From the World (New York).

"LORD GOD OF HOSTS, BE WITH US YET, LEST WE FORGET— LEST WE FORGET!"—From the World (New York).

UNCLE SAM: "Now that he turns his shoulder I will give him such a lick it will be the lick of the century."

"Oh, hello! I have the pleasure to salute you, Señor."

From El Nacional (Barcelona).

The moral of the foregoing is given in the old Catalonian proverb, "Qui amenessa y no peqa per bestia queda" (He who makes a bluff and does not make it good is a dirty slob).

America as a hog. In the cartoon at the top of the page, for instance, Uncle Sam is represented threatening Spain by sending the ship Maine to Havana, whereupon Spain turns to take revenge, and Uncle Sam runs away in the shape of a hog. In the second cartoon the American hog is personated by Minister Woodford; while the Spanish nation takes the form of a dove with the head of Señor Gullon, the foreign minister. In the lower right-hand corner President McKinley is represented as a hog dressed in the Stars and Stripes, attempt-

ing in a treacherous and cowardly manner to stab the Spanish lion through the bars of a cage. In the

THE COOING AND BILLING OF DOVES!-From Don Quirote (Madrid).

UNCLE SAM AT THE CARNIVAL AT SPAIN. From Blanco y Negro (Madrid).

lower left-hand corner is a carnival cartoon, in which America in the form of a hog is represented as mingling in the gay throng and making advances to Spain, represented by a fair lady. We could multiply such cartoons, but these are enough to show the nature of Spanish wit.

THE SPANISH LION: "If I could only break the cage and get at him!"—From Don Quirote (Madrid).

TACKLE THE BIRD, OF COURSE.

SENOR SAGASTA: "If I don't fight the bird they'll both tackle me. Now, what had I better do, I wonder?" From the Journal (New York).

HOW GENERAL LEE HELD THE SITUATION. From El Ahuizote (Mexico).

TAKE THAT!-From Cuba Española (Havana).

ISN'T THIS A POSSIBILITY?—From the Tribune (Minneapolis).

UNCLE SAM (to the ambassadors, who had used French): "I only speak American, and I don't care for advice. Good-day!"

Mr. Homer Davenport, of the New York Journal, has had a very active month, and we fear he has drawn some cartoons in the excitement of the moment that he may live to regret. He was so ardent for action and so impatient of diplomatic delays that a number of his drawings reflect severely, and, as we think, very unjustly, upon President McKinley. Not because we agree with the sentiment of those cartoons, but in order that this department of the REVIEW may fairly reflect the various points of view that were prevalent in April, 1898-for the benefit of future readers who will turn the leaves of our bound volumes—we print two of Mr. Davenport's mildest jibes at the President. In one of them he represents Mr. McKinley as an old lady vainly trying to sweep back the tide of the Congressional and popular will. In another he pokes fun at the once commonly mentioned resemblance between McKinley and Napoleon. Next month, undoubtedly, we shall be able to reproduce cartoons from Mr. Davenport's pencil in which the President will be treated in a very much handsomer fashion. At the top of this page Uncle Sam is represented as giving his answer to the joint note of the powers. Mr. Davenport should certainly remember that Uncle Sam in that instance spoke through the mouth of President McKinley.

On the opposite page Mr. Neelan, of the New York Herald, turns the tables on Congress in two cartoons, which were drawn just after the President's message was sent in and while Congress seemed to be taking an undue time to agree upon resolutions. The House, however, as Mr. Corey remarks in the top cartoon, swung off at a rapid gait; and the delay was really due—as witness Uncle Sam's yawning at the bottom of the page—to a three days' debate in the Senate.

ANOTHER OLD WOMAN TRIES TO SWEEP BACK THE SEA. From the Journal (New York).

AND THEY CALLED HIM NAPOLEON. From the Journal (New York).

## THE WAR QUESTION IN CARTOONS.

THEY'RE OFF.-From the Journal (New York).

"WELL, I'M WAITING NOW."-From the Herald (New York).

BEFORE AND AFTER TAKING—RESPONSIBILITY. From the Herald (New York).

A-H-H! WILL THEY NEVER STOP TALKING! From the Journal (New York).

COLUMBIA'S NEW EASTER BONNET. From the Tribune (Minneapolis).

JOHN BULL: "What a horrible bluff those fellows are giving each other! I'll bet there'll be a scrap here in a little while and my lanky cousin will wipe up the earth with the Don."—From Wasp (San Francisco).

"BLOOD THICKER THAN WATER."

"The present friendly understanding happily existing between Great Britain and the United States becomes popular on both sides of the Atlantic."—From Punch (London).

Several of the cartoons on this page point pleasantly to the fact that John Bull is taking an unwontedly friendly interest in the affairs of the United States just now. And certainly it is true that Uncle Sam is appreciative of John Bull's bluff but honest approval. The sympathy and good-will of our English friends in this present year will avail, if we mistake not, to wipe out all old scores and grudges-which, after all, involved no sacred principles on either side, but only such differences as common sense can adjust.

UNCLESAM: "Cash for old cruisers!"—From La Correspondencia de España (Madrid).

SHE HAS TROUBLES OF HER OWN. From the Herald (New York).

"OH! DON'T GO TO WAR, SAM. IT WOULD JUST KILL ME."—Post (Cincinnati).

THE SEE-SAW OF NATIONS.

The Anglo-Saxons hold the balance of power.—From Judge (New York).

## TWO GREAT AMERICAN TREATIES:

# ONE WITH RUSSIA—RATIFIED; ONE WITH DENMARK—DEFERRED.

BY W. MARTIN JONES.

## I.—SECRETARY SEWARD'S POLICY OF EXPANSION.

T is not possible for the outside world to tell how much of truth and how much of fiction come from "reliable sources" when great state questions are under discussion and matters of international moment are receiving the attention of international agencies. The proper protection of state interests and the due observance of the amenities between nations demand a reasonable and many times a most scrupulous observance of the rights and the possible susceptibilities of contracting or interested parties. Nations deal with one another from quite a different position than that occupied by individuals. Courts of law and equity are open for the redress of wrongs suffered by men. The dream of the Utopian of the nineteenth century when nations, too, may file their briefs in courts of competent jurisdiction has not yet been realized, and they still look to the arbitrament of arms as the recourse when diplomacy fails. For this reason diplomacy, in its best and highest sense, has long been the acme of statecraft, and is cultivated in its purity and highest excellence by the best and wisest men of every civilized nation. It need not, then, be so great a matter of surprise that truth and fiction blend so frequently in "authentic" stories respecting incidents that are pending between nations.

A few days since the telegraph conveyed the intelligence around the world that the United States Government had in effect concluded the purchase of the Danish West India Islands, and it only waited an appropriation by Congress to complete the bargain and the transfer of the sov-The following day saw the wires burereignty. dened with an elaborate denial of the story-all from "reliable sources." Another day told the public that Congress was about to appropriate \$5,000,000 for the purchase of the islands—with no suggestion that the administration had concluded a treaty or even entered into negotiations with the owner of the property. There is no reason, however, to doubt the statement that the subject of the purchase of one or more of the Danish Leeward Islands has very recently received the consideration of the administration of the United States as well as that of members and committees of the two houses of Congress.

To what extent this movement has advanced is not at all an easy matter for one outside the charmed circle of the Department of State to an-

WILLIAM H. SEWARD. (In 1861.)

It is well that it is so. There is nothing yet to indicate to those on the outside whether negotiations between the governments of Denmark and the United States have been reopened for the purpose of securing a renewal of the treaty for the transfer of two of the islands that was once agreed upon or for the making of an entirely new treaty in reference to the subject. It is proper, however, to observe in this connection, and in view of so much "reliable information" that has filled the daily press for several weeks past on the subject of the Danish purchase, that the initial step in the peaceful transfer of foreign territory is not an appropriation by the legislative branch of a government of a specific amount of money to be used in such purchase. Such an act would be the extreme of legislative presumption. Appropriations for the acquisition of foreign real property have never been known to anticipate negotiations for its purchase. It would not, then, seem to be a violent presumption to assume that the administration has this subject under advisement, and that it has made some progress toward a renewal of the conditions that existed when Andrew Johnson retired from and Gen. U. S. Grant assumed the duties of President of the United States.

At the St. Louis convention the Republican party, in a very apt and diplomatic declaration, pledged itself to the policy of securing a "proper and much-needed naval station in the West Indies" by the purchase of one or more of the Danish islands. Since the incoming of the present administration the subject of this declaration of the Republican platform has received much attention at the hands of the daily press of the nation, and not a little misconception of the subject has obtained throughout the country. fair illustration of this misapprehension is contained in a leading editorial that appeared a few weeks ago in a well-known daily paper published in New York State, under the caption "The Danish Islands." Two paragraphs of this editorial were as follows:

These islands have been for sale for many years at a very reasonable price. Our Government has no moral right to declare that Denmark shall forever own them, and it cannot prevent a change of sovereignty in case Denmark chooses to abandon them. The only proper course to prevent a change in sovereignty to another European power is for our Government to pay a reasonable sum and raise the American flag. It is a case in which a dog-in-the-manger policy is dangerous and unjust.

The convention at St. Louis took the right view of the matter and the purchase of the islands should be undertaken. Secretary Seward wanted to buy them, but he was not supported by Congress because our debt was then large and pressing.

It is fair and only an act of justice to a friendly nation, as well as a recognition of the truth of history, that two very pronounced statements in this editorial should be materially modified. There is no sign hung on the Danish islands ad vertising them "For Sale," nor is it true that the reason they were not purchased by the United States Government thirty years ago was because Secretary Seward was not supported by Congress on account of "our debt being then large and pressing." These are not very material facts in the case, but the student of history, at least, will justify a correction that will place the responsibility for the failure of this country to acquire title to part of the holdings of Denmark in the western hemisphere where it belongs; and no one who loves fair play will fail to commend a modification that will not unnecessarily wound the sensitive nature of a people who have shown in many ways their kindly feelings for the people and Government of the United States.

The nation has come a long way from the time when William H. Seward, looking into the future with the foresight of true statesmanship, conceived the great importance to the nation and to the nation's future welfare of its becoming the owner of valuable real-estate properties then belonging to foreign countries. The present generation is more or less familiar with the events that crowded upon the closing days of the great rebellion—some of it by having been actors in one way or another in or witnesses of those days that saw the lifting of the black cloud that had hung so heavy above the nation for four long years,

FREDERICK W. SEWARD.
(In 1865, prior to the attempt on his life.)

and others of it by the frequent perusal of historical pages that tell the story of the most gigantic struggle any nation ever had for the preservation of its own existence and of the integrity of its vast dominion.

It is now thirty-three years since the memorable scene at Appomattox that in effect terminated the great war, since the assassin's bullet closed the mortal career of the great President, and since another assassin's knife nearly terminated the life of his Secretary of State. And these events as the world now looks back upon them through the vista of nearly one-third of a century have been growing obscure—except to those who were a part of them—and some of them are nearly

They were real events to the writer, manifest and conspicuous, for he was in the presence of some of the great actors when the first news came from Appomattox; sitting a few feet away he heard the sharp report of the pistolshot of John Wilkes Booth; was a mourner in the procession that followed the remains of Abraham Lincoln from the portals of the White House: and watched in the shadows that seemed to grow deeper day by day as they hung over the nation while it waited, in breathless suspense, the result of the murderous attack on the great Secretary and his son, Frederick W. Seward. what a relief came to the nation when the news was confirmed from the Seward homestead that both the Secretary and his assistant were practically out of danger! It was not many weeks before the former was at his desk in the old Department, but the latter did not even gain consciousness until after fourteen days following the murderous assault upon him. His life hung by a slender thread for weeks after that, and not until November 2, 1865, a period of six months and nineteen days following the assassination of the President, did he resume his duties at the Department. The injury to the Assistant Secretary required an operation on his skull in the removal of parts of it that were creating a pressure on the brain and the insertion of a silver plate in the place of the shattered bone. When he resumed his seat at his desk in the Department he wore a skull-cap on his head and has continued to wear such a cap till the present time. Mention is made of these facts as incidents that led to the subsequent trip of Mr. Seward and his son Frederick to the West India Islands.

A few months after the Department resumed its normal condition and the Secretary and his assistant were again at their posts of duty an excellent picture of them, in company with the chiefs of bureaus in the State Department, was made by a Washington artist. A copy of that picture, with the autographs of the originals, hangs above the desk of the writer and has hung there for many long years—a remembrance from the great men who are pictured in it. Of the nine who sat for the picture two only are living The sadly disfigured face of the Secretary —the result of the accident of April 5, 1865, and of the assassin's knife nine days after—and the ever-present cap on the head of his son are continual reminders of that hapless Good Friday in 1865, and as the writer looks up in the faces of the father and son he sees them as he saw them thirty-two years ago when, amid deplorable family affliction, they were struggling on in the line of duty, fulfilling the highest obligation a citizen owes his country-fighting her battles in the arena of international diplomacy and winning victories that are to-day no less memorable and were then no less pregnant with stupendous consequences to the nation than are and were its great victories won by the nation's other heroes on the field of carnage. Remembering these men as they were and remembering those other men who touched elbows with them in the nation's onward and upward march—Lincoln and Grant, Seward and Sherman, Sumner and Sheridan, and their many contemporaries—the writer is prompted many times to exclaim, "Truly, there were giants in those days!"

The War of the Rebellion made very manifest one of the weakest and most vulnerable points in the whole governmental system of the American The nation was at war with a belligerent It was compelled to defend itself and power. its great commerce against piratical attacks from a power that held equal privileges with itself, and in some cases superior advantages, in the ports of neutral nations. Its ships of war were given only the same rights in these foreign and sometimes distant ports that were possessed by those of its enemy, and those were to take on certain supplies, remain in port a limited time, and in certain cases be prevented from sailing from the port of a neutral power in pursuit of a war vessel or piratical craft, a filibuster or a blockade-runner of the enemy until that craft had a certain number of hours' start and time enough to escape. All these conditions and circumstances led the Secretary of State to the conclusion that one of the first duties of this Government, on the close of hostilities and the reconstruction of the State governments of the misguided citizens of the South, was to secure adequate facilities for the accommodation of vessels of the United States in ports of its own when at distant points from And then, it is not the disclosure of a state secret to say that William H. Seward was a man who believed in "Greater America." In his biography, written by his son, is given the following extract from a speech made by Mr. Seward at St. Paul in September, 1860, during the first Lincoln campaign and at a time when the possibility of secession was scarcely thought of in the Northern States and the purchase of Russian America was as remote in men's minds as the annexation of the north pole to the United

Standing here and looking far off into the Northwest, I see the Russian as he busily occupies himself in establishing seaports, and towns, and fortifications on the verge of this continent as the outposts of St. Petersburg; and I can say: "Go on and build up your outposts all along the coast, up even to the Arctic Ocean; they will yet become the outposts of my own country—

monuments of the civilization of the United States in the Northwest."

In less than seven years from the date when this speech was uttered by the great American commoner, the hand of the speaker traced the midnight treaty that transferred that immense territory, with all its adjacent islands, from the sovereignty of autocratic Russia to that of the great republic. what gigantic strides events sometimes move! The writer is tempted to dwell a moment on the Alaskan incident before further reference to the proposed purchase of a part

of the Leeward Islands. He is particularly disposed to do this because of a popular misunderstanding in reference to the transaction and of its bearing upon the subsequent negotiations for the purchase of the Danish islands, although the treaty for the cession of Russian America was not signed by the contracting parties until almost fifteen months after Mr. Seward went on a voyage of inspection to the West And then a further reason for what at first may seem an unwarranted digression from the principal subject of this article is that the Alaskan incident fills an exceedingly interesting page in the history of the nation and of the men who contributed so largely to make it what it is. The writer was in touch with much that has gone into the story of these interesting days of the post-war and reconstruction period, but he is indebted for many facts that he draws upon for this divergence to the biography of Mr. Seward and to subsequent personal interviews with the author of it.

It is very evident that Mr. Seward had never lost sight of his prophetic declaration, made at St. Paul in 1860, when in his masterly rhetoric, speaking as if to a bystander, he told the Russian, far away on the Northwest seacoast, to go on and build outposts for his own great nationto become monuments to American civilization. Subsequently, when he was bearing on his own shoulders the great responsibilities of the foreign relations of that same nation, he learned, as no other man in the country's service could learn, under what immense disadvantages the Government labored in not having proper naval and coaling stations at points more or less remote from our own long lines of almost undefended seacoast. It was then that he thought of the

THE SIGNING OF THE "MIDNIGHT TREATY" FOR THE CESSION OF ALASKA.

outposts, the islands, and the seaports of Russian America and of the many beautiful harbors looking out on the Caribbean Sea and farther Atlantic Ocean.

### II.—THE ALASKA TREATY.

This nation will never forget the sympathy and the many acts of courtesy and of material support extended to it by the Czar and the government of Russia during the trying ordeal of the great civil war, and not a few of these acts were especially timely, as well as most delicate and discriminating, in view of the attitude of some of the other great powers toward the great republic at the time referred to. It has always seemed a strange circumstance to those whose limited opportunities have not enabled them to discern the secret incentives that prompt nations to deeds—the warm friendship that from time to time has been very manifest and pronounced between (what the American people are proud to think) the freest nation in the world and the nation that that world is prone to point to as the most despotic. There are good reasons for this fraternity of feeling, however, and for the present it is sufficient to point to the very natural desire of the Bear of Russia that her immediate neighbors shall not benefit by any undue acquisitions in other lands, while the heart of every true American must naturally warm toward a government that by one touch of its magic wand loosed the chains from more than 20,000,000 of bondmen.

During the year 1866 an unsuccessful attempt was made to assassinate the Czar of Russia. The occasion was opportune, and Mr. Seward at once instructed our minister at St. Petersburg personally, and in the name of the United States Government, to congratulate the Emperor of all the

Russias upon his escape and to convey to him an expression of the sincere good-will and friendship of the people of America. This action on the part of the Secretary of State, and without doubt at his suggestion, was quickly followed by the adoption by the two houses of Congress of a very complimentary resolution of greeting to "his imperial majesty and to the Russian nation" upon his providential escape from danger. Thereupon the Government sent a special envoy and a war vessel-the double-turreted monitor Miantonomah—to convey him across the sea and to St. Petersburg especially to bear this greeting to the Emperor of the Russias. All this could but be most gratifying to the Russian people, and it most admirably opened the way for negotiations for the purchase of those "outposts of St. Petersburg" along the coast of the Northwest.

It was Russia's friendship for the United States that made negotiations for the sale of her American possessions not altogether an unwelcome subject for discussion when first presented to the Russian minister at Washington by Mr. Seward. An agreement was quickly reached. The question of compensation seems to have been easily adjusted, and probably with less discussion than would commonly occur in the sale and purchase of an ordinary residence. Two nations were making a trade. They were accustomed to deal in large figures. The acreage of each went far into the millions. Their populations, their

revenues, their annual budgets never fell below eight and nine figures. One had a valuable residence. It was willing to part with it. The other was willing to buy. The owner says I will accept \$10,000,000 for it. The prospective purchaser says I will give you \$5,000,000 for it. The owner says I will split the difference—taking \$7,500,000. The other says call it an even \$7,000,000 and it is a bargain. Agreed, said the first. And so the contract was made, and Russian America, all those "seaports, and towns, and fortifications on the verge of this continent," once "the outposts of St. Petersburg," were stipulated to be sold to the United States for a paltry \$7,000,000—about the price of two war The Russian Fur Company, however, had some vested interests in the country which Mr. Seward earnestly desired should be removed by the Russian Government, and the trifle of \$200,000 was added to the purchase price to provide for that expense—thus making the actual pecuniary consideration \$7,200,000. But this negotiation between Mr. Stoeckl, the Russian minister at Washington, and Mr. Seward did not close the incident. It had all to be submitted to the government at St. Petersburg.

One of the most dramatic and at the same time important chapters in the story of the life of the great American statesman and diplomatist who so successfully presided over the foreign relations of the Government of the United

States during the stormy period of the administrations of Abraham Lincoln and Andrew Johnson is that of the final scene in the negotiations for acquiring title to that vast territory theretofore known as Russian America—the drafting and signing of the treaty of transfer. Dramatic because of its wonderful environments. drawn by the pen of the great statesman at the midnight hour when other men slept, or, if awake at the capital of the nation, awake only to outgeneral an administration that had fallen on evil days and, in the philosophy of many, was deserving of defeat in every measure that emanated from its portfolios; important in that it witnessed the culmination of an idea long and tenderly cherished by its

THE OLD STATE DEPARTMENT BUILDING IN WASHINGTON, AS IT WAS IN 1865.
(Where the Alaskan treaty was signed.)

author, for by that night's work a vast sovereignty was passing from one great nation to another; not by force of arms, by conquest, by seizure, or by unlawful appropriation, but by peaceful and fraternal negotiation—a momentous proceeding in which by solemn treaty two great nations won each a victory and neither suffered defeat. It was a beautiful scene, that midnight gathering at the temporary State Department on Fourteenth Street, and the writer makes no apology for transcribing here the story as it has been told by one who was a part of it in the biography of his father, the great Secretary, and who is the only one now living who was present in behalf of the United States on that memorable occasion.

On Friday evening, March 29, Seward was playing whist in his parlor with some of his family, when the Russian minister was announced.

"I have a dispatch, Mr. Seward, from my government by cable. The Emperor gives his consent to the cession. To-morrow, if you like, I will come to the Department, and we can enter upon the treaty."

Seward, with a smile of satisfaction at the news, pushed away the whist-table, saying:

"Why wait till to-morrow, Mr. Stoeckl? Let us make the treaty to-night."

"But your Department is closed. You have no clerks and my secretaries are scattered about the town."

"Never mind that," responded Seward. "If you can muster your legation together before midnight, you will find me awaiting you at the Department, which will be open and ready for business."

In less than two hours afterward light was streaming out of the windows of the Department of State, and apparently business was going on there as at midday. By 4 o'clock on Saturday morning the treaty was engrossed, signed, sealed, and ready for transmission by the President to the Senate. There was need

of this haste, in order to have it acted upon before the end of the session, now near at hand.

Leutze, the artist, subsequently painted an historical picture representing the scene at the Department. It gives with fidelity the lighted room, its furniture and appointments. Seward, sitting by his writing-table, pen in hand, is listening to the Russian minister, whose extended hand is just over the great globe at the Secretary's elbow. The gaslight streaming down on the globe illuminates the outline of the Russian province. The chief clerk, Mr. Chew, is coming in with the engrossed copy of the treaty for signature. In the background stand Mr. Hunter and Mr. Bodisco, comparing the French and English versions, while Mr. Sumner and the Assistant Secretary are sitting in conference.

To the Assistant Secretary had been assigned, as his share of the night's work, the duty of finding Mr. Sumner, the chairman of the Senate Committee on Foreign Relations, to inform him of the negotiations in progress and request his advocacy of the treaty in the Senate.

On the following morning, while the Senate was about considering its favorite theme of administrative delinquencies, the sergeant-at-arms announced, "A message from the President of the United States." Glancewere significantly exchanged between Senators, with the muttered remark, "Another veto!" Great was the surprise in the chamber when the Secretary ejaculated, rather than read, "A treaty for the cession of Russian America."

Nor was the surprise lessened when the chairman of Foreign Relations, a leading opponent of the President rose to move favorable action. His remarks showed easy familiarity with the subject and that he was prapared to give reasons for the speedy approval of the treaty by the Senate.

In the cloak-room, after adjournment, the matter was talked over. Said one Senator, "I thought we were going to have another hack at Andy Johnson to-day but it looks now as if we were going to vote for the biggest and most-unheard-of thing the administration has done yet."

BAY AND TOWN OF ST. THOMAS.

(Showing also outlying islands which serve to protect the entrance to the bay.)

# III.—MR. SEWARD'S VISIT TO THE DANISH WEST INDIES.

Neither Mr. Seward nor his son Frederick was in robust health when cold weather commenced in December, 1865. The physicians advised a temporary change of climate. The assassin had failed to take the life of Mr. Seward or his son, but one for whom either one of them would have deemed it a privilege to lay down his own life, the faithful, loving wife and mother, who at the time of the accident to Mr. Seward—April 5—was at her home in Auburn, but who immediately

STREET SCENE IN ST. CROIX, DANISH WEST INDIES.

hastened to Washington and was in the house at the time of the murderous attack on her loved ones, had been unable to withstand the shock, and died in the Washington home while her son was still in imminent peril, June 21, 1865. A second victim, the only daughter, followed the mother a little more than a year later. At this time, however—December, 1865—the daughter was at the Auburn home. The Secretary intended that she should go with him on his West India cruise, but for some reason that part of his plan was abandoned.

The Secretary of the Navy placed the De Soto, a steamer belonging then to the Gulf squadron, at the service of the Secretary of State, and on the night of December 30, 1865, his party, consisting of himself, his son Frederick, Mrs. Frederick W. Seward, her sister, and two servants, embarked and went out to sea with the tide the next morning. It evidently goes without saying that there was something more than rest, recreation, and desire to escape the inclemency of the mild Washington winter that prompted the Secretary of State to turn the prow of the De Soto toward the Virgin Islands when they cleared the Potomac River and the Chesapeake Bay on the evening of January 1, 1866.

The De Soto steamed across the Gulf Stream well east of the Bahamas and direct to Puerto Rico, the first land sighted after leaving the shores of the United States. On January 9 it anchored in the harbor of St. Thomas. The scenes that met Mr. Seward and his party here were strange and interesting, it being their first visit to any of the West India Islands. They

remained at St. Thomas three days, during which time Mr. Seward received and returned official visits and was honored in many ways. On January 10 he dined with the Danish governor of the island and was received with a salute of fifteen guns from the Danish forts as he was met by the governor's carriage on landing from the De Soto. Among other interesting incidents of Mr. Seward's stay at St. Thomas was a visit paid by him to General Santa Anna, twice president and twice dictator of Mexico, but then an exile from his country, where Napoleon III. had, under the Austrian Prince Ferdinand Maximilian, set up an empire which at this time was being upheld in a precarious condition by French bayonets. The student of history wonders sometimes, as he reads the story of the interchange of courtesies be-

tween the stalwart veteran soldier and ex-president of the Mexican republic and the Secretary of State of the United States, if it ever occurred to the stern old warrior, then nearly seventy years old, that in the maimed and disfigured statesman before him, barely half his size, slumbered then the latent power that, greater than Mexican military maneuvers, would soon remove the support of French bayonets from an effete Mexican empire, and leave it to topple over into the merciless embrace of an organized Mexican republic.

It was unnecessary for Mr. Seward to visit St. Thomas to become convinced that its commodious port, located at a point that has been most aptly and accurately described as "a place which is on the way to every other place in the West Indies," must be a very valuable acquisition to the United States, especially in the event of hostilities with any other power. And yet seeing with one's own eyes is much more convincing than listening to the most eloquent discourse or reading the most accurate description. The perplexities and the annoyances experienced by the Government of the United States in its then very recent struggle for national existence, when its statesmen would have given millions of money for convenient outside seaports over which they could have had exclusive control, were too fresh in the memory of the Secretary of State not to prompt him, with the foresight of the true statesman, early to cast about in quest of such naval accommodations as the Government could conveniently secure. It was a bitter memory—it had been gall and wormwood to the high-spirited

and chivalrous statesman as he sat in his inner office in the old State Department and read reports that came from diplomatic and consular offices scattered over the world and realized the embarrassments and vexations experienced by them in their struggles to guard national interests under A convenient scaport at some point alien skies. not too remote from the Atlantic seaboard that should be wholly under the control of the American Government had been an absolute necessity during the struggle just closed, and Mr. Seward determined that the want of such a port should not embarrass any future administration if in his power to prevent it. He ran his eye over the map of the western hemisphere and took note of the multitude of islands in the seas that wash the long lines of coast of the United States. found them well-nigh innumerable. The Bermudas, the Bahamas, the Antilles, the Hawaiian, the Aleutian—all the property of other nations, and at that time the Government of the United States held no absolute right even to cast anchor in the smallest port of any one of them. a boon it would have been to have had just one port for the shelter of American ships from 1861 to 1865 at some convenient point off the Atlantic coast, in either the Bermuda or Bahama group, is fairly illustrated by the possession of the keys off the southern coast of Florida at the present Under such conditions there ought not to be any difficulty in understanding the anxiety and solicitude of the Government in the matter of acquiring title to one or more suitable seaports within easy access of the Atlantic and Pacific

The advantages of St. Thomas as a central, salutary, and convenient port for the United States have always been recognized by those who have had any knowledge of the matter. island is about 181 degrees north of the equator and 36 miles east of Puerto Rico. It is second in size of the Danish Virgin Islands, St. Croix containing more than double its square miles. The Virgin group of islands was discovered by Columbus on his second voyage in 1493, and were christened by him in memory of St. Ursula and her 11,000 companions whose bones are claimed still to be preserved at Cologne. Whether Columbus concluded as he felt his way among what may well have appeared to him to be an innumerable cluster of islets, scattered over a space of about two degrees of latitude and longitude, that there was an island apiece for each of the virgin followers of Ursula, is uncertain, but wiser men than Columbus have demonstrated the fact that in this work of distribution there are only islands enough to provide one each for about 100 of the virgins. Scarcely more than a dozen

of the islands are now inhabited. The total area is estimated at 465 square miles and the total population a few years ago was 67,000. westerly islands belong to Spain, the easterly to Great Britain, and the central to Denmark. The area of the Spanish islands is about 150 square miles, that of the British about 57 square miles, and that of the Danish 240 square miles—a probable over-estimate. The populations of these divisions according to the latest obtainable information are respectively approximately 2,600, 5,500, and 34,000. The area of the three principal Danish islands is as follows: St. Croix, 80 square miles; St. Thomas, 33 square miles; St. John, 21 square miles. St. Thomas has only one town, bearing the name of Charlotte Amelie, but more often called by the name of the island, St. Thomas, and it is located on its magnificent harbor, which is about the middle of the south coast and is nearly land-locked. The island is 13 miles long and has an average width of about 3 The harbor, so well sheltered and so advantageously situated in the way of ocean travel, is undoubtedly one of the best and most commodious in all the West Indies. It is capable of floating the largest vessels and possesses adequate anchorage for the entire navy of the United States and its mercantile marine.

Mr. Seward and party returned to the Potomac by way of San Domingo, Port au Prince, and Havana, arriving at the Washington home January 28, 1866. The presence of the Secretary and his assistant at their desks in the old State Department on the following morning, January 29, was greeted with pleasure by all who knew them, and the benefit resulting to them in their month's cruise was manifest. A snow-storm during the day—just a little Washington snow-storm—was quite enough to remind them that they were out of the tropics, a long way from the balmy breezes of St. Thomas, and again in the midst of exacting duties.

## IV.—THE DANISH TREATY AND ITS DEFEAT IN THE SENATE.

The attention of the Department of State on Mr. Seward's return to it was first given to the matters of the Franco-Mexican difficulty and to the Alabama claims, but very soon thereafter, in a delicate and diplomatic manner, the Secretary of State introduced the subject of the sale and purchase of a Danish West Indian seaport to Mr. Raasloff, the Danish minister then residing at Washington. The suggestion was too novel to meet with immediate favor. To part with the sovereignty of a portion of its territory by a European nation was not by any means an unheard-of transaction, but it was a proceeding so

SECRETARY SEWARD, ASSISTANT SECRETARY F. W. SEWARD, AND THE CHIEFS OF BUREAUS OF THE STATE DEPARTMENT.

unusual and so extraordinary that the suggestion could not be entertained at once. was still much uncertainty as to whether Denmark would be willing to part with any portion of its West India possessions, intimations came from the government of San Domingo that the desired naval depot might be secured by the purchase of the bay and peninsula of Samana, a most commodious harbor on the north coast of San Domingo. A visit made by Admiral Porter and Mr. Frederick W. Seward in the naval steamer Gettysburg to San Domingo, the Assistant Secretary being clothed with power to conclude a treaty for the cession of bay and peninsula if found satisfactory, did not result in the conclusion of any treaty. Not very long after this event the treaty for the cession of Russian America was negotiated and ratified by the Senate.

So far from being at all anxious to part with any portion of its West India possessions—or having hung upon them a sign "For Sale"—the Danish Government and people were very slow to entertain any proposition for a transfer of one of its ports to the American Government. Just what influence the action of the Russian Government in the sale of Alaska may have had

in bringing the Danish administration to entertain the suggestion of such a transfer it would be difficult to determine. It was only a little before this suggestion, made by Mr. Seward to Colonel Raasloff, that Denmark sustained a crushing blow at the hands of the Austrians and Prussians in the loss of the duchies of Lanenburg, Holstein, and Slesvig. It was a terrible calamity to this proud little monarchy, and the memory of it is not likely to be wiped out for many generations. The writer could but sympathize with the grieved hearts of two Danish gentlemen whom he accompanied through a German museum at Berlin in June, 1897, where are preserved many cannon, battle-flags, and other trophies of war captured by the Prussians from the Danes on more than one hard-fought field in the struggle of brave little Denmark against the combined forces of the two powerful opposing Tears came unbidden to the eyes of these chivalrous descendants of the sea-kings of the north, and words were quite unnecessary to convey an expression of the hope that time will one day provide an opportunity to square accounts with the powers that laid waste their beautiful land and stripped it of its most valuable provinces.

During the civil war in the United States Denmark had shown its friendship for the great republic in many ways. In its ports American vessels found a welcome and a safe anchorage. It never lost an opportunity to perform a kind office for the Government and people of the

country where so many of its brave sons and daughters had come to build themselves new homes. These facts, however, were not sufficient to prompt the Danish administration at once to take kindly to the suggestion to relinquish, for money or other consideration, its possessions in the New

CHRISTIAN IX., KING OF DENMARK.

World. Of all the European nations having holdings in the West Indies where African slavery previously existed, Denmark alone had successfully solved the problem of emancipa-Its subjects on the islands of the Virgin group were prosperous, contented, and happy; they sought no change, although if change were decreed, as subsequently shown, they would not be averse to see the Stars and Stripes float over Prompted, however, with a sincere the islands. purpose to render another kind office to the people of the United States, the Danish crown finally consented to entertain a proposition to sell a part of the West India possessions, very firmly refusing to dispose of more than two islands and retaining to itself the largest and most productive of the group.

The writer would emphasize this fact, that this action on the part of the Danish Government in finally consenting to cede, for a small money consideration, a part of its American possessions to the nation that ought, by virtue of location and for national defense, to own the entire range of islands that command entrance to American ports, was prompted not by a desire to relinquish its possessions in this hemisphere or for the trifle stipulated for their purchase, but, like the greater and more powerful nation so closely united with Denmark and which had but a few months before ceded "the outposts of St. Petersburg" to the great republic, by a perfectly sincere purpose to

perform a graceful act and extend a courtesy to the one nation in all the world with which it had always been on most friendly terms, and between whom and it there had never arisen cause for the slightest international controversy. Intimate personal acquaintance and association with the people of Denmark have made the writer more or less familiar with their modes of thought and the depth and tenderness of their emotions. Loyalty to king and country is a cardinal virtue. Gratitude and love of justice and fair play are qualities that come into their lives with the fresh breezes that sweep across their island homes. The King and members of the royal family are part of the people, and may frequently be seen on the streets

FREDERICK W. SEWARD.

(After the attempted assassination.)

of Copenhagen mingling with the hurrying populace, lifting hats to the humblest subjects and recognizing courtesies from an intensely loyal people.

had the sympathy of the people of America in its disastrous struggle with the allied powers in 1864, and with her own sympathy still strong for a

Denmark

people who had suppressed a gigantic insurrection in the face of ridicule and open disfavor of an almost united Europe, it need not be wondered at that the little monarchy eventually consented to enter into a treaty for the transfer of the two small islands of St. Thomas and St. John to the sovereignty of the United States. Still, so concerned was it in the happiness and well-being of its subjects on the islands referred to that the transfer was only agreed to on condition that their inhabitants should freely and formally consent thereto by The vote was had on Januballot duly taken. ary 9, 1868, and resulted in almost a unanimous declaration in favor of the transfer of allegiance. there being but 22 votes in the negative on the island of St. Thomas and not a dissenting vote on the island of St. John.

The failure of the United States Senate to give its advice and consent to the ratification of the treaty solemnly entered into between the execu-

tives of the governments of Denmark and the United States marks one of the saddest pages in the entire record of American diplomacy. The story of that transaction, though told for a thousand years to come, will never fail to bring the blush of shame and remorse to the cheek of any true American. Denmark did not come pounding at the gates of the American nation and offer for sale two beautiful Virgin islands. It was the American nation that sought out the owner of the little group and then offered \$5,000,000 for the three. It was the American nation that sent the De Soto, with its great Secretary of State, to view the land, and afterward sent the same little war vessel from St. Thomas to Washington to bear the special commissioner of Denmark, Gov. Edward Carstensen, to the American capital, where he could gain authentic advices as to the probability of the treaty's ratification before submitting the matter to a vote of the inhabitants of the islands. And it was the American Senate that finally ignored the whole proceeding, never taking any action whatever on the treaty submitted to it, and thereby offering a gratuitous, a wicked, and an unwarranted insult to a friendly nation. The purchase price agreed upon was It is true the debt of the nation **\$**7,500,000. was then large; but it was not pressing. revenue also was large, and the price stipulated was a bagatelle. It is not true that the reason Mr. Seward was not supported by Congress was because of the then existing national debt. Such an excuse was never given. As a fact the course of the Senate was dictated by a policy accurately if not elegantly described in the editorial quoted as a "dog-in-the-manger policy." It was indeed most dangerous and unjust in the highest degree.

Not until the curtain shall rise upon yet another generation will the careful and painstaking historian put together the scattered facts that bear upon the diplomatic incident that culminated in the treaty referred to and in its unnatural death by strangulation in the room of the Senate Committee on Foreign Relations. Then indeed the world will learn, and the flush of shame will mantle more than one brow to know, that in the superheated political conditions attendant upon the presentation of the Danish treaty the strongest argument against its consideration-and the only reason that actuated more than one member of that august Senate-was the fact that the President under whom it was negotiated and by whom it was submitted to the Senate was Andrew Johnson. So unreasoning and so unreasonable are wise men sometimes when Passion guides and Prejudice sits the saddle!

Charles Sumner, one of the greatest intellects that ever made an argument in the United States

"THE MAIMED AND DISFIGURED STATESMAN."
(After the attempted assassination.)

Senate, was chairman of its Committee on Foreign Relations at the time this matter was pend-It is fair to say that while he was a pronounced partisan and a bitter opponent of the President, he was a warm friend of Mr. Seward and had previously been in perfect accord with him in his foreign policy. This is well illustrated by his cordial support of the Russian treaty. The same arguments made by Mr. Sumner in support of the treaty to annex Alaska were equally applicable in support of the treaty to raise the flag over the West India Islands. Indeed, as a military or naval necessity in the event of hostilities, the reasons for annexing St. Thomas were then at least four-fold greater than were those for adding Alaska to the territory of the United States. He was never heard to say a word against the Danish treaty, and even in the presence of the Danish commissioner, whose mission to this country was known to be for the purpose of learning what, if any, hostility existed against the treaty, he raised his voice only in its support. Subsequently, when General de Raasloff, the former minister to the United States and then a member of the Danish cabinet, came especially, but in an unofficial way, to urge favorable action on the treaty as a matter of justice to the Danish Government, it having entered into the treaty stipulations at

the urgent solicitation of the United States, the entire Senate Committee on Foreign Relations were silent, Mr. Sumner with the rest. The matter continued to rest undisturbed in the hands of the Senate Committee on Foreign Relations until the incoming of the administration of Gen. U. S. Grant. Andrew Johnson was no longer President, and it would seem that there was then no reason for further delay, the time for exchanging ratifications having been twice extended—the last time at the instance of Mr. Seward's successor in the State Department.

These gentlemen—"all honorable men"—forgot that it was Abraham Lincoln who first opened negotiations for the purchase of St. Thomas; forgot that Denmark had been the friend of the United States during its great struggle for national existence; forgot that in case of another war absolute military necessity would compel the Government to seek just such a station, and that it would be forced to have it even if it had to fight to get it; forgot that the most sanguinary pages of history had been colored the crimson tint by the blood of brave men spilled to win—as they were forced to win—just such strategic posts that have been military and naval necessities since the world and warfare began.

## V.—CONCLUSION AND MORAL.

Early in the Presidential career of Abraham Lincoln he sought full information on the subject of securing a suitable naval station among the islands off the Atlantic seaboard. With Secretary Seward he requested the opinion of Admiral Porter as to the strategic importance of different stations among the West India groups. The admiral promptly made a report to the President. Among other things in this report he said:

St. Thomas lies right in the track of all vessels from Europe, Brazil, the East Indies, and the Pacific Ocean, bound to the West India Islands or to the United States. It is the point where all vessels touch for supplies when needed coming from any of the above stations. It is a central point from which any or all of the West India Islands can be assailed, while it is impervious to attack from landing parties and can be fortified to any extent. The bay on which lies the town of St. Thomas is almost circular, the entrance being by a neck guarded by two heavy forts, which can be so strengthened and protected that no foreign power can ever hope to take it. St. Thomas is a small Gibraltar by itself and could not be attacked by a naval force. There would be no possibility of landing troops there, as the island is surrounded by reefs and breakers, and every point near which a vessel or boat could approach is a natural fortification, and only requires guns with little labor expended on fortified works. There is no harbor in the West Indies better fitted than St. Thomas for a naval station. Its harbor and that of St. John, and the harbor formed by the Water Island, would contain all the vessels of the largest navy in the world, where they would be protected at all times from bad weather and be secure against an enemy. In fine, St. Thomas is the keystone to the arch of the West Indies. It commands them all. It is of more importance to us than to any other nation.

During the pendency of the St. Thomas treaty in the Senate—or with the Committee on Foreign Relations, the treaty having never left the committee-room after reaching it—ex-Assistant Secretary of the Navy Fox wrote to Mr Sumner as follows—words that will bear repeating though thirty years have flitted by since they were written:

The experience of centuries has demonstrated that defensible depot-stations in waters where a fleet is intended to act are invaluable for the protection they af ford to commerce, the efficiency they give to naval power, and the economy they produce in repairing and supplying such force. History is full of the struggles of nations for the control of such positions; Rhodes Malta, Minorca, Gibraltar, Louisburg, Havana, and Carthagena readily occur to the memory. Their loss was followed by diminished naval power, their gain by large influence. . . .

The reasons which made it wise and patriotic for Mr. Lincoln to open negotiations to this end have lost none of their force now. New grounds for favoring the object come constantly into notice, and our country can hardly fulfill the great destinies expected of her unless she secures, when the opportunity is presented, a position which by strategic art will serve as an outwork to the coast of our Union and give additional efficiency to the means of defending our commerce and our Atlantic and

Pacific communications.

It is very true, as stated in the foregoing editorial, that "the convention at St. Louis took the right view of the matter and the purchase of the islands should be undertaken." It is also equally true that the administration cannot be too diligent in its attempt to carry into effect, in good faith. this plank of the platform of the party that carried Whether the treatyit to victory in 1896. making power of the United States has not lost much of its prestige for honorable and fair dealings, especially in the eyes of the Danish Government and people, may be a question of some importance, but recent events are sufficient to prompt the administration to look to its "outposts all along the coast," for not even a wise and dignified Senator to-day can tell what waits upon the coming of the morrow. By all means "pay a reasonable sum and raise the American flag," but first make the amende honorable and demonstrate the fact that the American nation, while too great and too grand a nation to suffer insult or injury without resentment, is also too great and too grand a nation to visit unmerited injury or insult upon another. Let the flag be raised, but as its folds unfurl let it be clean and unspotted, that the whole world may know that it is the flag of honor as well as the "flag of the free."

# KUROPATKIN: WAR LORD OF RUSSIA.

BY CHARLES JOHNSTON.

(Bengal Civil Service, retired.)

LIEUTENANT-GENERAL KUROPATKIN.

EN. ALEXEI NICOLAIEVITCH KUROPATKIN, who was appointed acting minister of war on New Year's Day, is the greatest
'fighting general" in the Russian army. He
has won every distinction 'for valor" in the
field that the imperial crown holds in its gift; he
has "swords of honor" enough to arm a company; he has seen active service in three continents—Africa, Europe, Asia—from Mount Atlas
to Chinese Tartary; he was one of the decisive
factors in the last great decisive battle fought on
European soil.

Further, General Kuropatkin is the best writer of military history in Russia, the master of those who know in the science of war. His story of the Balkan crusade is a classic; his works on Algiers and Kashgar have been crowned by the Imperial Geographical Society; his essays are the final authority on every point of strategy; his lectures make military statistics as interesting as romance, and well they may, for on this warp is the web of all poetry woven. Finally, General Kuropatkin is a tried and tested administrator, of singular creative and constructive genius. He

can toil terribly, mastering a multitude of details and piercing to the principle beneath them; adapting means to ends with the unerring insight of intuition; he has won the wildest and corruptest region of the world from robbery and plunder to ways of peace, turning murdering hordes into mild cotton-growers and bringing wealth to a dead wilderness of sand; he has carried diplomatic success to the heart of the Gobi desert; he has won the enthusiastic worship of his soldiers, the devotion of his officers, the warm regard of his civilian helpers.

In his forty-ninth year, in the very prime of vigor and power, he is lord of the greatest army in the world—5,000,000 men in time of war. No finer augury could have been imagined for Russia's hopes in the new year and the new century than the destiny which calls this wisest warrior to lead the armies of the Czar.

General Kuropatkin's life is rich in dramatic coloring. No one has had more magnificent stage scenery: the northern lights over the frozen Neva River; the "Arabian Nights'" country of Tashkent and Samarcand; Paris of the Débâcle; a moonlit oasis in the Sahara; the Tartar cities under the roof of the world; the blue Danube, Plevna, the Balkans; the brigand-ridden Turcoman steppes; the shores of the Caspian; the ruins of Merv; then again the wintry Neva, the war ministry, the Russian army. And, on the average, three decorations for every change of scene.

What will be the setting of the coming acts? Constantinople? Calcutta? China? These things lie on the knees of the gods.

### I.—BIRTH AND EDUCATION: 1848-66.

Like the minister of finance, the new war lord is an example of the extreme democracy of Rus-Sergei Iulitch Vitté began his career sian rule. as master of a wayside railroad station; Alexei Nicolaievitch Kuropàtkin as sub-lieutenant in a Turkestan regiment when Asian service was esteemed mere exile. They won their way to the highest places in the realm by sheer character and power. Both are of old noble families. The minister of finance can trace his line back through the Princes Dolgorùki to the old Czars of Mos-The minister of war is a hereditary noble of Pskoff, whose tradition of aristocracy stretches back through mediæval Hansa days to mere heathendom, when Thor and Woden ruled the In the midst of its peat-bogs and pine world. forests, Pskoff boasts its buttressed walls and towered citadel more venerable far than Moscow's Its stones were old ere the first log of Kremlin. Moscow was laid.

General Kuropatkin's father, retiring from

military service about the year the serfs were liberated, lived on his Pskoff estate and played a leading part in the local government of the province. As president of the Agricultural Committee, his skill and knowledge of flax may well have influenced his son a generation later among the cotton-fields of Merv. General Kuropatkin's mother still lives on the Pskoff estate, managing her farms and cultivating her gardens.

Alexei Nicolaievitch Kuropatkin was entered at the Cadet Corps School and later at the Pavlovskoe Military College in St. Petersburg; one of those huge buildings in raw red stucco, gaunt and unlovely, which the twilight capital so much He read there, among other things, how Count Muravieff of the Amoor had just added to the Russian empire a territory as big as France, won from China, on the Pacific coast over against Japan. He did not read of the conquest of Turkestan; he himself was to help in making that piece of Russian history. An atmosphere of keen modernity reigns over the Pavlovskoe class-rooms: mathematics, the sciences, living languages only; military history from stone-hatchet days; and as much of the art of war as a sub-lieutenant's head can hold. Hard work all week; mild Sunday merry-makings; periodical examinations; military discipline over

# II.—THE LAND OF THE "ARABIAN NIGHTS:" 1866-68.

When Alexei Kuropatkin was passing his last terms at Pavlovskoe College the shadow of the Russian power was rising over the sands of Turkestan. "We have come hither not for a day, nor yet for a year, but forever," were the prophetic words of one of her generals.

The vast wonderland of Islam had slowly been growing common and familiar. The veil of the unknown had been torn from Asiatic Turkey,

TWO NATIVES OF TURKESTAN

MOSCOW-THE KREMLIN.

Persia, Afghanistan. The Siberian steppes on the north had long been Russian soil. There remained only Turkestan, still drowsing in the blue haze of mystery and romance. The evening voice of the muezzin calling in cadence on Allah; mosque and medresi still murmuring the prayers of the Prophet and dreaming of Islam's alchemy and star-lore; the roses of Khorassan and the winecups of Shiraz; tinsel slippers and veiled faces behind latticed windows. This was the blue mist in the sunlight, but beneath the mist corruption, profligacy, crime; the wild cruelty of weakness; the fanatic hatreds of dead faith.

In June, 1864, the Russian advance began, when General Chernàieff, taking Aulia Ata and Turkestan City, drew a line of forts across the northern frontier. In October he stormed Chemkent, and the wonderland of Islam trembled. Chernàieff hastened southward, bringing his batteries into line before Tashkent on October 25. A partial breach, a premature assault; the Russians, greatly outnumbered, were forced to retire.

The spring of 1865 saw Chernaieff again before Tashkent, making a reconnoissance of the suburbs beyond the city wall and occupying the ford of the Sir Darya to cut off Bokharan aid. A final assault on June 27, and Tashkent fell before the Russian general, whose 2,000 men had defeated a force of 30,000 five times stronger in artillery. That same evening Chernaieff rode through the conquered city with a few Cossacks only; he visited the native baths and drank tea with the Czar's new subjects. The nation of cutthroats and poisoners were delighted with his audacity; they still remember him as Shir Naib, the Lion Viceroy.

In 1866 Alexei Kuropatkin got his commission as sub-lieutenant in the Turkestan rifles, attracted thither by the voice of war. He may well have dreamed of that land of wonders. Visions of the Golden Age, when this was Eden; Zoroaster and the holy fire; then Alexander of Macedon; then high-cheeked Buddhist Mongols; Nestorian Christians; Arabs triumphing for Islam; then Genghis Khan in his ruthless savagery; and at last Tamerlane, a warrior equal to Alexander, ruthless as Genghis Khan, fanatical as the Arabs, as great a builder as the Buddhists. His enameled mosques, with their arabesques; mosaic floors of ebony and ivory; the Turquoise Gate; the Summer Palace, resplendent in gold and blue against the morning; the Garden of Paradise, of clear white Tabriz marble, frescoes, inlaid floors, furniture of silver; Indian spices and muslins, China silks, and musk, and precious stones, rich furs from Siberia-all the wealth and color of the "Arabian Nights" multiplied ten times by lame Timur's genius. Then, after Timur, centuries of degradation and seething rottenness, and over all the iridescence of decay, the last glamor of Islam, holding the hearts of the faithful from the Ganges to Morocco, from Kazan to Zanzibar. Far more than Mecca or Stamboul Bokhara was the heart of the Moslem world.

But Alexei Kuropatkin had not come there to dream. A decisive battle had just been fought against the Bokharan Emir, 40,000 giving way before 4,000 Russians. The Emir's tent, in its sunset splendor, and a park of artillery fell into the conqueror's hands. Then seven days' fierce storming of Khodjent, with a final assault at the

point of the bayonet. Then Ora Tépé fell. Then a year of skirmishing against Bokharans, Turcomans, Afghans, but no decisive battle.

On May 13, 1868, the order was at last given to march on Timur's capital, Samarcand, where the supreme Turkish genius sleeps in a lovely mausoleum beneath the apricots. An oasis of the Zerafsan River; 8,000 Russians fighting their way across against 50,000; storming the high bank till the Bokharans break and fly, the gates of their city shut against them. Then, on May 14, the Russian flag over the city which once gave its submission to Grecian Alexander.

The Czar's troops still pressed southward, with their terrible bayonet courage. A panic in the Bokharan host; the ways strewn with abandoned weapons. Then treachery in Samarcand, 700 Russians holding the city six days against 20,000 and finally beating them. Then a treaty with the Emir, leaving Bokhara politically free, but morally bowed before the dominant Russian genius.

If Alexei Kuropatkin spent these two years in dreaming, the crosses of St. Stanislav and St. Anne, with the ribbons and swords of honor, "for distinguished valor," sufficiently record the spirit of his dream.

# III.—THE NEVA, THE SEINE, THE SAHARA: 1868-74.

With the rank of lieutenant, Kuropatkin returned to St. Petersburg to continue his studies

in the science of war in the Academy of the General Staff. In those days the curled darlings of this most favored home of learning were nicknamed "pheasants" by the plain-plumed students of the other schools. They had favors at court balls, special opportunities for flirtation, and floods of social sunshine in that most distinguished metropolis. After the Turkish war they were called the "moments," because they so often sought and missed the psychological moment in a battle.

If Lieutenant Kuropatkin wore fine feathers, he worked hard. He completed his studies in 1874, coming out triumphant at the head of his year. The best student is annually rewarded. Lieutenant Kuropatkin received a special allowance to continue his studies abroad. After a brief visit to Berlin he hurried on to Paris. France was hot with the fury of Sedan, the four months' siege, the commune, the ransom raised by the Jews. M. Thiers, wearied with the waywardness of the citizens, had retired to his back garden to study the orderly works of the Creator. In that famous Cashmere dressing-gown, gesticulating with his spy-glass, he talked of all things to all men. He and France with him were thinking well of the Russians, who had saved the honor of Belfort, the one stronghold the Uhlans had never taken. M. Thiers had put off presidential honors, and Marshal MacMahon reigned in his stead. His Irish half was urging him to rebuild the army; his French half had led him

THE STORMING OF THE GREEN HILLS, SEPTEMBER 7, 1877.

From the painting by Demietriev Orenburgski.

into the shows of mock royalty and impossible political designs. Lieutenant Kuropatkin was introduced to his Irish half, and the marshalpresident proposed that the brilliant young Russian officer should have a share in reorganizing the cavalry of France. Lieutenant Kuropatkin displayed so much knowledge, skill, and sagacity that General Galliffet, who was chief of the cavalry department at Paris, considered it his duty to inform Marshal MacMahon that the most brilliant results of the work had been gained by the young Russian officer's advice. Shortly after this Kuropatkin was invited to take part in the maneuvers around Metz, where he showed such remarkable strategic ability that the French authorities enthusiastically made him Officier de la Légion d'Honneur. Alexei Kuropatkin was thus the first Russian officer to receive this decoration for distinguished military services.

From Metz the scene suddenly changes to Algiers, sacred to Tartarin and the Atlas lions. Kuropatkin had better luck than the Tarascon For eleven months he rode through the length and breadth of the land with a column under General Laverdeau, in the expedition of the Great Sahara, through the oasis of Mzab to Wargla. A stage setting of desert sands, date palms, Kabyle encampments, striped tents, hooded nomads, camels, Jews in garments of the Captivity; a general effect of the meeting of Jacob and Esau, with some of the Egyptian plaques added for local colors. To put it poetically, insects floating in the sunshine; others felt, though hidden from the sunlight. Let us trust that Lieutenant Kuropatkin shared a certain immunity bestowed on Tom Sawyer. Like that hero, Kuropatkin recorded his seeings and doings in a book -a history of Algiers from the time of the French conquest; the face of the country, with its caravan routes, trade centers, commerce, manufactures; the native population; the condition of the interior; the army, administration, and judiciary. Add a special description of the Wargla oasis, presented to Governor-General Chansy, and in recognition of this yet another degree of the Legion of Honor.

## IV.—IN THE COUNTRY OF KUBLAI KHAN: 1875-76.

Meanwhile the genius of General Kauffmann had been "turning the Oxus into a Russian river." In 1871 he had overrun the Ili valley; in 1873 he had conquered the Khan of Khiva, leaving him nominally independent, but morally subdued. From Algiers Kuropatkin returned to the Norway winters and Persian summers of Turkestan. There was a question of conquering Kokand. The Emir had plundered his subjects to the re-

volting point and then had fled to Russian territory. His son took up arms against Russia, but was beaten at Telian and driven back to Kokand. He ceded the right bank of the Sir Darya River as far as Naryn to the Czar. But the trouble still went on, and Russia fought and won at Andijan. On January 26, 1876, a true Oriental intrigue brought the Czar's army back again.

THE CZAR ALEXANDER II.
"The Divine Figure from the North."
From the painting by K. E. Makovski.

On March 3 the end came, with the annexation of Kokand to the general government of Turkestan as the new province of Ferghana. Kuropatkin came out of this campaign with a rather severe wound, the crosses of St. George and St. Vladimir of the fourth class, and the rank of captain. He had been chief of the staff to Skobeleff, who was made governor of the new territory. We shall hear of these two together again at Plevna.

Ferghana lies to the north of the mountain mass of the Pamirs. East of the Pamirs is Chinese Tartary. Somewhere at the corner Ferghana and Tartary met; no one knew exactly where; this was now to be decided. At this time Chinese Tartary was the hunting-ground of Yakub Bek of Kashgar, a man with something of Genghis Khan and Timur in him. Kuropatkin was sent over the border into the wilds to find Yakub Bek and settle the frontier. Just round the corner of the Pamirs, near Osh in the Tian Shan Mountains, his escort was set on by a swarm

of Kara-Kirghiz nomads, the very material of conquering Tartar hordes. Capt. Alexei Kuropatkin and his brother, a captain of artillery, held out by dint of hard fighting until some troops from Osh relieved them. Alexei Kuropàtkin continued his journey through the wilds with a wounded arm and a stronger escort. was among unknown deserts wilder than the Sahara. Through Aksu he came to Kurla, near Karashar—grim places among the sands of Tarim and Gobi. The stage scenery included the felt tents of Tartar encampments, reeking mutton broth, patriarchal flocks and herds, insects, and wild-eyed Yakub Khan, the presiding genius of The expedition lasted a year, and the wastes. 2,500 miles were covered on horseback. Kuropàtkin gained some diplomatic glory and wrote a book on Kashgaria, awarded the Geographical Society's gold medal, like the volume on Algiers.

## V.—THE DANUBE, PLEVNA, THE BALKANS: 1877-78.

The deeds that brought the Russian invasion of Turkey are well enough known—the cruelty and rapine of Genghis Khan, prolonged in the full day of Christian Europe. Atrocious tortures; men and women bastinadoed to death, or hung head downward, or burned alive, or starved, or impaled on stakes. In one day the Turkish Governor of Belgrade impaled 170 Servians within sight of the Austrian post of Semlin. The Austrian officer sent a violently worded remon-After that the Servians were impaled on the other side of the town, out of sight of the Austrian fort. This is one day out of four centuries.

While Kuropatkin was with Skobeleff at Kokand the fiends had been let loose along the Danube. Christians were insulted, mutilated, and murdered with every atrocity. Finally the Emperor Alexander II. intervened, in the name of humanity and religion. War was declared on April 24, 1877. Thus the period of lying promises and evasions was closed.

There were three great barriers between Russia and Constantinople: the Danube, the Turkish forts in Bulgaria, and the Balkan Mountains. Russia brought to the Danube 200,000 men. had 250,000, better supplied, much better armed, and with finer artillery, though less of it. the Danube the Turks had a powerful fleetmonitors, ironclads, and torpedo-boats. Russians had no fleet at all till after the war. So absolutely useless were the ironclads and monitors that they accounted for just six Russian soldiers wounded during the war; not one killed. The resistance on the Danube was almost a fiasco. The Russians were across by the end of June.

Osman Pasha had been hurrying from Servia to stop them with 60,000 veteran troops armed with Peabody-Martinis. He came late and instantly decided to occupy Plevna, and so menace the line the Russians must follow from the Danube to the Balkans. About the same time General Gourko had made a brilliant rush to the south and seized the Shipka Pass in the Balkans. After two disastrous attempts to take Plevna in July the Russians finally realized the strength of Osman's position. Had they advanced to the south he would have cut their line of communication with Russia. No forward move could be made till Osman was dislodged.

Lovcha lay between Plevna and the Shipks Pass, held by 15,000 Turks. To close up on Skobeleff was Plevna Lovcha had to be taken. sent thither with Kuropatkin as chief of his The Turks had two strongholds, the Red Hill, between Skobeleff and the town, and a redoubt on the other side, a square fort of earthworks and trenches. On September 2 Skobeleff held a ridge commanding the town. The same night he got a strong battery into position. Early the next morning he began a deadly artillery fire against the first Turkish position on the After eight hours' continuous firing Red Hill. he stopped his artillery, advanced with bayonets fixed, and carried the Red Hill position by fierce hand-to-hand fighting.

His cannon then fired over the town against the redoubt on the other side, Skobeleff's troops meanwhile making their way through the town

RUSSIAN SOLDIERS.

to the gardens under the redoubt. After three hours the artillery had knocked the redoubt nearly to pieces. But the Turks opened a heavy infantry fire with their deadly Martinis when the Russians advanced to carry the redoubt with the bayonet. This they finally did about 7 in the evening after a terrible hand-to-hand struggle, a wild turmoil of slaughter and mutilation. The Turks were killed to a man. The bodies of the dead of both sides lay piled up six feet

THE BLACK SEA-THE HARBOR OF ODESSA.

high in the throat of the redoubt, ghastly and silent.

Meanwhile Osman had been burrowing in the earth round Plevna. He had a half circle of defenses on the southeast of the town, beginning with the Grivitza redoubt on the east and ending with the Krishin redoubt on the south. Half way between was a strong group of earthworks. Osman had 60,000 troops with Martinis and abundant ammunition, but only 80 cannon. The Russians had about 80,000, but nearly 400 cannon. But they had far too many commanders.

The third battle of Plevna was fought on September 11. The Roumanian army, led by Prince Charles and General Krüdener, was against the Grivitza redoubt, Kriloff's regiments were against the middle, and Skobeleff was against the Krishin redoubt to the south, on the left flank of the Russians. The Grivitza redoubt was a square earthwork with a parapet eighteen feet thick. The Russian artillery had hammered at it for four days, but had been unable to carry it by assault against the murderous rifle fire of the Turks. By the evening of the 10th it was pretty well knocked to pieces. At the other end of the Russian line Skobeleff had been fighting under the Krishin redoubt, backward and forward along the Green Hills, with their three crests lying between him and Plevna. On the evening of the 10th he had retired to the first crest.

Here is an episode to show the esteem Skobeleff was already held in. He was technically under the orders of Prince Imeretinsky, his senior in standing. Late on the night of the 10th Imeretinsky received an order from the general staff dividing his forces into two independent portions and placing the first under Skobeleff's command. Imeretinsky retained the second, with

orders to support Skobeleff, and during the battle Skobeleff called on him for support so often that Imeretinsky was left without a single battalion. This was precisely what was intended. While nominally in command he was superseded by his brilliant junior.

The 11th broke with cold rain and fog. At 10 o'clock Skobeleff began to work forward toward the crest of the third hill. He had no earthworks there to protect him, and when the fog lifted he was terribly exposed. He sought and received permission to advance about 3 o'clock. The air was full of the thunder of 300 cannon.

The Turks held a rifle-pit under the third hill. Skobeleff advanced, with bands playing, to the assault, and cleared the Turks out with the bayonet. He was exposed to a terrible fire from front, right, and left from the

Turkish trenches and redoubts, while he was in the open. This was the decisive movement of the battle, and Skobeleff was equal to the ordeal. The very van of his troops, under the most deadly fire, suddenly found him in their midst, a giant in a white cloak on a white steed. The "white general's" personal valor was worth more than a dozen regiments. He fought his way into the Turkish trenches at the head of his men; his horse was killed, but he himself never even wounded. There was tremendous enthusiasm among the Russian troops and a splendid effort to take the next position. At half-past 4 the Turks were forced out, and this position also was in his hands. beleff had lost 3,000 men within the hour and was still under ruinous fire from three sides.

Then the Turks in the redoubt on his left made a sortie. Colonel Kuropatkin took 300 men and went forward to meet them in the open. Every other officer on Skobeleff's staff had fallen. A desperate fight took place, in which Kuropatkin lost almost his whole 300, but the Turks were driven back into their redoubt. Skobeleff was still in a position of the utmost danger, with 12,000 men against him. But he had won a name for valor and undying fame, and the Russian soldiers spoke of him as one who had the daring of the immortals. He was compelled to

fall back at last, leaving behind him 8,000 men who had died the red death of war, valorous and exultant.

Meanwhile the Grivitza redoubt had been taken, but at a ruinous loss to both Russians and Roumanians, who had fought gallantly under their leader, Prince Charles. The Turkish center had been absolutely unshaken. On the left Skobeleff had been compelled to retreat.

Strategically the battle was a defeat, and Skobeleff himself was defeated. Nevertheless the magnetic power of his valor under that four-fold murderous fire in the open, the splendid energy and vigor of his daring, and something large and heroic in his whole person were the qualities that fired the Russian soldiers and won the war. Skobeleff had conquered fear.

Colonel Kuropatkin, while re-forming his soldiers in the redoubt after holding back the Turks, received a contused wound on the head from the bursting of a case of cartridges. He spent the next month in hospital at Bucharest.

The Russians gathered in round Plevna and practically starved Osman out. On December 10 he surrendered, and the second obstacle to the Russian arms was overcome.

The winter that followed was terribly severe. In one Russian division 6,000 men fell victims to the cold. The thermometer sank thirty degrees below freezing, and there were ten feet of snow on the Balkans. Between Christmas and New Year the Russians were fighting their way across amid arctic storms and hurricanes. Sheets of ice, whirling wreaths of snow, Turkish sharpshooters under cover—this was their daily life. Then another splendid achievement of Skobeleff and his chief of staff, Kuropatkin. Their column, descending the Balkans, was strongly opposed by the Turks on the ridge at Imetli, taking the column in flank. The Russians stopped. Skobeleff came up to the front and found his men lying down, unable to reply to the Turkish fire from the inferior range of their rifles. While Skobeleff was speaking Colonel Kuropatkin received a serious wound in the shoulder from a Turkish bullet. Skobeleff ordered up a company of the Sixty-third Regiment, armed with Peabody-Martinis taken at They opened fire and silenced the Plevna. The Russians lay down in the snow, expecting to be shot the next morning, and in no wise disconcerted by the expectation. after sunrise the Sixty-third and Sixty-fourth regiments drove the Turks from the ridge of Imetli and advanced toward Sheinovo, joined later by the Sixty-first and Sixty-second. What follows has been commemorated by Verestchagin in a picture of grim and ghastly beauty.

Skobeleff formed his troops to attack the Sheinovo redoubts. With bands playing and without firing a shot the troops moved forward to the assault in the teeth of the Turkish fire. They were badly hit all along the line, but moved forward quite steadily till they were closed to the redoubts. Then they rushed in cheering. As they entered the redoubts silence closed over them. No sound, but a grim, fierce struggle hand to hand, bayonet against bayonet. The Russians were completely victorious. Twelve thousand Turks laid down their arms at Sheinovo, "one of the most splendid assaults ever made."

A fortnight later Skobeleff entered Adrianople, and in March peace was made. Over the negotiations that followed it is best to draw a veil.

Colonel Kuropatkin was awarded the golden sword of honor "for valor," and the crosses of St. Stanislav and St. Anne of the second class and St. Vladimir of the third class, all with swords of honor. He is the only Russian general who holds the St. Stanislav and St. Anne crosses of the second class with swords of honor.

"Lovcha, Plevna, Sheinovo" and "The Actions of General Skobeleff's Division" were added to the list of his writings.

## VI.—AT THE GENERAL STAFF, GEOK TÉPÉ: 1878-90.

At the close of the Russo-Turkish war Kuropàtkin was appointed director of the Asiatic department of the general staff and joint professor of military statistics in the academy from which he had issued, as its most brilliant student, five years before. Whether in that capacity he has perfected a plan for the invasion of India, a military alliance with the Afghans, or the conquest of China, are matters which are likely to remain secrets of state. But he was not destined to enjoy long rest in the northern capital. There was trouble again on the borders of Turkestan. A series of blundering expeditions from the Caspian had ingulfed many Russian soldiers in the Turcoman deserts. Skobeleff, the fighting general, was sent to put matters right. Kuropatkin was put in command of the Turkestan rifle brigade. As they passed through the Caucasus, on their way to the Transcaspian province, all Tiflis came The great "white general." out to greet them. with his small dark brother Kuropatkin, both of them full of unconquerable fire, passed on across the blue Caspian Sea. Kuropatkin brought his Turkestan rifles to support Skobeleff from the Oxus across the desert after a terribly hard march of 400 miles through the sands.

At the siege of Geok Tépé, as commander of the right wing and afterward the center of the attack, the brunt of the battle fell on Kuropatkin. The Turcomans were foemen worthy of the victors of Lovcha and Sheinovo. When in command of the chief storming column Kuropatkin forced a way into the fortress by a brilliant piece of mining, and laid the foundations of a complete conquest of the Turcoman marauders—the last dregs of the great Mongol hordes.

In this assault, as in all his battles, there was a certain quiet serenity in Kuropatkin for all his fire, as though the roar of cannon was pleasant music, the smoke-clouds scent-laden zephyrs, the menace of instant death a gentle companionship. The cross of St. George of the third class and the rank of major-general record his doings in this Turcoman campaign. Then Skobeleff's sun set in a splendid carouse, to rise again in Valhalla.

From 1883 to 1890 General Kuropatkin was busy with the work of the general staff, and played a leading part in that reoganization of the Russian army which marked the reign of Alexander III. This reorganization involved the application of the best and wisest modern standards throughout the whole army, which is now, in point of discipline, equipment, organization, and knowledge, the equal of any in the world. In moral force, courage, and unity it is probably without equal. Those who have seen the armies of all the great powers under fire are strongest in praise of the serene assurance with which the Russians can advance in the face of certain death, not less than the invincible valor of their splendid bayonet charges. Kuropatkin has handled larger bodies of troops all along the German and Austrian frontiers in the yearly maneuvers.

# VII.—TRANSCASPIAN PROVINCES: 1890-97.

What remains to tell of Kuropatkin's life up to New Year's Day, when he became minister of war, is of high interest and value, though it cannot compare, for stirring dramatic power, with what has gone before.

On March 27, 1890, he was appointed governor of the Transcaspian province and promoted to the rank of lieutenant-general. It is admitted on all hands that the fruits of his rule show the wisdom of his appointment. He has completely pacified the Turcoman hordes, and carried far on the road to success that process of absorption which seems to be Russia's secret in dealing with Asian peoples. Contact with Russian rule seems to confirm and strengthen their national genius and steady them in the true path of their natural development. A railroad has been completed from Krasnovodsk, on the Caspian, right through the Turcoman country, Bokhara, and Mery to Samarcand. A branch will soon be

opened to Tashkend, where there are already telephones and electric railroads.

All along General Kuropatkin has steadily worked to strengthen the Russian colonizing element. On the Transcaspian railroad, thanks to his persistence, Russians are taking the places formerly held by Persians and Bokharans. More than 6,000 Russians are now employed on the railroad—an element of great strength should the course of events bring about a future struggle on this utmost outpost of the Russian empire to the General Kuropatkin has also built a southeast. carriage road over the Kopet Dagh Mountains into Persia; churches and public buildings have been added to the Transcaspian towns; about thirty Russian schools have been opened, including the Marienski College, in Askhabad; the technical railroad school; a horticultural and several municipal schools.

General Kuropatkin has further had to organize the judicial department of the province, for the native inhabitants as well as for the colonists. And he has induced the natives to take to cottongrowing, with the result that this industry, which hardly produced 100 tons of raw cotton ten years ago, now yields an annual produce of 7,000 tons. To this period also belongs a journey to Teheran as ambassador extraordinary to the Shah of Persia in 1895.

## VIII.—THE MINISTRY OF WAR: 1898.

And now, with the widest knowledge and experience to supplement his inherent genius and power, Alexei Nicolaievitch Kuropatkin is called to the supreme post of power, the lordship of the Russian army, with its 5,000,000 men in time of war.

Russia was never so powerful, so wealthy, so full of exultant confidence in her destiny; never was there such profound peace and general well-being within the empire; never were her counsels of such weight abroad. The potent and patient genius of Alexander III. has made Russia the arbiter of Europe, as Napoleon once made France and as Bismarck made united Germany.

A long period of repose and consolidation, of high success in the arts of peace, of rapidly growing national wealth, may lead to a time of territorial growth like that which, under Alexander II., added to Russia the rich Pacific provinces on the Amoor and the whole of Turkestan. In such a period of expansion General Kuropatkin stands for the effective organization of the will of the Russian race. It is for him to assure to the genius of his country that success which has been hers throughout three centuries of conquest.

## THE LATE ANTON SEIDL.

## BY CHARLES D. LANIER.

I T is a difficult matter to write of Herr Seidl, who died so suddenly on March 28 last. A writer either has or has not come under Seidl's spell. If not, then there is as much reason for a Patagonian savage to give readings from Dante; if so, there is such a poignant realization of the greatness of this man and artist and of the poor place which true poetry occupies in our workaday lives that an appreciative biographical note savors of anti-climax. This writer believes, with thousands of others, that Anton Seidl was the greatest interpreter of music that the nineteenth century

ANTON SEIDL

has produced. It is more generally admitted that he was the first of Wagnerian conductors and that he, more than any other, gave America what it has of the noblest music. This he did with no fury of argument, with no skill in business organization, but merely by virtue of his genius in compelling, inspiring, the sincerest efforts of the musicians beneath his baton. The hearts of the multitude were moved; they saw and felt what Wagner, what Beethoven, saw and felt.

Seidl was born in 1850 at Budapest. His musical education was begun at the Leipsic Conservatory and was continued for two years under Hans Richter at Budapest. In 1872 Wagner wrote from Bayreuth to Richter asking if he knew

of any young musician of talent who could act as a musical secretary to aid in the completion of "Parsifal" and "The Ring" from the shorthand notes and cabalistic signs with which the great composer first drafted his operas. Seidl went to Bayreuth in 1872 to do this work, and remained for five years as a member of Wagner's house-The labor of copying the long and elaborate score of these operas, together with the discussion and corrections—for some of which Seidl was responsible—was a precious preparation for the mission which later came to the young musician of introducing the master's poems to an unbelieving world. In 1878 the young secretary began his serious work as Wagner's interpreter by managing a cycle of the operas at Vienna, and during the next seven years acted as an orchestral conductor in the musical centers of Germany, Italy, and England.

It was with this magnificent equipment of experience that Seidl came to America in 1885. It is pleasant to think of his invasion of the clashing, hustling city of New York all intent on bearing the message his master, Wagner, had for the world. His task would have seemed a superhuman one to any one who did not realize how much of the raw capacity to receive poetry lies in the heart of every man and woman-New York business man, boarding-school girl, irreverent reporter, bedizened, chattering occupant of a "box," editor of a "comic" paper, or whoever it may be. Thirteen years ago Wagner was only a joke, except with a few who were looked on as fullfledged cranks. As conductor at the Metropolitan Opera House, Seidl produced during the three years preceding 1889 the first performances in America of Die Meistersinger, Tristan und Isolde, Götterdämmerung, and Rheingold. The few who had appreciated Wagner's greatness found him vastly greater than they had ever before suspected; and with this noble, contained figure leading and inspiring the orchestra to the very heights of passion and tenderness, of love and despair, real music found its way to the hearts of thousands whom the works of Beethoven and Mozart, great as they were, had failed to move. When the emotional side of his audience had been once stirred, the fine poetic figure of Anton Seidl added to the charm. Not tall, but of commanding presence, with masterly, sure gestures, most noble in their simplicity and reserve; his

strongly chiseled features firm set in grave beauty; a magnificent mane of silky hair like that of Liszt—his face and form were in such rare keeping with the music of the gods that the appeal of his reserve was more powerful than any effect attained by those conductors who are intoxicated into a fury of gesture. To have heard his orchestra in the Vorspiel of Tristan is to have at hand for one's lifetime a world of poetry to which the gate is opened at the thought of Seidl's uplifted hand and brow. It is strange enough to observe the variety of minds who were captivated by him. The most cynical of men, to whom music, before they knew Seidl, meant merely a plaything for women and womanish men, repaired night after night to the Metropolitan and spent ecstatic hours. He was, on the other hand, worshiped of women, notwithstanding his exceeding reserve; the most sentimental schoolgirl and the largest and finest mind alike accepted him as a hero, because he appealed to the truth in both of them. The musicians, too, adored He was modest and, in his quiet, unprotesting way, most kindly. He seemed undeniably one of the elder men, one who could "speak and be silent." His worth was best recognized by the very greatest of his peers, Wagner, Liszt, and Richter, and De Reszké, Lehmann, and Al-He brought Lehmann and Alvary with him in 1885; De Reszké refused to sing Tristan unless Seidl was the conductor.

In the years between 1886 and 1889 Seidl made the German opera in New York City compare favorably with any dramatic music in the In the season of 1890 the Metropolitan reverted for several years to operas of the Italian and French schools, and Seidl applied himself to concert work, and especially the building up of the Philharmonic Society, which has more nearly classical traditions than any other organization in the New World. He had the opportunity here, and improved it in a manner surprising even to his admirers, to show that his powers of interpretation were not by any means limited to the Wagnerian music. Beethoven's seventh and ninth symphonies, the "pathetic" sympathy of Tschaikowsky, and Dvórak's "The New World" have never been and will scarcely be interpreted with more sympathy and high intelligence.

Aside from his activities as leader of the Philharmonic, Seidl conducted a regular series of concerts under the management of the Seidl Society of Brooklyn, and of an evening in the hot season led his musicians into a large pavilion at Brighton Beach, where the thunder of the Valkyrie and of Walhalla were mingled with the roar of the waves which dashed against the walls

of the concert hall. His earnings from these many engagements were not large. The perfect outlines of a perfect artist's life were not broken in Seidl's career by the cares of building up a fortune. Indeed, he would scarcely have made a "business success;" it is said that more than once he returned his stipulated check to a manager who had not realized a fair profit.

The total effect of Seidl's work in America was to arouse here such an enthusiasm for classical music as was utterly unknown before him. He became quite the hero of the music-loving people of the country. The inspiration he gave was not at all confined to New York City and Brooklyn, for it became quite the fashion in these later days for the people of musical tastes in the West and South to come to New York or Chicago for the opera season. People of all classes in the country seized on any holiday or other opportunity to come to the city during the opera and concert season, and carried back to their homes an enduring recollection of the great orchestral leader and a new capacity for the highest enjoyment of music.

In New York City Anton Seidl was a wellknown and picturesque figure on the streets, cigar in hand, next the driver of a horse-car, or even more frequently in the upper story of Fleischmann's restaurant next to Grace Church. Here during the "season" he could be seen day after day, gravely entering and bowing to acquaintances in the little circle of Germans and Austrians that regularly frequent this eating-house. One or two of these would invariably join Seidl over his simple lunch and beloved cigar, and it was charming to see how the excited gestures and loud voices of the round table they had left would be changed to a quiet demeanor and almost reverential consideration for the musician's mood. Seidl talked very little except when aroused, but his silence was more eloquent and satisfying than the best conversational efforts of many men. In the summer Seidl and his wife lived in a cottage in the Catskills named "Seidlberg." They had no children, and expended a vast amount of affection on their collection of dogs, of which Wotan, a huge St. Bernard, and Mime, a dachshund, were the chief and ever-present members.

Seidl was but forty-eight; the best twenty years of his life were before him. New York has asked Herr Mottl to come in his place, but for a year yet that eminent conductor is engaged. The thought of a successor merely serves to remind the lovers of Anton Seidl that his loss is final. No one can take his place to those who heard him.

## GEORGE MÜLLER: A CHARACTER SKETCH.

BY W. T. STEAD.

## I.—HIS LIFE-STORY.

TF George Müller had been a well-connected Englishman of standing and of fortune, the accredited representative of the national Church. if his orphanages had been launched under distinguished patronage, if their revenues had been collected by an army of enthusiastic volunteers, and if their existence had been constantly kept before the mind of the public by lavish advertisement, it would have been easy enough to account It is true that many who have for his success. had all these advantages have, nevertheless, made dismal shipwreck of their schemes; but let us admit that their existence would have been sufficient to explain the achievement which has made the name of Müller famous throughout the George Müller, however, as will be seen from the most cursory glance at his remarkable career, had none of these advantages. an alien in a strange land. George Müller was "made in Germany." He had no personal property, no independent income. He was connected for a short time—somewhat loosely connected—with a sect which, although it has done some service to the state, has neither the wealth of the Establishment nor the denominational en-His orphanages thusiasm of the Methodists. were started in the humblest way, without patronage of any kind. His revenues came to him without any canvassing or any personal application for a single subscription. He never advertised—he simply praved. And he got the cash.

### HIS BIRTH AND PARENTAGE.

George Müller was the son of a Prussian exciseman. He was born at a place called Kroppenstadt, near Halberstadt, in Prussian Saxony, on September 27, 1805. Twenty-four days after he was born Nelson fell at Trafalgar. In the following October Prussia fell, crashing at the feet of Napoleon on the fatal field of Jena, not to be avenged till seven years later, at the battle of Leipsic. Although Müller as a boy lived within cannon-range of the battlefields where the fate of empires was decided and was ten years old when Waterloo at last gave peace to the continent, he seems to have been absolutely unaffected by the wars and rumors of wars in the midst of which he grew up. Nowhere in any of

his writings, so far as I have been able to discover, is there so much as an allusion to the fact that his childhood was passed in the cockpit of Central Europe at the time when the fighting was the bloodiest and most incessant. It is significant of much. From his birth up political things never commanded his attention.

### A BORN THIEF.

It is not that he was too much of a saint in his early days. The things of this world had an immense attraction for the lad-so great an attraction, indeed, that he could not even keep his hands from picking and stealing. If ever there was a youth who seemed predestined to end his days in a convict prison, George Müller was that He seemed to be a born thief. astray, if not from the cradle, speaking lies and stealing money, at least from the days when he put off petticoats and wore breeches. He himself tells us, with characteristic frankness, in the very first page of his delightful autobiography, which is far more interesting even than Bunyan's "Grace Abounding for the Chief of Sinners," that he was an habitual thief before he was ten years old. And, mark you, this was none of the petty larceny of the orchard or the cupboard; it was deliberate, systematic stealing of money. He began by falsifying the little accounts he had to render to his father as to the way in which he spent his pocket-money; he went on to rob his father of the money he collected as taxes. "Before I was ten years old I repeatedly took of the government money which was intrusted to my father, and which he had to make up."

### "GROSSLY IMMORAL" AT FOURTEEN.

John Bunyan, poor soul, in the excessive tenderness of his Puritan conscience, accused himself of being the chief of sinners on account of his love for bell-ringing, the playing at bowls, and a perverse habit of profanity. Compared with the lad George Müller, John Bunyan in his worst estate was a perfect saint. On the day his mother died, George, being then fourteen years old, sat playing at cards till 2 o'clock on Sunday morning; and while she lay dead in the house he spent Sunday in the tavern, and scandalized the village by staggering half drunk through the streets. On the next day he began to receive the religious instruction preparatory for confir-

mation; three or four days before taking his first communion he was "guilty of gross immorality." The very day before he was confirmed, when he went into the vestry to confess his sins to the clergyman, he cheated him out of eleven-twelfths of the fee which his father had given him to pay the parson. After his confirmation he continued to lead a dissipated, dishonest life.

#### A JAIL-BIRD AT SIXTEEN.

No one can be surprised after this on learning that the young scoundrel was landed in jail before he was seventeen years of age. He went off on a spree one fine day, spent six days in Magdeburg "in much sin," emptied his purse at Brunswick, where he had a sweetheart, had to sacrifice his best clothes to meet his hotel bill at one place, and then, when trying to bilk the landlord at Wolfbuttel, he was arrested and clapped into jail as a rogue and vagabond. There he was kept under lock and key for three weeks, and as usual came out a good deal worse than he went After he came out his father flogged him harder than ever, but the lad was incorrigible. But while he lied and cheated and drank and was "habitually guilty of great sins," he did begin seriously to apply himself to his books.

## A COURSE OF DEBAUCHERY AND DIVINITY.

For this young reprobate was designed by his father for the Christian ministry, chiefly, it would appear, in order that when he retired from the excise he might find a comfortable retreat in his son's parsonage. Not even a thirteen weeks' illness produced any impression on him, beyond leading him to read Klopstock's works without When he recovered he went on his weariness. swindling way, narrowly escaping a much more serious imprisonment for a barefaced fraud. When he was twenty his debauchery again laid him up on a sick-bed. When he recovered he forged his father's name, pawned his books, and set off on a tour in Switzerland with some fellowstudents as racketty as himself. How utterly lost he was at this time to even the rudimentary sentiments of honor and honesty may be judged from this confession: "I was in this journey like Judas, for having the common purse I was a thief. I managed so that the journey cost me but two-thirds of what it cost my friends."

## HIS CONVERSION.

Such was George Müller when, in the year 1825, he was studying at the University of Halle, one among 900 young men who as divinity students were all permitted to preach, although, as he remarked afterward, "I have reason to believe not nine of them feared the Lord." If

they, the other 890, were like George Müller, this judgment is probably not uncharitable. He says that although according to custom he took the Lord's Supper twice a year, he had no Bible and had not read it for years. "I had never heard the Gospel preached up to the beginning of November, 1825. I had never met with a person who told me that he meant by the help of God to live according to the Holy Scriptures." Nevertheless he was ill at ease, and when, in November, 1825, a comrade told him of a Saturday evening meeting at a friend's house where they read the Bible, sang, prayed, and read a printed sermon, "it was to me as if I had found something after which I had been seeking all my life" -which is peculiar, to say the least of it.

#### HOW IT CAME ABOUT.

Nevertheless, most things are peculiar in this odd world, and we must take things as they are. George Müller went to this Saturday evening prayer-meeting. At that time in Prussia "no regular meetings for expounding the Scriptures were allowed unless an ordained clergyman was present," so they only read a chapter and a printed sermon. But that night's meeting changed the whole of George Müller's life. How, he frankly confesses he does not exactly know. He had never seen any one on their knees before in The prayers made a deep impression on him. "I was happy, though if I had been asked why I was happy I could not have clearly explained it." When he returned home he does not remember whether he so much as knelt in prayer. "This I know, that I lay peaceful and happy in my bed." He seems to have had very little sorrow for sin. He certainly had none of John Bunyan's agony of remorse. He says: "I obtained joy without any deep sorrow of heart and with scarcely any knowledge. That evening was the turning-point of my life."

## THE SHUNTING-TIME OF HIS LIFE.

His wife's account of this memorable shuntingtime somewhat obscures the notable fact that salvation came to him as a vague sense of joy practically unaccompanied by any keen penitence or any distinct grasp of the doctrines of Christianity. She says:

In the little prayer-meeting for the first time he heard about the way of salvation through Jesus Christ; for the first time he saw what a wicked, guilty sinner he had been all his life long, walking without a thought or care about God, and it pleased God—to put the matter shortly—after he had entered the house as one dead in trespasses and sins, and utterly unconcerned and reckless about the things of God as one could possibly be, to allow him to leave it a Christian, although one extremely little instructed about the things of God.

He changed his manner of living, ceased to play cards, abandoned the ball-room, and burned the manuscript of a French novel which he was translating into German. He read the Scriptures, prayed often, went to church. "Apprehending in some measure the love of Jesus for my soul, I was constrained to love him in return." When he was overcome by sins, secret or open, he sorrowed in his heart, and after a time he began to think seriously of devoting himself to missionary labor.

## THE "YOUNG FEMALE."

But the tempter, as of old, employed a young female, who was prone withal to beguile the young man from the upward path. Her parents would not allow her to go to the mission field, and life seemed to him barren and void without her, so for six weeks he ceased to pray, and the joy of the Lord departed from his life. But at Easter he heard of a young man of wealth who had abandoned luxury at home in order to labor among the Jews in Poland. The example smote Müller to the heart. "I had given up the work of the Lord—I may say the Lord himself—for the sake of a girl." Poor girl! she was soon dethroned. "I was enabled to give up this connection, which I had entered into without prayer and which thus had led me away from the Lord." The snare was broken, and thus "for the first time in my life I was able fully and unreservedly to give up myself to God."

#### HIS FIRST EXPERIENCE OF COMPENSATION

He says that it was at this time he began truly to enjoy the peace of God which passeth all understanding, and which enabled him to withstand the wrath of his father, who was furious when his son tried to convert him, and talked about becoming a missionary, instead of qualifying for the fat living with a manse in which Müller père hoped to end his days. He refused to accept any money from his father, and, "by the way, I would here observe that the Lord in the most remarkable way supplied my temporal wants." Some American professors needed lessons in German, and they paid him more than the money his father used to allow him. "Thus did the Lord richly make up to me the little which I had relinquished for his sake." That is the first note in his autobiography of the teaching which vibrated more and more every year till the close of his long and useful life.

## ON THE DRAWING OF LOTS.

Müller was not sure whether he ought to be a missionary. So, by way of settling the matter, he drew a lot in private and bought a ticket in

the royal lottery, deciding that if he won a prize it would be a sure sign that the Lord wished him to be a missionary. Surely, never was there a more abominable method of interrogating the Sacred Oracle. He won a prize and promptly applied to be a missionary. He was refused because he had not his father's consent. Thereupon he began to consider the error into

THE LATE GEORGE MULLER.

which he had fallen concerning the lot. He tried it several times, but it did not work. On one occasion when he lost his way he drew lots after prayer as to whether he should go to the right or the left. The lot fell to the left, but the left was wrong. Then he prayed the Lord to send him some one to put him in the right way, "and almost immediately a carriage came up, and I was directed on my journey."

## HIS CHILD-LIKE FAITH.

Müller was now past twenty-one. He says quite truly:

From the very commencement of my divine life the Lord very graciously gave me a measure of simplicity and of child-like disposition in spiritual things, so that while I was exceedingly ignorant of the Scriptures and was still from time to time overcome even by outward sins, yet I was enabled to carry most minute matters to the Lord in prayer.

So far from feeling that the Almighty would resent this perpetual troubling him with all the good George's anxieties concerning the life that now is, as well as the life which is to come, he was firmly of opinion that the Lord expected it, and rather resented his failure to consult him upon every trifling detail of his existence.

## AN ODD INSTANCE.

Of this the most extraordinary illustration is afforded us in the passage in which, when his wife, after a seventeen hours' labor, was delivered of a still-born child—her first-born—this astounding man actually makes an entry in his journal that as he had never earnestly prayed about her confinement, never having seriously thought of the great danger connected with it—it was his first experience—"he had no doubt the Lord now, in great compassion, sent this heavy blow." Afterward, when his boy was born, he left his wife to face her trouble while he went to fulfill a preaching engagement. When he came home the son was born. Whereupon he writes:

Observe—(1) The Lord graciously sent the medical attendant and the nurse (the latter nearly three miles off) in the right time; (2) the Lord put it into my heart to honor him by preferring the care of his house to that of my own, and thus he lovingly spared me three painful hours.

That is George Müller all through. We cannot help wondering what the wife thought about it. Human ideas of justice are somewhat difficult to harmonize with inflicting seventeen hours' torture on the wife as a punishment for the husband's shortcomings.

## FOR THE CONVERSION OF THE JEWS.

I am, however, anticipating. George Müller began to preach and to distribute tracts. He had his ups and downs like other men, and on one occasion backslid so far as to fall to drink. But although he used to be able to quaff five quarts of strong beer in an afternoon, he could not now get beyond two or three glasses of wine, and soon gave it up. He diligently availed himself of all the accessible means of grace. The Moravians refreshed his soul. He would walk ten or fifteen miles on Sunday to hear any godly minister, and he carefully eschewed all profane literature.

When he was twenty-one he had a call to go as a missionary to the Jews. He was a great student of Hebrew, and was in June, 1828, accepted as a missionary student on probation by the London Society for the Conversion of the

Jews. He had still his term to serve in the Prussian army. Fortunately, however, a temporary backsliding which led him to attend a performance in the Leipsic Opera House, where he took a glass of ice-water, brought on a serious illness, which led the army doctors to reject him as unfit for military service, having "a tendency to consumption." Greatly rejoicing at his escape, George Müller landed in London on March 19, 1829. He went to the seminary and spent twelve hours a day studying Hebrew and ('haldee. Most of the students were German, and he had little opportunity of mastering our language. His health broke down before midsummer, and he was ordered into the country.

## HE TURNS TO THE GENTILES.

He went to Teignmouth, where he met Henry Craik, who was destined to be afterward so closely associated with his life.

At Teignmouth he began to preach in his broken English to a little church of 18 members, meeting in Ebenezer Chapel. While there he became a Calvinist, a Second Adventist, and a believer in the baptism of believers. His preaching excited much opposition at first. This, curiously enough, seemed to him to be a sure sign of his call:

I could not explain it in any other way than this: that the Lord intended to work through my instrumentality at Teignmouth, and that therefore Satan, fearing this, sought to raise opposition against me.

An admirable formula, worthy to be had in eternal remembrance.

He soon came to the conclusion that his vocation was not the conversion of stiff-necked Jews who would not listen to the Gospel. He wished to follow St. Paul's example and turn to the gentiles. Besides, with the sturdy and excessive individuality of the man, he objected to be at the beck and call of a society. He must be God's man and God's alone; no one should give him orders save the Holy Spirit. And as the Divine Monitor had laid it upon his soul that he must go preaching tours among the churches, it is not very surprising that on January 30, 1830, the missionary society severed their connection with Mr. G. F. Mülier.

## PASTOR WITHOUT SALARY.

He was now free. He accepted the unanimous invitation of the church at Teignmouth to become their pastor, on the munificent salary of £55 per annum. On this he married in October, and almost immediately afterward he gave up any regular salary. He had conscientious objections. A box for free-will offerings was put up in the church, pew rents were abolished, and he

GENERAL VIEW OF MR. MULLER'S ORPHANAGES AT BRISTOL.

decided to trust God and the people for the means of subsistence.

He remained at Teignmouth till May, 1832, when he removed to Bristol. The membership of the Teignmouth church had risen from 18 to 51. All his wants had been supplied. He had married and had gained recognition as a spiritual force from Exeter to Barnstaple.

#### SETTLES AT BRISTOL.

In 1832, when he removed to Bristol, he carried on the same kind of work in the same kind of way-nursing the sick through the cholera epidemic, feeding the hungry as a means of doing something for the souls of poor boys and girls, and generally forging ahead, until on March 5, 1834, he boldly launched the Scriptural Knowledge Institution for Home and Abroad, of which institution his orphanage, although far and away the best-known branch, is only one department among many But now, having sketched in rapid, cursory fashion the life of George Müller up to this point, I will suspend the personal narrative in order to put together, as briefly and as succinctly as possible, the facts about the orphanage.

## II.—HIS LIFE-WORK.

The Scriptural Knowledge Institution for Home and Abroad had the following objects, namely: (1) To establish day-schools, Sunday-schools, and adult schools; (2) to circulate the Holy Scriptures, and particularly among the very poorest of the poor; (3) to aid missionary operations; (4) to circulate religious books, pamphlets, and tracts for the benefit of believers and of unbelievers (an object added some time afterward).

## THE PRINCIPLES OF HIS ORPHANAGES.

The account from which this is extracted goes on: (5) In 1835 the orphan work was established. Of the principles of the institution two only need be mentioned—first, that debt should never be incurred; and, second, that no rich, great

man should be its patron, but that the living God alone should be the patron of the institution.

The Lord helping us, we do not mean to seek the patronage of the world, as we never intend to ask unconverted persons of rank or wealth to countenance this institution, because this we consider would be dishonorable to the Lord. He alone shall be our patron. We reject altogether the help of unbelievers in managing or carrying on the affairs of the institution.

Unbelievers were allowed to contribute, but were never to be asked to do so, even Mr. Müller finding it difficult to detect unbelief in the free gift of a willing heart.

## HIS OTHER WORK.

Of the less-known part of his work the following summary must suffice:

In various localities schools were supported with a view of extending the influence of Christian teaching, and thus in sixty-three years of work 121,683 young people have been taught, a number altogether outside the orphanage work. That is not all. In the same period there have been circulated, by means of this institution, in almost all parts of the world and in many different languages, 281,652 Bibles, 1,448,662 New Testaments. 21,343 copies of the Book of Psalms, and 222,196 other portions of the Holy Scriptures. Copies of the Scriptures have been sold at half price by Bible carriages journeying to out-of-the-way districts. When Spain was opened to this work in 1868 Mr. Müller promptly sent many thousands of copies in Spanish, and so in the case of Italy. In other parts of the world similar work has been done. The distribution of religious literature has been in the aggregate enormous more than 111,000,000 books, pamphlets, and tracts having been sent out.

Nearly £400,000 has been raised and expended in this work. The sum raised and expended on the orphanage is in round numbers about £1,000,000.

## THE NEED FOR THE ORPHANAGES.

In 1834, when Mr. Müller began his work, there were no orphanages in England Between April, 1836, and May 26, 1897, the orphan houses had provided for 9,844 children, and for their maintenance and for the buildings nearly a

million of money (£964,764) had been given. Writing in 1891 Mr. Müller said:

At the time when it was especially laid on my heart to labor for orphans, the total accommodation in all the erphan institutions in England was for 3,600 orphans, and at the same time there were 6,000 orphans under eight years of age in the prisons of England, according to public statistics. This deeply affected me, and I sought therefore to enlarge the orphan work under my direction to the utmost of my power. This ended in providing accommodation for 2,050 orphans and 112 helpers at a time, and the result of this has been that by means of other individuals or through societies one institution after another has been opened for the reception of 20, 80, 50, or 100 orphans; or that orphan houses have been built for 200, 300, 400, and even 500 orphans, so that now, I am happy to say, there is accommodation in England alone for at least 100,000 orphans.

## HOW THEY GREW.

In April, 1836, Mr. Müller opened a large rented house in Wilson Street, Bristol, for the reception of 30 orphans; in November, 1836, he opened a second house in Wilson Street for the reception of 36 orphans; in 1837 a third house for 30 orphans; and in 1843 a fourth house for 30 orphans. There were now 126 orphans and 11 helpers or teachers and matrons. In 1849, as no houses were to be had suitable for orphans, he opened the first orphan house on Ashley Down, which he had built for 300 children; in November, 1857, he opened a second orphan house, built and fitted up for 400 children; in March, 1862, a third house for 450 children; in 1868 a fourth house for 450 orphans; and in 1869 a fifth house for 450 orphans. Thus he had accommodation for 2,050 orphans and 112 helpers. The term of residence at Ashley Down has averaged between eight and nine years, but some girls admitted as infants have remained under the sheltering roof over seventeen years.

## THEIR MANAGEMENT.

Between April, 1836, and May 26, 1897, 9,844 orphans had passed through or were then residing in the Müller orphanages. Of the principles on which the orphanages were founded and are still managed it is best to quote Mr. Müller's own words:

"No sectarian views prompt nor even in the least influence Mr. Wright and myself in the reception of children. We do not belong to any sect, and are not, therefore, influenced in the admission of orphans and sectarianism; but from whatever place they come, to whatever religious denomination the parents may have belonged, or with whatever religious body the persons making application may be connected, makes no difference in the admission of the children." He, however, laid down three essentials as a preliminary to admission to the institution. Only legitimate children were eligible, and they must have lost both parents by death and be in needy circumstances. Given these three qualifica-

tions and the necessary proofs that the statements made about them were correct, Mr. Müller and his associates refused none who came as long as there was room for the applicant to be found a place. Some of those admitted have been infants only a few months old and others have been considerably older, and as a rule the stay in the institution has been a lengthy one. Girls generally remain under its care until they are seventeen years of age. In one of his narratives the philanthropist himself briefly states the kind of training given, the reference being first to girls. are instructed in reading, writing, arithmetic, English grammar, geography, English history, a little of universal history, all kinds of useful needlework and household work. They make their clothes and keep them in repair; they work in the kitchens, sculleries, wash-houses, and laundries; and in a word we aim at this, that if any of them do not turn out well, temporarily or spiritually, and do not become useful members of society, it shall not at least be our fault. The boys are generally apprenticed when they are between fourteen and fifteen years old, a sum of £13 being paid with each apprentice; but in each case we consider the welfare of the individual orphan, without having any fixed rule respecting these matters. The boys have a free choice of the trade or business they like to learn, but having once chosen and having been apprenticed, we do not allow them to alter. The boys as well as the girls have an outfit provided for them, and any other expenses that may be connected with their apprenticeship are also met by the funds of the orphan establishment."

THE APOSTOLIC TOURS OF A SEPTUAGENARIAN.

It was quite late in life that Mr. Müller developed the extraordinary bent for traveling round the world preaching the Gospel. It is almost incredible, but it is nevertheless the fact, that his itinerant missionary labors began when he had passed the limit of three-score and ten. Here is a list of his apostolic tours:

- 1. March to June, 1875-England.
- 2. August, 1875, to July, 1876—England, Scotland, and Ireland.
  - 8. September, 1876, to September, 1877-Europe.
- 1878—Canada and the United States; 19,247 miles, 808 addresses.
  - 5. 1879-Europe.
- 6. August, 1879, to June, 1880—United States and Canada.
- 7. September, 1880, to May, 1881—United States and Canada.
  - 8. 1882-Egypt, Asia Minor, Turkey, and Greece.
  - 9. 1882—Germany, Austria, Russia, and Poland.
  - 10. 1883-India.
  - 11. 1884—England and Wales.
  - 12. 1885-Isle of Wight.
- November, 1885, to June, 1896—Australia, China, and Japan; 37,280 miles.
- 14. October, 1886, to April, 1889—Australia, New Zealand, and India.

HIS REFLECTIONS WHEN NINETY YEARS OLD.

Mr. Müller could preach the Gospel in seven languages. He had preached it in 42 countries, and the distance covered on those journeys was

more than six times round the world. He did not spare himself. He sometimes preached 38 times in 36 days, or 17 times in 15 days (as at Dundee), or 21 times in 20 days (as in Dublin). At Liverpool and Hull he preached 48 times in 38 days. Speaking at Bethesda on his ninetieth birthday, Mr. Müller said:

He had traveled 200,000 miles by land and sea with his departed wife; had preached in 42 countries in Europe, America, Africa, Asia, and the six Australian colonies. Although formerly he used to suffer much from seasickness, he placed himself at God's disposal, and in all his journeys by sea had never suffered from sickness during these tours. He had crossed the Atlantic 7 times, had been over the Red Sea 5 times, 16 times had been over the Mediterranean. He had crossed the Pacific Ocean and the Indian Ocean, and never once had he been the least sick. See how good it was to be an obedient servant of Christ. His mental powers were as clear as when he passed his examinations and wrote essays in Latin, French, German, and had to pass examinations in Hebrew and Greek, mathematics, history, and the like. These examinations were seventy years and six months ago. How they should admire the Lord's kindness! See how God could use a miserable worm which was only a wreck when brought to the knowledge of the Lord Jesus Christ, and who was that evening at the commencement of his ninety-first year. For sixty-nine years and ten months he had been a happy man-a very happy man. That he attributed to two things. He had maintained a good conscience, not willfully going on in a course he knew to be contrary to the mind of God; he did not mean, of course, he was perfect; he was poor, weak, and sinful. Secondly, he attributed it to his love for the Holy Scripture. Of late years his practice had been four times every year to read through the Scriptures with application to his own heart and with meditation, and at that day he was a greater lover of the Word of God than he was sixty-six years ago. The more it was treated with carelessness and indifference and the more it was reasoned away, the more he stuck close to it. It was this and maintaining a good conscience that had given him all those scores of years peace and joy in the Holy Ghost.

## III.—THE PRAYER TELEPHONE.

These details are interesting enough. But they only lead up to the real topic of importance, the way in which George Müller proved and tested the practical working value of that spiritual telephone the prayer of faith. There is no doubt that it worked, worked every day and all days for over sixty years. Worked too with a punctuality and a certainty, although not with a regularity, which filled even those who regarded him as a heretic with admiration.

#### A PRAYER FOR A SOUTH WIND.

For instance, take this tribute to Müller's child-like confidence in God, and which, after his death, was specially signaled out by the Roman Catholic Bishop of Clifton for the encouragement of the faith of his own flock. The bishop said:

At Mr. Müller's orphanage some forty years ago it was discovered that the boiler of the heating apparatus was in a dangerous condition. To repair it the brickwork in which it was imbedded had to be pulled to pieces. The fires must be put out for at least three days. A bitterly cold north wind was blowing. Mr. Müller had read in the Bible that when Nehemiah was building the temple he accomplished it, "for the men had a mind to work." So he prayed for two thingsthat the north wind might be changed into a south wind and also that the workmen might have a mind to work. The day that the fires were put out the wind changed and blew from the south, and the children did not feel the cold. When the evening of the first day came the men asked to speak to Mr. Müller, and said they had been talking it over among themselves and had all agreed to work all that night, so that the children might not be kept without fires! Thus the men had a mind to work.

Of course the great god Coincidence will be invoked to account for the changing of the wind from north to south, but coincidences that always occur in regular sequence, at least, suggest the existence of some relations other than those of mere chance.

#### A PRELIMINARY TEST.

Without discussing this further, let us see how the orphanage came into existence which was to become so gigantic and conspicuous an illustration of the potency of the prayer of faith. From what has been already said, it will have been seen that George Müller had long relied upon answers to prayer for his financial needs before the orphanage was started. He found that the results of relying on prayer as compared with the regular income which he had given up were encouraging. For every secured pound which he had sacrificed he received two or three by the way of prayer. From the purely financial point of view he had gained money, hands down, by trusting the Lord for his own needs. Hence, before he made the experiment about the orphanage, he had put his principle to a preliminary test extending over nearly six years. Again and again his last penny had been spent, and he had not had a sixpenny-piece in hand with which to meet the anticipated visit of the tax-collector. But time after time the money always turned up before it was wanted. In the year 1835, for instance, £5, sent from a distance of eighty miles, arrived just before the collector called for the George Müller was always able to meet every call upon him. He never got into debt.

#### THE FIRST CALL.

It was on October 28, 1834, that he first began to think seriously about the matter. A little orphan boy who had been "brought to a real concern about his soul through what I said concerning the torments of hell" was taken to the

workhouse, some six miles distant, and could therefore no longer "attend our school and ministry." In his journal Müller wrote: "May this, if it be the Lord's will, lead me to do something also for the supply of the temporal wants of poor children."

It was not, however, till twelve months later that he began no longer to think about "the establishment of an orphan house, but actually to set about it." His first idea was, as usual, "to ascertain the Lord's mind." After a month spent "much in prayer" he became more and more convinced that the idea was "of God." But let no humanitarian reader, intent solely upon the filling of the hungry stomachs and clothing the naked backs of the starving orphans, imagine that the good Müller was moved to this conclusion solely by any such considerations of a materialistic philanthropy. Nothing of the kind. Mrs. Browning has told us, "It takes a soul to move a body e'en to a cleaner stye," and George Müller's desire to start the orphanage was only in a very secondary way due to his pity and sympathy for the physical sufferings of the children. The children, indeed, were by no means the first object of his solicitude.

## WHY HE FOUNDED THE ORPHANAGE.

In his published journal he tells us frankly and fully why it was he wanted the orphanage. says that in his ministry he had so often found Christians full of misgivings and ready to faint for lack of faith that he saw that "one of the especial things which the children of God needed in our day was to have their faith strengthened." Some were afraid to take the time necessary for reading the Bible and prayer for fear their business might suffer; others went through life with a haunting dread of the workhouse hanging over their heads; while others were afraid to trust God to provide for them if they fearlessly obeyed his commands. The object for which he longed was "to have something to point the brother to as a visible proof that our God and Father is the same faithful God as ever he was, as willing as ever to prove himself to be the living God in our day as formerly to all who put their trust in him." Over and over again he recurs to this. He wanted a sign, a proof, something to point to, like the going back of the shadow on the sun-dial of King Ahaz or like the budding of Aaron's rod. That was what he was after—a tangible objectlesson impossible to be misunderstood: that if you took God at his word you would never have reason to regret it.

## A GERMAN PRECEDENT.

When he was thinking and praying his mind was naturally led to the idea of an orphanage as

a prayer test, because "I remembered what a great blessing my own soul had received through the Lord's dealings with his servant, A. H. Francke, who, in dependence upon the living God alone, established an immense orphan house, which I had seen many times with my own eyes"—to wit, when he was a student at Halle. Professor Francke died in 1727, but his orphanage was flourishing one hundred years later—may be still flourishing, for aught I know. Müller, having seen with his own eyes the success of an orphanage as a prayer test in Germany, felt naturally more disposed to try a similar system in Bristol.

#### THE ORPHANAGE AS A PRAYER TEST.

It is necessary to insist upon this point, because the popular idea is that he established the orphanage to help the orphans, and that in some mysterious way the invisible powers rewarded the excellence of his intention by supplying him with funds. This is putting the cart before the horse. He did not use the prayer telephone in order to found the orphanage. He founded the orphanage in order to demonstrate the utility of the prayer telephone. He wanted, he wrote in his journal, to set before the world at large and the Church a proof that God had not in the least changed, and this, he adds, "seemed to me best done by the establishing of an orphan house." He proceeds:

It needed to be something which could be seen, even by the natural eye. Now, if I, a poor man, simply by prayer and faith, obtained, without asking any individual, the means for establishing and carrying on an orphan house, there would be something which, with the Lord's blessing, might be instrumental in strengthening the faith of the children of God, besides being a testimony to the consciences of the unconverted of the reality of the things of God. This, then, was the primary reason for establishing the orphan house. I certainly did from my heart desire to be used by God to benefit the bodies of poor children bereaved of both parents, and seek, in other respects, with the help of God, to do them good for this life. I also particularly longed to be used by God in getting the dear orphans trained up in the fear of God; but still the first and primary object of the work was (and still is) that God might be magnified by the fact that the orphans under my care are provided with all they need only by prayer and faith, without any one being asked by me and my fellow-laborers, whereby it may be seen that God is faithful still and hears prayer still.

#### A SCIENTIFIC EXPERIMENT.

"That it might be seen by the whole world and the whole Church of God that yet in these days God listens to prayer, and that God is the same in prayer and love as he ever was"—that was the thesis which George Müller set himself to establish. That he was enabled to write Q.

ORPHANAGE NUMBER FOUR.

E. D. after it, with the confident certainty of Euclid himself, few will deny who follow his story year by year from 1836 to 1898. He was an experimental philosopher, was George Müller. Professor Tyndall long after suggested a prayer gauge in a hospital ward, but the Bristol philanthropist had anticipated the president of the British Association by nearly half a century. Here was the genuine method of the man of science applied to the verifying of the working hypothesis of the German missionary.

## A ROMANCE STUDDED WITH MIRACLES.

The story of the great experiment from its inception to the close reads like one continuous romance—a romance studded with miracles, which only ceased to be regarded as miracles because they happened every day. And with the element of romance and of miracle there is mingled such grotesque absurdity—according to modern rationalistic notions—that it is difficult to refrain from bursting out into laughter.

When, in that fateful December of 1835, George Müller was weighing the pros and cons of the orphan house experimental test, he had grave doubts as to whether his desire to erect a prayer gauge in this fashion was of God or was of the devil. Had God not already given him so much to do? He was then thirty years old, and already he had established three day-schools, a Sunday-school, and an adult school, and was carrying on three charity day-schools, which would otherwise have been closed for lack of funds. He was also helping foreign missions and distributing Bibles and Testaments by the thousand.

## A TEXT OF DESTINY.

On December 5 he was reading the eighty-first Psalm. It is a psalm of thanksgiving indited by some pious Hebrew more than two thousand years since in praise of the marvelous loving-kindness of God to Israel, especially as it was manifested in the Exodus. The tenth verse runs: "I am the Lord thy God, which brought thee out of the land of Egypt. Open thy mouth wide and I will

fill it." Interpreted historically, rationally, or in any conceivably natural method, this poetical refrain applied, first, to that familiar incident of the Exodus—the feeding of the Israelites with manna and with quails, and with possibly some reference to the circumstances of Israel at the time when the psalm was written. On any rational system of interpretation it could certainly not be construed as containing a promise binding the Lord God of Israel to fill the mouth of George Müller. the German missionary at Bristol in the nineteenth century, however wide he might choose to open it. But, incredible though it may appear, it was this text and that interpretation of this text which decided George Müller to start his orphan house.

## "OPEN THY MOUTH WIDE!"

He says:

The whole of those two weeks I never asked the Lord for money or for persons to engage in the work. On December 5, however, the subject of my prayer all at once became different. I was reading Psalm lxxxi., and was particularly struck, more than at any time before, with verse 10: "Open thy mouth wide and I will fill it." I thought a few moments about these words. and then was led to apply them to the case of the orphan house. It struck me that I had never asked the Lord for anything concerning it, except to know his will respecting its being established or not; and I then fell upon my knees and opened my mouth wide, asking him for much. I asked in submission to his will, and without fixing a time when he should answer my petition. I prayed that he would give me a house-1.c., either as a loan or that some one might be led to pay the rent for one, or that one might be given permanently for this object; further, I asked him for £1,000 and likewise for suitable individuals to take care of the children. Besides this I have been since led to ask the Lord to put into the hearts of his people to send me articles of furniture for the house and some clothes for the children.

## "AND I WILL FILL IT."

Next day nothing came. The day after he received his first shilling. Before night a second shilling was added to it. On December 9 a wardrobe came along. At the meeting 10 shillings was subscribed. No collection was taken.

but one sister offered herself for the work. On December 10 he sent to the press a statement of what he proposed to do. The same day a brother and a sister offered themselves for the work. They would give up all their furniture for the use of the home and were willing to work without salary. "In the evening a brother brought from several individuals three dishes, twenty-eight plates, three basins, one jug, four mugs, three salt-stands, one grater, four knives, and five forks." This was the beginning of a story of magical attraction heretofore seldom seen out of the "Arabian Nights."

## THE MAGIC OF PRAYER.

The magic continued to work, increasing more and more and day by day, and still as the funds came in George Müller opened his mouth wider and still more wide. On December 12 an individual unexpectedly gave £50. So "I was led to pray that this day the Lord would give still more." In the evening accordingly there were sent in twenty-nine yards of print. Sister after sister came in offering themselves for work in the orphan house. Then premises which it had cost £2,600 to build were offered him as a free gift if he could raise £500 to extend them. In January, and again in May, Mr. Müller put statements in the papers of his proposals, but no subscriptions were asked for personally, nor were any acknowledged publicly by name. Still, although the orphan house was opened in April, 1837, the whole of the £1,000 had not been raised. In May Mr. Müller was sending to the press an account of "The Lord's Dealings with George Müller," and he grudged sorely issuing it until every penny had been subscribed. So he gave himself much to prayer. The Central was rung up pretty continuously these May days, and soon the money began to roll in. One day £7 10s. came, £40 another, and so on with a multitude of trinkets: one gold pin, fifteen Irish pearls, two brooches, two lockets, eleven rings, one bracelet, etc., all of gold. At last, on June 15, he had received £995. One more day was spent in prayer, and in came the lacking fivepound note. George Müller's mouth was filled at last, and he called on the brethren and sisters beloved in the Lord to help him to praise the Lord.

## HOW THE PROMISE HAS BEEN KEPT.

That was how it began. How it grew and prospered until it became a mighty institution sheltering 2,000 orphans and entailing an annual expenditure of £20,000 must be read in detail in the reports of "The Lord's Dealings with George Müller." The orphan house as a test was a

brilliant success. It verified George Müller's hypothesis every day for sixty years:

While we have often been brought low, yea, so low that we have not had even as much as a single penny left, or so as to have the last bread on the table, and not as much money as was needed to buy another loaf, yet never have we had to sit down to a meal without our good Lord having provided nourishing food for us. I am bound to state this, and I do it with pleasure. My Master has been a kind Master to me, and if I had to choose this day again as to the way of living, the Lord giving me grace, I would not choose differently.

## THE PRAYER OF FAITH OR TELEPATHY?

Forty-nine out of every fifty donors were personally unknown by Mr. Müller. None of the donors were ever personally appealed to for a penny. Not a farthing was spent in advertise-No collections were made. No vanity was stimulated by the publication of the names of donors in subscription lists. Modest little reports were issued from time to time, and that Of course, excepting the prayer of That telephone was constantly switched on to Ashley Down. And the results were what we see. Mr. Müller rung up the Central, and the Central switched him on to a marvelous multitude of persons in all parts of the world who had the wherewithal to minister to his needs. It was very seldom that Mr. Müller specifically named any one to be switched on to. Once, however, when he wanted £100 very badly, he prayed that it might be laid upon the heart of one particular person to give him £100. And lo, it came to pass even as he had prayed! The £100 came along next day. Telepathy, no doubt! Yes.

## THE CENTRAL?

But who governed the telepathic thoughtwaves, so that when Mr. Müller gave them no definite direction they were transmitted direct to those who could contribute? Over and over again the subscribers accompanied their remittances by the statement that "God had told them to send it in." The ground on which the orphanage stands was obtained in this way, not as a gift, but at a heavy reduction. Mr. Müller had called twice upon the vendor, and found him out both times:

Mr. Müller now judged that God had some intention in the matter, and resolved not to call at the gentleman's residence later in the day, as he might have done. The following morning, however, Mr. Müller saw him, and the gentleman at once stated that he was prepared for the visit, for the previous night he had been unable to sleep, and while lying awake God had told him that if Mr. Müller called again he must sell him the land at £120 per acre instead of £200, the price he had been asking for it. The compact was drawn up and signed within ten minutes, and thus Mr. Müller secured the seven

acres of land for  $\pounds 560$  less than he would have done the night before!

#### AT LAST HELP ALWAYS CAME.

I have filled up all my available space, and as yet I have but told of the beginning of the work—the planting of the acorn which was so steadily and so speedily to grow into the magnificent oak that shelters 2,000 orphans at Ashley Down. In the very last report he ever issued, Mr. Müller affirmed once more that the aim and object of the institution was to prove that the living God was still the living God, as in the days of the prophets three thousand to four thousand years ago, as in the days of the apostles eighteen hundred and sixty years ago.

When we need money to carry on the various branches of the institution we ask no former donors to help us, we do not send out especial appeals for help, we have no collections. We do nothing but pray, and patiently wait God's time for help; and he invariably helps us, though very, very often during the past sixty-three years we have had our patience and faith greatly tried before help came. But at last it always came.

Again he wrote, after sixty-seven years' experience:

Everything that I needed for myself or my family I received from God in answer to prayer, without ever appealing to any human being in the whole world for anything, or even informing any human being of my need. . . . When I was in forty-two countries all over the world engaged in my missionary labors, I often needed to pay down £100, £140, yea, even £240 for a passage to Australia, to and fro, for myself and Mrs. Müller, but I always had the means of doing so without asking any one for help.

## SO LIKE THE TELEPHONE.

A volume might be filled with anecdotes each, if it stood by itself, sufficient to be ranked as a miracle, at least as miraculous as those in the "Lives of the Saints," illustrating the way in which this man's prayers were answered. But at the orphan house they appeared as much a matter of course as it seems to us to receive answers from the telephone. That mundane instrument also tries our patience pretty severely at times. But it works; and so did George Müller's prayer of faith.

The way in which the money came rolling in—nay, to this hour continues to roll in—as thank-offerings, as conscience money, as donations, as bequests, can only be glanced at here. Mr. Müller would never insure his property; and those who followed his example, leaving the preservation of their premises from fire to the care of the Lord, used to send the insurance money in to the orphan house. One donor sent in £2 7s. 6d. one year, "instead of insuring my men against accidents under the Employers' Liability act of 1880." It is difficult to repress

a smile while reading some of the acknowledgments in the report. One good soul sent in £1 with this statement: "Our Heavenly Father has given us thirty-four chickens, and not one of them has been taken by the fox, although our neighbors have lost many!"

## THANK-OFFERINGS.

A newspaper writer in Bristol says:

Then thank-offerings would be received for the recovery of debts; for preservation from fire; for health; for harvest; and for sleep; for preservation from injury in falling through a trap-door; for being delivered from perils in darkness on a Canadian prairie: for not having been killed, but only greatly hurt, in being thrown from a horse; for "having caught the train several times when being on important business and having very little time;" for restoring two cows that were very ill and not expected to live; (from a wife) for her husband not having drunk any beer at Christmas; for a horse having turned out well; for having "broken my left arm," and not "my right arm" or "my neck or head;" for "the safe delivery of a valued servant and a sow from an enraged bull;" for "relieving my dear daughter of a violent face ache; " for "the restoration of a very bad finger;" for a ten-pound note, which it was thought was bad, turning out to be a good one; for "a very dear, sweet stepmother;" and for preservation from injurythe donor had only left his bath-room about five minutes when the ceiling fell.

And so forth and so forth. These things did not occur in the ages of faith. They are occurring this very day, in the last decade of the nineteenth century, in the midst of this materialist and skeptical generation.

And now, reader, what do you make of it all? Did George Müller verify his tremendous hypothesis or did he not? It is possible of course to criticise the deductions that may be drawn from the experiment. There can be no question as to the result of the experiment itself.

What George Müller set himself to prove was that the old telephone known as the prayer of faith was a living reality, a practical and most convenient method of obtaining his ends. he certainly proved—if anything can ever be said to be proved. And let it never be forgotten that while others talk of George Müller being a specially gifted man of faith, George Müller himself always scouted the notion. To attribute any special quality to him as an explanation of the success of his petitions would in his eyes have destroyed the chief object for which he established the orphan house. He did it to prove to every humble, believing soul that he or she, equally with George Müller, could draw on the divine treasury for all their needs. But to do so it is necessary to be in connection and to have your batteries, the electricity in which is faith, well charged. Otherwise you may subscribe to the exchange, but the telephone won't work.

## THE MOVEMENT FOR BETTER PRIMARIES.

BY WILLIAM H. HOTCHKISS.

## I.—ITS CAUSES.

DECADE ago the ballot reformer was much in evidence. To-day his younger brother proclaims the need of pure primaries. officially regulated election was announced as the harbinger of our political millennium. Now, with that millennium as far away as before, we are told that the trouble was not with the election, but with the caucus. The elder reformer was partly right; the electors of to-day thank him for their opportunity to vote in secret and for the certainty that their votes will be counted and returned as cast. The younger brother, too, is partly right, and soon may be able to point to another officially regulated election day for caucus purposes and say proudly, "I helped to accomplish that!" But in hoping for a political millennium both are rainbow-chasing. They must be satisfied if they can but help. Politics will be politics to the end. Leaders may become bosses. He who would change our primary election laws should ask little more than that every opportunity be given to be rid of an unsatisfactory leader or to make a political organization responsive to its voters. Thus far the reformer and the liberal partisan can go together. In that unity of purpose lies the hopefulness of the present movement for better primaries.

## SWEEP OF THE MOVEMENT.

The movement is both spontaneous and widespread. No primary election law worthy the name has been in force more than three years. Yet the ambitious legislator who has not already built political castles in Spain with materials taken from this or that plan to reform the primaries is rare. Michigan, Minnesota, and Massachusetts enacted primary laws in 1895; California's law of that year was declared unconstitutional and reënacted in 1897. This year Illinois fell into line and has already tried its new law; primary reform bills have been prominent in the Legislatures of half a dozen States; while in New York the agitation became epidemic, and reformers and politicians have been tumbling over one another in their zeal to help enact a primary election law.

History is repeating itself. In a little more than a decade our body electorate has again risen, and the phenomena which marked the spontaneous adoption of the Australian ballot system again appear. They characterize and emphasize this

newest of reforms-officially conducted primaries. But with this difference: there is the same demand voiced by the non-political classes; the same heedless rush after anything, good or bad, if but a reform; the same willingness on the part of legislators to give statutory expression to the popular demand But this time the problem is not so easy. It was not difficult to frame a system for voting based upon a formal registration and which guaranteed a secret ballot and an honest count. We had but to copy the statutes and be guided by the experience of our Australian The disease of caucus corruption, however, broke out first in our own land-at least here for the first time have the symptoms been acute and the need of a general application of healing remedies universally recognized. Student and politician alike have become convinced of the necessity of some decidedly allopathic doses. Hence perhaps the many nostrums—the seemingly unlimited remedies. Hence, too, the unending conferences and the growing heap of bills and reports devoted to primary laws!

## THE PROBLEM TO BE SOLVED.

In short, the present problem is involved in To prescribe that a man must reside in his election precinct a specified time and formally register before he may vote was easy; but to prescribe a test by which shall be determined whether a voter is a party man or not, and then to add to it a scheme whereby, without increasing the duties of electoral citizenship to a prohibitive point, the elector may be enrolled as a party voter and protected in his right to vote at his party's primaries, suggest difficulties as apparent to the plain citizen as they are to the politician. We elected our officers all over the country in much the same way before the ballot laws went into effect. But the caucus systems, the notice required, the choice of officers, whether the vote shall be by ballot or not, and the test of allegiance to party, vary not merely from State, to State, but from city to city and village to village. A State law regulating primaries must solve that problem, uniformity in operation being The average legislator was easily convinced that no political harm might come to him from an official and secret ballot. But that same legislator looks doubtful and for a time is inclined to rebel when the caucus rules he understands are threatened and new-fangled devices of which

he knows nothing are suggested; for how will such laws affect his political future?

The problem is complicated, too, by the very insidiousness of the malady. The old-time caucus was an informal town meeting. In communities having a scattered but fixed population such a caucus accomplished its purpose. But in the centers of population, the great cities, evils developed which live in the words "snap calls," " packed caucuses," and their like. The primaries of that period, however, were public, and if sometimes controlled by brute force, they yielded in the end to public opinion, whether expressed in a policeman's night-stick or in a vigorous rebuke at the polls. With the coming of the official ballot the evolution of the caucus began. From the caucus in a hat we quickly evolved to a caucus in a head—the head of a leader who might or might not express the party's choice. The process was simple. The caucus without rules had not been a success; therefore we would try one with rules. Rules were drawn and we soon were experiencing a rule-regulated caucus. This system worked well or ill, just as the rules were fair or elastic, and if elastic, just as the political leaders enforcing them were broad or narrow. Rules, however, easily yielded to amendment, committees changed from year to year, and almost unconsciously we evolved from the regulated to the regular caucus.

## THE REVOLT AGAINST BOSSISM.

The primary meeting thus became the real center of political activity. It was subject to elastic rules, changing almost from day to day. Politicians being but human, selfish purposes suggested selfish means, and regularity being the open sesame, regularity was regulated. At first the party organization was content with regulating the choice of the caucus officers; then it suggested all but prohibitive oaths as the basis of party membership; then the caucus suddenly betook itself to back alleys and up flights of stairs; and thus at last the party, so called, became small and select! The few who remained "regular" merely obeyed. The evolution had been accom-The caucus of leadership—silent, lawabiding, and deadly—named the candidates for whom the people must vote on the blanket ballot of election day. The picture may be extreme. That it is true to reality in many of our cities will not be denied. It is the logical outcome of a system of rule-regulated primaries. There is no brute force in such a system. The caucus is as peaceable as a prayer-meeting.

But what of the result? Political revolts have rapidly increased. The rank and file of the voters have been breaking away from their party

allegiance. Parties have been disintegrating. Recent municipal elections in our greatest cities evidenced a tendency to bolt the ticket from top The wise ones among our political leaders have taken the lesson to heart. To them, rather than to the professional reformers, is due the widespread demand for a new kind of primary, regulated, it is true, but by law, not rules, and made effectual by penalties and punishments. At any rate, whatever the caucus or however insidious the disease, the day of the select few at primaries, like the day of brute force, is end-The people will again choose their candi-Parties may again fulfill their proper function, responsible and responsive leadership in public affairs.

# 1I.—ITS EXPRESSION IN VARIOUS STATES.

Such are the conditions which have given birth to the present demand for primary reform. disease was acute; the remedies applied have been extreme. A revolution in political methods will be the result. But that result is by no means yet assured. There are some indeed who sniff at what has been done and regret it all because, being called a reform, the sham, so to say, will but postpone the reality. But the record speaks for itself. The movement is not yet five years old. It has met with opposition in high places and in low. Yet ten important States now have statutes more or less complete controlling on the primaries, and as many more are considering and investigating the problem.

## IN MINNESOTA AND WISCONSIN.

Few States have been or are entirely without statutory regulation of the primaries. regulations have in most cases gone no further than provisions for sufficient public notice and a few simple rules fixing the duties of the caucus The Southern States and those of the West, with the exception of California, have done little more than this. Thus much has been left to party regulations—with varying success. Other States have enacted the rules of the parties into statutes, and improved their primaries by surrounding them with the dignity of the law and the punishments of their penal codes. Minnesota is an instance. Her primary law, passed in 1895, is made up of the simplest of party rules, all details being left with the political organizations. Wisconsin in the same year enacted a similar law, which in 1897 had grown to be a very respectable primary statute. It is based on party rules and therefore leaves much to be regulated by political committees; but it provides for

an officially conducted primary in the booths, with blanket ballots, registry books, and official returns. Two of its provisions cannot be commended—i.e., that which makes the test of one's right to vote dependent on a written oath that "he voted for the regular candidates" of the party at the last election, and that which provides for a preliminary "parlor caucus" at which the delegates whose names are to be printed on the primary blanket ballot may be nominated. The Wisconsin law is compulsory on the large cities and optional elsewhere. It is a step, even if short, but yet a step forward.

#### IN OHIO AND MICHIGAN.

Ohio politics have of late become odorous. Yet Ohio was one of the earliest of the States to adopt a primary law. There Ohio stopped, and this in spite of agitation which resulted in a corruptpractices act that is a model. The present law is complex and out of date. It gives extended options to political committees. At the same time the primaries in the large cities are under the control of the public election officers and marked by some of the customary regulations. land's primaries are controlled by party rules of recent construction, and the direct vote for candidates, as opposed to the convention plan of nomination, has there been given a fair trial. Michigan is another of the States where the work has been little more than half done. Her law, also enacted in 1895, is in two parts, one applicable to Detroit, the other to all other considerable The public furnishes the booths, furniture, ballot-boxes, and the like, but the regulations touching the choice of the election officers, primary enrollment, and party allegiance are dangerously loose. Some admirable features are that the primaries shall be held on two fixed days in October, each of the large parties having a separate day, that the election precinct shall be the unit of representation, and that voting in conventions must be viva voce.

#### IN KENTUCKY.

Kentucky's primary law has been much quoted. It is a model in brevity. It, too, prescribes caucus supervision not unlike election supervision, providing even for a blanket ballot printed by the party organizations. Its penal provisions are severe. It permits the direct-vote method, and the Congressional nomination campaigns in Kentucky have often been of national interest. But the provision which has attracted most attention is Kentucky's novel means of making up party rolls by declarations of affiliation made by voters when they register prior to election day. The system is

open to abuses and many complaints are made—that it encourages the floater to enroll with the opposite party in order to make its nominations bad, and that its publicity prevents many of the employee class from participating in primaries. But on the whole this Kentucky system is the simplest, least burdensome, and most accurate method yet devised, whereby a party's rolls may be made up and "padding" and "erasing" prevented.

#### IN MISSOURI.

Missouri's law applies only to the primaries in St. Louis and Kansas City, but is notable because enacted as early as 1891. The caucus is officially regulated and blanket ballots are supplied at public expense. The law is silent as to enrollment and the qualifications of the party voter. It assesses candidates to pay for printing the ballots. As few as twenty voters in a ward may name a candidate for printing on the ballot, and the election officers must be chosen by the public officials from lists furnished by the candidates. Kansas City selects most of its candidates directly; St. Louis by delegates to conventions. The law has had a fair trial and is a success.

But of the laws which preceded the recent New York statute the most notable and progressive are those of Massachusetts, California, and Illinois. The former has been on trial three years; the latter was enacted early in the present year and has already been successfully tried in Chicago; while the law of California, the most advanced of the three, has been in force but a year.

## IN MASSACHUSETTS.

The Massachusetts caucus law is in two parts, one compulsory on Boston, the other on other localities. It took form from the Republican rules in force in Boston five years ago, was originally enacted in 1894 after a legislative investigation, and was reënacted in its present form in 1895. By it party committees and, to a lesser degree, political conventions are regulated by positive law, and most of the restrictions familiar at general elections apply to the primaries. Party organizations call the conventions and caucuses and certify the names of proposed delegates to the public authorities. Beyond this the machinery of the caucus is in the hands of the election commissioners. Until 1897 political committees fixed the test of party allegiance. In that year this was made dependent on the elector's willingness, if challenged, to swear that he intends to support the candidates of the party at the next election, and has not taken part in the primaries of any other party for a year, the first statutory recognition of intention rather than past fealty as the true test. As few as five electors in a ward in Boston may nominate a delegation for printing on the ballot. These delegates may be voted for as a body or separately, and may be pledged to or against a candidate or principle by printing above their names a few words indicative of such pledge. But Massachusetts has no enrollment system, its primaries are movable feasts, and the caucus officers are chosen at the caucuses. Great success has thus far marked the operation of the law. Barring the newer statutes of Cali fornia and New York, it is easily the best of the State laws yet passed, and in some features is even their superior.

#### IN CALIFORNIA.

The Stratton law of California has for its object "the promotion of the purity of primary elections by regulating the conduct thereof." the Massachusetts statute, it supervises the machinery of nominations from the beginning to the It does not provide for a party enrollment, but prescribes the use of the election registers and makes intention to support a party's candidate the test of party allegiance. The law is remarkable for two new devices: one in the interest of a large attendance at primaries, the other that the expense of these preliminary elections may be kept within bounds. California compels all parties to hold their primaries on the same day and together, thus constituting another It is to be regretted that this day election day. may be changed from year to year and need not be the same day even in adjoining counties. Any person may furnish caucus ballots, but they must be of the color and size prescribed by the election commissioners. California thus attains substantial secrecy without the complicated machinery and great expense of blanket primary ballots; while this far Western pioneer in the movement chooses election judges after the manner of juries and compels them, as a duty incident to their citizenship, to serve without pay. These experiments will be watched with great interest. The law in its entirety promises more for better primaries than any statute other than the new law of New York.

## THE CHICAGO EXPERIMENT.

The primary elections of Chicago have been as bad and unreliable as those of New York. Yet Chicago in March, 1898, experienced a new kind of caucus, the result of the Illinois primary law of 1898. The sponsors of this law do not claim that it equals those of Massachusetts and California, but maintain that it guarantees to Chicago at least a legally conducted primary, paid for at public expense and with some of the restrictions and safeguards of election day. There is no statutory declaration of the party test, no

provision for enrollment, no regular primary day, no blanket ballot, and but the loosest provisions for a "uniform" ballot. But the penal provisions are numerous and drastic, the judges and clerks are public officers, the primary districts can have only a limited number of voters, and the general election law is declared applicable to primary elections. The ballots used at the first primary held under the law were pledging bal-The percentage of voters who participated in that primary showed a marked increase over There was quiet and peace where before had been mob tactics and bloodshed. success of the law thus far augurs well for an Illinois law that may come next year or the next, and through which the voters of that State may have all the protection provided in Massachusetts, California, and now at last in New York.

## A SUMMARY OF RESULTS.

The condition of the movement prior to the recent action of the New York Legislature may therefore be summed up as follows:

All of the primary election laws prescribe-

1. Sufficient public notice.

2. Voting by ballot.

Sworn officers, chosen either at the primaries or by the party or public authorities.

4. That the expense of primary elections be borne by the public or, in rare instances, by the candidates.

That the voter be protected against familiar frauds and the wrong-doer at the caucus suffer severe penalties.

 That parties, while necessarily a part of the machinery of elections, must be supreme in the management of their internal affairs.

7 That these requirements should be compulsory only on the larger cities and optional elsewhere.

The later statutes go much further and provide penalties and machinery with a particularity which, while revealing the malignancy of the disease, prophesies the healthful result to come. These recent statutes are more or less specific in the following matters:

1. The methods for securing a fair and full enrollment of a party's voters prior to its primaries.

2. The proper test by which to determine who is a member of a party.

The establishment of a preliminary election day or days for primary purposes.

4. The use of a secret primary ballot of the "blanket" or "uniform" variety.

5. The nomination of candidates by direct vote, or, if through conventions, by delegates chosen by a pledging ballot at the primary.

6. The regulation of the convention, in particular, by provisions against proxy and secret voting and by proper restrictions against interference with the temporary organization.

The most vital of these are the party test and the methods of enrollment The former was left to rules until within little more than a twelvemonth. The test, quite naturally perhaps, had yearly become more and more prohibitive. The tendency now is to fix it by statute and, what is more important, to base it on future intention, not past acts.

Prior to the present year none of the States except Kentucky went further than to provide the use of the election registers or voting lists as caucus registers, leaving the voter, if challenged, to the mercy of an inquisitorial election judge, or compelling him to go to a public political confessional before entitling himself to a vote at his party's caucus. Viewed in the light of the modern city primary, without the protection of non-elastic law in these two particulars, the rights of the party voter are never safe.

The most serious indictment of our primary system is that so few voters attend, and usually those only of the obedient kind. The establishment of a regular day or days for primary meetings is therefore a far step forward. All the later statutes provide for such a day; but aside from New York none fixes the day save Michigan, and that State has two days, not one.

The analogy of the blanket ballot now universal on election day led many States to incorporate the idea into their primary laws, to the weakening of their efficiency and the increase of their burden upon the public treasury. What is wanted is a secret ballot. The blanket primary ballet has well been said to increase the dangers masked in the threatening behest, "Be regular," the last stand, and an effective one, of a discredited political machine. Thus the trend of the movement seems to be away from the blanket ballot and toward a ballot like that originated in California. It permits vest-pocket voting, which is usually independent; it makes it easier to tip over an unsatisfactory organization; it can be made absolutely secret.

Of the merits of the direct vote there is the widest divergence of opinion. In large cities, with from twenty to one hundred candidates to be considered at the caucuses, much confusion, to say nothing of nominations by very small minorities, might result. Except in political divisions where the interest could be centered on one office, nomination by convention has nowhere been abolished with complete success. Some of the State laws tacitly permit direct vot-None of the more modern, such as those of California and Illinois, even do that; while New York's new law merely allows a community to try it. Warm advocates of primary reform hesitate to give up the convention. But they are unwilling to trust delegates who are appointed, not nominated, or conventions which are dictated from outside or are not masters of their own affairs. Hence the devices to make the primary fair, large, and representative. Hence the pledging ballot, on the face of which the man or organization to be supported is plainly indicated. Hence, too, the increasing restrictions on the organization of political conventions and voting thereat. Once let the caucus be officially regulated, perfectly fair and largely attended, and the convention organized by its delegates and not from headquarters, and with its members selected by pledging ballots and compelled to vote viva voce and in person, the agitation for the abolition of the convention and for direct nominations by the people will disappear.

## III.—THE NEW YORK PRIMARY LAW.

This, then, was the condition of the movement at the beginning of the recent remarkable campaign for reformed primaries in the Empire State. That campaign merits an article by itself; but briefly described it and its results are as follows:

The New York election code was enacted in It has five short sections devoted to primaries and conventions. Its provisions might be of some value in a rural community, but as a system for a State characterized by immense aggregations of population and for the past half century the storm-center of political corruption, these provisions could as well have been blank paper. The sudden awakening and the somewhat remarkable result are, however, not to be won-For some time the mutterings of the storm have been heard. The tendency has been to make regularity more difficult and the caucus more select. In some places the primary became not only select, but secreted. The old-time outcry against taxation without representation, in a modified form, was again heard, and the wiser of the political leaders made their rules more liberal. Others did not, and, not satisfied with a select and semi-secret caucus, seized upon conventions by unseating majorities, and, backed by an unanimity thus won, hoisted the banner of regularity and went on—to certain defeat. The majority party lost or suffered losses in every important city in 1897; in New York and Albany as the result of independent nomination, and in Buffalo, to a certain extent at least, by reason of a noisy protest against alleged arbitrary action in making up the caucus registry lists.

Chastened by this crushing defeat, largely traceable to dissatisfaction with the caucus rules, the Republican party set to work at the cause. It controlled the Legislature and the governor was of its faith. Its problem was made the easier by a small majority in the lower house and the

presence therein of a few men selected as independents, but who were Republicans in principle and at heart. Besides, when the legislative session began it had before it the result of investigations made by committees from the Buffalo Republican League and kindred political organizations. It had, too, the knowledge that Governor Black was in favor of and determined to have a primary law which would lift the political caucuses of New York to the level of the other populous States and tend toward a unification of the Republican party. The situation was somewhat novel, but as promising as novel.

## IN THE LEGISLATURE.

On the first days of the session two primary bills were introduced; one by Senator Pavey, of New York, which was a redraft of a bill introduced by him the year before and smothered by the then dominant political forces; it provided for the Kentucky system of enrollment by declaration of political affiliation at the time of the annual registration of voters; the other by Senator Brush, of Brooklyn, which provided some important but incomplete changes in the then existing law. These bills were quickly supplemented by that of Assemblyman Hill, of Buffalo-probably the most comprehensive bill of its kind ever presented—and a little later by Senator Ford's bill, which was taken to express what the Republican organization of New York City was willing to concede to the bolting wing of its party.

These four bills were quickly followed by others, more or less complete, and the question of primary reform soon became the most important before the Legislature. The Hill bill really included the Pavey and Brush bills, and the lines were soon drawn between that bill and the measure introduced by Senator Ford. In the controversy which resulted, a controversy remarkable for conferences seemingly limitless in number and of almost unlimited duration, the principles behind the Hill bill and many of the details suggested by it continually won support, and in the end were given expression in the bill which became a law late in March. The original form of the bill—an amendment to the election law gave place to the form of a separate statute; the blanket ballot provisions were dropped out, and wisely; the combination of the three duties, enrollment for primaries, voting at primaries, and registering for election, all on one day, was eliminated; the meeting of the parties together on primary day was revised out in one of the later conferences, and the bill was made optional on all cities and villages of over five thousand and under fifty thousand, instead of compulsory on all; but aside from this the law in its essentials is the Hill

bill, a bill which was drafted after a study of all of the statutes on the subject and was intended to include the best that was in each of them. Whatever the result in actual practice, the law as it stands does credit to Governor Black, Senators Lexow and Pavey, Assemblyman Hill, and Elihu Root and Paul D. Cravath, of the Union League Club's special committee, not to mention the scores of other individuals whose time and talents were given without stint. The New York Primary Election law was framed and passed in less than three months; in the end there was not a vote against it. It is at present the broadest and most complete law regulating primary elections, political committees, and conventions.

## PRINCIPLES OF THE MEASURE.

This latest enactment provides, of course, for the officially regulated primary now growing familiar—in truth establishes a preliminary election surrounded by the formalities and penalties of the modern election laws. But it goes much further than any State has gone in a number of particu-The party test is modeled after that of Massachusetts and depends on future intention, but it expressly exempts municipal elections, and is the first statutory recognition that a voter may vote as he pleases for city officers and yet be a party man. The enrollment provisions, though based on the Kentucky plan, are far more elaborate; and the dangers of that plan are minimized by providing in substance that the enrollment for one year shall be made up the year before (with opportunities for reënrollment after change of residence) and shall be secret until after the approaching election day. The ballot is of the California variety, but the provisions concerning it and the methods of its preparation and voting are all in the direction of making it both easy to get and absolutely secret when cast. Perhaps the most notable provision is that which establishes an annual primary day for all parties in the regular election polling places and before the regular election officers, the seventh Tuesday before election thus becoming a fixed primary election day, with, it need not be claimed, all that that means in getting out a full expression of a party's voters. To be sure, the different parties vote in separate booths and before election officers representing their own party only, but that there will be a fixed primary day for all parties is the important, far-reaching fact. The basis of representation in conventions is dependent on the last vote for governor, while a similar rule makes party committees more representative, and in cities of the first.class at least those committees must be chosen at the primaries and not in the hurly-burly of conventions. The conventions themselves are

regulated by positive provisions, such as official rolls made up by public officers, the temporary organization entirely in the hands of the convention itself and not regulated from headquarters, voting for officers to be viva voce, and a record of proceedings to be kept and filed as a public document.

## SUGGESTIONS FOR FUTURE WORK.

The New York law, however, is not perfect. It has been criticised because cumpulsory only on large cities and silent entirely as to primaries in communities having less than five thousand inhabitants. Its enrollment system is complex and open to possible frauds, but will probably be simplified by later Legislatures. Its June primary day in years of State elections is unnecessary and should be stricken out. Trouble may come from election officers who are in effect named by the political committees, though the success of the same method in choosing the officers at regular elections prophesies the opposite result. entirety, however, the law cannot be too highly commended. Only a fair trial will prove its value or reveal its defects. The fact remains that, judged by the standard of other primary laws, New York in the short space of three months has in this matter progressed from barbarism to civilization.

This, then, is the status of the movement as the National Primary Election League comes on the scene. The first conference of that body, held in New York late in January, did much to crystallize the then growing sentiment in the Empire State. It did so because those in charge of that conference did not make the mistake of allowing the expression of theories only. They recognized that the honest practical politician—of whom there are not a few—is as deeply interested in better primaries as is the theorist. Thus guided, the new Primary League can do much to

popularize the primary meeting, and, by favoring non-elastic laws to protect the voter at the caucus and by inspiring him with confidence in its real value, may in the end modify the meaning of that much-abused word, politics.

The movement is yet in its beginnings. as far-reaching as civil-service reform and goes more to the root of things than ballot reform. So long as we use the official blanket ballot at elections, the primary meeting must continue the more important function of the two. There are, indeed, those who say that officially regulated caucuses will but strengthen the machines. No! not the machines, but the parties. lies the value, the necessity of the movement. The plain truth is that the patience of voters has been so exhausted by a deficient nomination system that, within State lines at least, parties have been disintegrating. Carried to its ultimate this tendency might lead not only to confusion, but even to national disruption. Parties have been and should be the responsible agents of our people. Republics like ours cannot long have more than two parties, for the governing party ought always to be representative of a large proportion, if not of an actual majority, of our people. Every step toward primaries that shall be free to all and fair to all must, therefore, be in the right direction. Let the law step in, as it has done in Massachusetts, California, Illinois, and New York, and our system will be safe; for party organizations will then be responsible to the people, party nominations will be made by the people, not the leaders, and political leadership will be liberal and statesmanlike.

Otherwise, after the wreck of political organizations and the dethronement of the bosses may come that chaos of irresponsibility and individualism which would surely remove the balance-wheel of this Government of ours.

# LEADING ARTICLES OF THE MONTH.

## THE ISOLATION OF THE UNITED STATES.

HE Atlantic Monthly for May begins with a reprint of the address by the Hon. Richard Olney delivered at Harvard College last March on the "International Isolation of the United States." Mr. Olney rehearses Washington's rule that the United States should stand aloof from European politics and quarrels and avoid alliances that might connect it with them. The very statement of this rule, thinks Mr. Olney, shows that the considerations justifying it to Washington can no longer be urged in support of it. "Time has been gained—our institutions are proven to have a stability and to work with a success exceeding all expectation—and though the nation is still young, it has long since ceased to be feeble or to lack the power to command its own fortunes." This change since Washington's time evidently appears to Mr. Olney to justify a disregard in the future of the "rule." He thinks it possible to regard the isolation rule as having outlived its usefulness, without exposing ourselves to any serious hazards.

"There is such a thing for a nation as a 'splendid isolation' — as when for a worthy cause, for its own independence, or dignity, or vital interests it unshrinkingly opposes itself to a hostile world. But isolation that is nothing but a shirking of the responsibilities of high place and great power is simply ignominious. If we shall sooner or later—and we certainly shall shake off the spell of the Washington legend and cease to act the rôle of a sort of international recluse, it will not follow that formal alliances with other nations for permanent or even temporary purposes will soon or often be found expedient. On the other hand, with which of them we shall as a rule practically cooperate cannot be doubtful. From the point of view of our material interests alone, our best friend as well as most formidable foe is that world-wide empire whose navies rule the seas and which on our northern frontier controls a dominion itself imperial in extent and capabilities."

"There is a patriotism of race as well as of country—and the Anglo-American is as little likely to be indifferent to the one as to the other. Family quarrels there have been heretofore and doubtless will be again, and the two peoples, at the safe distance which the broad Atlantic interposes, take with each other liberties of speech which only the fondest and dearest relatives indulge in."

## SHOULD WE INCREASE THE ARMY?

REASONS for Increasing the Regular Army" are set forth by Lieut. George B. Duncan, U. S. A., in the April number of the North American Review.

After considering the arguments formerly advanced against the maintenance of standing armies, the changed conditions under which the United States is taking its place as one of the great world powers of to-day, and the resulting importance of systematic national defense, Lieutenant Duncan proceeds to note the cost and strength of the armies now maintained by other nations.

The largest army in the world at the present time is maintained by Russia, at an annual expenditure of \$213,000,000. In time of peace this army numbers 910,000 officers and men, while 3,077,000 men are immediately available for any emergency, and the full fighting strength of the country is estimated at 13,000,000 men. Germany comes next with an army of 584,734 men ready for war at any moment. This force can be promptly increased to 3,700,000, and under the new law the empire has a prospective strength for national defense of 7,697,356, of whom 4,297,856 are trained soldiers.

"France expends \$123,000,000 annually to keep 524,768 officers and men in training, ready to be augmented to a total of 2,930,000 for defense. England and India keep up a regular establishment of 366,000 men and 865,000 reserves and militia, and these forces can be doubled for war. Spain maintains an army of 95,000, nearly four times larger than our own, with an available war strength of 1,334,000 men. Italy has a peace army of 222,275 and a prospective force for war of 3,397,000. Even Belgium has a force of 43,359, and Holland one of 21,500.

"Now a glance at the American side of the same subject. Mexico, with a population of 11,633,000, keeps up a regular army of 35,000; Colombia, with 4,600,000 people, an army of 5,000; Brazil an army of about 24,000 in a population of 18,000,000; Chili an army of 25,600, with a population of 3,500,000. The Argentine Republic, with a population of 4,750,003, maintains 15,000 regular troops. The United States, with 70,000,000 and growing every day, keeps in training about 25,000 men, with an antiquated organization, while to the north lives a population of 5,000,000 people ready to do and die for England. In naval ability suffice it to say that

the combined navies of Mexico and South America would not be a barrier to England's West Indian squadron alone."

If the Monroe doctrine is to have force, we are to take into consideration the possibility of being called on to defend weaker American states from European intervention. Without the intervention of the United States, Lieutenant Duncan is of the opinion that not another government on this hemisphere could live in the face of a determined foe from Europe. Keeping such contingencies in mind, it seems plain that our dependence on the militia of the States has been carried too far.

#### MODERN SOLDIERING.

"It must be borne in mind that there is no subject in which greater scientific progress has been made during the past thirty years than in the appliances and appurtenances of war. non-professional reader will grasp this fact more readily by reference to the familiar circumstance of the cost and length of time required to build and equip one of our modern warships as compared with the wooden frigates of the line then in vogue. There has been quite as much change and improvement in the armament of troops for battle, and a very much greater need of discipline and preliminary training and drill to make them effective in action. Indeed, there is no comparison between these latter requirements as they exist to-day and what was formerly necessary, and it is this fact which it is so difficult to impress upon the average citizen. The old soldier who advanced to the attack in what he called a rain of bullets would now be greeted with a del-The mass of metal thrown from two contending lines of battle will be terrific. skirmish preceding battle will commence at incredible distances. In the full tide of conflict, squads, sections, companies, and even battalions may in a moment be swept into eternity. face of such conditions, common sense would say that victory will reward that command which uses its weapons most skillfully, which husbands its ammunition and throws its leaden hail with accuracy, and at the command of its leaders moving ever onward to the attack, forgetting personal danger in its confidence in the wisdom of its commanders, and in final victory. Do we realize the never-ending drill, the discipline, the unceasing vigilance of instruction, the unquestioning obedience, the target practice, the field exercises absolutely necessary, all to bring the soldier to his most efficient state, or, if you please, to convert the individual into as much of a machine as possible? Such essential qualities can come only from the regular training of daily life; and so the question naturally arises, Does the militia fulfill these conditions?"

#### STRENGTH AND WEAKNESS OF THE MILITIA.

The organized militia in the whole country numbers about 112,000 officers and men, and the unorganized portion of the total male population subject to military duty in emergency about 9,000,000. Lieutenant Duncan estimates that forty-nine men out of every fifty, the country through, are "ignorant of even the rudiments of military instruction."

The men in the militia organizations of the States enlist for recreation, pleasure, and the physical advantages of military drill, not for fighting. Lieutenant Duncan declares that to pit such men against experienced regular troops whose whole life has been given to preparation for battle would be almost murderous. The victory in future battles, he says, must be with the force having the best-controlled and most accurate fire action. Without fire discipline mere members avail nothing.

"There is no question of the patriotism of our people and of the fact that in time of national danger hundreds of thousands would willingly throw their lives into the breach in defense of our institutions, and that in the end fidelity and valor would remain supreme, and that the country would rebound from any conflict more vigorous from the healthful blood-letting of war. But while the country might rise supreme from its very ashes, there would be no resurrection of the lives which had paid the forfeit of war; there could be no return to the fireside of the fathers. husbands, brothers, and sons left upon the battlefield. Upon individuals thus left to mourn does the anguish of war fall hardest. The question simply is whether it is the part of good government to demand from our citizens such a sacrifice, such a needless slaughter as would now pay the price of war, or by a proper preparation in peace to reduce such possibilities to a minimum."

## FINANCIERING FOR WAR.

THE April number of the Bankers' Magazine considers the problem of meeting war expenditures with the least possible disturbance of existing contracts—in other words, maintaining specie payments. The editor shows that all the most important wars carried on by the United States have been financed on a paper-money basis and have been followed by periods of depression and monetary demoralization. The Continental currency of the Revolution, as is well known, became at times almost destitute of purchasing power, and a large part of it was never redeemed.

In the War of 1812 the State banks suspended specie payments and the national Government was obliged to sell its securities for the depreciated notes of those banks. Prices were increased three and four fold. The Mexican War put no such strain on the country's resources, and specie payments were not suspended.

"The civil war was commenced on a specie basis, and had it not been for two serious mistakes made by the Secretary of the Treasury in 1861, it was and is the opinion of many competent authorities that specie payments need not have been suspended. It has been estimated on grounds that appear sound that the suspension of specie payments in 1861 and the ensuing necessity of the legal-tender acts increased the necessary expense of the war by at least one-third. The business of the country in 1861 presented many features very similar to those that exist to-day. Speaking of the early period the late George S. Coe, in a letter dated October, 1875, to the Hon. E. G. Spaulding, said:

"'Fortunately the commercial conditions of the Northern States were altogether favorable. The panic of 1857 had been followed by three or four years of great productiveness and economy, which had so turned international exchanges in favor of this country that larger balances in coin than ever before had, during 1860 and 1861, been imported from Europe.'

## ACTION OF THE BANKS IN 1861.

"The banks in New York City held \$50,000,-000 in coin, which was equal to about 50 per cent. of their liabilities. Of the present time it may be said in almost the same language that the commercial conditions of the whole country are now altogether favorable. The panic of 1893 has been followed by four or five years of great productiveness and economy, which has turned international exchanges in favor of this country so that large balances in coin are now being imported from Europe. The New York City banks hold \$136,000,000 in specie and show large surplus reserves; and this sum in coin is supplemented by over \$170,000,000 in gold in the Treasury.

"In 1861, after the disastrous battle of Bull Run, a combination of the banks in New York, Boston, and Philadelphia agreed to take \$150,000,000 of 7.3 notes and furnish the Government \$150,000,000 of specie in installments of \$50,000,000. It was hoped that a general combination of all the banks in the Northern States could be effected, but there was so little unity among the banks of that period that this plan proved futile, and the banks of New York, Boston, and Philadelphia had to stand alone. The three in-

stallments of specie were furnished to the Government between August 7 and December 7, 1861. On August 7 the specie in the New York banks was \$49,733,990, and on December 7, after the three installments of \$50,000,000 each had been furnished, there was still \$42,318,610 in specie in the vaults of these banks. The disbursements of the Government were so rapid, the internal trade movement so intense, that the coin paid out in installments of \$5,000,000 every six days came back to the banks through the community in about one week. In the meantime the banks were disposing of the 7.30 notes among the people, and there is every reason to believe that the banks could in this manner have furnished the Government with \$50,000,000 in specie every sixty days for an indefinite period, sufficient with the use of the bank circulation to have met all expenses at prices on a specie basis. This promising outlook was dimmed and finally totally obscured by the issue of demand notes. of these notes convinced the public that the war was to be fought on a paper basis, and all who could get hold of specie began to hoard it. banks lost \$13,000,000 of specie in three weeks, and as the drain was increasing they were obliged to suspend specie payments.

## THE GOVERNMENT 8 MISTAKES.

"It must be noticed that the specie furnished by the banks was not drawn upon in the usual way by checks, but was actually taken from the vaults of the banks and deposited in the sub-Treasury. This was the other mistake of Secretary Chase. If he had consented to act under the suspension of the sub-Treasury act which had been agreed to by Congress, and treated the banks as depositories and drawn checks on them, these checks backed by the specie in the banks would have served as a circulating medium constantly issued and redeemed, and the specie itself would have remained untouched in the banks, while the loans to the Government could have been increased by degrees to any amount de-These two mistakes, the refusal to use banking machinery to economize the use of specie and the issue of demand Treasury notes, precipitated the suspension of specie payments and so damaged the Government's credit, as well as that of the banks, as to create the necessity which was the plea on which Congress issued the legaltender notes of 1862."

#### ENORMOUS EXPENSES.

On a depreciated paper basis the expense of the civil war at times reached \$3,000,000 a day, and the expense of the apprehended war with Spain may exceed even those figures. If bond issues should become necessary, the Bankers' Magazine assures us that the banks of the whole country would come to the aid of the Govern-It suggests that the credits furnished by the banks in return for bonds should be. drawn upon by checks which would furnish a currency issued as needed and redeemed at once through the clearing house machinery of the country.

## HARBOR OBSTRUCTIONS AND SUBMARINE MINES.

I N the Green Bag for April Mr. John H. Ford reviews the diplomatic relations of the United States so far as they throw light on the question of the right of Spain to protect Havana harbor by the use of explosives and by other means to blockade the port.

As to the right of blockade and the binding of neutral powers to respect it, the law seems to be settled; but as to the right of a government to protect its harbors by the use of submarine explosives, the question is still an open one so far as regards the adoption of rules by the powers to regulate it. The United States Government holds that it cannot be done recklessly and without otice.

## FORMER PROTESTS OF THIS GOVERNMENT.

"Mr. Evarts, on January 25, 1881, wrote to our minister to Peru: 'I regret that a report which has been communicated to the Department obliges me to request that you will make a strong representation in the premises to the Peruvian Government should you find on inquiry that the report is well founded. The report is that the Peruvians have made use during the present war with Chili of boats containing explosive materials, which have been left adrift on the chance of their being fallen in with by some of the Chilian blockading squadron. It is sufficiently obvious that this practice must be fraught with danger to neutral vessels entitled to protection under the law of nations, and that in case American vessels are injured, this Government can do no less than hold the government of Peru responsible for any damage which may be thus occasioned. That in case it is ascertained that means and ways so dangerous to neutrals as those adverted to have been for any reasons suffered to be adopted by her forces or any part of them, they should be at once checked, not only for the benefit of Peru, but in the interest of a wise and chivalrous warfare, which should constantly afford to neutral powers the highest possible consideration.'

"Again, in 1884, the Hon. John Russell Young,

as minister to China, was confronted with the threat that China would place obstructions in the water approaches to Canton because of a contemplated war with France. Corresponding with Mr. Frelinghuysen, Secretary of State, as to his duties in the premises to protect American commerce, Mr. Young said, in speaking of the subject, that 'China relied upon the treaty of 1858 on her right to do so,' but further said: 'Since 1858 the methods of offensive and defensive war-The United fare have been revolutionized. States, during the rebellion, saw fit to obstruct the channels of Charleston harbor by sinking ships laden with stone to secure an effective Germany, during her latest war with blockade. France, protected her Baltic ports with torpedoes. I should have felt some embarrassment in seeking to persuade the Yamen that what Germany and the United States regarded as honorable warfare could not be permitted to China.'

"To this letter Mr. Frelinghuysen sent a reply on April 18, 1884, in which he said that it could only be tolerated as a temporary measure, to be removed as soon as the special occasion there-

for shall have passed.'

"But the whole question was more thoroughly reviewed by Mr. Bayard in 1886, in a letter to Minister Denby in relation to the removal of obstructions from the same river in which he called attention to the above correspondence, and said that 'when war ceases, obstructions impeding navigation must be removed by the territorial authorities.'

#### WHAT DETERMINES THE NECESSITY?

"This was done when the Dutch attacked Spain in the time of Philip II., and by England in the time of Charles II. when blockaded by the Dutch; by this country during the Revolution, the War of 1812, and the late civil war; by Russia at the siege of Sebastopol and by Germany as above; but when there is no necessity—that is, when the opposing power has no navy—it is a question whether under the law of nations it can be done.

"The placing of torpedoes in the Danube by the Turks in 1877 caused a letter to be sent by Mr. Evarts to the Russian chancellor, Mr. Shishkin, in which he said, speaking of this method of warfare: 'The employment of torpedoes is so recent a belligerent device that it is believed the powers as yet have had no opportunity to consider the general regulations, if any, to which they should be subjected,' and that is exactly the status of affairs to govern the Maine case, provided she was destroyed by a Spanish mine in the harbor through no overt act of that government or an accidental discharge of the mine."

## BRITISH-BUILT SHIPS FOR FOREIGN NAVIES.

VERY interesting paper in the Nineteenth Century for April is that written by Mr. Archibald S. Hurd, entitled "British Ships in Foreign Navies." Mr. Hurd is uneasy concerning the extent to which British shipbuilders have executed orders from foreign governments who ordered ships of war. Curiously enough, his article comes immediately after Sir William White's paper, which concludes with the recognition that the chief source of the strength of England's naval power is the great reserve of productive capacity in private shipyards, which are kept going by other business than that which is supplied by orders from the Admiralty.

Following is a list of the ships of war constructed in Great Britain for foreign govern-

Argentine Republic: 2 battleships, 3 coast-defense ironclads, 3 cruisers, 2 gun-vessels, 2 torpedo gun-vessels, 5 gunboats, 8 destroyers, 22 torpedo-boats—30,053

Austria-Hungary: 2 torpedo cruisers, 1 torpedo gunvessel, 8 first-class and 26 second-class torpedo-boats—

Brazil: 2 battleships, 2 coast-defense ironclads, 2 protected cruisers, 2 torpedo gun-vessels, 14 torpedo-boats-19,465 tons.

Chili: 2 battleships, 1 armored cruiser, 8 protected cruisers, 1 gunboat, 3 torpedo gunboats, 4 destroyers, 18 torpedo-boats—38,965 tons.

China: 2 protected cruisers, 5 gunboats—10,620 tons. Denmark: 1 cruiser, 18 torpedo-boats—1,284 tons. Germany: 8 armored cruisers, 1 torpedo gun-vessel, 5

torpedo-boats-26,271 tons.

Greece: 1 battleship, 8 cruisers, 11 gunboats, 8 torpedo-boats-9,908 tons.

Haiti: 1 gun-vessel—950 tons.

Holland: 1 battleship, 4 coast-defense ironclads, 8 gun-vessels, 3 gunboats, 10 torpedo-boats—13,096 tons.

Italy: 1 battleship, 3 cruisers, 40 torpedo-boats-18,000

Japan: 4 battleships, 4 armored cruisers, 7 protected cruisers, 1 cruiser, 1 torpedo gun-vessel, 5 destroyers, 8 gunboats-97,505 tons.

Liberia: 1 gunboat—150 tons. Mexico: 2 gunboats—850 tons.

Norway: 2 coast-defense ironclads, 1 torpedo gunvessel-6,840 tons.

Peru: 1 cruiser—420 tons.

Portugal: 1 battleship, 6 cruisers, 12 gunboats, 3 river gunboats, 6 torpedo-boats-21,016 tons.

Roumania: 1 cruiser, 1 gunboat, 2 torpedo-boats, 6 coast-guard vessels-2,275 tons.

Russia: 1 coast-defense ironclad, 2 gunboats, 1 destroyer, 3 torpedo-boats-4,600 tons.

San Domingo: 3 gun-vessels—1,800 tons.

Siam: 1 cruiser, 1 gunboat—2,778 tons. Spain: 2 battleships, 3 protected cruisers, 2 unprotected cruisers, 1 torpedo gun-vessel, 4 torpedo-boat destroyers, 9 torpedo-boats, 22 gunboats—31,621 tons.

Sweden: 3 torpedo-boats-110 tons.

Turkey: 8 battleships, 3 cruisers, 3 torpedo boats, 3 gun-vessels-46,328 tons.

"This is a very bald statement in detail of the significant fact that British shipbuilding vards have constructed for foreign navies warships with an aggregate displacement of 377,815 tons, equai to about one-fourth of the whole British navy."

## POWERFUL CRUISERS AND BATTLESHIPS.

Strange as it may seem, some of these ships built for foreign navies are more powerful than any owned by England herself:

"The boast cannot be controverted that the British navy has no vessel to equal, size for size, these British-built cruisers of the Argentine, Chinese, and Chilian navies: they are superior in speed, in protection, in armament, and even in coal capacity."

The following statement as to the ships now building in British yards for foreign powers shows that the probability of any of these vessels being employed against the British fleet is ex-

traordinarily small:

"For Japan alone 8 battleships and cruisers and 8 torpedo-boat destroyers are being built. There is also a coast-defense ship for Norway, besides 2 cruisers each for China and Chili and 1 cruiser each for Portugal and Brazil, while 4 torpedo-boats for Austria are approaching completion, and the German navy will shortly be stronger by the addition of a British-built swift and deadly torpedo-boat destroyer."

## THE FOREIGN POLICY OF LORD SALISBURY.

ORD SALISBURY'S foreign policy is made a point of special attack by anonymous writers in the Contemporary and Fortnightly for April.

In the Fortnightly Lord Salisbury's shortcomings are reckoned up by "Diplomaticus," a writer whose nom de guerre is more familiar than his personality. "Diplomaticus" is a pessimist of the pessimists, and his reckoning up of Lord Salisbury's foreign policy lacks nothing in the way of emphasis.

After quoting the glowing assurances in which Mr. Chamberlain indulged after the formation of the present British ministry, "Diplomaticus"

"The only comment I need make on this claim is to tabulate the problems of 1895, which involved questions of markets and cessions of territory, and to set against them the solutions obtained by British diplomacy:

"1. Siam: Great sphere of influence created for France, including the valuable provinces of Battambang and Angkor. Cession to France, without consideration, of the British transMekong portion of Keng Cheng. Guarantee of territorial integrity of and 'equality of opportunity' for traders in Central Siam.

"2. Madagascar: Island annexed by the French and market closed. British protest disregarded.

"3. Tunis: Commercial treaty surrendered and eventual closing of market acquiesced in. No compensation.

- "4. Upper Nile: Cession to Abyssinia of a large slice of Southern Somaliland. Apparently the only consideration a most-favored-nation clause, and a declaration that the Emperor Menelik regards the Mahdists as 'the enemies of his empire.' Nothing done to stop the French from 'effectively occupying' our sphere of influence on the Upper Nile, and their invasions officially ignored.
- "5. China: Kaio-Chau seized by Germany and exclusive privileges acquired by her in Shantung. Exclusive privileges acquired by Russia in Manchuria. Germany declines to pledge herself that Kaio-Chau shall always remain an open port. China has agreed to open rivers to trade and a treaty port in Hunan, and has promised not to cede the Yang-tse valley to any foreign power.
- "6. West Africa: France has occupied, in defiance of treaties, the whole of the hinterland of Lagos and a part of the hinterland of the Gold Coast, and threatens to exclude our trade. In face of this aggression we are negotiating.

## RESULTS SUMMED UP.

"In brief, instead of expanding the empire we have ceded indisputably British territory to France and Abyssinia; instead of 'defending our own possessions and claims,' we have allowed the French to invade and occupy immense regions which we had proclaimed as British; instead of 'preventing old markets from being closed,' we have given up the Tunis market, lost the Madagascar market, consented to the earmarking of a large portion of Eastern Siam by France, and stood idly by while Germany and Russia have created spheres of influence in Shantung and Manchuria. Against this the government have to set a valueless promise from China not to alienate the Yang-tse valley, the prospective opening of a treaty port in Hunan, the opening of the inland waters of China to trade—the only really valuable gain that has been obtained -the rescue of Central Siam from the range of French ambition, and the concession of mostfavored-nation treatment by Abyssinia. Is it surprising that there should be popular discontent when this record is compared with the glowing promises made by ministers?"

## Another Criticism.

The author of the article on "The Failure of Our Foreign Policy" in the Contemporary wields a much more effective pen than "Diplomaticus," and is quite as bitter. He can see no good in anything that Lord Salisbury has done. To his gloomy and despondent vision the future holds out no hope for an empire which can allow its chances to be fooled away so recklessly.

Nothing would satisfy this writer but the summary removal of the administration from power. He says:

"Lord Salisbury accomplished his mission when he saved Ireland from home rule or separation. The present problem is how to save the empire from dismemberment. In this Lord Salisbury's cabinet has dismally failed. Hence the choice now lies between the maintenance of his government in power and the defense of our imperial interests."

## AN ANTI-BRITISH LEAGUE.

"The present imperial crisis is the upshot of a carefully thought-out plan which France and Russia are resolved to carry out in partnership. The two are industriously working together wherever Great Britain has political or commercial interests to safeguard or to lose. They both agree in tearing up written treaties, trampling upon our recognized interests, demanding the dismissal of British subjects, hampering us in Egypt, and wantonly humiliating us throughout the globe. And this at a time when our foreign secretary had squandered away more British territory and abandoned more important rights than a war would have sacrificed, in the hope and belief that he had purchased therewith their close friendship and good-will. It is now too late for the government to strike out a fresh policy; it still tenuciously clings to that amicable understanding, belief in which has made us the laughing-stock of Europe. What our pushing rivals are now seeking to accomplish is this: figuratively they are constructing a cage or palisade around the British empire, within which we have freedom of motion for a time, but whose dimensions, even if they were not destined to grow gradually less, as in Africa, we shall have outgrown in a certain number of years. What policy has our Foreign Office to oppose to this?

"We have only to compare the calm, resolute, and highly artistic manner in which Prince Lobanoff, in an incredibly short space of time, changed the face of Europe and the world, with the stumbling and floundering and blundering of our own Foreign Office for years, in order to appreciate the difference between a party politician and an imperial statesman."

## "AMICABLE UNDERSTANDINGS."

England's only policy, according to this unsparing critic, has been to rely upon amicable understandings which are no sooner destroyed than the English, with child-like credulity, seek to replace them by more amicable understandings, which are as worthless as those which have been trampled under foot. He is full of admiration of Russian as opposed to English diplomacy. He declares that he judges the tree by its fruit. Russia's policy has been as uniformly successful as Lord Salisbury's has been uniformly a failure:

"Russia has been at the trouble and expense of concluding alliances and rewarding allies for the express purpose of dispensing with Great Britain's help and carrying out her schemes in the teeth of Great Britain's opposition. And that arrangement has more than justified Russia's She has triumphed all wildest hopes of success. along the line; further and greater victories await her in a short time; without the loss of a Cossack or a marine she is changing the map of the world and filling Great Britain with the gravest At this conjuncture British statesmen anxiety. hope that by 'offering' Russia a fraction of what she has it in her power to take as soon as she can digest it, they can induce her to abandon a plan which is not merely ambitious and feasible, but likewise eminently patriotic. And this is boasted British statesmanship!

#### SUMMING UP: WANTED-A LEADER.

"From whatever point of view, therefore, we consider the foreign policy of the present government, we find that it is unreal in its suppositions, ruinous in its results, and absolutely unworthy of the confidence of those who put the interests of the nation and the empire above the considerations of party and the shibboleths of Parliament. What we sorely need at the present grave crisis is not the prestige of this great marquis or that great earl, this rising Liberal or that enlightened Conservative, but a real statesman who understands foreign politics, foreign peoples, and foreign languages, who can adjust means to ends and successfully solve a difficult problem in imperial policy. Such a man, be he a Tory, a Radical, or an Independent, can rely upon the support of the entire British people, and will not be troubled with idle questions in Parliament. A leader of this caliber is indispensable to the empire, and unless his services can be speedily obtained, the state of things, now critical, will go from bad to worse, and whatever hopes may be entertained of the future of the Anglo-Saxon race, there are none for that of the British em-The arguments which I have adduced against our present listless lack of policy are

unanswerable; and they are so fully borne out by the facts with which we are confronted that he who reads may run and sigh at the fate of the mightiest state of the world."

## RUSSIAN ASCENDENCY IN CHINA.

'HE most elaborate article in the May Harper's is the opening paper on "Awakened Russia," by Julian Ralph, with a great number of exceedingly handsome illustrations. custom with Mr. Ralph's treatment of such a subject, there are printed a considerable number of interesting facts which he has reported in a readable manner. The most timely portion of Mr. Ralph's article is, of course, that which refers to the Russian advance on China. ascendency of Russia over China, Mr. Ralph says, is complete; so much so that when the great Belgian railroad concession was offered to the Muscovite Government they refused it at a moderate price, on the ground that they could get whatever concessions they wanted for noth-Though this article must have been written before the recent events by which Russia has acquired such real and such vastly important rights in China, Mr. Ralph already assumes that the Czar has a practical protectorate "over the frightened and humiliated old empire." The form of this protectorate is briefly that Russia, in return for the acquisition of the principal naval ports of China, promises to defend Northern China from all comers, without asking anything of the same nature from that empire. When the Belgian syndicate last year had obtained what looked like a concession for a practical monopoly of railroad building in China, the powers protested. Other syndicates offered vastly more favorable terms and all waited until the Russian Prince Oukhtomsky came. He received The Emperor unprecedented honors in China. placed a residence at his disposal in Shanghai; the Vicerov entertained him; he rode to Peking on the first train that ever rolled into the capital, and had two audiences with the Emperor, a very "At the second audience the Emrare honor. peror rose and took from the Prince's hands the gifts he had brought for the Empress Dowageran act which is described as an astonishing piece of imperial condescension. The Prince brought an extraordinary lot of costly presents, and no important official was forgotten. One gift by the Czar to the Emperor was a bronze group representing the emancipation of the Leao-tong Peninsula from the Japanese—which may be thought to show that the Russians, like most other persons, only see what they are looking at. The Prince appeared to be eminently successful in

whatever was his undertaking, and now that he is gone the new Russo-Chinese Bank, in a palatial building where the other banks are denied more than the barest accommodations, stands as a bureau of the Russian finance department. Five millions of taels of the money China borrowed to pay her war debt is deposited in this bank as security for the fulfillment of the obligation Russia secured from her in connection with the building of the Siberian Railway through Manchuria. The capital of the bank is \$5,000,000, five-eighths of which was subscribed in France.

"The Russians have published what they are pleased to make known of the terms of the Russo. Chinese agreement concerning this new division of the great railroad on Chinese land. The shareholders are wholly Russian and Chinese, and the fiscal agent of the railroad is the Russo-Chinese The raison d'être of the bank is the construction of the railroad. When the books were opened for subscriptions for stock in the new railroad they were almost immediately closed, because more than the money needed was at once offered. The length of the railroad is to be 1,289 miles, 946 of which are to be in Man-The route is chosen not because itshortens the Siberian Railway, for the branches to it from the finished sections make necessary the construction of 169 miles more than an entirely Siberian route would require. But the Manchuria route is cheaper to build and is 400 miles further south, in a better climate and a richer country. China reserves the right to purchase the road at the end of thirty-six years, or to take it without cost at the end of eighty years. Goods shipped through Manchuria are to be free from Chinese taxes, and goods brought into China or out of it by the railroad will pay a third less import and export duties than if brought in or out at Chinese seaports. In Manchuria the railroad is to be policed by Russian constables."

## A Russo-Chinese Point of View.

Dr. A. V. Markoff contributes to the London National Review for April an article on the Chinese question which deserves more attention than most of the essays which are appearing on the subject in the English press. Dr. Markoff is a Russian, resident for some years in England, who has traveled extensively in China and knows the Chinese well.

## THE CHINESE STANDPOINT.

In his article upon "The Policy of Russia" he brings forcibly before the attention of the public the fact that while the powers are glibly talking about the partition of China, they may be bringing about results the very opposite of those which they anticipate. In other words, Dr. Markoff re-

minds them that instead of partitioning China they may simply let loose the Chinese deluge which may ingulf no small part of European civilization. Dr. Markoff, recognizing this fact, makes it the basis of an earnest appeal to the European nations to act in unity in approaching the inscrutable Chinese factor, which may easily become the dominant factor of the nineteenth century. Dr. Markoff says:

"We must not forget that while petty jealousies in Europe—Germany against England;
France against Germany—seem to forecast a
division in our strength, the struggle in the future
will not be that of nation against nation, but of
race against race, Mongolian versus Aryan. Having had the Mongols as rulers of our country, we
have been able to study the East and her people
—not superficially, but through her languages,
customs, and institutions. Therefore we know
the East and appreciate the possibilities of her
peoples in the future."

There is not a word in the foregoing which would not have been indorsed by General Gordon, who also knew the East and appreciated the possibilities of her peoples in the future.

#### PARTITION IMPOSSIBLE.

Those who are airly drawing up schemes on paper for the partition of China will be interested in knowing that Dr. Markoff holds they are reckoning without their host, and that none of their schemes can be carried out:

"European nations are far from being efficiently equipped, either mentally or morally, for successfully undertaking the partition of China—nay, we will go even a step further and say outright that such a partition is quite impracticable. By dint of brute force we shall certainly be able to hold and maintain a few places on the coast—that is possible; but unless we garrisoned town and country throughout the interior and carried out a war of extermination which would deluge the whole East with blood; unless we can convert the Chinaman into the European—wood into iron—we cannot hold China.

"The land may even be ruled temporarily by Europeans, but in that case it would only mean that the old, old tale would be again repeated. Our European nations all lack the stability, or rather they lack the 'attributes of the eternal,' which characterize the Chinese, and we need not think, in our self-sufficient satisfaction, that we are going to eat up China like a piece of bread-nd-cheese. We are to China what bulrushes are to the oak. If we go there we go as English, French, Germans, Russians, all jealous of each other, but the probability is that we shall leave—if we ever do leave—as Chinese."

The breakdown of the Chinese Government and their collapse in the Japanese war ought not to blind us to the fact that, as Dr. Markoff says, "when we study the principles of Chinese life and when we see how zealously they try to live up to these principles, then we must see that the race possesses all qualifications necessary to reach the highest degrees of mental, industrial, and political development. Gradually, and as soon as the Chinese become amenable to European culture, they are bound to prove an immense force in the world, both industrially, politically, and morally."

## THE DUTY OF ENGLAND AND RUSSIA.

Dr. Markoff concludes his paper with a plea for the cooperation of England and Russia in confronting a common danger in the far East:

"China can only be conquered by a higher civilization than her own, a civilization which will be based not on theory, but which will be

carried out in practice.

"We hope Russia will not be hindered in her work of bringing China into the sphere of European civilization, but will be supported by Eng-We also hope that the only two countries which have a real civilizing mission in this world will go hand in hand in agreement with each other in Asia, dividing their spheres of action, and not plotting and planning one against the There is plenty of room for both. if they will not work together, all their separate means will only end in their own stultification, and with the result that they will have made the Chinese great at their own expense, and in order finally to be eaten up by them—first Russia and then the rest of Europe. China will then, in point of fact, be actually 'Tyan-Sya'—the universe, the kingdom under heaven, as they call it themselves."

# RUSSIA AND THE BALANCE OF POWER.

THE last article in the Contemporary Review for April is entitled "The Balance of Power." The personality of the writer, who has lived in Russia, is concealed by the phrase "Quorum Pars Fui." This writer maintains that on the whole Russia has treated England extremely well, nor is there any antagonism between the respective interests of the two countries. He says:

"There is really no cause for hostility or suspicion. So far as the North Sea and the Baltic Sea are concerned, there is every prospect of trade development between the two countries on mutually advantageous terms. England is Russia's best customer for food products; and even if Russia's protective system were an ungenerous one to us—which, on the whole, it is not—it is to Russia's interest as much as to ours that the trade should be on fair give-and-take principles. The way in which Captain Wiggins and Mr. Popham have been encouraged to assist in developing the Siberian river trade holds out every hope that increased national friendliness will be one of the results."

#### THE CHINESE POLICY OF RUSSIA.

The following tribute to the Chinese policy of Russia will be read by many with surprise:

"If we look back at Russia's dealings with China, we see that her relations have always been friendly and fair. In the Amur boundary question, two hundred years ago, the Russians and the Manchus were equally conquerors and explorers. It is, indeed, said that the Russians once removed the boundary stones in a tricky way; but that is also a very old Chinese trick, and, in any case, one of which local officers on a remote frontier might easily on either side be guilty. On the whole, the history of the Russo-Chinese trade relations up to our own times points to prudence, loyalty, and even considerate gentleness on the Russian side. It is often said that the Russians did a smart thing in filching Primorsk from the Manchus after our last war with Perhaps they did; but there was no violence; it was all a matter of fair negotiation. In the Ili question, eighteen years ago, the Russians restored certain territory, and honorably swallowed the leek in a way which no one expected to see. Here, again, they had 'smartly' and successfully negotiated with an incapable Manchu envoy in Russia. But his work was disavowed; Ili was demanded in accordance with Russia's promise and was duly given back. the same way with Bokhara, which as a vassal state is now much more helpless than was China in 1880, Russia has honorably abandoned to her the states of Roshan and Shignan, in accordance with old claims justified by Bokhara.

"I do not for a moment mean to take a brief for Russia, whose statesmen are probably individually neither worse nor better than the rest of mankind. But what I do say is that her Asiatic policy generally seems to have been honorable as a whole, due allowance made for 'psychological' considerations. Russia's whole attitude in the world is far from being an aggressive one."

#### FRANCE THE CAUSE OF TROUBLE.

Nor is there any truth even in the allegation of Russia's action against British interests. "Quorum Pars Fui" admits that it is, unfortunately, indisputable that Russia has thwarted England here and there in small matters; but he argues

that this is entirely due to the exigencies of the French alliance. He says:

"Russia, in order to protect herself against German aggression while her whole resources are devoted to developing her internal wealth, had found it useful to enlist the general countenance of France, which arrangement necessitates on the part of Russia occasional counter favors to France in directions where her own interests are not touched. In this way Russia can make herself disagreeable to us in many parts of the world without our being able to retaliate with the same light hand. Russia wants nothing from us in any part of the world; she does not even want money so long as she can keep France in a good hopeful humor. Thus it falls out that though there is nothing whatever to make the solid Russian interests clash with ours, or to prevent perfectly above-board and honorable dealings between ourselves and Russia, she is often forced in her own interests to abet the unreasonable pretensions of France. The remedy would, of course, be to conciliate France in such a way that she would have no interest in thwarting us or in inducing Russia to aid her in doing so."

#### RUSSIAN JUSTICE AND HUMANITY.

The writer pays the following enthusiastic tribute to the high personal characteristics of the Russian people:

"I found that the Russians by temperament were without exception the gentlest, most easygoing and humane nation in Europe—and I have seen them all. Their defects are many, but the leading feature in the Russian character, high and low, which stands above faults of which they have their full share, is an enthusiastic, generous humanity, easily moved to sadness and tears; full of expansive gratitude for kindness; free from meanness, pettiness, and cunning greed. In short, it struck me, the more I contemplated the Russian character, that they were the only people in Europe who possessed several of the better characteristics of ourselves. The Russians are not so fond of fair play, not so truthful, not so energetic, not so manly as we are; but, on the other hand, they are less hypocritical, more truly modest, gentler, more tender, more truly religious, more humane, and less brutal and violent in every way. This being so, I decline to believe that the Russian nation as a body or the Russian Government as its representative—which shares the virtues and vices of that body—would ever lend itself heart and soul to an aggressive general war for mere purposes of spite and plunder; and in this matter, far inferior though the Russians are to their new allies in intelligence, wit, vivacity, and many other noble qualities, they are infinitely

superior to the French. They are a juster race, with less venom."

#### Russia's Sinews of War.

In his article in the National Review on "Russia's Sinews of War," Mr. W. R. Lawson discusses the question as to how Russia and France would be able to stand the financial strain if war resulted over the present Chinese question. In Mr. Lawson's opinion, Russia, despite her apparent financial prosperity and despite the great boom in Russian industrial enterprises, would find herself in a very difficult position on the outbreak of war:

"If the Russian Government were seriously thinking of going to war with Great Britain, or even with Japan, one thing is certain, that it could not hope to screw its ordinary revenue much higher than it is already. All economic authorities who have studied the actual condition of the Russian people agree that they are overtaxed already and could bear no additional burdens."

The Russian national debt is now estimated to be nearly \$4,850,000,000. The annual expenditure has gone up from 900,000,000 roubles in 1891 to over 1,300,000,000 roubles in 1897. Russian finance is so closely bound up with that of France that the two cannot be considered apart. Mr. Lawson says:

"France is now the principal creditor as well as the chief ally of Russia in Europe. Not only has she three-fourths of the government bonds held abroad, but she is stuffing herself full of Russian mining shares and other wild-cat scrip specially manufactured for her consumption. Frenchmen who can appreciate the risk to both countries involved in this Franco-Russian boom -as mad as the Kaffir circus in its worst daysare afraid to calculate the amount of French money locked up in it. The lowest estimate is 8,000,000,000 francs, and some of them run as high as 11,000,000,000. The day that sees Russia on the verge of war with another great power will give the Paris Bourse a far worse fright over its Russian securities than it is now having over its Spanish bonds. An actual outbreak of war would knock 25 per cent. at least off the market value of these securities.

"It is to be feared that France had rather hazy ideas of what she was committing herself to when she joyfully undertook to act the part of benevolent banker to the Russian empire. Frenchmen do not appear to have examined their security very closely before they advanced their 8,000,000,000 on it. But they have had good opportunities since to complete their information. Russian finance is a favorite subject with them now, though not always an agreeable one. It is hardly

reassuring to them to discover, as they have done, that the Russian people are even more heavily burdened with debt than their government is. Hopeless indebtedness is the normal condition of peasant and landowner alike. Eighty million hectares of land—over 200,000,000 acres—are under mortgage, and the amount of the mortgages piled up on them is estimated at £240,000,000."

## THE QUEEN OF DENMARK.

N the Woman at Home for April, Jessie Brochner, who has gathered the material for her article from the highest sources, writes a pleasant, gossipy paper on the King and Queen of Den-It is illustrated by any number of photographs of the Queen, and also by an original autograph and motto written specially for the article. The writer reminds us of the fact that her majesty the Queen of Denmark has a right of precedence over her majesty the Queen of England—at least in matter of years. The Queen of Denmark was born in 1817, so that she is now in her eighty-second year, and is still in as full possession of her faculties as Queen Victoria. She is an admirable housewife, writes every week to each of her three daughters, keeps up her reading in four languages, and has of late developed a new interest in the German religious literature of the present day. She is very fond of painting and music. The royal couple breakfast at 9 o'clock, and all their visitors are expected to sit down at that time, no matter how late they may have gone to bed on the previous night.

The Queen often spends her morning cutting flowers and arranging them. Through the winter months they give dinner-parties every Wednesday, and often on Sundays. These dinners are early, and the guests depart before a London dinner would begin. The Queen drives out almost every day through the winter, often in an open The King rides every morning at the riding school at Christianborg Palace and regularly visits the royal stables. He is very fond of horses, his preference being for good-sized bays and chestnuts. The room of Alexander III. at Fredensborg is preserved in exactly the same state as when he last used it. It contains a plain and commonplace walnut writing table which the Czar had bought himself in a small Copenhagen He frequently patronized the small local shops, and used to carry home his purchases himself in triumph to the children. He was an immense favorite with little children, and often, says Miss Brochner, played with them on the floor, forgetting his imperial dignity. A portrait of King Christian IX. appears elsewhere in this number of the REVIEW.

## JAPAN'S ECONOMIC SITUATION.

PROF. BERNARD MOSES contributes to the Journal of Political Economy for March an able analysis of present economic conditions in Japan.

Recent writers on this subject—notably Mr. Jerome-Dyer in a New Century Review article from which we quoted last month—have been inclined to confuse the artistic skill exhibited by the Japanese people with mechanical skill, but Professor Moses shows that artistic talent is not in itself sufficient to insure great industrial success:

"Undoubtedly artistic taste and skill applied to production, as in France, tend to give currency and increased commercial value to wares, but artistic taste and skill alone will not give a nation industrial leadership. In many of their products the Japanese have shown great refinement of taste and great manual dexterity in carrying out their artistic conceptions, yet there is very little in their industrial products to indicate that they have ever possessed any considerable degree of mechanical ability. Their early achievements show remarkable progress in certain lines, yet in mechanical construction they have not advanced beyond the first stages of industrial growth. At present they are employing some of the more complicated appliances for the development and application of power; but these appliances have been borrowed from the nations that invented them, but they are used generally without improvement and often without the care necessary for their greatest effectiveness and longest possible preservation.

## LOW WAGES AND STRIKES.

"A nation without more mechanical talent than Japan has thus far displayed, relying on other nations for its mechanical constructions, is likely in the course of time to be obliged to use inferior machinery for communication or manufacturing as compared with those nations whose genius for invention leads them constantly to make improvements in their mechanical appliances. In this respect Japan will be handicapped in her industrial rivalry with England and Amer-On the other hand, in the lower wages of her laborers the manufacturers of Japan have a certain advantage over those of other nations, yet this advantage is not measured by the difference of wages; for while the Japanese receive low wages, their efficiency is also low, particularly in the construction, repair, and use of machinery; and under the modern organization of production this kind of labor covers many of the more important departments."

"As Japan enters the common market of the

Western nations with her wares, her conditions of production tend to approximate those of the nations with whom she competes. Her laborers, becoming better informed as to the rate of wages paid elsewhere, demand an increase. Already they are showing strong faith in strikes as a means of obtaining the end desired. Moreover, the disposition of the people to entertain great respect for their own individual judgments under all circumstances furnishes good ground for the opinion that the strike will, for yet a number of years, continue to be a favorite weapon of the Japanese laborers in their contests with their employers. But in spite of the movement toward Western conditions of production, there is no indication that wages in Japan will ever reach the English or American standard; and it may be expected that in spite of any rise of wages which may be brought about, the increased efficiency induced by the organization and discipline necessitated under production on a large scale will leave the employer with essentially all the advantages he enjoys at present."

#### DEVELOPMENT OF MANUFACTURES.

Professor Moses points out that what determines the general conditions of labor in Japan is the fact that production is conducted for the most part on a small scale. So far as agriculture is concerned there seems to be no prospect of a change in this ruling practice, but in manufacturing industries there are signs of development.

"These are seen, in certain lines of production, in the departure from individual to corporate industry and in the attempt to secure the advantages of manufacturing on a large scale. These changes are especially noteworthy in the manufacture of cotton goods. The advance along this line has been so great that the Japanese would be pleased to have the achievements made in this direction considered as typical of the industrial progress of the nation. They like to speak of Osaka as the Manchester of Japan. The products of the Osaka mills find their largest foreign market in China, but some of them are The sales in India are carried as far as India. viewed with satisfaction, because they represent successful competition with English producers on territory under English rule. In carrying on this industry the raw cotton and the machinery are imported, and the domestic advantage is In seeking to maintain this incheap labor. dustry in their own hands, the Japanese will be obliged, under the revised treaties, to withstand the competition of foreign capital. They will be obliged to compete, moreover, with the superior ability in industrial organization possessed by the English, Germans, and Americans, who,

under the proposed treaty regulations, will be able to get all the advantages of cheap labor now enjoyed by the Japanese manufacturers. For. through the revised treaties, foreigners residing in Japan and their property are to be brought under Japanese law and made subject to Japanese courts. The extra-territorial jurisdiction which the foreign powers have exercised through their consuls in the open ports is to cease, and the subjects of these powers are to be permitted to reside, hold property, and transact business in any part of Japan. Japan will undertake to hold the same relation to foreigners that the leading civilized nations of the West maintain."

## HANDICAPS TO PROGRESS.

In commerce the Japanese are still on a comparatively low plane. In the old social order the merchant as he is known in the West had no place. The shopkeepers of the towns were at the lowest extreme of the social scale, and their calling was generally condemned. They had the lowest ideals of commercial morality, and even now the Japanese traders, as a class, are regarded as less reliable than the merchants of Western nations.

Japan is also at a disadvantage from the lack of thoroughness in workmanship which marks many of her wares.

"Many wares fall short of the mechanical excellence required. If it is a piece of silk, a larger thread at some point breaks the uniformity of the texture, or some other apparently insignificant defect appears. In the works of the potters the wares that will bear the most careful scrutiny are only a small part of those produced. In the products of iron and steel this is even more emphatically true. The lack of mechanical thoroughness almost always leaves something to be desired. On account of this the nation is heavily handicapped in the construction of all forms of machinery, and some forms, like the higher grades of bicycles, are entirely beyond its present ability. These limitations are inherent in the character of a people that is always disposed to pronounce an artistic rather than a mechanical judgment. Yet it may happen that the artistic quality of certain wares will more than counterbalance any mechanical defect they may possess. This might very well be true in the case of porcelain and textile products, but no artistic quality of the bicycle would be an acceptable substitute for mechanical excellence."

Even in the manufacture of artistic porcelain the beginnings of production on a large scale have been made, the works of the recognized masters constitute a constantly decreasing quantity in the exportations, and most of the Japanese porcelains now put on the market are cheap and ugly.

#### JAPAN AND ITALY-A PARALLEL.

In conclusion, Professor Moses draws a parallel between Japan and Italy in their strivings to attain rank with the great powers of the world:

"After the achievement of political unity, Italy might have held a very dignified position as a third-rate power. She might have continued to enjoy her hereditary prestige in art and to take pride in her early intellectual leadership. world would not have demanded much of her, and she might have devoted her energies to the development of her internal administration and economic resources. But in an evil hour she determined to be a great military and naval state, and as a result of her ambition she has been for years on the verge of bankruptcy. It may not be wise to prophesy that Japan, moved by the ambition to be a great power, has entered upon a career which leads to a similar end. At the same time it is impossible to avoid observing here Both nations have won disa certain parallel. tinction for their artistic creations. Each has a small territory and a large population, which has necessitated careful and intense cultivation and left little opportunity in the present for agricul-In both nations the genius of the tural growth. The Japanese and the Italians people is artistic. stand in sharp contrast with the mechanical English and Americans, and by reason of their lack of mechanical talent suffer an obvious disadvantage in the rivalries of this industrial age. Yet during the last few years the Japanese have been enjoying their industrial honeymoon. They have started on a new career, and the way before them has seemed to be very easy and agreeable. cause they have not yet encountered the real difficulties of the industrial state, it is possible that they are living in the sweet delusion that there are no difficulties. With an extended use of credit, they will be likely to enter into the experiences of commercial crises, and with the development of the factory system have part in the practical problems that have been brought to the attention of Western nations by strikes, lockouts, and mob violence. In whatever aspect Japan's economic activity is viewed, it is difficult to discover prospects of economic growth justifying sufficient expenditures to enable the nation to play the rôle that is apparently the object of its ambition."

"External pressure broke the barriers of Japanese isolation and enabled the people to rise from the position of a number of almost independent and antagonistic provinces to be a nation in reality under an imperial ruler. Through the influence of a foreign war there was aroused a spirit of national patriotism, which has swept away the pettiness of the old provincial life, and put forth the demand that hereafter the nation shall be counted in the treaties among the most favored nations."

#### Gold Monometailism in Japan.

In the Political Science Quarterly for March Mr. J. Soyeda, of the Japanese treasury, concludes an elaborate review and defense of Japan's action in adopting the single gold standard with the following summary of the chief advantages hoped for by the friends of the new monetary system:

"Economically, the gold standard, by steadying prices, will contribute much to the real increase of wealth; commercially, foreign trade will be freed from its speculative tendency, and the trade with gold countries, in particular, will be facilitated; industrially, we can import machinery and railroad equipment much more easily from gold countries; at the same time, we can get more cheaply cotton and other raw materials from China and other silver-using countries, provided the supposition that silver is doomed to fall be true; financially, the relation with the external money market will be made closer, as proved already by the sale of government bonds in the London market: socially, the speculative spirit will be cooled down, luxurious habits may be checked, and the whole tendency in national life will become more sound and trustworthy.

"None but a prophet can exactly predict how the future will turn out. The benefits described are what the writer believes will be realized; whether this belief is well founded or not must be left to the verdict of time. Without sound money, true, general, and lasting economic progress is never to be realized. This is why Japan made up her mind to adopt the gold standard. It is the earnest wish of the writer that all enlightened countries may adopt this standard without heeding the groundless cry of bimetallists that gold is scarce, or their fruitless efforts to convene international conferences. The annual output of gold is, in fact, on the increase, and international agreement is practically impossible. actual result of the agitation for a new conference is to intensify the fluctuations of silver in the market. Gold monometallism alone can pave the way to the attainment of a universal money. and thus to that closer intercourse that shall bring all the nations into one brotherhood—the goal and destiny of mankind."

## IS THERE WORK ENOUGH FOR ALL?

R. WILLIAM T. HARRIS, United States Commissioner of Education, discusses this question in the April Forum. To state the problem in Dr. Harris' own words:

"Granted that you have proved that the production of the nation as a whole increases steadily with the adoption of new inventions in machinery and the application of the powers of steam and electricity, does not all this progress involve the displacement of the laborer? Where a thousand seamstresses were once employed in the manufacture of clothing, one hundred only were needed after the invention of the sewing-machine. Where a thousand blacksmiths' apprentices were needed to make nails by hand, one only is needed now with the machine that makes them out of What becomes of the nine hundred steel wire. seamstresses and the nine hundred and ninetynine nailmakers thus thrown out of employment? If agricultural machinery enables one man to do what six did in former times, what happens to the five not needed for agricultural production? All along the line machinery is pushing out the laborer from the work for which he has been preparing himself since infancy. Scarcely any of the old trades which required seven years' apprenticeship can avoid the fate which mechanical invention forces upon them. Some ingenious devices or a series of such devices are deftly inserted in place of the living hand, and the occupation of the workman, skilled by long apprenticeship, is gone."

## NEW CALLINGS FOR THE WORKERS.

Dr. Harris shows how, in the progress of civilization, new avenues of employment are created:

"Human wants and desires have come to demand more than the mere necessities for living. Before a complete supply of such necessities is reached, society demands creature comforts and means of luxury. It accordingly sends out its demand for laborers who have greater skill of manipulation and greater power of invention, and invites them to ascend to better-paid industries. These include manufactures that are adapted to luxury and creature comforts and which require a high order of educated technical skill. culling out of the higher class of laborers relieves the pressure on the lower orders, wherein machinery displaces the mere hand laborer. obvious all along the line that a new cycle of employments which add luxury and creature comforts may draw into it the laborers of the lower class as fast as they can be dispensed with below. Suppose that an extreme limit is reached, and that one person out of each hundred of the population is able to supply with the aid of machinery all the raw material that is needed. Suppose again that one person out of each hundred of the people engaged in manufacturing. when aided by machinery, is equal to the task of producing all the articles of necessity. Suppose the same in the spheres of transportation and commerce. When once the labor was readjusted it would be found that the ninety-nine laborers out of each hundred could be profitably employed in providing a better quality of clothing, more commodious dwellings, more comfortable furniture, better transportation facilities, and more healthful mills and working-places for the laborer. The entire surplus of laborers could be taken up into this higher order of occupations that increase the means of luxury and comfort for the people.

#### ADAPTABILITY ESSENTIAL.

"This readjustment of vocations may be accomplished well enough, provided the laborers are generally intelligent. But this is a very important proviso. The populace must be educated in the common schools and have that superior intelligence which comes from knowledge of the rudiments—reading, writing, arithmetic, geography, industrial drawing, etc. And with education the laborer becomes able to ascend from mere hand work to the supervision and direction of machinery and to those employments requiring greater skill which furnish the articles of luxury and creature comfort."

The figures of the United States census seem to bear out Dr. Harris' contentions. In the twenty years from 1870 to 1890 there was an apparent increase in the higher vocations—that is to say, the learned professions, teaching, journalism, literature, art, printing, etc.—of nearly 50 per cent.

"The number of vocations also increases and will increase; the inventive mind being very active in the direction of furnishing new devices for instruction, as well as in the matter of intercommunication between the individual and his fellow-men. As fast as the supply of the lower order of wants can be effected by means of machinery, large numbers press upward into these vocations, which have to deal with intercommunication, the diffusion of science, and the refinement of taste. That part of the population which still labors in the lowest round of occupations claims as its right that those who fill the professional employments shall labor for its delectation and welfare.

"Suppose that machinery should so far conquer drudgery that one person in each hundred, by the aid of machinery, could furnish all the food, clothing, and shelter needed for the other ninety-nine: every one of these ninety-nine would find ample employment in the higher order of employments which provide means for luxury, protection, and culture. The discontent existing at the present time originates largely in the feeling that there is too much drudgery and too little time for science, art, literature, and the contemplation of ideals. Instead of coming too fast, useful inventions are not coming fast enough."

## THE MUNICIPALITY AND THE GAS-SUPPLY.

I N our April number we quoted from two articles on the recent lease of the Philadelphia gas-works, an event in American municipal history of far more than local interest and significance. In the Annals of the American Academy of Political and Social Science for May, Dr. Leo S. Rowe reviews Philadelphia's experience from the point of view of the municipal economist.

Dr. Rowe concedes that the opponents as well as the friends of the lease were generally agreed that the results of municipal management of the gas-works were not encouraging, but he says that this conclusion was reached without a sufficiently thorough investigation of the facts. His own study of the history of this municipal enterprise leads him to conclude that the most serious defects connected with city management are traceable to evils inherited from the long period of irresponsible management by the so-called "gas trust," which can give no fair test of municipal efficiency, while during the period of responsible city control—that is, the last ten years—he finds indication of improvement in every direction. That such improvement was not more rapid he attributes to the mistaken policy of the city councils rather than to defects in the administration of the gas department. Dr. Rowe cites abundant statistics in support of this contention.

## THE ABANDONMENT OF A MUNICIPAL FUNCTION.

After discussing the lease as a purely business relation between the city and the company, Dr. Rowe proceeds to examine the relinquishment by the city of the gas service as a municipal function.

"That the use of gas is playing an important part in the economy of modern life requires no demonstration. Neither will any one doubt that it is destined to play an increasingly important part for some years to come.

"At the time the gas-works were placed under municipal control in Glasgow—and the same statement applies to the other cities of Great Britain—the use of gas was limited to the well-

to-do classes. After careful study and inquiry, the municipal authorities came to the conclusion that to introduce its use for cooking and illuminating purposes by the working classes, particularly in the thickly settled tenement districts, would work radical changes in their mode of life. The wastefulness of the coal-stove and the comparatively high cost of its maintenance had given to uncooked foods an important place in the standard of life of these classes, a fact that seriously affected their industrial efficiency and physical vigor. The widespread use of alcoholic liquors was largely to be explained by the crude diet of the poorer classes. It was evident that the introduction of a new element into the standard of life could only be effected by the city through a temporary subordination of financial considerations. In order to facilitate the use of gas for illuminating purposes, automatic pennyin-the-slot meters were introduced. For two cents a large burner would be supplied for a period of five hours. Furthermore, the city inaugurated the policy of renting gas-stoves. making all connections free of charge. At first the use of automatic meters was small, but with each year the number has increased until at the present time we find over 13,000 of such meters in use With each year the number of in Manchester. gas-stoves rented by the city is increasing. In 1896 Glasgow rented 12,762 and Manchester 9,403.

## AN IMPORTANT SOCIAL SERVICE.

"The influence of this more general use of gas upon the standard of life is strongly evident to any one examining the standard of life of the working classes in the English cities. The use of cooked foods is far more general than was the case ten years ago. That this change has had an influence upon the health and industrial efficiency of the population is attested by the testimony of health officers. Furthermore, through the low price of gas the city has been able to exert an influence upon industrial conditions. The introduction of the gas-engine to replace the steamengine has given a new lease of life to the small manufacturer.

"In pursuing this policy in the gas administration, the English cities have been carrying out a general principle which pervades the management of all their quasi-public works. The municipal street-railroad systems are being used to effect a more equable distribution of population; the municipal water-supply furnishes hydraulic power at low rates; and the municipal gas-supply is contributing to the improvement of the standard of life and of the industrial efficiency of the population. The municipality, for this

reason, represents a far more positive force in English city life than in the United States. That American municipalities must, in time, perform the same functions is evident to any one who has followed the course of municipal development. To relinquish public works means simply to postpone the period when such service is to be per-

" From whatever point of view the change of policy in Philadelphia be examined, the conclusion that it marks a retrograde movement is unavoidable. This is particularly true when it is looked at from the standpoint of civic progress. The recent history of American municipalities has shown that the dangers to be feared do not lie in the direction of municipal socialism, but rather in the increasing influence of private corporations enjoying public franchises upon our public life. The inability of our city governments to maintain control over private corporations performing quasi-public functions is the most conspicuous weakness of our administrative It is scarcely an exaggeration to say that these corporations have succeeded in intrenching themselves as the real power behind the constituted authorities in all matters affecting their interests."

## A STUDY IN MUNICIPAL POLITICS.

MISS JANE ADDAMS, of Hull House, Chicago, contributes to the International Journal of Ethics a paper on "Ethical Survivals in Municipal Corruption," based on observation during "eight years' residence in a ward of Chicago which has, during all of that time, returned to the city council a notoriously corrupt politician." We may add that since Miss Addams' article appeared in print the same alderman has once more been elected to represent the ward in which Hull House is situated, in spite of the strenuous efforts to defeat him made by the Municipal Voters' League and other reform agencies, of which Hull House itself was one.

## THE MILK OF HUMAN KINDNESS.

Miss Addams gives many interesting facts to illustrate the various ways by which a typical Chicago alderman of the baser sort has ingratiated himself with his constituency, which is largely composed of foreign-born citizens and numbers altogether fifty thousand people.

"Any one who has lived among poorer people cannot fail to be impressed with their constant kindness to each other; that unfailing response to the needs and distresses of their neighbors, even when in danger of bankruptcy themselves. This is their reward for living in the midst of poverty. They have constant opportunities for self-sacrifice and generosity, to which, as a rule, they respond. A man stands by his friend when he gets too drunk to take care of himself, when he loses his wife or child, when he is evicted for non-payment of rent, when he is arrested for a petty crime. It seems to such a man entirely fitting that his alderman should do the same thing on a larger scale—that he should help a constituent out of trouble just because he is in trouble, irrespective of the justice involved."

"The alderman, therefore, bails out his constituents when they are arrested, or says a good word to the police justice when they appear before him for trial; uses his 'pull' with the magistrate when they are likely to be fined for a civil misdemeanor, or sees what he can do to 'fix up matters' with the State's attorney when the charge is really a serious one."

#### GOOD USE OF THE SPOILS OF OFFICE.

"Because of simple friendliness, the alderman is expected to pay rent for the hard-pressed tenant when no rent is forthcoming, to find jobs when work is hard to get, to procure and divide among his constituents all the places which he can seize from the City Hall. The alderman of the Nineteenth Ward at one time made the proud boast that he had twenty-six hundred people in his ward upon the public pay-roll. course, included day-laborers, but each one felt under distinct obligations to him for getting the job."

By this means alone the alderman controlled one-third of the entire vote of the ward.

- "If we recollect, further, that the franchiseseeking companies pay respectful heed to the applicants backed by the alderman, the question of voting for the successful man becomes as much an industrial as a political one. An Italian laborer wants a job more than anything else, and quite simply votes for the man who promises him one."
- "The alderman may himself be quite sincere in his acts of kindness. In certain stages of moral evolution, a man is incapable of unselfish action the results of which will not benefit some one of his acquaintances; still more, of conduct that does not aim to assist any individual whatsoever; and it is a long step in moral progress to appreciate the work done by the individual for the community."
- "The alderman gives presents at weddings and christenings. He seizes these days of family festivities for making friends. It is easiest to reach people in the holiday mood of expansive good-will, but on their side it seems natural and kindly that he should do it. The alderman procures passes from the railroads when his constit-

uents wish to visit friends or to attend the funerals of distant relatives; he buys tickets galore for benefit entertainments given for a widow or a consumptive in peculiar distress; he contributes to prizes which are awarded to the handsomest lady or the most popular man. At a church bazaar, for instance, the alderman finds the stage all set for his dramatic performance. others are spending pennies he is spending dol-Where anxious relatives are canvassing to secure votes for the two most beautiful children who are being voted upon, he recklessly buys votes from both sides, and laughingly declines to say which one he likes the best, buying off the young lady who is persistently determined to find out with five dollars for the flower bazaar, the posies, of course, to be sent to the sick of the The moral atmosphere of a bazaar suits parish. him exactly. He murmurs many times, 'Never mind; the money all goes to the poor,' or 'It is all straight enough if the church gets it,' or 'The poor won't ask too many questions.' The oftener he can put sentiments of that sort into the minds of his constituents, the better he is pleased. Nothing so rapidly prepares them to take his view of money-getting and money-spending."

## SOURCES OF CORRUPTION.

"The question does, of course, occur to many minds, Where does the money come from with which to dramatize so successfully? The more primitive people accept the truthful statement of its sources without any shock to their moral To their simple minds he gets it 'from the rich,' and so long as he again gives it out to the poor, as a true Robin Hood, with open hand, they have no objections to offer. Their ethics are quite honestly those of the merry-making foresters. The next less primitive people of the vicinage are quite willing to admit that he leads 'the gang' in the city council and sells out the city franchises; that he makes deals with the franchise-seeking companies; that he guarantees to steer dubious measures through the council, for which he demands liberal pay; that he is, in short, a successful boodler. But when there is intellect enough to get this point of view, there is also enough to make the contention that this is universally done; that all the aldermen do it more or less successfully, but that the alderman of the Nineteenth Ward is unique in being so generous; that such a state of affairs is to be deplored, of course, but that that is the way business is run, and we are fortunate when a kindhearted man who is close to the people gets a large share of the boodle; that he serves these franchised companies who employ men in the building and construction of their enterprises, and

that they are bound in return to give jobs to his constituency. It is again the justification of stealing from the rich to give to the poor. when they are intelligent enough to complete the circle and to see that the money comes, not from the pockets of the companies' agents, but from the street car fares of people like themselves, it almost seems as if they would rather pay two cents more each time they ride than give up the consciousness that they have a big, warm-hearted friend at court who will stand by them in an The sense of just dealing comes apparently much later than the desire for protection and kindness. On the whole, the gifts and favors are taken quite simply, as an evidence of good and loving kindness, or are accepted as inevitable political measures."

Miss Addams admirably sums up the vital truth of the whole matter in these two paragraphs:

"The alderman is really elected because he is a good friend and neighbor. He is corrupt, of course, but he is not elected because he is corrupt, but rather in spite of it. His standard suits his constituents. He exemplifies and exaggerates the popular type of a good man. He has attained what his constituents secretly long for."

"This lowering of standards, this setting of an ideal, is perhaps the worst of the situation, for daily by our actions and decisions we not only determine ideals for ourselves, but largely for each other. We are all involved in this political corruption, and as members of the community stand indicted. This is the penalty of a democracy—that we are bound to move forward or retrograde together. None of us can stand aside, for our feet are mired in the same soil and our lungs breathe the same air."

## THE ENGLISH GOVERNING OLIGARCHY.

M. SIDNEY LOW, till recently editor of the St. James's Gazette, London, contributes to the April Forum an interesting study of the English political system, with special reference to the influence of the aristocracy in practical government.

Mr. Low reiterates the familiar observation of English publicists that the English system of government is even more democratic than the American, and yet he is constrained to admit that "the multitude does not rule England"—that is, the actual administration is not in the hands of persons belonging to the most numerous classes of the population.

## THE CABINET.

Although hardly recognized in English political theory, the cabinet, in Mr. Low's view, is the true keystone of English government as ad-

ministered to-day, and in practice the cabinet is a powerful check on democratic tendencies. To the fling of certain English writers that the American voter's chief function is to choose a despot every four years, Mr. Low very aptly replies that as matters stand the chief political duty of the British voter is to elect an oligarchy, whose powers are almost unlimited till the time comes for them to be abandoned. So long as it is permitted to exist, this oligarchy is more powerful than our President.

"In theory, of course, the House of Commons may dismiss it at any moment or may cause it to reverse its policy by an adverse vote. But in modern practice the House of Commons seldom does this, unless the cabinet breaks up by internal dissension—as was the case in 1886, when Mr. Gladstone shattered his ministry over the Irish home-rule bill-or unless ministers themselves feel that their mandate is exhausted and voluntarily court defeat. The latter event happened in 1895, when Lord Rosebery went out of office, after a hostile division on a minor question of departmental administration in a halfempty House. In a general way, however, it is true to say that in our time the House of Commons does not defeat its ministers on points involving the existence of a cabinet.

"The remedy of punishing a cabinet by a vote of censure or by throwing out a government bill of importance is in the hands of the House; but it is tending more and more to take the place of the old—and never formally abandoned—expedient of impeachment, and to be regarded as a valuable prerogative to be used only in extreme No doubt ministers are constantly defeated in committee debates in which the details of bills are discussed; but this seldom happens except on comparatively small points on which they themselves are not unwilling to give way. Otherwise, and so long as they are not guilty of corruption or gross misconduct, they are fairly safe in the House until such time as a long series of unfavorable by-elections has altered the balance of parties at Westminster, or convinced ministers that they have lost the confidence of the electors out of doors. Till one of these things happens the cabinet has practical immunity in the lower house, and for a very simple reason: the ministers are the nominees, not of the House as a whole, but only of the majority; and, naturally, the majority does not want to defeat itself and confer a victory on the opposition."

Mr. Low explains the peculiar influence possessed by an English premier over his followers as largely due to the fear of a dissolution of Parliament and the resulting general election, which the premier can always hold out as a threat in case of disagreement. In the conduct of administration the premier can do about as he pleases.

THE "GOVERNING CLASS" IN ENGLAND.

It may be difficult for the American reader to understand why the members of the British cabinet should always come from a particular social class. On this point Mr. Low remarks:

"Theoretically, of course-indeed, in the view of most Englishmen—any man can become a member of the cabinet just as he can become a member of Parliament. There is no formal bar to prevent it. The road is open to all British subjects; and so far as any positive enactments or prohibitions are concerned, it should be no more impossible for a rail-splitter or a country attorney to become prime minister of England than for a person of the same condition to attain the Presidency of the United States. But we talk here not of possibilities, but of actualities; and as a matter of fact it is rare, and it has been rare at any time during this century, for a man not a member of one of the aristocratic or territorial families, nor closely associated, by wealth, education, and social connections, with the circle that includes those families, to enter the cabinet of Great Britain. In other words, he must belong to what has been correctly described as the governing order; for such an order there is in England. It consists, roughly speaking, of the peerage and its offshoots, the great landowners. and county families, and the comparatively limited number of wealthy persons of the mercantile, manufacturing, and professional classes who are admitted to what is called 'society.' fact, society, in this sense of the word, is almost conterminous with the governing class. It would be difficult to say what constitutes exactly the qualification for membership of this select body. Birth, wealth, leisure, are no doubt the main Without at least one, and preferably more than one, of the three, it is difficult to enter the circle.

"Fortunately for itself and fortunately for the country, the aristocracy in England has never been a caste. In these matters mankind is ruled by names; and nothing has worked more usefully than the custom—for, as it happens, it is no more than a custom—by which honorary titles do not attach to the descendants of the younger children of English peers. It might have become the fashion for every child, grandchild, and greatgrandchild of a baron or viscount to be called 'Lord' or 'Lady' to the end of time. As it is, the younger son of a lord is only 'The Honorable;' and his son is plain 'Mr.' Thus the scion of a noble house merges into the upper stratum of the commonalty.

"At the same time the wealthy and successful member of the haute bourgeoisie is not debarred from entering the ranks of the aristocracy. The process is usually performed in the second or third generation. The son of the rich contractor, or manufacturer, or mine-owner is sent to Eton and Christ Church, marries the daughter of one of the territorial families, enters Parliament, and in course of time may receive a peerage himself. The governing class has assimilated him."

In regard to the homage paid to merit for its own sake by this English oligarchy, Mr. Low

says:

"It is only fair to remember that the ruling clique has never shown itself adverse to the recognition of ability. The clever professional man is occasionally admitted, though not, as a rule, till his cleverness has taken the form of actual pecuniary success; and here and there a mere outsider, like Canning or Disraeli, has forced himself in by sheer weight of genius. Even in these exceptional cases, however, the outsider enters, as it were, by favor of the society oligarchy. The instances are rare indeed where a poor man has been able to rise to a leading place in politics without influential connections and without being \*taken up' in London drawing-rooms. The case of John Bright, and perhaps that of Mr. Joseph Chamberlain, may be quoted as those of very able men who scaled the political heights by the truly democratic method of impressing their personality upon the masses of their fellow-citizens. But even these cases are those of rich men; and both statesmen, before they attained to the rank of cabinet minister, had been distinctly accepted by society. Manchester and Birmingham sent them into politics; but it was London—the West End of London—which placed them among the rulers of the empire."

## WHO FORM THE MINISTRIES?

Mr. Low's account of the process by which ministers are appointed in England makes it clear that there is very little effort made to select men "in touch with the masses" of their countrymen:

"We have, then, this actually large, but relatively rather small, governing class, consisting, as I have said, of the few thousand representatives of the nobility, landowners, capitalists, and successful professional men who make up London society. No constitutional rule or precedent prescribes that ministers shall be appointed from this set of persons. But, from the circumstances of the case, they usually are so appointed. The electorate itself is far too amorphous, too scattered, and too ill-organized to perform the process of selection; and there is nothing in England corresponding to the party conventions by

which candidates for the Presidency of the United States are nominated. When the result of a general election has decided that one of the two great parties is to enter office, the Queen sends for the statesman who is the most conspicuous figure in this political group and commissions him to form a ministry. This personage, whether he be a great nobleman, like Lord Salisbury or the Duke of Devonshire, or a distinguished commoner, like Mr. Gladstone or Sir William Harcourt, has passed most of his lifeeven if he has not been actually 'born in the purple'—within the innermost recesses of London society. He is usually advanced in years (Lord Rosebery is the only recent instance of a middleaged premier); he is generally wealthy and often titled; and he is closely connected, if not by ties of blood and marriage, at least by long and intimate association, with the most exclusive sets in the capital. He himself may be and probably is altogether above the worship of wealth, rank, and fashion. Yet the conditions of his life make it difficult for him to break away from the circle. His opportunities do not allow him to consort much with people who are poor, unknown, and obscure. When he has to make up his ministry he naturally consults his own little court of friends, followers, and allies; and they naturally press the claims of their own associates—the men whom they meet at London luncheons and dinners and fashionable country-house parties, who call each other by their Christian names, who have been educated at the same little group of public schools and colleges, and have pretty freely intermarried with each other's rela-What wonder if the distribution of offices falls largely to the members of this body?"

Mr. Low has no difficulty in citing concrete illustrations in the last Liberal ministry, as well as in Lord Salisbury's present official family. Birth, wealth, and social qualifications were and are ruling qualifications of membership.

#### HOW THE SYSTEM WORKS.

Judged by practical results, the system, in Mr. Low's opinion, is above condemnation:

"Its strong point is that it provides a class of public men who, taken altogether, are very adequately equipped for their business. Their wealth and standing place them beyond all suspicion of the coarser kind of corruption; they are sufficiently above the need of earning a livelihood to be able to enter active politics in the prime of life; and from their position in society they grow early accustomed to deal with affairs in the spirit of men of the world. Some of the younger ministers and under-secretaries in the present cabinet, like Mr. George Curzon and Mr.

St. John Brodrick, have been practically trained for administration from their boyhood by a long course of study, by travel, and by an early apprenticeship to the House of Commons; so that as they near forty they have acquired an experience with which the middle-class man-who enters Parliament about that age-cannot be expected to cope. Politics, to be well managed, must, as a rule, be in the hands of those who devote a great deal of time and attention to it. The difficulty of a democracy lies in inducing a sufficient number of fairly honest and fairly capable men to undertake public duties without the temptation or the hope of unlimited spoils. The English system at least goes some way toward overcoming this difficulty."

#### **IRELAND SINCE '98.**

M. R. JOHN E. REDMOND, M.P., writes in the North American Review for April on the history of Ireland since the insurrection of 1798, the centenary of which, he says, will be celebrated this year, not only in Ireland itself, but in every land in which Irishmen or the descendants of Irishmen live.

Mr. Redmond declares that the object of the real authors of the insurrection was what actually resulted—the union of 1800, and that there is practically no longer any controversy about the motives of those who promoted this union, the means by which it was carried, or the results by which it has been attended. In brief, England was jealous of Ireland's social and political progress and afraid of possible developments under Ireland's legislative independence. The policy of the union was resolved on, and it was decided that the policy must be carried through at whatever cost. Mr. Redmond describes the process as follows:

"The conversion of a perfectly constitutional agitation for reform of the Irish constitution into a so-called rebellion was the initial step. the history of that cold-blooded performance it is not within my purpose to enter here. ond step was to bribe the Irish Parliament to commit suicide, it having been found that even the terrors of '98 were not sufficient of themselves to bring about that consummation. the union was accomplished by the most open, base, and profligate corruption that has ever stained the annals of any country, is now an admitted fact. The peerage, the episcopal bench, the bench of justice, the civil service, the army, and the navy were all commodities trafficked in for the purchase of votes for the union. caltiffs of corruption,' as Grattan said, 'were everywhere—in the lobby, in the street, on the

steps and at the doors of every Parliamentary leader; offering titles to some, offices to others, corruption to all.' 'The basest corruption and artifice,' said Lord Chief Justice Bushe, 'were exerted to promote the union; all the worst passions of the human heart entered into the service; and all the most deprayed ingenuity of the human intellect was tortured to devise new contrivances of fraud.'"

The project of the union was defeated, however, in the first session of the Irish Parliament in which it was brought forward, but it was carried in the second.

"From the very moment of the accomplishment of the union down to the moment I write," says Mr. Redmond, "Ireland, broadly speaking, has been either actively or passively in revolt against the usurpation of 1800, and England has been at the same time engaged in a constant effort to buy off its opposition by periodical concessions or to put it down by force or fraud."

The different stages of Ireland's "revolt" during the past century may be summarized as the O'Connell agitation, the attempted insurrection of 1848, the Fenian outbreak of 1867, and the agrarian troubles in the 70s and 80s which led to the Gladstone land agitation and proposition of home rule.

THE STRUGGLE FOR RELIGIOUS EQUALITY.

Mr. Redmond is especially severe in denouncing the discriminations made for many years against Catholics in Ireland—much the larger part of the population. He says:

"The authors of the union who promised Catholic emancipation as the result of the union deliberately broke their words. They not merely neglected to effect emancipation, but they actively opposed it. Nor did their successors change their tactics till the very last, when the fear of civil war, as the Duke of Wellington himself admitted, compelled them to do so. then the · concession ' was incomplete. Emancipation act of 1829 has been talked of as a great measure, and, of course, it was: but, read in the light of the closing days of the century, it really looks as much like a measure of pains and penalties for Catholics as like a measure of free-Quite a number of its clauses or sections expressly impose disabilities for certain professors of the Catholic faith. The religious orders, for instance, are banned by it, and up to a few years ago no Catholic lawyer in Ireland, no matter how competent or how distinguished, could occupy the highest post in his profession—namely, the lord chancellorship. When at last partial emancipation was granted it was accompanied by a sweeping measure of disfranchisement. Catholics

were rendered capable of election to Parliament; but in order that as few as possible of them might be able to get there the forty-shilling freehold vote, which carried O'Connell's election for Clare, was absolutely swept away, and not again till fourteen years ago were the bulk of the householders of Ireland, in town or country, admitted to the franchise, though the English established household suffrage for their own bor-The Catholics in Ireland, it oughs in 1868. need hardly be said, have all through the century been three to one of the entire population; but it took seventy years after the passing of the union to put all the denominations on a level by disestablishing the Church of the minority. the affair of education the story of English policy is of a piece with the policy of England toward Ireland in everything else. Forbidden to learn at all in the seventeenth century, Irish Catholics were offered, for more than thirty years after the union, the alternative of still going without education altogether or obtaining it in institutions which their consciences prevented them from attending, and this is actually the alternative still presented to such of them as desire the higher education imparted in universities. though religious equality in the abstract now prevails in Ireland, in the concrete it is largely a myth; for even still an undue proportion—it may be said a large majority—of all the posts of power, emolument, or honor in the country are held by professors of other faiths than that of the great majority of the people."

#### IRELAND'S LIST OF GRIEVANCES.

We pass over the long and disheartening story of the strife of the tenants against the landlords. That story has been told many times, and the conditions have been greatly modified for the better.

The financial relations between Great Britain and Ireland have been investigated recently by a royal commission, which concludes that Ireland, since 1853, has been overtaxed to the amount of nearly fifteen million dollars a year.

Mr. Redmond concludes his outline of Ireland's history since 1798 as follows:

"The union, the accomplishment of which was the main object of the men who fomented, nurtured, matured, and eventually brought about the insurrection of that year and then repressed it in a sea of blood and with every circumstance of cruelty and brutality, has been to Ireland an unmixed curse and even to England itself a source of constant trouble and dishonor.

"Of course, the advocates of the maintenance of the union have something to say for themselves, and it may be well to notice their plea

here very briefly. They cannot and do not deur that all through the century Ireland has been practically in revolt against the union. cannot and do not deny that, in consequence, England has all through the century governed Ireland as if it were an unwilling slave chafing at and trying to burst his chains. They cannot and do not deny that every reform passed for Ireland during that period has been wrung from the imperial Parliament by agitation and disturt-They cannot deny that the ance in Ireland. union has produced a war of classes instead of social peace, and that religious antagonism has often been actually more acute since the unica than it was in the days of Grattan's Parliament They cannot and do not deny the fearful reduction of the population of Ireland—a reduction unparalleled in any civilized or progressive courtry on the face of the earth, and that nevertheless there have been one appalling famine, recurring periods of distress, and a chronic state of porerty all along the western seaboard of the island They do not deny that the manufacturers of Ireland have dwindled almost out of existence and that the main industry of agriculture is always in a more or less depressed condition.

#### PROGRESS NOTWITHSTANDING.

"But they say that, in spite of all those things, Ireland has yet on the whole prospered in thelas hundred years. The deposits in the Irish banks have greatly increased. The tonnage of the principal Irish ports has also increased. people are better housed, better fed, better clothed, and better educated than the Irish people were in 1798. Granted all this for the sale of argument, and yet what does it prove? That Ireland has progressed as it ought to have done —has progressed like England, Belgium, France, Norway, or any other European country? Of course not, but that it has shared to some slight extent, despite the most adverse conditions, is the general progress of the world. No one denies that Ireland has advanced in some respects since 1798; what is complained of is that she has not been allowed to advance as she would have done and was actually doing under her own free constitution between 1782 and 1796, and that nothing but the back-wash, as it were, of the universal prosperity of the world outside has been allowed to touch her shores. The advocates of the union might have made their case apparently stronger by pointing out that Ireland has now several things she did not possess in 1798railroads, and telegraphs, and the penny postage, and the telephone—but the fallacy of the argument would have been there all the same.

"Ireland, however, is making way politically,

at least—slowly, but surely. The blood of the martyrs of '98 was not shed in vain. The efforts and sacrifices of the men of '48, '65, and '67 have borne fruit. The statesmanship of Parnell not only achieved much, but will yet inspire the whole Irish nation to brave and wise deeds for its liberation. Even as I write, the very supporters of the union are actually offering a wide measure of local self-government. There is no reason for despair."

#### THE CENTRAL AMERICAN REPUBLICS.

In an article contributed to the April Forum on "Central America: Its Resources and Commerce," Mr. William Eleroy Curtis asserts that the chief reason for the obvious lack of progress in that country lies in the avarice and ambition of the political leaders in the several "republics."

"Misgovernment is the great obstacle to their development and prosperity; and it obstructs, more or less, the advancement of all the other Latin-American States. There is no lack of patriotism, but in some of the countries the practice of seeking pecuniary profit from the exercise of political power has become almost habitual. The progress in internal improvements, in industry, commerce, education, and wealth, that a nation may make under a liberal, intelligent, and honest government, finds a striking example in Mexico, where the finances have been managed with the strictest integrity since General Diaz has been president. The fact is also illustrated by the lively 'spurts' in civilization which have been made by some of the other countries of Latin America where the people have had peace, freedom from excessive taxation, and an assurance that the public moneys were properly expended for the general welfare. The prosperity of Costa Rica to-day indicates what the conditions might be if such blessings were permanent throughout the hemisphere. But a lust for power and riches has possessed the rulers of the Spanish colonies in America ever since they were discovered; and it still exists, in a greater or less degree, in the tropical countries.

#### CORRUPT OFFICIALISM.

"Public opinion in the Latin States is tolerant toward official peculation; perhaps this is due to habit. It is too often the case in Central America for a new president, when he first comes into power, to invest in New York, London, or Paris, as soon as possible, a sum sufficient to keep himself and his family in luxury for the rest of their lives. When that is accomplished, his next effort is to provide for his reelection by the ordinary means known to politicians in those coun-

tries, which involve liberal allowances and sinecures for his supporters, the appointment of unnecessary officials, unwarranted liberality in granting contracts and concessions, and the maintenance of an army to preserve order and protect the palace. Though such efforts, when directed by a brave and skillful man, usually prove successful, rivals are apt to spring up, and factions and feuds are numerous. Whenever a revolution occurs, it means that some president is endeavoring to perpetuate his authority against some one who desires to succeed him, or that some ambitious statesman is so eager for political promotion that he cannot wait for an election. If let alone, the people never rebel. patient, patriotic, loyal, and long-suffering; and while their partisanship finds expression in fiercer emotions than are often displayed in the political contests of North America, they will submit to almost any kind of government until their indignation is aroused by some unusual act.

#### DEMORALIZATION AND POVERTY.

"This peculiarity of the Central American republics keeps them poor. It prevents the development of their natural resources, the construction of internal improvements, and the establishment of mechanical industries. It frightens capital from making investments, and keeps immigrants away. There is practically no immigration. Money raised by taxation or by the sale of bonds for educational purposes or public works is too often used to pay an army and to buy ammunition for the suppression of a revolution. In one country four loans have been made for one and the same purpose during the last twenty years; and every dollar has been diverted. roads are neglected, schools and public institutions are unsupported, and citizens who are fortunate enough to have a surplus invest it abroad. because they dare not engage in enterprises that may be interrupted by political disturbances."

In Salvador, which, although the smallest in area, is described by Mr. Curtis as "by far the richest, the most prosperous, the most enterprising, and the most densely populated" of the Central American republics, the same evil prevails:

"There is probably more politics in Salvador in proportion to the population than in any other country in the world; and while it appears in the geographies as a republic, it is really an absolute monarchy, ruled by a small group of politicians who maintain their power by military force and are overthrown as often as the opposition can form and carry out a conspiracy. There has not been a 'constitutional' president in Salvador for many years. The presidents have always been pronunciamentos—that is, they have come into

power by self-proclamation rather than through an election by the people according to law. This is so common that the people expect nothing else. I happened to land at La Libertad shortly after President Cleveland had been inaugurated, and was much surprised when the governor asked me whether he was a constitutional or a pronunciamento president."

#### WATER RIGHTS IN IRRIGATED REGIONS.

HE State engineer of Wyoming, Mr. Elwood Mead, contributes to the Engineering Magazine for March an instructive article on the adjudication of water rights in the West.

Eastern readers may be surprised by the statement that the expenses due to litigation over water rights are already greater in the United States than the total cost of building ditches and reclaiming land. If this is true now, we may well join with Mr. Mead in apprehension as to the future, when the water supply will have still greater value as the result of expanding set-

tlement and increasing scarcity.

"California stands first among the arid commonwealths in the cost and perfection of ditches and in the skill and economy with which water It also leads in the number and cost of water-right litigations. Water in that State is Those who do not want to personal property. appropriate it for use can appropriate it to rent or There is no limitation on the volume which sell may thus be claimed. Water rights are located exactly as mining claims are, and the records of appropriations from a single stream, instead of being filed in one place, are divided between the several counties through which the river or its tributaries may flow. There is no special tribunal for the adjustment of these conflicting appropriations or system of administration when rights are once determined. There are extravagant rights acquired by appropriation, indefinite rights of riparian proprietors, and unknown rights based on Spanish and Mexican grants. Making of water personal property and recognizing its appropriation for the purpose of sale has made it a speculative commodity. It is largely owned apart from the land, and the tiller of the soil is at the mercy of the owner of the stream.

"I recently learned of a case where the litigation over a water right had occupied the courts for seven years. It stopped because the litigants were unable longer to pay lawyers' fees; but one of them informs me that as soon as he can afford it he will renew the contest. A single riparian proprietor has compelled the users of the stream on which he lives to pay him two hundred and fifty thousand dollars for his consent to their

The users of water from Kings River have, all in all, paid hundreds of thousands of dollars to the riparian and other appropriators of that stream for the right to use its waters. is their title thereto as yet secure. There are yet unused lands along that stream, and the riparian proprietors of these lands have a prior right to divert its waters."

Utah's comparative immunity from water litigation is not due, in Mr. Mead's opinion to the excellence of the State laws, but rather to the influence of the Mormon Church in promoting the peaceful settlement of controversies. State, as in California, water is personal prop-The same thing is true in Colorado, as decided by the courts, but Colorado provides for the State supervision of streams.

#### PUBLIC OWNERSHIP.

Mr. Mead argues for the perpetual public ownership of streams, the limitation of rights to water to the right of use, and the restriction of this right to the place and purpose for which it was originally acquired. Rights to water for irrigation should inhere in the land reclaimed.

"There is no more necessity for a court decree to establish a water right than for such a decree to confirm a land patent. Nor do the wisdom and efficacy of these reforms depend on the experience of other irrigated lands. For the past seven years they have been tested in the United They are all embodied in the irrigation code of Wyoming, and it is sufficient to say that during the entire period of their operation, which had its beginning with the adoption of the State Constitution, there has not been a single controversy or abuse due to the limitations imposed. On the contrary, the adoption of these restrictions ended scores of controversies and abuses. The only litigation over water rights which now occupies, or ever has occupied, the attention of the courts of that State or Territory has resulted from attempts to establish or enforce surplus or speculative rights in streams.

"There are two other provisions in European irrigation laws which, it is believed, will be found worthy of adoption. Under the present American system all appropriations of water are made in perpetuity, the appropriator receiving this as a free grant from the public. The subsequent supervision of the stream to protect this right is paid for by taxes. This is an illogical procedure. The public surrenders valuable property, for which it receives no direct return, and in doing so is compelled to shoulder a perpetual burden in the protection of that property. A better system would be to require each user of water to pay the State a rental therefor, these rentals to be very

small, intended only to meet the expenses of supervision and prevent the salaries of water commissioners from becoming a burden on the public. A great value of this system would be that it would promote economy. The man who has to pay for what he gets will not be wasteful. It also places the doctrine of public ownership in a form which can be understood by all. That is not true at present. The man who gets a free grant to the use of water in perpetuity comes in time to think he owns it, no matter what the laws or Constitution may say."

The second change based on European experience and advocated by Mr. Mead for American adoption relates to the period of the grants. Mr. Mead holds that these should never be made perpetual. "They should be treated as franchises and their operation restricted to a definite number of years. If rights to water were limited to fifty years, it would meet all the requirements of present development, and would enable the United States in the future to adjust their water laws to changing conditions. The present method may in time prove a serious obstacle to desirable or even necessary reforms."

#### TRIBUTES TO MISS WILLARD.

In several of the reviews and magazines articles have appeared on the life and services of the late Frances E. Willard. Perhaps no one of these will attract more general attention than the brief tribute written by Miss Willard's intimate friend and associate in the World's W. C. T. U. work, Lady Henry Somerset, for the North American Review. We reprint a few paragraphs from Lady Henry's article:

"It is difficult sometimes to gauge, as we turn the pages of current history, what are the events and which are the lives that are making an indelible mark on our day. Only from time to time when some crisis arrests our thought do we begin to disentangle from the multitude of current events those salient features that stand out as special landmarks. I believe that when the record of the nineteenth century is read by those who can form truer estimates because distance will give a juster sense of proportion, the name of the woman who has just passed out from her field of work in this world will remain as one of those who molded the history of our time not only in America, but throughout the world. There is no other life to-day that could be so widely mourned, except the Queen of England, and the grief that will come to thousands of hearts when she has left us will be one less personal in character than the bereavement that has fallen upon tens of thousands of men and women

all the world over. When the news of Frances Willard's death was announced in the great city of London, no other name coming to us across the Atlantic would have been so widely known or so dearly loved. English newspapers are not as a rule enthusiastic, more especially about celebrities of other nationalities; but there has not been one single paper that has not recorded in its columns the life-work of Frances Willard and the irreparable gap that she has left in the ranks of philanthropists.

"It should be the pride of America that no other country could have produced her and no other age understood her, but it will be for future generations to realize what her life has meant to humanity. It is not because Frances Willard toiled for twenty years in the temperance cause that she is famous, not because she gathered round her an association of women more fully organized and with probably a stronger esprit de corps than any other woman's society in the world; but rather because she was a woman who saw ahead of her time, who realized that the evils that were round her must be grappled with by an entirely new conception of woman's responsibility to the world."

#### A MEMORABLE GREETING.

"We do not forget in England that to no other philanthropist did we ever give so warm a welcome. The great meeting at Exeter Hall that was held in her honor was probably the most representative gathering that has ever assembled to greet any great man or woman on that historic platform; and we are glad to know that we laid laurels at her feet while yet the homage could bring a smile to her face and the words of praise could still rejoice her heart. And now she has gone, and to us she has left her legacy of work—work that we dare not neglect, for still we know that 'eyes do regard us in eternity's stillness,' and we have learned our lesson from that womanly spirit whose words of sweet reasonableness have been spoken so often, whose many-sided arguments and loving pleas we will yet prove have not been 'love's labor Such lives are never ended, for their spirit lives on in the lives of others. Frances Willard felt that a woman owed it to all other women to live as bravely, as helpfully, and as grandly as she could."

#### The Noblest of Ideals.

Mrs. Mary Lowe Dickinson says in the May Arena, speaking of Miss Willard's career:

"It was indeed a prismatic, many-sided life. And whether we think of her as the prairie child, as daughter, sister, student, teacher, orator.

leader, reformer, it was on every side a white life, facing the sun and absorbing and reflecting

the light."

"In her opinion the world belonged to women that they might comfort it, save it, help to redeem it and uplift its manhood into true sonship of God. In this work, as her divine mission, from first to last she unswervingly believed. For such saving and uplifting she battled in life and pleaded almost to the hour when pleading changed to praise.

"As the grand agency for the accomplishment of the elevation of mankind, she early appreciated the power of organization. No woman has to the same extent been the teacher of the higher principles of cooperative effort. Her educational work for the women of her day has no parallel in this direction. She was great in many ways, but in none was she greater than in the fact that she had the power to discern, to inspire, to educate, and to utilize the highest spiritual forces in other women. To her must be given credit largely for that waking of the women of our country to a knowledge of their own possibilities and powers that has marked the last quarter of a century. She worked after God's methods through humanity for humanity's sake."

#### CHILDREN'S INSURANCE.

In the Charities Review for March and April there appears an interesting discussion of the subject of "industrial insurance," so called, especially as related to children's lives.

Mr. Haley Fiske, on behalf of the companies engaged in "industrial" business, gives in the March number the principal arguments in favor

of that form of insurance.

To give some idea of the importance of the subject, the editor of the Review states that according to recent estimates there are "industrial" insurance policies now outstanding in this country to the value of \$1,000,000,000, all paid for in weekly sums averaging nine or ten cents each.

"This means that the poorer classes, largely in our cities, are paying out annually about \$40,000,000, probably for the most part in order that they may have at death what they consider a decent funeral, and perhaps something over to pay the doctors' bills. Provision for the family after the death or in the old age of the breadwinner may sometimes be in mind, but certainly not as a rule, for the policies taken average \$112, an amount which, even if it were not intended specifically for that purpose, would scarcely cover more than the death expenses of the insured."

#### A RESPONSE TO A NATURAL DEMAND.

In defending the practice of child insurance

Mr. Fiske says:

"Child insurance is legitimate, because the people feel the need of protection against death. They abhor pauper burial. Their sentiment of respect for the body of a child is a Christian sentiment, a civilized sentiment; the wish for protection is a sensible business motive. To call a speculation because the child is a non-producer a misuse of words, a confusion of ideas.

"It is said money is wasted on such insurance Why wasted on children more than adults? The deaths are more numerous. Money is needed for burial in the one case as in the other. tive cost is greater on account of the higher mor-But how wasted? Did people save more before the advent of industrial insurance? Mr. Dryden, president of the Newark Prudential, it his address before the Massachusetts committee. conclusively showed by statistics that contributions to industrial insurance have grown side by side with increase of savings-bank deposits What evidence is there that money not spent for insurance would be saved in other ways? The evidence is to the contrary. Would it not rather go for beer or ribbons or newspapers or fraudulent insurance? What more direct and persistent practical instruction in thrift could there be than the weekly call of an insurance agent?"

#### OBJECTIONS TO THE SYSTEM.

In the April number Miss Mary Willcox Brown represents the opponents of child insurance. As the experience of the companies shows that but 5.47 children out of 1,000 insured die at the age of ten years, and but 49.37 at the more tender age of two, Miss Brown holds that the contingency of death is too remote to justify the expenditure of the small sums so hardly collected

by the parents.

"The industrial insurance companies claim, however, that the system is 'purely burial insurance at the earlier ages,' so that the premium for a child should not be looked on as an indemnity for 'the prospective value of its service.' If not. why should burial expenses be met by insurance rather than other more certain casualties of man's first ages, sickness or accident? If the charity worker could be as persistent and persuasive as the collector, might not he show that there are many unusual demands made on the purses of the poor which honest pride should make a man as anxious to meet as those of the undertaker? The need of fresh air in summer, to be had in all our cities at the expenditure of five or ten cents for car-fare, of more nourishing food in time of sickness, of a longer period given to educationthese and many more requisites can be pointed out as being more important than to meet the weekly demands of the premium collector. Though he say that five or ten cents a week means but \$2.60 or \$5.20 a year, yet when either sum is multiplied by the average number of children in a family the total is a considerable expenditure for a family of restricted means—an expenditure which should be regulated by the exercise of good judgment."

#### BURIAL EXPENSES VERSUS LIVING EXPENSES.

To the argument that "respect for the body of a child is a Christian sentiment" Miss Brown replies:

"Yes, and I honor every poor father and mother who is willing to provide a decent burial for a child. But if the desire for suitable burial be prompted by a false pride to appear to advantage in a neighborhood, or if the fear of not being able to provide a befitting funeral induces a parent to deny a little one, a living child, something which would add to its welfare, I say such a preparation for its possible death is not for the good of the child. Every one who is interested in the well-being of a child should try to show its parents that their duty is to provide rather for its present needs and, by giving as wisely and generously as is possible to its training, to lay the foundation of its future success."

#### CAR-FERRYING ON LAKE MICHIGAN.

THE new method employed in transporting railroad freight across Lake Michigan without "breaking bulk" is the subject of an article in Cassier's Magazine for April by Mr. A. S. Chapman, who describes the Lake Michigan car ferry as "an attempt to combine the carrying capacity of the freight steamer with the facility of the freight car for handling all classes of business, to wipe out the heavy charges involved in the frequent handling of commodities, and to utilize the natural highway offered by the lake."

"In former systems of railroad economy a car ferry had been regarded as a necessary nuisance, an expedient for bridging a gap of water, a connecting link between two lines of railroad. In the present system the positions are reversed; the railroad upon land becomes subordinate to the water line, and we have the innovation of a railroad whose bed is the waves of Lake Michigan, whose locomotives are steamers, whose cars are towboats, and whose freight is cars. This car ferry is not designed as a connecting link between two lines of railroads nor as a terminal or transfer, but as a direct competitor for the business of railroads on their own terms.

"The conclusion that freight may be carried at a profit in this manner has been reached by a series of logical steps. The initial expense for towboats, transports, and docks is but a fraction of the cost of equipment of a railroad on land of the same length. Neither are there any fixed charges of interest on bonds nor any maintenance of right of way, with its corps of engineers, section men, switchmen, or other employees. There is little wear and tear on rolling stock, and there are no machine shops to keep up. The cost of repairs is reduced to a minimum. Few men comparatively are required to operate this marine railroad. Most of the dangers of land railroads are eliminated, and there are other compensating advantages.

#### TRANSPORTATION ON A LARGE SCALE.

"The transports are 324 feet in length and 46 feet beam. Twenty-eight cars of ordinary length make a load, in the aggregate about 1,500 tons. In general appearance, without their deck loads, the transports resemble nothing so much as huge canal boats. In loading and unloading a dock of special construction is, of course, necessary. The railroad tracks run from the shore upon a huge apron, from which the cars are shunted to the deck. Once in position, each car is carefully secured against the possible effects of rough weather.

"The towing steamer and its two transports form an impressive spectacle, suggestive of a marine caravan. The length of cable between the boats is 1,200 feet, and the steamer, the cables, and the transports stretch out to a distance of nearly two-thirds of a mile. A crew of fifteen men is carried on each of the steamers and of six on the transports. The only present means of communication between the boats is a code of whistles, but a telephone system may be devised."

Mr. Chapman also describes a mammoth steam vessel plying between Ludington, Mich., and Manitowoc, Wis., which is capable of carrying between decks thirty freight cars of standard size. This mighty craft is built with special reference to winter cruising, and is said to have a speed of ten miles an hour through fourteen-inch ice. Her length is 350 feet, beam 56 feet, and draught 17 feet.

#### THE PERIODICALS REVIEWED.

#### THE CENTURY.

HE May Century has an interesting "popular scientific" article on "Submarine Photography," by Prof. Louis Boutan, who was the first person to make submarine photographs. The feat of making pictures of the bottom of the sea will be immensely facilitated when it will be possible to let down with the camera a powerful artificial light. Professor Boutan thinks that such an apparatus may succeed in satisfactorily photographing one hundred square meters of space. He also thinks that it will soon be possible to make photographs at any depth of water. It is scarcely necessary to suggest the value of such a scientific victory. The nature of the bottom of the sea, its vegetation, the interior of grottoes, animals caught and pictured in their homes, and especially the study of submerged shipwrecks, would make such a possibility very valuable and interesting to the world.

Mr. Franklin B. Locke writes on "Railway Crossings in Europe and America," with a strong advocacy of absolute abolition of grade-crossings; in other words, the separation of street and railroad grades. He says that one-third of all accidents to persons on English roads belong to grade-crossing casualties, although the greatest care is taken to minimize the risks at these dangerous points. In America scarcely any provision is made, and the result is that in the State of Massachusetts alone there are about half as many deaths from gradecrossing accidents as in the whole of Great Britain and Ireland. He says that by averaging the fatalities in Great Britain and Germany and comparing with the average for Massachusetts and Connecticut, the proportion is about 7 to 1 in favor of the foreign countries. Mr. Locke, in inquiring into the question as to whether the abolition of grade-crossings will pay, compares the facilities and the financial results of the English roads with those of the United States, and thinks that the money spent in doing away with these dangerous places will add so to the prosperity of the roads by increasing their facilities for handling business with greater economy that they can amply afford to spend the money. He says, too, that it is a mistake to boast of having the fastest trains in the world in this country-that is, on any sort of average. For if we compare the average time of the twenty-six fastest trains to and from New York on all of its twenty-six important roads, the result is only about forty miles an hour, against the average of forty-six miles an hour for fifty-four trains running to and from London.

Hon. Andrew D. White, United States Minister to Berlin and former Minister to Russia, has a brief character sketch of M. Pobedonostzeff, who is generally admitted to be the most important and influential personage in the Russian empire. Mr. White writes to oppose the English and American views that this great man was bigoted, cruel, and hypocritical. He has the fiercest enemies, but to Mr. White appeared a scholarly, kindly man, sensitive to art and especially to the beauties of religious literature, and, curiously enough, very much in love with American literature, studying constantly Hawthorne, Lowell, and above all Emerson.

#### HARPER'S MAGAZINE.

THE May Harper's contains an article by Julian Ralph entitled "Awakened Russia," which we have quoted from in another department.

Mr. E.S. Martin's light, shrewd, and pleasant touch is brought to bear upon "East Side Considerations." He begins his article with an approval of the impression of "an enlightened official of New York," who has said that the happiest people in the metropolis live on the East Side. Mr. Martin thinks that this may be very true. He admits that there are more people on the East Side than there ought to be, and that there is a good deal more dirt, although some streets are clean, for streets and the children are clean, for children who play in the streets. It is good to read Mr. Martin's cheerful though entirely sympathetic description of the pleasures and customs of this great workaday population of New York City, after the harrowing tales which no doubt are necessary and right for the reformers. For Mr. Martin, familiarity with the Hester Street peddlers, the Italians, and the Polish Jews does not breed contempt: neither indifference, but rather increased interest. That the public of the municipality are not unmindful of the needs of washing, housing, and feeding this great collection of citizens is apparent to Mr. Martin from the signs of cooperation for public and private charity that are evident in eastern avenues and cross-streets. The public schools, big, substantial, and often handsome, still insufficient and all the time increasing, the churches, parish houses, libraries, kindergartens, vaction schools, dispensaries, college settlements, hospitals, fresh-air funds, and scores of other enterprises and establishments attest the persistence of the East Side in the public memory. Even without the outside aid Mr. Martin thinks this community can take care of itself. It harbors the greater portion of the manual workers of New York, "and the bulk of its great population is thrifty, industrious, self-respecting, and self-sustaining."

Col. William Ludlow, writing on "The Trans-Isthmian Canal Problem," rehearses the opportunities and difficulties of the proposed Nicaraguan and Panama canals, especially from the engineering point of view. with no final decision except that a thorough investigation and more accurate data are needed for the practical solution of the chief problems. The commission, acting under the act of June 4, 1897, is now making such investigation of the final plans and estimates. Colonel Ludlow thinks that within a year or two it will be possible to decide finally and accurately how the Nicarguan Canal should be built, what it will cost, and which of the two great rival projects, Panama or Nicaragua, will be the first to get itself completed and "constitute the most notable achievement in the annals of engineering."

#### SCRIBNER'S MAGAZINE.

THE May Scribner's gives twenty-four pages of heavily illustrated matter to a description of "Undergraduate Life at Wellesley," by Abbe Carter Goodloe. It is a very excellent description and gives the best idea, perhaps, of the college-girl life at a typical American woman's college that we have seen.

Altogether the most fascinating feature of this number is the series of "Bicycle Pictures" by A. B. Frost, an artist who combines wonderfully with clever technique and the most veracious brush a thorough and true-blue instinct for sport in every form—not to speak of the inimitable dashes of humor that are apt to creep in everything he does with his pencil or brush.

Aside from these features Scribner's is chiefly occupied with the serials, Mr. Richard Harding Davis' story, "The King's Jackal," Thomas Nelson Page's novel, "Red Rock," and Henry Cabot Lodge's "Story of the Revolution."

#### THE COSMOPOLITAN.

HE Cosmopolitan publishes a chapter of a document purporting to be an autobiography of Napoleon, which was brought to America in 1817. The editor does not finally vouch for the authenticity of the document, and says that there are a number of points to be cleared up with regard to the history of it which make it desirable to say no more in regard to that history at present. Mr. Walker asks, however, if the new style and matter do not point to Napoleon; and if he did not write it, who could? The regular publication of the so-called autobiography will begin with the next issue of the Cosmopolitan. In this number appears a chapter dealing with the period which saw the organization of the continental system—a method which does not give the document the most favorable opportunity in the eyes of the reader. This is a sample paragraph:

"I had to become a legislator after having been a warrior. It was not possible to make the Revolution retrace its steps; for that would have been making the strong submit anew to the weak, which is unnatural. I had, therefore, to seize the spirit of the times and to form an analogous system of legislation. I think I have succeeded—the system will survive me; and I have left Europe an inheritance which can never be alienated."

Mr. John Brisben Walker, the editor of the Cosmopolitan, writes on "Motherhood as a Profession" in
the series "On the Choice of a Lifework." He asks,
Why should motherhood not be a profession, inasmuch
as doctors and lawyers and teachers and clergymen fit
themselves to have charge of human lives? Mr.
Walker has the courage of his convictions, and he
starts his professional career for the mother at once
with the consideration of the selection of a husband.

Mr. Henry G. Hawn has an article on a very interesting subject, "The Voice in Conversation." He tells of the almost universal distortion of sounds that the average American is guilty of in his talk, and argues that there is just as much an art of every-day speech as there is an art of elocution; in fact, they are the same thing.

Mr. Walker announces that eighteen thousand eight hundred and fifty-four students have applied for registration on the rolls of his Cosmopolitan University. He prints a list of well-known American teachers, generally from the universities—Harvard, Bowdoin, Brown, Johns Hopkins, etc.—who are now connected with the departments in working order, and says that these departments are English, philosophy, ethics, pedagogy, science, citizenship, biology, modern languages, Greek, and Latin; while the departments so far unorganized are home economics, the arts, business preparation, and agriculture.

#### McCLURE'S MAGAZINE.

HE editors of McClure's show the courage of their editorial convictions in the May number by the reproduction of the first of a series of short stories written by Mr. John A. Hill that were printed many years ago in a railroad magazine. Mr. John A. Hill is a railroad man, unknown until now to literary fame. Mr. McClure has run across these stories in an obscure journal, and thinks so highly of them that they will be a prominent feature in the coming numbers of his magazine. This first one is not concerned with railroad matters, but is called "The Polar Zone." As literature it certainly lies over anything we have had from the arctic regions, and quite justifies the rather unusual editorial methods. The capital recital of adventure is illustrated with drawings which almost incline one to the opinion that it is worth while to illustrate works of fiction.

Mr. Cleveland Moffett, the journalist, has from the beginning of McClure's been a prominent feature in that magazine with his interviews of the people who have had picturesque or useful experiences. He reappears in this number with an interview with John Milne, the "observer of earthquakes." Mr. Milne's earthquake observatory is situated in the center of the Isle of Wight. "Here, on a quiet hill, grown over with old trees and banks of ivy, away from all rush and noise, Professor Milne may be found, as I have found him, working among strange instruments of his own devising, operated by clockwork and electricity, and possessing such sensitiveness that an earthquake shock in Borneo will set them swinging for hours." The results of the professor's observations in this station are so interesting and valuable that it seems certain that in a few months some twenty of these seismic stations will be put in operation in various parts of the globe, all of them equipped with the special instruments that this scientist has perfected for the tracing of earthquake phenomena. Professor Milne is confident that these observatories will make it possible to determine at once the precise location of any important seismic disturbance as soon as it occurs, as well as all the essential facts regarding it. "When it is born in mind," says Mr. Moffett, "that at present 75 per cent. of the whole number of earthquakes occur in the bed of the ocean, the value of such statistics to cable companies is at once apparent." The commercial value of this single department of the earthquake science is apparent when one sees that in the ten years preceding 1894, the cable companies spent three million dollars in investigating the fifteen breaks that occurred in the Atlantic cables alone. With the vast increase in the number of ocean cables that will occur in the next quarter century, the importance of Mr. Milne's observatories will be very great indeed.

The late Charles A. Dana's "Reminiscences" of the civil war are occupied this month with the march of Grant and his generals to Petersburg, the panic at Washington, and Early's raid on Washington. The magazine contains a number of fine portaits of Thomas Jefferson, with an introduction by Prof. Charles Henry Hart.

The chief literary feature of the number is a poem by Rudyard Kipling, entitled "The Destroyers," inspired by the thought of the gigantic force exerted by the torpedo in modern warfare. One can well imagine that Mr. Kipling would be enamored of such a subject and of "the strength of twice three thousand horse."

#### THE BOOKMAN.

THE May Bookman says that Mr. George W. Cable has gone to England, where he will stay for some time, giving readings during his visit, and that his novel, "The Grandissimes," will be republished by Messrs. Hodder & Stoughton. Most good judges consider this novel his best piece of work. Mr. Barrie will write an introduction. He is a great friend of Mr. Cable's.

Another piece of book news is that there is to be a satisfactory and authorized life of Madame Patti.

The Bookman says that it is true that the Messrs. Harmsworth will begin a new monthly magazine in London to be sold at six cents. Advertisers are being guaranteed a circulation of the first number of not less than half a million copies.

Mr. Henry W. Fischer writes on Abraham Lincoln, Ward Hill Lamon, and Eugene Field, from the stand-

point of three men who loved children.

The article in the series on "American Bookmen" takes up this month Longfellow and Holmes. M. A. De Wolfe Howe is the author.

#### LIPPINCOTT'S MAGAZINE.

R. JAMES WEIR, JR., writes in Lippincott's for May on "The Faculty of Computing in Animals." He says that the quail lays some twelve or fifteen eggs, and seems to be aware of the fact that some of the eggs are missing when several have been removed from the nest. He gives many more egg instances of this sort of the different fowls, but there is a doubt about the reasoning in this case, for it is possible to find, probably, that the disturbance of the bird does not arise from the fact that she has counted the eggs and found some missing, but from the fact that she is aware, through some sense or senses, of the intruding human hand, and has an aversion to the despoiled home. A different case is with a mule that was employed by a Cincinnati street-railroad company in hauling cars up a steep incline. This animal was hitched in front of the regular team and unhitched as soon as the car arrived at the top of the hill. It made a certain number of trips in the forenoon and a like number in the afternoon, resting an hour at noon. As soon as the mule completed its fiftieth trip it marched away to its stable without orders from its driver. This certainly comes under the head of those matters which are important if true.

Eleanor Whiting, writing on "Woman's Work and Wages," states the theses, first, that it is not to the advantage of the average woman, new or old, to become a direct wage-earner, and, second, that it is not to the advantage of society that she should become a direct wage-earner. The writer claims a large amount of experience, and has come to the conclusion that matrimony is the most lucrative profession for women.

The novel of the month in *Lippincott's* is by Paul Laurence Dunbar, the young negro poet.

#### THE LADIES' HOME JOURNAL.

THE May Ladies' Home Journal contains a very pleasant article by Josephine Robb on "Rip Van Winkle as He Is at Home." We always think of Mr. Jefferson as being very venerable, he has so long been dean of the American stage, but this writer tells us that he is only sixty-nine years old, and that if he lives to be

a thousand he will never be an old man. He married in March, 1851, when he was buttwenty-two years old; his wife was Miss Margaret Lockyer. Of their six children four are now living. This writer says his family life is an ideal one, and the home, "Crow's Nest," at Buzzard's Bay, is one of the most beautiful spots in the world. Mr. Jefferson has an exceedingly sympathetic and well-trained sense of the æsthetic. He is an artist himself, as is well known, and has taken the greatest pleasure in gathering about him all the beautiful things that he could procure in the course of his many professional journeys.

There is an interesting page of pictures which tell the life of a trained nurse in the series of photographs taken especially for the *Ladies' Home Journal*. More "Inner Experiences of a Cabinet Member's Wife" appear, and there are contributions from Mr. Robert J. Bur-

dette and Julia Magruder.

#### THE NATIONAL MAGAZINE.

THE National Magazine, of Boston, is in the second number of its eighth volume and shows many signs of enterprise. In the May number there is an article by "Sara Crowquill" called "In London with Charles Dana Gibson," with some reproductions of Gibson's drawings of London subjects.

Caroline A. Powell contributes "Some Memories of Leopold Damrosch," which are interesting in their light on the beginning of real musical opportunities in

America.

There is an article by Frederick De L. Booth-Tucker, entitled "Back to the Land," in which he describes the farm colonies of the Salvation Army. He says: "Without any effort on our part [referring to the Salvation Army] more than 1,000 families, consisting of 5,000 souls, have placed themselves at our disposal to be sent forth." It is well known that after the panic of 1873 some 4,000,000 of our population moved out of the cities of their own accord and took up land, starting some 250,000 new farms. The Salvation Army has made a small beginning in California with 100 souls, and another colony is under contemplation in Colorado.

Mr. Thomas W. Steep, described as a field correspondent, gives an interesting account of "A Cuban Insurgent Newspaper," published in a mountain print shop, under the title El Cubana Libre. The press is a Washington, of the date of 1854, a hand-press of the earliest pattern. The space cleared for the printing shop is overarched with palms and woodbine, and the woods are filled with parrots that keep up an incessant chatter. A small cave near the present office was the home of the paper before the hut was built. The editorial work is done at the base of the mountain. The editor, Ferrer, and his staff live at the base of the mountain, and the trail leading to the press is kept overgrown with brush and is frequently changed. The shop is quite the official printing office. Mr. Steep says he saw orders for printing from Gomez, Cisneros, and the various secretaries of the Cuban Government. The paper is circulated gratis in the ranks of the insurgent army.

#### MUNSEY'S MAGAZINE.

THE indefatigable Mr. James L. Ford contributes to the May Munsey's Magazine an essay entitled "The Praisemongers," in which he "arraigns" the practice of indiscriminate and insincere commendation and tells of its disastrous influence in all branches of art, and how flattery has ruined many a career that honest criticism would have helped.

Mr. George G. Bain gives some interesting facts about "America's Big Guns" and their manufacture, and there is a picture of a casting now being forged at Bethlehem Iron Works for a sixteen-inch rifle, the largest gun in the world. This will be sent to the Watervliet Arsenal for finishing and will be ready in 1899. Each shot from the sixteen-inch gun will cost the Government \$1,000. The gun will weigh 142 tons. It is not a question with such a rifle as this of penetrating armor; a single shot would smash in the side of a ship. This great gun will only stand about 500 shots at best, as it has a pressure of 20 tons to the square inch in the powder chamber, and it will take much less time to break up than to make.

#### THE ATLANTIC MONTHLY.

THE May Atlantic Monthly begins with the address of Richard Olney on the "International Isolation of the United States." We quote from it in another department.

Mr. Henry J. Fletcher discusses "Western Real Estate Booms and After," with no great pessimism aroused by the wholesale slump of values in the great West. The inflated values which collapsed in 1893 were to be looked for as the natural course of things, in Mr. Fletcher's opinion, with the rapidly spreading population over the vast fresh territory, nor does he consider that the hard times which succeeded the period of speculation are necessarily to be regarded as evils if they arrest evil tendencies. "The only means by which a wayward community can be turned back into the right path is the severe lashing of its individuals when they go wrong. Many of the most valuable results of hard times are reaped whether or not the people understand their causes and correctly interpret their lessons. The shifting of population during the last fifteen years is a good illustration of this principle."

Mr. John T. Morse, Jr., has an article on "The Dreyfus and Zola Trials," in which he inquires into the evidence on both sides in that riotous affair, and decides that all the facts known fall very far short of proving Dreyfus' guilt. On the other hand, he does not at all wish to make any affirmative proposition that he is innocent. Mr. Morse's only conclusion is that the affair remains an unsolved mystery, and this, he says, is the only charm of the incident. "If we knew as an absolute fact either that Dreyfus is guilty or that he is innocent, we should forget his case in twenty-four hours."

Prof. Hugo Münsterberg has an argumentative article on "Psychology and the Real Life," not very easy reading, and the more weighty essays of the number are rounded up by Mark H. Liddell's paper on "English Literature and the Vernacular."

#### THE ARENA.

In the April Arena the Hon. William Jennings Bryan discusses the subject of "Foreign Influence in American Politics" in a brief and vigorous article, devoting attention chiefly to the dangers threatened by foreign syndicates of money-lenders and foreign investments in American securities, with the resulting interest of foreigners in our politics.

Another political article is contributed by the Hon.

George Fred. Williams, who enters the usual plea for free silver.

Mr. B. O. Flower writes on "Brookline: A Model Town Under the Referendum," Mr. Flower shows that Brookline is one of the most progressive of American municipalities, and that its business is conducted strictly on the referendum principle.

"It has been argued that the business of a city with a population of 10,000 or more would be cumbersome, that it would be impossible to carry it on expeditiously if all the people had a direct vote on all important measures; yet here this principle has been in practical operation for nearly two centuries without any inconvenience. Though the town has increased until its population is between 15,000 and 20,000, the work is so systematized that there is practically no more difficulty in carrying on the government expeditiously and satisfactorily than in the old days when the population numbered only hundreds."

The May number of the Arena opens with an article by Senator Stewart, of Nevada, on "The Great Slave Power," which being interpreted for the benefit of readers not familiar with the Arena vernacular means the modern money power—"Wall Street," the trusts, the "plutocracy" of the day. Senator Stewart's article is rather more rhetorical than Mr. Bryan's of the preceding month on essentially the same subject.

Mr. William Henry Johnson makes an interesting collocation of the opinions of representative thinkers of the day on the question of immortality.

Camille Flammarion writes a rejoinder to criticisms of his studies in occult phenomena published in recent numbers of the *Arcna*.

The eulogy of Miss Willard, by Mrs. Mary Lowe Dickinson, is noticed elsewhere.

#### THE NORTH AMERICAN REVIEW.

ROM the April North American we have selected Lady Henry Somerset's tribute to Miss Willard, John E. Redmond's "Ireland Since '98" and Lieutenant Duncan's "Reasons for Increasing the Army" for notice elsewhere.

Mr. Harry P. Robinson, editor of the Ratlway Age, writes on "State Regulation of Railways," frankly extolling the benefits which the railroads expect to derive from the recent decision of the United States Supreme Court in the Nebraska rate case.

Miss M. E. J. Kelley contributes an interesting study of "Women and the Labor Movement." She says:

"The labor movement has always stood for greater educational opportunities for the workers, and this phase of the agitation is having its effect on working-women and on the home. Technical training, art education, the teaching of domestic economy, which are gradually being made a part of the public-school system, will have much to do with raising the standard of living. The club movement among women is teaching the value of organization and coöperation, is unconsciously broadening women's sympathies and breaking down false ideas and artificial barriers. The impetus toward all these things was given by the labor movement, and they are gradually bringing women into the labor movement."

Lieutenant Gibbons, U. S. N., writing on "The Great Lakes and the Modern Navy," sums up the situation as follows:

"1. The great lakes region has developed the iron and

steel industry to a degree that enables it to surpass all the rest of the United States in the important industry of shipbuilding.

"2. The improvements in canal-building make it only a question of time when this region will have a deepwater outlet to the sea.

"3. The result of this deep-water way will be the rehabilitation of our merchant marine and the creation of an extensive foreign trade carried in American bottoms.

"4. The expansion of our merchant marine will be followed necessarily by the expansion of the navy.

"5. The great lakes region is debarred by existing treaty relations from contributing material for naval warfare, but, containing as it does more than one-third of our entire population, the navy should, as a peace precaution, give immediate encouragement to the navalmilitia movement in that part of the United States, thus developing a source of supply for the large increase in our personnel that war will render necessary."

Prof. John B. Smith defends Germany's exclusion of American fruits as fully justified by actual danger from the San José scale. Our own government publications and State and federal legislation seem to prove that such a danger exists.

#### OTHER ARTICLES.

Karl Blind gives an entertaining account of balloon voyages made from Paris during the siege of 1870-71; John P. Young writes on "The Decay of Cobdenism in England;" Dr. Langdon Kain relates some wonderful instances of longevity; and Sir William Howard Russell proceeds with his narration of civil-war recollections.

#### THE FORUM.

N our department of "Leading Articles" we have quoted from the article by Mr. quoted from the article by Mr. Curtis on the Central American republics, from Mr. Sidney Low's description of "The English Governing Oligarchy," and from Dr. William T. Harris' reply to the question, "Is There Work Enough for All?" appearing in the April

The introductory article of the number is a statement of "The Dangerous Demands of the Interstate Commerce Commission," by Mr. Milton H. Smith, president of the Louisville & Nashville Railroad. The amendments to the Interstate Commerce law now before Congress, as Mr. Smith views them, propose to "give the commission the power to regulate, in the most complete and extensive manner imaginable, every detail of interstate railroad traffic; all such regulations to take effect without any resort to judicial tribunals for their enforcement, and, ordinarily, in spite of the pendency of proceedings of review in court."

In an article on England and France in West Africa Mr. Thomas Gibson Bowles, M.P., declares that the time is fully ripe for a settlement of the dispute and

that the only danger lies in delay.

General Miles, in discussing "The Political Situation

in Europe and the East," says of China:

"Here is a tempting field for the ambitious, both in a political and a commercial sense. And this field will be thoroughly explored with one of two results: (1) A combination of the great powers of Europe, resulting in a division of the Chinese empire—the strongest seizing the lion's share; or (2) a disagreement—much to be desired-among the powers as to this division, in which case the Celestial Kingdom would be allowed to work

out its own salvation. In the latter case the empire, stimulated to greater efforts, may eventually reach a high standard of civilization and development."

Mr. John M. Robertson exposes some of the fallacies in the commonly accepted opinion that genius is always superior to conditions, that fame is a sure test of genius, and that a preponderance of genius per capita proves a superiority in the race. He decides that "genius is conditioned economically, morally, and socially. Conditions which are partly favorable to it are seen to disappear by economic evolution even in an age of moral progress; and unless to the achieved moral and scientific progress be added a social science which takes intelligent heed of such changes, there may follow manifold retrogression."

#### OTHER ARTICLES.

Bruno Schrader, a leading Handel disciple, gives an account of the present Handel revival in Germany; Prof. Charles B. Bliss comes to the defense of modern experimental psychology against the attack on it made by Professor Münsterberg in the February Atlantic; Mr. Charles Upson Clark describes the great Finnish epic poem, the "Kalevala" and Prof. William P. Trent reviews some of the recent histories of literature.

#### THE NINETEENTH CENTURY.

HE Nineteenth Century for April is a good number-a very judicious mixture of politics, literature, and science.

Those who wish to know all about the British navy will find what they want in the article on "The Latest Reconstruction of the Navy," by Sir William H. White. No man in the world is better able to speak about the British fleet of to-day than the man who has practically built it. His article is a model of simplicity and lucidity. We shall not attempt to summarize it here, but merely quote one or two of the striking facts and figures with which it bristles. The total first cost of the fighting ships of the British navy as it stood in 1813, at the end of a long war with France, was £10,000,000. In 1860, just as the ironclad was beginning to come in. the estimated cost of the ships building and built was about £18,000,000. In 1878 the ironclad era had raised it to £28,000,000, and to-day it stands at £97,000,000. In the last eleven years, including ships built and completed, nearly 1,000,000 tons have been added to the navy, which, excluding cost of armament, represents an expenditure of £52,000,000. This is exclusive of torpedo-boat destroyers.

#### THE QUESTION OF DIET.

Sir Henry Thompson, whose name has been taken in vain as a great scientific authority in favor of vegetarianism, explains at some length his views upon the question of diet. He makes it clear that while he thinks that too much flesh is eaten, he is by no means a flesh abstainer. He puts his foot down in the following emphatic fashion upon the favorite doctrine of the vegetarians:

"The very idea of restricting our resources and supplies is a step backward-a distinct reversion to the rude and distant savagery of the past, a sign of decadence rather than of advance."

There is much in the article of general interest. For instance, he says, speaking of the best food for people who are advanced in life:

"Some persons are stronger and more healthy who

live very largely on vegetables, while there are many others for whom a proportion of animal food appears not merely to be desirable, but absolutely necessary. The question of diet as modified for man in advancing years may appropriately come here. During the term of middle life, when his activity is at its maximum, food may be generous in quality and in quantity, corresponding, of course, to the nature of the force expended. But in later stages of life highly nutritious animal food, especially when containing also much fatty matter, is for the most part very undesirable. When through age man's natural powers fail, so that, no longer capable of walking three or four miles an hour, he finds two or two and a half in one hour suffice to exhauat his forces, he must lessen the supply of proteids and fats."

#### SCHOOL GARDENS IN ENGLISH COUNTIES.

The Dean of Rochester in a review of Mrs. Earl's "Pot-Pourri" gossips pleasantly concerning gardens and gardening. In the course of his article he says:

"No more excellent work has been undertaken by our County Councils, notably by those of Kent and Surrey, than the establishment of school gardens at selected centers, to be cultivated in plots by boys of thirteen years of age and upward, under a local instructor; the encouragement of cottage gardening and allotments by the lectures and visits of qualified persons, by prizes awarded to successful culture, and by the organization, as at Maidstone and elsewhere, of schools of cookery."

#### THE CONTEMPORARY REVIEW.

THE Contemporary Review contains several articles of interest which are noticed elsewhere.

Professor Westlake, who has apparently been charged with the duty of drawing up a report on the questions at issue between England and France in the basin of the Niger, from the point of view of international law, sets forth his conclusions. His paper is judicial, and will irritate many Englishmen by the generous fashion in which he gives away the contention that the Say-Barua agreement should be interpreted so as to give the Say-Nikki-Busa triangle to Great Britain. But after passing in review the questions of hinterland, effective occupation, treaties with native potentates, and notification, he arrives at the conclusion that the British claims to Borgu are well founded. He says:

"It remains that the question about Borgu is whether England shall be dispossessed of places taken by her under a protectorate publicly notified at the time of its institution, and specifically notified to France before the attempt to dispossess her was made at Boussa. I cannot believe that the best mind of France will desire to pursue such a policy."

#### GERMAN RULE IN HELIGOLAND.

The writer of the article upon the "Balance of Power" says that the substitution of German for British rule has been by no means an unmixed blessing for the inhabitants of Heligoland:

"The picture of Heligoland as it now is—native populace forbidden to stand in groups; dancing and concert rooms only open twice a week; 2,000 natives superciliously treated by the police and military; bathing visitors coming across from Hamburg rarely and for days, instead of regularly and for months—all this (though Heligoland is not exactly a colony) is

typical of the German official's impracticable ideas, and contrasts sadly with the good old days when six unarmed British blue-jackets formed the sole 'force' of the island; when the town swarmed all the season with happy German families enjoying a whole summer's liberty; when the inoffensive inhabitants spent their livering groups examining the sea with their telescopes, preparing the skins of sea-fowl, taking service as pilots, and enjoying absolute freedom."

#### IRISH ELEMENTARY EDUCATION.

Edith F. Hogg and Arthur D. Innes are the joint authors of an article on "Irish Elementary Education." The account which they give of the neglected condition of the education of the Irish youth is discouraging. They say:

"The industrial regeneration of the country depends, first of all, upon the reform of its primary education. To raise this out of its present state of deplorable inefficiency and to convert rural opinion to seeing the necessity for a more enlightened system are the problems that face us."

The priests no their best to induce the children to attend school, but the average attendance is far below that of Scotland. In Scotland the average percentage of attendance is 80; in Ireland, 52.

"Although many of the children nominally remain at school until a far later age than is customary in England, they leave still unable to read with sufficient ease to enjoy reading for its own sake, to write a decent or intelligible letter, or to work out the simplest sum correctly. In 1881, 21.4 per cent. of the men and 23.2 per cent. of the women in Ireland who were married signed the register by their mark."

Notwithstanding the importance of agricultural education to a country which is one great farm, only 30 schools out of 8,555 have school gardens attached to them. The condition of the poor-law schools appears to be the worst of all, and is a scandal and a disgrace to the government and to the country in which such things are possible. The one bright feature in the article is the account of the Christian Brothers' Industrial School at Artane.

#### THE MANUFACTURE OF BICYCLES.

A writer signing himself "Duncans" discusses the present condition of the bicycle industry in an article which, although full of facts and figures, is full of very interesting reading. He points out how very heavily the trade has been over-capitalized, and deplores the centralization which has been the result of this policy of amalgamation. He looks forward to a time when a reaction will set in against this system, and when bicycles will be put together in the villages throughout the country. Nearly all the component parts of a bicycle are patented and made separately. Hence the business of a bicycle maker is eminently one which can be pursued by individual workers in the country districts. The more the trade is decentralized the greater care will be given to the careful fitting together of the parts in the individual machine. According to the statement of an English manufacturer, the best-made bicycle in the world ought to be put on the market at £13 2s. 6d. (\$65.50). How is it, then, that first-class bicycles are sold in England at £28? The answer is that the £14 17s. 6d. represents the advertising expenses, ordinary and extraordinary. In the latter are fees to influential directors and prizes given to racing men.

#### OTHER ARTICLES.

Mr. J. A. Hobson describes "Mr. Mallock as a Political Economist." He maintains that "no one of the three cardinal propositions of Mr. Mallock's argument is valid. Ability and labor are not separable productive powers. Industrial progress is not attributable solely to the ability of a few. The labor movement does not aim at dispensing with ability of management."

Mr. Edmund Gosse writes pleasantly about Ferdinand Fabre, the novelist, who died just before he could take his seat in the French Academy, to which he had been elected. Mr. Gosse praises very highly his delineation of the French priest. M. Fabre, he says, understood the French clergy more intimately than any other author.

"Persuade him to speak to you of these, and you will be enchanted; yet never forget that his themes are limited and his mode of delivery monotonous."

Mr. W. R. Lawson writes about "India on a Gold Basis," and Mr. E. Stewart describes crocodile-shooting in India, compared with which rat-catching in sewers would seem to be positively fascinating.

#### THE FORTNIGHTLY REVIEW.

THE article entitled "Where Lord Salisbury Has Failed," in the April Fortnightly, is noticed else-

Mr. Stephen Gwynn, writing on "The Posthumous Works of Robert Louis Stevenson," maintains that "Weir of Hermiston," the romance which he left unfinished, is the greatest of all his achievements. Mr. Gwynn says:

"The world, which does not care about fragments, will not often read 'Weir of Hermiston,' but for artists it will remain a monument. Only this is to be said, that enough of it is left to be a high example—enough to prove that Stevenson's lifelong devotion to his art was on the point of being rewarded by such a success as he had always dreamed of; that in the man's nature there was power to conceive scenes of a tragic beauty and intensity unsurpassed in our prose literature, and to create characters not unworthy of his greatest predecessor."

#### INSURANCE SOCIETIES FOR WOMEN.

The Rev. J. Frome Wilkinson describes the results that have been attained by the "friendly" societies that have been established by women in England. The salient feature of all the statistics which have been quoted by Mr. Wilkinson is that women need to pay on an average 28 per cent. more than men to secure the same benefits. He says:

"It is evident that the practice of allowing women to insure for a sick benefit and charging them in accordance with male rates is very unsound. If a friendly society for women is to be established on a firm financial basis, it must charge its members contributions which will cover the liabilities those members bring. Till the last year or two, with the exception of a few Rechabites and Abstinent Sisters of the Phœnix, the great male affiliated or federated orders uniformly declined to admit females into their ranks and to open lodges and courts for women. The old order has, however, at length given way to new. The Ancient Order of Foresters was the first society to throw open its

doors to women and to establish female courts of the order."

WAR BETWEEN SPAIN AND THE UNITED STATES.

Mr. F. T. Jane, in an article entitled "The 'Maine' Disaster and After," discusses the probable issue of a conflict between the navies of the United States and Spain. His calculations are interesting, and may be read with advantage even by those who do not share his belief that a series of Spanish successes would result in breaking up the American republic into two or three fragments. Mr. Jane says:

"To hold her own Spain must be prepared for a long fight, and one in which guerrilla tactics will be best. She can only beat the American battleships at the cost of all, or nearly all, her own chief units, and America would still be left with a formidable coast defense squadron of ironclads. If wise, she would steadfastly avoid any general action (unless both Argentina and Brazil were with her) and confine herself to a dragged-out campaign, not seeking to effect any grand coup, but making isolated efforts with her two best ships and the minor craft; recognizing that these last would eventually be destroyed. The present spirit of Spanish sailors is favorable for such efforts. It is the people and towns upon the American coast that it will best pay Spain to damage."

#### THE UTILITY OF WAR CORRESPONDENTS.

Mr. M. MacDonagh in an article entitled "Can We Rely on Our War News?" pleads in favor of official recognition of the utility of war correspondents. In the war of 1870 the Germans admitted correspondents freely, while the French refused them all access to their armies. In the Russo-Turkish war the Russians gave the correspondents privilege in position. In the present Egyptian campaign the Sirdar seems to have done his best to deprive the public of the advantage of war correspondents. Mr. MacDonagh says:

respondents. Mr. MacDonagn says:

"But the public are not likely to tolerate any unreasonable attempt on the part of the War Office to hamper the enterprise of the war correspondents on the field of action. The tardy, meager, incomplete, and cold official reports of the operations of our armies in the field, published weeks and often months after the event, will not satisfy the public. They will insist on having early and vivid and independent newspaper accounts from the seat of war. Indeed, it is astonishing how the War Office can fail to see that these war correspondents' graphic pictures of disasters, as well as victories, help, by the stirring of the patriotic sentiments and love of adventure in our youths, to man the services."

#### THE NATIONAL REVIEW.

Nour department of "Leading Articles" we have quoted from the articles on Russian policy in the National Review for April.

In discussing the possibility of Lord Salisbury abandoning one of his two offices, the editor expresses somewhat vehemently his conviction that the House of Commons will not stand another premier in the House of Lords:

"It is common knowledge that on more than one occasion since the formation of the Unionist alliance in 1886 Lord Salisbury has sought to intern himself in the Foreign Office, leaving the supremacy of the premiership to the Duke of Devonshire, who has consistently, loyally, and wisely declined this attractive offer. There has latterly been a recrudescence of some such solution among political gossips. The Conservative party are not governed by any petty prejudice against a Liberal Unionist, but there is a strong and general feeling that if, at any time, the premiership is transferred from Lord Salisbury—an event that would be deeply deplored—it should pass, not to another peer, but to a commoner. It is now several years since the House of Commons has contained a premier-Mr. Gladstone having been the last. The House of Commons would be asked to face, but would refuse to face, a permanent disappearance of the premier from their midst if the Devonshire plan were adopted. Commoner should succeed peer as peer may succeed commoner. We devoutly hope that Lord Salisbury will not be moved to relinquish the premiership. Should he do so, his only possible successor at the present juncture is the leader of the House of Commons-Mr. Balfour."

#### PROFESSOR VAMBERY ON BRITAIN AND HER RIVALS.

Professor Vambery writes an article on "Great Britain and Her Rivals in Asia:" Taking the standpoint of a European anxious to see European culture promoted in Asia, he discusses the comparative merits of Great Britain and her three rivals, France, Russia, and Germany. He thinks the three allies have not much chance of success, nor will they be able to do the work which Britain is doing until their national character has been ripened by the sun of political freedom. Not until then will they be able to struggle against the overwhelming superiority of the country which, with all its faults, is still the truest representative in Europe of the aims and endeavors of the nineteenth century.

#### WHAT TOMMY ATKINS WANTS.

The writer of the article on "The Army as a Career" thus sums up the nine reforms which he thinks should be introduced in order to make the lot of the private soldier in the British army more attractive than it is at present:

"1. Trained soldiers to receive a higher rate of pay than recruits.

"2. An annual issue of 'necessaries' and a more liberal allowance of clothing.

"8. The promotion of N. C. O.s to run through both battalions of a regiment, and when N. C. O.s accompany drafts abroad, the returning troop-ship to bring back an equal number of N. C. O.s to the home battalion.

"4. The stoppage for 'washing, marking, hair-cutting, and library' to be totally abolished.

"5, 'Fatigue duties' to be performed only by men under punishment.

"6. 'Hospital stoppages' to be abolished, except where a soldier is under treatment for disease occasioned by his own misconduct.

"7. The cost of discharge by purchase to be reduced with each year's service.

"8. Reservists to be permitted to rejoin the colors at any time, without being required to refund their 'deferred pay.'

"9. A reservist's liability to be 'called up' to be in inverse ratio to his period of service in this force."

#### THE LONDON COUNTY COUNCIL ELECTION.

Mr. C. A. Whitmore, M.P., writing on "Our Defeat and Some Morals," gives a plain hint to Lord Salisbury that his attack on the county council did a great deal to lose the election. Mr. Whitmore says:

"The lesson is unmistakable. May it be hoped that those in high places will in the future understand that the general opinion of London on London questions is not to be gathered in West-End clubs, and perhaps not even from political organizers, who are not generally interested in its municipal life or the working of its local institutions."

There are other morals which Mr. Whitmore brings forward. One is that the Moderate members of the county council would do well to stick more to their work instead of leaving the Progressives to put in most of the attendances on committees. Also, he dryly remarks, the character of the Moderate candidates might be improved with advantage. In many cases at the last election the Moderate candidates were evidently thinking more of politics than of sober municipal work. Mr. Whitmore thinks that the defeat of the engineers stimulated the trades unionists to revenge themselves upon the party of the capitalists. Mr. Whitmore does not despair, but he exhorts the government to lose no time in bringing in its municipal bill.

#### THE CZAR OF NEWFOUNDLAND.

Newfoundland, says the writer of the "Colonial Chronicle," "being weary of self-government, has decided to deliver itself bodily to a contractor, for we are told that 'Mr. Reid, the railroad contractor, has concluded an agreement with the Newfoundland government to take over and operate the entire railroad system of the colony for fifty years for a subsidy of 2,500 acres of land per mile. Mr. Reid pays \$1,000,000 now, which at compound interest in fifty years amounts to \$7,000,000. At the end of that period he will own the road. If he fails to fulfill the contract the money and road will be forfeited to the colony. Mr. Reid buys the St. John's dry dock for \$320,000 and brings his workshops there and operates the dock. He also builds a new railroad to Topsail, a distance of fifteen miles, for \$100,000, and a terminus at the dock. He builds seven new steamers, one to ply to Labrador and on the six largest bays of Newfoundland, at a subsidy of \$90,000 per annum. He takes over the government telegraph lines at a subsidy of \$12,000 per annum for seven years, when the Anglo-American monopoly expires, then to operate free, and give a uniform tariff of 25 cents all over the island for ten words. He operates in new coal areas and pays a royalty of 10 cents per ton. He builds an electric railroad in St. John's for \$140,000 and repairs the Whitbourne Railway for \$100,000. This offer passed the House of Assembly by 26 votes to 6, and had been signed by the governor—apparently after some hesitation—and the capacious contractor. "Its completion" is reported to cause "great rejoicings and meets with universal approval.","

The Rev. Anthony Deane in an article on the religious novel, after preliminary denunciation of Marie Corelli, devotes the rest of his article to criticising Mr. Hall Caine's "Christian." Prof. Harrison Moore, of Melbourne, writes on "Constitution-Making in Australia."

#### THE FRENCH AND GERMAN REVIEWS.

#### REVUE DE PARIS.

THE two March numbers of the Revue de Paris are exceptionally interesting from every point of view, but it is significant that absolutely no notice of the Zola case is taken by two of the three leading French reviews.

In the first number M. Liard contributes an interesting analysis of Jules Simon. Like another remarkable Frenchman who certainly influenced to a rare degree his generation, Jules Simon was a Breton by birth, and came of pious, God-fearing people. Unlike Renan, however, he always remained true to his early beliefs and impressions, and yet during his long life he was consistently liberal, holding almost socialistic views as to what should be the laws affecting the working classes of his own and of other countries. Like many Englishmen belonging to the same generation, Jules Simon was inclined to pin his whole faith on the supposed benefit accruing from a universal and comprehensive scheme of education. "The people who rejoice in the possession of the best schools and teachers," he once wrote, "will play a leading part in the world, if not today, then to-morrow." It need hardly be said that he was a strong advocate of compulsory and gratuitous education, and he labored hard, on the whole with success, to introduce into French schools a larger measure of physical exercise, better hygienic conditions, and some practical knowledge of foreign languages.

Another biographical article, contributed by D. Halévy, proves how great a place "Uncle Tom's Cabin" has won among continental readers.

A vivid account of the battle of Solferino and of the events which immediately followed is extracted from a forthcoming volume of recollections by General Fleury. These letters, addressed by the general to his wife, give a very clear and striking picture of what went on behind the scenes, and from that point of view form a valuable addition to the diplomatic history of the 60s.

#### STATE-SUPPORTED THEATERS IN GERMANY.

M. Carré contributes an amusing and exhaustive description of the German and Austrian theatrical world. As was natural, what most struck him as a Frenchman was the extraordinary discipline which apparently reigns in each German theater, where the spirit of militarism seems to have penetrated beyond the footlights. Everything is foreseen, the discipline is perfect, and in most cases the principal theater of a town is under direct royal or municipal patronage. Early in the century the same might be said of most of the Paris theaters; now the Grand Opéra, the Théâtre Francais, and the Odéon alone depend in any way on the state. Every German Grand Duchy has a state-supported stage. The King of Saxony spends \$120,000 a year on the two principal Dresden theaters. The Regent of Bavaria spends exactly the same amount on the two Munich theaters, and the German Emperor, in his quality as King of Prussia, is compelled to pay out \$100,000 a year to the individual who manages theatrical matters at Wiesbaden, while the great theater at Stuttgart, managed by Baron Putlitz, enjoys a royal subvention of \$60,000 a year. Even the Grand Duke of Hesse is compelled to pay out \$50,000 a year to his theatrical intendant, Herr Werner.

It is probably owing to this curious state of things that Germans of all ranks and conditions so constantly go to the theaters. The best places are low-priced, six marks being an exception, and when a place is subscribed for by the month or by the year, the subscriber witnesses each performance at an almost nominal cost. Owing to the system of national subvention, each German taxpayer considers himself personally aggrieved if the local theater is not up to a certain standard of excellence, and certainly it cannot be denied that the German stage justifies its maintenance at a comparatively large cost. In one year the Berlin theater produced 60 different works, 52 operas, and 8 ballets; the Grand Theater of Frankfort changed the bill 88 times during the same period, and at Carlsruhe the programme was changed 97 times, there being produced in the course of twelve months 47 operas, 49 comedies, and 1 ballet. Dresden, however, can proudly point to a unique record, that of having produced at the two state theaters 162 completely different pieces, 56 operas, 5 ballets, 4 oratorios, 12 dramas, 36 comedies, and 49 farces. The theatrical and musical literature of the whole world is laid under contribution to produce this result, and every German dramatic author is sure of a hearing.

#### THE GENESIS OF THE TANNHAUSER LEGEND.

M. Paris, a distinguished folk-lorist, devotes some space in the second number of the Revue to the analysis of the Tannhauser legend. He gives several variations of the legend immortalized by Wagner, and he also alludes to the many modern writers who have adapted the most dramatic story, notably Heine and Hoffmann. The first complete history of the knight Tannhauser and of his sojourn in the Venusberg was told in German verse in 1453, and this poem was considered by Heine to be as fine in its own way as the Song of Songs. There was in the thirteenth century a meistersinger who was actually called Tannhauser, and who seems to have been a kind of mediæval Verlaine, famous alike for his license and his piety, and no doubt his personality in time became legendary and suggested the well-known mythical story. An Italian variant lays the scene near Rome, the Venusberg being one of the Sibylline Mountains.

#### NOUVELLE REVUE

THE two March numbers of Madame Adam's periodical have more in them than usual, though no article calls for very special remark, and, following the example of the Revue de Paris, not a word is said in criticism of the Zola trial.

Those about to visit the Riviera, intent on business or pleasure, will find much that is both amusing and instructive in old Prince Valori's two articles on Nice. The Prince, who was one of the best-known figures of the cosmopolitan society which spends so great a portion of each year in the south of France, first made his home in the town just forty years ago, long before the French annexation. "The English or the Germans." observes the Prince, "would have created an industrial center; we made our new possession into a watering place. Still, since the annexation the population has trebled, and owing to a variety of circumstances the

town has become one of the wealthiest centers of continental life."

Among other royal personages who early discovered the charms of the French Riviera was Louis of Bavaria, the gallant old King who twice risked his life to save the worthless Lola Montez against his justly incensed people and the Duke of Schleswig-Holstein, the grandfather of the Princess of Wales.

During many years one of the most notable patrons of Nice was Lady Caithness, who, according to this her latest biographer, was by turn a Jewess, a Mussulman, a Brahmin, a Buddhist, and a Parsee. Be that as it may, she certainly considered herself the final incarnation of Mary Stuart; but though all the world was always ready to laugh at her eccentricities, she was a woman of real power, and when she gave up her villa at Nice she was very much missed.

In an interesting article concerning the many attempts to solve the secret of the north pole, the writer, M. Roussin, after devoting a certain space to past expeditions, gives an account of the balloon expedition about to be organized by a French aeronaut, Louis Gogort. This inventor, together with a friend, M. Surcouf, a descendant of the famous admiral of that name, is not in any sense an imitator of the ill-fated Andrée. The plan of the two explorers is to approach as near as they can to the north pole with the help of an ordinary vessel. Once there they will each ascend in a balloon, trusting to chance to blow them where they wish to go. Nansen claims to have come within four hundred and twenty miles of the north pole, and according to M. Gogort, had the Fram carried a balloon, he might quite conceivably have actually passed over the pole with but very little extra risk.

#### THE PROTECTION OF CHILDREN IN PARIS.

All those concerned with the protection of children should read M. D'Almeras' admirable article detailing the French methods of dealing with the difficult problem which Mr. Benjamin Waugh has done so much to solve. The new divorce laws have greatly complicated the question in France, for it seems to be really difficult to persuade a French couple, once the decree absolute has been pronounced, that they are still morally and legally bound to look after their children.

The Paris municipality recognizes that it has certain duties to the children born in the great city, and though there is no workhouse system in France, the question of pauper children is not neglected, and in 1894 eight millions of francs were spent on the forty thousand pauper children wholly dependent for education and sustenance on the state. An elaborate boarding-out system has been formed, the most practical way of dealing with the problem, and works fairly well, inspectors going round the various farms and cottage dwellings and paying frequent surprise visits, in order to see that the children are kindly treated and well looked after by their foster fathers and mothers. The French Society for the Protection of Children, which was started some years ago by Mesdames Barran and Kergomard, is armed with considerable legal powers and has the absolute right to take complete charge of the children of drunkards. Thanks to their efforts, that wretched blot on French civilization, the Children's Prison-"La Petite Roquette"-will soon be replaced by a reformatory at Montesson. The French writer declares that in Canada and the United States the protection of children is really intelligently organized.

#### A LADY ON KLONDIKE.

Mrs. Matilda Shaw contributes an excellent and interesting account of the various roads to Klondike, and unlike many who have made "copy" out of this new Eldorado, Mrs. Shaw seems to have really been there, and she gives a very vivid account of the rough-and-ready justice of Dawson City. She pays a high tribute to the kindness and courtesy of the rough miners to all those women whom duty or a spirit of adventure bring to Klondike, and, on the whole, she gives an encouraging picture of the gold country.

#### REVUE DES DEUX MONDES.

WITH the exception of Captain Reynaud's paper in the second March number on the bump of locality, as it may perhaps be called, in animals, the Revue for March is not, it must be confessed, particularly interesting.

M. Lévêque's article on the French School of Archæology at Athens, in the first March number of the Revue, is really, though it is not of course intended to be, one long reproach to the indifference of successive English governments. For while the French school at Athens has always, or almost always, been able to rely on state support, it is well known that the British school has had to trust to the generosity of private subscribers and to the already overburdened resources of the great universities. This is not creditable to a country which has for centuries kept alight the flame of Greek learning.

#### THE IRON IN US.

M. Dastre continues his interesting series of articles on the presence of iron in all kinds of living creatures. Much of his paper is extremely technical, but some curious and perhaps not very well-known facts may be noted. For instance, the liver is the organ in the superior animals which is most concerned with iron, and, singularly enough, it does not place all its iron at the disposal of the blood, but seems to keep a private stock of the metal for its own enjoyment. Thus a baby at the moment of its birth possesses an enormous reserve of iron in its liver, three or four times as great in proportion as the amount to be found there in an adult. This is really a beautiful provision of nature, for the milk which forms the staple food of infants contains a very inadequate supply of iron.

#### THE BUMP OF LOCALITY IN ANIMALS.

To the second March number Captain Reynaud contributes an interesting paper on the extent to which what we call the bump of locality is found in various animals. As the result of long observation he has come to the conclusion that most four-footed creatures live from choice in a somewhat circumscribed area; thus a stag, when being chased, will turn round within an invisible circle, however large be the forest or park where it is being hunted. On the other hand, take a stag away from its own surroundings and cart it to a new part of the country, and it will, as a rule, make straight away, presumably in the hope of finding its way home.

Horses have a very strong bump of locality. Put the reins on your horse's neck and he will invariably turn round and make his way home by the road he has already traversed to his stable. It is a curious fact that no horse takes a short cut home; he will always retrace as exactly as may be his own steps, and this even in a district of which he knows every road and by-path.

Of course pigeons and cats seem to possess a quite exceptional instinct for "homing." Pussy has been known to make her way back to her old quarters a distance of eighty miles. It has been ascertained that swallows follow year after year exactly the same aërial route, and this, incredible as it may appear, almost to a yard. Thus the same bird will start from the same tree in, say, Dover, will rest on the same roof in Dijon, and take up his winter residence on exactly the same spot in Egypt as he and his forbears did before him; and just as sailors follow an invisible but none the less clearly defined pathway across the sea, so swallows appear to have a clearly traced route through the atmosphere.

This instinct, or sixth sense, as the French writer prefers to call it, is not entirely confined to animals. The red Indians were and are famous for their path-finding qualities; and in China, when a great noble goes hunting in wild and little-known regions, he takes with him a Mongolian, secure that the latter will be able to guide him home, however far they may stray.

#### THE ZOLA CASE.

M. Brunetière alone has the courage to reopen the Zola controversy. In an article entitled "After the Trial" he may be said to sum up the general view of his countrymen on the case-namely, a deliberate condemnation of Zola and his methods of striving to obtain a revision of the Dreyfus court-martial. The editor of the Revue des Deux Mondes waxes very bitter over the sympathy Zola evoked among the "intellectuals"-in other words, among the more advanced thinkers of the country. "Because they know things we do not know," he cries angrily, "we give them credit for knowledge they do not possess. . . . Finding them so certain when we should hesitate, we are apt to believe that they have reasons for this confidence in their own judgment. This is not so; and when further they try to finally convince us by evoking the scientific method and spirit, it is then that the danger of their pretensions increases." The writer's references to Protestants, Jews, and Free Masons will not be received with any liking by his English-speaking friends. M. Brunetière laments the general decadence of his country, which it is clear he attributes in a great measure to the republican form of government.

#### OTHER FRENCH REVIEWS.

HE Revue des Revues is now quite an independent review-that is to say, its contents are made up of original articles. In the number for March 1 attention may be drawn to the article on the exile of Ranavalona, the last Queen of Madagascar, contributed by Jean Carol; a sketch of Werner von Heidenstam, a Swedish writer, by Jacques de Coussanges; "Molière in Hungary," by Prof. J. Kont; "The Marvels of Grafting in Surgery," by Jean de Loverdo; and "Ludwig Windell, a German Spy in France," by G. Saint-Aubin. In the number for March 15 Henry Bérenger writes on "Religion and France;" Eugène Müntz on the occultism (?) of Leonardo da Vinci; and Raoul Deberdt on George Sand and her grandmother, Marie Verrière. The articles "How Greece was Betrayed" and "The Life and Death of Gracchus of Naples," by Charles Simond, appear in both numbers. This list of important articles, though by no means complete, will give some idea of the amount of original matter in the Revue.

Illustrations are rather the exception than the rule in

the French reviews. The Monde Moderne, ever sing it was started, has made its illustrations a leading feature. The interest of the two descriptive articles on Copenhagen and the city of Constantine and its ravines in Algeria in the March number is greatly enhanced by the pictures.

The Revue Encyclopédique is another French publication which pays considerable attention to its illustra-

tions

For some months the Revue Générale has been giving a series of papers on Italian painting by Arnold Goffin, illustrated by phototypes after the Italian old master. In this way there have been interesting studies of Siennese art and the art of Pisa. Pisa is concluded in the March number, and the phototypes are from the frescoes of Gozzoli.

The March number of the Monde Moderne has a article on the Chout, a Russian periodical, written in Russian and in French. It was founded about twenty years ago, but its present shape is quite new, and the director or editor, M. R. Golicke, seems to have gathered round him a number of excellent artists.

What with economic reviews and articles on economic subjects in the general reviews, the bulk of the contents of the French periodicals might well be classed under the head "Political Economy." We have the Réforme Sociale appearing twice a month; the Humanité Nouvelle, the Revue Politique et Parlementaire, the Revue d'Economie Politique, the Revue Socialiste, the Revue Internationale de Sociologic the Journal des Economistes, all monthlies; and the Annales de l'Ecole Libre des Sciences Politiques, sp pearing every two months. In the February Humanité Nouvelle and the March Revue Socialiste Mr. Tom Mann has articles on the recent dispute in the English engineering trade. Of the other reviews which pay considerable attention to economic and social problems the Association Catholique, the Correspondant, the Université Catholique, the Revue Générale, and the Revue du Monde Catholique, all Catholic monthlies, are worthy of mention. Some very valuable articles are published in these reviews. There is also an excellent weekly, the Monde Economique.

#### THE GERMAN REVIEWS.

NE of the most interesting articles in the German reviews this month is Georg von Plenker's study -some fifty pages in length-of Beatrice Cenci, which appears in the March number of Nord und Sud. The story of Beatrice Cenci, "the beautiful parricide," is probably best known in connection with Shelley's tragedy and the alleged portrait by Guido Reni; but Bertolotti has endeavored to prove that the famous picture in the Barberini Gallery at Rome could not have been painted by Guido. This, however, does not deter crowds of enthusiasts and artists with easels from almost barricading the way to the little picture. Georg von Plenker suggests that Guido may have chanced to be in Rome on the day of the execution, and have been one of those who witnessed the procession of the condemned to the scaffold. He may then have made rough pencil sketch of Beatrice's beautiful face, and have completed the picture some years afterward. In like manner David, the French painter, made his frightful pencil sketch of Marie Antoinette as she was being led to the guillotine.

A similar cloud of doubts hangs over the history of

Beatrice. The biographers of the popes, as well as the newspaper correspondents of the time, say little about the case, and it is not till one hundred and fifty years later that Muratori publishes his annals of Italy with a more detailed account. His narrative remained the accepted one till the beginning of the present century, when several manuscripts came to light representing the father in a distinctly unfavorable light. Enough; here was material for poets! Shelley's drama appeared in 1819, and Niccolini, the Italian dramatist, followed with another. Byron considered the story better adapted to fiction, and Marie Henri Beyle ("Stendhal") published a list of the numerous romances founded on the story. Nor has Nietzsche been behind in the matter. In his psychological study of the Cenci he professes to have had access to hitherto unknown documents.

The most important of the new Cenci literature is Guerrazzi's novel (1854), a picture of hatred of the Pope and enthusiasm for freedom and humanity. The book had such an enormous success that clerical scholars were induced to take up the subject in defense of the Church, and several works were produced with varying success, till Bertolotti's great work on Francesco Cenci and his family made its appearance in 1877. Bertolotti, who defends the father rather than Beatrice, says that in his investigations he has consulted thousands of documents; but Georg von Plenker is of opinion that these documents represent only one side of the case, and he complains that though three centuries have elapsed since the great tragedy was enacted, the Church is still very shy about permitting access to its archives relating to this question.

#### FERDINAND FREILIGRATH.

In the March number of the Deutsche Rundschau Dr. Julius Rodenberg begins another chapter of reminiscences with the first installment of an article devoted to Ferdinand Freiligrath, the German poet. Freiligrath was born at Detmold in 1810; in 1838 he published his collected "Poems," and was granted a pension. In 1844, when he was drawn into the revolutionary movement, he wrote his "Glaubensbekenntniss," or "Confession of Faith," and gave up his pension on account of his democratic opinions. He fled first to Belgium and in 1846 to London, and in 1848 he published his revolutionary poems "Die Revolution" and "Februarklänge." These did not prevent his being included in the amnesty of March 19, and he returned to Germany to publish another poem, "Die Todten an die Lebenden" ("The Dead to the Living"). For this he was impeached, tried, and acquitted, but in 1851 another prosecution caused him to take refuge in London again, where he remained till about 1868. He died at Cannstadt in 1876. It was as a boy of fourteen that Dr. Rodenberg, through a sympathetic teacher, first came under the spell of Freiligrath's poems, and by 1848 Freiligrath was the poet of his heart. But Dr. Rodenberg had to wait till 1856 to make the personal acquaintance of the poet, who was then an exile in London.

#### ANTON VON WERNER.

The March Deutsche Revue contains a number of articles of general interest. Ottomar Beta, who writes on Anton von Werner, the German military and historical painter, records many of the artist's views on art gathered from conversations with him. Werner, who is now fifty-five, is also well known as a writer on art, and he is a musician of no mean order. At Versailles, in the campaign of 1870-71, he would often play on the 'cello the Bach-Gounod "Ave Maria" in the headquarters of the Crown Prince. He has the most delightful remembrance of the quartette evenings of Berlin, when, with Karl Becker, E. Teschendorff, and T. Rehbaum, he played quartettes once a week for nearly twenty years. Later, Frau L. Knaus, the pianist, joined the music party, and with the additional assistance of P. Meyerheim, Reinhold Begas, Kapellmeister Radecke, and others, the musicians made themselves familiar with most of the chamber music, ancient and modern, that had been written. The meetings took place every Thursday, and each member took it in turn, German fashion, to have the "evening" at his house.

#### THE ELZEVIR "REPUBLICS."

The Zeitschrift für Bücherfreunde for March contains an interesting article, by Georg Frick, on the Elzevir family of printers, publishers, and booksellers, with special reference to the series of "Petites Républiques" issued from their press. Louis Elzevir (1540-1617), the founder of the house, opened a small book shop at Leyden, near the university, and the first book which he published was an edition of Eutropius, the Latin historian, edited by P. Merula, in 1592. When Louis died the business was in a flourishing condition. and his work was held in high repute outside Holland. Five sons seem to have followed him in the business at Leyden, Amsterdam, and other cities, but after a century the firm may be said to have reached its zenith, and henceforth it gradually declined. Louis' son Bonaventura, and Abraham, Bonaventura's nephew, issued the famous series of beautiful historical and political works called "Petites Républiques." Between 1625 and 1649 thirty-four numbers had been produced.

In Heft 5 of the Gesellschaft F. A. Geissler has an article entitled "Wagner and Bungert." The subject, however, is August Bungert, the composer of a cycle of six operas founded on the Homeric stories and known as "The Homeric World," "Circe," "The Return of Odysseus," etc.; and his patrons have proposed to have a theater built at Godesberg for the performance of his Homeric music dramas.

The Preussische Jahrbücher for March contains the complete text of a lecture, by A. Schröer, on "The Future of the German Language," which was delivered before the Academic Society at Freiburg im Breisgau. The writer thinks it hopeless to attempt to compete with the use of English and French, but he would have the Germans take greater pride in their language and literature.

#### THE NEW BOOKS.

#### RECENT AMERICAN PUBLICATIONS.

#### SOCIOLOGY AND POLITICS.

Industrial Democracy. By Sidney and Beatrice Webb. Two vols., 8vo, pp. 957. New York: Longmans, Green & Co. \$8.

This country is honored just now by a visit from Mr. and Mrs. Sidney Webb of London, who arrived last month for a vacation sojourn of some weeks in the United States. Our readers will not be unfamiliar with the name of Mr. Sidney Webb, for he is one of London's foremost municipal statesmen. He has served with high efficiency for a number of years on the London County Council in the capacity of chairman of the Committee on Education; and only a few weeks ago in the great London election he was triumphantly returned for another term, with a heartiness of support from men who were once afraid of his radical views that gave the highest possible testimony to the practical value of his public services. Mr. Webb is an admirable writer who has contributed much to economic literature, and is a conspicuous advocate of the extension of governmental functions. His wife, as Miss Beatrice Potter, had before her marriage become well known as a writer upon industrial cooperation and other subjects of an economic character. For the past six years Mr. and Mrs. Webb have together devoted themselves to a profound study of English industrial life and organization. A preliminary volume, published some time ago, has now been followed by a monumental work in two large volumes entitled "Industrial Democracy." The book is a masterpiece in several senses. No one can doubt the unequaled grasp of these writers upon the facts with which their volumes deal; and upon the scientific side, therefore, they have made an enduring contribution to the history and theory of social economics. Further than that, they have achieved a literary triumph, in view of the artistic unity of the method they have employed, and the lucidity and charm of their style and treatment. This strong and learned study of a great theme is worth careful and thorough reading, because it carries one by methods of sure and clear analysis into the very heart of the structure of the democracy of our own generation. At another time we hope to present to our readers some of the important generalizations and specific conclusions to be found in these volumes.

The Science of Political Economy. By Henry George. 8vo, pp. 584. New York: Doubleday & McClure Company. \$2.50.

The last seven years of Henry George's life were mainly devoted to the writing of this book. When Mr. George entered the fatal New York mayoralty campaign last fall he had nearly completed the work; what he regarded as the essential features were in the form in which he wished them to be published. The readers of "Progress and Poverty" are conversant with the fundamental principles of Mr. George's system of economics, but in that work it was impossible to give an exposition of the system as a logical whole. "Progress and Poverty" was controversial rather than constructive. It was Mr. George's desire to leave behind him a treatise which should embody the great truths of his reconstructed science of political economy, stated in their logical sequence and perspective. Such a treatise is the work just published. It is marked by the same literary style which made "Progress and Poverty" one of the most widely read books of the century-a style unapproached by any other economic writer in the English language. The book is neatly printed and well indexed. It has an excellent photogravure portrait as a frontispiece.

Outlines of Sociology. By Lester F. Ward. 12mo, pp. 313. New York: The Macmillan Company. \$2.
Professor Ward's "Outlines" is to be numbered among

Professor Ward's "Outlines" is to be numbered among the most important of the recent American contributions to the comparatively new science of sociology. Its value, to a great extent, lies in the author's clear delimitation of the province of sociological investigation. Merely to mark off the field of this science in a way satisfactory to all investigators is a feat that no writer has yet accomplished. Yet it is obviously one of the primary tasks of the sociologist. It cannot be asserted that Professor Ward has done this work to the full satisfaction of all the schools, but if we mistake not he has made a distinct advance in this direction. In his exposition of what sociology is not, he clears the ground of what sociology is, he deals with vital and enduring principles.

Various Fragments. By Herbert Spencer. 12mo, pp. 209. New York: D. Appleton & Co. \$1.25.

The "fragments" of Mr. Spencer's voluminors writings brought together in this volume are chiefly concerned with social and political topics. Some of these utterances were called out by reviews of the author's "Sociology." The copyright question is discussed at some length.

Aristocracy and Evolution: A Study of the Rights, the Origin, and the Social Functions of the Wealthier Classes. By W. H. Mallock. 8vo, pp. 418. New York: The Macmillan Company. \$3.

In this volume the leading English opponent of modern socialism enters into an exhaustive argument to show the place of aristocracy, or rather, as the author explains his use of the term, of "the exceptionally gifted and efficient minority," in the social organism. This argument will be read with great interest by the opponents as well as by the indorsers of Mr. Mallock's views. The present volume, however, does not attempt a complete answer to the question in dispute between "the masses and the classea." It aims at establishing the social rights and functions of the minority, but it takes no account of the minority's duties to society. The author promises to deal with that part of the problem later.

The Statesman's Year-Book: Statistical and Historical Annual of the States of the World for the Year 1898. Edited by J. Scott Keltie, LL.D. 12mo, pp. 1196. New York: The Macmillan Company. \$3.

It is always a pleasure to receive the new volume of the Statesman's Year-Book. Dr. J. Scott Keltie's compilation for 1898 has all the merits of its long line of predecessors, while this new issue, like each of its recent companions in the series, has some excellent features of its own in the way of maps and special tables. No other compilation of like character can compare with the Statesman's Year-Book for accuracy and completeness in statistical and governmental information about all the countries and political divisions of the planet.

A Compilation of the Messages and Papers of the Presidents, 1789-1897. Published by Authority of Congress. By James D. Richardson. Octavo. Washington: Government Printing Office.

The Hon. James D. Richardson, a well-known member of Congress from Tennessee, has thought out and carried through a most interesting and useful publication. Of the nine volumes, nearly all have made their appearance. They contain the annual and special messages of all the presidents to Congress, and other important papers of an official char acter by our chief magistrates. If the collection is not quite exhaustively complete, very little of importance will be found wanting; and the volumes will prove of great con-

venience for reference. Its preparation has involved much labor, and is a credit to Mr. Richardson's intelligence and industry. The volumes are much more handsomely gotten up than the average specimen of bookmaking that comes out of the public printing office at Washington.

Cartoons by Homer C. Davenport. With an Introduction by Hon. John J. Ingalls. Folio, pp. 94. New York: R. H. Russell. \$1.75.

Very many of Mr. Homer Davenport's cartoons have been placed upon permanent record in the bound volumes of this magazine, and they will not escape the notice of the future historian when he searches in the public libraries for a knowledge of American politics in the closing years of the present century. Mr. Davenport is above all else a caricaturist. The present volume, in which his work is reproduced, consists in large part of portrait caricatures of individual men. These show an extraordinary ability, and establish for Mr. Davenport an extremely high place among the fifteen or twenty foremost political caricaturists and cartoonists of the whole world. The volume is very handsomely printed, and is a good thing to keep. Every copy of it will have a high value a few years hence.

Open Mints and Free Banking. By William Brough. 12mo, pp. 187. New York: G. P. Putnam's Sons. \$1.25.

Mr. William Brough maintains in this work the position taken in his essay on "The Natural Law of Money," in favor of the free coinage of both gold and silver, and of the virtual abdication by the government of the business of banking and of any form of control of the currency. This, he holds, might be done without disturbance to business and without such injustice to individuals as would assuredly follow a suspension of gold payment under our present monetary laws.

The Bargain Theory of Wages. By John Davidson, M.A. 12mo, pp. 322. New York: G. P. Putnam's Sons. \$1.50.

The author of this monograph, who holds the chair of political economy in the University of New Brunswick, has attempted to reconcile the theory of wages held by the late General Walker with the doctrine of the wages fund which General Walker himself so strenuously opposed. He finds some aid toward this attempt in the Austrian theory of value. As a convenient historical statement of the various theories on the subject of wages, the book will serve a useful purpose.

BIOGRAPHY.

Cheerful Yesterdays. By Thomas Wentworth Higginson. 12mo, pp. 374. Boston: Houghton, Mifflin & Co. \$2.

Among living Americans there are few indeed whose lives have been richer in interesting incident, fewer still who can write more gracefully of "Cheerful Yesterdays," than Colonel Higginson. With the exception of Dr. Edward Everett Hale, Colonel Higginson is the sole survivor of that group of brilliant writers which accomplished the transition from the early "transcendental" movement in New England to the anti-slavery propaganda represented by the Atlantic Monthly of the ante-bellum period. The chapter on "The Birth of a Literature" gives pleasing glimpses of the personal relations that existed between the most famous members of the Atlantic school. Then follow chapters on "Kansas and John Brown" and "Civil War," dealing with episodes less fitly grouped among the "Cheerful Yester-' perhaps, and yet not lacking in humorous suggestion. Hardly less entertaining are Colonel Higginson's reminiscences of his own participation in public affairs since the

Memoirs and Letters of James Kent, LL.D., Late Chancellor of the State of New York. By William Kent. 12mo, pp. 341. Boston: Little, Brown & Co. \$2.50. It seems strange that the publication of the memoirs of Chancellor Kent, "the American Blackstone," should have

been delayed for more than fifty years after that distinguished jurist's death. In the annals of the American bench and bar probably no name commands more general respect than that of the author of "Commentaries on American Law." Judge William Kent, son of the chancellor, had collected much of the material now included in this volume, but he died before it was ready for publication, and the work of editing was left to his grandson. Chancellor Kent's acquaintance with Alexander Hamilton and other public men of his day enhances the interest of his memoirs for the general reader. To the legal profession the book appeals with peculiar force; for Kent may almost be regarded as the founder of our system of jurisprudence.

General Grant's Letters to a Friend, 1861-1880. 12mo, pp. 142. Boston: T. Y. Crowell & Co. \$1.

This little volume contains the forty-eight letters and parts of letters addressed by General Grant to the Hon. E. B. Washburne during a period of nineteen years, beginning in 1861. An introduction and notes are supplied by Gen. James Grant Wilson. Some of these letters were published last year in the North American Review, where they aroused much interest. They form a unique contribution to history.

James Macdonell, Journalist. By W. Robertson Nicoll. 8vo, pp. 428. New York: Dodd, Mead & Co. \$2.75. This biography of a British journalist is not likely to appeal to a wide and curious audience, but those who read it will be thankful that it was written, and will recommend it to their friends. Mr. James Macdonell died nearly twenty

years ago, and the first English edition of this book appeared nine or ten years ago; but it is not too late even now to offer the book in a new edition te American readers. Macdonell was a Scotchman who served his journalistic apprenticeship in Edinburgh, and by stages advanced through the provincial press to important positions in London. For a good while he was in Paris as the correspondent of the London Daily Telegraph, and afterward he was a member of the staff of the London Times. His talents were great and his work of a high order. He was admired and respected by many of the most eminent public men of England, and few journalists have ever been more thoroughly esteemed by their professional contemporaries.

The Wound Dresser: A Series of Letters Written from the Hospitals in Washington During the War of the Rebellion by Walt Whitman. Edited by Richard Maurice Bucke, M.D. 16mo, pp. 206. Boston: Small, Maynard & Co. \$1.50.

These letters give an insight into army hospital life that has distinctive value, quite apart from the writer's own unique personality. The judgment of most readers will fully coincide with that of the editor of the volume in the opinion that the letters are not in any true sense literature.

John Wesley as a Social Reformer. By D. D. Thompson. 12mo, pp. 111. New York: Eaton & Mains. 50 cents.

This work treats briefly of Wesley as "the apostle to the poor," his influence on the social life of England, his opposition to slavery, his influence in America, and on the labor movement.

Sir Thomas Maitland; The Mastery of the Mediterranean. By Walter Frewen Lord. 12mo, pp. 321. New York: Longmans, Green & Co. \$1.50.

In the series of "Builders of Greater Britain" Sir Thomas Maitland has a place as "the only Mediterranean statesman that England ever produced." Living in the Napoleonic era, when the map of Europe was undergoing radical changes, Sir Thomas Maitland made it his chief endeavor to see to it that, so far as the Mediterranean was concerned, no change should be prejudicial to British interests.

Napoleon III. and his Court. By Imbert de Saint-Amand. Translated by Elizabeth Gilbert Martin. 12mo, pp. 407. New York: Charles Scribner's Sons. \$1.50. In this volume M. Saint-Amand exhibits the second French Emperor at his best. In the years 1853-56 Louis Napoleon was on dress parade. That was the period of his triumph. Among the important international events of those years were the Crimean War and the Paris Exposition. M. Saint-Amand writes with full personal knowledge of the period.

The Letters of Victor Hugo, from Exile, and After the Fall of the Empire. Edited by Paul Meurice. 8vo, pp. 249. Boston: Houghton, Mifflin & Co. \$3.

This volume is the second of the series edited by M. Meurice; it is made up of letters written by Victor Hugo to various persons between the years 1896 and 1882—a period covering such important episodes in French history as the Revolution of 1848, the Coup d'État of Napoleon III., the fall of the second Empire, and the establishment of the present republic. Many of the letters, especially those addressed to Mme. Hugo, have an intense personal interest.

Pasteur. By Percy Frankland and Mrs. Percy Frankland. 12mo, pp. 224. New York: The Macmillan Company. \$1.25.

This volume in the "Century Science Series" performs a useful service in telling such facts as the public chiefly cares to know about the life of the man who of all the scientists of the age has made discoveries most profoundly affecting our every-day existence. Although written by original investigators in Pasteur's field of research, the book is not of a technical character. It is remarkably successful in making clear the practical bearings of Pasteur's contributions to science.

Chambers' Biographical Dictionary: The Great of all Times and Nations. Edited by David Patrick, LL.D., and Francis Hindes Groome. 8vo, pp. 1002. Philadelphia: J. B. Lippincott Company. \$8.50.

This new edition of Chambers' Biographical Dictionary will be welcomed by all who have occasion to note facts in the lives of the world's great men. The revision has been brought down to the month of October last, and much new material has been incorporated, in one form or another.

The Canadian Men and Women of the Time: A Handbook of Canadian Biography. Edited by Henry James Morgan. 12mo, pp. 1130. Toronto: William Briggs. \$3.

The first feeling on taking up Mr. Morgan's "Canadian Men and Women of the Time" is likely to be one of mild wonderment at the bulkiness of the volume. Here are more than three thousand biographical exetches. Surely Canada is to be congratulated on having so many eminent citizens within her bounds. The chief features of the English "Men and Women of the Time" are adopted in this publication, and in addition Mr. Morgan has taken the trouble to incorporate in some of the sketches the subjects' opinions on the public questions of the day, and to supply the post-office address of each person represented. The work seems to have been compiled with much care.

#### HISTORY AND TRAVEL.

Marching with Gomez: A War Correspondent's Field Note-Book kept Four Months with the Cuban Army. By Grover Flint. With an introduction by John Fiske. 12mo, pp. 319. Boston: Lamson, Wolffe & Co. \$1.50.

Mr. Flint gives us by far the best description of the Cuban insurgents and their operations that has yet appeared. Mr. Flint was qualified by former experience in the United States Army on the great plains of the West to make an intelligent study of military movements, and residence in Spain had made him familiar with the language and modes of thought of the Spanish race. The introduction, contributed by Mr. John Fiske, is an admirable summary of Cuba's unhappy history under Spanish rule.

The Pilgrims in their Three Homes, England, Holland, America. By William Elliot Griffis. 16mo, pp. 300. Boston: Houghton, Mifflin & Co. \$1.25.

Dr. Griffis writes most entertainingly of the Pilgrim fathers and mothers in their social life, before and after the founding of Plymouth Colony. He emphasizes more than most historians the value of the Dutch influence. His book was suggested by the movement among American Congregationalists to commemorate at Delfshaven the twelve-years' residence of the Pilgrims in Holland prior to their sailing to New England in 1620.

A Literary History of India. By R. W. Frazer, LL.B. 8vo, pp. 474. New York: Charles Scribner's Sons. \$4.

The first volume in the "Library of Literary History" covers ground that to most American readers, at least, is comparatively unfamiliar. The monumental series of "Sacred Books of the East" is accessible to the scholars among us, it is true, and a few popular histories of India have been published in English, but we now have for the first time a connected history of the country worked out from literary evidences exclusively. The writer has long been one of the foremost authorities on matters connected with Indian literature, philosophy, and history.

Through South Africa. By Henry M. Stanley. 12mo, pp. 160. New York: Charles Scribner's Sons. \$1.

Any one at all interested in South Africa will be glad to get the impressions of so experienced a traveler as Mr. Stanley, who for many years has been the highest authority on other portions of the Dark Continent. This volume is made up of a series of newspaper letters written by Mr. Stanley during November, 1897, from Bulawayo, Johannesburg, and Pretoria. The book is provided with a good map.

#### LITERATURE.

Benjamin Franklin. Edited by Bliss Perry. 18mo, pp. 185. New York: Doubleday & McClure Company. 80 cents.

In the series of "Little Masterpieces" now coming from the Doubleday & McClure press a book of extracts from the writings of Benjamin Franklin has wisely been included. Selections from the "Autobiography," "Poor Richard's Almanac," and a few of the genial philosopher's essays and letters are presented in this convenient form. As to Franklin's place in American literature, Professor Perry's judgment seems to us eminently sound: "We have had plenty of gloomy, stormy geniuses since Franklin's day, but we have had very few men who could write a better page of English prose."

Daniel Webster: Representative Speeches. Edited by Bliss Perry. 18mo, pp. 183. New York: Doubleday & McClure Company. 80 cents

The Websterian contribution to "Little Masterpieces" consists of the eulogy of Adams and Jefferson and the "Reply to Hayne." While these speeches fully justify the title of the book, it seems peculiarly unfortunate that the Plymouth address, the Bunker Hill oration, and the argument in the Dartmouth College case should not be represented even by brief selections.

#### BOOKS ON EDUCATION.

The Meaning of Education, and Other Essays and Addresses. By Nicholas Murray Butler. 12mo, pp. 241. New York: The Macmillan Company. \$1.

Several of the most important of Dr. Butler's recent contributions to the discussion of educational problems are included in this volume. "What Knowledge is of Most Worth?" "Is there a New Education?" "Democracy and Education," "The American College and the American University," "The Function of the Secondary School," and "The Reform of Secondary Education in the United States" are the titles of these papers, some of which have already appeared as magazine articles, while others have been read at meetings of educational associations. We are sure that

the teachers of the country will be glad to have these articles and addresses brought together in a single volume. On all that pertains to the science of education no writer more readily commands assent than Dr. Butler.

Thoughts and Theories of Life and Education. By J. L. Spalding. 16mo, pp. 286. Chicago: A. C. Mc-Clurg & Co. \$1.

As an essayist on educational subjects Bishop Spalding has been universally commended. There are few American writers who combine such breadth of view with a like facility of expression.

The Children of the Future. By Nora Archibald Smith. 16mo, pp. 165. Boston: Houghton, Mifflin & Co. \$1.

Heretofore Miss Smith has been chiefly known to the reading public through her collaboration with Mrs. Kate Douglas Wiggin in the authorship of "The Story Hour," "Children's Rights," and "The Republic of Childhood," a charming series of books dealing with various phases of the kindergarten, though several of the essays included in the present volume have appeared in the Outlook and Table Talk. These essays are addressed primarily to mothers, and have been written in a most helpful spirit.

The Common School and the New Education. By Maximilian P. E. Groszmann, Ph.D. Paper, 16mo, pp. 46. Syracuse: C. W. Bardeen. 25 cents.

#### SCHOOL TEXT-BOOKS.

THE LUXURY OF SHAMPOOING

is experienced in its fullest sense with the use of

# PACKER'S TAR SOAP

This pure, bland, antiseptic soap not only cleanses the hair and scalp thoroughly, leaving the hair soft and lustrous, but it refreshes, invigorates, and promotes healthful conditions. It is invaluable in treatment of dandruff and falling hair.

"It is especially an all-round soap, good for the body and for the hair and scalp,"—Woman's Medical Journal,

THE PACKER MFG. CO., NEW YORK.

stiffened and bound with Corduroy, made of All-Wool Cloths, Serges, Cheviots, etc., in all the latest effects, \$4 up.

Special Values in Bicycle Suits in all the newest fabrics, \$4.50 up.

Separate Bicycle Skirts, \$3 up.

Our line of samples includes the newest materials, most of them being exclusive novelties not shown elsewhere. We also have a special line of black goods and fabrics for second mourning. All orders are filled with the greatest promptness. Write to-day for catalogue and samples; you will get them by return mail.

THE NATIONAL CLOAK COMPANY, 119 and 121 West 23d St., New York City.

# The World of Thrift and Money Matters.

Southern Cotton Mills.—While the newspapers have been full lately of labor troubles in the cotton mills of New England-cuts in wages, strikes, lockouts, petitions, complaints, and the whole dreary round—the dispatches have from time to time recorded a far different condition of affairs through the Southern States. It looks as if Georgia, Alabama, and the Carolinas had found the remedy for over-production and the consequent five-cent cotton which has been declared to mean ruin for Dixie. Mills have been springing up like mushrooms during the last year or so, for the pioneers have so successfully demonstrated their ability to compete with New England in this respect that unlimited capital has been forthcoming for such enterprises. A number of the foremost business men and manufacturers of Massachusetts have memorialized the Legislature of that State, setting forth the disadvantages under which they are laboring as compared with their Southern rivals and petitioning for relief in the form of lower taxes. Meanwhile the mills in the cotton-growing region, close to the raw product and so saving freight, with an abundance of cheap fuel, cheap labor, and with low taxes, are uniformly prosperous. There are to-day fully 500 such factories south of Mason and Dixon's line, and a recent writer estimates that they have cost two-thirds less money than plants operating an equal number of spindles at the North. Of these South Carolina has about 70 and North Carolina has nearly 200. Durham, in the latter State, has developed almost beyond belief along these lines, and is now a source of supplies for many smaller mills who get yarn there to make into various fabrics and then send their products back to be The same observer writes:

"I saw three factories built of unhewn logs. The girls who were weaving cloth by 'piecework' could look at the bark on the logs while they earned from \$2 to \$4 a week—big wages for them. Better factories are put up two stories

high of brick. These brick are put into the walls for \$6.50 per thousand. There is no paint or whitewash to look at—just plain bricks and mortar. The machinery is often second-hand and owned by some Northern factory which has changed its machinery to better machinery from England."

"How do they start a factory in the South?" "I saw a factory just started in Columbia. The money of colored men was behind it. They bought an old abandoned tobacco factory. Part of it was a tobacco shed. It cost \$3,000. Then, with some Northern backing, they went to Maine and bought four sets of machinery second-hand—the Maine factory replacing it with superb machinery from Manchester to do fine The Columbia factory, fitted up, cost about \$15,000. A factory in New England able to do the work of this factory would cost \$75,. This factory is run by negroes. cannot get over \$8 a month on the farms, and they are willing to work for the same wages in It is a missionary work to give them work at any price. This mill will make plain three-cent sheeting, and can produce it a third cheaper than Fall River.

"There are other factories in Columbia making heavy tent cloth, beautiful goods, and they can make it cheaper than they can in England."

Spain's Trade.—A very special interest attaches to the financial and commercial condition of Spain just at present. The following statistics come from a Madrid newspaper, and show a decidedly larger increase in the imports for 1897 than in the exports. A peseta is worth about 19.3 cents, so the entire exports amounted to less than \$180,000,000:

"The imports amounted to 793,341,121 pesetas, as compared with 748,986,377 pesetas in 1896 and 703,792,244 pesetas in 1895. The exports were of the value of 924,936,047 pesetas,

as against 892,328,618 pesetas in 1896 and 692,-635,935 pesetas in 1895. The exports of last year exceeded, therefore, the imports by 131,-594,926 pesetas. With regard to imports, an increase is observable in the following articles: Glass and china ware, drugs and chemical preparations, cotton, vegetable fibers, papers, wood, live-stock, machinery, and carriages. Of imports of a more special nature, railroad material, gold and silver have increased, while tobacco for the Compana Arrendataria has increased to the extent of nearly 12,000,000 pesetas. Exported articles show an increase except wool, live-stock, machinery, and foodstuffs. The value of exported Spanish wine of a common class has decreased by about 20,000,000 pesetas and of spirits and olive oil by 12,000,000 pesetas. Oranges, on the other hand, exceed the preceding year's export by 11,000,000 pesetas. customs dues collected show 8,205,824 pesetas less than in 1896, attributable in large measure to the decrease in imported cereals."

The Demand for Ships.—It is an ill wind that blows no one good, and the shipbuilders certainly have no cause to complain over the war excitement which has so unsettled most busi-Owners of war vessels have found themselves in the enviable position of being pressed to dispose of their wares at fancy prices, and no sooner were all the available torpedo-boats and cruisers snapped up than the Naval Board began to turn its attention to the passenger steamers which might serve as auxiliary cruisers. sels belonging to the Ward line, the North German Lloyd, the Red D, the Hamburg-American, the Savannah, and the International Navigation Company have all been examined and reported on, and up to the middle of April four steamers belonging to the Morgan line had been actually purchased, while negotiations were in progress for three from the Old Dominion Company. is fortunate for these passenger lines that they have some outlet, for the transatlantic traffic in particular is far short of the normal amount and most of them will hardly make up their losses in It is stated that the shipbuilding industry on the Clyde has experienced an altogether unexampled boom. The output from the Clyde yards during March was 40,000 tons. were also booked during that month for 120,000 tons, making the work now in hand or ordered 625,000 tons, which is double the entire output during 1897. In this connection it is interesting to note that Lloyd's annual report shows the United States to hold second place in the merchant shipping of the world, something like 4,769,000 tons being placed to her credit. Great Britain, of

## New England Loan

### Trust Company,

#### DIRECTORS:

R. B. FERRIS, HENRY D. LYMAN, HENRY WHELEN, G. W. MARQUARDT, F. K. HIPPLE, II. J. PIERCE, E. D. SAMSON, W. W. WITMER, JOHN WYMAN, D. O. ESHBAUGH, W. F. BARTLETT.

We have been engaged for twenty-two years in lending money on first mortgages on real estate. The mortgages thus obtained are deposited with a trustee, and bonds which are the direct obligations of the Company are issued against the mortgages so deposited. They are issued in denominations of \$200 and upward. They are payable in gold and bear 5 per cent. interest per annum, payable semi-annually. We offer these bonds at par and interest. Investors who prefer may purchase the mortgages themselves.

About 8,000 investors in our securities include insurance and trust companies, savings banks, universities, colleges,

trustees, guardians, and individuals.

#### The Battle-Line of Freedom

TO-DAY

#### is in the Island of Cuba.

Every lover of liberty should help the cause of Cuban independence by purchasing

#### CUBAN BONDS.

It is now clear to almost every mind that Cuba will achieve her independence, when these bonds, now selling at 50 per cent., will be worth more than par, and if Cuba joins the Union of States, which is very probable, they will become U.S. bonds.

Further particulars upon application.

#### SPECIAL NOTICE.

Every friend of Cuban independen e and every person who has contributed in any way to the cause of Cuba should place themselves in communication with

THE CUBAN-AMERICAN LEAGUE, Room 82, No. 115 BROADWAY, NEW YORK CITY.

13 ASTOR PLACE, NEW YORK CITY, April 12, 1897.

April 12, 1897.

About three months ago I secured an Electropoise for my wife. She was a martyr to neuralgia, the suffering being so great (caused from nausea) that she had to stay in bed, I am happy to say she is now able to go out in all kinds of weather, which, before the Electropoise came to our lot, would have been the beginning of a sick spell. Trusting that all who know what neuralgia really is will get one of your little instruments at once, I am

Yours truly, WILLIAM WATT, Advertising Editor Review of Reviews.

The Electropoise is cheaper than medicinedoes not wear out-can be used on every member of the family and costs only \$10. A new edition of our 112-page booklet mailed free.

### THE REX CYCLE.

OR several years after the general adoption of the "safety" and the pneumatic tire no radical change was made in the bicycle. The new models each season exhibited various minor alterations from those of the preceding year, but beyond a general decrease of weights and a number of convenient devices, the bicycle remained in itsentirety the same thing for seven or eight years. last season, however, rumors of entirely new developments filled the air, and the chainless wheel has been a bone of contention ever since with the bicyclists and the makers alike. There is only one of the largest firms who declare the chainless model is superior to the best chain wheel; the others have apparently adopted the new idea more in response to a public demand for novelty than because they felt its finality. One good result of the agitation and discussion, however, has been a general stirring up of the whole subject, and perhaps the most remarkable product of this dissatisfaction with the former wheels is the machine lately put on the market by the Rex cycle.

In point of fact this is not a bicycle at all. has three wheels tandem, the saddle being attached to a long curving backbone which sweeps from the front of the frame over the power wheel and terminates in a small trailing wheel just behind it. This trailer is attached by means of forks to head built on the same plan as the steering head, and its contributions to comfort, safety, and ease of handling seem to be extraordinary. The makers claim (and produce sweeping testimonials to bear out their contention) that the Rex, by its equal distribution of the rider's weight and its three bearing surfaces, does not transmit half as much jar and jolt from a given obstacle as the safety, calculating that the tilt to its saddle in passing over a three-inch obstruction is only three-eighths of an inch; if the middle wheel slips the back wheel swings to the side and props up the machine; it will stand alone! and the rider can come to a dead stop and then start again, so that the difficulties of balancing while learning to ride and the dangers of wheeling in a crowded city are minimized; the position of the wheelman over the middle of the machine causes a great saving of power in hill-climbing: and finally, by means of its rear joint one can turn around on it in a space of five feet. With all these advantages its weight is only from twentyeight to thirty-two pounds, fully fitted out, and its tires are much less liable to puncture, since the pressure is divided up among three wheels instead of two.

### RIDE A WHEEL THAT IS NOT A DEPARTMENT STORE WHEEL

THE "RIPEST FRUIT OF INVENTION."

### Rex Cycle Tandem.

READ WHAT PEOPLE WHO RIDE THE REX SAY. We have Such Letters by the Hundred.

We do not need any particular Saddle or Spring Seat post, or roads built for our wheel. Rex Cycles are built for any kind of roads. Absolutely non-vibrating and free from jolts and jars.

PINCKNEY & TATGE, Attorneys and Conselors, Suite 503-504, First National Bank Bldg. Telephone Main, 3631.

CHICAGO, ILL., December 22, 1897.
REX CYCLE COMPANY, No. 84 Adams St., Chicago.
Gentlemen: - After a thorough test of the Rex

l'andem last summer and fall, on all kinds of roads randem last summer and fall, on all kinds of roads and with many different people, it gives me great pleasure to say that it is the easiest riding machine lever mounted. My wife and I have ridden your machine on roads so rough that we could not have stayed on any other tandem. The rougher the roads the more marked is the superiority of your wheel over other wheels. Your wheel, properly introduced will prove a world beater. Sincerely yours, (Signes) M. W. PINCKNEY.

Ladies' Rex Cycle.

REX CYCLE CLUBS are the fad of 1898. Why not organize one in your town? They are exclusive and are protected by the Individuality and High Grade of Rex Cycles.

NOTE.—All Rex Cycles are fully warranted, and if not found all we claim for them we will take them back and refund full purchase price.

"THE REX IS A MARVEL OF INVENTIVE SKILL."

We refer to the Globe Nat'l Bank of Chicago or any other names given in our 1898 Catalogue. Send for it, REX CYCLES ARE THE ONLY STRICTLY HIGH-GRADE WHEELS NOW EXTANT.

OUR TANDEMS CAN BE TURNED IN THEIR OWN SPACE. THINK OF IT. IF CHAINLESS GEAR PROVES A SUCCESS WE CAN EASILY APPLY IT TO THE REX, BUT WE WILL NOT EXPERIMENT. IT IS NOT A QUESTION OF GEARS, BUT SPEED, AND COMFORT.

# The American Monthly Review of Reviews

### Bind the Semi-Annual Volumes.

THE December number of 1897 rounded out the sixteenth volume of the American Monthly Review of Reviews.

Complete unbound volumes delivered to us, postage or express prepaid, and in good condition, with covers on, will be exchanged for bound volumes and returned, charges prepaid by us, for 75 cents a volume. Back numbers for filling out volumes can be supplied as far back as April, 1892, for 20 cents each.

Those who desire to have binding done in their own localities will be furnished with binding cases for each volume at 50 cents each, postpaid.

Numbers can be mailed to us for 4 cents per pound (no limit as to size of package; page 903, January, 1898, Postal Guide). This will be found cheaper than express in most cases.

Frances E. Willard, President World's W. C. T. U.—"The brightest outlook window in Christendom for busy people who want to see what is going on in the world."

Chauncey M. Depew, President New York Central R. R.—"The Review of Reviews is the best medium through which a busy man can keep abreast with magazine and review literature, which has now become so voluminous that unless digested no one can follow it."

Francis E. Clark, D.D., President Un. Soc. of Christian Endeavor.—" It is the most valuable magazine published. It is such a happy combination of timely articles and articles of lasting interest that it is becoming quite a necessity to me, and I am sure I am speaking for thousands of other professional men."

Hon. Theodore Roosevelt.—"The Review of Reviews does really important work, because it not merely gives an epitome of what is going on in the world, but a chance to every man of whatever political creed, who writes seriously and deeply, to reach the classes of our people most interested in the vital government and social problems of our time. I know that through its columns, views have been presented to me that I could not otherwise have had access to; because all earnest and thoughtful men, no matter how widely their ideas diverge, are given free utterance in its columns."

If the can show you a Wash-burn, but be on your Washburn were guard against imitations. not the prod-Write today for a beautiful souvenir catalogue, containing portraits of 100 leading artists, and illustrations of Washburn Mandolins, Guitars, Banjos and Zithers. Address the makers.

CHICAGO.

A new and wonderful invention that instantly converts any plano into a self-playing instrument. In every house where there is a plano the ANGELUS ORCHESTRAL PLANO PLAYER is needed,

STRAL PIANO PLAYER is needed,
No musical talent on the part of the
performer is required. A child that
has never before seen a piano can, with
the aid of the ANGELUS ORCHESTRAL
PIANO PLAYER, render the most difficuit compositions in a manner possible
to only the most accomplished and
practised of pianists. Contains (in addition to the piano-playing mechanism)
two full sets of organ reeds, which may
be played separately or in company
with the plano.

The above is a very brief and incomplete account of the ANGELUS ORCHESTRAL PIANO PLAYER. Send your name and address on a postal card and we will mail you descriptive catalogue.

# SHIRTS made to order, and the beat Ready-to-Wear Shirts .....

BELIEVE there are thousands of gentlemen, who would be willing to pay a little more money for shirts if they could secure something thoroughly up-to-date,

and shirts which would be a happy revelation in the matter of fit and quality. I MAKE SHIRTS TO ORDER; that's been my specialty for years. I shirt the most careful dressers in Cincinnati. I will make you one shirt at the half-dozen rate, and trust to my ability to please you for an order for five more. It'll come. Send me your name and address; I'll forward you samples, self-measurement blank, etc. I also make the "Gofton" ready-to-wear shirt—a little higher in cost than the usual ready-made shirts, but mine fit, are made better, and the materials are finer. White or colored, \$1.50 esch. Neck, sleeve, shirt measurement, all I want to know. Write me to-day for samples. Postal is sufficient. Reliable agents wanted.

JUDIES CONSTITUTE OF STANDES

By years of persevering endeavor, we have made possible the fact that shoes can be made to sell at popular prices and have the same material, styles and wearing qualities to be found in high price shoes. It is our earnest desire to please the public, which we endeavor to do by giving the best value in shoe leather that experience and skill can produce.

Our spring and summer styles are made on many new lasts, especially designed to counteract the annoyances usually found in summer shoes, and still retain the latest shapes. We have all the popular leathers, such as Black, Tan and Brown Vict Kid, Brown and Tan Willow Calf, Calf, Patent Calf, French Enamel, etc., made in 155 styles and widths from A to EE.

NONE GENUINE unless W. L. Douglas name and price is stamped on bottom. If not convenient to our stores or dealers, try our Mail Order Department. We send shoes everywhere on receipt of price with 25 cents extra for carriage. State size and width wanted, we can fit you.

CATALOGUE FROM W. L. DOUGLAS, Brockton, Mass.

# The Shepard Consumption Treatment for Consumption

cures by arresting the progress of the disease and developing into full healthy activity the remaining parts. Dr. Shepard has demonstrated that one lung will be sufficient for the ordinary demands of life, and no case is necessarily hopeless where 50 per cent of the lungs have not been wasted away.

# MaltzYutrine

A PURE. STRENGTHENING TONIC.

Malt-Nutrine is unlike the many other preparations with similar names. It is a pure, strengthening, palatable tonic, while others are, in most cases, simply a strong, dark beer. Malt-Nutrine is concentrated nutriment—it builds up the entire system, insures a gain of flesh of from one to two pounds a week. Doctors agree that Malt-Nutrine is invaluable for the nourishing of convalescents. It is prepared by the celebrated Anheuser-Busch Brewing Ass'n, which fact guarantees the purity, excellence and merit claimed for it.

An interesting Booklet mailed for the asking. Anheuser-Busch Brewing Ass'n, St. Louis, U. S.

### Don't Study the Bill of Fare-Use Pepsalt and Eat Anything

That salt-shaker is filled with Pepsalt. It cures and prevents indigestion.

# Pepsalt

cures and prevents indigestion.

## Pepsalt

in looks and taste cannot be told from table salt.

# Pepsalt

is to be used in place of table salt at your

### Pepsalt

supplies what is required and at the right time.

PEPSALT is the best of table salt, into every grain of which is incorporated digestive substances natural to the stomach. Fill your salt-cellar with Pepsalt and use it in place of salt at your meals. Pills or aperients for indigestion force out the food which should, in order to sustain life, remain in the stomach and become digested. Pepsalt helps to completely digest all the food you take into your stomach. If you have indigestion your stomach does not supply the necessary amount of the dissolving or digestive juices. Pepsalt, taken in place of salt at your meals, makes good this deficiency, as you take with every mouthful of your food a similar substance to that which is repuired and at the right time. Your food commences to digest immediately. The result is complete digestion of what you eat. You enjoy your food, your health is good and your indigestion is a thing of the past. Send for sample in salt-shaker bottle and try it. Price 25 cents, postpaid.

The Vaupel Samaritan Co., (Permanent Bldg.), 179 Euclid Ave., Cleveland, Ohio.

Book That Tells All Mailed Fre WILSON EAR DRUM 505 Trust Edg., Leubville, Ky.

# The Sheet covers a multitude of sins

when spread over a HAIR mattress. A microscopic examination of even the best quality of hair would fill you with horror untold, and the old idea that "it must be hair" is a relic of the dark ages.

# Send us a postal card to-day

and we will mail you our handsome pamphlet "The Test of Time," which will tell you of **The Ostermoor Patent Elastic Felt Mattress, \$15.**—a product of modern science and sanitary teaching (size 6 feet 3 inches long by 4 feet 6 inches wide—express charges paid anywhere), which consists of airy, interlacing, fibrous sheets of snowy whiteness and great elasticity; closed in the tick by hand, and never mats, loses shape or gets lumpy. Is perfectly dry, non-absorbent, and is guaranteed vermin-proof. Tick may be removed for washing without trouble. Softer and purer than hair can be; no re-picking or re-stuffing necessary. Made in all sizes.

#### **GUARANTEE:**

Sleep on it for a month, and if it isn't all you have hoped for in the way of a mattress; if you don't believe it to b the equal in cleanliness, durability and comfort of any \$50 hair mattress ever made, you can get your money back by return mail—"no questions asked."

#### NOT FOR SALE AT STORES.

Wretched imitations are offered by unscrupulous dealers—our name and guarantee is on every mattress.

OSTERMOOR & CO., 123 Elizabeth Street, New York City.

We have cushioned 25,000 Churches. Send for our book, "Church Cushions."

The Chicago Evening Post printed more publishers' advertising during the year 1897 than any other paper in the United States, with the exception of The Evening Post, of New York. Its readers are book-buyers and book-readers.

# The Regal Golf.

(Photographed from King Calf Russet Shoe.)

\$3.50 Per pa

MARIANI & CO., 52 WEST FIFTEENTH STREET, NEW YORK.

Paris: 41 Boulevard Haussmann. London: 83 Mortimer Street. Montreal: 28-30 Hospital Street.

Dr. William A. Hammond, Surgeon-General (retired) United States Army, formerly Professor of Diseases of the Mind and Nervous System in the University of New York, etc., Wa hington, D. C.:

"I have BUFFALO LITHIA WATER blo effect. When taken in large quantities, its influence in such cases is unmistakably beneficial. In one case of Puerperal Mania it was a powerful adjunct to the other means used to effect a cure."

"As a preventive of Puerperal ConBUFFALO LITHIA WATER as most valuable. It
vulsions and Puerperal Mania I regard the BUFFALO LITHIA WATER should with this view
form the constant beverage of pregnant women in the place of ordinary water. I have had considerable experience
with this water in the treatment of Bright's Disease. I have witnessed the Albuminuria of this affection and
also casts of the renal vessels disappear on the use of the water, and this not only in a single case, but in
several of which I have full notes. It must in these cases also be taken in large quantities and its use continued for
a considerable time."

Dr. William H. Drummond, Professor of Medical Jurisprudence, Bishop's University, Montreal,

"In the Acute and Chronic Nephritis—Bright's Disease of the Kidneys of Gouty and Rheumatic origin—as well as in the graver of Albumianuria of Pregnancy, I have found BUFFALO LITHIA WATER and I know of no other natural agent possessing this important quality."

Dr. G. A. Foote, of Warrenton, N. C., ex-President State Medical Society, formerly member of the State Board of Medical Examiners and also of the State Board of Health:

"In Bright's Disease of the Kidneys I have in many cases noted the disappearance of Albuminuria and casts under BUFFALO LITHIA WATER which I regard as the most efficacious of known remedies the action of BUFFALO LITHIA WATER in this distressing malady, so difficult of successful treatment. I have also witnessed excellent results from this water in Albuminuria of Pregnancy, and it is my habit to prescribe its free use in every case of pregnancy under my care, certainly after the sixth month, and I have yet to see any untoward results where my directions were obeyed. That the water is a preventive and antidotal to the causes producing Nausea, Headache, and Puerperal Convulsions, in my opinion admits of no question."

George Halstead Boyland, A.M., M.D., of Paris, Doctor of Medicine of the Faculty of Paris, in the "New York Medical Journal," August 22, 1896, says:

"There is no remedy so absolutely specific in all forms of Albuminuria and Bright's Disease, whether acute or chronic, as BUFFALO LITHIA WATER Spring No. 2, accompanied by a milk diet. In all cases of pregnancy where albumen is found in the urine as late as the last week before confinement, if this water and a milk diet are prescribed the albumen disappears rapidly from the urine and the patient has a positive guarantee against puerperal convulsions. Used as a substitute for ordinary water during gestation, it will be found invaluable as a preventive of puerperal convulsions and other disturbances incident to this condition. It is also an undoubted tonic to both mother and child, allaying at the same time nausea and vomiting."

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally. Pamphlets on application. Springs open for quests from June 15 to October 1.

# The New Macmillan Novels.

MRS. HUMPHRY WARD'S NEW NOVEL.

By the author of Robert Elsmere, etc., etc.

### HELBECK OF BANNISDALE.

Cloth, Crown 8vo.

BY THE SAME AUTHOR.

#### David Grieve.

#### Marcella.

Sir George Tressady.

"It is doubtful if any other woman could have given us such brilliant and thought-inspiring works as 'Robert Elsmer,' Marcella,' and 'The History of David Grieve.'"—The Herald, New York.

OTHER NEW NOVELS.

#### The General Manager's Story.

By HERBERT E. HAMBLEN, author of "On Many Seas." Illustrated from actual life by W. D. STEVENS.

Cloth, crown 8vo, \$1.50.

He knows the life thoroughly, from fifteen years of experience; he describes vividly, dramatically, in a book of intense interest, the story of labor as seen from the inside.

#### The Gospel of Freedom.

By Robert Herrick. Cloth, crown 8vo, \$1.50.

"A novel which is likely to be widely read, and to bring its author recognition as one who must be counted among the few write-who have the ambition, the patience, and the special talents for undertaking the serious treatment of American lite."

GEORGE R. CARPENTER, Columbia College.

#### THE FOREST LOVERS.

By MAURICE HEWLETT, author of "Pan and the Young Shepherd." Cloth, crown 8vo, \$1.50. Just Ready

An unusually striking novel, the freshest, sweetest romance imaginable; a tale of forest love and chivalry as idyllic as the most perfect story of King Arthur's Table or the court of Robin Hood.

#### At You All's House.

By James Newton Baskett. Cloth, \$1.50. Just Ready.

A nature story, picturing rural Missouri for unfamiliar Northern readers. Its peculiarities are charmingly described.

#### The Celebrity.

By Winston Churchill. Cloth, crown 8vo, \$1.50.

"When a book reaches a third edition within a month from the time it is issued and before one gets around to reviewing it there is an obvious inference to be drawn. It is a book that is liked by the public, and the question becomes, Why is it liked? In the present instance there is more than one reason. . . In a word, Mr. Churchill's book is as modern as the latest thing in boots, and we suspect that this quality more than any other accounts for the three editions."—The Times, New York.

#### Tales Told in a Coffee House.

By CYRUS ADLER and ALLEN RAMSAY.

Cloth, 16mo, 75 cents.

Turkish tales in an unusually attractive setting. Actually heard in the coffee houses by the author.

#### Where the Trade Wind Blows.

By Mrs. SCHUYLER CROWNINSHIELD. Cloth, \$1.50.

TALES OF CUBAN LIFE.

"One of the most original and distinctive of current books...
It is a collection of tales descriptive of life in the West Index.
But even the shortest has central idea plot and development; is a compact little drama. We commend this book to any who want something fresh and good in fiction."—The Evening Tempaph, Philadelphia.

### PARIS.

In two vols., \$2.00.

By M. ZOLA.

THE DOWNFALL.
In one vol., \$1.50.

"I defy the unprejudiced reader to refuse to salute in the creator of these vast monuments a great and honest man of letters and the robust talent of our day."—Paul Bourget.

### THE PRIDE OF JENNICO

By Egerton Castle. Cloth, \$1.50.

"Everybody is reading—or ought to be reading it . . . a bewitching romance. One of the newest and best novels of the decade."

—The Tribune, New York.

WAR STORIES.

#### ARMY.

#### Southern Soldier Stories.

By George Cary Eggleston. Illustrations by Rufus F. Zog-BALM. Cloth, crown 8vo, \$1.50.

"Every line of the book rings true. It is good work, honestly done; and while youthful readers will revel in it from the standpoint of the story, their elders will enjoy the gleams of dry humor which follow so closely upon the pathos."—The

#### NAVY.

#### Yankee Ships and Yankee Sailors.

By James Barnes. Illustrated by R. F. Zognaum and C. T. Chapman. Cloth, crown 8vo, \$1.50.

"There are no more wholesome books, and none of greater influence upon the youthful mind, than such contributions to the literature of to-day as James Barnes makes in his authentic stries of the navy. One cannot praise too highly such influential books."—The Army and Navy Register.

# THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

# The Macmillan Company's New Books on the study of Nature.

# FOUR-FOOTED AMERICANS

AND THEIR KIN. A STORY OF NATIVE MAMMALS.

BY MABEL OSGOOD WRIGHT, AUTHOR OF "CITIZEN BIRD," ETC.

With over 70 illustrations by ERNEST SETON THOMPSON. In Press.

This is the second issue of the Heart of Nature Series, and it deals with all the principal American mammals.

#### NATURE STUDY FOR ELEMENTARY SCHOOLS.

By Mrs. L. L. W. Wilson, Ph.D., Head of the Biological Laboratories in the Philadelphia Normal School for Girls, and in charge of the Nature Work in its School of Observation and Practice.

IN TWO VOLUMES. Vol. I., READER; 35 cents. Vol. II., TEACHERS' MANUAL; 90 cents.

"Full of suggestion abounding in information, instinct with inspiration. Nothing has yet appeared along this line that is more complete, varied, judicious, and directive than this book—it is peerless."—New England Journal of Education.

#### Citizen Bird.

#### Scenes in Bird Life in Plain English for Beginners.

By MABEL OSGOOD WRIGHT and ELLIOTT COUES.

With illustrations by Louis Agassiz Fuertes.

Cloth, crown 8vo, \$1.50 net.

"A delightful and at the same time a most instructive book."-New York Herald.

#### Wild Neighbors.

#### Out-Door Studies in the United States.

By ERNEST INGERSOLL.

With 20 full-page illustrations and other smaller cuts.

Orown 8vo, cloth, \$1.50.

"Mr. Ingersoll has gathered a fund of entertaining knowledge and imparted it with a directness and enthusiasm that compel attention and interest." Out ing.

#### FIRST LESSONS WITH PLANTS.

Being an Abridgement of "LESSONS WITH PLANTS."

By L. H. BAILEY, Professor of Horticulture, Cornell University.

Cloth, crown 8vo, 40 cents net.

"It is new in matter, in illustrations, and in methods. Its greatest value will be in affording stimulating suggestions to both teacher and pupil in primary and secondary schools. When we look at the treatment we find a newness and freshness which tell of the master who wrote the suggestive pages."—Science.

#### THE MOST PRACTICAL KIND OF GARDENING.

Make use of the laws of science and the experience of years.

Just Ready. New volumes in the Garden Craft Series.

By Prof. L. H. BAILEY, of Cornell University.

Prof. C. E. Bessey, of the University of Nebraska, writing of one of the author's previous works, said in Science: "Whatever Professor Balley writes is interesting reading. He has the rare gift of entertaining style, and what he writes people want to read. All his previous books have been widely read, and this will prove no exception to the weil-established rule. The secret of this popularity, if there be any secret about it, is that when he writes he has something new to say—something based upon experiences and observations. These are by no means all his own, for he has the ability to see with the eyes of other people, as well as with his own. He is thus able to bring into his pages a rich mass of new matter, which gives them additional interest and value."

### Garden-Making.

#### Suggestions for the Utilizing of Home Grounds.

By Prof. L. H. BAILEY,

Aided by L. R. Taft, F. A. Waugh, and Ernest Walker, 256 illustrations. Cloth, 16me, \$1.00.

It tells of gardening of any range, with lists of suitable trees and shrubs; treats of fruits and of vegetables for home use, and gives the word of instruction hitherto unattainable in any one simple and compact book. No modern American work coversthis important field.

### The Pruning-Book.

# A Monograph of the Pruning and Training of Plants as Applied to American Conditions.

By Prof. L. H. BAILEY, Cornell University.
888 illustrations. Cloth, 16mo, \$1.50.

Until the appearance of this book, there had been no complete and consistent discussion of pruning. It states principles; and then the various practices of pruning are considered in full detail, and a vast fund of carefully collected data is made serviceable to the reader.

SEND FOR A DESCRIPTIVE CIRCULAR OF PROFESSOR BAILEY'S BOOKS.

# THE MACMILLAN COMPANY, 66 Fifth Ave., New York.

# The Macmillan Company's New Books

" The worthy outcome of well-spent years.' -The Times, London.

# FRANCE.

" Masterly in conception and painstaking execution." -The Tribune, Chicago.

By JOHN EDWARD COURTENAY BODLEY, M.A. Two Volumes. Demy 8vo, \$4.00 net.

"An invaluable social and political study, and at the same time one of the most readable productions of the day. . . . Many piquant anecdotes are preserved, and along the line Mr. Bodley gives us the benefit of his personal acquaintance with some of the chief makers of modern French history."—The Tribune.

"We would strongly advise the reading of these volumes and their careful study, for we are of the opinion that 'France' is the most thorough and careful of works, possessing just those points which have been heretofore overlooked or carelessly treated."—The Times.

# ARISTOCRACY AND EVOLUTION.

A Study of the Rights, the Origin, and the Social Functions of the Wealthier Classes. By W. H. MALLOCK,

Author of "Is Life Worth Living?" etc. Medium 8vo, cloth, \$3.00.

"It is convincing in its completeness. It must undoubtedly be accepted as a highly important restatement of social theory."-Prof. Franklin H. Giddings, in Book Reviews.

### THE SCIENCE OF LAW AND LAW-MAKING.

An Introduction to Law, a General View of its Forms and Substance, and a Discussion of the Question of Codification. For Laymen as well as Lawyers.

> By R. FLOYD CLARKE, of the New York Bar. In cloth, medium 8vo, \$4.00 net.

This book is an attempt to make clear to the average reader some of the truths of law and jurisprudence. Until now no work has been written that explains the general outlines of legal systems in popular terms.

"A valuable contribution to the solution of a very important and exceedingly complex problem."-Law Journal.

### THE MEANING OF EDUCATION

And Other Essays and Addresses. By NICHOLAS MURRAY BUTLER,

Professor of Philosophy and Education in Columbia University.

Cloth, crown 8vo, \$1.00.

CONTENTS: The Meaning of Education.
What Knowledge is Most Worth?
Is There a New Education?
Democracy and Education.

The American College and American University.
The Function of the Secondary School.
The Reform of Secondary Education in the United

"Set forth with eloquence and with a directness of appeal which carries with it the conviction of the reader. . It is a pleasure to commend this book as a standard-bearer in the ceaseless struggle going on for the betterment of the American system of education." -W. T. HARRIS, U. S. Commissioner of Education.

### DEVELOPMENT

The Newest Word on the Subject.

By Dr. NATHAN OPPENHEIM.

Attending Physician to the Children's Department Mt. Sinai Hospital Dispensary.

Cloth, crown 8vo, \$1.25 net.

It demonstrates that there is the widest difference between the child and the adult, and concludes that the environment and standards of treatment of children should be modified to meet their peculiar condition. The book closes with an important chapter on the profession of maternity.

An Essay on the Spiritual Significance of Matter. By the Rev. J. R. ILLINGWORTH, Author of "Personality: Human and Divine."

Cloth, crown 8vo, \$1.50.

"As an exposition and interpretation of the subjects of which it treats, it is unsurpassed by any volume written in English during the present decade."—Rev. Amory H. Bradford, D.D.

# Pictorial History of the War

T

V

V

Ŵ Ŵ

# WEEKLY HARPER'S

The best pictorial history of the war of 1861 is comprised in the "War Numbers" of HARPER'S WEEKLY. The file of HARPER'S WEEKLY appearing during the war with Spain will be of even greater value, for with the improved facilities for printing and reproduction of drawings the WEEKLY of to-day can offer a far higher class of illustrative work than in the days of '61. The list of artists and authors who will follow the movements of our Army and Navy, who will be in Washington, at Key West, and wherever else may be necessary, is alone sufficient to show what the work of both pen and pencil will be during the present war. Among the artists will be Rufus F. Zogbaum, Carlton T. Chapman, Frederic Remington, W. A. Rogers, and T. de Thulstrup; and among the correspondents will be Caspar Whitney, John Fox, Jr., John R. Spears, O. K. Davis, and Harold Martin. The Spanish view of the war situation will be treated by Poultney Bigelow, who within a month has crossed Spain on a bicycle for HARPER'S WEEKLY. A special limited subscription offer is made now, and now is the time to take advantage of it. Send in your \$2 00 now and secure the WEEKLY to January 1st, 1899.

# Longmans, Green, & Co.'s New Books

#### Drake and the Tudor Navy,

With a History of the Rise of England as a Maritime Power. By JULIAN S. CORBETT. With portrait, plates, charts, and 14 illustrations in the text. 2 vols., large 8vo, 948 pages, cloth, extra, \$10.00.

"A valuable output from the mine of history, and a most welcome help to all who would understand the origin and progress of British sea-power."—Daily News, London.

#### A Memoir of Major-General Sir Henry Creswicke Rawlinson. Bart.

By George Rawlinson, M.A., Canon of Canterbury. With an introduction by Field Marshal Lord Roberts, of Kandahar, V.C. With portraits, illustrations, and map. Large 8vo, \$5.00.

# The Story of the Malakand Field Force, 1897.

#### AN EPISODE OF FRONTIER WAR.

By Winston L. Spencer Churchill. With 6 maps and plans and a frontispiece portrait of Major-General Sir Bindon Blood, K.C.B. Crown 8vo, 350 pages, \$2.50.

The author of this volume is the eldest son of the late Lord Randolph Churchill. He is a lieutenant of the Fourth (Queen's Own) Hussars, and got leave to accompany the Malakand expedition. Mr. Churchill had before seen something of warfare in Cuba, when Marshal Campos was in command there. He has enjoyed the distinction of being mentioned in dispatches during the frontier campaign, although only present in the capacity of correspondent.

#### Stray Thoughts on Reading.

By Lucy H. M. Soulsby, Head Mistress of Oxford High School. 16mo, \$1.00.

"A volume of practical and sensible advice, based upon a considerable range of observation and useful personal experience. The criticism in the book is terse and just, and the author appears to be a safe guide. The contents are miscellaneous, being partly distinct suggestions as to reading and partly literary criticism on authors and their works. The chapter on Sunday reading strikes us as a judicious and candid treatment of what is certainly in these days a vexed question."—Congregationalist, Boston.

### The Sundering Flood.

A Romance. By WILLIAM MORRIS, author of "The Earthly Paradise," etc. Printed in old style and bound in buckram with paper label. With a map. Crown 8vo, \$2.25.

"The charm of the book is upon us still. The joy of life, the youthfulness of it all, the frank belief in the love of women and the honor of men, the open-eyed wonder of boyhood in the presence of the beauty of God's universe, will go with us for days like some haunting strain of the music of a great master."—Paily News, London.

#### Builders of Greater Britain.

### D. APPLETON AND COMPANY,

72 Fifth Avenue, New York.

# D. Appleton & Co.'s New Books. | Delightful New Books.

# Penelope's Progress.

By KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," "The Story of Patsy," "A Cathedral Courtship," "Marm Lisa," etc. 16mo, in unique Scottish binding, \$1.25.

Penelope came to cheer, refresh, and captivate. No one ever wore the plaid with such contagious enthusiasm.—HAMILTON W. MAB:E.

"Penelope's Progress," in its gay tartan covers, comes very near to being a perfect book. Its aim is to amuse, and it does amuse, tickling the fancy while it satisfies the taste, and inevitably raising the spirits of the reader to the pitch which is sustained through the whole two hundred and sixty-eight pages. — Time and the Hour, Boston.

#### Ten Thousand Gone. Second Edition Ready.

# Caleb West, Master Diver.

By F. HOPKINSON SMITH, author of "Tom Grogan," Gondola Days," etc. Finely illustrated. 12mo

"Caleb West" is the best work of its author, that into which he has put most of living force and genuine sympathy. — The Critic, New York.

It is a fascinating, even a great story, and it establishes the author's title to a place in the front rank of living American novelists.—Brooklyn Eagle.

# Tales of the Home Folks in Peace and War.

By JOEL CHANDLER HARRIS, author of the "Uncle Remus" and "Thimblefinger" stories. With illustrations. 12mo, \$1.50.

Mr. Harris is quite at his best in these stories, which are excel-lent in temper, satisfying in their reality and their cheerfulness, and full of both humorous and dramatic fictions in Southern life before and during the war.—The Outlook, New York.

# Unforeseen Tendencies of Democracy.

By EDWIN L. GODKIN, editor of the New York Nation. Crown 8vo, \$2.00.

On its practical side the book is almost indispensable to the student of American institutions.—The Critic, New York.

# French Literature of To-day.

A Study of the Principal Romancers and Essayists. By YETTA BLAZE DE BURY. Crown 8vo, gilt top, \$1.50.

Mademoiselle Blaze de Bury's comments are entertaining, and combine biography and criticism in pleasant proportions. All of the writers discussed are treated with conspicuous fairness—Springfield Republican.

Sold by all Booksellers. Sent, postpaid, by

Universities and Colleges.

Universities and Colleges.

#### University, Morgantown, West Virginia

THE SUMMER QUARTER WILL BEGIN JULY 1 AND CONTINUE TWELVE WEEKS.

It will be divided into two terms of six weeks each. Teachers will find the Summer Quarter especially attractive. Numerous courses in pedagogy and inspiring lectures on educational subjects.

The Summer Quarter is not a "summer school;" it is an integral part of the university year.

Summer Quarter work will count toward a degree the same as work in any other quarter. All departments will be in full operation. In addition to the regular faculty, eminent specialists from other institutions will lecture—among them

Dr. Lester F. Ward, author of "Dynamic Sociology;"
Miss Jane Addams, of Hull House, Chicago;
Prof. Charles Zueblin, of the University of Chicago;
President Nathaniel Butler, of Colby University;

President E. Benj. Andrews, of Brown University; Prof. B. A. Hinsdale, of the University of Michigan; Dr. A. E. Winship, editor of the Journal of Education; and others

Expenses for the Entire Quarter, including tuition and board, may be made less than \$65.00, and for a term of six weeks, half this amount. Morgantown, in the West Virginia hills, is a delightful summer home.

Instruction is Given by Correspondence to those who cannot attend in person. The University grants no degrees for work done entirely by correspondence, but work so done may count toward a degree. Students may take complete college courses and receive degrees by taking correspondence work during the year and attending the University during successive summer quarters.

For complete announcements address

JEROME H. RAYMOND, President,

Morgantown, W. Va.

DISTRICT OF COLUMBIA, Washington, Third and T Sts. N.E.

# Chautauqua

# Chautauqua Lake, N. Y.

Twenty-fifth year of this famous and unique institution, which has been imitated in England, Switzerland, South Africa, Japan, and in the United States.

#### "Not a dull day all summer."

CHAUTAUQUA is interesting and recreative. It is not merely a summer school. It is a many-sided and charming social life.

No danger from war or yellow fever, Chautauqua being an inland resort and situated at a high altitude.

#### "Something for every member of the family."

Many resorts attract part of the family. CHAUTAUQUA provides something interesting for every member, from the children in the Kindergarten and Boys' and Girls' Clubs, to the adults, in many varied amusements and pursuits.

Send for a handsome illustrated book and catalogue, etc. Free. Special half rate to Chautauqua by nearly all rail-roads.

W. A. DUNCAN, Secretary, Chautauqua, N. Y.

General Agents, SAN FRANCISCO, CAL.

#### The War and Tourist Travel.

The effect of the war upon the usual spring and summer rush of travel seems to be rather complex. When the trouble first came and we were all anxiously awaiting the course of events, which should confirm or disturb our fourth decade of peace, the war gloom threw its deepest shadows ahead, and for a time all the transatlantic steamers were very scantily passengered. The only line sailing under the American flag was naturally the heaviest sufferer; its bookings fell rapidly to half and then to a quarter of their normal proportions; and finally, just before the outbreak of hostilities, its fleet avoided a total cessation of activity only by being selected as auxiliary cruisers for the United States Government—a piece of good luck which was perhaps only fitting, inasmuch as its misfortune had come through the Stars and Stripes.

Curiously enough, when the crisis came and Spain declared that to her pride our "ultimatum" could mean only war, the Atlantic fleet was at once largely patronized. For, evidently, many travelers who had been waiting the result of the negotiations then bought their tickets-so much more taunting is uncertainty than even actual hostilities. The withdrawal of the vessels referred to gave the survivors plenty of business for a time, but the spurt does not seem to have lasted. Thousands of tourists who would otherwise have gone to Europe some weeks ago are still in this countrywhether from the illogical but potent feminine feeling that the conflict adds the final "thing too much" to the terrors of the deep,

# Far From War's Alarums

Is the region traversed by the Intercolonial Railway, and it would be hard to find on the American continent such a cluster of attractive summer resorts as it reaches. Seacoast and the finest of surf bathing; the marvelous scenery of Nova Scotia, of the beautiful Baie des Chaleurs, and of the New Brunswick and Lower St. Lawrence regions; and a land where hunters for big and little game, as well as those after salmon, trout, and all the other fresh and salt water fish, may verify the most incredible stories of the game which used to swarm in the Eastern States three centuries ago. Restigouche and Metapedia are names to make the sportsman's eyes flash. These are but the most charming of its attractions. And withal comfortable trains supplied with every modern convenience whirl over this all-rail route from Quebec to St. John and Halifax.

There is no space here even to hint at the wealth of scenic, sporting, and sanitary advantages which are thus brought near to the thousands sweltering in our great cities. A postal to the General Passenger Agent at Monckton, New Brunswick, will bring you much information. To really appreciate what the **Intercolonial** means you have but to try such a vacation as is

described.

if you really want to enjoy your holiday

334; PILLEY'S ISLAND, \$40. RETURN TICKETS AT REDUCED RATES. BOWRING & AROHIBALD, D Floor, Produce Exch. Annex Building, N.Y. or from an ardent curiosity to keep in touch with the progress of the struggle, or from a sheer patriotism that forbids a flight to foreign shores at such a time of stress, it would be difficult to say. Certain it is that many railroads and hotel proprietors are confidently counting upon this body of stay-at-homes as a factor in a successful season.

At home, too, the situation has undergone many changes from week to week. The first symptom here was a most depressing lack of interest on the part of the general public in the thousands of seaside resorts which usually claim so large a proportion of those who flee from the city's torridity. From Bar Harbor to St. Augustine there was weeping and lamentation, with almost the sole exception of Old Point. Here the presence of the flying squadron produced an altogether Wives, extraordinary crowd. mothers, and sweethearts as the sands of the sea made the whole place assume an air of prosperity and gayety. It was a flimsy edifice, however, and crumbled like a house of cards as soon as the ships were ordered to sea and the attraction was withdrawn. It is easy to jest about the situation of the luckless proprietors who took time by the forelock and engaged their seaside hotels and boarding-houses before the dogs of war had even begun to growl, but it looks at present as if the prosperous season upon which the inland resorts are entering will mean very serious loss to a host of their competitors on the coast. On the various islands, some of which are so popular year after year, there is an absolute stagnation. It is reported that along the Jersey coast cottages have vainly sought occupancy at a quarter their customary rental; and unless a sudden and speedy change in the outlook brings relief the "resort" portion of the Atlantic coast will long remember 1898.

It seemed for a time that this had occurred. When the account of Admiral Dewey's dashing feat was followed by the "news" that the Cape Verde squadron had returned to Cadiz, it looked as if confidence would be restored. The newspapers printed long accounts telling why the retrograde

#### A Quarter of a Million Dollars

Will accomplish a great deal in the way of luxury, and its possibilities along the lines of comfort and decoration have rarely been more strikingly exemplified than in a pair of new trains, the "PIONEER LIMITED," running daily between Chicago, Milwaukee, St. Paul, and Minneapolis. The railroad company has "laid itself out" on these twin trains, which are fitted up more like some millionaire's show house than like public conveyances.

Each train is made up as usual, even the vestibules being finished in mahogany. Throughout these are abundant electric lights, an auxiliary battery in each car being provided in addition to the dynamo outfit, and the vestibules and steps are as light at midnight as at noon.

Immediately behind the baggage car (well supplied with bicycle racks) are the buffets, each divided into a smoking compartment, one for cards, and a buffet proper. On the walls shine rich, glossy mahogany from the forests of St. Jago, carved and inlaid with tulip, amaranth, primavera, saffron-olive, eccobolo, white holly, and English oak. Handsome mirrors, easy-chairs, deep sofas, reading and writing tables, with soft green hangings all about and a heavy Wilton carpet on the floor, help to make a men's "living apartment" as decorative as it is comfortable.

The sleepers, too, are wonderfully diferent from the stuffy, dirty-brown places of torture in which most travelers have at some time been confined. Finished in pad oak or vermilion wood, and shading off in color from a delicate old blue in the carpets to a cheerful robins'-egg hue, picked out in gilt, in the ceiling, the whole is at once harmonious and restful.

In the compartment dining and chair cars, too, each with its special woods and colors, no trouble or expense has been spared to make these temporary dwelling-places true works of art. Haviland china and silverware of fascinating antique design are parts of a table service which few private houses could equal.

The day coaches are provided with large toilet-rooms, and these apartments in the sleepers are furnished with every device ingenuity could suggest, even down to an electric arrangement for heating the ladies' curling-tongs!

In short, no traveler can know the high-water mark of railroad comfort and elegance until he has seen these really superb creations of the Chicago, Milwaukee & St. Paul road.

Recreation

movement had been made and dilating upon its significance: the customs of international law as regards bombardments and the elaborate strategic reasons against such a proceeding on the enemy's part combined to create the belief that surf-bathing this season might, after all, be feasible. And then, presto! another about face. The Spaniards had not gone to Cadiz; and, moreover, incoming steamers brought tales (perhaps apocryphal) of Spanish cruisers and destroyers lurking about our coast; and the "scare" was again in evidence. As these lines are written an action is expected at any time in the West Indies. Should Admiral Sampson administer to the enemy as crushing a defeat as that which was his lot under the guns of Cavité, it seems probable that the seashore may still claim a portion of its stanchest adherents. The trade papers profess to believe that the hotel proprietors will "come out all right," since they say the rents will be far more reasonable and "the enormous sums expended by the Government for raising, equipping, and sustaining the army will very quickly reach the people. Money will be comparatively easy, and the summer hotels everywhere will have a prosperous, if not phenomenal, season."

In any case, however, the Catskills, Adirondacks, Berkshires, White Mountains, and all the New England and New York summering places away from the ocean will undoubtedly be the refuge of an unusually large army this season. There is no lack of choice even with the seacoast left out of the question. The Shawangunk region of New York, almost rivaling the Adirondacks in wildness, in its iron and chalybeate springs, and in its boating and fishing, offers many attractions at Ellenville, Liberty, Neversink, and Guymond Springs; the many classic spots along the Hudson, from Yonkers to Saratoga Springs, are perennial in their inducements, Lake Mohonk being, perhaps, one of the most widely patronized spots in this vicinity; in the Catskills the tourist finds beauty and variety of mountain scenery with unusual accessibility: Cats-

J. W. BURDICK, Gen. Pass. Agt., Delaware & Hudson R. R. Albany, N. Y. kill, Kaaterskill Falls, Haines Falls, Palenville, Cairo, Ontena Park, Hunter, Tannersville, South Durham, Windham, Prattsville, Echo Lake, Pine Hill, and West Hurley are among the settlements where hotels and boarding-houses are to be found. Saratoga, with a hundred years of fame behind it, still offers some of the largest hotels in the world and its forty springs, varying almost incredibly in their constituents; further north lies picturesque Lake George, with an island for every day in the year and with an abundance of fish still to be found in its "silvery waters," although it has long enjoyed the distinction of being the most frequented of American lakes : Caldwell, Bolton, Hague, and Baldwin are towns on the shores of the lake, but there are many hotels and boarding-houses scattered between these points and on the islands; only five miles away from the head lies Lake Champlain, whose northerly location is emphasized by the fact that from the end of November to the beginning of April it is entirely ice-locked; Whitehall, Ticonderoga, Burlington, Port Kent, Plattsburg, and Bluff Point are all headquarters for visitors; close by Champlain are the famous Adirondacks, with their five hundred mountains and thousand lakes-perhaps the most famous "resort" region of America. Indeed, no one could doubt the ability of this section to accommodate all who decide to try its numberless retreats. A good many thousands of tourists could be turned loose in the Adirondacks alone without crowding each other! And both papa and mamma can easily reduce themselves to a state of exasperated perplexity bordering on insanity by canvassing the merits of but a small portion of that New England whose summer resorts are so numerous that a large office with several attendants in our greatest city has no other cause of existence than to disseminate literature telling of its attractions, its mineral springs, its trout and salmon, its hotels and boarding-houses, and the intricate network of railroads which transport passengers into its every nook and corner.

Crab Orchard, Kv. Keeley Catechism sent on application.

Inebriety, Morphine and other Drug habits are dependent upon a diseased condition of the nervous system.

The victim of the disease again and again puts forth the most herole efforts to reform, but his disease is too absolutely overpowering to be conquered by resolutions. The will-power he would exercise if he could is no longer supreme. Alcoholic stimulants have so congested the delicate nerve cells that they cannot respond to the performance of their functional duties, and the helplessness of the victim's condition is as inexplicable to himself as it seems inexcusable to his friends,

The Keeley treatment cures this disease by restoring the nerves to a perfectly healthy state. It cures by removing the cause. The result is that the patient is left in a normal and healthy condition, and he has neither craving, desire, nor necessity for stimulants.

Over 270,000 men and women to-day have been permanently cured of the disease of inebriety through Dr. Keeley's treatment, which is admin-istered only at institutions authorized by him.

The treatment at these institutions is pleasant, no restraint is imposed; it is like taking a four-weeks' vacation; the patient only knows he is cured. Detailed information of this treatment, and proofs of its success, sent free upon application to any of the following institutions.

McClure's Magazine History Club, 141 E. 25th St., N.

### GENERAL LEE'S BOOK.

THE WHOLE TRUTH BY THE ONE MAN WHO CAN TELL IT ALL.

FITZHUGH LEE'S STORY OF CUBA'S MARTYRDOM

OF MISRULE.

A BOOK of exceptional interest is about to be issued. Fitzhugh Lee will give to the world the entire, the true, and the terrible story of Spanish misrule and treachery in Cuba. This work will be a volume of 500 pages, printed on superior paper, beautifully illustrated with over 100 full-page plates, from photographs, many of them collected by General Lee himself, of actual scenes in Cuba. Fitzhugh Lee's story will stir the heart and convince the mind of the world, for it gives the whole truth for the first time.

In Cuba, General Lee was more than a brave and far-seeing diplomat. He was also the student and historian of events. His every observation was recorded, his every experience written down when fresh in his mind. He took every advantage of his unequaled opportunity to know the TRUTH, that he might give it to the world in an intelligent and inter-

esting way. His memoranda, manuscripts, and illustrations being ready, he has been able TO FINISH QUICKLY AND WHEN MOST NEEDED his magnificent undertaking—a true, complete, and enduring story of the rise and rescue of Cuba. The author spares nothing that stands in the way of TRUTH in giving his "inside" information, including many important facts that have heretofore been withheld from the people on account of diplomatic relations with Spain.

In accordance with General Lee's desire, the publishers are distributing the first edition, only, at a price absolutely within the reach of every one, no matter how limited their means may be. A postal card to the publishers, J. A. Hill & Co., No. 91 Fifth Avenue, will secure full information regarding the work and the favorable terms upon which it can now be secured Agents should write to above address.

### LASELL SEMINARY FOR YOUNG WOMEN.

### THE FINE WORK OF THE COLLEGE AT AUBURNDALE.

BY A MEMBER OF THE REVIEW OF REVIEWS EDITORIAL STAFF.

A PEEP AT A STUDENT'S BEDROOM.

TEN miles from Boston is the town of Auburndale, set in the midst of what is probably the most beautiful and wholesome residential district in this country. The most noticeal building in Auburndale is a very spacious

stusior on a hill which commands a sweeping view of many miles to the north and east. The building is the home of C. Las !! Seminary, but it has none of i's forbidding earmarks that are of to characterize the "institution." Were there not so very many rooms; indicated by the number of windows, at a porch so very expansive, one might easily surmise that it was the estate of some family of ample fortune. It is set in its commanding position on the hill among fine old New England elms and wide expanses of grassy lawn. It has no aggressive looking newness or pretension, vet every detail of lawn and building betokens care and neatness. When one ascends the steps and passes over the wide veranda into a great hospitable-looking hall, this

homelike quality is still further accentuated. It seems to the writer to be as unlike most other boarding-schools as possible in this respect. Too often, when this quality is claimed for a boarding-

school, it means not only lack of pretension, but also slipshod methods and carelessness. It requires a genius for management and a rare degree of common sense to invest a great seminary, with appliances and accommodations for one hundred and fifty students, with this engaging atmosphere. But this Mr. C. C. Bragdon, the principal, really seems to have done. Lasell was founded in 1851 by Prof. Edward Lasell, of Williams College, with the aim of making it in reality a school for girls of the very first rank. For over twenty years Mr. Bragdon has been continuing the work of the founder in this spirit.

The pleasant impression produced by a first glimpse of the school is deepened as one walks through the wide, light halls to inspect the schoolrooms, the libraries, the gymnasium, and the sleeping apartments. It is evident that a certain something which can only be described as "good sense" has been expended in the planning and conduct of the school. This is apparent to a sensitive observer even in the glimpses of the students as they are at play or at work and in their demeanor toward each other and toward

A CLASS IN MILITARY DRILL.

visitors. They seem to be governed by the good taste which is shown in their surroundings. Their dress, a matter supervised to a certain degree by the faculty, is tasteful and not over-gorgeous, and

their manner open, their voices happy—in short, they are what any gentleman would wish his daughters to be in his own home.

These results have been the conscious aim of Mr. Bragdon, who has devoted much of his own time to teaching, especially during the early part of his work at Lasell. His success has come because he is one of those rare people born with a genius for teaching—a native talent which has been supplemented by a broad experience in educational work. He has striven to model his courses of instruction and the school life of the students on lines which shall lead them to be best fitted for home duties, which are the essential aim of

every well-bred American The schools in cooking, in dressmaking, in millinery, and other allied domestic arts can, of course, help to achieve this end; but nothing can in any wise compare in importance as a preparation for a happy and useful life to the general physical and moral conditions under which the students live at this plastic period. these conditions are sound and wholesome, more than half the battle, so far as education can fight it, is won.

Certainly the first requisite in the education of a young woman is physical welfare, and this factor seems to be dealt with at Lasell in a very unusually intelligent manner. The building is in a very

excellent location, and all its surroundings and equipments help to make the residence of the students there a period for the storing of health for the years of responsibility to come. large bedrooms are little like the dormitory pens which one has generally associated with boarding-schools, and are so disposed in the building as to allow the entrance of sunlight into each and every one of them. A competent nurse resides at the school with no object but to look after the health of the students, regulate their exercises, and provide care and medical attendance for them when they are ill. If these methods of prevention still allow cases of illness, there are quiet rooms completely isolated from the rest of the house which serve as a hospital. The gymnasium has been exceedingly well equipped, with the direction and advice of no less an authority than Dr. D. A. Sargent, of Harvard College, Cambridge. Charles River gives a constant temptation to the exercise of boating, and there are fine tennis courts on the grounds. Military drill twice a week has proved a potent remedy for stooping shoulders and ungraceful walking. The mention of Dr. Sargent suggests another value which the location of the school has—the proximity to Boston. While it enjoys the privacy and open air of the country suburbs, the nearness of Boston, with forty trains each way every day on the Boston & Albany Railroad, not to speak of the easy communication by trolley, gives Lasell practically all the advantages of the intellectual life and opportunities of a city which is so peculiarly able to supply these. For instance the Shake-

THE STUDENTS GIVE A LAWN PARTY.

speare class is conducted by Prof. William J. Rolfe, and Prof. John Fiske is one of the lecturers. In fact, in addition to the fifteen resident members of the faculty there are no less than sixteen instructors that are obtained from Boston: in other words, there are over thirty teachers for a total of one hundred and fifty students. The inspiration of the best culture is seen reflected in the work of the two flourishing literary societies. the "S. D." and "Lasellia," whose functions stimulate social relations among the students in a pleasant and wholesome way.

### A COURSE IN LIBERAL ARTS.

A glance at the formal curriculum is sufficient to show how far from the stereotyped classical and scientific courses lie these paths to useful knowledge. The preparatory year in the liberal arts course is occupied with algebra, English, Greek history, and drawing, with a choice of

either Latin or German. In the freshman year the drawing is omitted, the history becomes that of Rome, and the scholar relects two subjects from a list comprising Latin, Greek, French, German, botany, music, and painting. sophomores take up geometry, mediæval and modern history, and English, and can select two studies from almost the same list as the last, physics being in the place of botany. juniors and seniors drop the mathematics, add literature, art and architecture, and the evidences of Christianity, and include in their elective studies, besides the ancient and modern languages, chemistry, music, painting, astronomy, physiology, and psychology. Thus is offered a very wide and complete drill in the modern languages, history, literature, and natural science; this, on a foundation of Latin, being the most practical and really useful instruction in a majority of cases. The spirit of thoroughness referred to has prescribed that a student shall take either music or drawing, and not both unless she can extend the usual time.

#### MUSICAL COURSES.

For those who wish to devote themselves to music or art, however, there are special courses with advantages that cannot be surpassed at many

THE HALLS END IN COZY NOOKS LIKE THIS.

of the great musical conservatories and art leagues. The piano-playing course is divided into five grades, beginning with the rudiments and the major scales and working straight through to the intricacies of harmony, the theory of music and composition. Graduates of this course, as well as those who have completed the elaborate programme for cultivation of the voice, are ready at once for the second year of the Boston College of Music. Nor is the musical instruction confined to this; a vocalion, a pedal piano,

and a fine church organ give abundant chance for practice to those who prefer the organ to the piano, or the violin, mandolin, guitar, harp, or cornet can be studied in place of either.

### DRAWING AND PAINTING.

The same thing is true of the art study. An examination of the work produced in the spacious and attractive studio would surprise one of those skeptical persons who sniff at the art culture of girls' schools and colleges. The classes in drawing, painting, and modeling have every advantage.

A HALF OF THE STUDIO.

tage: able teachers, good models, a collection of twenty-six hundred paintings, engravings, and photographs, and an art gallery where score upon score of representative examples of both ancient and modern artists afford a constant source of inspiration. Four lessons a week are given in this department.

### OTHER BRANCHES OF STUDY.

In the languages, history, and mathematics Lasell presents much the usual college courses, but in every case the subject is vitalized by fresh treatment and an emphasis on those phases which connect it with other departments of knowledge. The English method is one upon which especial stress is laid, and, judged by results, it can safely be pronounced unusually effective. All grades study English. Compositions are made interesting, correct speaking is inculcated in and out of class, and the girls are sedulously trained in that rarest of accomplishments, a correct and fluent use of their mother tongue. In literature the text-book idea has been largely discarded in favor of an introduction to the great writers through their own works. Of course it is necessary to train the critical faculties and to direct the appreciation, but surely never was there a more thoroughly sound idea than this of getting back to

the original sources. In natural science the tendency is still to the sources, and a completely equipped laboratory provides the fullest opportunity for investigation and observation.

#### SOME UNUSUAL STUDIES.

Law is an unknown land to most women, yet the widening sphere of woman's activity brings her into many situations whose responsibilities she cannot discharge intelligently unless she has grasped those legal principles which most frequently crop up in every-day life. At Lasell lectures by an able lawyer cover as much ground in legal lore as seems necessary for the average person. For similar reasons bookkeeping takes its place in the list of accomplishments, and the future housekeeper, as well as the business woman, will find the ability to keep books of accounts an assistance well worth the time spent on Phonography, typewriting, telegraphy, and photography may also be studied, so that the young woman has many different chances to qualify herself as a wage-earner, if that be necessary, or to add to her resources some entirely fascinating pursuits.

### TRAINING FOR HOME CONSUMPTION.

Were it only for this one thing Lasell would deserve the gratitude and enthusiastic cooperation of all intelligent men and women—the attention paid to developing and instructing what might be called the earts and sciences of the home." As a witty writer on the "Unquiet Sex" has pointed out, supposing that the next generation should have a Carlyle in store for us, there could hardly be a nobler aim for the most ambitious woman than to present the philosopher to the world free of dyspepsia. There's no denying the fact that college women as a class are open to criticism in their housekeeping, and the practical and theoretical instruction in everything

appertaining to the daily home life is by no means the least valuable of the gifts that Lasell showers upon its students. Such experts as Miss Parloa. Mrs. Daniell, Mrs Lincoln, Mrs. Oakes, and Miss Barrows here teach what good cooking is in a thoroughly fitted-up lecture-room with all the appliances of a first-class kitchen. A knowledge of the principles of hygiene and sanitation, the science of foods and the domestic economics, often means the difference between health and invalidism, between comfort and death, on a small in-The whole range of domesticities is covered here: dress cutting and fitting, mending, house-furnishing and management, marketing and bread-making-all the honely accomplishments which were imparted unscientifically to every girl in the days before wemen's celleges were, are elevated to the rank of sciences and investigated in detail. This is a we'll-rounded curriculum indeed.

A glance at the catalogue shows that Dr. Charles Parkhurst and several other of the next notable men of the country are directors of Lasell or have assisted in the achievement of these results. Mr. Bragdon's immediate and acting associate in the work is Dr. Charles W. Gallagher, a man of broad scholarship and excellent training, who was formerly president of Lawrence University and more recently president of Maine Wesleyan Seminary.

Nothing can be quite as satisfactory in that tempt to form an estimate of the quality of a work done at Lasell as a visit to that instituted. This article will, however, serve to indicate the lines on which Lasell has chiefly developed strength. For more specific information concerning the courses, the cost of the etc. those who are interested may consult the comprehensive illustrated catalogue which will be gladly mailed on application by letter to Mr. C. C. Bragdon, Auburndale, Mass.

### THE PROGRESS OF THE WORLD.

Very few people in the United States, Our War in Two Hemispheres. in Spain, or anywhere else, in the discussion that preceded the actual outbreak of the war, had for a moment supposed that armed intervention for the pacification of Cuba would begin with a campaign for the conquest of the Philippine Islands, which lie in the Pacific Ocean between Hong Kong and New Guinea. We Americans adapt ourselves to new conditions rather readily; but even yet the average man is somewhat mystified by the Philippine campaign. It had been the declared purpose of our Government to extend a helping hand on strictly humanitarian grounds to the starving reconcentrados in This of course involved incidentally the carrying on of a war with Spain. We began the war by establishing a so-called "pacific blockade" of Havana and a part of the northern Cuban coast. All this was managed in a calm, leisurely fashion, with the result of shutting off outside food supplies not only from the reconcentrados, but from all other elements of the Cuban population. Thus we were, with the best of intentions, making it certain that we should have little future expense or trouble in caring for the reconcentrados-inasmuch as the vast majority of them would probably be dead before July. Ever since last December the Spanish policy has been to play one game after another upon Uncle Sam to prevent the invasion of Cuba before the beginning of the rainy season. We were better prepared, relatively, last winter for dealing swiftly with the Cuban situation than we are now. We have seemed at various times within the past five weeks to be on the point of really beginning our armed intervention in the island of Cuba, but as often as we have planned prompt invasion we have shuddered on the brink and drawn back. It is not likely that we shall attempt to carry out our plans on any conclusive scale until next fall. In any case, the Spaniards have succeeded perfectly in their policy of keeping the Cuban gates closed against us until their chief ally, the deadly rainy season, had duly arrived.

Spain's Even though a second-rate power and Flusius frightfully distracted by conditions at frightfully distracted by conditions at home, the Spaniards thus far have been more than a match for us, not only in diplomacy, but also in their naval strategy, which consists of dodging, under cover of misleading reports. At the time when our Government last December was fully apprised of those conditions in Cuba which made intervention our duty, the Spanish navy was not ready for action, and we could probably have dealt a prompt and effective blow. We waited, however, until nearly the opening of May, and allowed the Spaniards to get their ships in readiness. The maneuvering of their fleet and its marvelous success in veiling its movements in mystery wholly baffled our Government for many days in May. A powerful armored squadron under Admiral Cervera proceeded early in April from the Canary Islands and other Spanish waters to the Cape Verde Islands, which belong to Portugal, and there rendezvoused for a good many days. At length Portugal dared no longer flagrantly to disregard the obligations of neutrality, and the Spanish fleet was requested to sail away from St. Vincent, the great harbor and coaling station of the Cape Verde Islands. On April 29 the fleet actually sailed. It took a westward course. Although our Government seems to have had no plans for scouting upon its movements, the newspapers were enterprising enough to have it followed for a number of hours. As last seen, it was still moving toward the West Indies. Whereupon the newspapers were filled with great accounts of the tremendous battle that was about to occur. The vicinity of Porto Rico was selected by the strategists of the press, and the date arranged for this fight was about May 9. Rear-Admiral Sampson was ordered by the authorities at Washington to intercept the Spanish fleet and to capture or destroy it. Nobody seemed to have the slightest doubt as to the outcome. The momentous date arrived, however, and the great fight failed to come off as per schedule. Nothing had been

ADMIRAL PASCUAL CERVERA Y TOPETE,

seen or heard of the Spanish fleet. Several days more elapsed, and nobody was able to answer the question that everybody was asking as to the whereabouts of Admiral Cervera. The New England coast became panic-stricken, because it was reported that Cervera's ships had been sighted off Nova Scotia and were heading for Portland, Maine. Key West became acutely anxious because it was reported that Cervera had sailed southward and was going to attack Florida. The authorities at Washington, however, had a totally different theory. They were said to be convinced that Cervera had taken his fleet across to the coast of Brazil in order to intercept our battleship the Oregon, which, as our readers will remember, had in March left San Francisco to join our fleet in West Indian waters. For some

days, therefore, the newspapers followed the lead of the Washington strategists, and all attention was concentrated upon the whereabouts of the Oregon. There was some slight anxiety expressed; but, upon the whole, there was a cheerful consensus of American opinion to the effect that the Oregon, single handed, could vanquish any number of Spanish warships, no matter how powerful, by virtue of innate American superiority. News from Brazil was breathlessly awaited

All this was changed, however, by That Remarkable the surprising announcement on May 10 that Admiral Cervera's from Cadiz. entire squadron had turned up in the great seaport of Cadiz, on the coast of Spain. As the newspapers agreed in putting it, in enormous head lines, the Spanish fleet had "turned tail." Cervera had been afraid, after all, to cross the Atlantic, and had been skulking about, avoiding the frequented lanes of ocean commerce, so that nobody might tell tales of his cowardice; and at length, being hungry, thirsty, and in need of fuel, he had been compelled to swallow his pride, face his shame, and to go home to Cadiz. report was accepted without a particle of skepticism by the newspapers and confirmed by the Government's advices. Our alert ambassador at the court of St. James, Mr. Hay, cabled his assurances to the State Department at Washington

CRUISER "CRISTOBAL COLON," OF CERVERA'S PLEET.

that he had unquestioned private information from Cadiz to the effect that Admiral Cervera's big ironclads were lying in plain sight in the harbor. Cadiz, it should be remembered, is a large town, and the commerce of the world was passing freely in and out of the port, while travelers of all nations, including correspondents of the press, were coming and going at their pleasure. It would not appear to have been a much more difficult matter to verify the report that Admiral Cervera was at Cudiz than to test the accuracy of a rumor to the effect that the Statue of Liberty in New York harbor had disappeared beneath the waves, or that St. Paul's Cathedral in London had been blown up and totally destroyed by dynamite. Nevertheless, our enterprising newspapers and our authorities at Washington rested for several days-namely, from May 10 to May 13-upon the undoubted theory that Admiral Cervera, with his big armored cruisers, the Vizcaya, Maria Teresa, Cristobal Colon, and Almirante Oquendo, was recuperating in the Cadiz harbor.

Cadiz News On the strength of this assurance that and Our the Spanish fleet had wholly deserted Cuba, Porto Rico, and the western side of the Atlantic Ocean, it became the accepted opinion at Washington that Spain had virtually given up the war, and that the best thing to do was to proceed at once to occupy Cuba with a large force of men. A few days previously the plan had been to begin occupation with a small advance guard—a few regiments of regular troops, with perhaps a cowboy regiment or two of volunteers—these troops to coöperate with General Gomez and the Cuban insurgents, to whom also it was intended to send a large quantity of repeating rifles, ammunition, and other supplies. Now, however, there was a total change in the whole programme. Great preparations had been made to receive the larger part of the volunteer troops at Chickamauga, with no intention to use them for immediate service in Cuba. But Chickamauga was abandoned, and urgent instructions were given to muster in the volunteers and send them to Tampa, Mobile, New Orleans, and other points on the seaboard, for immediate transportation to Cuba. This order was given on May It had been supposed that General Wesley Merritt would be the leader of the forces in Cuba, but it was now announced that for some reason he would stay at home, and General Miles himself would go to Cuba as general in chief. expected at once to throw twenty thousand troops into the island, and a concerted land and naval attack was to be made at the earliest possible moment upon Havana. The utmost speed was enjoined by the Washington authorities upon the States in the preparation of their quotas of volunteers for active service. All this was done upon the theory that Admiral Cervera's squadron of armored cruisers was lying at anchor in the harbor of Cadiz, as widely advertised by Spain.

Martinique, to be fraudulent. When Admiral Cervera left the Cape Verde Islands on April 29 he took a westerly course, because he had a westerly destination. He had not, after

Copyright by Pearson Pub. Co., New York.

REAR-ADMIRAL SAMPSON.

all, "turned tail." His squadron did not, in fact, enter the harbor of Cadiz on May 10. Our enterprising representatives abroad were mistaken when they assured our Government at Washing ton that Cervera's fleet had returned home and was lying in the shadow of the fortification guns of the Spanish coast. On May 12, after a sail of fourteen days from the Cape Verde Islands, Admiral Cervera's fleet touched at the French island of Martinique, in the Lesser Antilles, otherwise known as the Caribbee or Windward Islands, which form the eastern fringe that incloses the

Caribbean Sea. Martinique has good cable connections, and Admiral Cervera was at once in communication with Madrid, and also presumably with the very active Spanish agency that Señor Polo had been maintaining across our border in Canada after his retirement from service as Spanish minister at Washington. Admiral Cervera's dispatches that had been received and held for him by the Spanish consulat Fort de France, the Martinique port, duly informed him of the fact that Admiral Sampson had called for him at Porto Rico, and had incidentally shelled the fortifications at San Juan on that very same morning of May 12. He had the advantage of knowing exactly the condition of the Cuban blockade, the whereabouts of Sampson's heavy but exceedingly slow squadron, and also the whereabouts of Schley's swift but unarmored and light-armed collection of cruisers.

We were better served with news from Cervera Martinique than we had been from Cain the Caribbean. diz. Nevertheless, the Martinique news had not come with a swiftness that made the wires hot. It was reported to Washington by Captain Cotton, of the Harvard. This cruiser of our auxiliary navy, having been on scout duty, had injured her machinery and was lying at a Martinique port for a few days making repairs. Captain Cotton's cablegram was delayed twenty-four hours before it was transmitted. Meanwhile, the Spanish fleet had taken on a supply of provisions, a certain amount of coal, and, above all, a full complement of advices, and had departed, again moving westward. This was on the night of May 12. The authorities at Washington thereupon abandoned their great plans

for the invasion of Cuba, and once more Chickamauga was declared to be the general rendezvous for volunteers. Nobody had the slightest idea where the Spanish fleet was going or what it was intending to attempt. But Admiral Cervera on May 14 again gratified our American curiosity by touching at the Dutch island of Curação, which is about 600 miles further west than Martinique and about three degrees further south. Curação is about 50 miles from the coast of Venezuela and 400 miles due south of San Domingo. At Curação Admiral Cervera seems to have secured once more an ample supply of information and a moderate quantity of coal and provisions. It was reported that he had proceeded due west, having disappeared from Curação on May 15.

Rear-Admiral Sampson had left the 8ampson's Cuban blockade in charge of Commo-Porto Rico. dore Watson and had on May 4 set sail for Porto Rico, where it was thought that he might meet the Spanish fleet. His powerful squadron consisted of the two magnificent battleships, Iowa and Indiana, the two huge monitors Terror and Amphitrite, and the cruisers New York, Detroit, and Montgomery. For bombardment or for actual fighting this fleet was of a most formidable character; but for cruising or for maneuvering it was painfully handicapped by the fact that the monitors are as slow as canalboat mules in dog-days. Obviously the speed of a squadron is precisely that of its slowest member: and the monitors average about four knots an hour unless towed by faster ships. It is easy, unless one studies the maps, to get the impression that Cuba's sister island, Porto Rico, lies near at hand, and that to sail with a fleet from off the Havana blockade to San Juan, Porto Rico, is something like taking the New York South Ferry from the Battery to Staten Island—a matter of a pleasant thirty-minute sail. As a mere matter of statistics, however, it is almost 1,000 miles from Havana to San Juan, Porto Rico, as the bird flies, and ships do not sail those seas on mathematically straight lines. The sailing course is considerably longer. Sampson's vovage from our coast to Porto Rico, therefore, was fully equal to one-third the distance from New York to the coast of Ireland. He arrived in the vicinity

MAP TO ILLUSTRATE LAST MONTH'S NAVAL MOVEMENTS.

On May 11, after eight days of sailing, and was able to get his news readily enough by means of swift scout yachts and torpedo-boats, which had access to the cable office at St. Thomas.

Thus he was informed of the report that Bombard-Admiral Cervera and the Spanish fleet 8an Juán. had returned to Cadiz. In the exercise of his discretion he bombarded the fortifications of the port of San Juan on Thursday morning, May 12. His object seems to have been to make use of the opportunity, while in the neighborhood, to dismount the batteries and render it less easy for the Spanish fleet at some later day to find safe refuge in the Porto Rican harbor. After three or four hours of vigorous cannonading, in which the American ships suffered no particular damage, while a good deal of harm seems to have been inflicted upon the fortifications of San Juan,

the American fleet withdrew from the harbor. The San Juan batteries are on uncommonly high ground, which gave the Spaniards a great ad. vantage of position; but they made very ill use of the excellent opportunity that Sampson gave them. It is said that the admirable gun. nery of our ships was readered difficult by the fact that

ALEJANDRO CHURRUCA, Vice-Admiral of the Spanish squadron now in the Atlantic.

they were not supplied with smokeless powder, such as all European navies adopted several years ago. The immense clouds of dense smoke produced by the firing of heavy guns with ordinary powder may obviously nullify the remarkable skill of our American gunners. Admiral Sampson's bombardment of the Porto Rican fortifications was simply his manner of saying farewell. Having been informed that the Spanish fleet was hugging the coast of Spain, and that our Government at Washington had decided immediately to send a great army into Cuba, it became Admiral Sampson's duty to return to Havana, in order to take part in the operations which were to reduce that stronghold.

GOVERNOR-GENERAL'S PALACE, SAN JUAN, PORTO RICO.

Naval Plans as He was returning, therefore, Affected by News of along the north coast of San Do-Cervera's Presence. mingo, when, on May 14, the torpedo-boat Porter ran into the harbor of Porto Plata for the news. It quickly returned to Admiral Sampson's flagship with the startling information that the Spanish fleet was not, after all, at Cadiz, but had turned up at Martinique. Since the slowest vessel in the Spanish fleet was easily able to make eighteen or twenty knots an hour, it was obviously impossible for Admiral Sampson to adopt the plan of pursuit. Until further information concerning the Spanish movements was received, there seemed nothing for the heavy American squadron to do but to continue its westerly course, and then occupy the Windward Passage, between Haiti and Cuba, in order to intercept the Spanish fleet in case it should attempt to reach the north coast of Cuba by that Admiral Schley's flying squadron, meanwhile, had been sent southward on May 13, from Hampton Roads, Virginia, and its policy seemed to be to block the channel between the west end of Cuba and the projecting point of the Yucatan peninsula. With the two principal American squadrons stationed the one at the far eastern end of Cuba and the other at the far western end, there would have seemed to the ordinary student of the map to be nothing to prevent Admiral Cervera from doing precisely the things he would naturally desire to do. His first object was supposed to be to land various munitions of war for General Blanco and the Spanish army in Cuba. For this purpose no port could be more convenient than Cienfuegos, on the south coast, joined by rail with Havana. Having delivered his supplies, Cervera would readily obtain at least a limited amount of coal, and all this could be done before either Schley's or Sampson's fleet could get anywhere near him. On the 20th it was generally reported that Cervera had gone to Santiago de Cuba, instead of to

Cienfuegos, probably because of too short a coal supply to make the more distant port. It would seem easy after a brief stay at this Cuban port to evade Sampson and to sail, by one course or by another, to Porto Rico, where he might perhaps spend several days in recuperating and in taking on a full supply of coal—unless, indeed, Sampson had left his monitors off the entrance to San Juan. It is supposed that the defenses of Porto Rico were not by any means permanently destroyed on May 12, and in any case it might take Sampson the better part of a week to return.

Within that time Cervera could Spanish Dodgpresumably have made the sort of American Delay. mysterious disappearance to which we were treated after his departure from the Cape Verde Islands. So long as his whereabouts were uncertain the American army of occupation would remain safe and comfortable at Chickamauga, and there would seem to be no reason why Cervera's baffling tactics should exhaust themselves in the course of two or three weeks. At least it would seem easy enough for him to keep the American army from entering Cuba before the very height of the rainy season, which of course would mean the delay of military operations until next fall. Meanwhile the Spaniards, whose position looked so hopeless that to make war against them seemed like attacking man on his deathbed, had been reviving wonderfully in their spirits. A very weak power can make a formidable defensive fight, if only it has had plenty of notice and its adversary carefully avoids all precipitancy. Cuba is still in the hands of the Spaniards, and we had not, up to the time of sending this number to press, late in May, seemed to be able even to land guns and supplies for the insurgents in any appreciable quantity. The blame is not President McKinley's. It belongs to Congress and to the country. Possibly Cervera may have been trapped, and Cuba invaded, before this number is printed. On the 23d, when these sentences were written, the country was in a state of eager expectancy.

The redeeming incident in the war thus far has been Admiral Dewey's brilliant success at Manila. Dewey, it will be remembered, had since January been in command of our Asiatic squadron, and when the war clouds began to gather he assembled such forces as he was able to command at Hong Kong. He is said to have spent a year or two in personal study and preparation for the very thing that it fell to his lot to do on May day. His principal ship was the first-class protected cruiser Olympia. His other vessels were the cruisers Raleigh, Balti-

more, and Boston, the gunbouts Concord and Petrel. and the dispatch boat McCullock, with colliers bought by him at Hong Kong. He was instructed, on the outbreak of the war, to proceed at once to the Philippines and either to capture or destroy the Spanish fleet. The Spanish naval forces were in command of Admiral Montoja His principal vessels were the Reina Christina. Castilla, and Don Antonio de Ulloa. His other ships were considerable in number, but most of them were old-fashioned, and their armament was lacking in modern rifled guns. Dewey sailed from Hong Kong April 26; and very early on Sunday morning, May I, daylight found him with his whole fleet safely inside Manila harbor. Admiral Montojo, instead of meeting him outside, had taken his ships well under the shelter of the shore batteries at Cavite, which protected the mouth of the harbor. engagement began at 5 o'clock. The American vessels rapidly destroyed the Spanish squadron,

ADMIRAL PATRICIO MONTOJO Y PASARON.

CAPT. CHARLES V. GRIDLEY.
(Who commanded the Olympia in Dewey's fleet.)

and soon silenced the Cavité forts. fice here to allude in this summary way to the engagement in view of the fact that a more ample account of it appears in our character sketch of Admiral Dewey, printed in this number. Winston Churchill, who writes the character sketch, is himself a graduate of the naval academy at Annapolis, and better qualified, therefore, than a layman to describe the fight. The Spaniards fought with desperate bravery, and apparently with something of the fatalism of Turkish soldiers; but recklessness is no substitute for coolness and skill. The Spanish tactics were bad, while Admiral Dewey's tactics were superb. His conduct throughout was admirable in the highest degree. The news of his brilliant victory came first in the grudging and rather ambiguous dispatches that the Spaniards themselves sent to Before we had received a definite ac-Madrid. count, Commodore Dewey had cut the cable line. Some days later full reports were received by way

of Hong Kong, whither they had been sent by Dewey's dispatch boat, the McCulloch. He had completely annihilated the Spanish fleet and had taken possession of Cavité. The Spanish loss had been about three hundred killed and more than twice as many wounded. The Americans had not lost a single man, and their ships had in curred nothing more than trifling damage.

Dewey had not taken possession of the Dewey's town of Manila, which still remained in the control of the Spanish governor-gen-He reported that he could bombard and occupy Manila at any moment, but that it would be useless to do this until troops had been sent as an occupying force and we were prepared to assume control and jurisdiction. To have bombarded Manila would have been to provoke anarchy. Dewey could only, therefore, report what he had done and ask that an expedition be immediately sent out to establish American authority on land. There had never been any doubt about Commodore Dewey's naval superiority over Admiral Montojo. Otherwise the battleship Oregon would not have been withdrawn from the Pacific, but would have been sent to reënforce our Asiatic squadron. It was also of course perfectly understood at Washington that Admiral Dewey's little fleet could not spare any men to take possession of a great country like the Philippines and administer the government. Plans began, therefore, to be discussed, just as soon as war became certain, for the dispatch of a land force to cooperate with the Asiatic squadron. No active steps of any kind, however, were taken until after the news of Dewey's victory had been fully confirmed. Meanwhile it was evident that conditions in the Philippines might go from bad to worse, and that if the United States were not very energetic in following up its victory by sending forces to maintain order, there might be very much more than a nominal excuse afforded to the great powers to land men at Manila and take our obligations and our opportunity off our hands. all the European powers, almost without exception, had sent warships to Manila from their China squadrons long before we were prepared to start the first ship for Dewey's reënforcement.

Fully three weeks had elapsed after Philippine Expedition. Dewey's victory before troops for his support were actually embarked; and the more nearly we approached the dates set for the sailing of troop-ships, the more strikingly apparent became the fact that we were entering upon a very difficult undertaking. The number of men to be sent was gradually in-

Photo. ty Steffens, Chicago.

MAJOR-GENERAL WESLEY MERRITT, U. S. A.

(Appointed Military Governor of the Philippines.)

At first it was to be five thousand, then ten, and at length fifteen. On about May 16 it was reported that as many as thirty thousand might be needed. About that time also it was officially announced that Gen. Wesley Merritt, commanding the Department of the East and stationed at New York, would be put in command of the expedition. A day or two later, however, General Merritt was quoted in all the newspapers as engaged in an argument with the authorities at Washington over the question how many regular troops he should have. If, it was said, the allotted one thousand regulars were not increased to five thousand he would stay at home and let somebody else have the glory of taking undrilled volunteers from our Northwestern States into the tropical jungles of Malaysia. More regulars were willingly accorded him, and the week beginning May 22 was destined to see several thousand of our men embarked for Manila.

Repanish Relief for Manila. Meanwhile, the Spaniards themselves were recruiting an expedition at Cadiz to carry relief and reënforcements to their captain-general in the Philippines. Their plans were commented upon with much disdain in the United States, and it was at first said by

all the newspapers and by all the strategists at Washington that the idea of a Spanish expedition to the Philippines was too hopeiess even to be contemplated. It was not, however, nearly so hopeless as these gentlemen supposed. Spanish preparations were going forward apparently with more briskness and businesslike energy than our own preparations for reenforcing Spain was proposing to send, with ten Dewey. thousand men, the warships Vitoria, Numancia, Lepanto, and Alfonso XIII. Indeed, there was some prospect that the whole situation in the Philippines might be changed by European intervention. For it must be remembered that all of the European powers have their consular establishments and their commercial interests in the Philippine Islands; and, furthermore—since we have taken it upon ourselves to proceed thither, destroying the Spanish fleet and attacking the Spanish sovereignty—we have incurred the highest kind of obligations for the protection of all foreign residents and interests. The destruction of the Spanish fleet of course encouraged the revolutionists who had been making Spain so much trouble for a year or two, and the revolutionary movement promptly broke out again. It is therefore not impossible that the European powers may be compelled to take an active hand in Philippine affairs a good while before we shall have appeared upon the scene with our Northwestern volunteers. The European powers and Japan were strongly represented in the harbor of Manila early in May; while all appearances in the latter part of May indicated that our projected military expedition would not actually reach Manila in full strength until some time in The European warships, it would seem, could hardly do otherwise than support the only civil authority actually existing in the islandsnamely, that of the Spanish governor-general. If, therefore, supplies and relief should have arrived from Spain for the governor-general, it is not at all impossible that the European powers might decide that Dewey is not to be permitted to destroy the Spanish expedition. Might it not have been wise to order Dewey's whole fleet to Honolulu or San Francisco, immediately after the victory of May 1? The climate is going to be bad for our Western boys.

In view of the fact that we have in no sense as yet conquered or taken possession of the Philippines, theelaborated cussion carried on, throughout the month of May, over what we should do with our so-called "new possessions" on the borders of the China Sea was, to say the least, needlessly anticipatory. The Spaniards have a very considerable army of well-sea-

soned peninsular troops in the Philippines, besides which they have a still larger native army, officered by Spaniards, quite on the plan of England's native regiments in India. The islands produce abundant food supplies; and to have destroyed Montojo's fleet is by no means to have secured possession of the It is, of course, reasonably country. probable that our expedition, when there in full force, will have no serious difficulty in effecting an occupation. town of Manila is the commanding point in the islands; and Admiral Dewey can at any time bombard it and enable American troops to take posses-This, however, is upon the assumption that the fleets of the European powers, which are already on the ground in much greater force than Dewey's fleet, will permit us to do as we please. If we had acted instantly, there would have been no prospect of outside interference. Our apparent unreadiness to follow up Dewey's victory in a decisive manner, rendered it at least very possible that we should never, even temporarily, obtain jurisdiction over the Philippine Islands. We must then first catch our hare-after which there will be time to dispose of it. Meanwhile, Dewey's victory has been valuable in this, that it has made our Pacific coast reasonably secure against any Spanish attacks during the present war.

Whether or not we are des-Novelty of Our Philippine Adventure. tined to have any decisive part in answering the question what shall be the political future of the Philippines, that particular group of islands has at the present moment a very legitimate claim upon our interest. A few weeks ago the great majority of the people of the United States knew nothing about the Philippines except in the vaguest possible way. Our recent interest in Cuban affairs had stimulated somewhat our disposition to find out about the other Spanish colonies; but otherwise the Philippines have been quite as remotely connected with our public life as the Celebes or Borneo. Within the past month, however, not only the Pacific coast, but all the States and Territories west of the Missouri River have become acutely aware of the existence of the Philippine Islands, for

the simple reason that their young men were volunteering for service in the army of the United States, and were notified that they might expect within a very few days to be placed on transport ships bound for Manila. And on May 18 even a Pennsylvania regiment was ordered to join the excursion. An expedition of this sort would create the most intense interest even in a European country, where colonial extensions and military adventures in distant regions are not so The French some years ago were profoundly stirred by their Tonquin expedition, and more recently by their Madagascar campaign. Italy entered with much excitement and considerable enthusiasm upon the Abyssinian campaign which ended so disastrously two years ago, and to which the present unhappy condition of affairs in Italy may in no small part be traced. English friends generally have one or more of these expeditions on their hands, and they are always wild with enthusiasm over every success at arms, whether on the Nile, on the Indian frontier, or elsewhere. With us, however, the dispatch of such an expedition as the one that has been preparing to go to Manila is all the more absorbing an affair for the reason that it is absolutely without any precedent in our national history. It is true that we pushed the Mexican War a'l the way to the City of Mexico, and that in an earlier day we carried on a picturesque little naval war against the Barbary pirates in the Mediter-But our Mexican campaign was a continuous land march, and an easier affair than we should have found it at that same period to send an army through the hostile Indian country to the Yellowstone Valley; while the Mediterranean exploit was a purely naval affair.

We have thought the Philippines inter-More Light esting enough to devote a good deal of space to them this month, and our Western readers in particular will hardly fail to concur in our view of the subject. We present elsewhere two articles, both written in New York late in May, one by Mr. Charles Johnston, who prepared our recent character sketch of the new Russian war minister, Kuropatkin, and who, although now resident in New York, was for a long time in the British civil service in India, and is especially conversant with conditions and affairs in all parts of the far East. The other article is by Mr. Joseph Mannix, a Minneapolis newspaper writer, who has within a few days reached New York, returning by way of the Suez Canal from a very interesting sojourn of a year or two in Japan, China, and the regions adjacent to the China Sea. He was for a considerable time in the Philippines, where he made a study of the

revolution against the Spanish authorities, and had various interesting experiences of his own. Mr. Mannix throws some very instructive side lights upon the nature of Spanish colonial administration, and also upon Spanish war-making as exemplified in the recent campaign against the Philippine insurgents. Nothing could better illustrate the cruelty of the Spanish character than the account Mr. Mannix gives of the delight taken by the Spanish ladies of Manila in attending, as gala performances, the diabolical execution scenes that have been a regular feature of the Spanish dealing with insurgents. quisition and the national institution of bull-fighting have left their indelible imprint upon the Spanish character. The hideousness of Spain's conduct in Cuba could be borne no longer by the people of the United States when the facts became clearly understood; but the Philippines were so far distant that we had known practically nothing about the maltreatment of the gentle, goodtempered Malay races whom the Spaniards have robbed and tortured for so many years with impunity. The kindly characteristics of those races are amply shown by Mr. Mannix and Mr. Johnston. They are not people well adapted, as for example the Japanese are, to play their own independent part in our modern life. For security and well-being they need simply a just and enlightened administration.

It must be remembered that whereas in Our Task and Duty Cuba there is not the slightest surviving at Manila. remnant of any native race, it is wholly otherwise in the Philippines, where practically the population is made up of the native Malaysian tribes, except for a large infusion of people of Chinese stock. The Spaniards resident in the Philippines, including their white descendants, could probably all be carried off in one or two large passenger steamships. This estimate, of course, does not include the regiments of Spanish troops sent out to quell the rebellion, but only the colonial population. In considering the future of the Philippines, therefore, we need make no account of the Spanish population, nor yet of any other European element, although we must make large account of the Chinese. It is not a region where the white races flourish, and the people to be considered are the natives. While we did not enter upon the present war with Spain primarily for the sake of the rescue of the long-suffering Philippinos, we shall have done an exceedingly creditable thing if we drive the Spaniards permanently out of those islands and help to install a decent régime. Germany and the other European powers that have begun to express themselves as rather deeply concerned about the question, have

in point of fact no rights that we need to consider. We shall be justified in postponing altogether the question of the permanent future of the Philippines until we have actually conquered them and erected in them an efficient temporary administration. There should be no haste whatever on our part to disavow the intention to hold the Philippines for all time. We are engaged in open warfare with Spain, and are under no obligation to settle the results of the war with the European powers. England's military occupation of Egypt, although always declared to be of a temporary nature and to involve no purpose of annexation, has been fraught with the highest benefit to the Egyptian people. Our occupation of the Philippines should, to some extent at least, be modeled upon England's beneficent services in the land of the Nile. President McKinley, in good conscience, both in his message to Congress and in his ultimatum to Spain, made it plain that the purpose of the United States toward Cuba was to secure the establishment of just, responsible, and modern administration. Now that it has fallen to our providential lot to drive the cruel Spaniards out of the Philippines as well as out of the West Indies, President McKinley will undoubtedly take the true position that it is our task to provide a just system of administration for the natives and a wholly unwonted freedom for the world's commerce in the Philippines.

We need not trouble our minds with either As to Annex- the metaphysical or the practical aspects of the relation of this military occupation of the Philippines to our constitutional system. will not hurt the Constitution of the United States in the smallest degree if we shall enter without hesitation upon the duty of improving the condition of the Philippines. As for making those islands a part of our national domain, in the sense in which Alaska has been added to the United States, that is a very different affair. the question of annexing the Philippines were one which had to be answered immediately with a yes or a no, there could be only one answer, and that a most emphatic negative. But the question does not require immediate answer. The President of the United States has already determined upon a military occupation. That, of necessity, must mean, throughout the Philippines, an American administration to succeed the administration now carried on under the Spanish governor general, who is at once a civil and a military authority. The completion of our conquest and the establishment of a military rule, under General Wesley Merritt, must require some little time, no matter how successful the expedition may be.

In the nature of the case, an Ameri-We Shall can government thus established in Have to Stay Awhile. the Philippines cannot be speedily withdrawn, because it would have to control the situation until something should be agreed upon to take its place. When one pauses for a moment to remember that the powers of Europe have really been in earnest about trying to establish an administration for the island of Crete, and yet—after constant efforts extending over more than two years—they have not been able to give effect to their plans, it is easy to understand that an American administration once installed in the Philippines will not be readily replaced by anything else, even though we might be exceedingly thankful to have some kind of international relief from our self-imposed but undesirable task. In the very nature of the case, therefore, we are likely—unless the Spaniards, either unaided or with European assistance, should defeat our expedition—to hold the Philippines, not for a few. weeks, but for several years. It is not in the least an agreeable undertaking to contemplate. The light-heartedness with which many people have rejoiced over the great naval victory in Manila harbor, and the flippancy with which they have spoken of the Philippines as a valuable prize certain to contribute to our joint and several prosperity, simply illustrate the sort of overweening self-confidence that will disappear in the sober light of the experiences that are surely in store for us in the near future.

The war must be faced with courage Our Sole Justification and resolution, and ought to be pushed with desperate energy. But the countries with desperate energy. try will learn before this war is ended to sympathize with the intense desire felt by President McKinley that the bitter cup might pass from his lips and that of the nation. There was, in fact, no honorable escape from the war; but for us it is a grievous and a fearful thing, not a jaunty and inspiriting enterprise. Its sole justification, as matters now stand, must be found in great contributions to the moral and material progress of the world. We must see that Cuba and Porto Rico are delivered from the incubus of mediævalism, and it must be our task to leave our beneficial impress permanently upon the fate of the What American missionaries had Philippinos. done for the Micronesians will indicate the possibility of American usefulness to the kindred inhabitants of the Philippines. Our article on America and Spain in the Caroline group, contributed at our request by the Rev. Dr. Strong, of Boston, and found in another part of this number, is important and timely in the highest sense. We believe it will convince all of our

readers that while giving good government to the Philippines, it is also our imperative duty to turn the Spaniards out of the Caroline Islands and to restore and guarantee the happy conditions which had been produced by many years of noble American effort before the Spaniards laid their blighting hand upon that island group.

W.hatever slurs may have been cast the Present upon the missionaries and the "sons Orisis. of missionaries" in the Hawaiian Islands, we beg to assert that this country has produced no group of men of whom we have better reason to be proud than the men who are to-day controlling and administering the Hawaiian republic. The Sandwich Islands have been added to Christendom and civilization by American Whether we annex those islands or not, their peculiarly intimate connection with the United States must have been made a permanent fact as a result of the present war. They have long needed us for the sake of a stable domestic equilibrium. We now perceive that we need them as a strategic outpost. The gentlemen who have been so bitterly opposed to Hawaiian annexation are now facing what seems to them the more dreadful bogie of Philippine annexation. We would modestly suggest to them that inasmuch as compromises are the necessary rule of practical statesmanship, they might do well to abandon their opposition so far as the Hawaiian group and the Caroline group are concerned both groups having actually been transformed from savagery to civilization by American effort. Their antagonism to Hawaii has been so violent, and in some respects so unreasonable, that it has not only overreached itself, but has really provoked a reaction of public opinion under which we may be led a great deal too far in the opposite direction of annexing everything we can lay hands upon. The predominant opinion of thoughtful men now seems to be that we want to hold the Hawaiian Islands as a permanent possession, but that we want to get out of the Philippines as soon as we can safely and honorably withdraw.

A Ship Canal as a Consequence of the War. The energy awakened by our early wars against England gave us the Eric canal, the national pike, and the development of Western river navigation. The Civil War gave us our great trans-continental railroads. The present war with Spain must, if its logic is heeded, give us a trans-isthmian ship canal. The Pacific is to be the theater of great events and of a rapidly expanding commerce in the years to come. We need the Nicaragua Canal in order to give our Eastern seaboard a fair opportunity in the Oriental trade. We need

it also for our trade with our own Pacific coast and with the western coast of South America. It is now evident, moreover, that we need the Nicaragua Canal as a defense measure. naval situation in the West Indies last month showed how much might possibly have depended upon the prompt arrival of the Oregon, which has required some ten weeks to proceed by way of Cape Horn from San Francisco to Key West. On the other hand, the naval situation in the Philippines showed how, under certain contingencies, it might have been necessary to send a relief expedition to Admiral Dewey from the Atlantic coast. The United States Government could readily afford to take the financial risk of the Nicaragua Canal purely on grounds of public The canal would probably pay its own defense. way out of the tolls upon commerce; but even if there were some annual deficiency to be met, it would be the most economical part of our annual naval bill. Thus far, the war has shown that we need a coaling station or two in the West Indies, that we need the Hawaiian Islands, and that we need the Nicaragua Canal as an outand-out territorial possession of the United States. The canal ought to be built as a direct governmental undertaking, and ought to be cut through a strip of ground owned by the United States as absolutely as our Government owns the District of Columbia. No other plan will suffice.

The exigencies of war have led to a Cabinet. partial reorganization of both the American and Spanish cabinets. able last month as we went to press barely to announce the retirement of Postmaster-General Gary and the appointment in his place of the Hon. Charles Emory Smith, of Philadelphia. Mr. Gary's retirement was due to the fact that his health was not equal to the very severe strain to which the war crisis had subjected all of the President's advisers. Mr. Smith, who has long been known as the able editor of the Philadelphia Press and as one of our most brilliant political orators, was Minister to Russia during the administration of President Harrison. He possessor high general qualifications for membership in the President's official family. The Hon. John Sherman, when appointed Secretary of State fifteen months ago, had already begun to show signs of failing strength and vigor, after about half a century of uninterrupted and conspicuous public It was feared that his health would not service. be found by any means equal to the extremely important work that was in store for the chief of the Department of State. And these fears, unfortunately, were verified. The every-day management of the Department of State was assumed

HON. WILLIAM R. DAY, OF OHIO, Secretary of State.

by the Assistant Secretary, Judge William R. Day, of Canton, Ohio, and special expert talent was freely employed to take charge of particular questions. In ordinary times the Department might perhaps have run on in this way for another year; but the outbreak of war brought a whole flood of new and difficult problems, and men in the full vigor of their strength were imperatively Mr. Sherman accordingly withdrew, and it is scarcely probable that he will again figure actively in our public life. It is to be regretted that he had permitted himself, against his preference and better judgment, to leave his place in the Senate and enter the Cabinet. His eminent career will not be overlooked by future historians. His place in the Cabinet was promptly filled by the promotion of Judge Day, whose services in the Department had confirmed the President's good opinion of his Ohio neighbor and friend. It is to be added that almost every one in public life at Washington seems to share the President's confidence in the ability and sound judgment of the new Secretary.

Two Assistant Secretaryships. In times of war the work of government is so enormously increased that the assistant secretaryships assume an importance many fold greater than, in times of peace. Judge Day's place as Assistant

Secretary of State was offered to Prof. John B. Moore, professor of international law in Columbia University, New York, who entered immediately upon his duties. Professor Moore had formerly served in the State Department, and his services were desired because of his authoritative grasp upon the theory and practice of such doctrines of international law as, for example, neutrality. In the Navy Department a great gap was left by the retirement of the Assistant Secretary, the Hon. Theodore Roosevelt. Mr. Roosevelt's capacity for executive work is simply prodigious; and in that respect it is probably true that no other man connected with Mr. McKinley's administration has been his equal. Mr. Roosevelt believed when the war broke out that other men could do as well as he at Washington, and no amount of persuasion availed to alter his determination to join the army. He could, of course, have had almost any possible staff position, or could have had the colonelcy of a volunteer regiment. What he chose was to promote the formation of an exceedingly picturesque regiment of Western cowboys and rough riders, recruited from Colorado, New Mexico, Arizona, the Indian Territory, Oklahoma, and that part of the country in general. Instead of taking the command himself, he expressed his preference for

HON. JOHN BASSETT MOORE, OF NEW YORK, Assistant Secretary of State.

service under Dr. Leonard Wood, who, although a surgeon in the army, had made a marvelously brilliant record as an Indian fighter in the Apache country. The regiment was rapidly recruited, and on or about May 14 Mr. Roosevelt left Washington to join it at San Antonio, Texas, its point of rendezvous. A good many well-known young men from the East joined this regiment as privates. In every case they were skilled in horsemanship and had in other ways proved themselves fit for any kind of service. To the "rattling good fellows," brave and manly, who have gone into the make-up of regiments like Roosevelt's, and to the more than one hundred thousand young men who have—most of them at a considerable sacrifice—stepped forward into the ranks of the volunteer regiments already mustered into Uncle Sam's service, the heart of the country goes out with warm admiration and anxious solicitude. When these pages reach our readers some of these volunteer regiments will be on the high seas sailing toward the distant Philippines. Others will be in readiness for that long voyage, willing to face the perils that await their arrival. Possibly some of these regiments may have embarked for Cuba; while the great majority of them will probably have been concentrated at Chickamauga and other Southern points.

Rooseveit's Mr. Roosevelt's place as Assistant Secretary of the Navy was filled by the appointment of Mr. Charles H. Allen, of Lowell,

HON. CHARLES H. ALLEN, Assistant Secretary of the Navy.

Mass. It is to be assumed that the new Assistant Secretary, whose name has not been known to the country, was selected by reason of exceptional qualifications for executive work. It had been rather expected that a retired naval officer might be given this appointment; but the Department is not without the constant presence of expert naval advisers of the highest qualifications. Captain Mahan, Admiral Sicard, and other eminent officers are now aiding the administration by serving on the Naval Strategy Board or otherwise.

Photo by Bell.

MAJ.-GEN. JOSEPH WHEELER.

One result of the declaration of war Our New against Spain has been the rapid promo-Major-Generals. tion of a large number of meritorious officers of the regular army. Prior to May 4 we had only three major-generals, namely, Gen. Nelson A. Miles, Gen. Wesley Merritt, and Gen. John R. Brooke. On that date the President sent to the Senate the names of eleven additional major-generals. Seven of these were promotions from the rank of brigadiergeneral in the regular army. The officers thus promoted are Generals Joseph C. Breckenridge, John J. Coppinger, William M. Graham, Henry C. Merriam, Elwell S. Otis, William R. Shafter, and James F. Wade. The other nominations for the rank of major-general were made from civil life, the selections being Gen. Fitzhugh Lee, Gen. James H. Wilson, Gen. William J. Sewell, and Gen. Joseph Wheeler. General Sewell, who is the well-known Senator from New Jersey, and who served very prominently

in the Civil War, declined his appointment. All the other appointees were confirmed, and entered promptly upon their duties. Curiously enough the three new major-generals appointed from civil life are all of them graduates of West Point, while of the seven major-generals promoted from the rank of brigadier-general in the regular army, not one is a West Pointer. It so happens that these men, like Generals Miles, Merritt, and Brooke, learned their business in the severe school of the Civil War. They won their spurs as young volunteers, advanced rapidly, and, instead of retiring at the end of the war, remained permanently identified with the army.

As for the three men appointed from The Three Civilian civil life, Gen. Fitzhugh Lee, of Virginia—recently our consul-general at Havana, and some years ago a Congressman and a Governor of his native State—stood first in his West Point class of 1856, and left the United States army in 1861 to enter the Confederate service, in which he rose rapidly and became a major-general. General Wheeler, at the time of his appointment last month, was serving his seventh term as a Congressman from Alabama. He graduated at West Point in 1859, and entered the Confederate army in 1861. Next to Stuart he was regarded as the most brilliant cavalry leader on the Confederate side; and he has now merely received in the army of the United States the rank he had reached in the Confederate army before the end of the Civil War. The whole country is unanimous in its praise of President McKinley for appointing these two eminent American citizens and great soldiers to high military rank in the present war. James H. Wilson, of Delaware, the other appointee from civil life, graduated at West Point in 1860. He was one of our greatest Northern cavalry leaders through the whole period of the Civil War, and though only a boy at the end of the strife, he had won the rank of major general. The late Charles A. Dana, in a recent installment of his "Reminiscences of the Civil War," now appearing in McClure's Magazine, paid an exceedingly high tribute to Gen. James H. Wilson as one of the most talented and meritorious leaders in our entire forces. The promotion of the brigadier generals left vacancies which gave opportunity for the advancement of a number of colonels to the rank of brigadier; thus the older officers of the regular army have to a great extent been moved up a peg or two all along the line. If the war should be protracted, it will of course give chances for the promotion of young officers of volunteers when their merits have been demonstrated in actual conflict.

MAJ.-GEN. JAMES H. WILSON.

Although the eyes of the country What Congress have not been fixed upon Congress has Been Doing. for the past month, but have been trying under many discouragements to follow the movement of the fleets, it is true, nevertheless, that our representatives at Washington have been dealing with several matters of great importance. The subject of largest permanent moment was the favorable report by the House Committee on Foreign Affairs of the resolutions for the annexation of Hawaii. This seemed to render it practically certain that Hawaii would, within a few days, or at most a very few weeks, be part and parcel of the domain of Uncle Sam. Another measure of importance was the resolution which passed the House by a large affirmative vote, favoring an amendment to the Constitution of the United States for the direct popular election of senators. It remains to be seen whether the senators themselves will approve of this resolution. A very useless attempt to amend the Constitution by changing the date of the inauguration of the President was passed by the Senate. It is to be hoped that the House will not acquiesce.

A measure of great immediate importance with which Congress had to concern itself last month was the bill for the provision of war revenues. There has been little disposition on the part of the people at large to encourage members of the Senate in trying to take advantage of the country's necessities to force their own personal or partisan financial views. This is not the time for Repub-

licans to levy a tonnage tax, or in any manner to inject their protectionist preferences into a scheme of extraordinary taxation. Nor, on the other hand, is this the time for Democrats to block necessary legislation by insisting upon an income tax which it is perfectly certain that the Republican administration could not now accept. It is probable that when the revenue bill is completed and signed, it will enable the country to collect about sixty millions of dollars a year from additional taxes upon beer and tobacco, and perhaps thirty or forty millions more from various kinds of taxes which will be collected principally through the use of adhesive stamps, as in the Civil War period and the years immediately fol-Thus we shall put stamps upon bank checks (except those for small amounts), upon telegrams, and upon various commercial papers. Many novel sources of revenue were proposed.

The Democrats in the Senate have The Bond strongly demanded the coinage of what Question. they call the seinorage, by which they mean that quantity of silver (of about \$40,000,-000 coinage value) owned by the treasury and not pledged for the redemption of outstanding silver certificates or treasury notes. The Democrats have also been in favor of the issue of a large amount of additional greenbacks or treasury notes, instead of interest-bearing bonds. Secretary Gage and the banking element have been disposed to advocate the issue of several hundred million dollars of long-time bonds. The newspapers of the country have quite predominantly favored the issue of bonds at 3 per cent., payable at an early date at the option of the government, and offered in amounts of very small denomination, either through the post offices of the entire country or through some other means for making it as easy as possible for the small investors everywhere to take up the bonds. As against the issue of treasury notes on the one hand, and long-term bonds to be handled by banking syndicates on the other, the reasonable compromise would seem to be the short-term bonds distributed in such a manner that the savings of the humblest citizen in every State and territory might find a ready opportunity to contribute a part of the government loan.

England and America in May. The evidence of friendly feeling and good understanding between the United States and Great Britain has continued to be shown in many ways through the month of May. A few men in both countries have seized this particular juncture to say a great deal about the desirability of a formal alliance. This discussion has been so peculiarly inoppor-

THE COMMON CRIER PROCLAIMING GREAT BRITAIN'S NEU-TRALITY ON STEPS OF BOYAL EXCHANGE.

tune that one might have supposed that these gentlemen at heart desired to destroy the fruit before it was ripe. They have not assisted their respective governments in the pressing tasks of the moment, but have only added an element of embarrassment. It is the duty of Great Britain at this time to observe every obligation of strict neutrality; and it is highly important for British interests that Spain should be treated with perfect justice and fairness. Otherwise, powerful combinations of the great continental powers might needlessly be provoked against Great Britain, to the detriment of her beneficent empire. As for the United States, we need nothing from Great Britain except that which the British Government has shown itself perfectly ready to accord us-namely, just treatment, based upon the friendliness which has been steadily growing between the two governments, and which had already received its real tests in the settlement of disputes between these two powerful nations by The friendship that exists peaceful arbitration. between Great Britain and the United States must be considered as benevolent rather than hostile in its intentions toward the rest of the world, and as making more powerfully than anvthing else for the world's quiet and progress. The Rt. Hon. Joseph Chamberlain's aggressive speech

at Birmingham, on May 13, was ill-timed and mischievous, in that it proclaimed the doctrine of an Anglo-American alliance in a tone of menace that provoked all Europe.

There has been undue exaggeration of certain symptoms of unfriendliness in continental Europe toward the United States in the present contest. The European press does not very accurately reflect public opinion, although, of course, it doubtless interprets the views of certain classes and elements. titled aristocracy of the European continent dislikes the United States, both because it dislikes republican institutions and also because our agricultural competition has destroyed the wealth of Europe's landed gentry. This to a considerable extent explains the tone of the newspapers that represent the so-called agrarian parties of Germany, Austria, and other parts of Europe. Furthermore, the powerful self-assertion of a great democracy like America against a monarchical country like Spain, where republicanism has more than once in the past raised its hand against the throne, is so clearly a menace to the security of the Spanish reigning dynasty that other monarchs naturally tremble, and all crowned heads lie the more uneasily on their pillows. Thus the formidable riots throughout Italy last month, while not due directly to the war between the United States and Spain, nevertheless were undoubtedly influenced by the tottering state of the Spanish throne. There is reason enough, therefore, for anti-American feeling on the part of certain classes in almost every European country. Even in England there are elements that are decidedly pro-Spanish in their sympathies.

Why an Alliance The plain people, it is true, who constitute the bone and sinew of the Britis Not in Order. ish nation, are to-day, as they almost always have been, in sympathy with the United But it is also true to a very great extent that the intelligent citizenship of Germany is friendly to America. The Germans are in much closer relationship with American life than are the English. We have millions upon millions of people in this country who, if not born in Germany themselves, are descended from parents or grandparents of German birth. The naturalized Americans born in England, on the other hand, are a very limited number indeed. The plain people of Germany have nothing in common with the people of Spain, while they feel that America, where all of them have relatives, is their second France, it is true, has many traditional and intimate ties with the neighboring Spaniards; but neither the French people nor the French

Government—especially the existing republican regime—would willingly abandon the tradition of friendliness toward the American republic. As for Russia, the maintenance of a thoroughly good understanding with the United States has for more than a generation been one of the fixed principles of her imperial policy. On our part, we have no possible occasion to develop any friction or ill-will in our relations with any of the great European powers. An offensive and defensive alliance with England at this time would revolutionize all the principles of our oldtime policy. In order to play our particular part in the affairs of the world, it does not now seem either necessary or desirable that we should bind ourselves by any alliance whatsoever. The best kind of an immediate entente with England would be effected by the adoption of an arbitration treaty—not so much because the treaty is specifically needed as because of the testimony it would bear, before the whole world, of mutual confidence and esteem between the two most powerful and most highly developed of nations. It is perfectly true, undoubtedly, that the growth of the most friendly feeling between England and America will be mutually advantageous in a high degree. And it is to be encouraged in every reasonable manner. But such a relationship will not be improved by indiscreet and blustering talk which can only arouse the jealousy and ill-will of continental Europe. Because we are willing to love England the more, there is no present reason why we should love Germany, or France, or Russia any the less.

The real growth of a good under-Mr. Gladstone standing between England and the of Sympathy. United States is best evidenced by such spontaneous expressions as the death of Mr. Gladstone, on May 19, called out from the whole American nation. For a long time Mr. Gladstone's name had in the United States been synonymous with the loftiest personal character and the highest moral purpose in statesmanship. He had never visited our country, and not many Americans had ever come under the glamor and spell of his noble oratory. Nor had the people of the United States ever to any appreciable extent read or studied his published writings. Further than that, the specific achievements of his long public career have never been matters of common information in the United States. Bismarck has been universally known throughout America for his splendid achievements. Gladstone, on the other hand, has been venerated and loved because he has always seemed to our serious-minded. nation to represent righteousness and Christian principle applied as the true test of every public

question that presented itself. Bismarck was always for Germany, and with him the end justified the means. Mr. Gladstone was loyal to his own country, but his sympathies were worldwide; and he was more concerned that his country's policies should be right than that they should gain unlimited mastery. He was the supreme statesman of the modern era of democ-He was the greatest parliamentary leader and debater that any country has yet produced. He was the foremost personality of our time. His intellectual and moral attainments, together with his great influence over his fellow-citizens, gave us the best possible evidence of the great qualities of the British race. For it must be a noble people that can appreciate and can faithfully follow a noble leader. Knowing that Mr. Gladstone's death was only a question of weeks, we had some time ago arranged for an obituary character sketch of the great statesman from the pen of Mr. W. T. Stead. In order to allow it ample space we have thought it best to hold it for our next number. The removal of so transcendant a figure as Mr. Gladstone is not merely a matter of the passing moment, to be hastily chronicled to-day and forgotten to-morrow.

The resignation of the Spanish cabinet 8panish on May 15 did not mean in any sense the retirement of Sagasta, and was merely a device for dropping Moret, Admiral Bermejo, the naval minister, Gullon, the foreign minister, and one or two others. The Queen Regent immediately instructed Señor Sagasta to form a new cabinet. A majority of the prime minister's former colleagues were retained in his new minis-Señor Gamazo is the most conspicuous public man among the new members, although he has the least important portfolio. The naval department is in the hands of Señor Aunon, who immediately entered upon his duties with immense vigor, and directed his fresh energies to the task of getting the Philippines relief expedition started ahead of our American expedition. In order to meet the wishes of Gamazo, Señor Sagasta and his new cabinet solemnly voted a disavowal and repudiation of the acts of Señor Sagasta and his old cabinet—a highly humorous and somewhat stultifying performance in view of the fact that most of the portfolios had not changed hands. Although Sagasta seems to have infused more vigor into his cabinet by the changes, it is not probable that he can keep the reins very long. All sorts of rumors of republican revolt and Carlist uprising have filled the air. If Sampson should crush Cervera's fleet, the Sagasta cabinet would, of course, go to pieces in a moment, and the dynasty would scarcely survive.

THE QUEEN REGENT AND KING ALFONSO XIII. BEFORE THE CORTES AT MADRID.

On Sunday, May 8, there was an France—
Her Republican election throughout France for members of the Chamber of Deputies. The notable thing in the general result is the smallness of the groups on the two extreme sides of the house. The Monarchists and the Socialists are, relatively speaking, only unimportant coteries in the new Chamber. The great mass of the members-elect are either moderate Republicans or else Radicals. And there does not seem to be any very vital distinction between the followers of Premier Mèline and President Faure, who are conspicuous chiefs of the Moderate party, and the disciples of men like Brisson and Bourgeois, who are leaders of the more advanced party, known as Radicals. In the hands of either of these great groups the republic itself would be perfectly safe. The election would seem to foreshadow the indefinite continuance of the existing ministry under M. Mèline—already in office an almost unprecedentedly long time for France. It is not easy to see that the recent agitation over the Drevfus-Zola trials has had any important effect upon election results. The monarchical countries surrounding France were only a few months ago predicting the speedy downfall of the republic. But to-day the French and Swiss Republics are, apart from Russia, the most firmly established governmental organizations on the European continent. Republics are well-ballasted, while monarchies, being top-heavy, fear rough seas.

The Spanish throne is tottering, and taly—Her Strifes and Italy has been the scene of riotous disorders of a most alarming character during the past month. On the very day the French were holding their peaceful elections there was a battle in the streets of Milan, Italy, between rioters and soldiers, in which it was reported that as many as three hundred persons were killed and a thousand wounded. There were disorders in almost every other city throughout the Italian kingdom, and blood was shed at The chief immediate causes of the many points. rioting were the lack of employment, the rise in the price of bread, and the extremely bad economic conditions generally prevailing. But various organizations hostile to the present government are believed to have fomented the disturbances. The real troubles of Italy have arisen from its unfortunate ambition to figure as a great power, when it could not pay the bills. present dynasty has ruined the nation with unbearable taxes in order to support a vast navy and an enormous standing army. If the Garibaldis and the Mazzinis could have had their way and made united Italy a republic, we should have witnessed prosperity where now we find distress. There is nothing essentially wrong with the Italian people, who are in the main honest and industri-

THE RECENT FRENCH ELECTIONS-A POSTER CAMPAIGN.

ous. They are the victims of dynastic ambitions and useless militarism. They deserve sympathy.

Germany-Her In France, the leader of the Socialists Emperor and in the last Chamber was M. Jaures, Her 800.1'sts. who is now defeated for reëlection. Everything in Germany, on the other hand, indicates the rapid growth of the socialistic movement, and the already large number of socialist members of the Reichstag it is believed will be much increased in the house that is to be elected this year. The "young" German Emperor, William II., who will be forty years old next January, will have reigned as King of Prussia and Emperor of Germany just ten years on the fifteenth day of the present month. On about that same date, the five-year term of the present Reichstag will have expired, and the new elections will follow very soon after. However showy a celebration there may be of the Emperor's ten years on the throne, the popular vote in the coming elections will certainly take the form of a protest against his arbitrary rule.

Speaking of anniversaries, the re-A Half Dozen spected King Albert, of Saxony, has just now been celebrating at once his seventieth birthday and the twenty-fifth anniversary of his accession to the throne. The little King Alfonso XIII. of Spain was thirteen years old on May 17, and his birthday was observed with more or less of ceremony. The Queen of the Netherlands, Wilhelmina, will be eighteen years old on the last day of August, and that will bring an end to the regency of Queen Emma. It should have been mentioned that King Humbert I. of Italy this year completes his twenty years upon the throne. In Russia a few days ago there was celebrated with mighty acclaim the thirtieth birthday of Emperor Nicholas II. His accession to the throne seems to have been only yesterday, but in point of fact he will have reigned four years, the length of one of our presidential terms, by the end of next October. The fiftieth anniversary of the reign of Francis Joseph as Emperor of Austria will not occur until the second day of December. His realms are in a sadly distracted plight, but it is now reasonably probable that they will hold together long enough to celebrate the venerable emperor's jubilee.

Greece—
the Departing
Turk and
the Indemnity.

five years on the throne. The Hellenic world
will not, however, make much of a fuss over the
anniversary. The fact seems to have escaped
mention in this country that the Turkish troops

which had still remained in camp in Thessaly, were notified, through a joint note of the ambassadors of the six great powers, that they must begin to evacuate on May 25. The Greek indemnity was to be paid in four instalments; one on May 15, the next on May 25 (when the Turks were to begin the movement out), the third on June 10 (when the Turks were expected to be completely evacuated), and the fourth on July 10. We shall not be perfectly sure that the mandate of the powers will be carried out until the reluctant Turks have really gone away. The powers, of course, are providing the money, and are protecting themselves by a joint control of the Greek They deal thriftily with weak peoples. revenues.

Kitchener, Rhodes, and the African We told the story last month of the battle of Atbara on the Nile, Trunk Rallway. fought on April 8, under the lead of General Sir H. Kitchener, the Sirdar of the Egyptian troops. The work of opening up the Soudan is so necessary, from the standpoint of civilization, that even Germany and France, for once, were disposed to congratulate the English upon the victory which has practically cleared the road to Khartoum. There will probably have to be another battle, however, at Omdurman. The advance, as we remarked last month, must await the rise of the Nile in order to give clear navigation to the gunboats. Mr. Cecil Rhodes, whose authority in South Africa is once more unquestioned, is meeting with ample support for his railroad project, and his only fear seems to be that Sir Herbert Kitchener, who is

CECIL RHODES LEADING THE FORCES OF PROGRESS.

From the South African Review.

WELL DONE, SIB HERBERT, AND ALL! Atbara, April 8, 1898.—From Punch, London.

building a railroad as he advances, may get as far as Uganda before Mr. Rhodes reaches that point from the South. Unless the unexpected happens, we shall certainly in the very early future witness the completion of an English railroad from the delta of the Nile straight down through the entire length of Africa to Cape Town. The English will then practically own Africa.

While our own Congress has been dis-Prosperous British cussing the question of war taxes, and Finances. trying to put the country on the financial basis needed to carry on costly military and naval campaigns in two hemispheres, the British have been so successful in their revenue measures. that Sir Michael Hicks Beach the chancellor of the exchequer, has been able slightly to reduce the income tax, while exempting small properties from the land tax, and reducing the legacy and succession taxes by 1 per cent. The tobacco tax also has been materially reduced. All these changes apply to the coming year. The income of the British Government last year was in round figures \$580,000,000, of which about \$18,000,-000 was surplus. Nearly all of this surplus was set apart for the construction of some greatly needed public buildings. The departments of the British Government in the neighborhood of Westminster have not been adequately housed, and it has now been decided to build a series of splendid edifices for governmental purposes.

### RECORD OF CURRENT EVENTS.

(From April 23 to May 20, 1898.)

### WAR BETWEEN THE UNITED STATES AND SPAIN.

April 23.—President McKinley issues his proclamation calling for 125,000 volunteers....Two Spanish schooners and a steamer are captured by the *Porter* and *Helena*, of the blockading fleet.

April 24.—Spain issues a decree declaring that a state of war exists with the United States....Three Spanish merchantmen are captured by the blockading fleet.

April 25.—The United States Congress declares that war exists with Spain....Secretary of State John Sherman resigns....The different States are called on for their quotas of troops.

April 26.—President McKinley, by proclamation, declares the intention of the United States to adhere to the anti-privateering agreement of the Declaration of Paris....England proclaims neutrality, deciding that war began April 21, when Spain gave Minister Woodford his passports....The Postmaster-General orders that no more mails be sent from the United States to Spain.

April 27.—The earthworks defending Matanzas, Cuba, are bombarded and silenced by the New York, Puritan, and Cincinnati, of Admiral Sampson's squadron; this is the first action of the war....Commodore Dewey's squadron sails from Mirs Bay for Manila.

April 28.—The following governments have declared neutrality: Great Britain, Italy, Switzerland, Netherlands, Sweden and Norway, Colombia, Mexico, Russia, France, Corea, Argentine Republic, Japan, and Uruguay.

April 29.—Portugal announces neutrality, and the Spanish squadron comprising the cruisers Maria Te-

RAMON DE CARRANZA Y REGUERA. (The brave challenger of Maj.-Gen. Fitzhugh Lee and Captain Sigsbee.)

resa, Almirante Oquendo, Viscaya, and Cristobal Colon, and the torpedo-boat destroyers Pluton, Terror, and Furor, sails from Cape Verde Islands....The cruiser New York fires on Spanish cavalry near Port Cabañas, Cuba.

April 30.—The steamer Paris, to be employed as an auxiliary cruiser by the United States, reaches New

ENSIGN WORTH BAGLEY, U. S. N. (First American officer killed in the war with Spain.)

York in safety....The United States battleship *Oregon* is reported at Rio de Janeiro, Brazil.

May 1.—The United States naval squadron under command of Commodore Dewey steams into the harbor of Manila, and at daybreak engages the Spanish fleet, consisting of the Reina Cristina, Castilla, Don Antonio de Ulloa, Isla de Luzon, Isla de Cuba, General Lezo, Marquis de Ducro, Cano, Velasco, Isla de Mindanao, and a transport. The American ships Olympia, Baltimore, Raleigh, Petrel, Concord, and Boston open heavy fire on the Spaniards, resulting in the destruction of all the Spanish ships and the silencing of the land batteries. On the American side six men are slightly wounded, no one killed. The Spanish loss is very heavy—two commanders and from 600 to 700 men killed or wounded.

May 2.—Commodore Dewey cuts the cable connecting Manila with Hong Kong, and destroys the fortifications at the entrance of Manila Bay, taking possession of the naval station at Cavité.

May 3.—The Spanish Cortes reassembles amid great excitement. In the Chamber of Deputies the government is called on to explain the defeat at Manila. Carlists and Republicans insult the government.

May 4.—The flagship New York, the battleships Iowa and Indiana, the monitor Puritan, the cruisers Cincinnati, Detroit, and Marblehead, and the torpedo-gunboat Mayflower, of Admiral Sampson's squad-

DON CARLOS, DUKE OF MADRID. (Pretender to the Spanish throne.)

ron, sail from Key West after coaling for a long voyage .... The Oregon and Marietta leave Rio de Janeiro .... President McKinley nominates from civil life James H. Wilson, of Delaware; Fitzhugh Lee, of Virginia;

William J. Sewell, of New Jersey, and Joseph Wheeler, of Alabama, to be major-generals of volunteers; of the brigadier-generals in the regular army the following are nominated to be major-generals: Joseph C. Breckinridge, Elwell S. Otis, John J. Coppinger, William R. Shafter, William M. Graham, James F. Wade, and Henry C. Merriam. A number of colonels and lieutenant-colonels are nominated to be brigadier-generals ....Orders go out from Washington for the concentration of regular and volunteer troops at San Francisco and for the purchase of transports to go to Manila.

May 5.—Serious riots occur in Spain on account of the high price of food.

May 6.—The French steamer Lafayette is captured while attempting to run the Havana blockade, but is released by di-

rection of our State Department and escorted back to Havana.

May 7.—Riots continue throughout Spain....Commodore Dewey is promoted to acting rear admiral and is congratulated by the authorities at Washington on his brilliant victory in Manila Bay.

May 9.—President McKinley sends a message to Congress in commendation of Admiral Dewey.

May 10.—A report is persistently circulated that the Spanish fleet has returned from Cape Verde to Cadiz.... The spanish Cortes votes war credits.

May 11.—In an attack by Spanish gunboats and shore batteries on the American blockading vessels Wilmington, Winslow (torpedo-boat), and Hudson at Cardenas, Cuba, the Winslow is disabled, Ensign Worth Bagley and four sailors are killed, and Lieutenant Bernadou and two others are wounded; Ensign Bagley is the first officer killed in the war...The cable at Cienfuegos, Cuba, is cut by American sailors under fire; one man is killed...Orders are given that troops from States west of the Missouri River, aggregating eleven regiments of infantry, one of cavalry, and four batteries, shall proceed to San Francisco to be embarked for the Philippines.

May 12.—Members of the First Infantry landed near Port Cabañas, Cuba, with supplies for the insurgents, have the first land skirmish of the war with Spanish troops....Part of Admiral Sampson's squadron bombards the batteries defending San Juan, Porto Rico, inflicting much damage and sustaining a loss of 2 men killed and 6 wounded....The Spanish squadron from Cape Verde is reported at Martinique.

May 13.—The flying squadron, under Commodore Schley, comprising the armored cruiser *Brooklya*, the battleships *Massachusetts* and *Texas*, the dispatch boat *Scorpton*, and a collier, sails from Hampton Roads for the South, to be followed immediately by the cruisers *Minneapolis* and *St. Paul*.

May 14.—The Spanish fleet is reported at Curação, off the Venezuelan coast, while Admiral Sampson's squad-

MOB AT SEVILLE THROWING COAT OF ARMS OF AMERICAN CONSULATE INTO

ADMIRAL CERVERA'S SPANISH SOHADRON LYING AT CAPE VERDE BEFORE SAILING FOR WEST INDIES.

ron is off the northern coast of Haiti....Senator Sewell, of New Jersey, declines appointment as major-general of volunteers.

May 15.—The entire Spanish Cabinet resigns.

May 16.—A new military department of the Pacific is created, including the Philippines; General Merritt is assigned to the command.... Volunteer troops from different parts of the country occupy Camp Thomas, Chickamauga Park.

May 19.—The Spanish fleet under Admiral Cervera is reported at Santiago de Cuba.

May 20.—The United States War Department takes steps for the enlistment of six regiments of yellow-fever immunes in the South.

#### PROCEEDINGS IN CONGRESS.

April 23.—The House passes the bill for the reorganization of the army, by unanimous vote; Chairman

Dingley, of the Ways and Means Committee, introduces a war revenue bill.

April 25.—The Senate passes the naval appropriation and the army reorganization bills with amendments. ....Both houses, on President McKinley's recommendation, pass a bill recognizing the existence of a state of war with Spain.

April 26.—The Senate agrees to the conference report on the army reorganization bill...In the House, the war revenue bill is favorably reported from the Ways and Means Committee; the House decides the election contest from the Second Virginia District in favor of Richard A. Wise (Rep.), unseating William A. Young (Dem.).

April 27.—The House begins debate on the war revenue bill.

April 29.—The Senate debates the conference report on the naval appropriation bill. The House passes the

war revenue bill by a vote of 181 to 131.

April 30.—The House rejects the conference report on the naval appropriation bill, and sends the bill back to the conference committee.

May 2.—The Senate votes the emergency appropriation of over \$35,000,000, asked for by the War Department, without debate....The House passes the war emergency bill, and debates the conference report on the naval appropriation bill, but rejects the conference report on the general Alaskan homestead bill.

May 4.—The Senate adopts a resolution proposing a Constitutional amendment regulating succession to the Presidency...The House agrees to the conference report on the fortifications appropriation bill.

MADRID-DEPARTURE OF SOLDIERS TO THE CANARY ISLANDS.

May 5.—The Senate passes a bill authorizing the President to supply munitions of war to the Cubans.... The House passes a bill providing for the arbitration of labor disputes between railroad companies and their employes and adopts the conference report on the Alaskan homestead bill.

May 6.—The Senate passes a bill authorizing an increase in the force of army surgeons, and adopts the postoffice appropriation bill.

May 9.—Both houses adopt resolutions of thanks to Admiral Dewey, and his officers and men for their gallantry at Manila, and pass a bill authorizing the President to appoint another rear admiral....The House passes a bill authorizing the enlistment of yellow fever immunes.

May 10.—The Senate passes the postoffice appropriation bill, a resolution in favor of changing the date of inauguration day from March 4 to May 4, and four measures relating to the war.

May 11.—The Senate adopts the labor arbitration bill. ....The House, by a vote of 184 to 11, passes a resolution for amending the Constitution so as to provide for the election of Senators by direct vote of the people.

MADRID-LIBRARY-MUSEUM.

(Meeting-place of the International Medical Congress.)

May 12.—The Senate passes the labor arbitration bill with only three dissenting votes; the war revenue bill is reported from the Finance Committee....The House passes a bill for the organization of a volunteer naval auxiliary force and a coast signal corps.

May 16.—A war revenue bill is introduced in the Senate by Mr. Allison (Rep., Iowa).

May 17.—The Senate considers the war revenue bill.

....The House passes an eight-hour bill for government employees and a bill for the appointment of a labor commission; the Committee on Foreign Affairs reports favorably on the annexation of Hawaii.

May 18.—The House passes the pension deficiency bill.

May 19.—The House agrees to the Senate amendments to the labor arbitration bill.

May 20.—The Senate adopts a resolution providing for a volunteer naval auxiliary force.

#### POLITICS AND GOVERNMENT—AMERICAN.

April 26.—President McKinley nominates William R. Day, of Ohio, for Secretary of State, and John B. Moore.

of New York for Assistant Secretary of State

May 4.— Alabama Populista nominate G. R. Deans for governor.

May 9.—President McKinley nominates Charles H. Allen. of Massachusetts. to be Assistant Secretary of the Navy.

May 12.—The Louisiana Constitutional Convention closes its session and promulgates the new constitution.

May 17. – In Kansas a fusion

of Silver Democrats and Populists is effected.

May 18.—The battleship Alabama is launched at Chester, Pa.

May 20.—Pennsylvania Prohibitionists nominate Dr. S. C. Swallow for overnor.

#### POLITICS AND GOVERNMENT-FOREIGN.

April 26.—The motion to impeach Count Badeni's carried in the Austrian Reichsrath.

April 27.—Serious bread riots occur at Bari, Italy.

April 29.—A preliminary treaty of peace between Nicaragua and Costa Rica is signed....In the British House of Commons the government's Chinese policy is attacked by Sir William Vernon Harcourt.

May 2.—Bread riots occur at Naples, Ravenna Ferrara, and at many other places in Italy: at the village of Bognia Cavallo three rioters are shot to death by the troops....The government of Haiti admits Americans to equal taxation with the natives and to the same trade and labor privileges.

May 3.—The Italian government decides to call out the reserves of 1873 to suppress the bread riots in various parts of the country....France suppresses the wheat

DR. PAUL BROUARDEL, DEAN OF MEDI-CAL FACULTY OF PARIS. Chairman Executive Board of the International Hygienic Medical Congress which met recently at Madrid.

duties till July 1....The Brazilian congress is opened at Rio de Janeiro.

May 4.—The German Reichstag, by a vote of 177 to 88, adopts a bill for the revision of court-martial procedure.

May 6.—The German Reichstag closes its session.

May 7.—China pays the balance of the war indemnity to Japan.

May 8.—Elections to the French Chamber of Deputies result favorably for the Republicans....Hundreds of people are killed in the street-rioting at Milan, Italy.

May 9.—The men who attempted to assassinate King George of Greece, February 26, are executed.

May 10.—A state of siege is proclaimed in the province of Florence, Italy.

May 12.—The Swiss Government announces that bands of Italians will not be permitted to cross the boundary into Switzerland.

May 13.—It is officially announced that Queen Victoria has accepted the resignation of the Earl of Aberdeen as Governor General of Canada.

THE LATE SENATOR EDWARD C. WALTHALL, OF MISSISSIPPI.

May 16.—The Queen Regent of Spain intrusts to Sagasta the forming of a new ministry.

May 18.—Señor Sagasta succeeds in forming a new Spanish Cabinet; Castillo declines the portfolio of foreign affairs. The other members of the Cabinet are: President of the Council of Ministers, Praxedes Sagasta; Minister of War, Lieutenant-General Correa; Minister of Marine, Señor Aunon; Minister of the Colonies, Romero Giron; Minister of Finance, Lopez Puigcerver; Minister of the Interior, F. R. Capdepon; Minister of Justice, C. Groizard, and Minister of Public Instruction, Señor Gamazo.

May 19.—The Venezuelan insurrection is regarded as practically ended by the defeat of General Hernandez.

May 20.—The British Parliament pays extraordinary honors to the memory of Mr. Gladstone.

#### OBITUARY.

April 23.—Prof. William Wirt Fay, of the United States Naval Academy, 66.

April 25.—Melville Atwood, a California geologist and microscopist, 86.

April 27.—Rev. Birdsey Grant Northrop, "father of village improvement societies," 81.

April 29.—Maxime Outray, former Minister of France to the United States, 76....Mrs. Mary Towne Burt, President W. C. T. U., State of New York, 56.

April 30.—Gen. Edward C. Mason, U. S. A., retired, 63.
May 1.—Philip Calderon, a distinguished painter, 65.
....Thomas C. Acton, well-known banker of New York
City, 75.

May 2.—Gen. Charles Carroll Walcott, of Ohio, 60.

May 5.—Gen. Robert F. Stockton, of New Jersey, 66....Prof. Joseph A. Lintner, New York State Entymologist, 76.

May 6.—Capt. Samuel Green, one of the most prominent of the old whaling captains of Connecticut, 83.

May 9.—Maj. Henry T. Stanton, a well-known Kentucky poet.

May 12.—Mgr. Komp, Archbishop of Freybourg.... Ensign Worth Bagley, U. S. N., first American officer killed in the war with Spain, 24.

May 13.—Bishop William Stevens Perry, of Iowa, 66.

May 15.—Eduard Remenyi, the violinist, 68.

May 17.—Rev. Dr. Joseph T. Duryea.

May 19.—William Ewart Gladstone, 88.

#### FORTHCOMING EVENTS.

#### COLLEGE COMMENCEMENTS.

An occasion of unique interest will be the semi-centennial celebration of Iowa College at Grinnell, June 19-23. This college, one of the first institutions of higher education to be founded west of the Mississippi, has made a most worthy record, and at this jubilee commencement will graduate the largest class in its history—appropriately numbering just fifty young men and women. The story of the fifty years has been admirably told by Prof. J. Irving Manatt in an article summarized elsewhere in this number of the Review.

Another vigorous Western institution, Drury College, at Springfield, Mo., will observe its twenty-fifth anniversary June 15.

Among the more ancient seats of learning, Columbia University will hold its commencement June 8, Princeton June 15, and Yale and Harvard June 29. Between the 20th and 30th of the month the commencements of all the smaller New England colleges will take place.

The University Convocation of the State of New York will be held in the Capitol at Albany, June 27-29.

#### CONVENTIONS IN JUNE.

The General Federation of Women's Clubs will meet in biennial convention at Denver on the 22d, as announced in our last number.

During the month a number of scientific and professional bodies will meet in annual convention, such as the American Society of Mechanical Engineers, at Niagara Falls on the 1st; the American Institute of Electrical Engineers, at Omaha on the 27th; the American Medical Association, at Denver during the week ending on the 11th; the American Institute of Homocopathy, at Omaha on the 24th, and the National Association of Elocutionists, at Cincinnati on the 27th.

UNCLE SAM: "I'll just frame this."-From the Evening Post (Denver).

# CARTOON COMMENTS—CHIEFLY FOREIGN—ON OUR WAR.

UR cartoon selections this month are taken almost wholly from the work of European satirists of the pencil. We have been at some pains to procure recent specimens of Spanish war caricature, and have devoted particular attention to Kladderadatsch, the famous comic political paper of Germany. Three interesting examples of Hungarian caricature, moreover, we have taken from the Budapest papers, and we have made incidental selections from French, Austrian, and Dutch, as well as from English papers. We have chosen to open this cartoon department, however, with two American drawings on the present page. The very expressive picture at the top of the page comes from

Denver, where Mr. Steele, of the Evening Post of that city, has begun to do cartoon work of an unusual excellence. Two months ago we used a cartoon of his with the result of its being copied throughout Europe. The drawing at the bottom of the page is from the initial number of the Bee of New York, a new comic weekly which made its first appearance on May 16. The cartoonist of the Bee is Mr. Corey, whose bold work has been a feature of the New York Evening Journal, and has in times past frequently appeared in our monthly cartoon department. If the Bee goes on as well as it first number promises, it will achieve a brilliant success. The six typical faces below need no labels.

THE MANILA INCIDENT REFLECTED IN THE FACES OF EUROPE.—From the Bee (New York).

A SPANISH IDEA OF ANGLO-AMERICAN FRIENDSHIP.

An Ornamental Initial from the Cadiz Alègre.

THIS IS TO SHOW YOU WHY THE YANKEES CALL OUR SPANISH SOLDIERS "BUTCHERS."

From the Barcelona Comica (Barcelona, Spain).

Always and everywhere in the Spanish illustrated papers the hog is the emblem of our great American republic. The group of Spanish drawings on this page are quite self-explanatory. It is noticeably true that the Spanish press is now as hostile toward John Bull as toward Uncle Sam, a fact well illustrated by the first cartoon on this page. It must be confessed that the other hog cartoon at the top of the page is, from the Spanish point of view, rather clever, though characteristically vile. The combination of caricature and piano music that we have reduced from the Nucvo Mundo is dedicated to the "Cursed Yankees," the word "malditos" being the equivalent of a somewhat terser English adjective than the one we have used. We have not tried the music, and have not discovered, therefore, what sort of malevolence or contempt it may be intended to express.

UNCLE SAM BEHIND HIS MONEY BAGS. From the Nuevo Mundo (Madrid).

THE ACCURSED YANKEES .- From the Nuevo Mundo (Madrid).

THIS ENCOUNTER DOES NOT SEEM, AT PRESENT, EXACTLY A HAPPY ONE FOR POOR CUBA. From Kladderadatsch, April 24.

The most important and influential papers that make a specialty of political caricature are the London Punch and the Berlin Kladderadatsch. They are both papers of great ability and of prestige gained through the cumulative weight of years. Kladdcradatsch is now in its fifty-first year, while Punch is a few years older. Both papers have very considerable literary pretentions, and have a fixed habit of dropping into well-turned verse on current public affairs. Recent issues of Kladderadatsch have given special attention to the American-Spanish unpleasantness. Kladderadatsch does not like Uncle Sam, has a violent prejudice against John Bull, and also recognizes certain defects in the Spanish

A DIFFICULT CASE.

(Translated from Kladderadatsch by George M. Whicher.) America and Spain—behold the pair! Enraged and for a bloody strife arrayed. And if of peace to-morrow we despair, For which side were a just decision made? Helpless my mind amid these wild alarms; To find a fixed resolve it vainly tries. No love for Uncle Sam my bosom warms; With Spain I cannot wholly sympathize.

Deep-dyed with guilt, good sooth, the crown of Spain: Insight and clemency it never knew. In serfdom has it kept, and slavery's chain, The folk to whom a gentler rule was due. But herein has America a right To lesson others? Is Christ's rule her guide? For Spain my ardor burns not all too bright: But Uncle Sam I never can abide.

Some traits unlovely mark the man of Spain, And cruelty, men say, is in his blood. But for the Yankee—would one dare maintain That he is noble, generous, and good? The dollar is his god; and should he beat, I envy not the land that he will gain. I grudge it not that Spain perforce retreat; That Uncle Sam should win, I am not fain.

For thee, O Cuba! who hast patient borne Through centuries thy undeserved doom, For thee, the much-enduring, tyrant-torn, May happier days from grief and dolor bloom! May Heaven, that long hath heard thy painful plea, The boon thou cravest most bestow at last: 'Tis this, methinks: from Spain to set thee free, Yet let not Uncle Samuel hold thee fast.

UNCLE SAM'S PHILANTHROPHY HAS TWO SIDES, LIKE THE ABOVE FLAG, AND ONE'S OPINION OF IT DEPENDS UPON WHICH SIDE HE HAPPENS TO SEE.—From Kladderadatsch, April 24.

And yet, for his full satisfaction
In kinship, something more is due:
Wilt thou not join thy kinsman's faction?
Lend him thy ships, thine army too?
The honest fellow's army training
Is not so far advanced as thine;
Then help him: both together straining
You'll down the Spaniard, I opine.

Then haste! for scoffers nothing caring, Stand stoutly with thy friend allied! A sight to set the gods a-staring, Forsooth, to see you side by side. When danger seals this combination—When once your joint campaign begins—The world will shout in admiration:
"By Jove! a noble pair of twins!"

character. The opening page of Kladderadatsch is usually devoted to a poem that expresses its uppermost thought for the week. At our request Professor

George M. Whicher, of the Packer Institute, Brooklyn, has turned three of these recent poems into Eng-

#### TO BRAVE UNCLE SAM.

And so it's on at last! Soon comes a morn
When thou wilt take the field with mind to fight
In that old armor which thou hast not worn
For many a year—almost a comic sight.
A joust of arms is not among the things
That thou, as master hand, art wont to play.
Unless the sport substantial booty brings.
War's not a game, thou thinkest, that will pay.

Thou feelest safe, because in this debate All too uneven are the sides arrayed. And Victory ill-pleased with thee must mate, Who liefer had with knightly warriors stayed. Thy foray prospers; for thou hast what still

Iny foray prospers; for thou hast what sti Will win the final throw, a heap of gold; While as for the unlucky Spaniard's till, How badly off it is need not be told.

speice.

A STRAINED SITUATION, -From Kladderadatsch, April 17.

#### PAR NOBILE FRATRUM.

To the Old Anglo-Saxon John Bull.

When Uncle Sam, his sword unsheathing (All over rust), strides off for war,
A blessing on him thou art breathing;
For him success thou dost implore.
Thou feel'st, thou bundle of emotions,
Thine Anglo-Saxon pulses swell,
And thou art touched. Those tender notions
By Heaven, become thee passing well!

Once more in "splendid isolation"
Thou standest with thy lofty views.
But feel not over-much vexation—
"Tis this which most thy charm renews
Once more ye two birds of a feather
Disclose how like with like allies.

Like thee Sam's too good altogether; Money's no object in his eyes. And yet, I fancy, toward thy noble goal
Thou'lt not advance as swifty as thy dream.
Black eyes enow await thee-on my soul,
I hope so!—ere thy victor laurels gleam.
Not basely thinking of a coward's flight—
Fiercely resolved for combat stands thy foe.
Who knows! With one smart stroke perchance he might
Dislodge thee half a dozen teeth or so.

Right long from thee may he himself defend!
My choicest blessings to his cause be given!
And if he falls with honor in the end,
From many of his faults let him be shriven!
Fierce is the combat waged between the pair:
Sometimes thou art on top and sometimes he;
And daily will! breathe to Heaven the prayer:
"Make the rogue's task as hard as it may be!"

lish verses. We present Mr Whicher's translations on this and the facing page, together with four cartoons reproduced from late numbers of Kladderadatsch. Herr Stutzis the great cartoonist of that paper. These drawings are all from his pencil. German-Americans who read Kladderadatsch have been not a little disgusted by the tone of this poetry, and by the bad opinion Herr Stutz obviously entertains of Uncle Sam's moral character.

UNCLE SAM THE ADVENTURER. WILL HE GET BACK WITH A WHOLE SKIN?
From Kladderadatsch, May 8,

THE INTERNATIONAL FERRIS WHEEL.

- "Just wait till I come up, then I'll get at old Yankee Sam!"
- "Just wait till I come down, and I'll show the Yankee hog what a Spanish warrior can do!"

From Kladderadatsch, (Berlin).

BEFORE AND AFTER THE PASSAGE OF THE NEW COMPULSORY MILITARY SERVICE LAW IN SPAIN.

From the Barcelona Comica.

"How queerly you have gotten yourself up, Master Jonathan."

"I admit that this costume is not very practical, but I do claim that it has essentially the military charm."

From Le Rire, Paris.

SIR JOHN TENNIEL'S ABSURD CONCEPTION OF THE . AM

"The duello. 'Oh, the pity of it!"
From Punch, (London).

THE GALLANT SPANIARD AND THE SNORTING YANKEE.
"Caramba! my sword is perhaps a trifle too short, but happily its temper is excellent!"—From Le Rire (Paris).

THE EXPRESSION OF A SPANIARD AND THAT OF AN AMERICAN WHEN ONE OFFERS AN "HAVANA" CIGAR.

From Kikeriki (Vienna).

The three Hungarian cartoons on this page are decidedly American in their sympathies. The contrast between the Budapest opinion of the Spanish toreador

THE SPANISH DON QUIXOTE AND THE PORTUGUESE SANCHO.

From the Bolond Istôk (Budapest, Hungary).

THE POLTBOON SPANIARD AND THE AMERICAN BULL. From the Borsnem Yankó (Budapest, Hungary).

and the Paris opinion as shown in the two drawings at the top of the page is highly amusing. The Hungarians, ever since the days of Kossuth, have been ardent friends of the American republic, and their views are not expressed by the Vienna foreign office. On the opposite page is an amusing Barcelona caricature which shows how popular enthusiasm for the war has been dampened by the adoption of a new army bill which makes military service universal and compulsory.

SPAIN'S DESPERATE PLIGHT.
From the Borsnem Yankó (Budapest, Hungary).

THE ANGLO-AMERICAN "RAPPROCHEMENT" OF LAST MONTH.
"Dear me, it was not always thus!"—From Life (New York).

Although the past month has brought many evidences of English friendliness to the United States—a state of affairs very pleasantly illustrated by Mr. At-

wood, of Life, in the cartoon reproduced at the top of this page,—the successive numbers of London Punch have altogether failed to warm up toward Brother Jonathan

THE PROBABLE BOMBARDMENT OF NEW YORK.—From El Ahuigote (Mexico). (Apropos of the new Spanish taxes which apply to the property of the clergy.)

THE PRIZE BRAND.

COUSIN JONATHAN: These look very nice! Wonder if they'll be the better for keeping?"—From Punch (London).

All the traditions of that fine old Tory sheet are of prejudice against the United States. All the way from Daniel Webster to Abraham Lincoln, and from Lincoln to McKinley, Punch's caricaturists and rhymesters have lampooned "Cousin Jonathan." There is nothing bitter in its recent allusions to the American-Spanish war, but there is no heartiness of good-will. Its cartoons are more offensive in a certain easy-going contempt they exhibit than if they were distinctly hostile. The Mexican cartoon on the opposite page is a curious design suggested by the news that the present Spanish Government is compelling the ecclesiastical authorities to pay a large part of the war taxes.

THE KING OF THE SEAS.

KING COAL (loq.): "Aha! Peace or war, they can't get on without me!"—From Punch (London).

THE PATRIOT U.S.A.

Owner of Spanish Poultry. "Guens I'll kill those Fowls,
ANYWAY!"

[According to the Daily Mail, "the hatred for Spaniards has grown so intense among the patriotic farmers of Westchester County, New York State, that they have begun killing all the Spanish fowls which they own. Colonel Green, of the Portchester Infantry, says he has killed six Spanish roosters which he owned, and that his neighbours are following his example."]

HERE's three times three for Colonel GREEN
And Westchester farmers all!
The bravest patriots ever seen
To answer duty's call!
They might not meet the Spanish fleet
On the high sess cheek by jowl,
So with bowse and knife they began their strife,
And slaughtered the Spanish fowl!

They avenged the Maine on the farmyard don Who dared in their ears to crow, And his wives and chicks were set upon With many a deadly blow!

E'en the hapless egg could no quarter beg As it crunched 'neath the stalwart heel.

And the chick unborn must have known the scorn That all houset patriots feel!

Here's three times three for Colonel Green And that rooster-slaying band,
Who showed the foe what men may mean When threatened their native land!
And the Esgle's cry well nigh bust the sky As he soared o'er the foreign crew,
And in proud Madrid men their faces hid When they learned what Revenge could do!

From Punch, (London).

### ADMIRAL DEWEY: A CHARACTER SKETCH.

#### BY WINSTON CHURCHILL.

VERMONTERS seem to be strongly addicted to the annoying habit of getting up early. Ethan Allen was a Vermonter. One fine morning he arrived at Ticonderoga in ample time for an early breakfast. And a century and a quarter later Commodore George Dewey, another Vermonter, so far forgot himself as to violate the etiquette of Spanish warfare, which is supposed to take place at such times as not to interfere with meals or

COMMODORE DEWEY.

sleep, or any other amusement. In fact, George Dewey was seen in Manila harbor only a few hours after the Dons had gone to bed. So he proceeded to wake them up.

#### BIRTHPLACE.

Admiral Dewey was born in Montpelier, Vt., December 26, 1837. And if early rising really be a State quality, as Vermonters claim, prosperity follows hard upon the practice of it. To have seen the town of Montpelier is to have beheld the very embodiment of industry and thrift, and of comfortable wealth, their consequence. Every-

body appears well-to-do, and, what is better, busy. The little city is bright and clean, with solid and tasteful houses of the colonial type, mostly of brick, set back behind broad shaded lawns. The wide streets are lined by magnificent elms, and the green hills of Vermont tower high above you on either side as you walk. Montpelier, like most Vermont towns, was built upon the hills first, and it was perhaps with reluctance that the settlers came down into the narrow valley of the Onion, now called the Winooski.

Montpelier owes not a little to Dr. Dewey, the admiral's father, who late in life was the founder of its most flourishing corporation. Like all foremost citizens of New England commonwealths he believed in education, and the results of education are patent in every feature of the place; in the splendid free library, in the art gallery, contributed by a liberal adopted citizen; in the architecture of the homes and of the State House, and even in the very book-shops of the town. Montpelier is not only a good place to come from, but unlike Dr. Johnson's famous estimate of Scotland, a better place to stay in.

#### "A CROWN THE CONQUEROR IS DUE."

This chances to be the motto of the ancestral arms of the Deweys. The first Dewey came to Dorchester, in the Massachusetts Bay Colony, in 1633, from Sandwich, England. The admiral is the ninth generation. Simeon Dewey, his grandfather, was born in Hanover, N. H., considerably over a hundred years ago, and bought a farm in Berlin, Vt., four miles from Montpelier. The family is long-lived. Mr. Charles Dewey, the admiral's brother, when in England some time ago, happened to overhear a British theory for American degeneracy. "Americans," said the critic, "are undersized and die early because they live upon pork and ice-water." Mr. Dewey hastened to thank his informant, replying that until then it had always been a mystery to him why his grandfather Simeon had been prematurely cut off at the early age of ninety-three. To him pork and ice-water were essentials.

In Berlin the admiral's father, Julius Yemans Dewey, M.D., was born in 1801. In 1822 he settled in Montpelier, marrying in 1825 Miss Mary Perrin. Four children were born, Charles, Edward, George, and Mary.

#### A HERO FOR A FATHER.

Broadly speaking there are two kinds of heroes: those who go abroad and win victories for their country and fame for themselves, and those who remain at home in the sphere where God has placed them, battling each day with trials, but winning their fight without plaudits, and often without even the knowledge of those nearest them. The Deweys are a fighting stock, and father and son fought and gained each his victory in his own way. For few walks of life offer more chances for noble deeds than that of a country doctor.

Julius Dewey when but a poor lad taught school in Montpelier, and earned enough money to enable him to study medicine and to get his degree. Such a man could not be but an early riser, and the future admiral learned his lesson young. He was more than once awakened by his father's cheery voice singing:

"My drowsy powers, why sleep ye so? Awake, my sluggish soul! Nothing has half thy work to do, And nothing is half so dull."

Dr. Dewey was a man of a deep, innate religion, and a breadth of doctrinal view by no means common in his time. He was the founder of Christ Episcopal Church in Montpelier, where the future admiral was baptized, went to Sundayschool, and was confirmed. The first funeral which took place there was that of George Dewey's mother, when he was but five years old.

Grace before meals was habitual at the doctor's house, and George's sister recalls many an irresistible grimace, when distinguished visitors chanced to be present, from a mischievous youngster at the far end of the table in the midst of the prayer. The doctor was a man who had conquered a temper in his early days, and none of his children ever saw him in anger. He looked persistently upon the happy side of life, and believed in laughter above quinine. Far and near over the country-side was he known and loved, and many a forlorn patient brightened, be the day ever so rainy, when he caught sight of Lady in the doctor's gig. And the doctor was never too tired or too preoccupied to tell the children anecdotes when he came home to dinner or supper. He loved children, not only his own, but all children, and this is one of many traits the admiral inherits from him. Never a Sunday evening passed in the little house opposite the State House without the hymns with the children after church. The doctor knew them all by heart. He was fond of music and poetry. Burns was his favorite, and no wonder. Then came Shakespeare and Cowper.

The doctor had a cheery but strong face and a healthful, ruddy complexion. As may be guessed, he was not a politic man, and he had his own opinions and gave them strongly when called upon. He had always maintained he would give his sons as good an education as was in his power, and he kept his word. He always kept his word. He married three times, all his children being those of his first wife. When he got to be fifty, having saved something out of his practice, he formed the National Life Insurance Company of Montpelier, and before he died he had the satisfaction of seeing it very prosperous.

DR. JULIUS DEWEY, (Father of the admiral.)

He had always expressed a wish to "go in harness," and thus he went at the age of seventy-six to the Green Mount Cemetery, high on the hill above the scene of his labors. Admiral Dewey has often said that of all the great and public men he has met in his wide experience in the world, his father stands first in character. Yes, Dr. Dewey was a hero, in that he fought the battle of a hard life and won with honor.

#### GEORGE DEWEY'S BOYHOOD.

The doctor had a name for his son George which rings with a strangely prophetic sound after the years—he called him his "little hero." Well the doctor knew the timber of which the lad was made. It was not given him to foresee

when George was scampering barefoot over the hills the great victory in tropic climes that was to quicken the pulse of the world, but before the doctor died he had talked with the great Farragut in New York, where the admiral had seized his hand and said with a genuine emotion:

"Sir, your son George is a worthy and a brave officer. He has an honorable record and some day will make his own mark."

Surely, that was something of a reward!

The cottage where George was born and passed his childhood still stands, but it has been removed some distance down the street from its old site, directly across from the white-columned State House. In bygone days it was a vine-clad cottage, and the Onion River ran through the pleasant fields and gardens behind it, between weeping willows and stone walls. The steep velvet side of a hill rises from its farther bank. Little George loved that river; his bare feet knew every stone in it. One day he was summoned out of the rapids and dragged reluctant into the parlor to meet "company." The "company" still have a vivid memory of the very small boy with the roguish black eyes and restless face-none too clean-and of the sinewy bare little legs, and even of the battered straw hat, innocent of brim, which he held bashfully in his hand while the introduction was in progress.

George's sister Mary, two years younger, was his constant companion when his excellency permitted. She knew no keener joy than that of plodding after him many a weary mile with a tin of worms. To bait his hook was a privilege unspeakable. How often of late has she lived over those years while awaiting news of him from the far-away Orient! George was not a great reader in those days. "Robinson Crusoe" pleased him and aroused a passion for adventure in far-away lands which he took out in tramps over his own Vermont mountains, with sister Mary, perhaps, as man Friday. But a fateful day came when his big brother Charles, twelve years older, presented him with a copy of the "Life of Hannibal." Snow lay thick on the steep slope behind the State House, and over it a heavy crust with surface like glass. To ten-yearold Hannibal here was a Jungfrau ready to hand and well-nigh as formidable. Orders were at once issued to sister Mary, in this instance the army and all the appurtenances thereof, who cheerfully left her "Child's Life of Queen Bess" and the cozy fireside to follow her captain over the Alps—no mean undertaking—and afterward to pay for her loyalty, poor little soul, by a week in bed. History does not mention what happened to George.

It could scarce be expected that a general or

an admiral should go through life without fighting. Fights occurred in those days, though the town records of Montpelier fail to reveal time or place or results. If rumor be true, however, results were with the future admiral. He was a born leader, and owned a temper that kind Dr. Dewey had more than once to reckon with. George had a wiry little frame, and its constant activity made the gaining of flesh quite out of the question. The Rev. Mr. Wright, a prominent clergyman of Montpelier, remembers the admiral at this period very well. Mr. Wright

LIEUTENANT DEWEY IN 1861.

DEWEY AT THE TIME OF HIS MARRIAGE IN 1867.

was a schoolmate. "George was always a fighting boy," said he. So is the child father to the man.

Mr. Wright also recalls going to "nigger minstrel" shows in George Dewey's barn. George was the life and soul of these shows (and they were by no means confined to such low comedy as minstrels)—he was business manager, stage manager, took the leading parts, and I believe the future admiral's productions were exclusively brought forth here. Sister Mary invariably preferred the audience and a back seat, whence she could admire without being seen. But on one occasion, the regular leading lady (ten years old) being unavoidably absent, Mary was peremptorily told to come forward and take the part. "But I don't know it all, George," she objected. That made no difference. George was to fire his pistol at the awkward crisis, and so Mary carried off the matter, on the whole, very creditably.

This pistol-shooting, by the way, proved a huge drawing card, and attracted such crowds to the theater that there was scarce standing room. A wholly unwarranted interference on the part of the neighbors put an untimely end to plays and play bills by an edict from the doctor. A peanut stand near the door, another feature of popularity, modern managers might do well to copy.

The bump of destructiveness seems to be a necessary attribute to the fighting character, and it was not lacking in George Dewey. His chief offense in this direction was the killing of a pet dove which belonged to a young lady of twelve

in the neighborhood. But since this very trait in the admiral has finally led to the destruction of all the Spanish ships he could lay hands on, he has recently, though not until recently, been forgiven by the aggrieved lady, who still lives in Montpelier. She has so far gone against her convictions as to have penned him a letter of congratulation.

#### ADMIRAL DEWEY'S FIRST CRUISE.

It is not generally known that the admiral's first cruise took place when he was no older than eleven. It happened in this wise: he started out one day in his father's buggy, accompanied by his friend Will Redfield, bent upon an over

TAKEN IN 1885, WHEN DEWEY WAS A COMMANDER ON THE "PENSACOLA."

MAP OF THE APPROACHES TO MANILA, THE CAPITAL OF LUZON.

land trig of adventure—to drive the cows home, it has been said. But when they came to the Dog River, which enters the Winooski some distance from the town, they found it higher than the oldest inhabitant had ever seen it, the ford impassable from recent rains. William prudently counseled turning back, but to this the admiral would not listen.

"" What man hath done, man can do," said he, and he whipped up his horse and went at the ford four bells. Needless to say, he found no bottom; the superstructure of his frail craft, which in this case was the buggy-top, cast adrift and floated swiftly away toward Lake Champlain, while the admiral, serene as ever, and the thoroughly frightened William, clambered on board the horse and managed to land in safety. When the boy reached home the doctor was away on a professional call, and an innate sense of tactics bade George go directly to bed, without waiting for supper. The father found him apparently asleep, but was not deceived, and immediately began to chide him for his rashness, when his son replied from the depths of the covers:

"You ought to be thankful that my life wath thoared."

Alas! the future admiral lisped.

#### SCHOOLING.

George Dewey was sent first, when a little chap, to the Washington County Grammar School in Montpelier. The scholars there did not have the reputation of being amenable to discipline, and it is to be feared that George was no excep tion to the rule. To this school, after a variety of failures, came Mr. Z. K. Pangborn, now Maj. Z. K. Pangborn, of the Jersey City Journal. The boys, quite exhibitanted by the success they had had with former masters, made a bold stand, with young George Dewey to the front and George was at once called upon for excenter. amination, but the spirit of mutiny being rife within him, he declined to go. The dominie thereupon seized the collar of young Dewey with one hand and his whip with the other; no quarter being cried, none was given, and the lad got a whipping the like of which had never been served out in that district. He was then told to

go home, and Mr. Pangborn went along, the rest of the school trooping at his heels. Dr. Dewey stood at his door, and sizing the situation at sight of the procession, dismissed the boys and took the schoolmaster and George to his study.

"What is it, my son?" he asked.

In answer, George stripped off coat and shirt and showed a back covered with red stripes, which gave his father more pain than he felt himself. But the doctor was a just man—a very just one. Perceiving that George was still not as repentant as he should be, he brought him round by declaring that he himself would add to the punishment of Mr. Pangborn had not given enough. The hint proved sufficient.

It was natural that a boy of Dewey's spirit should grow to have an affection for the dominie who did not flinch from his duty. When Mr. Pangborn went to Johnson, Vt., a year or so afterward to establish a private academy, George followed him thither by his own request. Perhaps it was here he wrote the essays on "Fame" which his sister treasured for a quarter of a century or more and sent to him six years ago. Captain Dewey replied upon reading it over that it was much better than he ever expected to write again.

At fifteen he went to the Norwich Military Academy at Norwich, Vt., and it was while there he conceived a strong taste for a military life and expressed a desire to go to Annapolis. This was greatly against his father's wishes. But it had never been the doctor's policy to thwart his children, and he consented. It so happened that Dewey mentioned his ambition to George

Spalding, a schoolmate of his, to discover that Spalding had like designs. It was Spalding who obtained the appointment and Dewey the alternate through Senator Foote. But fate, in the guise of a stern New England mother, stepped in at this juncture, and so it came about that the Rev. George B. Spalding preached a war sermon in Syracuse, N. Y., upon the occasion of his old schoolmate's great victory.

#### AT THE NAVAL ACADEMY.

Dewey entered the class of '54 at the age of seventeen. At that time he was a strong, active boy of medium height, with flashing black eyes and shoulders beginning to broaden. He could swim as one born to the water should, and excelled in all out-door exercises. napolis he found the line sharply drawn between the Northern and Southern boys, and George proceeded at once to get into trouble. He had a spirit that would bear no insult, and he was singled out by the leader of the Southern lads as the most promising of the Northern faction for a little excitement. The Southerner was not disappointed. George was far from resenting the term of "Yankee;" he thought that of "dough-face" more opprobrious, and and as the quarrel grew his enemy did not stop there. So one day, coming out of mess George waited for him and calmly knocked him down, and got decidedly the better of the mix-up that followed. Some time afterward he had an inkstand hurled at his head in the reading-room, which resulted in another personal encounter, with the freshman admiral again victorious. But

THE SPANISH FLEET THAT WAS IN PHILIPPINE WATERS.

Copyright, Scientific American.

THE "OLYMPIA"—COMMODORE DEWEY'S FLAGSHIP.

the matter did not end even here, for the Southerner wrote a challenge to mortal combat with pistols at close range. The offer was accepted with alacrity, the seconds chosen, and even the ground paced off, when the classmates, seriously alarmed, informed some of the officers stationed at Annapolis. And so again fate was kind to Dewey's country.

It is pleasant to learn, when now the South and the North are firmly united under the one flag with one heart for our country, that the breach was eventually healed. On both sides were lads of honor and courage quick to recognize these qualities in the other, and as the class became united George Dewey grew to be one of its most popular members. Somehow, a quiet fellow who can "do things" is always popular, and George was this kind.

Young Dewey was graduated in 1858, number five in his class. But fourteen out of perhaps sixty-five who started in received diplomas. George was not naturally a student, but he excelled in the study of seamanship. It may be well to mention here that Admiral Dewey is the logical result of a system which produces the best naval officers in the world. The reason of this is not far to seek. We have not only the very finest of material to choose from, for the American officer combines valuable qualities of his own with the necessary traits which are found in the English and other northern races, but also because the whole result of the Annapolis training may be summed up in the phrase "the survival of the fittest." It is the refined metal alone that comes out. At Annapolis a lad is thrown entirely upon his own resources. He knows there is no bottom under him if he falls; and he is forced to enter into competition with the brightest minds from all over the country for his only existence, as it were. And he is put to a discipline and hardship more rigid than that of the enlisted man aboard ship. His superiors know no such thing as favor.

George Dewey entered the Academy with a hatred of lying. He went into the service with this feeling intensified, and in all the years he has been at sea he has been lenient with Jack for every offense but this.

As a midshipman he was sent to the European station, cruising for two years in the Mediterranean on the Wabash, with Captain Barron, of Virginia, who afterward joined the Confederate navy. Visiting Jerusalem, he sent an olive-wood cane to his grandfather, then living in Vermont. The old gentleman died with that cane by his side, and his very last words were of affection for the grandson who had sent it. In 1860 George returned to Annapolis to be examined for a commission, showing his ability by leading his fellows. This stand, combined with that of his graduation, gave him a final rating of three in his class.

#### DEWEY IN THE CIVIL WAR.

A great deed like the victory of Manila is not the accomplishment of an hour, nor yet of a day. but of a lifetime. The spirit that impelled the eleven-year-old hero across the flood was the same, to be sure, as that which sent Commodore Dewey into a black harbor in the Malay archipelago, past unknown shallows and frowning forts and over torpedoes to fight a treacherous race. But in the commodore boyish daring was tempered by years of hard study of his profession and other years of hard fighting in some of the fiercest battles of the Civil War.

Dewey was at home in Montpelier when Sumter was fired upon. One week afterward he secured his commission as a lieutenant and was ordered to the steam sloop Mississippi, of the west Gulf squadron. He was then twenty three years of age, and the black eye had become piercing. It will be remembered that Farragut raised his flag over this fleet in February, 1862. The Mississippi was the only side wheeler of the lot. Commander Melancthon Smith was her captain and Dewey her first lieutenant. Early in April the larger ships, the Mississippi among them, were unloaded and hauled over the bar, and by the night of the 23d the squadron was ready for the business of running past the formidable batteries of St. Philip and Jackson, ready to conquer the Conederate fleet beyond and to press on to New orleans.

Farragut divided his ships into two divisions, 'apt. Theodorus Bailey to have command of that oing first, and the *Mississippi* was the third in is line. Decks were whitewashed, no lights rere showing, and the night was inky black save

THE "REINA CRISTINA," THE FLAGSHIP OF ADMIRAL MONTOJO.

for the lurid red of an occasional Confederate fire. The big ships, having a speed of only eight knots, hugged the shore to avoid the swift current. On, on they steamed, a slow, stately procession that knew no check, until the flames of the broadside guns leaped into the very ports of the batteries and the shot struck in mid-air. So close were they that the gunners hurled curses at each other across the narrow space of black water. On the high bridge of the side-wheeler, in the midst of belching smoke and flame, stood Dewey, guiding the Mississippi as calmly as though he were going up New York Bay on a still afternoon in Indian summer. He was a perfect master of himself.

"Do you know the channel, Dewey?" Captain Smith asked anxiously and more than once as he paced from port to starboard. The lieutenant was very young, only twenty-four, and the situation would have tried a veteran.

"Yes, sir," replied Dewey with confidence each time. But he admitted afterward that he expected to ground any moment.

This is how Chief Engineer Baird, U. S. N., who was there, remembers him: "I can see him now in the red and yellow glare flung from the

cannon-mouths. It was like some terrible thunder-storm with almost incessant lightning. an instant all would be dark and Dewey unseen. Then the forts would belch forth, and there he was away up in the midst of it, the flames from the guns almost touching him and the big shot and shell passing near enough to him to blow him over with their breath, while he held firmly to the bridge rail. Every time the dark came back I felt sure that we would never see Dewey But at the next flash there he stood. His hat was blown off and his eyes were aflame. But he gave his orders with the air of a man in thorough command of himself. He took in everything. He saw a point of advantage and seized it at once. And when from around the hull of the Pensacola the rebel ram darted, Dewey like a flash saw what was best to be done, and as he put his knowledge into words the head of the Mississippi fell off, and as the ram came up alongside the entire starboard broadside plunged a mass of iron shot and shell through her armor and she began to sink. Her crew ran her ashore and escaped. A boat's crew from our ship went on board, thinking to extinguish the flames which our broadside had started and capture her. But she was too far gone. Dewey took us all through the fight, and in a manner which won the warmest praise, not only of all on board, but of Farragut himself. He was cool

(To which the Spanish admiral transfered his flag when the Reina was destroyed.)

from first to last, and after we had passed the fort and reached safety and he came down from the bridge his face was black with smoke, but there wasn't a drop of perspiration on his brow."

Things began to go wrong on the river a year

later, and Farragut once more ran up from the Gulf to adjust them. Port Hudson shoals and currents are among the most dangerous on the stream, and it was while running the forts here that the Mississippi was lost. The Hartford and Albatross led, then came the Monongahela and Kineo, the Richmond and Genesee, followed by the Mississippi alone. The Monongahela and her consort both grounded, though they managed But directly opposite the center of to get off. the Port Hudson battery the Mississippi stuck hard and fast, as fair a target as could be wished. Shot after shot was poured into her until her hull was riddled, and she had to be abandoned. was hit two hundred and fifty times in half an hour. The officers who took the first boats never returned, and so the task of getting the men to safety devolved upon Lieutenant Dewey. he went to the Richmond and twice came back, until at last he and Captain Smith stood alone on the deck. She was set afire in five places. "Are you sure she will burn, Dewey?" the captain asked as he paused at the gangway. Dewey risked his life to go to the ward-room for a last look, and together they left the ship, Dewey without his coat-tails, sorrowfully, with the shot splashing all around them.

Lieutenant Dewey was then made first heutenant of one of the gunboats which Farragut used as a dispatch boat. The admiral used often to come aboard and steam up near the levee to reconnoiter, and he grew to have a great liking for the quiet young heutenant. The Southerners had a way of rushing a field piece to the top of the high bank, firing point-blank at the gunboat, and then of backing down again. Upon one such occasion Farragut saw Dewey dodge a shot.

Said he:

"Why don't you stand firm, heutenant? Don't you know you can't jump quick enough?"

A day or so after the admiral dodged a shot. The lieutenant smiled and held his tongue: but the admiral had a guilty conscience. He cleared his throat once or twice, shifted his attitude, and finally declared:

"Why, sir, you can't help it, sir. It's human nature, and there's an end to it!"

Lieutenant Dewey that same year was at Donaldsonville, and afterward succeeded to the temporary command of the *Monongahela* when her captain, Abner Read, was killed

If getting into the thick of the fighting be deemed good fortune (and Admiral Dewey would call it so), Lieutenant Dewey was one of the luckiest officers in the war. He was Commodore Henry Knox Thatcher's first lieutenant on the Colorado at Fort Fisher in December and January, 1864-65. The Colorado, you may be

sure, was well within striking distance of the fort. but, being a wooden ship, was in the second circle. Toward the end of the second engage ment, when matters were moving the right way, Admiral Porter signaled Thatcher to close in and silence a certain part of the works. ship had already received no inconsiderable damage, her officers remonstrated. But Dewey, who. in addition to dash and bravery, had now acquired marked tactical ability, was quick to see the vantage to be gained by the move. "We be safer in there," he said quietly, " and the work can be taken in fifteen minutes." It was The New York Times, commenting upon this part of the action, spoke of it as "the most beautiful duel of the war." When Admiral Porter came to congratulate Commodore Thatcher the latter said, generously:

"You must thank Lieutenant Dewey, sir. I

was his move."

The "move" won for Thatcher the nomination of acting rear admiral, and when, next month, he was sent to relieve Farragut at Mobile Bay, he recommended Dewey for his fleet captaincy. Probably the Department hesitated for fear of arousing jealousy, to give so great a promotion to so young a man, for Dewey was not appointed. But in March, 1865, two months after Fort Fisher, his courage was promptly rewarded by a commission as a lieutenant-commander.

#### SERVICE AFLOAT AND ASHORE-HIS MARRIAGE.

After the war Lieutenant-Commander Dewey served for two years on the European squadron. first on the Kearsarge and then on the flagslip Colorado. In 1867, while on duty at Portsmouth, he became engaged to Miss Susy Goodwin, daughter of Ichabod Goodwin, known as the "fighting governor" of New Hampshire. In 1868 he was attached to the Naval Academy. then in charge of Admiral Porter, and many officers now in the navy have a keen recollection of the hospitable quarters on the Santee. 1870 he received his first command, that of the Narragansett. In 1872 came the great and, so far as the public knows, the only cloud upon his Late in that year he was left a widower. The admiral has one son, George Goodwin Dewey, born in 1872. He has not followed his father's career, but after graduating at Prince ton has embarked in business in New York City.

In 1875 Lieutenant-Commander Dewey was advanced to be commander and was assigned to the Light-House Board. Next he was in command of the *Juniata*, of the Asiatic squadron, and recent events showed that he employed his opportunities to good advantage. He was honored in 1884, upon attaining his captaincy, by

BEHIND THE FORTIFICATIONS AT CAVITE.

receiving the *Dolphin*, which was among the very first vessels in our new navy, then known as the "White Squadron."

It was in New York harbor, while on the Dolphin, that Captain Dewey showed how thoroughly he knew the vagaries of human nature as well as the principles of good discipline. Perhaps he bore in mind some lesson inculcated in early youth by a wise father. At any rate, the admiral has always been noted for his ability to deal with "Jack." The "Jack" in question was a paymaster's yeoman, or something of the kind, and he refused to obey an order of the first lieutenant, because, he said, it was outside the line of his duty. The lieutenant, after vainly remonstrating with him, reported the matter to Captain Dewey, who sauntered out on deck and looked his man through and through, which made the yeoman exceedingly uncomfortable. Nevertheless he remained stubborn. "What!" said the captain, "you refuse! Do you know that that is mutiny? When you entered the service you swore to obey your superior officers." The man was silent and made no move, whereupon the captain very quietly told the corporal to call the guard, stood the obdurate yeoman on the far side of the deck, and bade the marines load. Then he took out his watch. "Now, my man," said he, "you have just five minutes in which to obey that order," and began to call the minutes. At the fourth count the yeoman moved off with considerable alacrity, and has since been one of the strongest opponents of the policy of tampering with the "old man," as the admiral has been for some time erroneously but affectionately called in the forecastle.

From the Dolphin, in 1885, Captain Dewey went to the Pensacola, then flagship of the European squadron. Since 1888 he has occupied various responsible positions on shore, such as a second time a member of the Light-House Board and chief of the Bureau of Equipment. At his promotion to be commodore he went to the head of the Board of Inspection and Survey. It is said that the commodore was averse to the Asiatic station, where he hoisted his burgee on the first day of the present year. He had been in poor health, however, and welcomed sea duty on that account, as did his friends for him. But war with Spain was then among the strong probabilities, and Commodore Dewey regretted being sent so far away from the Atlantic, which the naval experts considered was to be the principal battleground. As the commodore was leaving New York for his new station he made the remark, which has since proved to have been not without significance, that he was to be the first commodore in Asiatic waters since Perry. As it turned out he went, as ever, into the thick of it. Department put the right man into the right place.

#### CHARACTERISTICS.

The characters of Admiral Dewey and of his father, Dr. Dewey, are in many respects strongly alike, despite the different fields of usefulness in which each has been placed. Both have the same quiet sense of humor and the habit of looking at the bright side of life. Both are the rare type of man who does that duty which comes to hand with all his might. The doctor was a man to be trusted implicitly;

so is the admiral, and that fact has even become a by-word at the Navy Department. The doctor's nature was essentially religious, of the special kind of religion which is known as charity; Dr. Dewey's charity began at home, with his children, to spread over the country-side. The admiral's has spread wherever Jack Tar has trod. He makes no parade of religion; his devotional books and his Bible are hid in his cabin where none can see them. But they are there. The admiral has won fame because it came in the line of duty. He did not seek it, but the custom he had formed of doing things well made it inevitable. And this custom he got from his father.

Both men are quiet. The admiral talks but little and never about himself. He also comes naturally by a love of music and has an excellent voice; there are many men and women now in Montpelier who remember with pleasure the guitar he brought home from Norwich and the songs he sang to it. At Annapolis he was a member of the midshipmen's choir. He also inherits from the doctor his love of children. youngsters in his native town call him "Uncle Captain," and when he revisits the old place he is frequently surrounded by a juvenile audience, for he tells a child's story to perfection, which in itself is no mean gift. Of late years his health has not been rugged, but he is an ardent sportsman, indulging his taste when it is possible, but of all lubberly exercises he prefers riding. His manner with strangers is almost reserved, but cordial; with friends he is unmistakably earnest. side the study of tactics and of his profession, which he has made most thoroughly, he has read little.

The admiral, as may be supposed, has an eminently human side to him. He is exceedingly popular, especially in Washington, where he belongs to several clubs, the Metropolitan and the Army and Navy. He is also a member of the University Club, of New York, and was at one time of the Somerset, Boston. At the farewell dinner given to him in November of last year, Colonel Hopkins recited some verses of his own which seem to embody the enthusiastic esteem in which the commodore is held:

"Ashore, afloat, on deck, below, Or where our buildogs roar, To back a friend or breast a foe, We pledge the commodore.

"We know our honor'll be sustained Where'er his pennant flies; Our rights respected and maintained, Whatever power defles."

Perhaps the admiral has gained a somewhat unjust reputation in regard to dress; he has, at least, proved that the art of being spick and span is not at variance with that of a sea fighter. He has done more: he has settled it for all time that they go together properly. A near appearance runs a long way toward one's estimate of a man, and if the admiral really is as particular to shift into evening clothes at the stroke of the bell as he is to change the watch at sea, that is as it should be. One of the most vivid recollections which a niece at Montpelier retains of her uncle is a long row of boots strung outside of the captain's door.

This peculiarity has served to raise him in the estimation of the men forward, who believe that an officer should be everything that he requires of his ship. And however they may grumble at scrubbing and "bright-work," they have no use for a captain who lets his ship go. miral, in return, has a strong sympathy for the enlisted man. "Give him a show. He'll be good now," is a remark he has often been heard to make. He bears in mind the hardships of forecastle life, and is almost long suffering of liberty-breakers, foc'sle-scrappers, and others who come aboard not quite what they should be. Intuitively a leader of men, he has found the faintly drawn line between leniency on the one hand and imposition on the other. A factor in the Manila victory by no means to be despised was the enlisted man, and it may be counted upon as certain that the Jackies of the Asiatic squadron were one and all for Dewey.

A bluejacket who made a cruise with him tells this characteristic story in the New York Sun. I give it in his own words, that the flavor may not be lost: "We hadn't been to sea with him long before we got next to how he despised a liar. One of the petty officers went ashore at Gibraltar, got mixed up with the soldiers in the canteens on the hill, and came off to the ship paralyzed. He went before the captain at the mast the next morning. He gave Dewey the two-beers-and-sunstruck' yarn.

"'You're lying, my man,' said Dewey. 'You were very drunk. I myself heard you aft in my cabin. I will not have my men lie to me. I don't expect to find total abstinence in a mano'-war crew. But I do expect them to tell me the truth, and I am going to have them tell me the truth. Had you told me candidly that you took the drop too much on your liberty, you'd have been forward by this time, for you, at least returned to the ship. For lying you get ten days in irons. Let me have the truth hereafter. I am told you are a good seaman. A good seaman has no business lying.'

"After that there were few men aboard who didn't throw themselves on the mercy of the court when they waltzed up to the stick before Dewey, and none of us ever lost anything by it.

He'd have to punish us in accordance with regulations, but he had a great way of ordering the release of men he had to sentence to the brig before their time was half worked out."

#### MANILA AND THE MAN BEHIND THE GUN.

It is impossible at this writing, for lack of accurate reports, to give a just account of the battle of Manila Bay. One thing, however, is sure, that the most important factor in this fight, as in

their marksmanship. Their ships were light of draught and so able to keep in the shoal water out of reach of our larger vessels; and lastly, but of great importance, they were backed by the batteries of Cavite. Nobody will deny that if Montojo had gone to Subig Bay, which is shallow for nearly all of our ships' fleet, and has, moreover, an entrance which can be made almost impassable, and had spent a month or so leisurely planting batteries with a plunging fire, he would

TYPICAL SPANISH GUNBOATS IN PHILIPPINE WATERS.

any other in which our navy may be engaged, is the coolness, discipline, and ability of the man behind the gun. This of course includes the captains and their officers, for whom no praise is too great; and even the commodore himself! If any man ever fairly earned promotion and honors, that man is Admiral Dewey.

It is very generally declared by experts both here and abroad that the odds were decidedly against Dewey. The odds were not against him, naturally, after he had sailed past Corregidor Island and down to Cavite over a lot of torpedoes and had surprised the Spanish admiral and his men out of the remainder of their night's sleep. But it must be borne in mind that Dewey went in there without a positive knowledge of the majority of the elements with which he had to deal. He was sure of his men; of course, any American commander is. And he was sure of But the modern warship had yet to be tried in the balance. The Spanish chart of the bay was uncertain and actually found worthless after the battle had begun. The Spaniards, relieved of their astonishment and consternation, had a great deal in their favor. Although their fleet was not the equal of ours, their guns were by no means poor and were much better than

have had a better chance. The fact remains that he did not, principally because he was not given time. Too much cannot be said of Admiral Montojo's courage. He fought a fight for which all brave men admire and honor him. His chief misfortune seems to have been that he was not born in Vermont.

When war broke out between this country and Spain, Commodore Dewey, at Hong Kong, found himself in a singular and trying position. He was forced to leave British waters, and with no coaling station nearer than Honolulu there was but one thing to do—take Manila. But the taking of Manila involved first the capture and destruction of the Spanish fleet, which in turn was comparatively simple after it was once cornered. A Spanish fleet with a couple of thousand islands to dodge among is about as easy to catch as a hog in a ten-acre lot. Fortunately for Dewey, however, Montojo evidently had the notion that the American commodore had been long enough in the tropics to appreciate the blessings of that word "to-morrow.

It is said that Commodore Dewey, counting on this trait of the Spanish character as well as upon existing conditions when he left Mirs Bay, predicted to a day the time of the battle. He also had his mind then made up as to what he was going to do, and he carried out his programme without a hitch. The harbor of Manila hes on the western side of Luzon, the principal island in the Philippine group, and is about one hundred and twenty miles in circumference—too large to afford adequate shelter for vessels putting in there. It was protected by forts at the entrance, the most important being upon Corregidor Island, where the squadron arrived about 8 o'clock on Saturday evening, April 30. The moon was up, but no lights showed from the ships until a spark from the dispatch boat Mc-Culloch drew the fire of the forts It was returned, and the fleet passed on. Steaming at slow speed all night, with the men at full length beside their guns, gray dawn disclosed the sleeping city of Manila, and Cavite, with its white houses and battlements and its great arsenal, close at hand. And there, best news of all after the perilous darkness through which few men slept, lay the Spanish fleet, afloat on the dead water of daybreak. A great shout, as of one accord and from one throat, went up from the American ships:

"Remember the Maine!"

It is not clear from the reports in what shape the Spaniards were discovered or how they maneuvered afterward. Probably the Reina Cristina and some of the larger vessels got up anchor and formed a line of battle. But that does not matter. Suffice it to say that Commodore Dewey, heading his own line in the Olympia, steamed past them five times with a gradually

decreasing range, and practically annihilated the enemy's fleet, forts and all, in two hours. Then he drew off, as the morning was very hot and the men had had only a cup of coffee, and ate breakfast. After a little rest he returned and finished his work.

He did not lose a ship nor one of his bravemen. The matter was as simply and effectively carried out as a bit of squadron evolution off the Chesapeake capes. Our officers navigated among strange shoals with a sure hand, and the superb gunnery that has been our pride since the days of John Paul Jones did the rest. The Spanish loss was fearful.

Neither squadron contained an armored ship. The American vessels had their vitals covered by what are known as protective decks, while but two of the Spanish ships were so built. But for all that they might have riddled and sunk some of our squadron had they been able to shoot. The little *Petrel*, secure in their wild inaccuracy, danced up to within a thousand yards of their forts!

The results are best told by Admiral Dewey himself. His terse cablegrams have become history. At Manila Bay he showed the effects of his schooling under Farragut. One of Farragut's strongest points was his ability to choose the most advantageous distance, even when it brought him within a biscuit's throw of the batteries, as at Fort St. Philip. And the same fearlessness and cocksureness which led Farragut into Mobile Bay and up the Mississippi sent Dewey straight for Manila.

A VIEW OF MANILA AND ITS HARBOR

### WHAT AN AMERICAN SAW IN THE PHILIPPINES.

BY JOSEPH T. MANNIX.

A CORPORAL OF PHILIPPINE INFANTRY.

[X] HAT a great change a six months' turn of Time's horoscope has made in the now much-talked-about Philippine Islands! I was in Manila last autumn, inquiring into the conditions -political, social, and industrial. The investigation was necessarily limited in scope, for there were suspicious and hostile Spanish authorities to suggest that the presence of newspaper correspondents was not desired, and that a disregard of this disposition on the part of the local officials might endanger the visitor's personal freedom. The hostility toward American newspaper men was especially pronounced, and I was not surprised to find myself the sole representative of a fraternity that the authorities at Madrid profess to believe is guilty of gross misrepresentation and sensational exaggeration of the conditions in Cuba.

I met many kind-hearted and courteous rebel leaders in Manila. These men were holding regular meetings, raising money with which to prosecute the insurrection, and were in constant communication with Gen. Emilio Aguinaldo and the other rebel leaders, who were then quartered in the mountains immediately to the northward from Manila. These Manila rebels were delighted to welcome an American. "Oh, if the United States would only assist us!" they would say, and then they would declare the down-trodden Filipinos would be the happiest people in the world if the great American republic would only take the islands under her protection. That was a consummation for which they devoutly prayed, but they could not mix much hope with their prayers under the circumstances then existing.

#### I.—CHARACTERISTICS OF THE PEOPLE.

I went secretly beyond the city walls and mingled with the natives at Malaben and else The home of every rebel or rebel sympathizer was the hospitable resting-place of any American or other traveler who was taking sufficient interest in these people to investigate the situation. That they are a law-abiding people and easily governed is evident from the fact that when the present insurrection began in August, 1896, there were but 1,500 Spanish troops in the islands—about one-twentieth the number that the British Government has garrisoned in Ireland to-dav. And these 1,500 troops were natives of the islands. It was at a banquet of Spanish army officers that the principal speakers openly advocated a policy of "extermination of the wild beasts in their lairs, to show no quarter, but destroy and kill the infamous savages."

However lacking in intelligence the natives of the Philippines generally may be, they could not with truth be characterized as savages. There are in the Philippines between 6,000,000 and 9,000,000 people—probably about 7,500,000. Nearly half this number inhabit Luzon, the principal island of the group. The Tagals of Luzon are a copper-colored people, and, like all people of the Malay family, are short of stature. These Tagals are the most advanced and influential element in the whole population of the isl-There are a great many very intelligent and ambitious men among them-men who got their start in the schools established by the monastic friars whose political domination furnishes one of the many grievances which

have given rise to the present insurrection. The Tagals are as industrious as the Chinese and Japanese, and more easily controlled and less criminally disposed than the latter. they are entirely amenable to discipline when they have confidence in and respect for their leaders and advisers is evidenced by the fact that for more than a year Gen. Emilio Aguinaldo, their acknowledged leader, was able to maintain good order and comparatively good discipline among his 40,000 to 50,000 followers, and under circumstances where chaos and disorder would be the most natural conditions. am not a sentimentalist—not the sort of man to go into ecstasies of delight over the profuse politeness and kotowing of the Japanese-but I have observed in the leading men and women a charmingly courteous manner. Such characteristics as rudeness, assumption, or boisterousness are entirely lacking in their temperament.

The disposition of the Tagals to respect the rights of people against whom they had no grievance was shown by the fact that during all the months of the rebellion the property of the Manila & Dagipan Railway Company was molested but once, and then not seriously. The railroad is owned and operated by Englishmen, who secured a concession about eight years ago. The road has been used for the transportation of troops to points northward from the capital, and it would have been greatly to the advantage of the insurgents had they interrupted traffic. The fact that foreigners who were not at all responsible for the unfortunate conditions of which they complained

owned the railroad was the sole restraining element in the case. The conduct of the rebels in this respect has been a great and agreeable surprise to the officials of the railroad named. Here is another thing that indicates the discriminating quality of the Filipinos: The rebels had thought seriously several times of attacking and taking Manila. The insurgent leaders knew that if 25,000 to 50,000 infuriated insurgents rushed through those gates no quarter would be shown the Spanish residents of the capital, but men, women, and children would be massacred. With the idea of protecting the foreigners (English, German, American, and others) a carefully prepared list of all these people, with their places

of residence, was furnished the rebel leaders both inside and outside Manila. The understanding was that in case the city was captured by the rebels the leaders would promptly place guards over the lives and property of these people. The foreigners felt no alarm whatever in regard to their own safety. Nine out of every ten Americans, Germans, and Britishers living in Manila have been secretly in sympathy with the insurgents. These foreigners had an opportunity of judging as to how incompetent and corrupt a governing power the Spaniards are, and could not blame the natives for rebelling.

#### II.—IN A REBEL CAMP.

An insurgent camp was a singularly picturesque and interesting spectacle. The poor people had little to work with, but they had been nobly making the most of opportunity. Thousands and thousands who were in the two principal camps 25 and 40 miles respectively north of Manila were poor people who had been driven from their humble little bamboo homes and rice paddies in Cavite province. The revolt began in that district. The rebels were victorious in many instances early in the outbreak, but when a large army came from the peninsula as the result of conscription, the insurgents were driven from Imus, Bacoor, and other very considerable communities in Cavite into the mountains to the southeast and then to the eastward of Manila. Later the rebels were dislodged from their mountain fastnesses in the east and driven around to

NATIVE TROOPS IN MINDANAO.

A COMPANY OF MANILA VOLUNTEERS (SPANISH).

the points where they were strongly intrenched when Aguinaldo and his lieutenants laid down their arms and picked up Spanish gold and then quietly sailed for Hong Kong.

The rebels had selected for the camp immediately north of Manila a mountain elevation, and here they had thrown up immense earth-It was ordered that something should be done each day to strengthen the fortress, and it was also decreed there should be daily drill, whether the men had rifles or not. A certain number of the more ingenious men in camp were engaged in an effort to devise firearms. patience of a people was never put to greater test. They knew there was a couple of hundred thousand Mexican dollars in the revolutionary exchequer, and they knew agents of the insurrection were making desperate efforts to secure rifles. But they pursued their guerrilla warfare for more than fifteen months, and no rifles came.

During the entire time the rebels managed to secure but 1,800 rifles, and about 500 of these were brought over by natives who deserted from the Spanish service. The thousands and thousands of men in the two principal camps had the most indifferent arms. Where there were about 5,000 able bodied and ambitious men there were not more than 1,000 rifles. A squad of deserters from the imperial forces were welcomed by the insurgent camp with a demonstration that showed how highly the insurgents prized a rifle. The camp had almost every kind of a weapon known in ancient and modern warfare. There were shotguns of almost every conceivable style, and the flint-lock was represented. There were sabers and bayonets, knives, dirks, clubs, revolvers of a hundred different descriptions, bows and arrows, spears, and bolos.

The bolo was the favorite weapon with the rebels. It is about 18 inches long, with heavy steel blade, not very sharp at either edge or point, but an affair calculated especially for hand-to-hand cutting and slashing. The natives are very proficient in the use of the bolo, and have worked great havoc when they have done close fighting. In one instance nearly half a Spanish regiment was killed in a desperate encounter, the insurgents relying almost wholly on their favorite bolo.

The rebels were encouraged by the presence in the camp of many women. A good many of these women have sworn to avenge the death of a father, husband, or brother, and many of them have distinguished themselves in engagements with the enemy.

The Filipinos may not be capable of successful self-government. They may not be clever strategists, and there are doubtless many other respects in which they are deficient, but it cannot be said of them that they are cowards. It may not be what is commonly designated as courage that makes these interesting people act when they know death is going to be their reward. It may be simply a reckless abandon, a seeming disregard of life, such as many of the Asiatic peoples show. The conduct of the Filipinos in this struggle is nevertheless interesting to observe and study. Their ability to face death calmly seems to be a national characteristic.

Among the various strange weapons which the insurgents had improvised there were a number which were calculated to do more harm to those using them than to the enemy—affairs which called for great courage upon the part of those manipulating them. For instance, among different sorts of "cannon" invented by the

rebels was one made of boiler tube. The tubing was bound with wire, and the two or three inch bore was filled with powder and cobble-stones and material of that general character. Ordinarily this arrangement exploded, and then disaster came to the rebels. But they would persist in its use, for they could at least demoralize the ranks of the enemy by the employment of these infernal machines. The avidity with which

the rebels grabbed up the rifles which had been borne by men in their own ranks who were shot down, knowing that the man with a precious rifle would be the common target for the Spaniards, is another thing which shows the unlimited nerve of these strange people.

## III.—GRIEVANCES OF THE REBELS.

The people of the Philippines have patiently borne burdensometaxation and submitted to other unhappy conditions for a great many years. When the only educated people on the islands were the

rulers no murmur of discontent was heard from the enslaved illiterates. The world is changing, and even the remote and almost unknown Philippines are changing also. There are to-day about 3,000 monastic friars in the Philippines. A great many of these men have attended strictly to their professional duties, while many more are greatly concerned in political matters—have acted as agents of the government in imposing arbitrary and burdensome taxation of the natives.

The establishment of schools under monastic auspices has unquestionably done much to elevate the natives. These schools have at least provided hundreds of thousands with the rudiments of an education. A great many of the more ambitious have taken advantage of the university at Manila and the higher schools in other places of large population.. A good many young men went abroad and got ideas of freedom that did not exist in their native islands. With greater education came greater ambition. The natives wanted some say in the government. They wanted to be consulted in regard to taxes, and they maintained they should have representation in the office holding class. This new-born ambition was not encouraged. The proud, educated Spanish official and the property-owning and powerloving friars looked with pronounced disfavor upon the demands of these people. The ultimate consequences of proper political recognition might be unfortunate for those whose prosperity and political influence was most secure as long as these natives were kept in respectful subordination.

It is difficult for Americans to realize the conditions that exist in the Philippines. The church and state are so inseparably linked together

TYPES OF NATIVES IMPRESSED AS LOCAL GUARDS.

that no important action is taken by Spain's political representatives in the islands until the archbishop has first been consulted. The Spanish officials maintained that the revolt was a racial affair, and tried to alarm Europeans over the thought that this trouble in the Philippines was the beginning of a great and general war between Asiatics and the whites. The writer inquired very particularly as to this point. The fact that in discussing a possible protectorate for the islands nine out of every ten insurgents would manifest unmistakable opposition to Japan's well-known ambition to acquire the Philippines is in itself sufficient to establish how unfounded is the social theory. Said General Aguinaldo to the writer:

"The people of these islands would be happy if the United States, Great Britain, or any other progressive and humane nation would take these islands under its protection. The natives are struggling for their freedom, but they are not convinced of their ability to successfully govern themselves."

The rebel leaders issued an appeal to the world, and among other things said:

"We make no racial distinction. We call on all possessing honor and national dignity. All are sufferers, the Filipino and the Asiatic, the American and the European. We invite all to help raise a down-trodden and tormented race—a country destroyed and hurled into the slough of degradation. We except no one, not even a Spaniard, because in our ranks there are some noble Spaniards, lovers of justice, free from prejudice, who are supporting our demands for individuality and national dignity."

I am quite decidedly of the opinion there is no foundation for the theory advanced by some Spanish officials that the revolt has a religious significance. The Catapunan Society is the strongest secret political organization in the Philippines. The "munitions of war" were furnished principally through the Catapunans. The order is said to have a membership of between 40,000 and 50,000, mainly on Luzon Island. member of this organization contributed weekly what would be equivalent to ten American cents to the revolutionary fund. There is a good deal of Free Masonry in the Philippines-Masonry that was brought from Spain. There is no evidence that Masons in America or elsewhere in the world have contributed a dollar to the Philippine revolutionary fund or in any other manner indicated any special interest in the revolt. cording to the best information obtainable no Masonic lodge in the Philippines has taken action as a body, although there are doubtless a good many Masons among the Catapunans. Six months ago the insurgents would have returned

A NATIVE CAVALRYMAN.

to their work and ended the rebellion if the government had granted these four points:

- 1. The Filipinos to have representation in the Spanish national parliament.
- 2. Reform the land and tax systems of the islands.
  - 3. Curtail the civil powers of the friars.

ANDRES BONIFACIO.

(Who was rebel president of the socalled "Tagal Republic.")

4. Recall many of the Spanish officials in the islands, with a view to more honest, economical, and efficient government.

But the Filipinos would not compromise to-day on any terms, however liberal. They are determined, desperately determined, to free themselves absolutely from Spanish rule. They will welcome

with open arms and grateful hearts the soldiers of America. A great many of the Filipinos will unquestionably be influenced by the priests, who will strive industriously to make their people believe it is a case of a strong Protestant nation going out on a mission of conquest to gobble up and Protestantize a Catholic country. As a Catholic who is somewhat familiar with the conditions in the Philippines, I believe the efforts of the friars in this direction will be almost wholly ineffectual.

#### IV.—TYPICAL SPANISH CAMPAIGNING.

The strangely incongruous character of the Spaniard—his great inconsistencies of temperament—was illustrated in striking manner at Manila. There was no time during the rebellion when the saloons and cafes of the capital were not filled with these gayly uniformed, good-looking fellows—a self-contained, confident, proud lot. There were dozens of instances where officers of quite important rank spent weeks and perhaps months about these cafes, eating, drinking, smoking, and conversing, having a jolly time generally, before they had passed out be-

yond the capital gates to take a look at an insurgent. The men who stuck most closely to this congenial pastime were loudest in their speech as to the prowess of Spain, making every now and then a patriotic outburst in regard to great glories of the past. There seemed to be no one

HOSPITAL SAN JUAN DE DIOS, MANILA.

in command. The great majority of these well-paid officers manifested so much indifference in regard to the insurrection that many of the foreign residents of the city actually believed they were not anxious to see the revolt ended. There is an old Spanish proverb that declares "when the river is in flood there is plenty of

wreckage." Many of the officials were making a "good thing" out of the rebellion, and these men, possessing that mercenary spirit so common among Spanish government officials, naturally desired a continuance of the trouble.

And there appeared to be absolutely nothing that would interfere with this sort of "campaigning." The report that the insurgents were going to attack Manila, and at a time when they had great numbers only a few miles beyond the city walls, did not disturb these military gen-They knew that for 25,000 to 50,000 infuriated rebels, armed with all sorts of weapons, to come rushing madly and blindly into the capital, meant an indiscrimate massacre of all the Spanish residents-men, women, and children. The Spanish officers understood that perfectly well, yet they stirred not. This sublime confidence was most manifested at times when the conditions were the least favorable for the government. When native soldiers were deserting the imperial ranks; when the hospitals were crowded and hundreds of the government troops were dying each week; when the natives were not more than twenty miles away and were given battle at a point so close that the report of artillery could be heard from across the bay in Cavité: when the Spanish treasury was depleted and the poor soldiers were unpaid, half starved, and half clothed; when, with the most active propaganda, the attempt to place a loan of 15,000,000 Mexican dollars in the Spanish archipelago proved a complete failure; when the transports for Barcelona were being loaded with sick and dying soldiers-then, under these terrible conditions, the great cafes of the capital rang with the merry laughter of these easy-going officers. Their tranquillity was not disturbed when they learned that a great tidal wave had swept the shore of one of the southern islands of the group and taken 10.000 natives to a watery grave. These strangely acting men are a pleasant, gentlemanly lot-kind, hospitable, extremely

polite—really a charming and fascinating lot.

These were the people who were delighted with the privilege of witnessing the execution of rebels or "suspects" on the famous Lunetta—the fashionable promenade, the theater of hundreds of tragedies, a place that may soon be the camping ground of Uncle Sam's conquering he

A VILLAGE ON THE RIVER PASIG.

HEADQUARTERS OF THE VETERAN CIVIL GUARD.

roes. The Spaniards are not instinctively an industrious people. This is manifested among the military officers as well as among the masses of the people. The military officers who left Barcelona amid much outward demonstration of

patriotism, after proudly declaring their determination to "exterminate the hordes of thankless, unappreciative Filipinos," soon learned to take things easy in the Philippines. They were joyously welcomed at Manila. Their arrival from the peninsula was made the occasion of great jubilation. It was a fête day. The warships in the harbor were fully "dressed," the Spanish tricolor floated from public and private buildings, the captaingeneral was out with his suit and brilliantly uniformed body-guards, all the troops in the garrison who were able to bear arms were in line, business was generally suspended, the military bands rendered soul-stirring national airs, and as the welcome troopship neared her moorings there were salutes fired on land and on sea. The newcomers were royally welcomed by the captaingeneral in a characteristically Spanish speechfull of fire, patriotic sentiment, and fulsome compliment to the fresh officers and troops. Then there was a grand parade through the principal streets of the city.

These receptions were gotten up for the express purpose of putting heart into the miserable young conscripts. These "hurrahs" were so joyous and inspiring as almost to make the men forget the physical troubles incident to a long and generally unpleasant voyage. It was life and stir and patriotic purpose for a day. It would suggest that the days of the insurrection were numbered. There were speeches and patriotic sentiment enough to suppress a more formidable But this, unfortunately for the Spanish cause, did not last. The peculiarly humid atmosphere of Luzon would immediately affect the new arrivals, and the second day would find them in happy converse with old military friends in the cafés.

I speak of the officer. With the poor private it was vastly different. If the men were able, after that six-thousand-mile voyage, to stand alone, they were promptly sent out into the malarial

A HOUSE IN THE MEISIC QUARTER, MANILA.

districts to hunt for the ubiquitous insurgent. The fate of these young, undeveloped conscripts did not seem to worry their official superiors in the least. However great the mortality among the privates, the officers continued to enjoy life. Information that the imperial forces in Cuba had

A BAND OF INSURGENT PRISONERS.

suffered severe reverses did not appear to detract from the pleasure of their daily gatherings in the cafes.

#### V.—EXECUTIONS AS THE FASHION-ABLE PASTIME.

The announcement that more than a hundred rebels and "suspected" rebels had been deliberately suffocated to death in the famous "Dark Hole of Manila" in one night was given only passing notice by these officers of a supposedly chivalrous people. This most terrible affairthe darkest chapter in the whole rebellion, with its many inquisitional features—was a mere incident to their minds. They knew these unfortunate men had been thrown into a pestilential dungeon—the old inquisitional prison in the base of the main fortifications, on the Pasig River, a dark and unsanitary hole below the ground level, unused for more than a hundred years, with stagnant water, poisoned, stifling atmosphere. inhabited by rats and other vermin—and there allowed to die. These Spanish officers had heard that the miserable creatures called piteously for air during that long and awful night, and that instead of a humane response to their dying appeals, their condition was made still more terrible when, acting upon the order of a heartless

AN EXECUTION ON THE LUNETTA OF INSURGENT CHIEFS.

lieutenant, the sentinel in charge covered up the only air-hole in the dungeon.

The incongruity of the Spanish character was clearly illustrated through the medium of the many public executions at Manila. These executions were generally made the occasion for quite a jubile—a turnout of the élite, a gala day, a time for rejoicing. The fact that there was to be an execution was prominently, joyously announced, officially and otherwise, in the local newspapers. There was at least one military band in evidence, and the morning when unfortunates who had protested against Spanish misrule were to be shot found the Spanish colors flying from a great many buildings, and the warships in the harbor "dressed." The Philippine capital had a holiday aspect.

The deadly work was generally performed in the cool of morning. That these events were fully appreciated was shown by the presence on the Lunetta of thousands of people. Hundreds of fashionably dressed ladies and gentlemen "graced" the occasion with their presence. For the most part these fashionables came in their equipages. These ladies would stand in their vehicles, determined not to miss any part of the ghastly show. The signal from the commanding lieutenant that the victims were dead was the signal for these delighted lady spectators to wave their handkerchiefs or parasols as evidence of their satisfaction.

As a general thing these were frightfully grewsome affairs. There was a firing squad of five for each unfortunate. This squad of executioners would be stationed about ten paces immediately to the rear of their human target. In most instances the soldiers constituting the firing squad were natives. They were secretly in favor of the rebellion, and no member of the squad cared to fire the fatal shot. Consequently each

man would aim for the arm or leg. This, of course. only added to the horror of There was one the affair. occasion when thirteen leading members of the secret revolutionary society, the Catapunan, were executed. There was not a single instance at this execution where the unfortunate was killed by the first volley. In a majority of cases three or four vollevs were required, and in one instance five volleys were fired before the surgeon declared the man dead. The an-

nouncement that all were dead was the signal for music by the band—gay, triumphal music.

Probably the most horrible exhibition was that of seven months ago, when a lad, apparently not more than eighteen years of age, was executed. The boy fell to the ground when the first volley was fired, but he was not mortally wounded. A second volley was fired at closer range, but the unfortunate fellow twisted and writhed in his agony, and another volley was ordered. The surgeon made a motion that the band-master mistook for a signal that the boy was dead. Spanish air was struck up, and the regiment of troops doing guard duty started to march away. The surgeon, observing that life was not extinct. ordered a member of the firing squad to put the muzzle of his rifle into the miserable boy's mouth and fire. The head was practically blown off.

#### VI.—A NOTE ON THE CLIMATE.

That the climate of the Philippines is particularly severe and unhealthy is evident from the very great mortality among Spanish soldiers during the rebellion. During the fifteen months immediately succeeding the outbreak of the insurrection in August, 1896, fully 25 per cent. of the 28,000 to 30,000 soldiers sent from the peninsula died from the effects of the climate. The climate is so severe upon the unacclimated that the rebel leaders, very early in the revolt, decided upon a defensive campaign. They sought rendezvous in the mountain fastnesses of Luzon, only to come forth occasionally and do guerrilla fighting. They thought they could pursue these easy tactics and the climate would do the rest. I am absolutely convinced at least 5.000 Spaniards died on account of the climate. Captain-General Primo de Rivera

was thoroughly disheartened on account of the frightful ravages among his troops. Although the insurrection was very formidable, the captaingeneral declared, not more than six months since. that if the rebellion was to be suppressed it would be by native volunteers - that Spaniards could not stand the climate of the islands. The captain-general refused to ask for more troops from Spain, saying it was simply murder to get conscripts from home. The climate is especially humid, and in the low, swampy land in the interior there is much malaria. The hottest season is between the middle of March and the middle of Then follows the very trying rainy season, with alternating showers and blistering sunshine for about six months. Then follow a few months when the weather is comparatively agreeable.

About eight years ago General Manager Higgins, of the Manila & Dabipan Railway, having secured a concession from the Spanish Government, organized in London a party of about forty Englishmen—civil engineers and others who were to survey the route and build and afterward assist in the operation and management of the railroad. Mr. Higgins gave special attention to the physical condition of his assistants, selecting only men that he believed could stand the severe climate of the archipelago. To-day not more than half the members of that party are alive.

The climate alone cannot be blamed for the frightful mortality among the young Spanish soldiers, however. A majority of the 30,000 troops sent from Barcelona to Manila during this insurrection were raw, undeveloped conscripts from the A great many of them came from the cool mountainous districts. They had no previous military experience, their first drill being on the steamer between Barcelona and Manila. Spanish commissary was most miserable. men were hurried out into the low fever country. They were miserably fed and still more miserably clothed. As a general thing there was no medical attendance, and hundreds died who might have been saved by a little timely medical at-A company of these young troops coming into the capital after a few months' service in the interior presented a sad spectacle. Many of the men were so completely used up on account of the weather and because of inadequate clothing and protection at night, and also because of wholly insufficient food, they could not carry their rifles. I have seen more than three hundred of these unfortunate fellows crowded upon a comparatively small transport for the voyage to Spain, with half of them in a dying condition and with but a single physician to look after them during that long and generally trying voyage.

# I.—UNDER THE DOMINION OF THE EVIL ONE.

HAVING won America, a fourth part of the earth which the ancients never knew, the Spaniards sailed, following the sun, and discovered in the Western Ocean an archipelago of many islands adjacent to further Asia, inhabited by various nations, abounding in rich metals, precious stones, and pearls, and all manner of fruit, where, raising the standard of the faith, they snatched them from the yoke and power of the devil and placed them under the command and government of Spain."

Thus wrote Antonio de Morga in 1609. Let me try to paint a picture of the islands while they were yet under the yoke of Spain's predecessor. A hundred thousand square miles of land, broken into more than a thousand pieces and strewn through the China Sea. Ten millions of weak folk inhabiting them, rather sensual, afraid of the fiends, living snug enough Aliens now and then lives in their rice-fields. descending on them to rob and murder; some of the weak ten millions suffering much for a while, but presently appeased. Dense forests over most of the islands, and red-crested volcanoes everywhere bursting up through the palm Rivers that are torrents at one time and dry sand streaks at another, with pools where

alligators lurk, and turtles, and strange fish, and serpents. Civets and wild-cats in the woods: buffalo and wild boar; and among the hot, vaporous greenery of the trees parakeets and cockatoos and pigeons, while mound-building turkeys and jungle fowl roam underneath, and the air is full of gorgeous butterflies. And there are snowwhite monkeys in Mindanao.

And among these forests and smoke-wreathed hills, in the sweltering air, lived, as I have said. some ten millions of human beings, of low stature and varying degrees of blackness and vellowness. with a certain far-away humanity in their souls. There were the little black people of the wilds. who numbered a few scores of thousands, the furtive remnant of an earlier world. They were spindle-legged, with flat noses and frizzled heads. made frightful with tattoo-marks. They roamed through the forest with bows and poisoned arrows. dwarfish and hideous, hunting for honeycombs and eating all manner of strange wild food, such as only repulsive dwarfs would eat. Little wonder if they were taken for the true children of him who, before the Spaniards, ruled the islands.

But they were hard pressed by the Malays in their millions, the true owners and natives of the soil: stout, yellowish people, with low, dusky foreheads, very good-natured till the murdering fit is on them, when they are speared with iron tridents and shot. The Malays had long been settled; they dwelt in bamboo huts, with walls of matted palm-leaves, among their rice-fields; they fished in the rivers and lakes and kept pigs and ducks and fowl, and great black buffaloes with long backward curving horns.

While they were yet in their sins they sowed the rice and reaped it with much blood-sacrifice to the fiends. For the five spring months the air had been growing hotter and hotter, till it came in great burning breaths like the breath of a furnace. Then white clouds began to gather in the hot blue dome, and to whirl and cluster and thicken till they hid the sky in a stifling mantle of vapor, and all men went breathless praying for the rain-fiends to conquer the drought. And then burst forth the lightnings and thunderings, and the whole air was full of raging demons, and the big rain-drops came down, first singly, then in battalions; and the air was full of the swish and swirl of the rain. For the next four months all things were dripping and steaming; the forests were white with hot vapor, and there was an endless trickling from the leaves and a splashing of water on the swampy ground. Then a certain coolness came, and the Malays prepared to plant their rice. In the good old days of heathendom they guarded the thick-sown rice against evil spirits by a bamboo basket of offerings, which they made in this wise: Splitting the end of a rod for the length of a hand and spreading out the pieces, they wove twigs between them, making an open trumpet of basket work, stuck in the ground with the wide end up. In this they put the offerings to the fiends.

Once in three years they held a more imposing ceremony, which brought rich blessings on their fields. There is a plant called pua, which grows in the jungle, tall and slender, so that,

TYPICAL NATIVE HOUSES.

stripped of its leaves and the root-fibers cut away, it makes a splendid javelin for a sham fight. When the ceremonial day had come, the pawangs, or medicine-men, and the elders collected small coins throughout the villages, and therewith bought a white buffalo—that is, a buffalo of the color of a pig. And all the good, squat yellow sons of the adversary came together and brought rice and cakes for the festivities, and the buffalo was tied between two trees and its throat cut, so that the head fell in the stream that watered the rice-fields. And the flesh was measured out among those whose subscriptions were Then the rice and the cakes were eaten, and there were more incantations to the fiends. And the young men armed themselves with pua spears and divided into two bands, and so fought a running fight of javelins down the rice-fields, the one party being all the time in retreat. master of incantations threw the first spear, and the rest yelled with glee. When the fight had been waged all down the valley, taken up by village after village for three whole days, the evil spirits took flight and the rice-fields were safe for a season. And when the cold time came in December the women harvested the crop, cutting it ear by ear, that the spirit of the rice might not be offended. And there are millions and millions of these yellow people, and the incantations are still in their blood, and the murdering fits, for all their Mussulman or Christian faith.

# II.—HOW SPAIN WON INNUMERABLE SOULS FOR HEAVEN.

Now the story of how the island came under In the year of grace 1511 the King of Portugal's men conquered Malacca in the Golden Chersonese, half round the world. There they heard rumors of islands of spices and flowery peninsulas, and forthwith equipped three ships to go in search of them. The chief of the fleet was one Antonio de Abreo, and he sailed across the China Sea and the sea of Celebes to Banda and Ternate in the Moluccas. He came back again to Malacca, and told of the wonders of the islands to his friend Fernan Perez de Andrada, and setting forth to Portugal was drowned somewhere in midocean. Captain Fernan told the story to Francisco Serrano, who went in a war-junk to look for the spice islands, and was wrecked on the Isle of Tortoises, beyond Banda. Here they did valiant battle with Malay pirates, who carried them to Amboyna, and thence the fame of their prowess spread to Ternate and Tidor, so that Cachil Boleyfe, lord of Ternate, persuaded Serrano to help him to subdue Cachil Almanser, lord of Tidor, both being pious Mussulmans and enemies of long standing. And Serrano wrote all these things to his friend Fernando de Magallanes, who was then in Portugal and who had been with him at the taking of Malacca.

Now, a few years before, Pope Alexander VI. had divided the world between the kings of Portugal and Castille, by a line which ran from pole to pole three hundred miles west of the Azores. And all that was to the eastward the King of Portugal took, but what lav to the west belonged to the King of Castille. His Holiness never imagined that the one sailing east and the other west, they must meet somewhere on the nether side of the earth, with no line to divide them, yet this very thing immediately happened, and for three hundred years the Spaniards had a day too much in their calendar and the Portugals a day too little from sailing thus in opposite ways. Then Fernando de Magallanes, falling out with his liege lord of Portugal and moved thereto by the devil, as the Portuguese chronicler tells us, went over to the King of Spain with Serrano's letter in his pocket. And he persuaded him that the Moluccas fell within the Spanish dominions, if only you took care to reach them sailing to the west; and Charles V. let himself be persuaded, and fitted out a fleet, under the command of the said Magallanes, or Magellan, who took with him a famous astrologer named Ruyfarelo, the better to find his way through the unknown. And the said Magellan discovered the straits which bear his name, and sailed through them to the southern seas and thence to the islands of Tendaya and Zebu, where he was slain by the natives of Matan. And about the same time his good friend Serrano paid life's debt in Ternate. And thus the Philippine Islands were discovered.

The fleet went on to the Moluccas and came into dispute with the King of Portugal's men, who had railed round the other way and claimed all they found as within their sovereign's dominions. The Spaniards fared badly in the quarrel, and the remnant of them sailed for Spain in the Victory, which alone remained to them of their fleet. And this was the first ship that ever went round the world.

And it afterward seemed good to the King, Don Philip II. of Spain, to carry the matter further. And being informed by the Viceroy of New Spain and the friar Andres de Urdaneta, who had sailed to the Moluccas, that the voyage might be made more easily from New Spain—for so they then called Mexico and Peru—he bade them equip a fleet in the port of Navidad, in the South Sea, and it was given in charge to Miguel Lopez de Legazpi, an inhabitant of Mexico and born in the province of Quipuzcoa, a person

of quality and trust. And the Audiencia, which is the high court of justice, completed the dispatching of Legazpi, giving him instructions as to the parts to which he was to go, with orders not to open them until he should be three hundred leagues out to sea. reason of this was that many differences existed among the officers of the fleet, some saying that they should go to New Guinea and others to the Luzon Islands, and yet others to the Moluccas. So Miguel Lopez de Legazpi sailed from the port of Navidad in the year of grace 1564, being the year in which the poet Shakespeare was born. He had with him five ships and 500 men, and also the friar Andres de Urdaneta and four other monks of St. Augustine's order. And having navigated for some days to the west, he opened his instructions and found he was to go to the Luzon Islands, which he should endeavor to pacify and reduce to submission to his majesty of Spain and the holy Catholic faith. He sailed over blue seas till he came to the isle of Zebu, where he anchored in a good and convenient port. And the natives and Tupas, their chief, entreated him faith-

PHILIPPINE TYPES-A 'MESTIZA."

fully and well, but later sought to kill him and his companions, who had stolen their provisions and wealth. whereupon they sought to destroy the invaders. But, says the

chronicler, it turned out contrariwise to what they had expected, for the Spaniards conquered and subjected them. Seeing what had taken place in Zebu, the natives of other neighboring islands came humbly before the chief of the expedition, and making submission to him, provided his camp with victuals. Spanish settlement was made in that port, which they named the City of the Most Holy Name of Jesus, because they found there, in one of the houses of the natives when they conquered them, a carved image of Jesus; and it was believed that it had remained there from the fleet of Magellan, and the natives held it in great reverence, and it worked for them in their needs miraculous effects. And the image they put in the monastery of St. Augustine, which was built in that city. The isle of Samar was first called Philippina in 1543, but it was a generation more before the whole group were called the Philippine Islands, being by that time pacified and subdued, and the souls of the natives being won for heaven, as the old chroniclers relate.

# III.—THREE HUNDRED YEARS AGO.

It is the fashion to condemn Spanish rule in the Philippines, as though matters there had been steadily going from bad to worse, and as though that remote colony in the China Sea were incomparably worse governed than any other colony under any other power. In reality this is not true at all. There is not a cause of discord in existence to-day that was not equally existent three centuries ago. The events that are happening now are no new events, but had their exact parallel, point for point, in occurrences that took place before the first colonists ever settled in North America. The trouble springs from deep ineradicable causes which arise under every rule by an alien race, and which are operative and steadily working for disintegration in every Oriental land now held by any European power. And, finally, the forces that are fighting against Spain do not represent the Philippine natives at all, but an intrusive and alien element which forced its way into the country long after the arrival of the Spaniards, and which is as heartily detested by the real native races as by the Spaniards themselves.

Let me prove this in detail. And let me point out, to begin with, that even the rulers whom the Spaniards found in possession, and whom they conquered, were an alien element—invaders who had brought a foreign religion and an exotic social system from the mainland of India. The Malays themselves, who are the true native population, had practically no say in the matter then,

and have almost none now. The whole thing is a struggle of aliens for the right to plunder the Malavs.

After the Spaniards had gained a footing at Zebu they turned their ambitions toward Luzon, the largest island of the group, some 40,000

PHILIPPINE TYPES-A SEAMSTRESS OF LUZON PROVINCE.

square miles in extent. Having arrived at the bay of Manila, they found the town on the sea-beach close to a large river, in possession of and fortified by a chief whom they called Raja Mora, whose very name smacks of foreign invasion from India. Across the river there was another large town named Tondo, held by another chief named Raja Matanda. These places were fortified by stockades filled in with earth and a quantity of bronze cannon and a considerable variety of artillery. The Spaniards entered the town by force of arms and took it, with the forts and artillery, on May 9, 1571. The chiefs made their submission, and their example was followed by many other tribes in Luzon. The Spanish commander-in-chief, Legazpi, established a town on the site of Manila, of which Raja Mora made a "donation" to the Spaniards for that purpose, as the position was a strong one and in a well-provisioned district. The name Manila was retained. Before the invasion from India the islands had been under Chinese dominion.

CHURCH OF SAN ROQUE, CAVITÉ.

but had shaken off the Chinese yoke. But the Chinese still maintained a brisk trade with the Philippines, sending a score of ships thither every year laden with cotton, silk, porcelain, sulphur, iron, copper, flour, quicksilver, cloth, and gunpowder, which they exchanged for skins and buffalo hides, bartered by the Malays.

In the days of the second governor, the famous Chinese pirate, Li Ma Hong, made a descent on the island with seventy large ships and entered the city of Manila, shutting the Spaniards up in But they defended themselves courthe citadel. ageously, and finally compelled the pirates to reëmbark, and, following them up, burned their fleet in the mouth of the Pangasinam River; and the pirate chief, escaping in an open boat, landed on a desert island and there died. About this time also the monks, friars, and Jesuits began to get a footing on the island, and gradually extended their power over the fanatically orthodox Spanish rulers, as well as over the Malay natives. Their sincere, prolonged, and fervent endeavors to convert the natives were one chief element of discord, as their gradual accumulation of church property was a growing cause of hardship to the Malays. These two forces sprang from the very heart of the religious system they represented, and were dangerous in proportion to their sincere belief in it and faithful adherence to it.

About this time, too, the English freebooters began to plunder Spanish ships returning from the Philippines. Here is the story of one of them, Thomas Candish, in a letter dated September 9, 1588: "The matter of most profit unto me was a great ship of the King's, which I took at California, which ship came from the Philippines, being one of the richest of merchandise that ever passed those seas, as the King's register

did show. Which goods, for that my ships were not able to contain the least part of them, I was inforced to set on fire." Sir Francis Drake had done the same thing repeatedly, visiting the Philippine Islands on his famous voyage around the world ten years before.

In 1590 the governor, Gomez Perez, began to fortify the town of Manila, and built a battery on the point and also constructed the stone cathedral, and encouraged the inhabitants of the city to build their houses of stone. He further cast many cannons, and indeed left old Manila very much what it is to-day. Then came trouble with the Japanese, who are at this moment trying to gain a voice in the affairs of the Philippines, as they tried then, more than three centuries ago: For several years there had been a steady trade between Nagasaki and Manila, and some of the Japanese traders incited the Emperor of Japan to proclaim his suzerainty over the Philippine Islands. This he did in an arrogant letter, saving that if the Spanish governor did not acquiesce "he should expect him on his return from China, whence he would go directly to his islands, to teach him who he was.' At the same time the King of Cambodia sent an embassy to Manila, with a present of two elephants, in return for which the governor sent him a horse and some emeralds.

I record these details to show that the Philippine Islands had already come within the net of Asiatic politics, and that a complicated web of relations was then formed which exists at this moment, and which will have to be taken into account by whatever power assumes the government of the Philippines.

As the claims of Japan, backed by a strong and rapidly growing fleet, form one of the most formidable elements in the foreign relations of the Philippines, so the presence of Chinese in the islands is the gravest internal danger. In March, 1603, a number of mandarins came as ambassadors to Manila "with banners, equipages, and lances, and other insignia of much state; the mandarins making many bows and courtesies after their fashion and the governor answering them in his." They told him a wonderful tale of a golden island they had come to seek, but this was a mere mask for a persistent Chinese attempt to get possession of the islands.

Numbers of Chinese shortly began to arrive, supplementing the already large Chinese colony in Manila. They were merchants, fishermen, quarrymen, coal dealers, carriers, masons, and day laborers. A plot was rapidly matured among them, having as its object the massacre of the Spaniards and the seizure of the island. Some of the Chinese themselves, both pagans and Christians, in order

to show themselves to be friends of the Spaniards and free from all blame, gave notice that in a short time there was to be an insurrection, and the governor kept a well-armed guard in readiness in the city. From this time forward the Spaniards began to persecute the Chinese, depriving them of their property and calling them The Chinese were goaded into traitorous dogs. The story is an ugly one. Twenty. rebellion. four thousand Chinese were put to death, with one curious result: "When the war was at an end the want and difficulties of the city began, because as there were no Chinese, who exercised various arts and brought all the provisions, neither was any food to be found to eat nor shoes to wear, not even for very excessive prices. All this weighed down the spirits of the Spaniards."

I do not relate these things for mere love of ancient history. The heart of the matter is that precisely the same thing has occurred again, though we have not yet come to the massacre of the Chinese. The whole of the present revolutionary movement in the Philippines is in Chinese hands, and if the Spaniards were annihilated tomorrow, these Chinamen would hold the islands and form a republic.

### IV.—THE MORAL OF THE TALE.

There is no need to carry the story further. No new elements have been added in the last three hundred years. There are no incidents but that the English took Manila in 1762 and sold it back to the Spaniards for hard cash.

It will be noted that in all this history there is no talk of the Malays—the great bulk of the natives. This is not accidental. In the Philippines, as in India and Africa, the vast bulk of the natives do not count. They are weak and at any one's mercy, and therefore they receive

SUMMER RESIDENCE OF GOVERNOR-GENERAL.

none. In Asia there are hundreds of millions of weaklings who do not count at all and never will, unless they count for pity's sake. So, as far as politics are concerned, the Malays in their millions are out of the saga.

The Spaniards, too, are out of the saga. They tried and failed, and the causes of their failure are these. In dealing with a weak and helpless

GATE OF ISABEL II., AT ENTRANCE TO AVENUE DE MAGEL-LAN. MANILA.

people, one may follow different paths. If they are nomads and too long wild to settle on the soil, one may hunt them down with dogs and shoot them, as the English did in Tasmania and as they are doing in Australia and New Zealand. And some day, perhaps, the Ruler of the earth will ask what was done with his helpless children, and the answer will be: Lord, we have hunted them, and poisoned them, and slain them, and now they have found their peace.

Or if the weaker races are more settled and live by agriculture, one may take another course. If their land is temperate, where white men can dwell, as in South Africa, the weaker race will be ground down to the level of predial serfs. If it be tropical, they will be forced to labor on their lands; and under the name of taxation, or rent, or excise, or what-not, they will be forced to give up the bulk of their produce to enrich their rulers, and they will be ordered to love their ways and do homage, as in India, where the courts have recently decided that "lack of affection is disaffection," and disaffection is treason and means imprisonment for years or for life. The more skillful the rulers, the more certain the ultimate explosion. For they are doing violence to the genius of the weaker race, and even the weak will one day turn and fight with the wild savagery of weakness.

Or one may follow yet another course, as the Spaniards did in the Philippines. One may try, quite honestly at first, to turn these people into Europeans and Christians. And things will go along hopefully for a while till the elements of disintegration begin to show.

The first generation of settlers, being all men, will take native wives, and thus a certain near-

SAN JUAN DEL MONTE-AN AQUEDUCT.

ness will be brought about, and they will master the native tongues. That first period is far the best for all parties; it was so in the Philippines; it was so in India. Then will come security and two elements of future disunion. For security will bring European women and the nearness with the natives will be at an end. And the former union will have given birth to a race of half-castes, who will enter like a wedge between the natives and the rulers; and these two sources of separation will drive them ever further apart.

The first true contact was the last: after that comes the abyss of separation—the beginning of the end. Then, gradually growing further apart and feeling the gulf between, they will grow up on both sides. The rulers will lose faith in their mission; will see quite clearly that they can do these people no real good; that they were far happier in their idleness and their fighting and their sins. Then with the loss of faith the rulers will decide on one of two things: they will either continue to hold these weak folk for pride or for lucre. In India the English hold the natives for pride. None of the wiser heads among

them believe they are doing any real good. They have lost all genuine faith in their mission. In the Philippines the Spaniards held the natives for gain, and all kinds of plundering and cruelty resulted. And whatever nation takes the Spaniards' place, if they do so, either for pride or for gain, will bring nothing but harm and sorrow to the natives and conscious degradation to themselves.

Then the question of faith. The Spaniarls honestly tried to make Europeans of the Malays and bring them into the bonds of civil life. They failed hopelessly, because the race genius of the Malays is wholly out of tune with European civil life, and because that very civil life, existing for the privileged classes, carries within it the seeds of anarchy which are destined to break forth at home, and which will break forth the more certainly when difference of race aggravates the mischief of difference of caste and privilege.

The Spaniards honestly tried to make the Malays Christians. They totally failed, though they made them so in name. Race genius was against them, and race genius is strong as death. The Anglo-Indians say frankly that there are only two religions in the East, white man's religion and black man's religion, and that only fools try to mingle them. And if the English who govern India had their way and were not cowed by public opinion, they would drive out the missionaries to-morrow as a gang of breeders of mischief. But the Spaniards, the Catholic monks and friars, honestly tried to convert the Malays to the Church of Christ, as they understood it. They succeeded to the ear and failed And when they saw their failure to the heart. they lost faith and began to enrich themselves at the Malays' expense. And the Malays turned against this alien church with its privileges, as it was decreed by destiny that they must turn.

A STREET IN MANILA-" LACALLE REAL."

And wherever any church is based on privilege it is as infallibly doomed as are the Augustine friars in the Philippine Islands.

Thus has fate solved the problem throughout all the East. The Tasmanians are murdered and gone; the Australian black fellows are following, and the Maoris and many Polynesian races. Perhaps their lean shades now hover over the Philippines, wondering whether the same tender mercy and loving kindness await the Malays. The natives of India are reduced to serfdom, all the more enthralling that it is so skillfully or-But there is a smoldering madness eating at their weak hearts. The gods, they say, have given them up to famine and plague in punishment for their rulers' sins. The Japanese have escaped servitude. They are confident, arrogant, remorseless. They cherish boundless ambitions. The Chinese will also escape. They have boundless commercial energy and untiring industrial zeal. A generation will bring Europe to punishment for meddling with the dreaming empire of the East. The superior moral force of the Chinese has already dominated the millions of Malays in the Philippines, as in the British colonies of Singapore and the Straits Settlements. And the wealthy Chinese are already beginning to browbeat the English in all the great cities of the East.

So there remains the fate of the helpless millions, the weak children of men who cannot defend themselves. Only one way has yet been tried with them, the way of domination, which ends by breaking their hearts. It is irony to cover this with talk of the Gospel and civilization.

There remains yet another way—the way that America has taken with the millions of negroes in the States. It is not to try to take advantage of their weakness, but to help them; to give them a chance, little fair play and generous dealing; to let these weaker children of men have an opportunity to follow out their own race-genius and live their own lives, which they love in their dumb way as we love ours. There are real human kindness and gentleness and pity, even at this late date; and as all else has failed, it might be well, though only in despite, to give them at least a trial.

Here is a chance for the genius of America to bring a new revelation to the world—the revelation of true and kindly dealing with weak races who cannot help themselves. Here is an opportunity to protect them, to guard them against

TYPES OF NATIVE SOLDIERS.

European extortion and the extortion of the same spirit of greedy cruelty in Americans, to protect them from the superior moral force of the Chinese without doing injustice to the Chinese genius, and, lastly, to protect them from themselves, their own weakness and unsteady wills; to put a little heart into them, so that they may love life and see good days amid their tropical jungle. Here is the choice. Choose well and wisely, for the choice involves a new hope for humanity, for the hundreds of millions of weaklings helpless and hopeless. If the question is rightly solved by the genius of Americans a new day of honor and freedom will dawn throughout all the Deal with these people yourselves. with them wisely and well. Above all, deal with them kindly and with good humor. Do not send them back into bondage, whether to Spaniard or any other European rule built on privilege and domination. Let Americans win one more victory for freedom; this time not for the strong and exultant, but for the helpless and the weak, who cannot help themselves.

# SPAIN AND THE CAROLINE ISLANDS.

BY E. E. STRONG, D.D.

(Editorial Secretary of the American Board of Foreign Missions.)

HE Caroline Islands, over which Spain claims sovereignty, lie on a belt some 300 miles wide, between 4° and 10° north of the equator and between 132° and 162° of longitude west from Greenwich. They therefore stretch about 2,000 miles from east to west, and though so near the equator and in a region of perpetual summer, the range of the thermometer through the year is not more than 13°, or from 74° to 87° F. East of the Carolines are the Gilbert and Marshall groups, and to the north lie the Ladrones. These four groups constitute what is known as Micronesia [the Little Islands], of which there are said to be no less than 1,000. The Ladrones were formerly used by Spain as a penal settlement, and the native race is said to be nearly or quite ex-The Marshall and Gilbert groups are of coral formation, rising but six or eight feet above sea-level. On these coral islands there are three principal products which support human life: the cocoa palm, the bread fruit, and the pandanas, or screw pine. In some places taro can be grown, but with this limited range of products it is difficult, if not impossible, for foreigners to reside continuously on these atolls. A missionary who did reside on one of them for a long time wrote: "Advocates of a meager diet as conducive to health might do well to migrate to the Gilbert Islands. If they survive the experiment their testimony will be interesting; possibly, however, a little 'thin.'"

Within the Caroline group there are five high islands, of basaltic formation, some of them having mountains from 2,000 to 3,000 feet high. These are Kusaie, Ponape, Ruk, Yap, and Pelew, and on them the range of products is correspondingly large, so that Americans and Europeans find no difficulty in residing there for years at a time. All visitors unite in praising the beauty of these high islands, and Kusaie and Ponape have been called the "Gems of the Pacific."

Forty-six years ago, in 1852, the American Board of Commissioners for Foreign Missions, uniting with the Hawaiian board, resolved to undertake a mission to these islands of Micronesia, and in that year three American missionaries, with their wives and two Hawaiian families, set sail and settled on Kusaie and Ponape, in the Caroline group. Reënforcements followed within the next few years, and in 1856 it was found

necessary to provide a vessel for taking the missionaries to and fro and carrying them supplies. By the contributions for this purpose of children in the United States the *Morning Star* was built. That barkentine had been succeeded by three other vessels bearing the same name, the last one having auxiliary steam power and now in service.

THE MISSIONARY VESSEL THE "MORNING STAR."

For over thirty years this Micronesian mission had prospered, island after island having been visited and Christian teachers introduced and welcomed by the native people. No one, either American or native, had seen any sign or had the remotest thought that any European nation claimed sovereignty over these groups. It was doubtless known in general that Spain, on account of early discovery, claimed ownership, but only at the extreme western end of the Carolines. at Yap and Pelew, was there any visible token of such claim. There were no Spaniards on the islands and no Spanish vessels in the waters. The natives were absolutely independent, and their chiefs were not even asked to recognize any authority outside of their islands.

It was in this open field that the American missionaries wrought without let or hindrance. At the first they found the natives not willing to receive them; they were savages, nearly or quite naked. The Caroline Islanders were elaborately tattooed, but their clothing was of the slightest. The characteristics varied somewhat on the different islands, but on most of them the people were savage and warlike. While not noted for cannibalism, it is said that on some islands there was probably not an adult male who had not tasted human flesh. There was no marriage rite known.

and in the early days missionary work was prosecuted with no little peril to life. But year by year ground was gained.

In 1888 more than thirty different islands had been occupied by native Christian teachers trained under the American missionaries, and on many of these islands no heathenism was to be found. The story of one of these islands lying within the Caroline group may be cited as a specimen. Pingelap is a coral island, east of Ponape, with about 1,000 inhabitants, who in 1871 were wild and rude savages, almost naked and living in ab-Native Christian teachers were ject heathenism. sent them from Ponape, who on arrival were rebuffed, the King and his chiefs compelling them to return. But, singularly, six natives of Pingelap who had drifted to Ponape came under the influence of the missionaries and became Christians, and after a time returned to their own island, where they experienced at first most violent opposition. But subsequently a great change came over the spirit of the people, and the message of these Christians was welcomed and a marvelous transformation followed. church was built, cloth was bought of passing traders, and the people were soon decently clothed. "Morning and evening, as well as on the Sabbath, nearly the entire population assembled to hear the Gospel. Liquor and tobacco were banished from the island, and the Ten Commandments became a code of laws." Wetmore, a physician of Honolulu who visited Pingelap in 1886, wrote in enthusiastic terms of the island and its inhabitants: "The change effected here in less than fourteen years by Thomas, helped by Manassa and Tepit in the earlier labors, after strenuous exertions had been put forth to prevent 'the coming of the missionary God,' is perfectly marvelous. Their church is almost large enough to seat 1,000 people, the entire population of the island." Dr. Wetmore describes at length the material prosperity of the place, which was in striking contrast with its condition when first visited. Similar reports could be made of other islands on which, as on Pingelap, no American missionary had resided, but where native preachers trained in mission schools had been prepared for this service.

In 1888 there were in the Micronesian mission 47 churches with 4,509 members, 15 native pastors, and a total of 44 native Christian laborers, including Hawaiians. Five languages had been reduced to writing and school-books prepared and printed in them all.

Such was the condition of the islands and the American missionary work therein when, in 1887, the good work was interrupted by the enforcement on the part of Spain of her claim to sovereignty. The question of territorial rights had been in dispute for some time between European powers, and without any knowledge or consent on the part of the Micronesians or of those who have been laboring successfully for the uplifting of the islands the matter was referred for arbitration to the Pope, who by a decision dated October 22, 1885, gave the Marshall Islands to Germany and the Carolines to Spain, while England was allowed to take possession of the Gilbert group. It was a year and a half after this. however, before Spain actually assumed author-

ity. On March 14, 1887, a Spanish man-of-war, having on board a governor, 6 Roman Catholic priests, 50 soldiers, and 25 convicts, arrived at the island of Ponape and demanded submission on the part of the natives.

This assumption of authority, with a show of force, was resented by the natives. They were especially irritated by the arrest of their beloved American missionary, Rev. E. T. Doane, a venerable and saintly man who for more than thirty years had instructed them in the ways of peace and righteousness. Mr. Doane had endeavored in every way to avert a conflict, but he was accused of inciting rebellion, was confined for weeks on board a man-of-war, and then taken as prisoner to Manila. At length the arrogant demands of the governor and his soldiers, with whom the priests were always associated, so incensed the natives that they suddenly arose in rebellion and slaughtered the governor and nearly all his officers. After this a wiser man was sent by the Spaniards as governor, and Mr. Doane, brought before the Governor-General of the Philippine Islands at Manila, was acquitted and returned to Ponape. The governor-general in sending him back gave him a remarkable testimonial, saying:

MISSION PREMISES, OUA, PONAPE.

The important labors performed by yourself and the other missionaries cannot but be appreciated and considered of extraordinary service to humanity and civilization; as likewise the great hardships suffered by yourself in the propagation of the Gospel do convince me of the faith and enthusiasm with which you have borne and overcome all sorts of obstacles and troubles in the conversion to Christianity of the savages of those islands. Wherefore, in acknowledging your interesting letter, I wish to express to you thanks for the well-known services rendered by yourself and the other missionaries, which have resulted to the advantage of Spain, inasmuch as in establishing her dominion in the East Carolines she has found those natives already fitly prepared to enter upon the life of a cultivated people.

On reaching Ponape Mr. Doane sought to promote harmony between the natives and their would-be rulers, but he was only partially suc-The people loved their missionaries and cessful. teachers, and they did not love those who came to domineer over them. For two or three years outbreaks occurred, in which the Ponapeans usually came out victorious. The Spaniards here, as in Cuba and the Philippines, showed conspicuously their incapacity for governing conquered people. Building a fort at the northern harbor of Ponape and under the protection of a man-of-war, they have held on, but have made no progress in subduing the island-

When the first governor landed he promised that the work of the American missionaries should not be interfered with and that there should be full religious freedom. But within three months from that time only three of ten mission schools on the island remained, the governor having interfered with them. The American missionaries, though greatly hampered in their work, yet held on to their posts.

In June, 1890, a Spanish force undertook to build barracks and a Catholic church at Oua, one of the mission stations, upon land deeded to the mission and within a few feet of the mission There could have been no object in doing this other than to drive out the American missionaries. This incident, following numberless other wrongs, brought matters to a crisis and proved more than the natives could bear. was but a single American woman at the station at this juncture, and she was powerless to prevent the sudden uprising of the people, followed by a slaughtering of the Spaniards. The vengeance they took upon their oppressors was swift and terrible. In September the Spaniards were reënforced by a gunboat and 600 soldiers from Manila, and the mission premises at Oua were shelled and destroyed, the natives retiring beyond the reach of the Spanish guns. All efforts toward conciliating the two parties, though most persistent, proved unavailing. Seeing that they would be practically prisoners if they remained, the missionaries left Ponape on board the United States ship Alliance and sought elsewhere a place for their Christian labors. Since then no American missionary has been allowed to remain on Ponape. The missionary vessel, the Morning Star, has been forbidden to touch at any point on the island except at the Spanish habor, under the guns of the fort, and those on board are not allowed to confer with the natives. Testaments and school-books in Ponapean must not be landed. The native Christians have been eager to obtain these supplies and to confer with their friends of

former days, but with a single exception such intercourse has been strictly forbidden.

So far as Ponape is concerned the case stands thus: When the Spaniards arrived there were on the island 6 American missionaries (two men and four women), 15 churches with 451 communicants, and 12 native teachers. As to the prospects of the mission work, Mr. Doane could then say: "The outlook on the whole is cheering. In some places the people had long clung

REV. E. T. DOANE.

(For thirty-five years a missionary in the
Caroline Islands.)

to darkness, but now the rulers have become Christians and the people have followed their example. The making of and dealing in intoxicating drinks have ceased, also the preparation of the narcotic joko root, polygamy, and Sabbathbreaking. Many youth of both sexes are learning to work for Christ. Of the five little kingdoms on the island, four have become Christian and the fifth is not all dark, for two of the chiefs are earnest workers for the Master."

How stands the case after ten years of Spanish rule-or misrule? While it is by no means true that the whole work of the American mission has come to naught, it has been most sadly broken It is known that some of the churches on up. the island are holding their own; that under native preachers they are seeking to stem the tide of evil that has come in through the presence of a licentious Spanish soldiery. But they are working against odds and pray for deliverance from the demoralizing influence brought in by After years of delay the their would-be rulers. Spanish Government has paid an indemnity of \$17,500 for mission property destroyed, but it

can never pay for the wrong it has wrought in the character and lives of the people.

By far the most pernicious results of Spanish rule in the Caroline Islands are found on Ponape, which has been the seat of their government. It is only fair to say that they have interfered little with mission work at Ruk or in the Mortlock lagoon, possibly because of their want of success on Ponape, or quite as likely because they saw little to be got out of these islands. Their vessels seldom appear in the Ruk archipelago or at Kusaie, and they have no officials on these islands. Hence in these sections the work of the American mission has prospered. This Micronesian mission, which is now connected from two points within the Caroline group—namely, at Kusaie and Ruk, though it extends into the Gilberts and Marshalls—has just sent in its report covering the year 1897. Its summary gives 19 American missionaries (seven of them men), 52 native preachers, 29 teachers, 45 churches with 5,313 communicants, 152 places for stated preaching, and 95 schools with 2,873 pupils. During the last year this mission has cost the American board about \$39,000, and during the forty-six years the board has expended, including the building and maintenance of its missionary vessels, only a fraction less than \$1,000,000. Aside from the Morning Star, a vessel of 430 tons, which makes an annual voyage through the groups, with Honolulu as its port, there are two small vessels, one at Ruk and one in the Gilbert Islands.

Lest any one should suspect that the testimony here presented concerning the value of missionary work has been prejudiced because coming from those connected with the work, it may be well to refer here to the testimony of one who has no connection and, so far as is known, no sympathy with missionary operations. Dr. Irmer, the German Governor-General (Landeshauptmann) of the Marshall Islands, sent in 1896 to his government in Berlin a report of a visit made by him at Kusaie, and the testimony he gives to the excellence of the mission work of the American board in that section of the Caroline Islands is as emphatic as it is unprejudiced.

While no complaint is made of the rule of Germany in the Marshalls or of Great Britain in the Gilberts, it is simply truth to say that the presence of the Spaniards in the Carolines has been only a curse. They have accomplished no good work; they have hindered the good that others were doing. The Christians of America have wrought most effectually for the uplifting of these islands, and if not politically, yet in the best of all senses, the sovereignty of the Carolines belongs to them.

# VACATION SCHOOLS IN THE UNITED STATES.

BY KATHERINE A. JONES.

THE principal of a Chicago vacation school before taking his pupils on their first excursion into the country wished to test their knowledge of nature. He wrote on the blackboard certain questions: Have you ever been to the country? Have you ever seen Lake Michigan? Have you ever picked a flower? Have you ever seen a cow? Have you ever climbed a tree? Most of these questions were answered in the negative by more than half of the children. One sobbing little girl, when finally brought to confess the reason for her tears, owned that she had answered "No" to so many of the questions that she was afraid she had not passed and could not go on the excursion.

This story is a commentary on several things. It makes an argument for summer schools in which the vacation is the central idea and school in the sense of text-books is omitted; no humdrum reading, writing, and arithmetic, but hammers and nails, flowers, colored crayons, and music.

Like many of the best things in educational ideas, the vacation school came from Boston. -In 1885 the North Bennet Street Industrial School held a large and successful session during six weeks of the summer, giving in this way its answer to the question troubling the minds of educational and philanthropic workers as to what can be done for the boys and girls in the poorer parts of our large cities during the long summer This has long been recognized as the dangerous time; the time when, as Mrs. Stevens, of Hull House, Chicago, reports, 60 per cent. is added to the criminal record of the children. Public-school teachers in the bad quarters fully understand how the summer days tear down the careful work of the year preceding. No other time is so full of vicious, demoralizing possibilities to these thousands of little ones to whom the world owes health and happiness and an opportunity for noble living. There is no pleasure in their wretched homes, and the street is the only alternative. Character develops fast there.

The shameful necessity for putting together the words "child" and "criminal" Mrs. Stevens believes, from her experience with the young offenders in Chicago's police courts, arises from something unnatural in the surroundings of the child. There is too much street and alley life and no adequate home life. The child criminal

A LITTLE SCULPTOR.

is criminal because he is not carefully looked after. How, then, shall he be helped? How is this great mass of material to be turned into good citizenship? How are these energetic boys and girls, so fully alive to something, to be bettered mentally and morally and physically into good men and women?

# BOSTON'S PIONEER EFFORTS.

Boston tried the vacation school. Perhaps no suggestion in education has been recognized more quickly as being to-day's best way for filling the need. In the report of the North Bennet Street Industrial School for 1887 this paragraph states the work then done:

For two years, during six weeks in summer, a large vacation school has been carried on. Most of the regular departments have been kept open, with additional occupations, such as sewing, knitting, and crocheting, lessons in botany, designing, basket-weaving, whittling, weighing and measuring, with kindergarten occupations for the youngest children. An average daily attendance of 250 children was secured, with more than twice that number enrolled during the summer of 1886, and an effort will be made during the coming season to improve

on all previous methods of employing this time of peculiar exposure to idle city children.

What these efforts brought forth may be seen in noting the work in Boston for 1897. There were then six schools held through a period of six weeks. In different parts of the city there were besides this several efforts made to keep the children from the streets by giving them vacation entertainment in playgrounds and the The six schools were held in districts as widely separated as Tyler Street, North End, Dorchester, and Roxbury. One school had the beautiful Rindge Manual Training building in Cambridge, and it was hoped that the work begun here might be carried on by the city, which would make its own the work for the neglected boys and girls. The expense of the work was borne by private subscription, except that the use of public-school buildings was allowed by the Board of Education; for example, the Tyler Street school was granted to Denison House. Here not only the primary school, but the admirably equipped carpenter shop was given to the boys of the slovd class.

The courses of 1897 had much in addition to those of 1885. The occupations this last year were wood-sloyd, leather-work, type-setting, chair-seating, basket-weaving, rug-knitting, plain sewing, ornamental, needlework, paper-folding and drawing, clay-molding, picture-pasting, color work, kindergarten and advanced kindergarten.

### MANUAL TRAINING.

Sloyd is taught in all the schools. When one considers the ends and aims of sloyd, one comprehends somewhat of the educational value at-

tached to this statement. As we use the term sloyd it means manual training after the Swedish method. Its aims as given by Director Salomon, of the school at Nääs, are: "To arouse a desire for work and a pleasure in it; to accustom pupils to independence and to fit them for it; to instill the virtues of exactness, order, and accuracy; to train the attention; and to train pupils in habits of industry and perseverance." Sloyd holds as one of its first principles the making of an article of practical use, but it has no larger value than lies in the fact that as Americanized by Miss Meri Topelius it is entirely adapted to the use of the younger pupils.

The need of such work as this for those boys and girls who must pass the long summer days in the city streets cannot be overestimated. The educational and intellectual worth of manual training is no longer disputed. Not alone is this true for the man who must gain his bread by it, but that the trained hand has helped to train the mind, and that rest and relaxation are found in turning from the mental effort to the adroit use of the hand, are also accepted. And this is the major work of the summer vacation school.

### USEFUL OCCUPATIONS FOR GIRLS.

The largest vacation school in Boston was the North End school. Here were the usual kindergarten and primary rooms, differing but little from the ordinary school of the year. In the more advanced primary sewing was taught. Ingenuity was exercised to make the work attractive, as by sewing the buttons in pretty designs on gay pieces of flannel. This class made scrapbooks also. In the next class above the girls

spent half the morning in basket-weaving and half in sewing. The course in sewing had the scientific educational idea. Cotton and flax were shown in the growing process, and the girls made maps setting forth the cottongrowing area. Spools, emery bags, wax, wool, silk, all were shown in each step of manufacture, as from the honey bee to the shaped wax. Each girl made a book of stitches, hem, French hem, running, etc., before she was allowed to make an article. Then came lessons in darning, then cutting from diagrams drawn on the board and criticised by the class. Finally each girl made two or three articles,

A CLASS IN BED-MAKING.

which were her own when completed. Next year these girls will be in the fancy-work class, but it is painful to think of how differently their brothers learn sloyd.

In the fancy-work class the girls were busy knitting slippers and making pen-wipers. Each one had some one at home and the coming Christ-

OUR BABY'S FAMILY.

mas in her mind as she sat with loving heart and nimble fingers.

### BOYS' WORK IN VARIOUS TRADES.

The boys, besides the sloyd, had printing. They set the type and ran the presses. One boy who had been in the school for three successive vears put forth his first book last year. was his title on the cover, "My First Book." Within, however, was a very well-written account of the battle of Bunker Hill. Punctuation, spelling, paragraphing, all were excellent, and there were no typographical errors. It was a dainty little volume of twelve pages, bound in bright cerise paper, carefully sewed with black linen thread, and author, printer, and publisher was Nathan Wolfman. The department is popular and, as might be expected, was turned to very practical use.

In the leather work were found bags, musicrolls, tool-bags for bicycles, and the simpler things made of this material. The class was carried on with little expense by buying odds and ends of leather, though this limited its practical value. Boys brought their shoes here to be mended, and seemed greatly to enjoy the new half-soles pegged on by their own fingers.

A group of small Russian and Hebrew boys

were busily weaving in the chair-seating class, not, let us hope, to be the future "chairs-to-mend" wanderers of our streets. The old chairs from home were brought there and repaired.

But the class of most general interest was the one in clay-modeling. The aim was industrial, not artistic, training. The teaching is not to make sculptors, but to train workmen in architectural ornamentation. As in sloyd—indeed, as in all manual work-not alone the hand, but the eye and the mind are trained. The class last year was under the direction of the professor of architecture in Harvard. The teacher was Some of the boys came as Andrew Garhutt. early as 8 o'clock in their eager interest. Two of the older members of the class were stone cutters regularly employed during the afternoon. A good workman in this line gets from \$10 to \$15 a day and is in great demand.

In the carpenter shop, where the class was deeply interested in miniature ship-building, there was rarely any trouble in regard to the required order. Singing and whistling were not forbidden, only quarrelsome disorder. "When that occurs I call the class to order," said the teacher, "and we vote upon the offenders and the offense." So they had a course in civics not laid down in the curriculum.

An excursion or vacation day was given each one of the younger classes one day of each week. These were spent either in the country or in visiting the famous public buildings of the city in groups of twenty accompanied by a teacher.

There were 360 pupils enrolled, with an average attendance of 275. The North End district is largely populated by Jews and Russians, all very poor. A large proportion of these children return year after year. Considering the class of little ones and the vagrant habits of their parents, this proportion is very large indeed. The numbers of boys and girls are about equal.

The teachers are all skilled workers. The teacher of sewing at the North End, for example, is regularly employed in the Industrial School and largely experienced in girls' clubs. At Tyler Street two dressmakers were employed, both familiar with girls' clubs and showing a most helpful spirit in their work. Many of these teachers have special aptitude, ingenuity, tact, and kindliness for these particular and peculiar and needy children, and give themselves heartily.

### BROOKLYN'S EXPERIENCE.

Mr. John Graham Brooks, so constant and intelligent a friend to the vacation-school idea, is wholly responsible for the Brooklyn effort in 1887, and it was known as the Brooks Vacation School. Up to that time Brooklyn had tried no

such school. It was established by the Brooks Association, of which Miss Mary A. Brackett was the president—an evolution from a newspaper club. The school was maintained, as so far all efforts have been, by private subscription. In many respects it might be taken as a model. More than 800 children applied for admission, though but 360 could be accepted. However, 724 children were members at one time and another, and the average attendance was 299.

The principal, Mrs. W. E. Gulick, is a woman of excellent experience in her work, and the teachers of drawing, modeling, sewing, and manual training were graduates of the Pratt Institute or some similar polytechnic school.

One respect in which this school was unfortunate was that the children most needing the help would not come. It is not easy to say why Brooklyn had this experience, so very different from that of any other city. The results, satisfactory as they were, were such as might be expected from bright children whose summer work was but supplementing the work of the school year and of the home.

They did much of the so-called practical work, chair-seating, basket-weaving, and shoe-cobbling. An interesting experiment worked out well in a class in sewing for boys, having as an object the mending of their own clothes. They acquired the mysteries of the use of thimble and needle, not by making books of stitches, but by making marble-bags and neckties and patching sails for

LITTLE MOTHERS.

their boats. Gradually pins gave way to buttons and rags to patches, till the improvement was marked.

## WHAT HAS BEEN DONE IN NEW YORK.

After no more than four years of work New York had in 1897 ten vacation schools, all estab-

BINGING CLASS.

lished and maintained in public-school buildings by the Association for Improving the Condition of the Poor. The average daily attendance in these schools exceeded 6,000 pupils.

The school at the corner of Bayard and Mulberry Streets may be used to illustrate conditions found in all. Here, in Grammar School No. 23, a model building cornering upon the new park, 600 children passed six weeks from 9 in the morning till 12 at noon. Miss Lilian Burdon, teacher of manual training in the Truant School of Brooklyn, was the principal. Her position for the year admirably fitted her for this work, and her enthusiastic sympathy carried her into it. The neighborhood was notified of the school and its purpose by notices posted on the doors of the school building, one in Hebrew, one in Italian, and one in English. Six hundred pupils responded. More might have been taken if they would have come. No American nor English names were on the roll after they were entered. Twenty-nine different languages were spoken in the homes from which they came. But the appealing thing in this school was the little mothers, the babies with their families. Fully one-tenth of the children in room after room were able to come only by bringing in their care the younger brothers and sisters from home. Mere babies themselves, they carried about and entertained fat, jolly baby brothers or puny little things who needed the care the teachers had often to give. Indeed, the principal said of her kindergarten teacher that she was rarely without a baby in her arms as she went about her work. The protecting care which principal and teachers felt for the flock must only too often have been the first loving care entering into many of the

little lives. One small boy seven years old who came day by day with two younger babies in his charge was an object of loving sympathy the school over. A little sculptor, also of seven years and a genius, his teacher said, came sobbing to the principal with blood flowing from a badly cut finger. The wound was washed and dressed with Miss Burdon's handkerchief, and the boy

MAKING BASEBALL BELTS.

went back to work, even then unwilling to go home.

It happened one day in the sloyd class that one of the particularly difficult, self-satisfied boys had finished to his perfect gratification his first article. The teacher was giving her criticism, when the principal came by and stopped, saying: "Joe, I want you to make that for me, and I want it just perfect." So Joe tried again. The second result gave him great satisfaction. His teacher showed him the model again, calling his attention to faulty lines and to the fact that this was to be a present and perfect. Finally the delight left his face and the disappointment was replaced by determination as he threw his work out of the window and in forcible boy language said: "Darn it! I'll make it right or not at all."

And they all had such good times! In the large basement hall some game was constantly going on under careful supervision, yet without unnecessary intrusion. They danced and sang and had gymnastics, and the teachers joined the games.

All the New York schools carried out the general vacation school idea—no text-book work, good manual work to awaken the interest and bring out undeveloped ability, and the keeping in pleasant quarters of those who otherwise would be on the street. Dr. W. H. Tolman gave statistics of the New York work in the August, 1897, number of this Review.

PRACTICAL WORK IN CHICAGO'S SLUMS.

Chicago has had two experiments, both eminently successful, in the field of vacation schools. The work began there from the efforts of Miss Mary E. McDowell, the head resident of the University of Chicago Settlement. With Miss McDowell the attempt arose from her own experience in watching the destructive influences of the long summer days as they came to children who, having in their own homes nothing cheering from one week's end to another, found their only brightness on the street. Why not make the long summer constructive rather than destructive? As a result of her thought, with the kindly help of friends, Chicago had in the sum mer of 1896 the Medill Vacation School, followed the next year by the Seward school, named in each instance from the public-school building occupied.

On summer days when the prevailing east wind brings the lake breeze so welcome to those in all the eastern part of Chicago, it brings instead to the vicinity of Forty-seventh Street and Ashland Avenue a pall of smoke which can be felt, and an odor from the neighboring stock yards which, if it cannot be seen, does not need that sense to testify to its presence. The heat on such days is intolerable, so burning that one understands the meaning of "fiery furnace." In the choicer parts of the city the mothers are ready to take their flocks out of town, to the sea, the lakes, the farms. Here no such thoughts are diverting them. The majority of the homes

THE SEWING CLASS.

are close, stuffy, dirty places, with none of the comforts that even the well-to-do stay-at-homes afford. There is no ice, no fly-screens, no bathtubs—a wash-tub in the kitchen on Saturday nights, perhaps, but smells of cooking. washing.

and bad drainage, flies, dirt, and panting heat. They may have one trip to the park within the whole summer, and that, planned for days, is really a great undertaking. To more than 100,000 children of school age in Chicago the streets are the most attractive places open in all the world of pleasant places.

To get some part of these children off the streets and into the large, cool school buildings and there to keep them occupied was Miss McDowell's problem. She, too, solved it by a vacation school.

Before the public schools closed the teachers in several neighboring schools were asked to furnish lists of their tru-

ant, disorderly, difficult children. Tickets were given to these, and when the school opened they were taken first. Three hundred were accepted. Many were turned away. Best and most wonderful of all, those who came came all the time, always on time, mourned that the school was not opened on Saturday nor held in the afternoon, and after a little came with clean hands and faces.

### THE SCHOOLS TEACH GOOD CITIZENSHIP.

The subjects given differed little from those of other schools. If there was special emphasis on any department it was sloyd, because the children emphasized it; yet almost as much might be said of the singing, the drawing, the nature study, and the work of the Clean City League. Each morning there was a gathering of the school community, teachers and pupils, in the hall for opening exercises. They sang a patriotic hymn, saluted the flag, and then repeated this Civic Creed, prepared for them by Miss Mc-Dowell:

God hath made of one blood all nations of men, and we are his children, brothers and sisters all. We are citizens of these United States, and we believe our flag stands for self-sacrifice for the good of all the people. We want, therefore, to be true citizens of our great city, and will show our love for her by our works.

Chicago does not ask us to die for her welfare. She asks us to live for her, and so to live and so to act that her government may be pure, her officers honest, and every corner of her territory shall be a place fit to grow the best men and women who shall rule over her.

The idea of civic patriotism was carried out in the work of the Clean City League. Both boys and girls of the older classes made up this league, and it was most satisfactorily popular. Mrs. A. E. Paul, who had studied the work under Colonel Waring, was the instructor. She explained to the children their ownership of the streets; that they were kept up by the citizens from taxes which pay inspectors and carbage collectors; that they should have the work that is

CLAY-MODELING-GRAMMAR SCHOOL NO. 23.

paid for. Systematic instruction was given re. garding sanitary conditions and city ordinances touching streets, yards, alleys, and garbage-The children were made official inspectors and blanks furnished them on which to enter complaints. Prompt attention from the Board of Health followed these reports. One girl reported a street that had not been swept since it was paved in June, 1896. In four days it was swept, but the dirt was not removed. The girl again reported the matter, the work was finished, and she became a person of much importance and influence in the community. Miles of broken sidewalk were repaired, and the children learned respect for their own abilities and for the officials who attended to wrongs to which their attention was called.

### THE SCHOOLS ARE POPULAR.

A large share of the success of the school came from the sloyd, for the boys came in the beginning attracted by the carpenter shop, and boys and girls alike took the work. From the day the school opened and a bright-haired, squinteyed boy about three feet high came up to his teacher with the air of building a church if only he were furnished tools and said, "Teacher, when are we going to begin to make things?" to the final day when they willingly stayed to help put away the loved tools, the interest never flagged. The worst boys were good boys here. One small boy when asked how he liked sloyd said, "Dis? Dis beats wadin," and no higher tribute could be paid in a neighborhood where "wadin" in the puddles made by sprinklingcarts and in the green-scum ditches left by insufficient drainage forms the choicest pleasure. The principal, Mr. Waterman, said in his report of the school: "This department clearly demonstrates that it is possible to obtain a strong hold on troublesome and unruly boys by means of manual training."

For the elementary housework a large classroom was divided by screens into kitchen, dining-room, and bedroom. Beyond this there was no make believe about it. A sure enough bed with white counterpane and pillows, wash-stand, chairs, and rugs fitted out the bedroom. In the dining-room were a dining-table and cupboard filled with dishes. Each little girl had her white apron, and very great was her satisfaction in the work she could do. They had lessons in sweeping, dusting, dish-washing, arranging flowers, making the bed, and all the rest. A mother came also to learn to make the bed, because her little daughter had told her that she did not know how.

The singing was closely related to and helped to unify the other efforts. It was of an industrial patriotic nature, yet it gave the poetic touch. Miss Hofer told the children some story of bees or woods or work, and when their interest was aroused she taught them a song about the same

thing.

The nature work, carefully taught, was supplemented and enlarged by the excursions into the country. Twice during the term of six weeks each class had an excursion day. The ignorance of these poor little mites regarding the most common things of country life might be amusing were it not so profoundly pathetic. It was a little Italian who fell on his face to kiss the grass in his delight at the wonder of it all.

Within the past winter the settlement sent some flowers to a sick boy who had been one of their problems the summer before. "Ain't they nice?" he said. "I like 'em so. Do you know, I didn't use to care anything about 'em and how they grew till we went to the woods last summer and dug 'em up."

One afternoon the fathers and mothers, 150 of them, came by special invitation to visit the school and talk it all over. Miss McDowell spoke to them in English, Mr. Waterman in German, and one of the parents in Bohemian; the janitor, too, made a speech, and as a result of it all they sent a petition to the Board of Education for manual training in the Seward school, and the petition was granted.

The teachers, from the principal, Mr. Richard Waterman, Jr., and his admirable assistant, Mrs. Lizzie T. Hart, through the corps of twenty-one department workers, were not only trained specialists, but teachers who gave themselves generously to the improvement of the pupils. The management was not willing to take tired-out teachers who had already worked ten months of the year. They wanted enthusiastic specialists and had

them, and much of the success was due to just this enthusiasm.

Many friends sent flowers to the school, so, that the rooms were bowers day after day. noteworthy loan was made by the Art Institute of many large, well-framed photographs. Classes in pedagogy at the summer session of the University of Chicago made special study of methods used there as at an experiment station where most valuable results were worked out.

### THE VACATION SCHOOL HAS COME TO STAY.

This is the carrying out of the vacation-school idea as it stands to-day. A Boston paper asks, "Can any one doubt the wisdom of supplementing the work of our public schools in this practical way?" and the Chicago Inter-Ocean declares. "It is safe to say that more was never done in the same length of time toward the making of good citizens." From each school comes the same remarkable testimony that little discipline is necessary. The unruly child has found, for the time at least, his salvation in his work.

For this coming summer the work in Boston and Brooklyn is to be carried on as before. Chicago the women's clubs, thirty-two of them, have made strong efforts to increase the number of Three are now provided for; one at the Seward in the stock-yards district, one in the Jewish quarter, and one in the Italian quarter. New York's School Board has adopted the work and voted \$12,000 for the support of summer schools. In the other cities it is hoped that the regular departments of education will undertake this as a part of their work, feeling that it should be in no sense a charity, except as a library or a university is philanthropic.

It might be well to consider a little more fully the advisability of giving over the vacation schools to any public board of education. They are now in the hands of those most intelligently interested in the greatest good to the most needy, hampered only in the use of the most advanced methods to that end by lack of means. that lack be met in another way than by giving over this vital interest to bodies whose very tenure of office makes efficiency and disinterestedness uncertain? Are we so satisfied with the school work of ten months of the year that we wish to give over from its wisest workers this opportunity of testing faithfully what is new and good, what tends most to the development of boys and girls into sterling men and women, what most truly educates to the duties and privileges of good citizenship?

# LEADING ARTICLES OF THE MONTH.

## THE WAR WITH SPAIN AND AFTER.

THE Atlantic Monthly for June begins with an unsigned article under this title, which briefly reviews the characters of the Spanish and American nations, the Cuban nuisance, and the salient events which preceded the present war. The author takes Mr. Buckle's view, that the Spaniards are relics of mediævalism. Mr. Buckle considers Spain as a country which regards the past rather than the future, which is excluded from the great European movement begun in the sixteenth century, which "has ever since been steadily advancing, unsettling old opinions, destroying old follies, reforming and improving on every side, influencing even such barbarous countries as Russia and Turkey, but leaving Spain untouched. . . . While Europe is ringing with the noise of intellectual achievements . . . Spain sleeps on, untroubled, unheeding, impassive, receiving no impressions from the rest of the world and making no impressions upon it."

The Atlantic Monthly writer accepts President Eliot's summary of what the United States has done for civilization, under five different heads -peace-keeping, religious toleration, the development of manhood suffrage, the welcoming of newcomers, and the diffusion of well-beingreasonable grounds for a steady, glowing patriot-He quotes President Eliot's belief that there is a strong ethical sentiment under each of these developments and a strong moral and social purpose. These comparisons of Spain and the United States are made to lead up to the Atlantic Monthly's thesis that there is entirely beneath the minor and accidental causes of the war a deeper current of American public opinion which has rushed us into this war—a public opinion which is instinctively alive to the fact that the deplorable misgovernment of Cuba would continue until the United States had set up a better state of things; that Spain's methods and our own are as wide apart as the poles; and that her methods are not effective to govern islands so many thousands of miles away. These minor and accidental causes are those which some people believe to be the essential causes of the war—that is, the newspapers "conducted by lost souls that make merchandise of all things that inflame men's worst passions"—to use the Atlantic's phrase—" a Congress with no attractive political programme for the next election, and a spirit of unrest among those classes of the people who had not wholly recovered from the riot in

false hopes that inspired the followers of Mr. Bryan in 1896—these and more made their contributions to the rapidly rising excitement. But all these together could not have driven us to war if we had not been willing to be driven, if the conviction had not become firm in the minds of the people that Spanish rule in Cuba was a blot on civilization that had now begun to bring reproach to us; and when the President, who favored peace, declared it 'intolerable,' the people were ready to accept his judgment."

### THE SENTIMENT AGAINST ANNEXATION.

"Not only is there in the United States an unmistakable popular approval of war as the only effective means of restoring civilization in Cuba, but the judgment of the English people promptly approved it—giving evidence of an instinctive race and institutional sympathy. Saxon institutions and methods stand for anything, the institutions and methods of Spanish rule in Cuba are an abomination and a reproach. And English sympathy is not more significant as an evidence of the necessity of the war and as a good omen for the future of free institutions than the equally instinctive sympathy with Spain that has been expressed by some of the decadent influences on the continent. Indeed, the real meaning of American civilization and ideals will henceforth be somewhat more clearly understood in several quarters of the world.

"American character will be still better understood when the whole world clearly perceives that the purpose of the war is only to remove from our very doors this cruel and inefficient piece of mediævalism which is one of the two great scandals of the closing years of the century; for it is not a war of conquest. There is a strong and definite sentiment against the annexation of Cuba and against our responsibility for its government further than we are now bound to be responsible. Once free, let it govern itself; and it ought to govern itself at least as well as other Spanish-American countries that have governed themselves since they achieved their independence "

# AND AFTER.

This writer says that the problems that are likely to follow after the war are graver than those that led to it. He thinks it possible that this change in our national policy may change our very national character. "And we are now playing with the great forces that may shape the future of the world—almost before we know it."

Only a few weeks ago these seventy millions of people were engaged with the peaceful problems of industry, administration, and finance. Now they are at war, and it is a question whether that adventurous spirit which inhabits the Anglo-Saxon man will be content to return to the unimaginative tasks that have occupied the race for more than a generation. What the Atlantic Monthly writer calls "the old outdoor spirit of the Anglo-Saxon" may refuse to go into harness again. Now a generation has come to manhood that has had no part in any great adventure. Our politics, our literature and art have been of the indoor nature, rather negative than positive.

This opportunity may prove a temptation to fling out again into the world. "Are we, by virtue of our surroundings and institutions, become a different people from our ancestors, or are we yet the same race of Anglo-Saxons whose restless energy in colonization, in conquest, in trade, in the spread of civilization has carried their speech into every part of the world and planted their habits everywhere?"

### OUR GREATEST VICTORY.

"The removal of the scandal of Spain's control of its last American colony is as just and merciful as it is pathetic—a necessary act of surgery for the health of civilization. Of the two disgraceful scandals of modern misgovernment, the one which lay within our correction will no longer deface the world. But when we have removed it, let us make sure that we stop; for the Old World's troubles are not our troubles nor its tasks our tasks, and we should not become sharers in its jealousies and entanglements. The continued progress of the race in the equalization of opportunity and in well-being depends on democratic institutions, of which we, under God, are yet, in spite of all our shortcomings, the chief beneficiaries and custodians. Our greatest victory will not be over Spain, but over ourselvesto show once more that even in its righteous wrath the republic has the virtue of self-restraint. At every great emergency in our history we have had men equal to the duties that faced us. men of the Revolution were the giants of their generation. Our Civil War brought forward the most striking personality of the century. during a period of peace we did not forget our courage and efficiency in war, so, we believe. during a period of routine domestic politics we have not lost our capacity for the largest states-The great merit of democracy is that manship. out of its multitudes who have all had a chance for natural development there arise, when occasion demands, stronger and wiser men than any class-governed societies have ever bred."

# THE COST OF CARRYING ON A WAR.

In the June McClure's Mr. George B. Waldron has an article on "The Cost of War," in which he gives the figures of the great wars, especially of our Civil War, as concerns the financial aspect. He says that during the last hundred years the wars of Christian Europe and America have cost the lives of 5,000,000 men and \$20,000,000,000.

"The experiences of our own country illustrate the losses caused by war. That seven years of struggle which gave the nation independence required \$135,000,000. To-day the nation can raise a like sum from the gold lying idle in the Treasury. But then it fell upon a people whose population was only a twentieth of the present number, and whose wealth was much less in proportion. The United States began their existence with a debt burden of \$75,000,000. This was about \$19 per capita, or larger by half than The deficit fell to \$45,000. the debt of to-day. 000 in 1812. Then came the 'second War of Independence,' which carried it up to \$127,-000,000. By 1836 the nation did not owe a dollar.

### COST OF OUR CIVIL WAR.

"In 1860 the debt was only \$65,000,000. But with the firing on Suinter the people of the North awoke to their task, and thereafter \$2,500,000 a day was needed until once more a common flag floated over the nation. That struggle cost the people of the North in direct outlay \$3,400,000,000. With the much smaller direct cost to the Confederacy, the destruction of property, and the interference with industries, the total loss must have been not less than \$8,000,000,000, or one-half of the entire wealth of the nation before the opening of hostilities.

"After the conflict was over the national debt stood at \$2,756,000,000. Year after year it has been a drag upon the resources of the country. until nearly \$2,000,000,000 has been discharged. But in the thirty-seven years since the war opened the nation has paid in interest on that debt an amount equal to the original principal and \$2,250,000,000 more in pensions to the soldiers These two items, the direct and their families. truits of the war, amount to \$5,000,000,000, and the end is not yet. The country is paying annually in interest and pensions \$160,000,000, which is more by \$35,000,000 than ten and twenty years ago and about equal to these same expenditures at the close of the war. It is not improbable from the present outlook that another \$2,000. 000,000 will be paid in the same way before the obligations of that one war are met. During the past six years the expenditures for wars past

and future have averaged over \$250,000,000, or more by \$50,000,000 a year than all the other expenses of the Government.

### WHAT COULD HAVE BEEN DONE WITH THE MONEY.

·· The total cost of war to the North and South would have bought the freedom of every slave and left enough to pay all the peace expenses of the federal Government for half a century. The divided nation expended money enough during the struggle to supply every man, woman, and child with ample food for the entire four years. And the sums spent and to be spent since because of the war would feed the people for another four years. The treasure destroyed because of that conflict would purchase the entire 185,000 miles of railroad, with all its rolling-stock, stations, yards, and other property, and all the 2,300 miles of canals, with every boat that plies through their waters; it would purchase in addition every vessel flying the American flag on all the oceans, rivers, and lakes of the world; all the thousands of miles of telegraph and telephone lines and everything belorging to them; and all the mines and quarries of the nation, including the producers of gold, silver, iron, copper, petroleum, marble, and every other substance that comes from the interior of the earth. Even all these would not exhaust the wealth spent because of that war, since there would yet be enough to buy every school-house and church that the people of this country now own."

# THE COSTLINESS OF THE VOLUNTEER SYSTEM.

I N concluding an article on the conscription of soldiers in the North American Review for May, Capt. James Parker, U. S. A., considers some of the financial aspects of our volunteer army system:

"It should be remembered that modern wars are paid for not so much by those who take part in them as by succeeding generations. great sacrifices are made, a war does not, as a rule, directly impoverish the people of a country, as formerly was the case. Taxation is of course increased, but the great sums necessary are largely obtained by issues of bonds. The ability of a nation to raise money on bond issues depends much upon the resources of the country. but also largely upon the amount of the national debt already existing. If this is small, war may be conducted without raising materially the rate of taxation. If, on the other hand, the national debt be unduly large, the power of the nation to borrow is limited, and the sums needed to prose cute the war have to be obtained largely by immediate and extreme taxation. Every dollar,

then, that is devoted to reducing the national debt may be said to have been deposited in the nation's war chest.

"In the War of the Rebellion our money flowed like water. In our desperate endeavor to succeed little foresight was shown, and in our gratitude to the victors we still further built up the tremendous load of obligations by a pension list which astounds the world. We enlisted in that war 2,500,000 men. These men cost us tor pay \$1,000,000,000; for United States bounties, \$300,000,000; for local bounties, \$300,000,000; for pensions already paid, \$2,000,000,000. The volunteer system, then, is a costly system. By it both men and money are wasted. It is doubtful whether the sacrifices which result from our adherence to it do not equal those we would endure were we to emulate the patriotic submission to universal conscription of the people of the nations of Europe, and thus secure the effective means of preparing in peace for war."

# CAPTAIN MAHAN ON CURRENT NAVAL FALLACIES.

I N the June Harper's Capt. A. T. Mahan points out several errors that out several errors that are occurring with respect to naval matters, and especially to the naval matters of the United States. error that is so commonly made is the thought that the United States needs a navy for defense This rises from a confusion of ideas—a political idea and a military idea, under the one term of defense. So far as the political precept is concerned he willingly subscribes to it, but the military part of the confused statement is, he thinks, disastrous, if accepted. "Among all masters of military art," he says, "including therein naval art, it is a thoroughly accepted principle that mere defensive war means military ruin, and therefore national disaster. A navy for defense only, in the political sense, means a navy that will only be used in case we are forced into war; a navy for defense only, in the military sense, means a navy that can only await attack and defend its own, leaving the enemy at ease as regards his own interests and at liberty to choose his own time and manner of fighting."

### THE COAST-DEFENSE PROBLEM.

The second fallacy which Captain Mahan sets right is that a navy for defense only means for the immediate defense of our seaports and coastline, an allowance also being made for scattered cruisers to prey upon an enemy's commerce. As for our seaports and coast-line defense, Captain Mahan says that all of our greatest cities on the Atlantic and Gulf coasts can be defended better

by forts than by ships, but if, instead of a navy for defense only, there be one so large that the enemy must send a great many ships across the Atlantic, if he sends any, then the question whether he can spare so great a number is very serious, considering the ever-critical condition of European politics. Suppose, for instance, we could put twenty battleships in commission for war in thirty days, and that we had threatening trouble with either Germany, France, Great Britain, or Russia. There is not one of these, except Great Britain, that could afford to send over here twenty-five battleships, which would be the very fewest needed, seeing the distance of their operations from home, while we have friendly ports.

# WE DO NOT NEED A NAVY LARGER THAN ENGLAND'S.

The third fallacy is that if we go beyond a navy for defense only, by acquiring any territory overseas, either by negotiation or conquest, we step at once to the need of having a navy larger than the largest, which is that of Great Britain, now the largest in the world. Captain Mahan says, suppose we do annex Hawaii; it is useful to us and we should have it for a coaling station and for a base of supplies. Under our present conditions either France or Great Britain could spare ships enough to overcome our force and take Hawaii, but if our navy were half the size of the British, Great Britain could not afford to send half her fleet so far away from home, nor, if we had half ours in the Pacific and half in the Atlantic, could she afford to send one-third or one-fourth of her entire navy so far from her greater interests, independent of the fact that, even if victorious, it would be very badly used before our force was defeated. Hawaii is not worth that to Great Britain, whereas it is of so much consequence to us that, even if lost, it would probably be returned at a peace, as Martinique and Guadeloupe invariably have been to France.

"Now the argument as to the British fleet is still stronger as to France, for she is as distant as Great Britain and has a smaller navy. argument is different as regards Japan, for she is nearer by far than they, only half as far again as we, and that power has recently given us an intimation which, if we disregard, we do so in face of the facts. Her remonstrance about the annexation of Hawaii, however far it went, gave us fair warning that a great naval state was about to come into being in the Pacific, prepared to watch, and perhaps to contest, our action in what we thought our interests demanded. From that instant the navy of Japan becomes a standard, showing, whether we annex the islands or not, a minimum beneath which our Pacific fleet cannot be allowed to fall, without becoming a 'navy for defense only,' in the very worst sense.

### THE FACTOR OF POSITION.

"This brief train of reasoning will suggest why it is not necessary to have a navy equal to the greatest, in order to insure that sense of fear which deters a rival from war or handicaps his action in war. The biggest navy that ever existed cannot all be sent on one mission, in any probable state of the political world. smaller force, favorably placed, produces an effect far beyond its proportionate numbers; for, to quote again Napoleon's phrase, 'War is a business of positions.' This idea is by no means new, even to unproduct and men; on the contrary, it is so old that it is deplorable to see such fatuous arguments as the necessity of equaling Great Britain's navy adduced against any scheme of external policy. The annexation of Hawaii, to recur to that, may be bad policy for many reasons, of which I am no good judge; but, as a naval student, I hesitate not to say that while annexation may entail a bigger navy than is demanded for the mere exclusion of other states from the islands—though I personally do not think so-it is absurd to say that we should need a navy equal to that of Great Britain."

## THE "OBSOLETE" ARGUMENT.

The fourth point that Captain Mahan wishes to controvert is the argument against a navy so frequently made, that a ship becomes obsolete in a very few years. This, he says, is one of those half-truths which, as Tennyson has it, are ever Captain Mahan says that no ship the worst lies. is obsolete for which fighting work can be found, with a tolerable chance, a fighting chance, of her being successful; because, though unequal to this or that position of exposure, she, by occupying an inferior one, releases a better ship. And here again, he says, we must guard ourselves from thinking that inferior force-inferior in number or inferior in quality—has no chance against a superior. So he does not think there is any need to worry about a ship becoming obsolete any more than there is over the fact that the best suit of to-day may be that for the office next year, or may finally descend to a dependent, or be cut down for a child. Whatever money a nation may be willing to spend on maintaining its first line of ships, it is not weaker, but stronger, when one of these drops into the reserve and is replaced by a newer ship. The great anxiety, in truth, is not lest the ships should not continue valid, but lest there be not trained men enough to man both the first line and the reserve.

# THE "MAINE" INCIDENT.

The fifth point of Captain Mahan's article is raised by the apprehensions which the destruction of the Maine has produced for a good many anxious people. Assuming for argument that it was accidental, he says it is evidently a very long and quite illogical step to infer that because the results of an accident may be dreadful, therefore the danger of the accident occurring at all is very great. On land a slight derangement of a rail, a slight obstacle on a track, the breaking of a wheel or of an axle, may plunge a railroad train to frightful disaster; but we know from annual experience that while such accidents do happen, and sometimes with appalling consequences, the chance of their happening in a particular case is so remote that we disregard it. It should be remembered, too, that the present battleship is not a sudden invention, springing up in a night, like Jonah's gourd, or newly contrived by a council sitting for the purpose, like a brand-new constitution of the French Revolu-The battleship of to-day is the outcome of a gradual evolution extending over forty years.

# WHAT WILL THE BATTLESHIP DO IN BATTLE?

N the June Atlantic Monthly Prof. Ira N. Hollis has an essay on "The Uncertain Factors in Naval Conflicts." He says that some of the doubts concerning modern naval fighting machines in the minds of over-anxious people are without foundation. For instance, there is no difference between iron and steel or wood, so far as safety is concerned; a wooden ship will sink just as certainly as a metal one under the same conditions. The real anxiety should come from the enormous complexity of the modern ship's construction. All vessels, says Professor Hollis, are not the death-traps they are often thought to be, and he is inclined to have less uneasiness than that generally expressed as to the results of a modern naval fight. He takes the Iowa as our typical battleship; in fact, he calls it our only completed example of the seagoing battleship, and approves of the phrase which describes her as a "vast honeycomb of steel." But that this honeycomb will be seriously injured by the shock of shells striking the hull he denies in advance, on the ground that the ship has already experienced just as great a shock from the discharge of her own guns. As compared with the old Constitution, which carried 44 guns to the Iowa's 46, the old ship fired a broadside of about 700 pounds, the Iowa discharging 4,560 pounds; and if the total weight of metal is reckoned that can be thrown from the lowa in the time required by the Constitution to

fire a broadside, we have not far from 9,000 pounds.

### THE ACCURACY OF MODERN GUNNERY.

"A feature of the modern gun will doubtless be its accuracy of aim. The guns of the first monitor had the ordinary sights, and the men had to look out through the port-holes of a revolving turret to find the enemy. We might say they often fired 'on the wing,' with very indefinite notions of the range and the briefest instant for training the guns. The Iowa's turrets have small boxes projecting above the covers Horizontal slits are cut near the for lookouts. tops of these boxes, giving a view around the horizon. The guns themselves are aimed by means of cross-hairs in telescopes, and fired by electric buttons which are instantaneous in their action. Once the cross-hair is on the object, the projectile may be sent on its way at a velocity of 2,000 feet a second before the roll of the ship has time to impair its accuracy. The range is found by means of instruments set up as far apart as possible, which make the ship the base line of a triangle having the target for its apex. In case of failure of the instruments the range may be found by trial of the rapid-fire guns, which deliver from 6 to 20 shots a minute.'

### THE SMALL THINGS MOST TROUBLESOME.

Professor Hollis shows how carefully modern naval construction has provided for all casualties to the vital parts of the battleship. These vitals are placed in a great inverted box 150 feet long and 72 feet broad, with 14 inches of steel on the sides, 12 inches on the ends, and 23 on the top, while the rapid-fire guns are placed above this, with five-inch steel armor on the sides to protect the men from small-arm fire. This great protective shell and the perfection of the machinery which manages the enormous guns and the appliances make it unreasonable to expect any disastrous results from the main engines of the ship. But the small things may lead to most distressing and hampering complications. For instance, the system of communication, the telephone connections, the mechanical bell-pulls, the speakingtubes, etc., may be interfered with, and the cutting of them all would throw the conning tower out of action. But even this would not necessarily impair the fighting efficiency, as the central station below the conning tower would still be available; as a last resort a line of men could be stationed on the berth deck.

As to the propelling machinery and boilers, of course it may be disastrous to have them deranged in these days of plentiful rams and torpedoes. They are placed, however, below the

water-line and are very substantially built, and Professor Hollis thinks that they are rather less likely to give out in battle than they are under stress of heavy weather.

The steering machinery is also entirely below the water-line and is a well-tried system. So also is the hydraulic machinery which turns the turrets containing the twelve-inch guns. Both these classes of machinery are run by engines situated near the ship's bottom, so that a shot could not disturb them. As to the eight-inch guns, they can be turned by hand as well. The only accident likely to happen is the disturbance of the gearing, due to the impact of a heavy shot. Even if the turrets could not be turned, the guns could be fought by turning the ship. The ammunition is hoisted by electricity, with a reserve of hand power.

### NOT SUCH A MYSTERY, AFTER ALL.

The presence of this enormous quantity of complicated machinery makes the personal skill and knowledge of the engineers and gunners who run the ship of the utmost importance. The serious casualties which come will be, in Professor Hollis' opinion, from lack of foresight or knowledge on the part of these men, rather than from any fault in the system of our modern fighting machines, and he points out that it is right here where the American navy is vastly superior to its Spanish opponent. The Spaniards are not excelled by our men or any men in bravery, but they have not the steadiness in handling the machinery and guns. Professor Hollis proceeds to take up the questions of coaling, dry-docking, ramming, etc., and concludes that there is much less of the sensational side of war with these big machines than the newspapers may have led us to He does not look for any of those gigantic surprises that have been surmised. "It is true," he says, "that a battleship is a very complicated machine, liable to accident, but we may feel sure that here the genius of our people has not gone far astray. The Americans are naturally mechanical, and instead of surprises we may look for many confirmations of our theories. We may lose some of our smaller ships, but there is no reason to anticipate any great disaster, unless one of our battleships should be taken by surprise or overwhelmed by a number of ships.

"In conclusion, it may be said that the machine is not an untried factor in warfare. Its possibilities are really the unknown quality to be determined in practice. Our guns will probably do just what they are expected to do, and unless a new weapon, more certain and deadly than anything we now have, be devised, a single naval battle is likely to affect only the arrange-

ment of details in the future. The qualities of the men must, after all, remain the determining element, and we have no cause to think that they have changed."

# THE TORPEDO-BOAT DESTROYER OF TO-DAY.

R. JOHN PLATT has in the May Engineering Magazine a well-informed article telling of "The Development of the Torpedoboat Destroyer," which is especially timely for us just now, when the Spanish boats of this type are apt to turn up anywhere on our coast. torpedo-boat destroyer has two purposes, the primary one being to destroy the enemy's torpedoboats, as its name implies; the second one is to act as a torpedo boat itself, as up to the present time the usual tubes have been fitted in all of these craft. For these purposes it must have a greater speed than the ordinary torpedo-boat, but it must be capable of maintaining this high rate of speed in a heavy sea-way, and finally must be a suitable platform for carrying quick-firing guns heavy enough to sink other torpedo-boats or destroyers. These should not be less than sixpounders, and at least one twelve or fourteen pounder has always been added.

### THE FIRST TORPEDO-BOATS.

The first torpedo-boat was built twenty-five years ago by the Messrs. Thornycroft, of England, for the Norwegian Government. boat had a speed of 15 knots an hour. Four years later the same firm had made a boat somewhat larger that would go knots an hour, and in 1878, 1880, and 1885 the Messrs. Yarrow raised this speed with about the same size of boat to 21.93, 22.16, and 25 knots respectively. The first boat that could be said to be in the class of the torpedo craft built at present was constructed by Thornycroft in 1887, the Ariete, for the Spanish Government. She was 148 feet long, of 97 tons displacement. and of 1,600 horse-power, for a speed of 26.1 knots per hour. She carried four three-pounder quick-firing guns and two torpedo-tubes. were all torpedo-boats. The first attempt to build a craft of the destroyer class was in 1885, when a number of "torpedo-boat catchers" were constructed, carrying two three-pounder quickfiring guns and three double-barrel Nordenfeldt guns as an alternative to torpedo-tubes. They were practically worthless for the purpose their name indicated, as they only made 20 knots an There were various other attempts, sometimes resulting in boats having a displacement as large as 810 tons, with nearly 5,000 horse-power, but it was not until 1893 that the first vessels which might be properly called destroyers were

designed by Thornycroft and Yarrow. The one was named the Daring. It was 185 feet long, 19 feet beam, 6 feet 3 inches mean draught, and 220 tons displacement. The engines on the trial developed 4,735 horse-power and a speed of 29½ knots per hour. The Havock, Yarrow's boat, attained a speed of 27.6 knots an hour. The armament consisted of one twelve-pounder quick-firing gun, mounted on the conning tower, and five six-pounder rapid-firing guns, four for broadside and one on the center line aft.

### THE PRESENT STANDARD TYPE.

After still further variations, Thornycroft arrived at the present English destroyer, which Mr. Platt says is the standard and the most economical vessel of the type. This is represented by the Desperate class. The requirements for this class are that a speed of 30 knots shall be maintained for three hours, with a load of 35 tons on board and with a coal consumption of not more than 21 pounds per horse-power per The Desperate is 210 feet long, 19 feet 6 inches beam, and 7 feet 2 inches mean draught, with a total displacement of 275 tons. screws are driven by engines with high-pressure cylinders 20 inches in diameter, and on the three hours' trial a speed of 301 knots was actually attained. The Spanish torpedo-boat destroyers Furor and Terror, which were built by J. & G. Thompson, of Glasgow, are larger than the standard English class, carrying a load of 75 tons, and with a heavier armament, too. make a speed of 29 knots per hour. Four other boats built by Thompson for Spain are the Audaz, Osado, Pluton, and Proserpina, having a speed of 30.3 knots per hour and developing the enormous amount of 7,500 horse-power.

# BOATS SHOULD NOT BE TOO LARGE.

In general, the typical destroyer varies between 275 tons and 400 tons trial displacement, with an average speed of 30 knots on a three-hour run, and this with a coal consumption of not more than 21 pounds per horse-power. Mr. Platt says: "As the size of the boat increases over 300 tons, it is found that more power in proportion is required for a given speed, and hence a greater coal consumption." So Mr. Platt advocates boats of not over 300 tons displacement, which should be of interest to our Government at present, while they are deciding on the boats to have built. The later Thornycroft boats of 275 tons showed a coal consumption in attaining a speed exceeding 30 knots of only 2.6 pounds per horse-power per Mr. Platt, who is an Englishman, gives this interesting account of the manner of testing these wonderful little craft:

# HOW "DESTROYERS" ARE TESTED.

"A trial trip last summer in the North Sea, on a boat of the type of the *Desperate* with half a gale blowing, very clearly showed that a boat of this size, with plenty of free-board, is capable of running satisfactorily at the high rate of speed called for.

"The 'destroyers' built in the south of England and on the Thames run their trial trips off The boat is taken out of the dock by the officers of the royal navy. The machinery is all in the care of the builders, who are responsible for the run. They provide their own pilot, who takes charge of the steering when she is puton the measured mile. If the boat has not been. out before she at once steams down to Sheerness, where she is swung for the adjusting of compasses. Directly this is done the boat gets: under way, and all becomes activity and life; orders are given for closing hatches and for starting the fans which produce the forced draft. From previous experiences it is known that it takes about half an hour to get everything in full swing, and in about that time the trial will begin. The boat has to run for three hours and to be run over the measured mile six times, three with the tide and three against it; the revolutions are taken from start to finish and are taken regularly while on the mile; at this time indicator cards are also taken. After the first two runs the man in charge of the machinery is able to tell what rate of speed he is making, and if he is not satisfied he at once tries to turn his engines faster; before the last of the six runs he will have been able to tell just what average of revolutions he must maintain to give him a speed a little in excess of the contract speed. It is now nearly always the case that by the end of the runs on the mile they find that the engines can be slowed down a little for the remainder of the trial and the necessary speed obtained."

# BLOCKADE-CHASING BEFORE HAVANA.

I N the June McClure's Mr. Stephen Bonsal, writing from the blockade fleet off Cuba, gives the following graphic description of the chase of a suspicious ship:

"We steamed on steadily, and about 4 o'clock the coast of Cuba, a dark fringe of palm trees and a light border of silver sand, began to rise to view out of the soft turquoise seas. We were straining our eyes for the first glimpse of the battlements of the Morro, when suddenly our course was changed, our speed quickened, and as the fleet swept on westward toward Havana the admiral signaled, 'Take no heed of the movements of the flagship,' and we darted off

to the eastward, to intercept a black speck of a vessel which was steaming along very close in shore. It was soon evident that the chase was no match in speed for the New York, and long before sunset we had her almost in range. She was thought to be an auxiliary cruiser of the Spanish Transatlantic Company, and so, of course, carried guns; so the bugle blew to general quarters as we came within range. The vessel was making every possible effort to escape; the black smoke rolled out of her stack in columns, and the captain was heading straight on to the reefs, apparently preferring shipwreck to capture. About 6 o'clock we gave him an eight-pounder across his bow, and she came around upon the second and slowly steamed toward us at half steam. It was a merchant steamer, the Pedro, of 3,000 tons, with an assorted cargo, and before night closed we had put a prize crew on board and sent her into Key West."

The most exciting episode of the cruise was the New York's chase of what was believed on board to be the Spanish armored cruiser Vizcaya.

"When it became apparent that we were making at least five knots an hour more than the chase, that we would be in range within twenty minutes, the hard features of the gunners relaxed into broad grins of satisfaction. 'If she wants to escape she will have to make up her mind to lick us,' said the gunner's mate with as much positive satisfaction and assurance as though he was saying she must dive or go up in a balloon to escape us. To him these three propositions were all equally probable.

"The ammunition was hauled up through the shafts; the shell extractor, a gigantic pair of sugar-tongs about 6 feet long, came in view for the first time; and the gun crew hugged to their bosom great canvas bags containing hundreds of pounds of brown prismatic powder as though they were pet cats and not the death-dealing explosive that was to send the armorpiercing projectiles upon their destructive course. The marines hoisted away at the ammunition pulleys and set out buckets of sand along the spar and gun decks—'to keep us from slipping and falling when the decks are slippery with blood,' said the mate of the gunner's crew in answer to my silent inquiry.

"The uncertainty and tension lasted for about twenty minutes after every preparation for going into action was complete. We even had out the hose, for a fire on board the New York was the only thing we feared. Now the flight was up, our chase would have to face us or be dashed upon the coral reefs, of which we could now see

they broke. She was only four miles but her colors flew straight toward

us, and we could not make them out. Sudder she changed her course several points, the colors became plain to those who could read them, an: a number was run up, a puff of smoke came from a turret, and a flash of fire jumped out toward us. The action had begun. I heard a low click in the turret near which I stood—nothing loud or boisterous—only a click like the ticking of a watch upon a still summer's night; but it meant that our heavy guns were ready to be touched off. Another column of smoke and an other arrow of flame shot out from the side of the chase. The report was not very loud and no very formidable; it seemed to be merely fourpounders barking, and many a face had fallen before the word was passed down from the bridge that the chase was an Italian man-of-war, the Don Giovanni Bausan, and that instead of a fight we were only getting a salute for the admiral.

# SURPRISE IN WAR.

I N the National Review for May Mr. T. Miller Maguire discusses the subject of "Surprise in War, from a Military and a National Point of View."

The object of every strategist, says this writer. "is to arrange his plans and his marches some time before the decisive battle actually takes place, so that if the enemy loses the battle the enemy will be placed in a perilous position, his line of communications will be threatened, and he will continue his operations at a considerable disadvantage; or, on the other hand, if his own army loses the battle, he can retire in safety, fall back upon a new position or a new base, and continue his operations with some prospect of ulti-All wise plans of campaign are mate success. illustrations of these principles. When we come to tactics, or the incidents of the day of a decisive battle, the object is to turn, if possible, the defeat of the enemy into a ruinous rout, so that the beaten army may be driven away from its base and supplies, cut to pieces, or compelled to capitulate. To put the enemy off his guard at the true point of attack, or, in other words, to surprise him, is the best method of securing these results."

Many historical instances of successful military surprises are cited. In the present century some of the most celebrated surprises were:

Napoleon in Italy, 1800.

Napoleon in Germany, 1805.

Napoleon in Champagne, 1814.

Jackson in the Shenandoah Valley, 1862.

Jackson and Lee against Pope, 1862.

Lord Roberts at the Peiwar Kotal, 1878.

Lord Wolseley at Tel-el-Kebir and the capture of Cairo, 1882.

### AMERICAN EXPERIENCE.

In this country we should by this time know the full meaning of surprise in war. This article summarizes the situation here in 1861 as follows:

"In the middle of this century leaders of political opinion in the United States of America were like other political dreamers for whom the past had no lessons; they ardently expected the arrival of the millennium like our exhibition enthusiasts in 1851. The Crimean War, the Solferino campaign, did not disabuse them; they only thought less than before of military Europeans, who were lost in admiration of the barbaric pride, pomp, and circumstance of brutal But a change came over the spirit of the dream of the Northern folk when the surprise of the first battle of Bull Run awakened them to the truth of the old maxim, that if you wish peace you must prepare for war. They had no proper military system, they had not prepared for disturbance in time of peace, and they had war with a vengeance. Their capital was threatened forthwith.

"In the midst of a war they had to organize and equip an army; nor could that army crush what might have been a petty insurrection, had the federal States possessed four good army corps in 1861, till they had buried 500,000 men in national cemeteries and spent £1,000,000,000 in four years."

The writer is strongly opposed to the "Little England" policy, and considers a non-military modern state as in little better condition than China:

"As Captain Mahan proves, unless Americans can play a leading part in the Pacific Ocean and the Caribbean Sea, they will be excluded from the strategy and greater commerce of the future. But they can live well for generations on the products of their soil; we would starve on ours."

### THE FRANCO-PRUSSIAN WAR.

After all, one of the most pertinent cases of national surprise in all history was afforded by the war between France and Germany in 1870-71.

"France challenged Germany, and was surprised to find herself unready and Germany armed to the teeth. The first skirmish took place on August 2; half of the French army was beleaguered by August 19; the other half surrendered September 2; Paris was invested September 19; all the country on a line from Montbeliard to Le Mans and north thereof was in thraldom by January 18; Paris was occupied January 28. France paid £200,000,000 to its foe, and altogether lost £725,000,000 in the

short period in question, or about £4,000,000 per day for the war time, not to speak of the loss of Alsace and part of Lorraine and the fortresses of Metz, and Thionville and Strasburg. Such is the cost of a modern national surprise, and yet in the spring of 1870 every one talked of peace. France was supposed to be a leading military nation. France is a fine power, with a splendid history and unexampled recuperative energies, and in spite of its losses still stands up straight. Most nations, after such an experience, would have fallen into the dust and remained in the dust for generations."

## HOW COULD WE OFFICER A MILLION SOLDIERS?

In the May number of the North American Review Lieut. J. A. Dapray, U. S. A., discusses "Our Duty to Our Citizen Soldiers." He assumes that 1,000,000 of these soldiers should be ready for duty in any war in which this country may have to engage with one of the first-class powers of the world, and it appears that the creation of a system for officering such an army would have to be considered at the outset.

"Admitting that from among the 14,000,000 of arms-bearing citizens we may be able to gather an army of able-bodied men equal to the hardships of field service, capable of learning within a brief period enough of the rudiments of military drill to enable them to move in column and form in line of battle; admitting that they will take naturally to the rifle and be able to handle it with that calmness, coolness, and precision which modern fire-discipline requires on battlefields; admitting that the great mass of private soldiers and petty non-commissioned officers may be quickly massed in an emergency—it is nevertheless a fact that the most serious problem of our next war will be the securing of competent and trained men to act as officers and leaders of this great army we are counting upon in reserve. Bear in mind that aside from the private military schools where a limited degree of military training is conducted, the only federal military establishment in this country graduates on an average only about 50 young officers annually. ing that the limit of age for the officers of the volunteer forces in time of war will correspond to the limits prescribed for the soldier-viz., eighteen to forty-five years of age—it must be borne in mind that if war should occur to-morrow only 1,200 men who graduated in the past twenty years at the age of twenty-one would be eligible within the forty-five-year limit. But are not all of the officers that have graduated up to date needed for the present small regular military establishment? To officer an army of 1,000,000 men would require 35,000 regimental officers alone, to say nothing of the large number required for the staffs of armies, corps, divisions, and brigades. From whence could that number of experienced or competent men be drawn? It is true in our late war, it is asserted, one New York regiment alone furnished over 600 officers, but that was an exceptional case. Doubtless there are regiments in the National Guard of the States and companies in the States that could supply a large number of officers, but it is respectfully submitted that the time has come when military statesmanship should give more thought to the leadership of men than has been done heretofore. New York State organizations should not be expected or required to furnish officers for Kansas or Idaho. Each State, under a generally well-fostered rule, should be assisted to maintain State pride by having State troops officered by competent State officers.

"There has been a great revolution in war methods within the past generation and vast improvements have been made in war implements. Military leadership is no longer within the reach of every civic layman. Even the born soldier, so called, must know something more than how to draw the sword; and the usefulness of the leader in battle will depend more upon knowledge of soldiery and military training than upon individual acts of gallantry or personal example of The officer must be able to teach, dibravery. rect, train, and instruct the raw material which he will find in the massive ranks of the volun-Since the Government relies for defense chiefly upon volunteer armies, it is a poor policy, if not a fatal one, to postpone the organization, drill, and discipline of the reserve until they are needed in war. Drill and discipline presuppose organization and are prerequisites to battlefield success."

# THE INDEPENDENCE OF THE MILITARY SYSTEM.

In the Forum for May Judge Advocate-General Lieber explains the independence of the military system, or of that part of our political organism which relates to the military establishment. He admits at the outset that the military system is not absolutely independent, but that in general it is subordinate to the civil power. The army was created and has ever since existed, says General Lieber, subject to the principle that wherever the civil power has jurisdiction, there this subordination of the military to the civil power exists. This principle, he says, is admitted and respected as fully in the army as out of it.

"When a man enters the army he does not lose his civil rights, but he adds to them the obligations of the military status. His civil rights do not affect this status. Trial by jury, with all that this implies, does not protect him in the army. Within it he is subject to its despotic law alone. History sustains this.

"Our military system was copied from the British system at the time of the Revolution, and we appropriated, together with it, its history and common law, so far as these were applicable to our political system. If independence was a feature of the British system and was not antagonistic to our political system, we undoubtedly adopted it. That is was a feature of the British system, history shows.

### THE BRITISH SYSTEM.

"The military system of England came into existence in 1689. Before then no government for a standing army in time of peace had been provided by statute, nor did the common law give the sovereign power to control his troops. Indeed, there had been no standing army before the Restoration of Charles II. Soon after the Restoration an act of Parliament was passed in which it was declared that the sole and supreme power, government, command, and disposition of the militia, and of all forces by sea and land, and of all forts and places of strength is, and by the laws of England ever was, the undoubted right of his majesty;' and in 1662 Charles II. issued certain Articles of War, not extending to capital punishment, for the government of his guards and garrisons. Notwithstanding this, the power of the sovereign to exercise military penal con trol over his troops in England in time of peace. by virtue of the prerogative, was not recognized, and therefore when, under William and Mary. the standing army became an established part of the political system, it became necessary to provide for its government. This was done by the mutiny act of 1689—at first in a very imperfect way, but subsequently, from year to year, more thoroughly, until that system was formed which we took from England."

"This, very briefly, is the history of the British military system. Now let us see whether there is anything in it repugnant to the principles of our political system. The Constitution of the United States likewise protects all men with the safeguard of trial by jury and due process of law, but it also provides for the court-martial. That is to say, it gives Congress the power to raise and support armies and to make rules for their government and regulation, and it makes the President commander in chief. And that, by virtue of these powers, the court

martial might be called into being, was recognized at the time of the adoption of the Constitution in the fact that we had an army which we were controlling in that way. We were simply continuing an existing system. By an act of Congress of September 29, 1789, the military establishment of the previous Congress and the articles relating to it were adopted. We carried the military system over from one government to the other."

### OBEDIENCE OF MILITARY ORDERS.

"The importance of the obligation of obedience is recognized in the twenty-first Article of War, which makes the disobedience of the lawful command of a superior officer an offense punishable even with death. What are we to understand by 'lawful command'? Have the civil courts jurisdiction to decide whether a military command is a lawful command? It is evident that, to some extent, they must have such jurisdiction, as, for example, if an order should be given to commit a crime, and the soldier obeying the order should plead it as a defense, or if he should seek the protection of a civil court against military punishment for disobeying it. When the order requires something to be done which would be criminal under the law of the land, there can be no obligation to obey. So when the act would be unlawful and would do an injury, although it might not be a criminal offense, there would be no obligation to obey. But can we go further than this and construe the expression 'lawful command' in the most comprehensive signification we can give it? If so, we should have to include under lawful commands every order requiring anything contrary to any provision of the law military, wherever found, not only in statutes, but in regulations, orders, or customs. And the result of this would be that we should have to recognize the right of the inferior, in each such case, to deliberate as to the lawfulness of his superior's command.

"It must be evident, however, that such a principle and military discipline would be antagonistic. Prompt and unhesitating obedience is necessary to discipline; and there can be no such obedience if each command may be placed in the scales and weighed by the inferior to whom it is addressed in order to determine its lawfulness.

"But who is to decide in such cases as to the right of the inferior to disobey the order? Officers are sometimes placed in situations which compel them to disregard regulations and to take the law into their own hands; or the regulation disregarded may be one of little importance; or what the inferior is required to do may do no injury. In such cases, within the domain of

pure military law, will the civil courts undertake to decide what the soldier's obligation is? Have they the knowledge which would enable them to do so? Is this not the sphere of military experts? Mr. Justice Brewer well said: 'An army is not a deliberative body. It is the executive arm. Its law is that of obedience. No question can be left open as to the right to command in the officer or the duty of obedience in the soldier.'

"Interference with this relation by the civil courts would be fatal. But the boundary line where the jurisdiction of the civil court ends is not clearly defined."

### A REVIEW OF CUBAN DIPLOMACY.

N the June Harper's Prof. Albert Bushnell Hart, of Harvard, writes on "A Century of Cuban Diplomacy," in which he recites the more prominent events in the troublous history of that wealthy tropical island. Though so much has been written about Cuba, it may be worth while to quote Professor Hart's terse summary of its importance. It has, he says, the natural elements of great wealth. "Its area of over 43,000 square miles has a seacoast of over 2,000 miles; it is accessible in nearly every part, and stands at the crossways of two international highways, from the United States to eastern South America and from Europe to the Gulf of Mexico. Besides its staple crops of sugar and tobacco, it has valuable timber, fruit, and minerals, and its exports were in 1894 worth more than \$100,000,000. Politically it is now the only West India island of consequence; and it has steadily increased in population and importance." The Spaniards in Cuba Professor Hart describes as not governors, but masters. They have held by a military garrison and they are a race not much disturbed by human suffering.

### THE SPANIARDS AS SLAVE MASTERS.

"They were worse slave masters even than Anglo-Saxons; they have for ages been accustomed to a vindictiveness in war which finds vent in the massacre of prisoners and the pillage of Their system of legal pronon-combatants. cedure, like that of all Latin nations, shocks the Anglo-Saxon by its harshness to the suspect and its cruelty to the convicted. Colonial authorities have a despotic power, and they cannot be effectively controlled from Spain. The Cubans are of the same race, but in all the Spanish colonies the native Spaniard has held himself and is held by the home government above the colonist whose father was a Spaniard. Under such circumstances, the administration of Cuba has always been exasperating to neighboring peoples, and most of all to the United States."

THE DIVIDING LINE IN CUBAN HISTORY.

The year 1823 was the dividing line in the history of Cuban diplomacy. Up to that time independence and even annexation seemed probable; after that time both were for twenty years discouraged by the American Government. Professor Hart says that the first genuine spontaneous movement for Cuban independence broke out in 1868, when Spain was passing in seven years through a Bourbon monarchy, a provisional government, an elective king, and a restoration of the Bourbon house. Under each of these régimes Cuba was impartially misgoverned. warfare was the same guerrilla running fight that we have come to know about in this last The United States carefully held aloof from the atrocities until November, 1873, when the steamer Virginius, registered as an American ship in the port of New York, was captured at sea by a Spanish vessel of war, carried into a Cuban port, and there held while fifty of her officers and crew were summarily shot. Spain protested fraud on the part of the vessel in getting her registry, but a turn of President Grant's hand would have meant war. The President, however, thought it best to accept the surrender of the vessel and an indemnity to the families of the murdered Americans. It was in 1875 that the first hint since 1827 of the word "intervention" was made by the Americans. On the whole, Professor Hart says, the years from 1879 to 1894 were freer from diplomatic controversy than any period of equal length since 1845, although some filibustering expeditions were on Meanwhile Cubans in the United States had accumulated a revolution fund of \$11,000,-000. Professor Hart concludes:

### THE GOOD TEMPER OF THE UNITED STATES.

"Looking back over the century, we see how often Cuba has been a source of irritation, anxiety, and danger. Military, commercial, economic, ethical, and political reasons have combined to compel the United States to concern itself with the neighboring island. Nevertheless, from 1795 to 1895 there were but two cases of direct interference with the destinies of Cuba-by President John Quincy Adams in 1826 and by President Grant in 1875. We saw the Spanish empire break up without stirring for Cuba; we saw filibusters in 1849-51, in 1854, in 1868-78, in 1884-85, and the administration never gave them aid or comfort; in 1854 and 1873 there came excuses for war, and they were not claimed. Among the advocates of the annexation of Cuba have been Presidents Jefferson, Monroe, John Quincy Adams, Jackson, Polk, Fillmore, Pierce, and Buchanan, and it was not annexed.

"Reviewing the whole period, it seems an historical truth that—so far from the Cuban policy of the United States having been one of aggression—few nations have shown more good temper toward a troublesome neighbor, more patience with diplomatic delays, or more self-restraint over a coveted possession. Even slavery, though it could prevent, could not procure, annexation. The Cuban controversy has not been sought by the United States: it arises out of the geographical and political conditions of America. As the French orator said in 1793: 'I do not accuse the King; I do not accuse the nation; I do not accuse the people; I accuse the situation.'"

## GEN. FITZHUGH LEE ON GENERAL BLANCO.

THE June McClure's opens with a well-illustrated article written by Gen. Fitzhugh Lee on "Cuba Under Spanish Rule." General Lee reviews briefly the events which led up to intervention, tells of his own going to Cuba and of his dealings with the Spanish authorities, and gives a frank, generous estimate of General Blanco. He says:

"General Blanco I always found an amiable, kind-hearted gentleman, who I believe was really and thoroughly conscientious in the discharge of the duties confided to him. He must have been convinced that there was no chance for autonomy to succeed, though in his pronunciamientos he allowed himself to argue to the contrary. How could he do otherwise? He was instructed by the Madrid authorities to proclaim and maintain this autonomistic policy, and was therefore obliged to do everything in his power to promote the purpose of his superiors."

"During the two or three days of the recent rioting in Havana, the rallying cry of the rioters. even at the very door of the palace, was: 'Death to Blanco and death to autonomy! Long live Spain and long live Weyler!' After quiet had been restored. Blanco and the autonomistic cabinet continued to build their hopes upon autonomistic success. Partisans and friends of General Weyler were removed from the various positions they had held in the island, and friends of General Blanco, or supposed friends of autonomy, were substituted in their places. But these substitutes, appointed in many instances to please the Cubans and to show that an autonomistic government meant a Cuban government, while professing their love for autonomy, were really for free Cuba, and at the proper time, had matters gone on without the intervention of this country, the autonomistic government would have fallen to pieces by desertions in its own ranks."

## THE UNITED STATES AND EUROPE.

BARON DE COUBERTIN contributes to the Deutsche Revue for May an interesting article on "The Relations Between Europe and the United States in the Twentieth Century." It is evident that the writer is animated with a strong desire to treat the United States with perfect fairness, and this obvious purpose on his part differentiates his article from the mass of literature relating to America now appearing in the periodical press of European countries. It is also interesting to note M. de Coubertin's marked independence of thought and freedom from the influences of his French environment in the discussion of international questions.

As to the issues on which the present war between the United States and Spain is being fought, M. de Coubertin does not directly state his personal views, further than to express the opinion that historically and legally Cuba belongs to Spain, while its geographical position and its own interests would make it a dependency of the The charge that Spain has for-United States. feited her sovereignty in Cuba by continued misgovernment is not discussed. M. de Coubertin attributes the American interest in Cuba to a certain form of "national ambition," but he apparently regards this ambition as an honorable and naturally developed trait, not as a species of avarice or greed. At any rate, he sees in this "national ambition" a force that must ultimately be reckoned with in European capitals, and he devotes the major part of his article to an examination of this newly revealed phenomenon in world politics.

## · AMERICAN AMBITIONS.

This national spirit was developed with the acquisition of territory, and after it had been in a measure sated in that respect it turned to the amassing of wealth. The American millionaire, in M. de Coubertin's opinion, is primarily concerned with his social relations. In seeking the dollar he seeks not so much the money itself as the social leadership that money confers. Europeans generally attribute this quest of riches solely to the mercantile instinct, but they fail to understand the American character. Our millionaires have the motives of statesmen. perceive," says M. de Coubertin, " no very great difference between the instincts of a Pullman or a Vanderbilt and those of a Clay or a Webster. They all alike dream only of greatness."

The millionaire will disappear, however, and colossal fortunes will cease to be accumulated. Power of this kind is not normal; it is almost a social monstrosity—an incident of a growing civilization. What, then, will feed this persist-

ent ambition of the Americans? M. de Coubertin thinks there is a strong probability that foreign conquest through a deliberate policy of "intervention" will be the next development in American national aggrandizement. He says we now have the elements of a numerically small but well-disciplined army. The training given our officers at West Point has a high moral and professional value. Our militia system is not to be despised, and the citizen soldiers of our States are better disciplined than is believed in Europe. A navy is being rapidly built, and Annapolis, like West Point, is a school of high moral ideals. American diplomacy is often brusque, but in our foreign relations we are never weak. sentiment with us approves bold deeds. To expect that our ambitions will suddenly become cooled would be absurd. It is a part of our nature to be ambitious, and we shall remain so. It is, therefore, more than probable that we shall take a part in the affairs of the world, and especially of Europe. M. de Coubertin assures his readers that we shall soon have powerful fleets, one in each ocean, and that our army has a good organization and can be made formidable. war spirit, he says, is not so foreign to our Government as is generally believed, and he thinks it would be nothing astonishing if the American democracy should be seized with a genuine kriegslust.

Two modifying influences at work in this country M. de Coubertin regards as of very great importance, although not often seriously considered in Europe. These are the growth of the universities and the social-religious movement. M. de Coubertin, who has made a special study of the American universities, is impressed with the tendency toward eclecticism recently developed among them, and in this he finds the guarantee of a more conciliatory disposition in future relations between the United States and European nations.

# Launch of the New World-Power.

"Looker-On," in Blackwood's Magazine, says: "Unless all the signs deceive, the American republic breaks from her old moorings and sails out to be a 'world-power.' Whether the start has been well made—with sagacity, with dignity, with due circumspection and preparedness against internal disturbance, for example—is for the Americans to consider. For our part, we must acknowledge that the movement is perfectly natural, if not 'mysteriously' imperative; and also entirely their affair. And then, taking account of another illustration of the way in which history repeats itself, with so little modification by 'moral forces,' we must shape our conduct accordingly."

# A DEMOCRATIC QUEEN.

THE Queen of Norway and Sweden is the subject of a most attractive sketch by Mr. Sherard in the Lady's Realm for May. It was a romantic engagement which linked her, Princess Sophia of Nassau, with the throne of Sweden. The future King met her at Wied on the Rhine, and was so captivated with her as to rush off post-haste to his father to ask the royal consent and to return to proffer his suit. Speaking of the various charms of this truly democratic queen, the writer says:

"It may be that what had chiefly attracted the great-grandson of the notary of Pau in this beautiful and accomplished young princess was the total absence of that pride of birth, that morgue of long descent, which so preëminently characterize the children of reigning families in Germany—that trait in her character, indeed, to which Princess Sophia owed it that her brothers and sisters used, at that time, to speak of her as 'unsere demokratische Schwester' ('our democratic sister'), and which was afterward to stand her in such good stead in the most democratic court in Europe."

Another trait has only been brought out by the painful malady which has compelled her absence from court since her accession to the throne:

"Though her sufferings have been terrible, she is often heard to say that she is thankful that they came upon her, because they taught her what consolation is to be found in religion. She is most devout, a constant worshiper. The success of General Booth's labors in Sweden and Norway and the preponderating influence enjoyed in those countries by the Salvation Army is due to the Queen's direct patronage. While at Bournemouth she was frequently to be seen at various prayer-meetings, public and private."

# A FAMOUS COURT ROMANCE.

Bournemouth has become her favorite health resort. All lovers of romance will think the more highly of this royal lady when they know that she, though herself belonging to one of the oldest families in Europe, sided with private affection against public interest in the famous romance which has ennobled the Swedish court.

"She interceded with her husband for permission for her second son, Prince Oscar, to marry the woman he loved, Ebba Munck, her favorite maid-of-honor. Although the Munck family has played a most important part in the history of Sweden, the King was entirely opposed to such a mésalliance. 'It is Oscar's duty to be true to himself and to his love,' she used to say. The King would not, however, consent.

At about that time the Queen was seized by one of her serious attacks of illness. Her recovery was despaired of. The doctors said that their only hope lay in a painful and dangerous opera-The Queen called her husband to her bedtion. 'If I undergo this operation,' she said. 'will you let Oscar and Ebba have their way?' How could the King resist such an appeal? month or two later, the operation having been successfully performed, he entered his wife's boudoir-it was one Christmas eve-while Ebba Munck was singing one of his poems to the Queen, and the disconsolate Prince Oscar was moping in a corner of the room. After listening to the song—it was a poem on the right to love —till it was finished, he went up to his son and, leading him up to the girl, laid his hand in hers."

# ONE RESULT OF THE WAR IN CUBA.

IT is an ill wind which blows nobody any good," and the destruction of Cuba appears to have been the salvation of one very important Spanish province. Mr. Pennell, writing in the Contemporary Review on his bicycle tour through Southern Spain, says that he was much astonished to find when he came to a small place in Andalusia called Motril that the district was simply humming with prosperity, a direct result of the war in Cuba.

### CUBA'S WRONGS HELP THE ANDALUSIANS.

"It did not take long to learn that the wreck of Cuba was Andalusia's prosperity; that the destruction of the plantations in that island had made those of the Mediterranean coast; that as no tobacco was arriving from Havana, equally good could be grown round Motril. It has been said that the Spaniard is too lazy to work and too ignorant; here he was working as no laborer would anywhere else. If the war in Cuba has drained most of the country of its youth and its strength, here, from the youngest to the oldest, every one was as busy and as full of life as in an American town on the boom. And the wish that I heard on all sides of me, though mainly expressed by foreigners, was that the war in Cuba might go on. For if it was ruining the rest of the country, it was making the fortune of the sugar-planters and the tobaccogrowers of Andalusia. The whole thing was a practical demonstration that the Spaniard would. be a splendid workman if only he had the chance to work, if he was not ground down by a royal family which sits upon him and the German generals and money-grubbing Jews who have drained his life blood.

# MANILA AS SEEN BY AN AMERICAN.

THE June McClure's has an article by Joseph Earle Stevens, entitled "An American in Manila," in which Mr. Stevens tells in pleasant style some interesting things about the town Admiral Dewey has captured. Manila is one foot above high water, but it is no small village, and contains some 300,000 souls. Of these 50,000 are Chinese, 5,000 Europeans, 100 English, and 3 are Americans.

The city proper is the walled town of old, stretching up the right bank of the river as you enter, and along the bay front to the south; and with its moats, its drawbridges, and heavy gates it suggests a troubled past. It may be a mile square, and the narrow streets and heavily buttressed houses within are gloomy in the extreme. Upon the mile of walls, that from the river run south behind the shore-road promenade are the batteries that cover the bay and river, and some half dozen Krupp guns raise the tone of a motley lot of old muzzle-loaders as they look over the parapet, rising from the weed-grown moat at either end of the fortifications.

The inhabitants are subjected to some delinquencies that we do not know in New York City. The houses are low-built, with a view to earthquakes, and there are no glass windows, thin sea-shells set in lattice serving for glass. Cloth, instead of plaster, covers the walls. Gas-pipes are not allowed, and water mains run along over the ground on smooth crossties. Only less frequent than the earthquakes are typhoons, which come into existence somewhere southeast of the Philippines and come swirling over the islands into the China Sea. "A medium blow will capsize 3,000 houses, and other people than my friend, the Englishman, have gone home from business after a sudden cyclone to find only their upright piano on the spot where their light-built houses stood, the balance of things having been hastened on to the next town."

Mr. Stevens says that the natives want nothing except to be left alone by the Church and the tax-gatherer, and to be free to work or not to work. "To know that the results of their enterprise will be theirs, not somebody else's; to be able to knock cocoanuts off a tree for their morning meal, or to shake the fruit from ten thousand trees to the ground and export the pieces in bags to Marseilles without hindrance.

"The Philippines are the richest gardens of the East, but their light has been hid under the bushel of Spain's colonial system. Our American fleet has silenced the guns on Corregidor; they have sunk the Spanish ships and silenced the batteries at Cavite. The Krupps that sent wadding over the promenade on the Malecon are still. Manila is ours, the 'mestizos' are with us. But up to the north, in the mountains of the interior, over to the east, on the Pacific, and away to the south, in the heart of a hundred islands, are wild tribes who are there to dispute our possession. The gems of the Pacific are as yet rough diamonds, and the cutting is going to be harder than the acquisition. For I take it Manila is the capital of our new colony, and the 400 islands of the Philippine group, with their 8,000,000 inhabitants, the materials to be used in our first great colonial experiment."

# ON THE DUTIES OF NEUTRALS.

DR. JOHN MACDONNELL contributes to the Nineteenth Century for May an article on "England's Duties as a Neutral." He deals with this under several heads, such as the "Foreign Enlistment Act," the "Right of Search," "Commercial Blockades," "Pacific Blockades." He does not like pacific blockades.

# ENGLAND'S DANGER FROM BLOCKADES.

He thinks that the only power that can be seriously crippled by a commercial blockade is England. He says:

"One state might indeed be conceivably crippled by a commercial blockade; a state which cannot obtain supplies across a land frontier, and which is dependent not merely for luxuries, but the food of its people and the raw material of its manufactures, on foreign countries. The only power so situated is England."

### THE DOCTRINE OF "CONTINUOUS VOYAGES."

As to the right of search, he holds out a prospect of the possibility of such a method of interpreting a contraband of war as to practically cripple the import trade into Canada or to Jamaica. This end will be achieved under the American doctrine of so-called continuous voyages. Dr. Macdonnell says:

"Will the United States apply to contraband articles the startling doctrine of 'continuous voyages' which they enforced during the Civil War, greatly to the inconvenience of neutrals? belligerent destination is an essential of contraband, and a merchant who puts munitions of war on board a vessel bound for a port belonging to one of the belligerents cannot fairly complain if his goods are confiscated. But in the Springbok and other cases the American courts condemned goods found in vessels sailing to neutral ports because the ultimate destination of the goods was belligerent. In the case of the Springbok the court condemned the cargo of a vessel the ultimate destination of which was Nassau, a neutral port, because, to summarize the effect of the judgment, it was highly probable that the cargo would be transshipped at that notorious rendezvous of dealers in contraband and forwarded to the Southern States by some other vessel. This decision, pregnant with alarming consequences to neutrals, has been questioned in every country in which it has been discussed."

### THE FOREIGN ENLISTMENT ACT.

England's chief obligation as a neutral is defined by the eighth clause of the foreign enlistment act of 1870, which reads as follows:

If any person within her majesty's dominions, without the license of her majesty, does any of the following acts-

1. Builds or agrees to build, or causes to be built any ship, with intent or knowledge, or having reasonable cause to believe, that the same shall or will be employed in the military or naval service of any foreign state at war with any friendly state; or . . .

3. Equips any ship with intent or knowledge, or having reasonable cause to believe, that the same shall or will be employed in the naval or military service of any foreign state at war with any friendly state; or

4. Dispatches, or causes or allows to be dispatched, any ship with intent or knowledge, or having reasonable cause to believe, that the same shall or will be employed in the naval or military service of any foreign state at war with any friendly state, he is guilty of an offense.

### THE THREE RULES OF WASHINGTON.

England's obligations, however, are being still further increased by her adhesion to the famous three rules of the time of the Alabama arbitration:

A neutral government is bound: First, to use due diligence to prevent the fitting out, arming, or equipping, within its jurisdiction, of any vessel which it has reasonable ground to believe is intended to cruise or to carry on war against a power with which it is at peace, and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction to warlike use. Secondly, not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms or the recruitment of men. Thirdly, to exercise due diligence in its own ports and waters, and as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties.

### WILL THEY BE ENFORCED?

These rules have not been generally or formally accepted, but says Dr. Macdonnell:

"I am inclined to think that they express the prevalent opinion of jurists; that they have been substantially incorporated in international law; that in carrying out the foreign enlistment act our government will be bound to act with the diligence of a bon père de famille or as a diligens paterfamilias; and that the culpable negligence of their officials in suffering the escape of a torpedo-boat or cruiser might lead to unanswerable demands for damages."

### THE GRANDEUR AND THE DECAY OF WAR.

IN the Westminster Review for May M. de Molinari's "Grandeur et Decadence de la Guerre" is reviewed by Mr. E. Austin Farleigh.

As the reviewer states them, the main propositions of M. de Molinari's book are two, namely. that in the early period of man's history war was the only means for obtaining the security of a people, that at this period, which he calls the period of the grandeur of war, it was distinctly a force working for good and for civilization; and, secondly, that there is now no place for war. since security from barbaric invasion has been assured to all civilized nations.

In the reviewer's opinion M. de Molinari has succeeded in proving the first of these propositions and has failed with the second.

"He takes one test, and one test only, by which to determine the righteousness of a warthat is, 'material benefit.' But it is quite impossible to reduce everything in this life to a matter of pounds, shillings, and pence; there are considerations in the public life of states and communities, as in the private life of individuals, which cannot be solved by the very simple process of striking a balance between profit and loss. emphasize his contention that all the wars of the present century have been for the separate interests of the ruling classes, to the detriment of the general body of the communities engaged, he cites, among others, the war of Italian independ-He means, of course, the economical detriment; he means that, calculating the income per head of population, Italy is perhaps worse off than before the war. But surely he cannot be serious in urging this view and in forgetting that there are other mainsprings of action, even in a nation, than considerations of economic Surely a sense of national unity and a hatred of foreign yoke are as praiseworthy, as essential to progress and civilization as any such considerations.

The present American Spanish war over Cuba is clearly an exception to M. de Molinari's sweeping generalization.

Mr. Farleigh considers the practical suggestions as to the way in which war may be superseded as the most valuable part of the treatise.

"He points out that war is detrimental to neutrals; that neutrals have in consequence, on many occasions, made their voices heard as to the way in which hostilities between any two or more powers should be conducted; that they have, on more than one occasion, actively intervened. 'Why not,' says M. de Molinari, 'constitute a league of neutrals, which would be enabled by the very display of overwhelming force to compel subjection to its awards?' Would

it? That is the whole question. England and France have both, single-handed, at the end of last century, defied most of the powers of Europe united. War cannot be prevented by force; we must wait till public sentiment is convinced that its interests—moral, material, intellectual—all lie in the direction of peace."

## AN ANGLO-AMERICAN UNDERSTANDING.

SIMULTANEOUSLY with the publication in the Atlantic Monthly of the Harvard address by ex-Secretary Olney from which we quoted in our last number, the Rev. Dr. Lyman Abbott contributed to the North American Review for May an article on "The Basis of an Anglo-American Understanding" which was strikingly similar in tone to Mr. Olney's address. The following extracts will serve to illustrate Dr. Abbott's line of thought:

"The time has therefore passed when the United States can say, 'We are sufficient unto ourselves, we will go our way; the rest of the world may go its way.' The question is not, 'Shall we avoid entangling alliances?' entangled with all the nations of the globe: by commerce, by manufactures, by race and religious affiliations, by popular and political sympa-The question for us to determine is not whether we shall live and work in fellowship with European nations, but whether we shall choose our fellowship with wise judgment and definite purpose, or whether we shall allow ourselves to drift into such fellowships as political accident or the changing incidents of human history may direct."

"It is for this reason I urge the establishment of a good understanding between the United States and England, in the hope that in time it will grow to a more formal alliance—civic, commercial, and industrial, rather than naval or military—and yet an alliance that will make us, for the purposes of our international life, one people, though not politically one nation."

## THE BASIS OF KINSHIP.

"It is true that in a sense the United States is neither a Christian nor an Anglo-Saxon nation. It is not officially Christian, if thereby is meant a nation which gives political or financial advantage to one religion over another. It is not Anglo Saxon, if thereby is meant a nation which sets itself to confer political power upon one race over another. But though it is officially neither Christian nor Anglo-Saxon, it is practically both. Its ethical standards are not those of Mohammedanism or Confucianism, but those of Christianity. Its ruling force in the country, educational,

political, and on the whole commercial, is not Celtic, nor Slavic, nor Semitic, nor African, nor Mongolian, but Anglo-Saxon. Thus in its religious spirit, though not altogether in its religious institutions, in its practical leadership, though not in the constituent elements of its population, and in its national history and the genesis of its political institutions, the United States is of kin to Great Britain. The two represent the same essential political ideals—they are both democratic; they both represent the same ethical ideals—they are Christian; and they both represent the same race leadership—they are Anglo-Saxon."

### WHAT AN ALLIANCE MIGHT DO.

"It [an Anglo-American alliance] would create a new confederation based on principles and ideas, not on tradition, and bounded by the possibilities of human development, not by geographical It would give a new significance to the motto E Pluribus Unum, and would create a new United States of the World, of which the United States of America would be a component part. Who can measure the advantage to liberty, to democracy, to popular rights and popular intelligence, to human progress, to a free and practical Christianity, which such an alliance would bring with it? Invincible against enemies, illimitable in influence, at once inspiring and restraining each other, these two nations, embodying the energy, the enterprise, and the conscience of the Anglo-Saxon race, would by the mere fact of their cooperation produce a result in human history which would surpass all that present imagination can conceive or present hope anticipate.'

### A Natural Agreement.

Gunton's Magazine for May likens our relation to Spain in the case of Cuba to England's relation to Russia in the case of China:

"England wants no conquest in China. She wants no division of territory or political con-What she asks, and what she may have to fight single-handed to maintain, is that the opportunities for free action of the industrial and commercial influences of Western civilization shall not be closed and China be dominated and practically controlled by the despotic influence of Russia. \In the case of Cuba our interest and attitude is not conquest, not political interference or industrial coercion, but simply to protect the opportunities for industrial development and political freedom against wanton and brutal suppression by the blood-stained hand of despotic Spain."

"There are many things in which the interests of the United States and England are not iden-

tical; but these points are industrial and relate only to the development of our domestic indus-In the matter of our attitude toward the growth of representative government and religious freedom and emancipation of backward sections of the human race from the thraldom of hand labor and of poverty, superstition, and despotism, the impulses, desires, and policy of England and the United States are substantially identical. The progress of civilization demands that the influence of nations like Turkey and Spain should be curtailed and reduced to nil as rapidly as possible, and that the more virile, barbaric nations like Russia should not extend their influence over new sections of the human race until they have developed industrial and political institutions in their own country to the point at least of factory methods and representative government.

"In the new formation of political friendships, therefore, which the present crises in Asia and our war with Spain may finally develop, England and the United States should very naturally become allies. Not allies for war, not allies for conquest, not allies for punishment of past offenses or extraction of future rewards, but allies for civilization—allies whose joint influence will be cast in favor of every effort for industrial and political freedom the world over. If the joint influence of England and the United States were assured in favor of the peaceful development of industry and democratic institutions and against the wanton conquest of weak nations to justify the mere military appetite of despotic dynasties, a great advance would have been made toward abolition of war and substitution of industrial for military civilization by peaceful methods."

### A Voice from Canada.

In the Canadian Magazine for May, in commenting on the present war, Mr. John A. Ewan says:

"As to Canada's attitude toward the belligerents, it will, of course, be one of strict neutrality so far as acts are concerned, although our sympathies will undoubtedly be with our kinsmen. To be thoroughly candid, it cannot be denied that some resentment lingers in places over the Venezuela incident, the Dingley bill, and the alien labor law, but any disaster to American arms would be profoundly regretted in all parts of Canada. The dominant civilization there is the Anglo-Saxon civilization and the dominant races are Celtic and Saxon, and it would be impossible to see the defeat of what these stand for without a painful feeling that we had sustained a blow also. Indeed, a remarkable efflorescence of these events has been the access of what, for lack of a more precise phrase, we call the Anglo-Saxon feeling. It is the first time in history that it has received a world-wide manifestation, and it is no mere bounce to say that it is a force that may have to be reckoned with in the future, but let us hope that it will never be employed save in the best of causes. We in Canada have a distinct mission in this regard. It need not be pointed out here or now, but the promotion of friendly feeling between the representatives of Anglo-Saxondom on this continent is the most important service that could be rendered to this great racial idea."

The editor declares that Canadians desire neither annexation nor independence.

### Is the Arbitration Scheme Abandoned?

The National Review, of London, while kindly disposed toward the United States, is bitterly opposed to the movement for Anglo-American arbitration. The editor says:

"The arbitration craze is as dead as Queen Anne, and could not be revived by fifty New York Heralds combined with a hundred Evening These agencies Posts and a thousand Smalleys. have surely misled Great Britain sufficiently as to American sentiment toward arbitration, which they do not represent and are powerless to influ-Moreover, there is as little desire for an arbitration treaty in Great Britain as there is in the United States, a state of opinion on which both nations may be congratulated, as anything more calculated to perpetuate friction than a series of arbitration crises involving the menace of perpetual litigation it would be impossible to imagine. It would be infinitely intolerable and far worse than an occasional war scare. seal of the arbitration cranks is entirely free from any discretion, and their methods of propaganda are strange. They avowedly desire an improvement in Anglo-American relations, but to advertise their fad they would accuse British diplomacy of the meanness of seeking to force a measure upon the United States when hampered by war which she had deliberately rejected as distasteful in peace time. This suggestion is of the class which refute themselves, as is also the further allegation that Mr. Henry White has been engaged in negotiating an 'alliance' which is not within the sphere of practical politics or within the dreams of any practical politician in either the United States or Great Britain. Let us abstain from weakening any cordiality which a community of sentiment, identity of interests, and the course of events may occasion, by floating our various fads, whether in the form of an arbitration that is dead or an alliance that is not yet born."

### From the British Point of View.

"Politicus," writing in the Contemporary Review under the title "The Collision of the Old World and the New," takes the war about Cuba as the text for a sermon in favor of the conclusion of an Anglo-American alliance. English sympathy with America in the present struggle is, says "Politicus," both natural and right. This being so, he maintains that "first, the present crisis is a golden opportunity; and, next, that if ever there was a human institution of which it would not be absurd to say that it would make on the whole for the kingdom of God, it is a treaty of amity between the severed powers of the English-speaking race."

### COMMON DANGER AND COMMON INTEREST.

There are many reasons why such an alliance should be brought about. "Politicus" says:

"If alliances are to be founded, like the Triplice, upon the potent motive of a common danger, there is common danger enough for us. But the motive of a common interest is equally there, and the worthiest motive of all, which is that of a common good purpose, would be and ought to be the real mainspring of such an effort."

### THE SUPPRESSION OF WAR.

The great end which the Anglo-American alliance should seek and might attain is, in the opinion of "Politicus," the extirpation of war. He says:

"One is tempted to wonder whether it might not be able, in the fullness of time, to take effectual steps toward that ideal which, to even the greatest optimists, seems almost hopeless-namely, the suppression of war. It would be certainly the desire of an Anglo-American combination to make universal, as between all sovereign states, any method of permanent arbitration which had in practice proved effectual between themselves. For such a policy they would surely have the ready support at least of all the smaller powers, and probably of some among the greater powers also. It is needless to point the obvious moral that if any system of permanent and general arbitration had existed the present war would never have begun."

### WHAT IS REQUIRED.

Of the need of the alliance in the first instance, "Politicus" says:

"No sane person would propose that either of the English-speaking powers should abate its general freedom of action or should alter its internal government. The materials are ready to hand for a perfectly simple and yet perfectly effective entente. All that is required is that the

responsible statesmen of England and America should arrive at and should formulate a policy on which they are agreed in those matters in which it concerns them to act together. The most important of these cases at the moment, apart from the questions arising from the war itself, is obviously China. For the purposes of such an alliance we take it that responsible men in America would be quite content formally to recognize us, as Sir Frederick Pollock recently suggested, as an American power who owned the Dominion of Canada and who were certain to stay there. If the sympathetic state of feeling which now exists on both sides of the Atlantic were wisely utilized at once, we cannot believe that it would be difficult to take up the thread of those negotiations concerning the arbitration treaty, which were apparently never altogether broken off. With even a little good-will on both sides it is ridiculous to doubt that the resources of diplomacy are adequate to the framing of a clause under which all ordinary disputes that may arise in future should be referred to some tribunal. If it were found possible to go so far, it would probably prove to be possible and we see no reason why there should be any reluctance from the English side—to go further also; and the next stage would be that the entente would become an alliance, under which each power might at least undertake to assist the other in a defensive warfare. This would mean, in plain language, that each partner of the Anglo-Saxon combination would safeguard the other against the risk of being wiped out by a combination of the continental military powers."

# Mr. Henry Norman's Comments.

In Cosmopolis for May Mr. Henry Norman says:

"Great Britain and the United States are steadily drawing nearer together. The process is a natural one, comparable to what surgeons call the healing of a wound 'by first intention.' A wise surgeon scrupulously refrains from attempting to expedite such a desirable process by artificial means; in my opinion the wise politician under present circumstances should be guided by his example. We have long assured the American people that there is on this side of the Atlantic nothing but good-will. Our action in the present crisis proves the truth of our words. Neutrality as benevolent as it can possibly be made to be under existing international law and custom should be our policy."

After quoting approvingly from Sir Frederick Pollock's letter to the London Daily Chronicle and from Ambassador Hay's speech at the Mansion House Easter banquet, Mr. Norman adds:

"From the point of view of fact, the comments of the continental press, too numerous to reproduce here, prove, first, that only the action of England has prevented an anti-American European coalition, and, second, by the anger shown in consequence, that the deep significance of the new development is fully appreciated. The Temps, the most serious and responsibly conducted journal of France, sneers at what it calls 'an acute fit of Anglo-Saxonism.' We may thank the French journal for the word. America is satisfied with the definition, we certainly are, for it is our hope and belief that this 'fit of Anglo-Saxonism' will mark the inauguration of a movement without parallel in the modern world for the peace, the commercial interests, and the social and political ideals which the two branches of the English-speaking race hold in common, and which no other nation holds on earth."

### ENGLAND IN CHINA.

'HE official papers upon the Chinese question were not issued in time for their contents to form the subject of comment in the magazines The acceptance of the right to refuse the reversion of Wei-Hai-Wei is the topic of several articles more or less objurgatory and de-"Tearem, M.P.," in the Contemporary risive. Review, declares that Lord Salisbury's administration has fallen into a hole owing to its reliance upon the misleading information of Mr. Curzon. If the government had relied upon their experts of the army and of the navy, they would never have allowed Port Arthur to have been snapped Russian vessels every day brought out cannon for the fortification of Port Arthur or the It was because they objected to Black Sea. have this fact brought to light that the Russians complained about the presence of British ships at The withdrawal of British vessels Port Arthur. was the signal for the collapse of British authority in the East. Had England but remained firm the Russians could not have put matters to It was perfectly within her power extremities. to have occupied Port Arthur or to have reëstablished the Japanese in the position from which they have been turned out by the Russians. This, however, was not done. The ships were ordered away, and the Russians from that moment had everything in their own hands.

"Tearem, M.P.," insists strongly upon the obvious fact that the government in taking Wei-Hai-Wei did so without any adequate information from the experts and without any clear idea as to what they intended to do. The crucial point, of course, is whether any provision is to

be made to provide fortifications and garrison for Wei-Hai-Wei. "Tearem, M.P.," thinks that thirty-six thousand men ought to be added to the British army if an adequate garrison is to be maintained in the new Chinese station.

"Otherwise it will be manifest that the occupation of Wei-Hai-Wei was a mere coup de théatre designed to save the face of a government in trouble, not an addition made by cautious states. men to the strength of the empire. The most serious element in the whole of the melancholy story I have had to tell is the evidence it supplies that the government, far from possessing that amount of superior knowledge with which we have always credited them, and because of which we have blindly trusted them, have been acting throughout without taking the means at their disposal for getting advice on subjects of which they were profoundly ignorant. ently because among the blind the one-eved is king, the one adviser or expert on whom they have relied has been Mr. Curzon. He traveled in China and in Russia and wrote a book about them. Therefore, of course, he must know. Unfortunately every prediction to which Mr. Curzon committed himself has been utterly falsified by events. He wrote both there and in Russia with that particular kind of confident assurance and certainty of personal omniscience which is usually only seen in a young graduate who has just taken a rather good degree. hasty glance as he raced through such vast areas as those that are covered by Russia and by China enabled him to settle every question, to penetrate into the minds of Russian statesmen, to gauge the social condition of such a complex and mysterious people as the Chinese. Because they have relied upon this gentleman, who needs advice from no one, but when backed by the hearty cheers of a party can give to older statesmen just such answers as rejoice the hearts of undergraduates in a union debate, her majesty's ministers have been hoodwinked by Russian diplomatists, bamboozled by French statesmen, and nonplussed by the sudden collapse of China, for which all serious students of the East were completely prepared."

### The Disastrous Policy of Partition.

"Diplomaticus," in the Fortnightly Review, writing upon "The Breakdown of Our Foreign Policy," maintains that the crucial point in Lord Salisbury's policy was when he was confronted by the German seizure of Kaio-Chau. Germany's action forced Russia's hand and precipitated the occupation of Port Arthur. "Diplomaticus" says, as the result of this blunder, the old China policy has broken down; a disastrous

one has been substituted for it, and the government has no one to blame but itself. In place of the old China policy, there has been inaugurated by the initiative of Germany a policy of partition, with coast stations duly occupied and spheres of influence marked out, just as if some new territory in East Africa were being dealt with.

#### Too Many Cabinet Cooks.

The editor of the National Review cannot refrain from roundly expressing his unmitigated disgust at the British policy in the far East. He thinks that the mischief has come from allowing the policy to be drawn up by a committee instead of being framed by an individual. There were two alternative policies, either of which would have saved England's honor. One was to have made friends with Russia; the other was to have fought her. The government did neither:

"Their policy has consisted in public bluster, futile paper protests, and the acquisition of a second Cyprus. We have exasperated Russia without injuring her prestige, and we may count upon her enmity everywhere. We might have conciliated her and we could have coerced her, but we have shown ourselves willing to wound, but afraid to strike. She has been allowed to order the greatest sea power of the world out of Port Arthur, than which there could have been nothing more damaging to our political credit in the far East. We are in for a period of perpetual friction with her, and when she has consolidated her strength she will not hesitate to use it."

# Wanted-Another Chinese Gordon to Save China.

Mr. D. C. Boulger, writing in the Contemporary Review for May on the question whether China can be saved, answers the question in the affirmative, with an important proviso:

"China has immense latent resources and the material for a fine army, but she has neither initiative nor system, and her existing administration at Pekin is irreclaimable. It rests in the hands of Englishmen whether China is to be saved or to be allowed to pass under the thrall of those who will know how to turn her ponderous strength to the subjugation of the civilized world."

The Chinese Government is hopeless, and, in Mr. Boulger's opinion, the English Government is almost equally hopeless. The one chance of salvation is to discover a new General Gordon, who will undertake with Chinese funds the organization of the Yang-tse Kiang, who will be able to defend Pekin against any foe. Mr. Boulger says:

"We cannot expect to command such men at every crisis in our fate, but the British army possesses a large number of officers ready for any task and capable of training the unlimited supply of men China possesses. There is no need for an excessive army. One hundred thousand trained troops would be able to save Pekin from sharing the fate of Manchuria, and that number could be easily raised in the lower Yang-tse Valley and properly equipped and paid for out of the resources of Nankin, Hankow, and Shanghai.

"There is no difficulty in indicating the machinery by which this force could be created. In the Taeping rebellion the native Chinese merchants formed themselves into a patriotic guild and provided the money for the ever victorious army. They are still there, and constitute one of the most flourishing communities in China. Their interests are bound up in the preservation of peace, and they would heartily support any scheme that promised well and was properly promoted. This would be a beginning, and five thousand trained troops would suffice as the nucleus of an efficient army."

#### More Jeremiads.

A writer in Blackwood is very lugubrious on the present outlook in the far East. He thinks that the ascendency of Russia in China, with its consequences, constitute "one of the gravest conjunctures in our whole history. The conditions of comparison are of course wanting; but in point of importance to our national well-being we should be inclined to say that since the loss of the American colonies no such blow has been sustained by the British empire as that which is symbolized in the Russian occupation of Port Arthur."

Blackwood refrains from roundly denouncing the possession of Wei-Hai-Wei, but there is no mistaking the drift of the following passage:

"Events have demonstrated that while our policy in China has been absolutely correct in its aim—to save that empire from disturbance—our method of procedure has been erroneous, since it has brought her to the verge of dissolution. And this solely from inadvertence, neglect, willful blindness to the light of day. If we are at last driven to emulate her spoilers and take a hand in the partition of China, it will set the stamp of complete failure upon our whole policy during thirty-seven years, and will, moreover, be a calamity for this country.

"The measures we have recently taken to redress the balance against us in the far East may be judged from two separate standpoints: either on their specific merits or as indications of a radical change in our general far Eastern policy. Crude and hasty though they appear to be, if they are the first fruits of true repentance, the precursors of a new era in our relations with China, the symbols of a determination to restore the influence of Great Britain in the far East, we need not scrutinize the details too strictly. if, on the other hand, they are sporadic efforts to strike a temporary balance, the measures in question can only be pronounced to be vanity of vanities."

# WHAT TO DO WITH THE RUSSIAN JEWS.

IN the Contemporary Review for May Mr. E. N. Adler, in an article entitled "A Bird's-Eye View of the Transcaspian," puts the suggestion that the ultimate solution of the Russian Jewish question may be found in the Jewish colonization of the steppes of central Asia. Mr. Adler last year made a hurried visit to central Asia, and his article gives a very vivid account of the change which the Russians have wrought in Turkestar. Although there is much that is very interesting and up to date in his account of his railroad journey to Krasnovodsk, the only novelty in his paper is his suggestion of the repeopling of the Asiatic steppes as the solution of the Jewish question. Mr. Adler found the cotton trade flourishing on Transcaspia. He also found that "the greater part of the trade was in the hands of my co-religionists, and although the Transcaspian was outside the pale of Jewish settlement and de jure tabooed to the Jew, the government welcomed them de facto as bringing money, business, and prosperity to their new Technically, the Panslavist would possessions. rather have Turkestan and Siberia peopled by The Jews, though they be Russian, are not Slavs; they are therefore outside the sympathies of the soi-disant Russian patriot. has learned by the experience of at least one generation that the Slavonic race is difficult to acclimatize in the burning sands of Turkestan or the icy plains of Siberia. So he finds himself compelled to welcome the more adaptable Hebrew. And herein, I venture to assert, lies the true solution of the Russo-Jewish question. millionaire, no cohort of millionaires, no government, however strong, can tempt or command a population of millions to cross the seas. Russia itself can the question be solved. Russia is great enough to suffice for all its inhabitants, even for its Jews. The resources of Siberia and central Asia are gigantic beyond the dreams of avarice. The world is only now beginning to realize them. It is a matter of history how Jews helped to develop the trade of America, India, Australia, and Africa. Let Russia open the gates of the pale and she will find that her Jewish children will be of the makers of her Eastern empire. And the stone which the build ers had refused will become the headstone of the corner."

#### The Repeopling of Palestine.

Mr. Joseph Prag, in an article in the same magazine on "The Jewish Colonies in Palestine," gives a reassuring report as to the extent to which the chosen people are returning to their land of Canaan. Mr. Prag says:

"The colonization of Palestine by Jews only commenced about sixteen years ago. Up to that time there was hardly a Jewish agriculturist in the whole of Palestine and Syria. Since the year 1882 twenty-five agricultural colonies have been established in Palestine and Syria, and societies for the furtherance of colonization have sprung up all over the world."

He then proceeds to describe with brief detail what each one of these colonies is doing, and then sums up the net result of their activity as follows:

"The whole face of the country is being changed by the efforts of the colonists. nothing but briers and brambles previously existed we now see beautiful vineyards and fields of growing corn. The country generally is noted for its bad roads, but in the neighborhood of the Jewish colonies excellent roads have been made and the greatest order prevails. A new race of beings, too, has grown up there, very different indeed from the poor, panic-stricken creatures who first set foot in this, to them, unknown land. The colonists are fine, sturdy men, capable of carrying out the hard work of reclaiming the barren land; and they are the most intrepid They are highly valued by the Turkhorsemen. ish authorities, and live on the best terms with the Arabs and all their neighbors. There is plenty of room in Palestine and Syria. colonies that have been established are the milestones marking the advance that Israel has made in these later years toward national rehabilita-The material is at hand, and there are skillful agriculturists there to undertake the work of directing and supervising, and thus, hand in hand with our brethren settled in other countries. we are steadily rearing that edifice which will only be complete when Israel has regained her national existence."

# The Zionist Movement.

In connection with Mr. Prag's article, Lieutenant-Colonel Conder's paper in Blackwood on the Zionists might be read with advantage. Lieutenant-Colonel Conder knows Palestine well. and the fact that he heartily approves of its recolonization by the Jews will go far to convince

the gentiles of the practicability of the scheme. The work, indeed, is now going on apace. He says:

"There are now more Jews in Palestine than in London, and fifty thousand more are anxious to go, knowing that their predecessors begin to prosper in the land."

At the congress held at Basle last year the Zionists "concluded with the characteristic determination to found a Jewish colonial bank and to raise a capital of some twenty million pounds in fifteen years. It proposes to form committees to spread the agitation, by means of the press and by making known what are the facts of the past and present, to look after financial affairs and to exert political influence; while pure Hebrew is to be fostered as the common tongue in which Jews of various countries may in the future find means of easy communication among themselves."

Lieutenant-Colonel Conder is doubtful about the Jews being permitted to establish themselves as a nation in Palestine, but short of that he thinks the Zionists' project has a fair chance of success:

"Shorn of illusions, the movement is yet capable of doing much good, to the Jews and to others as well. It deserves support among all who desire the increase of human welfare. It is the true solution of the vexed alien question; and in Britain it might be advocated on purely national grounds—for while, on the one hand, we should be relieved of a destitute class through the benevolence of the home-born Jews of higher education, we should, on the other hand, be happy to see a prosperous commercial country developed by a people whom we have treated well and from whom we might expect friendly feeling. Palestine should become a neutral country, an Asiatic Switzerland, protected against the ambitions of our rivals—a land consecrated by its past, such as the great Emperor Frederick II. strove, in alliance with the wise Sultan Melek el Kamil of Egypt, to make it in the thirteenth century. There will be nothing astonishing if this should prove to be the final outcome of Zionist endeavors. The question has thus been considered on purely practical, not on religious grounds; but we cannot forget those wonderful passages in the Law (Lev. xxvi., Deut. xxviii.) in which every kind of trouble that now afflicts the Hebrews is fore-'Among these nations shalt thou find no ease, neither shall the sole of thy foot have rest.' 'And thy life shall hang in doubt before thee, and thou shalt fear day and night.' For there is but one real home for the Hebrew, and that is in the land which was once the land of Israel."

# LIQUID AIR, THE NEWEST WONDER OF SCIENCE.

THE June Cosmopolitan opens with a strikingly interesting article by Charles E. Tripler, which tells of the things he has been able to accomplish with liquid air; it is accompanied by illustrations of Mr. Tripler and his liquid air in various forms of manipulation. An editorial note says that the liquid air which Mr. Tripler handled in the Cosmopolitan's office was colorless, except that there was a suggestion of the blue which one finds in a cloudless sky. foot of liquid air which Mr. Tripler used was composed of 800 cubic feet of air subjected to thousands of pounds pressure. Although it has sustained this great pressure, the liquefied air exerts no elastic force, but rests quietly in the bottom of a tin can, just as water would. editorial says that the first ounce of liquid air cost an English laboratory \$3,000. This resolved Mr. Tripler to put the experiments on a practically commercial basis. It only takes Mr. Tripler's machine fifteen minutes to manufacture liquid out of air, in which time the air is reduced to a temperature of about 310° below zero, F. can dip up a tumblerful of the liquid and be astonished to see it boil vigorously as it absorbs a portion of the heat around it; in about half an hour it will completely disappear, having mingled with the air around. The tumbler will be thickly coated with frost. There are, in fact, Mr. Tripler says, two entirely distinct fluids presentliquefied nitrogen and liquefied oxygen. oxygen gives the blue tint, the nitrogen having no color at all.

# LIQUID AIR SHIPPED LIKE DRY GOODS.

"For transportation—thus far only for experimental use—I place the liquid in a large tin can, or cylinder, holding from three to six gal-This I wrap with a layer of felt, and for protection against rough usage set it inside a slightly larger can of the same sort. Over the top I lay a thick cushion of hair-felt, which keeps out heat without preventing free escape of the expanding gases. With this simple arrangement I have kept the liquid for thirty-six hours and have shipped it from New York to Washington and to Boston. There is no difficulty nor danger in handling it provided reasonable precaution is used and the gases are not confined. It can be dipped up with a tin cup and poured into almost any sort of dish; like so much water. If you chance to drop the dipper, however, it will shatter like thin glassware. It is a curious fact that this intensity of cold makes iron and steel extremely brittle, while it increases their tensile strength. This condition is only temporary, of course. Copper, gold, silver, aluminum, platinum, and most other metals are not so affected. Neither is leather—luckily, for its use in valves, where it is exposed to great cold, is important; but rubber becomes as friable as so much terracotta."

#### ALCOHOL AND MERCURY FROZEN.

One of the most marvelous experiments that Mr. Tripler describes is also one of the simplest. That is, he invites his visitors to put their fingers into the fluid and cautions them, at the same time, to take them out again quickly. If this warning is observed no harm will result, in spite of the frightful degree of cold, for the moisture of the hand is acted on at once by the cold in such a way as to cause a thin cushion of vapor to form next the flesh, which incases and protects it like a glove. The merest pause, however, would mean at least a frost-bite, and perhaps a severe If beefsteak, or butter, or fruit, or eggs are dipped into liquid air and allowed to remain a few moments, they will become frozen so hard that one can take a hammer and pulverize them into a fine dry dust. Even mercury becomes frozen solid after a few minutes, and alcohol itself may be frozen absolutely rigid.

As the exposed liquid air gradually disappears to mingle with the air about it, the nitrogen leaves first, as it is more volatile, and boils away.

# THE PROBABLE USES OF LIQUID AIR.

The most obvious use to which this discovery will be put is, of course, that of refrigeration. With such a temperature it will be easy to transport fresh meat, fruits, etc., to any distance, and Mr. Tripler says that in hotels and large establishments the same motive power which is used for running the elevators and driving the dynamos might be turned to account for all kinds of re frigeration; while in summer the sleeping apartments might be cooled to any temperature desired without the deleterious gases which result from all attempts to artificially heat these rooms in Especially in hospitals would this be valuable, and Mr. Tripler thinks that medicine and surgery will have many ways to gain from its discovery, because of the opportunity it will give to obtain absolutely pure air. He mentions its possible use as a high explosive in war machines, and says that the War Department is already making investigation as to its application in cooling guns when in action. But more important will be its service as a motive force on war ships. He thinks that it may prove the solution of the tremendous modern problem of coal

operations. Then, if we had submarine ractical use, the motor would supply all

the air required for breathing. As to its application to the flying machine, Mr. Tripler says, assuming that all that is now wanted is a motor sufficiently strong and light and safe:

"With liquid air no fire would be needed—the heat of the surrounding atmosphere would be entirely adequate; and for this reason, and because there would be no moisture to affect them, the boilers could be made of paper. Aluminum, scarcely heavier than paper, yet nearly equal to copper in ductility, could be used for the coils and other necessary parts of the mechanism. The potential applications of liquid air are simply revolutionary; it is probable that even electricity is not destined to be of greater service to mankind. At present, in the best engines, 90 per cent. of the energy theoretically existing in the coal consumed is dissipated. This enormous loss liquid air will enable us to obviate."

# A NEW ENGLAND COLLEGE IN THE WEST.

N the New England Magazine for June, under this title, Prof. J. Irving Manatt, who is well known to the readers of the AMERICAN MONTHLY REVIEW OF REVIEWS from his articles on Greek subjects, describes the thriving and useful lowa College, at Grinnell, Iowa, and tells of the conditions of the Western movement from New England which made it and its success. Years before the founding of Grinnell there came into what was known as the "Black Hawk Purchase," a strip of land forty miles wide on the Mississippi River front, and what is now Iowa, named after the Indian chief who was its guarantor, two young men who afterward made their mark in the commonwealth, James Wilson Grimes, from Dartmouth, and Asa Turner. a Massachusetts man, educated at Yale, and one of the "Illinois Band" which was formed in New Haven in 1830 and which had already assisted in founding Illinois College. Grimes was a lawyer, Turner was a clergyman. Iowa was not vet a State, and the name was not in existence. At that time and immediafely afterward people were pouring into this region at the rate of a hundred families a day, chiefly following the parallels from New York, Ohio, Indiana, and Illinois, with small but important contingents from New Eng-These people had no teachers, and Father Turner was ambitious to provide them with such. He was seconded in this aim by the "Andover Band," eleven young men of the class of '42 at Andover. Together they framed the pioneer church at Denmark, on November 5, 1842. The newcomers to this land of magnificent distances and impassable tracts were all college men, and many of them were men of parts. Among them

were Ephraim Adams, the father of Prof. Henry C. Adams, of Michigan, and Prof. E. D. Adams, of Kansas University; Ebenezer Alden, Horace Hutchinson, James J. Hill, Daniel Lane, and six others of sterling character and fine training and They brought with them from attainments. Andover Hall the college idea, and added it to the enthusiasm for a college for the future State of Iowa which had already been aroused in seven students of the New Haven Divinity School as early as 1837. In October, 1842, at Brighton, the first actual steps were taken toward the formation of a college, and on June 17, 1847, Iowa College began its corporate existence. The first board of trustees included two of the pioneer pastors, and four of the college founders were graduates of Yale, two of Amherst, one each of Bowdoin, Dartmouth, University of Vermont, The town of Davenport offered a and Union. site and \$1,500 toward a building fund, and the founders each guaranteed \$100 more; and so, on November 1, 1848, two years before Davenport had a district school or a book store, the first college building, a small, one-story brick edifice, was thrown open to students.

# GRINNELL AND ITS FOUNDER.

The future college began very quietly with a total school roll of two boys who came in fit for It was in 1854, the same year that saw the election of Governor Grimes, that Iowa College received its last and most important reënforcement of founders. Josiah B. Grinnell was a Vermonter, born in 1821, who had lived a typically stern New England life, had drifted to New York State and thence to Wisconsin, then to Auburn Seminary, and later to Albany, where he conceived the idea of founding a Congregational church in the center of the slave power. With a substantial backing of such men as Beecher, Bowen, Bushnell, and Storrs, Grinnell bought old Trinity Church in Washington, and in November, 1851, opened fire from his pulpit. He was escorted away without too much ceremony from this stronghold for "giving a young mulatto couple a lesson in astronomy, especially the location of the 'north star.'" He preached awhile in New York, thus coming into cordial relations with Horace Greeley, whose advice to go West he took in good faith and with great suc-He settled on a high prairie site 125 miles west of the Mississippi, and "located" 5,000 acres of the richest soil in the world. To accomplish this land deal he started on a Saturday morning on a sixty five mile drive to the land office in Iowa City, and preached a rousing sermon in the infant capital the next day. Returning with his land titles, he built in the neighboring grove a

14 x 16 cabin, which served as "kitchen, dining-room, and office, hotel, and dormitory for ten persons." Goods had to be carted from Burlington by the founder himself. As the population swelled, the log-cabin was succeeded by the "Long Home," a frame shell 16 x 80, built of green lumber sawed by horse-power and serving as "land office, hotel, hospital, and council-room for rainy days and Sunday meetings." Dr. Thomas Holyoke was one of three that associated with him. He was another shrewd Yankee, and surveyed the lands, laid out the town, and led the way in building himself a comfortable home.

## PROSPEROUS PIONEERING.

These were homely times, but there was no privation, as nature furnished a bountiful fare. The woods were full of game; deer, wild turkey, partridges, squirrel, rabbit; every stubble-field alive with quail and prairie-chickens; the streams teeming with pickerel, bass, red-horse, and suckers, and their banks loaded with wild plums and grapes and nuts, while luscious blackberries and raspberries ran riot in every thicket, and an acre of sod was good for a bushel of strawberries that would melt in your mouth. Dr. Magoun tells of living on bear meat and wild honey for a week in 1844. Meanwhile the Western movement was in full tide, and soon this hustling community of pioneers decided that they wanted a school and a good school.

The proceeds of the sale of town lots were devoted from the first to an institution to be called "Grinnell University." The college walls were already rising, the men who spent the day breaking prairie or building their homes lending a hand at night, while their wives and children carried bricks or held the lantern. The town high school was already fitting pupils for the college, and thus the youth from the country around were drawn in and the little leaven began to leaven the big lump.

#### FINAL LOCATION OF IOWA COLLEGE.

In the meantime the unpretentious but sturdy Iowa College at Davenport had graduated five successive classes, which, however, numbered only ten in all, though there were some men who made their mark, and finally closed its doors in 1858, taking its good name and its assets, amounting to about \$9,000, with it to Grinnell, "where it absorbed what there was of Grinnell University—namely, two professors, some fifty preparatory students, a thirty-five-thousand-dollar property, and abounding good-will. No freshman class was formed until 1861; and then nine out of the twelve members took to the field. That was the order of the day as long as the war con-

tinued, and so the classes graduated in the sixties were composed chiefly of women. Indeed, at one time there was hardly a student left in the college who was capable of bearing arms—even the Quakers of both sexes going to the front to nurse the wounded or care for the freedmen. The professor, radiant himself, enlisted with twenty-six of his 'boys' in one company. college was represented in fifteen Iowa regiments and in several from other States; and there were no better soldiers. One who went out of that first freshman class-Capt. R. E. Jones-fell leading a gallant charge in the last days of the war; Joseph Lyman, of the same class, rose to the rank of major and lived to win distinction on the bench and in Congress; but for the most part the boys fought in the ranks, and their fame is treasured only in the simple homes and in the young college that sent them forth."

#### AN ABLE FACULTY.

At the close of the war the college was still carrying on its work, though it was rather uphill work, and had a property valued at \$100,000 and a fine faculty. The first president was not elected until 1865. He was a superb leader, George Frederick Magoun, who had been one of the council for a long time. His administration Professor Manatt lasted over twenty years. says: "It is not too much to say that he would have been a distinguished presence in any academic circle in the world, and he could hardly have had less than that in any Senate or in any A short-sighted man might have thought it a waste of greatness, but the new president magnified his office, and the little college grew into a statue." In this little community learning was honor and culture a religion, and several of the faculty in these early years of Grinnell, Henry W. Parker, the poet, Charles W. Clapp, John Avery, were men who would adorn

# SOME OF THE ALUMNI.

Professor Manatt says in conclusion:

"The last test of a college is its finished product, the quality of the men and women it trains for the world's service. By this test lowa is justified of her children. She is too young to point to many shining lights, and we can hardly dwell on individuals. But there are among her graduates some well known to the country and even beyond its borders. It would be hard to name three publicists from any other college who have done more solid work or won wider recognition than Prof. Jesse Macy, author of 'The English Constitution' and the pioneer in civic studies as a branch of public education; Prof. Henry Carter Adams, the historian of public finance and statistician of the Interstate Commerce Commission; and Dr. Albert Shaw, editor of the Review of Reviews and our highest authority on municipal problems Sound lawyers, wise lawmakers, accomplished journalists, good physicians, and able men of business not a few are on her roster; but I cannot even call the long roll of college presidents and professors, more than forty in all, to say nothing of the hundreds of teachers she has trained."

# THE PERIODICALS REVIEWED.

## THE CENTURY MAGAZINE.

THE Century for June begins with a description of "Toledo, the Imperial City of Spain," by Mr. Stephen Bonsal, who was for some time in the diplomatic service in Spain.

The Century passes on to other Spanish-American subjects in an account of the destruction of the Spanish Armada in 1588, written by William Frederic Tilton, with an introduction by Capt. A. T. Mahan, and goes more nearly into the current of recent Spanish-American events in its report by Emory W. Fenn, of the Cuban army, on his "Ten Months with the Cuban Insurgents." Most of this article is taken up with a description of the routine doings in the camp of General Garcia's forces.

Under the title "The Three Rs at Circle City," Anna Fulcomer tells of the opening by herself of the first government school in the interior of Alaska, in the fall of 1896. This adventurous undertaking was at Circle City, on the banks of the now famous Yukon. Circle City was already enjoy.ng a boom then and was the richest mining camp on the river, with a white population of 1,500. Miss Fulcomer began her school with 36 pupils, and the white and Indian children seemed to mix together without any trouble.

An interesting article in these war times is that by Mr. R. O. Crowley, formerly electrician of the torpedo division of the Confederate States navy, on "The Confederate Torpedo Service." That this department of the Confederacy conducted its work under serious difficulties is sufficiently attested by the discouraging scarcity of cannon powder and the fact that there were only four miles of insulated wire in the entire Confederacy; thirdly, the electricians could find only about four or five feet of fine-gauge platinum wire in the Southern States, while battery material was very scarce and acids could only be purchased from the small quantity remaining in the hands of druggists when the war broke out. Notwithstanding this, a number of torpedoes were constructed, using ordinary copper sodawater tanks capable of holding about 150 pounds of powder each and anchored floating midway between the bottom of the river and the surface of the water. Mr. Crowley tells of what was probably the first successful attempt at ramming with torpedoes, that on the United States steamship Minnesota, the largest war vessel in the Union service.

#### HARPER'S MAGAZINE.

ROM the June Harper's we have selected Capt. A.
T. Mahan's article on "Current Fallacies Upon
Naval Subjects" and Prof. Albert Bushnell Hart's on
"A Century of Cuban Diplomacy" to quote from among
the "Leading Articles of the Month."

A novel and very readable contribution to this number is "A Study of a Child," by Louise E. Hogan, who has taken a youngster fourteen months of age and recorded his impressions, his first attempts at speaking, at drawing, and writing.

There is an article on "The Situation in China," signed "Cathay," which deals with the onward movement of Russia, Germany, and France in the grab for the great

and inchoate empire. "Cathay" stands up for the British policy in China. It may, he says, not always have been free from reproach in other respects, but though there were times when Great Britain might have done anything she liked in China, when her political ascendency was as undisputed as her commercial preponderancy, she never claimed a single advantage for herself. Even the island rock of Hong Kong, the solitary trophy of two successful campaigns, is open to all comers, and in every treaty port throughout China all can share the rights which she acquired by the treaties of Nankin and Tientsin.

The opening article of the June Harper's is Mr. Julian Ralph's on "The Czar's People," in which he gives an account, in his characteristic reportorial style, of the "huge farm," comprising a seventh of the land surface of the globe and a twenty-sixth of its total area, with ten millions of men and women of a more or less comfortable class and one hundred and nineteen millions of citizens, the dullest, rudest, least ambitious peasantry in Europe.

## SCRIBNER'S MAGAZINE.

THE June Scribner's begins with "Undergraduate Life at Vassar," one of the series of articles on undergraduate life at the various colleges of the United States. It is well written by Margaret Sherwood and most charmingly illustrated by Orson Lowell. There is just a little more snap and pleasant audacity about Vassar undergraduates than perhaps any other college girls in the world, and Miss Sherwood has made the most of this subject.

"Seaside Pleasure Grounds for Cities" furnishes Mr. Sylvester Baxter with an opportunity to give an appreciative account of what his city has done in making its young people and old people, too, happy with Revere Beach. This is the first ocean beach near a great city which, in the history of public parks, has been set aside to be governed by a public body for the enjoyment of the common people. The late Charles Eliot, the associate of the Olmsteds, father and son, has studied this problem, and the result is a great and useful work. It has been a costly project, over \$1,000,000 having been devoted to making Revere Beach a worthy public ocean front for Greater Boston, chiefly on account of the land damages; but Mr. Baxter thinks it will be worth many times the cost. In August, 1896, there were something like 200,000 visitors in a single week, and they were so orderly that not a single arrest was made. The bathhouse was opened on August 1, 1897, and the season lasted about six weeks. For accommodations that surpass those of any private bathing establishment on the coast, including bathing-suit, towel and dressing-room, the charge was only 15 cents and for children 10 cents. The total receipts were \$10,643.75 and the expenses \$8,901.25. Residents are permitted to bathe from their own houses, but all others must resort to the metropolitan bath-house.

The well-known musical critic, Mr. H. E. Krehbiel, has a brief and appreciative critical article on Anton Seidl, in which he brings out prominently the keynote of Seidl's success as a "naturalist," as the Germans call

it. Seidl believed conducting to be an art which in its truest estate could be acquired only by plenary inspiration. Mr. Krehbiel says:

"Only once have I known him to mention a technical feature of the conductor's art which he deliberately adopted from another's method. He used the Munich Conductor Levi's manner of beating time in recitatives. For the rest, he depended upon himself-his influence at the moment, his knowledge of the music, his consciousness of command over men. The first essential in conducting he held to be complete devotion to the music in hand. The conductor must penetrate to the heart of the composition and be set aglow by its flames. That done, he must make his proclamation big and vital, full of red blood, sincere, and assertive-assertive even in its misconceptions. He had no room in his convictions for mere refinement of nuance or precision of execution. Too much elaboration of detail he thought injurious to the general effect."

#### THE ATLANTIC MONTHLY.

THE Atlantic Monthly for June contains an article on "The War With Spain and After" and one on "The Uncertain Factors of Naval Conflicts" which we have reviewed in another department.

Mr. Rollin L. Hartt has a very readable and enthusiastic article on Montana, and he calls it "The Montanians." The climate is idyllic, he says, and with its forty-two hundred vertical feet of the dense lower atmosphere knocked off the properties of the air are magnificent. Mr. Hartt says: "Breathe it for a year and a day and you will be altogether a new creature." Horses will travel fifty miles with less fatigue than the New England animal would suffer from a journey of twenty. There are no meek-eyed cows, but only the glaring, flerce-faced variety, with nervously twitching tails. Human nerves respond readily to the stimulation that comes with every breath of the exhilarating mountain air.

"Women feel it first. Montana women look older than they are and act younger. The settled-down, matronly, family-tree composure that comes to our women at forty-five or fifty is a thing unknown in the Rockies. Yet the outward signs of age are sooner seen: a girl begins to fade at twenty; faint lines, the beginnings of wrinkles, appear in the faces of mere maids of seventeen. The complexion loses its freshness; the hair turns gray prematurely and falls out at an unexampled rate, because of the extreme dryness of the air in a country where the sun shines three hundred days in the year. Young Norman, stay East!"

Mr. C. Hanford Henderson contributes "A New Programme in Education." After suggesting, in a well-written article, his theory of the aims of education he gives this programme: Gymnastics first—not athletics, he hastens to qualify, but gymnastics. Mr. Henderson believes that good health and abounding vitality are the foundation of all other excellence, and agrees with Dr. Johnson in considering all sick men rascals. The second place is taken by music, meaning the artistic cultivation of the voice in both speech and song, as well as distinct musical training on some suitable instrument. His third branch is manual training, and at the end of his list of important studies comes language. He would even omit the specific study of English, except perhaps spoken English. He thinks that most

children in educated families will themselves learn to read by the time they are eight years old. One other spoken language he might admit, and it would be French. So that up to fourteen years of age Mr. Henderson would confine all organic education to gymnatics, music, manual training, drawing, English, and French. All of this work mustenlist the good will and good feeling of the child, and the subtle spirit of noblesse oblige must be forever in the air.

There are two other articles on educational subjects in this number, one on "Normal Schools and the Training of Teachers," by Frederic Burk, and another on "High-School Extension," by D. S. Sanford.

There is another controversial paper from Prof. Hugo S. Münsterberg, who thinks that psychology is out of place in pedagogics, and who has been taken to task about it in the Forum by Professor Bliss.

#### McCLURE'S MAGAZINE.

THE June McClure's is full of war material. even to the cover, which portrays Miss Columbia adorned with a liberty cap. The editors have shown no little enterprise in preparing such a number of ideas with the factors of large edition and short time limits. We have reviewed or quoted from, in another department, Gen. Fitzhugh Lee's article on "Cuba Under Spanish Rule," Joseph E. Stevens' "An American in Manila," Stephen Bonsal's "How the War Began," and George B. Waldron's statistics of "The Cost of War."

In addition to these there are a number of other contributions apropos of the Spanish-American war. The chief of these is General Miles' article, "With the Turkish and Greek Armies in Time of War," the first of a series from General Miles on "Military Europe."

L. A. Coolidge contributes well-selected "Stories of the Fighting Leaders," with portraits of Dewey, Sampson, and others; Mr. Grover Flint has a chapter "In the Field with Gomez," and Mr. James Barnes two "Songs of the Ships of Steel."

General Miles' article is the result of a trip to Europe which he had determined on for a long time before, with a view to seeing the first European war that should offer a sight of hostile armies actually in the field. It is worth while noting that General Miles says that he is convinced the Turkish soldiers that he saw in Constantinople are among the most effective in the world. He gives as reasons for this the strength and sturdiness of the Turks, the influence of their religion on them, which teaches them to believe in absolute despotism and forces simplicity of life and strict temperance, and promises them unending pleasures in heaven as a reward for their endurance on earth. In addition, there is a long term of service, and finally the Turk has had a greater war record than any other European power during the last hundred years. General Miles says that Osman Pasha reminded him of General Grant more than any man he saw on the other side of the Atlantic.

In "The Household of the Hundred Thousand" Ira Seymour describes the social life in the army of the Union, in which he was a soldier.

Even the fiction of McClure's has a military tinge. Octave Thanet has a story called "An Old Grand Army Man," and Anthony Hope's story is full of soldiers. Charles A. Dana's "Reminiscences of the Civil War" and William Allen White's story, "When Johnny Went Marching Out," round out the war number.

#### THE COSMOPOLITAN MAGAZINE.

THE June Cosmopolitan has an article by Mr. Charles E. Tripler on "Liquid Air," from which we have quoted in another department.

The editor of the Cosmopolitan interrogated not long ago every member of the Senate and the House of Representatives as to his opinion on the ethics of stock speculation by Congressmen. Mr. Walker prints some eighteen answers to his letter of inquiry, all of which agree that it is highly improper for Congressmen to buy and sell speculative stocks while they are voting on the questions which will influence the value of those stocks so decidedly. Only a few qualifications appear in this batch of letters. Mr. Grosvenor says: "I cannot concur in any opinion that would exclude a member of Congress from doing a legitimate business in buying or selling stocks unaffected by pending legislation;" and Mr. John Murray Mitchell expresses the opinion that very few members of Congress ever do buy and sell stocks, and these "have done so long before they came to Congress, and do so entirely irrespective of their Congressional life and of any information which they might possibly gain as members." Most of the answers are much more aggressive, some of them wishing to prohibit stock speculation on the part of Congressmen by law.

Mr. Zangwill, who writes the London notes for the Cosmopolitan's "World of Art and Letters," extends only a "qualified welcome" to the Cosmopolitan's plan for an international language. He asks: "Is it possible to fix words as one can fix streets, to petrify the life of language by an Academic Dictionary of Draconian severity? Words are incessantly shifting their connotation and taking on new shimmers and flavors of literary association. . . . It was the unprincipled Chinese language that stirred the projector to his idea; but is there not something Chinese in the thought of conserving a language forever unaltered? Would such a language be living? Would it not rather be a mummy?"

Frances C. Baylor has a short article entitled "In Havana Just Before the War," in which she gives a good description of the status of the city and of the Spanish army in Cuba. Another article inspired by the present military times is that on "Transformation of Citizen into Soldier," by Vaughan Kester, who tells how the National Guard has been mustered in.

#### MUNSEY'S MAGAZINE.

16 MUNSEY'S MAGAZINE" is replete with pretty pictures of naval engagements and with portraits of the men who have come prominently before the world's eye in the present war excitement.

Another well-illustrated article, too, is that entitled "Two Miles of Millionaires," which gives handsome pictures of the "palatial" residences of the very wealthy people who live between Murray Hill and Eightieth Street, on Fifth Avenue.

Almost all of the magazines have succeeded in holding their June issues open for some reference to the magnificent victory of Admiral Dewey at Manila, and Munsey's furnishes its quota with an article entitled "Dewey's Invincible Squadron," with pictures of the most important vessels that contributed to that famous victory.

In the ever-present discussion as to the relative values of *Punch* and the American comic papers there is a sup-

posed evidence in the statement that Munsey's prints, that "an enormous quantity of American humorous matter is republished in England, two or three periodicals in London being made up entirely of Life, Puck, and Judge matter, which they arrange to receive from the publishers of those papers in the form of advance sheets sent weekly to them. On the other hand, very few of Punch's jokes enjoy currency in this country." This would, of course, be better evidence if the names and status of the papers which publish the American "jokes," so called, were given.

#### LADIES' HOME JOURNAL.

THE Ladies' Home Journal for June begins with an article on the anecdotal side of Mrs. Cleveland, with a dozen or more pleasant stories of that lady's grace and tact and good sense. The author says that Mrs. Cleveland only asked one official favor while her husband was President of the United States. All during Mr. Cleveland's two terms as President her most intimate associates were those whom she knew before marriage. One of them was the wife of a clerk in the Treasury Department, who lives in one of the most modest little homes in Washington's most unfashionable district. This made no difference to Mrs. Cleveland, and often the White House carriage called to pick up the friend for a drive. Another one of her intimate friends was a young woman who taught music to support herself. Mrs. Cleveland obtained many pupils for her. Another was the wife of a struggling lawyer, and each week a bouquet of White House flowers came to cheer the friend of schoolgirl days. A fourth was the teacher of a small kindergarten, who when the Cleveland children reached a suitable age transferred her school to the White House, and the children and grandchildren of the Cabinet members and of the families of Mrs. Cleveland's friends and of the friends of the President became her pupils. Mrs. Cleveland's elevation never spoiled her a particle, nor did it affect any of her old friendships.

Madeline S. Bridges calls the Shaker village of Mount Lebanon in her title "A Wonderful Little World of People," and gives a pleasant description of the interior of this community. She finds the Shaker village wonderfully wholesome, pure, and satisfying. She says:

"It is, perhaps, not widely known that Shakers are strict vegetarians, except in so far as the use of eggs and milk may be considered a deviation from the rule. Tea and coffee are still used, though sparingly, and the deily menu, prepared in the most inviting way, of cereals, vegetables, custards, jellies, preserves, fresh fruits, delicious brown and white breads, honey, and such cream, butter, and cheese as one seldom finds in city markets, gives the feeling that nothing was missed from such a table—the thought of animal food, indeed, seemed repellant. Visitors' meals are served in a small room opening from the general dining-room. Those outside of the faith are never admitted to the family table."

#### GODEY'S MAGAZINE.

"The Spaniards in Cuba," by Joseph Dana Miller, which gives some idea of the island, its population, and the causes underlying the Cuban struggle.

Elsie Reasoner describes the Trans-Mississippi Inter-

national Exposition which begins on June 1, with President McKinley touching the button which starts the great machinery at Omaha. The exposition grounds are in the northern part of Omaha. covering about two hundred acres. They are on a broad plateau overlooking the Missouri River. Trolley and steam railroad lines make the run from the heart of the city in ten minutes. Thirty-five States are represented at the exposition by organized State effort. A novelty of the building has been the connecting of the buildings by numerous graceful colonnades, so that the visitor may start at one end of the Grand Canal and completely encircle it, a distance of over a mile and a half, without once being compelled to brave the rays of the sun. This writer says that plans for the manufacture of beet sugar attracted a great deal of interest through the country, and the exposition will show a complete plant in operation.

There is a good article by D. J. Greene on "Our System of Moving Freight," and an article about light-houses is contributed under the title "The Ghosts of Light and Sound."

#### LIPPINCOTT'S MAGAZINE.

THE complete novel of the month in the June Ltp-pincott's is a characteristic story by Maria Louise Pool.

Mr. Felix L. Oswald thinks that a great deal can be done to make the Klondike regions of Alaska more inhabitable. In the first place, he thinks that if the recommendations of Professor Tyndall to copy the moss-stuffed chalcts of the Engadine were followed, winter in Alaska would be much more comfortable. These châlets are built with double-boarded walls, stuffed with a mixture of sea-grass and paper-mill waste, after impregnating both the wood and the padding with one of those numerous cheap solutions that will make cotton rags as non-combustible as woven asbestos. Experiments may also introduce, Mr. Oswald says, a multitude of grains and berries, if not of tree fruits, that could be made to ripen a crop in the short summers of eastern Alaska. Potatoes of the so-called "Irish" variety have already been modified by artificial selection till they now thrive 6,000 miles north of their original home.

Mr. George R. Frysinger tells some interesting things about robins. Commenting on the enormous numbers of these birds that are in the eastern part of the United States, Mr. Frysinger says he counted 40 robins' nests on one farm, and he has calculated the possibilities in the way of multiplication from these 40 pairs, and concludes that if there were not casualties, ten years would see no less than 3,545,520 robins as the result of that one farm's supply should they breed at a normal rate.

# THE ARENA.

I N the June Arcna the only article bearing even remotely on the war with Spain is Dr. Ridpath's argument to show that the Senators opposed to the recognition of Cuban independence were all "goldites." He says:

"The anti-Cuban vote in Congress was a gold-bug vote just as much as that given for the Lodge amendment on January 28. The suffering patriots of Cuba, if left to the care of the goldite oligarchy, might have

suffered eternally. The record of the contemners of the ill-starred island is made up; history has put it down in her memorandum. It was the opposing host of patriotism that on April 16 rose against the intrenched oligarchy and crushed it with the administration under it. It was the opposing host of patriotism that recognized Cuban independence, and it is that host that will make the Queen of the Antilles free as the waters that wash her shores!"

Still, it seems to us that some goldites must have joined the "host of patriotism," but they doubtless did so for the sake of the war bonds, as Dr. Ridpath intimates.

The Arcna has the usual introductory article on the usurpations of the money power; in this instance Governor Russell, of North Carolina, attacks the federal judiciary.

Mr. John S. Hopkins writes on "The Direct Nomination of Candidates by the People," urging the adoption of a direct-nomination plank by the Populist party.

This number of the Arena is notable for an important and learned contribution by President David Starr Jordan on "The Elements of Organic Evolution." There is another scientific paper, by Dr. Harold Wilson, on "The Relation of Color to the Emotions."

Mr. B. O. Flower makes a vigorous argument against restrictive medical legislation. Incidentally he directs attention to the recent rapid growth of "Christian science," or the faith-cure movement, in the United States. Mr. Flower states that the Boston church now has a membership of over ten thousand, and that within the past three years the "Christian scientists" have built or purchased and paid for more than three hundred churches in the whole country. Preaching is not permitted in these churches. This great growth is due chiefly to the alleged cures.

#### THE NORTH AMERICAN REVIEW.

ROM the articles in the North American for May we have selected Dr. Abbott's paper on "The Basis of an Anglo-American Understanding" and the contributions of Captain Parker and Lieutenant Dapray on the financing and officering of our volunteer army for separate notice elsewhere.

An unusually large proportion of the May number is given up to articles of an historical, biographical, and reminiscent nature. Such, for example, is Mr. I. A. Taylor's interesting account of "The Informers of Ninety-eight," while Max O'Rell's vivacious "Reminiscences of a Young French Officer" makes excellent collateral reading with Sir William Howard Russell's "Recollections of the Civil War." Very interesting, too, is Miss Clara Barton's story of her work and observations in Cuba just before the outbreak of our war with Spain.

The autobiographical notes by Madame Blanc ("Th. Bentzon"), collated by Theodore Stanton, will have a fascination for the American admirers of this gifted French writer, whose sympathy with and understanding of the American people and their institutions has been made manifest more than once.

Dr. A. H. Doty writes a straightforward article on "The Federal Government and the Public Health," opposing the proposition made in Congress to confer autocratic powers on the federal officials, and advocating the establishment of a national bureau of health whose

functions should be to aid and encourage State and municipal officers in the scientific work already begun, and to cooperate with them for the protection of the country against the invasion of infectious diseases.

Mr. Horatio S. Rubens, counsel of the Cuban Junta in the United States, describes the insurgent government of Cuba, but adds little to the information already given by the newspapers.

In an article on "Men and Machinery," Mr. Starr Hoyt Nichols contends that workmen who labor at a single operation in manufacturing by machinery are not noticeably duller-witted than those who supervise the making of an entire article; in other words, that repeated changing of the form of work does not of itself make the workman brighter or more intelligent as a workman. Mr. Nichols finds the influence of modern machinery to be wholly good, and looks for a millennium to result from improvements in machines, without regard to the human beings who operate the machines.

Mr. A. F. Weber presents statistics showing the growth of population in the suburbs of great cities and proving that the movement in the direction of suburban annexation in most of the great cities both in the United States and in Europe is not an artificial movement, but is simply the legal recognition of new economic conditions.

# OTHER ARTICLES.

In "Notes and Comments" Mr. P. T. Austen writes on "The Educational Value of Resistance," Mr. Edward C. Plummer on "A Simple Solution of the Shipping Question," Mr. Charles Ferguson on "A Democratic Aristocracy, or Voluntary Servitude," and Jane Marsh Parker on "Profit-Sharing and Domestic Service."

# THE FORUM.

I N our department of "Leading Articles of the Month" we have quoted from General Lieber's paper on the independence of the military system.

Germany's former ambassador to China, Herr von Brandt, offers an explanation of Germany's present position in China. He disavows in behalf of his government any intention looking toward the partition of China, declaring that Germany is not now in a position to share in the benefits resulting from such a partition, that the concessions recently demanded from the Chinese Government had become necessary because of the action of other powers in that part of the world, and that all that Germany desires is "a place in the sunshine by the side of others who are basking in it." Germany, he says, will advocate the extension of commercial relations with China—"not to the exclusion of others, but for the general benefit of humanity."

In discussing the special fifty-million appropriation for national defense, ex-Secretary Herbert shows that the principal loss to the Government, so far as the navy is concerned, that will result from emergency expenditures will be involved in the necessary purchase of makeshift vessels that will have to be sold when the emergency that called them into the navy shall have passed away. Such losses, however, as Mr. Herbert remarks, should be charged up not to the officials who are now compelled to spend this money, but to the economists in Congress who have pared down the appropriations for the navy's normal increase in the past years of peace.

Mr. Clarence Cary describes the trans-Siberian Railway now in process of construction, to which the present political complications in the far East are largely due. On the original survey plan this road is more than twice as long as the longest of the direct trans-continental systems in the United States. This great work was begun in 1891, and now it will soon be possible to travel from St. Petersburg to Vladivostock with continuous steam communication—during the summer at least—over the entire projected route, but a large part of this journey must be accomplished not by rail, but by light-draught steamers on the Amoor.

In an article on "The Utility of Music" Mr. Henry T. Finck ventures the assertion that nearly a quarter of a million people in this country make their living, directly and indirectly, by music. This would seem to establish the economic significance, if not the beneficence, of the art, but Mr. Finck advances many considerations to show the real usefulness of music from a religious, a physical, a moral, and a social point of view, respectively.

There are two important educational articles in this number of the Forum. Mr. Everett C. Willard advocates systematic physical culture in the public schools, and Prof. John Dewey attacks the methods of linguistic instruction employed in primary education in this country. As a substitute for the old routine of "the three Rs" Professor Dewey names the following controlling factors in the primary curriculum of the future: manual training, science, nature-study, art, and history.

Prof. Willis L. Moore, of the United States Weather Bureau, declares his belief that it is to-day impossible for any one to make a forecast, based fairly upon any principles of physics or upon any empiric rule in meteorology, for a greater period than one or two days in winter or for more than two or three days in summer; sometimes, he says, in winter, the movements of air conditions are so rapid that it is difficult to forecast even for one day. For this reason the Weather Bureau proposes to invade the upper air to get a new kind of data.

#### OTHER ARTICLES.

Dr. John G. Bourinot states Canada's case in the matter of her relations with the United States. Mr. William Eleroy Curtis contributes a second paper on the resources of Central America, from which it appears that Costa Rica is in many respects the model Central American state, and a model is certainly needed. Dr. Ernst von Wildenbruch traces the evolution of the German drama. There is an interesting anonymous article on "Journalism as a Profession," said to have been written by an experienced newspaper writer.

# THE CONTEMPORARY REVIEW.

A S usual, the Contemporary Review for May is more up to date than most of its contemporaries. It opens with an article on the moral of the situation created by the war between the United States and Spain, which is noticed elsewhere. Two articles are devoted to the present phase of the Chinese question, and two others deal with the most serious of all the coming questions before Europe—namely, what is to be done with the Jews? Another article, also noticed elsewhere, is Mr. Richard Heath's exposition of what he calls "The Waning of Evangelicalism" in England.

#### HOW THE DREYFUS CASE STANDS TO-DAY.

M. Yves Guyot, writing on the Dreyfus case, sets forth from his own standpoint its salient features. M. Guyot believes implicitly in the innocence of M. Dreyfus and the guilt of Esterhazy, but he is one of the few partisans of Dreyfus who still retain faith in the possibility of vindicating the victim of the French War Office.

"The generals of the staff are of opinion that to pile lies upon lies in order to conceal the judicial blunder of the court-martial of 1894 is to 'defend the honor of the army.' The Liberal Republicans are inert enough to take no side. The Radical Republicans, such as MM. Bourgeois and Cavaignac, take sides against Dreyfus and in favor of Esterhazy. The Socialists are divided. It is only a small minority of us who dare to declare our faith in truth and to demand justice. What matters? We are confident of success—perhaps an early success. There are things so shameful that no government can long tolerate them with impunity."

#### HEALTH ON THE BICYCLE.

Dr. E. B. Turner writes a pleasant chatty medical article on the bearing of the bicycle on the health of cyclists. He thinks that no children should be put on a bicycle until they are seven years old, and great caution should be used when the cyclist is advanced in years. Dr. Turner thus sums up the good and the bad of bicycling regarded as to its influence on the health of the rider:

"No one who is unsound or delicate should commence to cycle, except under the advice of a competent physician. There are some ailments in which cycling, properly regulated, acts like a charm in restoring health; there are others in which to mount a bicycle would be simple suicide. It does most good in functional diseases and in such as arise from insufficient exercise. It prevents and assists in the cure of such ailments as gout and rheumatism, and few regular cyclists are troubled with indigestion. In the bloodlessness of young girls it sometimes does more good than pints of iron drops, though in such cases moderation is most essential until the heart is well drilled in its new work, and very few instances of pure 'nervousness' survive a regular course of bicycle rides. Its use is not so apparent when there is organic mischief and change of structure in any organ, though sometimes it is used as a palliative, and enables the sufferer to take that exercise which is good for his general health and which he could not manage on his feet. No person, however, with any organic disease, especially if the heart be affected, should attempt to cycle, except under the direct orders of his physician."

Dr. Turner concludes his article by declaring: "The bicycle-face, the bicycle-hand, the bicycle-foot are myths, and even 'kyphosis bicyclistarum' need but provoke a smile, provided only that the reader observe the good old cycling rule: 'Sit easily upright and keep your eyes well in front of you.'"

# NOTABLE DOGS IN FICTION.

Phil Robinson devotes his ready pen to a disquisition on dogs in modern fiction. Bullseye, the dog of Bill Sykes in "Oliver Twist," comes first among the notables in the canine race. Snarleyyow he dismisses as a monstrosity and an impossibility. Very different was Launce's dog Crab, which was the most finished portrait of a dog to be found in Shakespeare's plays. Kingsley's Bran in "Hypatia" represents the human and Christian element of the novel, and is, indeed, the chief motive

power of the book. Walter Scott, in like manner, in "The Talisman" makes the dog Roswal the leading character in the story. Mr. Robinson concludes by a reference to the martyred Gelert.

#### SLAVERY IN THE LAGOS HINTERLAND.

Canon Robinson writes a brief and well-informed paper concerning the extent to which slavery and slaveraiding prevail in the West Coast of Africa. Nothing could put it down, he says, but an improved system of currency and improved methods of communication. Slaves are the only currency in the interior of the West Coast, with the exception of cowries.

"The value of a slave varies from 100,000 to 800,000 shells, or from £3 to £9. These are the average market prices; slaves sold by private arrangement, and whose character is known, often fetch much higher prices."

The system of making fresh slaves whenever it is necessary to put more money into circulation is carried on to an extent of which people who have never visited the country have little idea. Canon Robinson says:

"During my three months' stay in Kano, the chief town in the hinterland of West Africa and probably the second largest in the continent, there were as a rule 500 slaves on sale in the open market. I witnessed on one occasion nearly 1,000 new slaves brought into the town as the result of a single raiding expedition. The slave population of the town could not be less than 50,000. Moreover, what is to be seen on a proportionate scale in every other town throughout the greater part of the West African hinterland."

#### THE NINETEENTH CENTURY.

THE Ninetcenth Century has a good article on "England's Duties as a Neutral," which we notice elsewhere.

# THE GROWTH OF THE WORLD'S ARMAMENTS.

Mr. H. J. Wilson has a paper on this subject which is capitally illustrated with statistical diagrams bringing the salient facts into clear relief. In 1868 the actual expenditure on armaments by England, Russia, France. Italy, Austria, and Germany was \$445,000,000. Their armies on a war footing mounted up to 4,500,000 men. In 1896 the same powers spent \$845,000,000 on armaments and mustered 17,000,000 men in their armies on a war footing. In the same period the English-speaking states were the only countries which had reduced their national debt. The United States had reduced theirs from \$2,750,000,000 to \$1,000,000,000, while the reduction in Great Britain was from \$4,000,000,000 to \$3,250,000,000. All the others had piled up their debt, France leading the way. Her debt, which stood at \$2,500,000,000 in 1868. now stands at \$6,250,000,000. The Russian debt has increased in the same time even more in proportion, and rose from \$1,500,000,000 to \$4,000,000,000. The debt of Austria and of Italy has more than doubled. Mr. Wilson is inclined to be a pessimist, but he thinks he can see some good in the prospect of universal military service in Great Britain. He says:

"Provided the state can procure its war material within its own boundaries, the expenditure on cannon and battleships goes almost entirely in wages to the working class, while the subtraction of hundreds of thousands of young men from domestic life for a year or two years discourages premature marriage, develops

the body, and implants the spirit of discipline and obedience."

#### WANTED-LADIES TO HELP IN GIRLS' CLUBS!

Lady Albinia Hobart-Hampden, in a paper entitled "The Working Girl of Today," laments that so few ladies will devote their time to the management of clubs for working girls.

"I attribute this half-heartedness on the part of our would-be helpers to two causes: (1) That they have not a high aim in view behind the recreation, that they have not seriously thought out the position of those they are trying to influence or realized their crying need of friends to help and guide them. Above all, they may not have grasped the idea of self-sacrifice as the essential condition of all work that is worth doing; (2) that they have not understood the initial difficulty of getting hold of the girls."

#### THE CIRCASSIANS AND THE AFRIDIS.

Lord Napier of Magdala draws a comparison between the Russian campaign against the Circassians under Schamyl and the recent British campaign on the Northwest frontier. He says:

"This Russian expedition may well be compared with Sir W. Lockhart's expedition to Tirah. The two theaters of war are very similar in climate, topography, and extent. If the Russians had the disadvantage of operating in a thickly wooded country, Tirah, while being also in many parts covered with forest, which on one or two occasions gave the Afridis an advantage, is probably by far the more rugged and difficult, for the Russians' account mentions some light carts as having accompanied their force, which in Tirah would have been impossible. The wild tribes in both cases also seem to be identical. The happier result of our recent experience is probably due to the ability of our general and to the better training of the modern officer. There may have been some mistakes made during our campaign in some of the rear-guard actions, but such retreats in a mountain country are among the most difficult of military operations, and in the light of history we may well congratulate ourselves that our losses were no greater."

#### OTHER ARTICLES.

There is a very interesting paper of personal recollections and anecdotes of the great French painter Meissonier by the late Charles Yriarte. The Rev. Dr. Mason writes about "All Hallows, Barking," under the title of "The Romance of an Ancient City Church." The other papers are of good general interest, but do not call for special mention.

# THE FORTNIGHTLY REVIEW.

In the May Fortnightly Mr. Edward Dicey, who writes from Cairo, describes the changes which have been brought about in Egypt during the English occupation. After passing all the reforms effected in review he says:

"But I am convinced that if our troops were withdrawn and our place in Egypt was not taken by any other civilized European power, the old state of things would revive at once, and Egypt would be governed once more by the old system of baksheesh and kurbash. Indeed, the last state of the country would be worse than the first, as the old generation of Egyptian statesmen have fallen into the background under our occupation, and the younger generation have so far not exhibited the intelligence or the vigor of their predecessors. Our occupation, hampered as its action has been by manifold difficulties, has yet conferred immense benefits on the people of Egypt. Englishmen, therefore, who share my view that the occupation of Egypt is demanded by the interests of the British empire will, I trust, be confirmed in their resolution that this occupation must be maintained, by the conviction that its retention is beneficial not only to the occupying power, but to the country occupied."

#### MR. RHODES' AMBITIONS AND DIFFICULTIES.

"An Imperialist" has written an article which gives a very fair expression of the immensity of the change on the subject of Mr. Rhodes in public opinion. This writer replies to the complaints of those who say that there is no gold in Matabeleland because nothing has been done to put machinery up. He points out that, first of all, a good deal has been done, and much machinery is almost ready for beginning stamping operations. Secondly, he explains how the rinderpest upset all calculations. He says:

"Mealies, on which the natives are fed, cost about 25 shillings a bag. Two natives eat about one bag a month, so that the month's keep of each native costs 12 to 15 shillings. After the rinderpest mealies were £9 to £10 a bag, so that the keep of a native cost close on £5 a month. Now that the railroad has reached Bulawayo, the cost is about £2 a bag, and a further reduction in price is expected from an abundant mealie crop. This was the great operative cause that stopped mining development in 1896 and 1897."

"An Imperialist" naturally sympathizes with Mr. Rhodes' idea of uniting the Cape to Cairo by cable and by rail. He says:

"Mr. Rhodes' idea of a through telegraph service between the Cape and Cairo may be gathered from Mr. Rhodes' message to the Sirdar in reply to a wire report, ing the battle of Atbara: 'My personal skeleton in the cupboard is that you may get to Uganda before I do.' Mr. Rhodes may fairly hope to travel, before he is an old man, by a through railroad and steamboat service from Cape Town to Cairo."

#### HOW TO WORK AT ONE'S BEST.

In an article entitled "A Cure for Indolence," Dr. Maurice de Fleury incidentally touches upon a point of universal interest to all literary men. Speaking of how we can get the best work out of ourselves, Dr. Maurice de Fleury says:

"This rule might be thus briefly formulated: 'In order to insure the very least amount of nervous expenditure and fatigue, intellectual production ought to be daily, at a fixed hour and matinal.' It is certainly better to write during the morning; whowever is possessed with an interesting subject or with a good fixed idea meditates all day and prepares himself incessantly for work. One might, with very great advantage, imitate Michelet, who each evening, before retiring to rest, read his notes as a child prepares his lesson, classified them, impregnated his brain with the chapter to be written the following morning, and left his ideas to germinate during the peace of night.

"Then, if you will believe me, after a short toilet—only that which is necessary to have the eyes clear and the hands clean—go quickly to work as soon as you are

awake. You will at once find yourself disposed for work, and in a trice the brain will give forth the best of its mental secretion. It is a piece of advice of real practical importance. Nearly all neurasthenics who obey this prescription strictly improve rapidly, and there are none who do not speak of the feeling of great calm which a morning's work gives them for the rest of the day."

OTHER ARTICLES.

Prof. Hubert Herkomer, R.A., writes on "Painting in Enamels." Mr. Arthur Symons contributes a curious eulogy upon Aubrey Beardsley.

#### THE NATIONAL REVIEW.

THE National Review for May continues to keep up its high reputation as an intelligent observer of affairs in England, in the colonies, and in the United States.

## THE ADVANCE TO KHARTOUM.

Mr. Charles Williams writes on the "Advance on the Soudan." He is full of praise for the Sirdar, with whom he seems to be on terms of intimacy, which give importance to his forecasts of what is likely to happen in the Soudan. The Nile will begin to rise next month, and when it rises the expeditionary force will advance to Khartoum. Mr. Williams thinks it ought to go below Khartoum and establish communications with Wady Halfa. He says:

"Our work will not be done even when in the autumn, probably by Michaelmas, we shall be flying the Star and Crescent beside the Union flag over Omdurman and Khartoum. For we cannot stop there. That may be all Egypt is entitled to, or we may admit her right to resume the equatorial province. However this may be, we must see to a connection made and maintained with the Nile sources. The whole valley must be under one authority before our work is done. Roddy Owenon whom be peace !--planted the Union flag. There is much to do before operations are resumed at Nile rise. And it has to be decided whether there is to be another British brigade sent up for the advance on Khartoum. I am sure, if Kitchener had to decide the point, he, on the score of food and forage only, would prefer to do the remainder of the work substantially with the men he has. But as it is not likely Egypt can raise and provide for more troops at present, or that if they were raised they could be trained in time, a second British or an Indian brigade appears to be indispensable to the sureness of the operations of the autumn on the Nile. One thing is at length settled. Kitchener will be left to finish the work he has so well done up to now."

# WHAT AUSTRALIANS THINK OF THE OLD COUNTRY.

A "Globe-Trotter," whose letter is quoted in the "Colonial Chronicle," reports that the Australian cities are far ahead in the uses of the appliances of civilization, such as cable and steam roads, telephones, etc. Australian workmen, he says, work with a will when they do work, and have not advanced dawdling to the position of a virtue. He says:

"I have had many conversations with representative men during my travels, and there seems to be a consensus of opinion on the following points: (1) The United Kingdom is on the down grade; (2) it possesses only politicians, but no statesmen; (3) Germany is the coming nation and is cutting off our trade and commerce a every direction; (4) the average British workman fifty years behind the Belgian and German in intelligence, energy, and capacity for hard work; (5 that to fail in a war would be less disastrous than to periet by senile decay, while a successful war would be followed by a closer federation of the empire."

#### THE CHARTERED COMPANY.

Mr. L. March-Phillipps writes in a very depreciator. spirit on the financial prospects of the South Africa: Chartered Company. He charges them with haring suppressed the hostile reports said to have been drawn up by the experts who accompanied Lord Randolp' Churchill, and he is inclined to regard the right of the company to 50 per cent. of the scrip as the source of all evil. Since the company was formed "the public have invested over twenty million pounds sterling in Rhodesian gold syndicates. The Chartered Company shareto the extent of 50 per cent. in the profits of these syndicates. It is much to be suspected, indeed, that this 3per-cent. clause in the financial coalition between the government and the private speculator is at the root of all the misapprehensions under which we have been laboring so long as to the resources of the country."

# A PROTEST AGAINST THE AUTOCRACY OF THE NURSE.

Lady Vane has a short, spirited paper protestiaz against the modern habit of giving a trained nurse absolute power over her private patient. The hospital nurse, says Lady Vane, naturally attempts to introduct the mechanical routine which is indispensable to a public hospital, but it is irksome in the extreme to the private patient. The mistress of the house, Lady Vane maintains, should always preserve her authority over the nurse, and never allow her to become the autocrat of a sick-room.

#### MR. BODLEY'S "FRANCE."

Miss Betham-Edwards courteously but vigorously protests against Mr. Bodley's bulky pamphlet in two volumes as being nothing but a clerical indictment of the Third Republic in the guise of a study of modera France. Frenchmen do not mind what other people my about them, otherwise Mr. Bodley's book would have created a considerable fuss in France. Miss Betham-Edwards takes a diametrically opposite view to Mr. Bodley as to the present position of France, and as she has studied France over twenty-two years, while Mr. Bodley has only devoted seven years to the same subject, she naturally feels that she can speak with three times his authority.

#### THE WESTMINSTER REVIEW.

THE Westminster Review for May opens with a sensible paper on the need of what the writer calls an imperial minimum. In his opinion there are signs that the land-hunger of the English is for the moment appeased, and therefore the time has come for defining the policy which should be followed in the period on which we are entering. The writer ways:

"The pressing need of to-day is what may be described as an imperial minimum, which may serve as the guiding policy of the empire. This minimum will need to be so formulated as to include all that is of vital interest to the welfare of the British empire, and at the same time exclude all that does not directly

affect our interests, political and commercial. Such an imperial minimum should be the standard by which all foreign questions could be tested. Until such a minimum is formulated it will be impossible for Great Britain to have a settled and consistent foreign policy, and without such a settled policy peace with honor and safety is impossible, and without peace the work of consolidation cannot be carried on."

In defining the imperial minimum he proposes that it should consist of two points: (1) No further territorial extension and (2) the maintenance of the present status

"If our interests are to be protected and the open trade door is to be a reality in Asia, it will have to be in cooperation with and not in defiance of Russia. The most strenuous endeavors of English statesmen should be engaged in bringing about a cordial entente with Russia and the United States, which would leave us free to check any power, presuming upon our reluctance to fight, which trespasses upon ground recognized as lying within the imperial minimum."

#### COSMOPOLIS.

In Cosmopolis for May Mr. R. Nisbet Bain has a brief study of Zacharias Topelius, the great Finnish writer who died a few weeks since. To show the affection in which Topelius was held by the children of Finland and Sweden, Mr. Bain gives extracts from letters written by the children themselves to their favorite story-writer:

"Once a little boy of seven on reading some of Topelius' tales was fired by a sudden enthusiasm to turn author himself, and wrote off to Topelius to tell him so. 'But,' he adds, 'papa says I am to learn to spell first. My Zack, my rare Zack,' he concludes enthusiastically, 'I call uncle "Zack" now.' A little woman of nine, on the other hand, is more business-like, if less expansive. 'Dear Topelius,' she writes, 'kindly be quick and write another book. But it must not cost more than two crowns, for I only got three in all from granny on my birthday, and I want to have one over for something else. . . . Topelius must think I write frightfully bad for so big a girl, and the end is always the worst part of it. Adieu!'"

Mr. Joseph Pennell contributes an article on "Cycling in the High Alps," showing how the thing can be and has been done, poking fun at the Alpine Club and its climbers, and concluding with an exhortation to "bikists" to send their "bikes" up each of the passes in carriages and walk them down the other side! Riding, he suggests, is not advisable, and coasting is not good form.

Cosmopolis continues its exploration of Europe's literary by-ways with an article by Lewis Sergeant on "Greek Contemporary Literature."

On the subject of our war with Spain the English, French, and German Chroniques in this number refrain from the expression of extreme or partisan opinions. Mr. Henry Norman, in "The Globe and the Island," approves the course of the United States and predicts an Anglo-American alliance. M. Francis de Pressensé, in the Revue du Mots, laughs at the "acute attack of Anglo-Saxonism" manifested in England. "Ignotus," in the German political chronicle, reviews the diplomacy preceding the war and predicts an unequal contest.

With the present number of Cosmopolis a Spanish and an Italian supplement will be issued, in addition to the Russian.

# THE FRENCH REVIEWS.

#### REVUE DES DEUX MONDES.

THE first April number of the Revue des Deux Mondes has a well-informed article, by M. Grand maison, on the late Mr. Mundella and courts of arbitration in England. He does justice to the part played by the Conservative party in the social legislation of the last half of this century, and the description of the manifold activities of Mr. Mundella largely supplements the obituary notices which appeared at the time of his death.

#### THE FRENCH COLONIAL ARMY.

In the second April number Colonel Corbin has an article on the French colonial army. The importance of this, in view of the enormous colonial expansion of France in the last few years, will be readily seen. Colonel Corbin, it is interesting to note, holds up Woolwich Arsenal as a model in one respect, at any ratenamely, that the guns for both the British army and navy are really manufactured at the national arsenal, which is not the case in France. In laying down the conditions under which a true colonial army ought to be organized, he points out that the object is not only to guard and defend the colonies, but also to form, in case of need, an expeditionary force. It must be

admitted that Colonel Corbin is not at all an optimist. He has no great opinion, apparently, either of the ministerial plans or of the scheme elaborated by the commission of the Chamber of Deputies. He draws a picture of the colonial army tossed about like a shuttle-cock between the French War Office and the French Admiralty, and deprived of independence, autonomy, and unity of management. He laments that France will probably continue to rely on raw recruits, enlisted at an age when they are too young to bear the labors of a campaign, even too young sometimes to bear the ordinary strain of a life in the colonies. He prophesies vast expenditure, and if a new Madagascar expedition should be necessary, he considers that its final success is by no means certain.

#### THE WONDERS OF THE DEEP.

M. Thoulet has an article on oceanography in the Revue. It may, perhaps, be well to explain what oceanography is. It is the study of the sea and salt water, the topography of the bed of the sea, the composition of the waters of various seas, their physical properties, the variations of their temperature, their relative density, and so on. The science is a young one. It was founded really by an Italian named Marsigli, who was

successively engineer in the service of Leopold I., a Turkish slave, and a member of the Academy of Science in Paris and of the Royal Society in London, and was by turns overwhelmed with honors and ignominiously disgraced—in fact, a regular bohemian of science. He published the first treatise on oceanography in Holland, but he left no school behind him, and the science fell into oblivion. A century and a half later, about the year 1842, a Frenchman named Aimé took it up again, but without much success. In a sense the United States may be called the founders of oceanography, for their observations have been continued without interruption for a hundred years.

#### GERMAN TRADE PROGRESS.

The recent controversy as to the extent to which Germany is competing with England in trade renders M. Levy's article on German commerce specially important. He shows that German commerce is not only extending in great houses in the interior, but also abroad, and is sending keen commercial travelers to various countries, with the result that it is largely ousting English trade in the far East. The German bankers are behind this movement and appear to be ever ready to finance new channels of trade. M. Levy cites a remarkable example of German commercial enterprise. Two brothers, who describe themselves modestly as young Hamburg agents, recently undertook the tour of the world, adopting each a different itinerary, in order to extend their commercial knowledge, and on their return each published the inevitable book. One of them in his preface says: "Germany, her commerce, her industries, and her agriculture, will always have need of men who know the rest of the world otherwise than by newspapers and books." The spirit behind this declaration is in curious contrast with the attitude of the average English mercantile house.

M. Levy shows the progress of German commerce in another way, by statistics. It has increased in fifteen years by 30 per cent., while the whole commerce of the world, in the same period, has only increased 8 per cent. Wherever we turn we see the same phenomenon. Germany, conscious of her strength, pursues, by means which are not always above criticism, but which all lead to the same end, a persevering policy of commercial expansion. Not the least among her ambitions is the possession of a colonial empire. In 1870 she had none; it was only born, so to speak, in 1884, and since then it has increased rapidly, though it is, as is well known, not popular in the country itself. Most of the German colonies do not pay yet, but their development, though gradual, seems to be certain, and the seizure of Kaio-Chau is evidence that the policy of colonizing will be maintained in the future. M. Levy notes that in addition to ordinary commercial enterprise, the Germans have interests in a large number of industrial enterprises in other countries. They have built the Keneh-Assuan railroad, the majority of the bonds of South African railroads are held in Germany, and German interests in American roads are estimated at not less than half a milliard francs. In Brazil, Anatolia, European Turkey, and Venezuela German capital has been largely sunk, and they have a finger in such different enterprises as Liebig's extract, Chilian nitrates, and South African mines.

All this excites somewhat jealous feelings in the patriotic bosom of M. Levy. He urges his countrymen to take up colonizing in earnest, and he points out that

France finds herself face to face, not with the old Germany with its iron military discipline, but with a new commercial Germany, against whom France must fight with the weapons of peace if she wishes to retain her position among the nations.

# NOUVELLE REVUE.

W E have mentioned elsewhere M. Rodocanachi's article on "Animals in History." The remainder of the magazine is quite up to the average in interest.

#### VASCO DA GAMA.

In view of the approaching celebration of the four hundredth anniversary of the discovery of the Cape route to India by Vasco da Gama, Madame Adam has secured an extremely interesting paper on that great discoverer from the pen of a direct descendant of his, Don Maria Telles da Gama. The paper is to be continued in May, but there is enough to see that da Gama's descendant is not unworthy of his ancestry. The biographical and genealogical particulars of the family are of the greatest interest. The writer is indignant, perhaps naturally, at the allusions in the book entitled "Three Voyages of Vasco da Gama" to the cruelties and barbarities of the Portuguese conquerors of India, their frauds, extortions, and sanguinary hatreds, and he indicates pretty clearly that this is a case of the "pot calling the kettle black." He can, of course, only point to the heavy taxation under which India now labors, and in the nature of things it is impossible for him to contend that India is worse off under the rule of England than she would be under the dominion of Portugal. A good story is told of Vasco da Gama's readiness of retort. A stranger who wished to marry one of Da Gama's family presented his genealogical tree. Da Gama replied with a smile: "I have never had to do with my own genealogy, but if you wish to see it you should take the history of Portugal."

# OTHER ARTICLES.

Mme. Mathilde Shaw finishes her papers on the Klondike. Her description of the life of Dawson City is extremely vivid, but most people are already well informed of what goes on in the new El Dorado. It is worth while to note that Madame Shaw utters the often-reiterated warning that no one should go to the Klondike who has not money and provisions enough to stay there two or three years, and is not also endowed with excellent health and a great fund of gayety, insouciance, and philosophy.

Commandant Chassériaud returns to the attack about the French navy, and he draws from the recent debates in the Chamber the conclusion that there is great hope that the era of much-desired reforms is opening, inasmuch as Parliament seems to have taken that initiative in the control of the navy which has hitherto been split up and rendered practically non-existent among various official departments.

A writer calling himself "San Carlos" has an interesting description of Holy Week in Havana.

# MADAME ADAM ON FOREIGN POLITICS.

Madame Adam's "Letters on Foreign Politics" are of special interest at this particular juncture. It is well known that Madame Adam's opinion of England, or rather, perhaps, of England's policy, is a bad one; and she now declares that British perfidy is absolutely

without limits, apparently because the Japanese expected an alliance with England and have been disappointed. Madame Adam notices a suggestion in the London Review of Reviews that the questions at issue between France and England in Africa should be submitted to the arbitration of the Czar, in default of the Pope, by saying that M. Hanotaux's recent speech points distinctly to an approaching agreement between the two countries without the intervention of such an arbitrator. She adds, however, that her only fear is that M. Hanotaux may make too great concessions to England in order to preserve peace.

In the second April number Madame Adam is chiefly concerned with events in Austria and the candidature of Prince George in Crete. As for Lord Salisbury's vacillation in the far East, she does not draw from it any consolation, for she is convinced that English policy is apt in the end to gain its object by a combination of subtleness and audacity. She denounces, too, the villainies, the intrigues, and the cruelties of the English in Egypt. As for the war, Madame Adam naturally supports Spain; and she has a fascinating little picture of the young Queen of Holland, who is intelligent, good, and charming, and of whose reign she has evidently formed the highest hopes.

#### REVUE DE PARIS.

THE Revue de Paris for April is full of the battle-cries of the approaching French elections, and, as may be imagined, these are not particularly interesting to American readers, as they deal principally with questions of internal politics.

M. Léon Daudet concludes his study of his great father, Alphonse, and he has succeeded in conveying to the reader some idea of Daudet's wonderful personal charm, for with the enthusiasm of the critic for a great master of style is mingled deep affection for a devoted parent.

It is worthy of notice that George Gissing has been accorded the rare honor of having a translation of his novel, "The Ransom of Eve," published in a French review.

In the second April number Pierre Loti has a remarkable description of his feelings as he sat in a box at the Opéra Comique and saw played upon the stage a version of "Le Mariage de Loti." He saw the actor taking his place and the Princess Oréna going down into the gardens in the moonlight to call "Loti." It was one of his own love-stories that was being played before him, a wonderful piece of autobiography, and his feelings seem to have been an indescribable mixture in which, perhaps, the ridiculous aspect of the thing was uppermost. It happened to be the very day on which he left the French navy forever, and the sight of the actors on the stage in that uniform which he had so long reverenced, and to which they seemed to have no right, filled him with a curious sense of irritation.

An anonymous writer contributes a long article on the situation on the Niger, which is illustrated by a fairly good map, though, as may be expected, the patriotism of the geographer is more remarkable than his scientific accuracy. In effect, the article is a plea for accommodation on both sides, and the writer says, truly enough, that the sharing of this territory is easy between two great nations who have no serious motive for hating one another and who cannot go to war without ruining themselves for the profit of others.

#### REVUE DES REVUES.

FINOT is making steady progress in establishing the Revue des Revues as one of the most serious, yet at the same time the most wide-awake magazine published in the French language. The number last to hand on April 15, for instance, contains, in addition to the usual reviews of the periodicals and the caricatures of the continent, a short article by Henri Sienkiewicz, "The Judgment of Zeus." Another Slavonic writer who figures in its pages is Count Tolstoi, whose diatribe against contemporary science is given at length. The article of the most widespread and general interest is the second installment upon the way in which literary women judge men. It is entitled "How They Judge Us," and this later article contains several letters from eminent feminine authors setting forth their views of the other sex. The first place in the number is given to Dr. Henricourt's article on recent progress in medicine. George Pellissier gives a sketch of Jules Lemaître. There are hitherto unpublished letters of Rousseau. There is a most important article on the trade in white slave children between Italy and France. It is written by the secretary of the Italian embassy. The article "Le Langue electorale" contains many extracts from many notable electoral addresses, including that issued by the poet Béranger, which is in its way quite unique.

#### OTHER FRENCH REVIEWS.

THE Revue Internationale de Musique is a new fortnightly, started in March. The title, unfortunately a somewhat inconvenient one, explains the scope of the review, but, it may be added, many eminent French critics are among the contributors, and the general editor, the Comte de Chalot, is to be congratulated on his initial numbers. The mid-April number opens with an article on Wagner literature in Germany, by Henry Gauthier-Villars. This is followed by a notice of four directors of opera—Eugène Ritt, Emile Perrin, Halanzier, and Vaucorbell—by Louis Gallet, and Eugène de Solenière records his impression of church music

The Revue pour les Jeunes Filles of April 5 contains an interesting sketch of Gabriel Faure, a modern French composer.

The art article in the Revue Générale for April is by Ernest Verlant, and it deals with Germany. The beautiful phototypes with which it is illustrated give us glimpses of the art in the cathedrals of Mainz, Frankfurt, Aachen (Aix-la-Chapelle), and Spires.

Vallgren and his work, by Bojidar Karageorgevitch, appears in the mid-monthly Revue des Revues; and in the April Monde Moderne Eugène Müntz has an article on Giotto.

The Nouvelle Revue Internationale has published a special April number, entitled Pâques Fleuries. It contains portraits and short notices, etc., of a number of well-known writers, many of them contributors to the pages of the Revue—Emilio Castelar, Madame Ratazzi de Rute, Frédéric Mistral, and many others.

In the April number of the Bibliotheque Universelle the most important article is that by Abel Veuglaire on the French army in 1898 and the French military institutions. There is also an interesting notice of Adam Mickiewicz, based on the recent "Life" by Joseph Kallenbach.

# THE NEW BOOKS.

# RECENT AMERICAN PUBLICATIONS.

#### HISTORY.

The History of our Navy from its Origin to the Present Day, 1775-1897. By John R. Spears. Four volumes, 8vo, pp. 438-441-485-629. New York: Charles Scribner's Sons. \$8.

In view of the last sentence of his preface, Mr. Spears, whose history of our American navy appeared only a very few months ago, was giving his work to the public at a much more timely period in our public life than he himself had supposed. For Mr. Spears declared that he had reached the conclusion that, "because of the growth of civilization and the spread of the pure doctrines of Christianity throughout the world, and the progress in the arts of making guns and armor plate in the United States, we shall continue to pursue for many years our daily vocations in peace." The book indeed is dedicated "to all who seek peace and pursue it;" and behold, we are even now in the midst of the first important naval war that has been witnessed in the world since navies put on their present iron-clad character. But if Mr. Spears has failed as a prophet, he has not failed as a historian. His volumes are remarkable at once for their accuracy and their graphic style. Moreover, they are full of very interesting illustrations, containing over four hundred pictures and diagrams in all. They carry the narrative from the year 1775 to the year 1897, and will be found of the very greatest value and interest by all who would seize the present moment of excited curiosity to gain a knowledge of our naval history.

The Founding of the German Empire by William I.

Based chiefly upon Prussian state documents. By
Heinrich Sybel. Translated by Marshall L. Perrin,
and Helene Schemmelfennig White. Seven volumes, 8vo. Boston: Thomas Y. Crowell & Co. \$14.

Herr Von Sybel's admirable story of the founding of the German empire is now accessible in a thoroughly trustworthy English translation, brought out by Messrs. Crowell & Co. in seven very handsome volumes. Von Sybel had written a valuable history of the revolutionary years at the end of the last century, in their relation to the political life of the German people. The old empire went down in that cataclysm; and it occurred to Von Sybel to write a companion work on the birth of the new German empire in the period that was crowned with the great success of 1870. To this end Prince Bismarck gave the author ample opportunity to use the contents of the government archives. The first hundred pages of the work is devoted to a summing up of German history preceding the revolutionary movements of 1848. Then follows in bold, clear narrative the attempts at German unity made just half a century ago, with the dramatic and complicated movements of German history that swiftly succeeded one another. Of necessity, this work tells from the German standpoint the history of continental Europe between the years 1850 and 1871. It is, naturally, pro-Bismarckian. Merely to look these volumes through is to feel a fresh wonder at the intensity and the immense vitality of the movements which have brought Germany so rapidly to its great place among the nations of our time. At the conclusion of his fifth volume, with which he ends his account of the war between Prussia and Austria (1866), Von Sybel's work was temporarily interrupted by the retirement of Prince Bismarck from the chancellorship, and the refusal of Bismarck's successor to allow the historian the further use of the archives. However, Von Sybel was not seriously

thwarted, for there was abundance of material accessible for the story of the four years from 1866 to 1870. The earlier volumes were translated, and published by Messrs. T. Y. Crowell & Co., some six or seven years ago. The two concluding volumes have just now made their appearance. The work of translation has been done by competent scholars, and the set will be found in every respect highly creditable.

The Federalist: A Commentary on the Constitution of the United States. By Alexander Hamilton, James Madison, and John Jay. Edited, with notes, by Paul Leicester Ford. 12mo, pp. 869. New York: Henry Holt & Co. \$2.50.

Mr. Paul Leicester Ford has the habit of thoroughness in a very remarkable degree. Furthermore, he brings to a task of editing any work relating to American history or politics not only great ability but rare opportunities and invaluable experience. It is a very simple matter to reprint those famous papers known as "The Federalist" in some form or other. But it is a very different matter to present a soundly edited text, to annotate it, to index it, and to supply an introductory essay which really puts the touch of finality upon questions that have been in dispute for nearly a century. Any edition of "The Federalist" is valuable by reason of the intrinsic merits of the work as one of the masterpieces of political science; but for the purposes of critical study and precise reference, Mr. Ford's edition, it. seems to us, must of necessity exclude all others. Quite apart from the extremely valuable editorial work included in the introductory part of the volume, Mr. Ford's index (The Federalist has never before been indexed) would entitle him to a vote of thanks by Congress.

Congressional Committees: A Study of the Origins and Development of our National and Local Legislative Methods. By Lauros G. McConachie, Ph.D. 12mo, pp. 456. Boston: T. Y. Crowell & Co. \$1.75.

The study of the actual working of our political system has made great progress in the United States in the past dozen years. Professor Woodrow Wilson's "Congressional Government," which appeared about twelve years ago, lifted the veil from many eyes, and greatly stimulated a study of our government as it actually is, apart from the theory of the Constitution. Mr. Wilson dwelt particularly upon the great part played by the machinery of congressional committees. More recently Miss Follett's study of the Speaker of the House of Representatives and his great authority, ex ercised in the main through his power to appoint committees, has attracted wide attention. Mr. Bryce, in the first volume of "The American Commonwealth," has not failed to analyze the working constitution as distinguished from the written instrument. Now comes a new study on con-gressional committees by Lauros G. McConachie, who seems to have done admirable post-graduate work under competent instruction in Cornell and Wisconsin universities, and to have made a direct study of politics at Washington. His book is a valuable contribution to the literature of our American politics. One cannot help thinking how surprised even those prophetic and sagacious minds that gave us "The Federalist" would have been if they could see the development of the parliamentary system under which the business of law-making and government is now carried on at Washington. A search of Mr. Ford's elaborate index wholly fails to discover any reference whatever in the whole "Federalist" collection to congressional committees.

The Monroe Doctrine. By W. F. Reddaway, B.A. 12mo, pp. 162. New York: The Macmillan Company. \$1.25.

Mr. Reddaway's little volume on "The Monroe Doctrine" is published at the right moment. Mr. Reddaway traces the origin of the doctrine, discusses its authorship, and describes its subsequent history. He shows what part Canning played in the elaboration of the doctrine, and how its declaration strengthened his hands in the councils of Europe. Mr. Reddaway also shows how the interest and policy of England has frequently agreed with a portion, at any rate, of the famous doctrine. Mr. Reddaway holds that the doctrine cannot claim to be recognized as international law, for the rules of one nation for its own guidance are not binding upon other nations except by their acquiescence. Much confusion of thought exists as to the real significance of the Monroe doctrine, but it has established itself as a political force which, however esteemed, must be recognized. Above all, as Mr. Reddaway remarks, it must be understood. He has done something towards this most desirable end by publishing this little treatise.

Industrial Experiments in the British Colonies of North
 America. By Eleanor Louisa Lord. 8vo, pp. 164.
 Baltimore: The Johns Hopkins Press. \$1.25.

In this monograph Miss Lord very ably describes the inception and failure of the attempts made by Great Britain in the seventeenth and eighteenth centuries to force on her American colonies the production of naval supplies. This record of England's attempted exploitation of New England forms the economic background, so to speak, of the Revolution. The monograph makes it clear that the physical conditions of the country and the natural operation of economic laws made inevitable the commercial as well as the political independence of the colonies.

A French Volunteer of the War of Independence (The Chevalier de Pontgibaud). Translated and edited by Robert B. Douglas. 12mo, pp. 810. New York: D. Appleton & Co. \$1.50.

The memoirs of the Chevalier de Pontgibaud (the writer was known also as the Compte de Moré) are interesting for the revelations they make of the conditions of society in Philadelphia and New York just after the Revolution (when the author revisited this country and received about \$10,000 for his services in the war) as well as for the military experiences narrated. The Chevalier de Pontgibaud was a typical young French nobleman of the period, who enthusiastically followed the fortunes of the Marquis de la Fayette in our War of Independence. The original French edition of his memoirs has become a rare book because of its printer, who was no less a personage than Balzac, the novelist.

The Cruel Side of War: With the Army of the Potomac. By Katharine Prescott Wormeley. 12mo, pp. 216. Boston: Roberts Brothers. \$1.25.

The letters composing this volume form a record of personal service at the headquarters of the United States Sanitary Commission during the Peninsular campaign of 1862 in Virginia. These letters are published just as they were written; they give realistic pictures of an important phase of war experience—one that has been too much neglected by the historians. This little book, like Walt Whitman's "Wound Dresser," which we noticed in these columns last month, surrounds us with the very atmosphere of hospital service in war time.

Washington vs. Jefferson: The Case Tried by Battle in 1861-65.
By Moses M. Granger. 12mo, pp. 207.
Boston: Houghton, Mifflin & Co. \$1.25.

Colonel Granger's book is devoted to a review and exposition of the secession controversy from the national, or non-secession, point of view. The positions taken by Northern and Southern statesmen, respectively, are clearly, and in the main fairly stated. The book explains some mysteries in American political history for the benefit of the younger generation of readers and students.

The Building of the British Empire: The Story of England's Growth from Elizabeth to Victoria. By Alfred Thomas Story. In two parts. 12mo, pp. 391—468. New York: G. P. Putnam's Sons. \$3.

Mr. Story takes up the narrative of Great Britain's development at the time when territorial conquest in Europe ceased to be regarded by British statesmen as a possibility and when new-world discovery had opened to the Anglo-Saxon race new vistas of imperial expansion beyond seas. Throughout the work there is a conscious endeavor to subordinate or ignore such details of fact as might have had a place in an ordinary history, and to bring out in bold relief the significant steps in Britain's growth as a colonizing power. Each of the two parts is separately indexed, and the publishers have changed the binding heretofore used for the "Story of the Nations" series to a style better suited to the requirements of the library.

The Franks, from their Origin as a Confederacy to the Establishment of the Kingdom of France and the German Empire. By Lewis Sergeant. 12mo, pp. 361. New York: G. P. Putnam's Sons. \$1.50.

Another volume in the "Story of the Nations" series is devoted to the authentic history (almost inseparable from legend) of the ancient Franks. The author has aimed to confine himself "almost exclusively to facts which have a sure foundation." How far he has succeeded in this laudable undertaking, only the special student of the period is competent to judge, but of the difficulties in his path even the superficial reader may have a realizing sense. Mr. Sergeant's evident familiarity with the original sources of history tends to strengthen our confidence in his work.

#### TRAVEL AND DESCRIPTION.

The Isles and Shrines of Greece. By Samuel J. Barrows. 8vo, pp. 889. Boston: Roberts Brothers. \$2.

It is a pleasant thing to find among our public men at Washington the scholarship and the literary skill that is exemplified in this admirable volume on Greece. Dr. Barrows, now member of Congress from the Tenth Massachusetts district, and known for a longer time as editor of the Christian Register, gives us something much more valuable than the superficial travel-book of the average visitor to Greece. He dedicates his book to Dr. Dörpfeld, and acknowledges in his preface the assistance of such men as Manatt, Wheeler, White, and other American Grecians, whose very names are a guarantee of excellence. Dr. Barrows knows his Greece thoroughly. He takes us through the Ionian Isles, shows us the shrines of Athens and environing Attica, next visits the Peloponnessus, then leads the way through Phocis and the Delphi region, takes us to Thessaly, pauses among the islands of the Ægean, and finally takes us with him to the site of old Troy.

Geographical and Statistical Notes on Mexico. By Matias Romero. 8vo, pp. 300. New York: G. P. Putnam's Sons. \$2.

Sefior Romero, in his long residence at Washington has, to a singular degree, won the respect of the people of the United States. His scholarly accomplishments are on a par with his elevated character as a diplomat and statesman. He has compacted into this volume of Geographical and Statistical Notes on Mexico an immense amount of information that the reader might vainly seek elsewhere. The book sums up territorial information, is remarkably valuable in its facts about mining, gives adequate information about the climate, devotes due attention to agriculturai products, is very interesting in its account of the races who inhabit the country, and presents the best attainable statistical information on population, religion, political organization, education, railways, telegraphs, public lands, finances, trade and commerce, and other matters of interest. The statistical tables are elaborate, and the volume is supplied both with a valuable table of contents and a satisfactory index.

#### BIOGRAPHY.

Benjamin Franklin, Printer, Statesman, Philosopher, and Practical Citizen, 1706-1790. By Edward Robins. 12mo, pp. 364. New York: G. P. Putnam's Sons. \$1.50.

Of arranging books in the form of series there seems to be no end. The house of Putnams has had an exceptionally large experience of that sort, and undoubtedly it has been successful. This new life of Benjamin Franklin belongs to a new series entitled "American Men of Energy." It requires only a moment's reflection to perceive that this country has been peculiarly rich in distinguished personalities who have played a great part in the real development of the country, and who would not belong in a series of statesmen or men of letters, but would be quite at home in a group of "Men of Energy." It happens that Benjamin Franklin was a man of so large a nature and so varied a career that he could be made to fit into almost any sort of a biographical scheme. Mr. Robins has given us a very convenient, compact, and trustworthy narration of the life and services of the "sturdy printer, statesman, philosopher, and practical citizen."

The Eugene Field I Knew. By Francis Wilson. 12mo, pp. 134. New York: Charles Scribner's Sons. \$1.25.

The actor and book-lover, Francis Wilson, has written a charming little book of reminiscences of his friend the late Eugene Field. Of all Field's intimates none has given us so lifelike a portraiture of that inimitable genius as appears in this rather informal pen-sketch by Mr. Wilson. It is incomplete—but then, no Field biography that is likely to be written will ever seem complete or adequate to those who knew the man.

Here, There and Everywhere. By M. E. W. Sherwood. 8vo, pp. 299. Chicago: Herbert S. Stone & Co. \$2.50.

A gossipy book, made up mainly from journals of foreign travel, with chapters of reminiscences of General Scott, N. P. Willis, Washington Irving, George Bancroft, and other eminent Americans, and a few miscellaneous essays. Mrs. Sherwood has had unusual social advantages and has enjoyed the acquaintance of a remarkably large number of distinguished men and women, at home and abroad.

#### ECONOMICS AND POLITICS.

Unforeseen Tendencies of Democracy. By Edwin L. Godkin. 12mo, pp. 272. Boston: Houghton, Mifflin & Co. \$2.

Mr. Godkin finds the unforeseen tendencies of our American democracy manifested chiefly in the nominating system, in the decline, of our legislatures, in our municipal government, and in the methods by which expression is given to public opinion. Mr. Godkin's aim is to show that in these particulars democracy has departed from the paths marked out by the fathers. These essays leave the general impression that democracy is a far safer political system than its earlier critics believed it could be, but that as an effective governing force it has disclosed weaknesses formerly undreamed of. Mr. Godkin's estimate of Australian democracy is more favorable.

The Twentieth Century City. By Rev. Josiah Strong, D.D. 16mo, pp. 186. New York: The Baker & Taylor Company. 50 cents.

Dr. Strong, the well-known author of "Our Country" and "The New Era," has written a little book which attacks several of the more acute problems of modern civilization, notably those related to the growth of cities. There is a bravely optimistic note in Dr. Strong's message, even when he pictures the dark aspects of present-day materialism.

Workingmen's Insurance. By William Franklin Willoughby. 12mo, pp. 398. Boston: Thomas Y. Crowell & Co. \$1.75.

Mr. Willoughby, whose position in the Department of Labor at Washington gives him unusual facilities for conducting such an investigation, has devoted this work to an exhaustive survey of modern systems of insurance among workingmen the world over against accident, sickness, and non-employment. He examines not only the German and Austrian methods of compulsory insurance, which have lately attracted so much attention, but also the various forms of voluntary insurance in operation in the United States and in foreign lands. The subject is one of great practical importance, and considering the prominence that it has long had in European literatures it seems strange that up to the present time it has been so generally neglected in the United States.

The Cotton Industry: An Essay in American Economic History. By M. B. Hammond, Ph.D. Part I. The Cotton Culture and the Cotton Trade. Paper, 8vo, pp. 394. New York: The Macmillan Company. \$1.50.

This is the first of the new series of monographs published by the American Economic Association at irregular intervals. Dr. Hammond has made an exceptionally thorough study in the economics of cotton-growing in our Southern States and of the American cotton trade, reserving for treatment in a future monograph the subject of cotton manufacture in the United States. So closely is the cotton industry associated with slavery in American history that a review of the one necessarily involves an investigation of the other. Dr. Hammond discusses the influence of cotton in the preservation and extension of slavery, and especially the effects of the invention of the cotton gin.

Density and Distribution of Population in the United States at the Eleventh Census. By Walter F. Willcox, PhD. Paper, 12mo, pp. 72. (Economic Studies, Vol. II., No. 6.) New York: The Macmillan Company. 50 cents.

Government by Injunction. By William H. Dunbar. Paper, 12mo, pp. 43. (Economic Studies, Vol. III., No. 1.) New York: The Macmillan Company. 50 cents.

Hand-Book of the American Economic Association, 1898.

Paper, 12mo, pp. 135. (Supplement to Economic Studies, Vol. III., No. 1.) New York: The Macmillan Company. 50 cents.

Economic Aspects of Railroad Receiverships. By Henry H. Swain, Ph.D. Paper, 12mo, pp. 118. (Economic Studies, Vol. III., No. 2.) New York: The Macmillan Company. 50 cents.

The series of "Studies" published bi-monthly by the American Economic Association is becoming more and more valuable. Professor Willcox, of Cornell, has contributed two important papers dealing with the statistics of the last United States Census. The last is descriptive of changes during the decade between 1890 and 1890 and of present conditions so far as they may be read in the figures of density of population.

Mr. Dunbar's article on "Government by Injunction," which appeared in the Law Quarterly Review (London) for October, 1897, is now republished with some slight changes designed to make its reasoning clear to laymen as well as to members of the legal profession. The paper calls attention to certain grave abuses in the exercise of the powers intrusted to courts of equity.

Dr. Swain discusses the subject of railroad receiverships less from the lawyer's or investor's point of view than from that of the public economist. His essay presents important data for the consideration of the more general economic phases of the question.

The annual "Hand-Book" of the association, to which is appended a report of the tenth annual meeting held at Cleveland last December, shows that the membership is large and influential, and the interest in economic science apparently on the increase throughout the United States.

A Solution of the Race Problem in the South: An Essay. By Enoch Spencer Simmons. 12mo, pp. 150. Washington, N. C.: Published by the Author.

Mr. Simmons presents the familiar arguments for the colonization of the Southern negroes and applies them to existing conditions. In place of African colonies he proposes settlements in the States of Alabama, Louisiana, and Mississippi, which would have to be abandoned by the white race in accordance with his scheme. The practical difficulties in the way of such a "solution" of the Southern race problem are hinted at rather than seriously discussed by Mr. Simmons. Nevertheless, the book is interesting as a setting-forth of the problem from the Southern white man's point of view.

Legislation by States in 1897. Eighth Annual Comparative Summary and Index (State Library Bulletin). Paper, 8vo, pp. 249. Albany: University of the State of New York. 25 cents.

The general laws of 1897 in thirty-six of the States and in three Territories are summarized and indexed in the annual New York State Library Bulletin—an invaluable publication for everyone who wishes to keep well informed on the legislation of the day.

How to Right a Wrong: The Ways and the Means. By Moses Samelson. 12mo, pp. 383. New York: F. Tennyson Neely. \$2.

The Laborer and the Capitalist. By Freeman Otis Willey. 12mo, pp. 322. New York: Equitable Publishing Company.

Parasitic Wealth; or Money Reform. By John Brown. 12mo, pp. 169. Chicago: Charles H. Kerr & Co. \$1.

Money, Wages, and Prices. By George E. Roberts. Paper, 12mo, pp. 96. Chicago: National Sound Money League.

Republican Responsibility for Present Currency Perils. By Perry Belmont. 12mo, pp. 90. New York: G. P. Putnam's Sons. 50 cents.

#### RELIGION.

Sermons to Young Men. By Henry van Dyke. 12mo, pp. 253. New York: Charles Scribner's Sons. \$1.25.

This volume, as the author's preface explains, is a new edition of "Straight Sermons," with the title so changed as to prevent misapprehension, and an additional chapter devoted to the consideration of the person of Christ as the foundation of Christianity. The sermons were first written for Dr. van Dyke's New York church, in which there are many young men, and were afterwards preached in the college chapels of Yale, Harvard, and Princeton. Few preachers have succeeded in presenting religious truths to young men of the present day so attractively.

The Christian Gentleman: A Series of Addresses to Young Men. By Rev. Louis Albert Banks, D.D. 12mo, pp. 123. New York: Funk & Wagnalls Company. 75 cents.

Paul and his Friends: A Series of Revival Sermons. By
 Rev. Louis Albert Banks, D.D. 12mo, pp. 347.
 New York: Funk & Wagnalls Company. \$1.50.

The Rev. Dr. Louis Albert Banks is a Methodist preacher of wide reputation and influence. He has addressed himself especially to the problems of Christian living in modern cities. His recent addresses and sermons, delivered in Cleveland, and published in the two volumes entitled "The Christian Gentleman" and "Paul and His Friends," are likely to reach a large circle of readers.

Addresses to Women Engaged in Church Work. By the Right Reverend the Bishop of New York. 16mo, pp. 149. New York: E. P. Dutton & Co. \$1.

The good sense, directness, and reasonableness of these addresses by Bishop Potter will commend them to many

readers outside the circle of workers for whose benefit they were first delivered.

Apostolic and Modern Missions. By Rev. Chalmers Martin, A.M. 16mo, pp. 235. New York: Fleming H. Revell Company. \$1.

This little volume contains the Students' Lectures on Missions at Princeton Theological Seminary for 1895. Taken together these lectures comprise a systematic comparative study of the principles, problem, methods, and results of apoetolic and modern missions.

New Forms of Christian Education: An Address to the University Hall Guild. By Mrs. Humphry Ward. 12mo, pp. 39. Boston: T. Y. Crowell & Co. 35 cents.

This short address by Mrs. Ward was originally delivered about six years ago in London, was published at that time, and reprinted later in the New World. It is an epitome of the changing conditions which underlie the progressive religious thought and teaching of the day.

Selfhood and Service: The Relation of Christian Personality to Wealth and Social Redemption. By David Beaton. 12mo, pp. 220. New York: Fleming H. Revell Company. \$1.

This book contains a stimulating and rational discussion of some of the questions connected with the possession and employment of wealth. The author is the pastor of the Lincoln Park Congregational Church, of Chicago.

Aids to the Devout Life. Reprinted from the Outlook. 18mo, pp. 80. New York: Longmans, Green & Co. 50 cents.

This little book contains brief appreciations of "The Pilgrim's Progress," "The Imitation of Christ," Jeremy Taylor's "Holy Living and Dying," Browning's "Saul," and Keble's "Christian Year,"

An Outline of Christian Theology. By William Newton Clarke, D.D. 8vo, pp. 498. New York: Charles Scribner's Sons. \$2.50.

Dr. Clarke holds the chair of Christian theology in Colgate University at Hamilton, N. Y. This volume is made up of lectures delivered to his classes of divinity students.

God: Nature and Attributes. By Randolph S. Foster, D.D. 8vo, pp. 316. New York: Eaton & Mains. \$3.

The present work is the fifth volume of Bishop Foster's "Studies in Theology." A previous volume in this series having been devoted to the argument to prove the existence of a first cause, the author's aim in this later study is to discuss the nature and attributes of the being whose existence has been thus logically established.

Divine Immanence: An Essay on the Spiritual Significance of Matter. By J. R. Illingworth, M.A. 12mo, pp. 270. New York: The Macmillan Company. \$1.50.

Mr. Illingworth makes a clear and forcible presentation of the conclusions reached by some of the ablest theologians of the day in regard to certain theories of the universe more or less at variance with established religious beliefs. This writer is entirely sympathetic with progressive thought in science and philosophy, but too orthodox in his theology to satisfy independent inquirers in those fields of research.

The Message of the World's Religions. Reprinted from the Outlook. 18mo, pp. 125. New York: Longmans, Green & Co. 50 cents.

A series of brief papers by representative scholars on the essential truths of Judaism, Buddhism, Confucianism, Mohammedanism, Brahmanism, and Christianity.

Life, Death and Immortality. With Kindred Essays. By William M. Bryant, M.A. 12mo, pp. 442. New York: The Baker & Taylor Company. \$1.75.

The essays comprising this volume have been written from the modern scientific and critical point of view. The author institutes a comparison between the Christian religion and the the leading Oriental faiths.

The Preparation for Christianity in the Ancient World: A Study in the History of Moral Development. By R. M. Wenley. 12mo, pp. 194. New York: Fleming H. Revell Company. 75 cents.

This volume affords an excellent introduction to the study of church history. The three main streams of influence—the Greek, the Jewish, and the Roman—that contributed to the development of the Christian religion are clearly defined. The subject is approached on the philosophical, rather than the institutional side. The treatment is broad and comprehensive. The author, while a man trained in the Scotch universities, is at present professor of philosophy in the University of Michigan.

 The Apostles, Including the Period from the Death of Jesus until the Greater Missions of Paul. By Ernest Renan. Translated and edited by Joseph Henry Allen, D.D. 8vo, pp. 318. Boston: Roberts Brothers. \$2.50.

The translating and editing of this work was the last literary labor of the late Dr. Allen and was completed only a few weeks before his death. The translation was made from Renan's thirteenth edition, and the editorial notes, it goes without saying, were made with the greatest care.

The Story of the Christian Church. By George R. Crooks, D.D. 8vo, pp. 617. New York: Eaton & Mains. \$3.50.

This volume contains the lectures on church history delivered at Drew Theological Seminary by the late Dr. Crooks. Such parts of the manuscript as had not been revised before the author's death were prepared for the press by his daughter, Miss Katharine Crooks. Brief bibliographies are added to some of the chapters.

The Making of Methodism: Studies in the Genesis of Institutions. By Jno. J. Tigert, D.D., LL.D. 8vo, pp. 189. Nashville: Barbee & Smith. \$1.

Dr. Tigert's new volume is intended as a contribution to the governmental, or administrative, history of American Methodism. It contains interesting studies of the presiding eldership, of the itinerancy, and of the origin of the General Conference. The author's point of view is that of Southern Mathodism.

A Dictionary of the Bible, Dealing with its Language, Literature, and Contents. Edited by James Hastings, M.A., D.D., with the assistance of John A. Selbie, M.A. In four vols., Vol. I., A—Feasts. 8vo, pp. 879. New York: Charles Scribner's Sons. \$6.

This work is really a Biblical encyclopedia. All the more important articles are signed, and the proofs have been revised by such scholars as Professor Davidson, of Edinburgh; Canon Driver, of Oxford, and Professor Swete, of Cambridge. The departments of Old and New Testament criticism, theology, and geography fairly represent the best American and British scholarship of the day. Excellent maps are provided. The work is sold only by subscription.

The Bible Story Retold for Young People. By W. H. Bennett, M.A., and W. F. Adeney, M.A. 12mo, pp. 418. New York: The Macmillan Company. \$1.

In this volume the Old Testament story is told by W. H. Bennett, M.A., of Hackney and New Colleges, London, and the New Testament story by W. F. Adeney, M.A., of New College. The narratives are compact and skillfully carried. There are three maps and a score or more of illustrations.

The Woman's Bible. Part II. Comments on the Old and New Testaments from Joshua to Revelation. Paper, 8vo, pp. 217. New York: European Publishing Company. 50 cents. The second part of the "Woman's Bible," containing comments on those portions of the Scriptures referring to women by Elizabeth Cady Stanton and a group of colaborers, has just made its appearance. This work has provoked much controversy, and its purpose has apparently been misunderstood. It is not a new version of the Bible, but a commentary prepared by women who deny the divine inspiration of those passages which seem to them to foster degrading ideas of womanhood.

The Topical Psalter: An Arrangement of the Book of Psalms by Topics, for Responsive Reading. Arranged by Sylvanus B. Warner, D.D. 16mo, pp. 187. Cincinnati: Curts & Jennings. 25 cents.

The New Dispensation (The New Testament). Translated from the Greek by Robert D. Weekes. 8vo, pp. 525. New York: Funk & Wagnalls Company. \$2.25.

Christ and the Critics. By Gérôme. 18mo, pp. 85. Cincinnati: Curts & Jennings. 50 cents.

The Coming of the Great King; or, An Examination and Discussion of the Subject of the Second Coming of Christ, and of Questions Thereto Related. By William Houliston. 16mo, pp. 184. Boston: DeWolfe, Fiske & Co.

In His Steps: "What would Jesus Do?" By Charles M. Sheldon. 12mo, pp. 282. Chicago: Advance Publishing Company. 75 cents.

The Life of Jesus. By Ernest Renan. Translated from the Original French. 8vo, pp. 388. New York: Peter Eckler. 75 cents.

Renan's Life of Jesus. Translated, with an Introduction, by William G. Hutchinson. 12mo, pp. 321. New York: A. Lovell & Co. 40 cents.

#### ETHICS AND PSYCHOLOGY.

A Genealogy of Morals. By Friedrich Nietzsche. Translated by William A. Hausemann. Poems. Translated by John Gray. 12mo, pp. 308. New York: The Macmillan Company.

The tenth volume of Nietzsche's collected works is mainly devoted to what his English editor calls "gentleman-morality," as distinguished from "slave-morality." "A Genealogy of Morals" includes the discussion of such topics as the conceptions of good and evil, "guilt," "bad conscience," and especially "Ascetic Ideals." The present volume also includes a selection of Nietzsche's poems.

Studies of Good and Evil: A Series of Essays upon Problems of Philosophy and of Life. By Josiah Royce. 12mo, pp. 399. New York: D. Appleton & Co. \$1.50.

The titles of some of the essays composing this volume do not in themselves indicate the unity of the series. "The Problem of Joh," "The Case of John Bunyan," "Tennyson and Pessimism," etc., are the subjects of concrete studies along the same line. As Professor Royce says in an introductory chapter, the general title, "Studies of Good and Evil," commits the essays merely to one common character. "They are all, directly or indirectly, contributions to the comprehension of the ethical aspects of the universe." One of the papers is an historical study of a conflict between good and evil tendencies in early California life—the "squatter" riot of 1850 in Sacramento.

Dynamic Idealism: An Elementary Course in the Metaphysics of Psychology. By Alfred H. Lloyd, Ph.D. 16mo, pp. 241. Chicago: A. C. McClurg & Co. \$1.

Dr. Lloyd contends that not only is psychology without metaphysics useless, but that real psychology is metaphysics.

"Only the metaphysical principle can make any fact or any process really concrete." He holds to the old definition, "science of the soul," usually employing the more general term, "self," for the soul-reality. His lectures are adapted to the needs of non-technical students of the subject.

The Metaphysics of Balzac. By Ursula N. Gestefeld. 12mo, pp. 112. New York: The Gestefeld Publishing Company. \$1.

A brief analysis of "The Magic Skin," "Louis Lambert," and "Seraphita," made with a view to deducing the basic principles of the great French novelist's philosophy of life.

All's Right With the World. By Charles B. Newcomb. 12mo, pp. 261. Boston: The Philosophical Publishing Company. \$1.50.

The philosophy of existence accepted by the author of this book is well summarized by the title of his treatise. It is unmixed optimism. The book is cast in the form of a series of brief and often epigrammatic maxims and argumentative or exhortatory paragraphs.

#### GENERAL LITERATURE.

The World's Great Books. Aldine Edition. 8vo. New York: D. Appleton & Co. Sold by subscription.

This series, under the editorship of Dr. Rossiter Johnson, certainly begins well. We have received the initial five volumes, and find that they include works as varied as "The Dialogues of Plato" (Benjamin Jowett's translation) with an admirable new introduction by Professor Royce of Harvard; Creasy's "Decisive Battles of the World," with an introduction by Dr. Rossiter Johnson, and with new chapters added on Gettysburg and Sedan which give the volume an especial value; Gilbert White's "The Natural History of Selbourne," with an introduction by George H. Ellwanger; Charlotte Bronte's "Jane Eyre," with an introduction by Harriet Prescott Spafford; and Heine's "Pictures of Travel (Translated by Charles Godfrey Leland), with an introduction by Charles Harvey Genung. Dr. Johnson, as editor-inchief, has the assistance of a committee of selection consisting of Speaker Reed, President Harper, Dr. Hale, and Mr. Spofford of the Congressional Library. The volumes are to have a very wide range, and each one is to be complete in itself and to belong to what we may term the irreducible minimum of masterpiece literature. The typography and paper are admirable, and the series gains distinct value also from illustrations which, if not profuse in number, are of a high quality. We shall duly announce subsequent volumes in this attractive series as they make their appearance.

#### REFERENCE AND HAND-BOOKS.

The Century Atlas of the World. Prepared under the Superintendence of Benjamin E. Smith, A.M. Folio. New York: The Century Company.

The long-awaited "Century Atlas" amply fulfills all expectations and promises. It is truly a magnificent achievement. Some of the editorial and managerial ability that produced the "Century Dictionary" and "Cyclopædia of Names" has been turned to good account in the preparation of this masterpiece of modern cartography. Nearly three hundred maps are presented, covering all parts of the globe, a large proportion of space being given to those countries, in both hemispheres, about which, for one reason or another, the popular desire for information is strong. On all the maps railroads are printed in red, and in the case of mountain systems contour-lines, or lines of equal elevation above the sea, are printed in olive or brown. Altogether the indexes cite about 170,000 names as recorded in this atlas, and this

fact affords some indication of the thoroughness with which places have been located and identified on the maps. The color effects and typography are admirable. It is hard to see how a more satisfactory or beautiful plece of work, in these respects, could have been produced. The size of the page (9 x 13 inches) facilitates consultation; this is a great convenience. For general use the "Century" will surely supersede all works of its class heretofore published.

The Bookman Literary Year-Book, 1898. Edited by James MacArthur. 12mo, pp. 260. New York: Dodd, Mead & Co. \$1.25.

Mr. MacArthur, of the Bookman, has invented and carried through a very attractive year-book which prints the pictures of prominent writers of the past year, with brief biographies. There is also appended a good deal of interesting information on matters relating to books and publishing. The volume is printed on beautiful paper, and its half-tone portraits are therefore exceptionally attractive.

Who's Who.—1898. Second year of New Issue. Edited by Douglas Sladen. 12mo, pp. 884. New York: The Macmillan Company. \$1.75.

This is a biographical dictionary revised annually. It contains much general information not easily accessible elsewhere, and is well up to date.

Music: How it Came to be What it Is. By Hannah Smith. 12mo, pp. 254. New York: Charles Scribner's Sons. \$1.25.

A brief popular history of music. To make the subject intelligible the writer begins with a chapter on "Musical Acoustics." She then describes ancient and medizwal music, and gives a chapter each to the Belgian school and music in Italy. She then explains the evolution of the modern scale and the development of the opera and the oratorio. The last four chapters of the book are devoted to instrumental music, the piano-forte, and the orchestra. The book is illustrated, and a series of pictures of rare old musical instruments is appended.

How to Play Golf. By H. J. Whigham. 12mo, pp. 818. Chicago: Herbert S. Stone & Co.

There are a good many books extant on the great question how to play golf, but there seems to be a demand for more. Mr. Whigham's book is very American and very much up to date. A novel feature of it is its great number of photographs of prominent players, to illustrate various attitudes and strokes.

De Pontibus: A Pocket-Book for Bridge Engineers. By J. A. L. Waddell. 16mo, pp. 414. New York: John Wiley & Sons. \$3.

The author of this little technical work is an engineer of wide experience, and he has compacted in convenient form a vast deal of information on the subject of bridges and bridge-building. Its only fault seems to be its lack of illustrations. Engineers will find it invaluable.

The Pruning-Book: A Monograph of the Pruning and Training of Plants as Applied to American Conditions. By L. H. Bailey. 12mo, pp. 546. New York: The Macmillan Company.

It is now rather late in the season of '86 to use this little volume as an immediate practical guide in the treatment of trees and shrubs. Nevertheless, its range of information is very much wider than the title of the book would imply. Anybody really interested in the culture of trees—whether orchards, forests, or lawns—will find this solume an indispensable treasure, good for all years and all seasons.

With Packer's Tar Soap.

Young Americans who do not wish to lose their hair before they are forty must begin to look after their scalps before they are twenty.—New York Medical Record. Systematic shampooing with Packer's Tar Soap means healthy hair and scalp—and you cannot begin too early. Send for our leaflet on shampooing at home. The Packer Mfg. Co. (Sette 878), 81 Fulton St., New York.

"When you wish the latest styles write to us."

## New Summer Suits,

When fashionable, perfect-fitting suits are offered at such reasonable prices, should not every lady be well gowned? The styles which we make are exclusive, and our costumes are

made to order to suit the individual wearer. Perhaps that's the something which makes our garments distinctively different from the ready-made ones.

Suit No. 414.

To the lady who wishes to dress well at moderate cost we will mail free our summer catalogue of suits and skirts, together with the supplement of new styles from our Paris house and a complete line of samples of fashionable materials to select from. These illustrations and prices give you only an inkling of the handsome styles which are illustrated in our catalogue at extremely moderate figures.

At \$5.95—Walking suit (Style No. 414), made of your choice of thirty cotton fabrics, trimmed with braid, as illustrated.

At \$14.75—Walking suit in the same style as above, made of your choice of over one hundred all-wool fabrics, body of jacket lined with silk, skirt lined with percaline, and the entire costume trimmed with fine mohair braid.

At \$11.50—Same style as No. 414, but without the braid trimming, made of all-wool cloths and lined as described above.

At \$6.50—Yachting suit (Style No. 468), made of your choice of over thirty-fine cotton fabrics and handsomely trimmed with braid, as illustrated.

At \$4.50—Yachting suit, same style as above, made of fine cotton fabrics without the braid trimming.

At \$6—Fashionable summer costume (Style No. 475), made from your choice of over thirty new fabrics in crash, piqué, cotton covert cloths, denim, duck, etc., trimmed with braid and pearl buttons. An exquisite suit for warm-weather

At \$4.75—Same style as shown above, without the braid and button trimming.

At \$16-Costume made from your choice of over one hundred all-wool fabrics (Style No.
442); body of jacket lined with silk, skirt lined
with percaline, velvet collar on jacket, and entire suit trimmed with fine satin bands.

We make other styles of suits, rang-

ing in price from \$4 to \$35.

A fine assortment of costumes made of all-wool cloths, lined throughout, both of all-wood citors, fined throughout, both jacket and skirt, with fine quality taffeta slik, from \$16 up.

A particularly nice line of traveling suits, \$4 up.

Specialties in white serge, white mohair, and white broadcloth suits and

skirts.

Bioycle skirts, \$3 up. Bicycle suits, \$4.50 up.

express charges everywhere. orders filled promptly. A costume or skirt can be made within one day when necessary. Write to day for catalogue and samples; you will get them by return mail.

Style No. 468.

Style No. 475.

# ..REX CYCLES..

Do not be influenced by the prejudices of INTERESTED COMPETITORS. "The injured bird flutters." The success of the Rex Cycle has demonstrated that it is one of the WONDERS OF THE AGE. Our agents find it as big a success as the "BELL TELEPHONE".

#### THE TANDEM OF THE PERIOD.

If Rex cycles were not a huge success, interested competitors would let them alone, and they would soon be a thing of the past. Only GOOD THINGS are persecuted. Rider and dealer, this is worth thinking about. We have not a dissatisfied customer. All our wheels are sold under the absolute guarantee of: MONEY BACK if not satisfactory in every particular. Write to-day.

MAN'S REX CYCLE.

#### NOTE-WE QUOTE FROM LETTERS RECEIVED DAILY.

"Our bicycle dealers in town say so much against your wheel, we wish to inform ourselves. They almost malign it."

Reader, what do you deduce from this?

REX CYCLE CO., 280 Wabash Ave., CHICAGO, ILL

## The Shepard Treatment for Consumption

has a record of many cures made in the climate of the Eastern and Middle States.

Some of these cases were cured six and eight years ago, when Dr. Shepard was conducting his experiments at Elgin, Ill., where an office is still maintained for the treatment of this disease.

None of the above cases have, up to this time, shown signs of a recurrence.

A book, explaining the treatment, sent free on application.

Address Main Office, as follows:

The Shepard Treatment,

Kittredge Block, Denver. Colo.

A PREVENTIVE OF INSOMNIA.

Malt-Nutrine brings the balm of slumber to those tortured with insomnia. It soothes the irritated nerves, makes the blood rich and lively and greatly aids digestion. It makes buoyant health and good spiritsmakes strong the weak and the strong stronger. It is equally nourishing to the nursing mother who takes it and the babe who gets the indirect benefit. Malt-Nutrine is prepared by the celebrated Anheuser-Busch Brewing Ass'n, which fact guarantees the purity, excellence and merit claimed for it.

An interesting Booklet mailed for the asking. Anheuser-Busch Brewing Ass'n, St. Louis, U. S. A

### Hæmorrhoids Cured

thoroughly by the

## Brinkerhoff System

without use of Knife, Cautery, Anæsthetic or Detention from Business.

#### HÆMORRHOIDS-

When bleeding, lower the vitality.
When protruding, annoy the sufferer.
When internal, cause obscure symptoms.
When acutely inflamed, cause severe suffering.
When accompanied with fissure, cause intense

suffering.
When accompanied with rectal catarrh (inflammation), cause itching.

Temporary relief can be obtained by using the Brinkerhoff prescription locally. Write for sample; with it you will receive valuable information concerning the Brinkerhoff System, together with endorsements from people of the highest integrity and standing in professional and business circles. This will satisfy you that a thorough cure can be effected without surgery when the Brinkerhoff System is employed. Address

#### W. C. BRINKERHOFF, M. D., (Specialist)

#### McVicker's Theatre Bldg., Chicago, III.

[The American Monthly Review of Reviews exercises a very close scrutiny of everything that is admitted to its columns, and especially of any statements in the medical line. In presenting to our readers the announcement of the Brinkerhoff System for the treatment of hemorrhoids, we do so after personal interviews with citizens of Chicago who have been cured. Among those interviewed was one of the higher officials of the First National Bank of Chicago, who spoke enthusiastically of its merits. —Review of Reviews.1 merits. - Review of Reviews.1

### RHEUMATISM NEURALGIA.

Richardson's Celebrated Magneto-Galvanic Rings

Magneto-Galvanic Rings have cured Rheumatism, Neuralgia, Gout, Weak Back, and all blood impurities. Why? #### Don't Study the BM of Fare-Use Pepcalt and Eat Anything That sait-shaker is filled with Popsalt. It cures and prevents indigestion.

## epsalt

cures and prevents Indigestion.

## epsart

in looks and taste cannot be told from table salt.

## <del>o</del>psa

is to be used in place of table salt at your meals.

### *Pensait*

required and at the right time.

PEPSALT is the best of table salt, into every grain of which is incorporated digestive substances natural to the stomach. Fill your salt-cellar with Pepsalt and use it in place of salt at your meals. Pills or aperients for indigestion force out the food which should, in order to sustain life, remain in the stomach and become digested. Pepsalt helps to completely digest all the food you take into your stomach. If you have indigestion your stomach does not supply the necessary amount of the dissolving or digestive juices. Pepsalt, taken in place of salt at your meals, makes good this deficiency, as you take with every mouthful of your food a similar substance to that which is repuired and at the right time. Your food commences to digest immediately. The result is complete digestion of what you eat. You enjoy your food, your health is good and your indigestion is a thing of the past. Send for sample in salt-shaker bottle and try it. Price 25 cents, postpaid. THE VAUPEL SAMARITAN Co., (Permanent Bldg.), 179 Euclid Ave., Cleveland, Ohio.

# FOOD PRODUCTS

NOX'S SPARKLING CALVES'-FOOT GELATINE is the best—because there is nothing else so good.

OTHING in the world makes so many desserts that titillate the palate in so many irresistible ways. If you doubt it, send a two-cent stamp for "Dainty Desserts for Dainty People," a little book that comes free with every package of "Knox's."

RDER from your grocer—if he's the right sort of grocer. If he doesn't keep it you can find out just how deficient his stock is by sending to Charles B. Knox. Johnstown, N.Y. One package cost 15c., two for 35c.

ACTLY two minutes after opening the box you can have your gelatine dissolved. Better than an hour when you're in a hurry. Its granules are pure, too; no acids, and so clear !

OUNDS pretty good, doesn't it? But you ought to taste it!

"Dainty Desserts for Dainty People" will be sent free with every order of Gelatine. Send 5 cents in stamps for a sample of Acidulated Gelatine, which requires only water, extract and sugar, and a pint of jelly is made.

Highest Award at World's Fair.

Knox's Gelatine is indorsed by every leading teacher of cooking.

C. B. KNOX, JOHNSTOWN, N. Y.

# BLUE LABEL ...KETCHUP

is made from tomatoes and represents all that's good in ketchup—

grocers sell it.

Write us for booklet, "Prom Tree to Table," and our "Souplet," descriptive of our "Blue Label" Soups, which are "The Finest Yet,"

CURTICE BROTHERS CO. ROCHESTER, N. Y.
